How to Use This Catalog (/2020-2021-catalog/catalog-introduction/how-to-use-this-catalog)

The college catalog is a vital resource for you as an American River College student. Spend some time familiarizing yourself with the information in this catalog – it can be a key tool in your academic success.

About American River College (/2020-2021-catalog/catalog-introduction/about-american-river-college)

Learn about American River College, including its mission and vision, accreditation status, and leadership.
How to Use This Catalog | American River College

An Important Resource

This college catalog is a vital resource for you as a student at American River College. Please spend some time becoming familiar with the information in this catalog – it can be a key tool in your academic success.

Changes

It’s important to keep in mind that policies and regulations are subject to change. Many of these changes are dictated by the State of California or federal agencies. This catalog captures the latest information as of the publish date, but changes happen on a regular basis. For updated information, please consult the college website.

Official Updates

If there are significant changes – such as new courses, programs, or regulations – the college will publish a catalog update online (similar to an "addendum" in a print catalog). If updates are published, then they will typically appear in November of each year, but may be added at other times if critical content updates are necessary. Throughout the year, the catalog website (https://arc.losrios.edu/2020-2021-catalog) will always include the most current catalog content.

Career Education Program Changes

Please be aware that the required courses for career education (formerly career and technical education, or CTE) programs are subject to change due to state, regional, and federal agencies. It’s important to meet with a counselor to stay on top of any potential changes to these programs.

About This Catalog

Every effort has been made to ensure that what is stated in this catalog is accurate. The courses and programs we offer, together with other information contained in this online catalog, are subject to change without notice by the administration of the Los Rios Community College District and American River College for reasons related to student enrollment, level of financial support, or for any other reason, at the discretion of the district and American River College. The district and American River College further reserve the right to add, amend, or repeal any of their rules, regulations, policies, and procedures.
American River College is a top transfer school for CSU Sacramento and UC Davis. Our beautiful 153-acre main campus is in the suburbs of Sacramento, California, on the old Cameron Ranch. We enroll approximately 30,000 students each spring and fall, making it one of the larger higher education institutions in California. Our vision is to transform the future of all students and our community through inclusive, equitable education.

We offer a large selection of academic and career-oriented associate degrees and programs designed to prepare students to enter the workforce or transfer to complete their bachelor's degree. We are a feeder school for many of the four-year universities in the area, including California State University (CSU) Sacramento and University of California (UC) Davis. In fact, American River College transfers more students to CSU Sacramento and UC Davis than any other community college in California.

We offer associate degrees, vocational training programs, continuing education courses, and non-credit personal enrichment programs.

In This Section

See American River College's mission, vision, values, and commitment to equity.

Accreditation (/2020-2021-catalog/catalog-introduction/about-american-river-college/accreditation)
American River College is accredited by the Accrediting Commission for Community and Junior Colleges (ACCJC) of the Western Association of Schools and Colleges.

Board of Trustees and Chancellor (/2020-2021-catalog/catalog-introduction/about-american-river-college/board-of-trustees-and-chancellor)
The Board of Trustees is the governing body of Los Rios Community College District, including American River College.
Mission, Vision, and Values | American River College

Our Vision
Transform the future of all students and our community through inclusive, equitable education.

Our Mission
American River College places students first in providing an academically rich, inclusive environment that inspires critical thinking, learning and achievement, and responsible participation in the community.

American River College, serving the greater Sacramento region, offers education and support for students to strengthen basic skills, earn associate degrees and certificates, transfer to other colleges and universities, and achieve career as well as other academic and personal goals.

Our Commitment to Social Justice and Equity
American River College strives to uphold the dignity and humanity of every student and employee. We are committed to equity and social justice through equity-minded education, transformative leadership, and community engagement. We believe this commitment is essential to achieving our mission and enhancing our community.
The Los Rios Community College District consists of four comprehensive, public California community colleges: American River College, Cosumnes River College, Folsom Lake College, and Sacramento City College. American River College is accredited by the Accrediting Commission for Community and Junior Colleges (ACCJC) of the Western Association of Schools and Colleges, an institutional accrediting body recognized by the Council of Higher Education Accreditation and the US Department of Education. The American River College educational centers are fully accredited under the college's accreditation status.
The Board of Trustees is the governing body of Los Rios Community College District.

The board is responsible for the educational, physical, and financial well-being of the district. The board also sets legal policy for the district.

The board is composed of seven board members who are elected to four-year terms by registered voters. The board also includes a non-voting student trustee who is elected by students.

How to Enroll | American River College

In This Section

Steps to Enroll (/2020-2021-catalog/getting-started/how-to-enroll/steps-to-enroll)
Learn about the steps to enrollment, including how to apply to American River College, how to apply for financial aid, and other admissions tips.

Challenges to Matriculation Process (/2020-2021-catalog/getting-started/how-to-enroll/challenges-to-matriculation-process)
Students can elect to not participate or be exempt from some or all of the matriculation process if they meet certain criteria.
Steps to Enroll | American River College

Apply Now

Guarantee your admission to American River College by completing the online application to American River College (https://www.opencccapply.net/cccapply-welcome?cccMisCode=231).

Note: You must submit a new application any time you have a break of enrollment where you do not attend for a year or more.

When applying to one college in the Los Rios Community College District, you are able to enroll in all four colleges (American River College, Cosumnes River College, Folsom Lake College, and Sacramento City College).

Save Money

To qualify for the Los Rios Promise and other programs, fill out the Free Application for Federal Student Aid (FAFSA) or the California Dream Act Application (CADAA). Learn more about how to save money with financial aid (https://arc.losrios.edu/save-money).

Other Admissions Tips

- Submit your high school and/or college transcripts to be placed automatically into English and mathematics courses that match your skill level. Learn more about placement (https://arc.losrios.edu/admissions/placement). English as a Second Language (ESL) assessment testing is still available via assessment testing (https://arc.losrios.edu/admissions/placement/assessment-testing).
- Participate in orientation for new students (https://arc.losrios.edu/admissions/orientation).
Students can elect to not participate or be exempt from most or parts of the matriculation process based on the following criteria:

1. The student has completed an associate degree or higher.

2. The student satisfies at least two of the following:
   - The student has identified a goal of upgrading job skills
   - The student has enrolled for fewer than 12 units
   - The student is concurrently enrolled in another post-secondary institution
   - The student has declared no degree or occupational objective
Admission Requirements and Procedures
| American River College

In This Section

Admissions Eligibility (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/admissions-eligibility)
Learn about admissions eligibility for first-time college students, continuing American River College students, returning or transfer students, and high school students.

Admission with Transfer Credit (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/admission-with-transfer-credit)
Students who desire academic credit for courses taken at other regionally accredited colleges and universities must submit official transcripts to the Admissions and Records Office.

Admission for Veterans and Dependents Using Veterans Educational Benefits (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/admission-for-veterans-and-dependents-using-veterans-educational-benefits)
Learn about admissions information for veterans, spouses of veterans, and dependents of veterans.

International Student Admission (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/international-student-admission)
Learn about admissions for international students.

Advanced Education for High School Students (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/advanced-education-for-high-school-students)
Learn about admissions for high school students who want to take college classes through advanced education.

Undocumented Student Admission (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/undocumented-student-admission)
Learn about admissions for undocumented students, a group we define as all immigrants who reside in the US without legal status.

Residency Requirements (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/residency-requirements)
Learn about the requirements for having and maintaining California residency.

Readmission from Dismissed Status (/2020-2021-catalog/getting-started/admission-requirements-and-procedures/readmission-from-dismissed-status)
Students on dismissed status from American River College must submit a petition to be readmitted after dismissed status.
Any person who has earned a high school diploma or the equivalent – such as a certificate of proficiency issued by the State Board of Education including a General Education Development (GED) – is eligible for admission to American River College. Non-high school graduates 18 years of age or older who demonstrate ability to profit from a community college education may also be admitted.

There are four main types of students who attend American River College:

First-Time College Students

First-time college students are individuals who are a high school graduates or are at least 18 years old and never attended any college (other than those who attended while in high school).

Continuing Students

Continuing students are individuals who attended classes at any Los Rios college in the term immediately prior to the next term.

Returning or Transfer Students

All students returning after an absence or transferring from a non-Los Rios college must complete an admissions application and submit official transcripts of all other college work to the Admissions and Records Office.

High School Students

High school students who will be a junior or senior (grades 11 or 12) or at least 16 years of age by the start of classes may be eligible to enroll in a maximum of two community college classes each semester through the Advanced Education program.
Students who desire academic credit for courses taken at other regionally accredited colleges and universities must submit official transcripts of that work to the Admissions & Records office. It is the student’s responsibility to initiate a request to each institution asking that an official transcript of their work be sent directly to:

To be credited by American River College, the coursework must meet the following criteria:

- The course(s) must have been taken at a regionally accredited college or university.
- The course(s) must be at the undergraduate level.
- The course(s) must have been completed with a grade of D or higher. All transferred grades (including Fs) will be used in the calculation of units attempted, units completed, and the grade point average.
- For determination of course applicability/equivalency, student must meet with a counselor.

Students who have completed college- or university-level courses outside of the United States and who are requesting credit must have those transcripts evaluated by a Foreign Credit Evaluation Service. American River College will accept a foreign transcript evaluation from a current member of Association of International Credential Evaluators, Inc. (http://aice-eval.org/) (AICE) or National Association of Credential Evaluation Services (https://www.naces.org/) (NACES).

Credit for coursework/degrees will be granted if it is determined to be equivalent to that of a regionally accredited college or university in the US and is at the baccalaureate level. Once received by American River College, the evaluation becomes property of the college and is treated in the same manner as an official transcript.
Veterans services are available to assist veterans, spouses, and children of disabled or deceased veterans who may be eligible for federal and/or state educational benefits. New students should contact the Admissions & Records office at least two months prior to the start of the college semester to initiate the required paperwork.

In most cases, all tuition and enrollment fees, miscellaneous fees, textbooks, and class supplies are paid for by the student and not by Veterans Affairs (VA). The exception is students who are using the Post 9/11 GI Bill or Vocational Rehabilitation benefits.

If you believe VA will be paying your enrollment fees, then please verify with Veterans Services before you enroll in courses. The benefit process may take several months to complete for new benefit recipients. For continuing students, the benefit process can take four to six weeks. Benefit recipients should anticipate a delay of at least two months before receiving the first payment.

Visit the GI Bill website (https://benefits.va.gov/gibill/) for more information on VA benefits. Disabled veterans who qualify for additional benefits should contact their VA Vocational Rehabilitation Counselor prior to enrolling.

For more information, see veteran student admissions (https://arc.losrios.edu/veteran-admissions).
American River College welcomes students from all over the world. Students who enter the US on a non-immigrant visa are considered international students; however, there are different attendance requirements for each visa type.

American River College is approved by the Bureau of Citizenship and Immigration Services (formerly INS) to issue the I-20 for the F-1 visa. An international student must be enrolled in at least 12 units each semester and must maintain a C (2.0) grade point average at all times, in order to comply with F-1 visa requirements.

For more information, see [international student admissions](https://arc.losrios.edu/international-students).
Courses that provide enrichment and advancement in educational experience may be offered on a limited basis to high school students who have demonstrated academic achievement. The student must be 16 years of age or have completed their sophomore year of high school prior to the first day of the college semester. Advanced education students may not take remedial classes, those classes which need to be repeated because of low grades, and classes offered in the student's own school.

High school students should request information from their high school counselor regarding eligibility and an advanced education application. Advanced education students should then submit online a completed advanced education application form which has been signed by a parent and by a high school counselor or principal, an official transcript plus work in progress, and a written statement describing how the eligibility criteria are met and why they wish to take classes.

After the advanced education application has been approved, the student may register for classes. Students must enroll in person at Admissions & Records. An advanced education student is not considered a continuing student when registering for classes for any subsequent semesters. It is the responsibility of the advanced education student to become familiar with, and aware of, all the requirements, processes, and deadlines pertaining to advanced education.

For more information, see advanced education admissions (https://arc.losrios.edu/advanced-education).
At American River College, we define undocumented to include all immigrants who reside in the US without legal status. All undocumented students must:

1. Complete the online application to American River College (https://www.opencccapply.net/cccapply-welcome?cccMisCode=231).
2. Submit a California Non-Resident Tuition Exemption Form available to the Admissions & Records Office.

For more information, see undocumented student admissions (https://arc.losrios.edu/undocumented-students).
Residency Requirements | American River College

Students who are California residents pay in-state tuition of $46 per unit, whereas students who are non-residents pay out-of-state tuition of $353 per unit. (Note: Tuition fees are for the 2020-21 academic year.) Community college enrollment fees are set by the California State Legislature. All fees are subject to change.

The term "California resident" for fee purposes may differ from other definitions of California residency. A person who has a California driver's license and/or vehicle registration or who is a California resident for tax, voting, or welfare purposes may have established legal residence in the state but not necessarily be considered a resident for fee purposes.

Residency Eligibility

To be eligible for California residency, a student must do the following:

- Be a citizen or hold a US immigration status that does not prevent establishment of residency
- Verify physical presence in California for at least one year and one day prior to the first day of the semester/term
- Verify intent to make California your permanent place of residence
- Establish financial independence from a non-resident parent or guardian

For more information, go to residency requirements on the American River College website (https://arc.losrios.edu/residency-requirements).
Readmission from Dismissed Status | American River College

Students on dismissed status from American River College must submit a Petition for Readmission After Dismissed Status form, which is completed with a college counselor. In order to enroll in classes, the dean must approve readmission following counselor recommendation.

3 All summer 2020 classes will be online; therefore, no parking services will be available.

4 Students who receive the California College Promise Grant (formerly known as the BOG Fee Waiver) only pay $31 for a fall or spring semester parking permit.

Fee Descriptions
Tuition and Enrollment Fee

Refundable: Yes. Learn more about refunds (https://arc.losrios.edu/admissions/cost-of-attendance/refunds).

Tuition and enrollment fees are charged per unit of enrollment. These fees are set by the State of California and are subject to change at any time. Students who have registered for classes prior to an increase may be required to pay the additional amount.

Foreign Student Application Fee

Refundable: No.

The foreign student application fee applies to all international students. Some international students may be exempt from paying this fee if they demonstrate economic hardship. Read Regulation R-2251 Nonresident and International Student Fees to learn more.

Student Representation Fee

Refundable: Yes.

The student representation fee supports student government in its effort to advocate and lobby for legislative issues that affect students.

$1 of every $2 fee supports the operations of a statewide community college student organization that is recognized by the Board of Governors of the California Community Colleges (Assembly Bill 1504). This statewide organization provides for student representation and participation in state-level community college shared governance as well as governmental affairs representatives to advocate before the legislature and other state and local governmental entities.

Students can refuse to pay this fee based on moral, religious, political, or financial grounds. To be exempted from paying the fee, complete and submit the Student Representation Fee Form BS-55 (PDF) to your college Business Services Office, preferably before you pay your fees.

This fee was established under provision of California Education Code section 76060.5 and California Code of Regulations, Title V, sections 54801-54805.

Health Services Fee

Refundable: Yes.

The following students may be exempted from the health services fee if they submit the required paperwork to the Admissions and Records Office before they register for classes:

- Students who depend exclusively upon prayer for healing in accordance with the teachings of a bona fide religious sect, denomination, or organization
- Students who receive California College Promise Grant (formerly BOG Fee Waiver) Part A

The following students are not charged the health services fee:

- Students enrolled in the Sacramento Regional Public Safety Training Center (SRPSTC)
- Students enrolled in apprenticeship programs
- Students only enrolled in UC Davis Co-Op program courses
- Incarcerated students inside correctional facilities
- Students admitted as special part-time students (K-12 students)

Universal Transit Pass (UTP) Fee

Refundable: Yes. Learn more about refunds (https://arc.losrios.edu/admissions/cost-of-attendance/refunds).

The Universal transit pass (UTP) is available to certain students for use on Regional Transit (RT) services, including buses and light rail. All eligible students are charged the UTP fee, regardless of whether or not they use the pass. The UTP is a sticker that attaches to your student access card.

Visit the Regional Transit website (http://www.sacrt.com/fares/) for a list of all transit and bus systems that accept the UTP. UC Davis Unitrans does not accept the UTP.

Eligibility

Students taking one or more units during the spring or fall semester are eligible for the UTP. All students are eligible for the UTP in the summer semester, regardless of how many units they take.

Some students are not eligible for the UTP, and therefore are not charged the fee. These students include:

- Students enrolled in the Sacramento Regional Public Safety Training Center (SRPSTC)
- Students enrolled in apprenticeship programs
- Students taking classes on the UC Davis main campus
Students studying abroad

Incarcerated students inside correctional facilities

Students whose home college is not a Los Rios college but who are enrolled in courses at a Los Rios college through the California Community Colleges Online Education Initiative Course Exchange

Valid Dates

- For the spring semester, the UTP is valid January 1 through May 31.
- For the summer semester, the UTP is valid June 1 through July 31.
- For the fall semester, the UTP is valid August 1 through December 31.

Fee Structure

Beginning with the fall 2020 semester, eligible students will pay $2.50 per unit during the fall and spring semesters. Any fraction of a unit is rounded up to the next whole unit. The minimum fee charged is $2.50 (for one unit) and the maximum fee is $37.50 (for 15 or more units). For example:

- A student enrolled in .5 units will not pay the UTP fee.
- A student enrolled in one unit will pay $2.50.
- A student enrolled in 1.5 units will pay $5.00.
- A student enrolled in 15 or more units will pay the maximum fee of $37.50.

During the summer 2020 semester, all eligible students pay $11 for the UTP.

Lost or Stolen UTP Stickers

If your UTP sticker is lost or stolen, then you will have to pay the full price of $37.50 for a new one.

Damaged UTP stickers

If your UTP sticker is damaged but the remnants are still attached to your student access card, then we will issue a replacement for free.

Semester Parking Permit Fee

Refundable: Yes. Learn more about refunds (https://arc.losrios.edu/admissions/cost-of-attendance/refunds).

Students can buy a semester parking permit online via eServices (https://ps.losrios.edu/student/signon.html) or in person*. The semester parking permit is a decal that is placed on the windshield or hung from the rear-view mirror.

Read Administrative Regulation R-2252: Student Parking Fees (https://www.losrios.edu/docs/lrccd/board/regulations/R-2252.pdf) to learn more.

Lost, Stolen, or Damaged Parking Permit

If a semester parking permit is lost or stolen, then you will have to pay full price for a new one. If a vehicle is sold or damaged, then a replacement can be issued for $2. You will need to provide the old decal and proof of sale or repair for the $2 replacement.

* At American River College, Cosumnes River College, and Sacramento City College, parking permits can be purchased at the Business Services Office. At Folsom Lake College, parking permits can be purchased at the Admissions & Records Office.

Daily Parking Permit Fee

Refundable: No.

Students can buy daily parking permits from machines located in the parking lots at each campus. Daily parking permits are not recommended for motorcycles because they can be easily stolen. Read Los Rios’ Administrative Regulation R-2252: Student Parking Fees (PDF) (https://www.losrios.edu/docs/lrccd/board/regulations/R-2252.pdf) to learn more.

Instructional Material Fees

Instructional material fees for designated courses may be assessed in accordance with Title 5, Section 59400 and Los Rios Policy P-2253 (/shared/doc/board/policies/P-2253.pdf).
Fee Payment Deadlines | American River College

Your tuition and fees are due soon after you enroll in classes. You will be dropped if your fees are not paid by the fee payment deadline. This is true even if you enroll in a class that starts later in the semester.

Summer 2020 Payment Deadlines

Fall 2020 Payment Deadlines

This information is still being finalized.

Spring 2021 Payment Deadlines

This information is still being finalized.

A Note About Financial Aid

Your financial aid award is not automatically applied to your fees (except the California College Promise Grant). After you have applied your financial aid, you are responsible for paying the remaining amount on your account.

Make sure you apply for financial aid as early as possible and review the financial aid deadlines [here](https://arc.losrios.edu/financial-aid-deadlines).
Should a student or former student fail to pay a debt owed to the institution, the institution may withhold permission to any combination of the following from any person owing a debt until the debt is paid (Title 5, California Code of Regulations, Sections 42380 and 42381):

- Register
- Use facilities for which a fee is authorized to be charged
- Receive services, materials, food, or merchandise

If a student believes they do not owe all or part of an unpaid obligation, the student should contact the Business Services office.
Federal Education Tax Credits | American River College

Students (or parents of dependent students) may be able to obtain federal tax credits (including the American Opportunity Credit and Lifetime Learning Credit) for enrollment fees if the student:

- Is enrolled in at least six (6) units during any semester or summer session
- Meets the other conditions prescribed by federal law

Students who consent to online access can view and print the IRS Form 1098-T through eServices by January 31 of each year. For eligible students who do not consent to online access, the IRS Form 1098-T will be mailed by January 31.
Fee Refunds | American River College

What Fees are Refundable?

Refundable Fees

- Resident enrollment and tuition fee
- Non-resident enrollment and tuition fee
- Universal transit pass (UTP) fee
- Student representation fee
- Health services fee
- Semester parking permit fee

Non-Refundable Fees

- Foreign student application fee
- Daily parking permit fee

How to Get a Refund

Refunds for Enrollment and Tuition Fees

Follow these steps to get a refund for enrollment and tuition fees:

1. Drop your class(es) by the deadline. After your class is dropped, money is credited to your eServices account. Keep all documentation that shows the date your class was officially dropped.

2. Request a refund ([https://arc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application](https://arc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application)) to get the money out of your eServices account by the deadline. You can submit this request online or in person at the Business Services Office.

Refunds for Student Representation Fee

Follow these steps to get a refund for the student representation fee:

2. If you paid by credit card, then a refund credit will be issued to the credit card you used. All other methods of payment will be refunded by check and mailed to the address on file with your college's Admissions and Records Office.

Refunds for UTP and Health Services Fees

Follow these steps to get a refund for Universal Transit Pass (UTP) and health services fees:

1. Drop your class(es) by the deadline. After your class is dropped, money is credited to your eServices account. Keep all documentation that shows the date your class was officially dropped.

2. Request a refund ([https://arc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application](https://arc.losrios.edu/admissions/cost-of-attendance/refunds/refund-application)) to get the money out of your eServices account by the deadline. You can submit this request online or in person at the Business Services Office.

Important Information About UTP Refunds

Fall or Spring Semester

For the spring or fall semester, the UTP fee is refundable if you drop your courses within the fee refund period. If you drop to less than one unit, then you are expected to return the UTP sticker.

Summer Semester

For the summer semester, the UTP fee is refundable if you drop all of your units within the refund period. A minimum fee of $11 will be withheld from your refund if you have
already picked up a UTP sticker for the summer semester. You are expected to return the UTP sticker if you drop all units.

Refunds for Semester Parking Permits

To get a refund for a semester parking permit:

- Go to the Business Services Office to fill out a paper refund application before the deadline. Your parking permit decal must be attached to your application. You cannot do this step online. Your refund will be processed within 6-8 weeks.

Important Information About Refunds

Credit Balances in eServices

Money in your eServices account is not automatically refunded to you. If you have a credit balance in your eServices account and you do not request a refund by the last day of instruction of the semester, then you forfeit that money.

Exceptions for Military Students

If you have to withdraw from classes for military purposes, then you will be refunded 100% of your fees and tuition. This is true even if you drop after the deadline or request your refund after the end of the semester.

How long will it take to get my refund?

Refunds are issued within six to eight weeks. If you paid by credit card, then a refund will be issued to the credit card you paid with. All other methods of payment will be refunded by check and mailed to the address on file with Admissions and Records.

Get the Financial Help You Need

Money shouldn't get in the way of getting a college education. The Financial Aid Office is here to help you get the financial support you need to afford college.

Financial Aid Eligibility

Generally, to be eligible for financial aid, students must:

- Demonstrate financial need (for most programs)
- Be a US citizen or an eligible non-citizen
- Have a valid Social Security number (with the exception of students from the Republic of the Marshall Islands, Federated States of Micronesia, or the Republic of Palau)
- Be registered with Selective Service (https://www.sss.gov), if you're a male (you must register between the ages of 18 and 25)
- Be enrolled or accepted for enrollment as a regular student in an eligible degree or certificate program
- Be enrolled at least half-time to be eligible for Direct Loan Program funds
- Maintain satisfactory academic progress
- Sign the certification statement on the Free Application for Federal Student Aid (FAFSA) stating that:
  - You are not in default on a federal student loan and do not owe money on a federal student grant
  - You will use federal student aid only for educational purposes
- Show you're qualified to obtain a college or career school education by one of the following:
  - Having a high school diploma or a recognized equivalent such as a General Educational Development (GED) certificate
  - Completing a high school education in a homeschool setting approved under state law (or – if state law does not require a homeschooled student to obtain a completion credential – completing a high school education in a homeschool setting that qualifies as an exemption from compulsory attendance requirements under state law)
  - Enrolling in an eligible career pathway program and meeting one of the ability-to-benefit alternatives (https://www.sss.gov)

Registering for Selective Service

Most male students must be registered with Selective Service to receive federal student aid. You also must register if you are a male and are not currently on active duty in the US armed forces. If you are a citizen of the Federated States of Micronesia, the Republic of the Marshall Islands or the Republic of Palau, then you are exempt from registering for selective service.

You can call Selective Service toll-free at (888) 655-1825 for general information about registering, register online at sss.gov (https://www.sss.gov), or register when you submit your Free Application for Federal Student Aid (FAFSA) (https://fafsa.ed.gov/).

Ability-to-Benefit Alternatives

If you were enrolled in college or career school prior to July 1, 2012, or if you are currently enrolled in an eligible career pathway program*, then you may show you're qualified to obtain a higher education by one of the following:

- Passing an approved ability-to-benefit test* (if you don't have a diploma or GED, a college can administer a test to determine whether you can benefit from the education offered at that school)
- Completing six credit hours or equivalent course work toward a degree or certificate (you may not receive aid while earning the six credit hours)

*For more information about these criteria, talk to the Financial Aid Office.

Contact Financial Aid Office
In This Section

Free Application for Federal Student Aid (/2020-2021-catalog/while-you-are-here/financial-aid/free-application-for-federal-student-aid)
The Free Application for Federal Student Aid (FAFSA) is a form you fill out to get financial aid. Financial aid includes fee waivers, grants, work study, loans, and scholarships.

California Dream Act Application (/2020-2021-catalog/while-you-are-here/financial-aid/california-dream-act-application)
The California Dream Act is a law that allows some undocumented and nonresident students to receive certain types of financial aid. To apply, students submit the California Dream Act Application (CADAA).

Promise Programs (/2020-2021-catalog/while-you-are-here/financial-aid/promise-programs)
Promise programs offer first-time, full-time students up to two years of tuition-free education at American River College.

Grants (/2020-2021-catalog/while-you-are-here/financial-aid/grants)
A grant is money given to you by the federal or state government that you don’t usually have to pay back.

Federal Work-Study (/2020-2021-catalog/while-you-are-here/financial-aid/federal-work-study)
The Federal Work-Study (FWS) program provides jobs to students to help them pay for their educational expenses.

Scholarships (/2020-2021-catalog/while-you-are-here/financial-aid/scholarships)
A scholarship is money given to you to help pay for your education or related expenses. Scholarships come from a variety of sources, such as your college or a private organization.

Federal Direct Loans (/2020-2021-catalog/while-you-are-here/financial-aid/federal-direct-loans)
A federal direct loan is money you borrow from the government that you have to pay back with interest. We encourage students to apply for grants and scholarships before taking out a student loan. A loan is a serious and long-term obligation.

Private Loans (/2020-2021-catalog/while-you-are-here/financial-aid/private-loans)
A private loan is money you borrow from a private lender that you have to pay back with interest. We encourage students to apply for grants and scholarships before taking out a student loan.
What is FAFSA?

The Free Application for Federal Student Aid (FAFSA) ([https://fafsa.ed.gov/](https://fafsa.ed.gov/)) is a form you fill out to get financial aid. Financial aid includes fee waivers, grants, work-study, loans, and scholarships. Submit the FAFSA each year you are in college – it only takes about 30 minutes to complete when you are prepared.

Though undocumented students cannot apply for aid through the FAFSA, they may be eligible for state financial aid through the [California Dream Act (https://dream.csac.ca.gov/)](https://dream.csac.ca.gov/).

Deadline to Submit FAFSA

Submit the FAFSA as early as you can. This will help you figure out how to pay for college before classes begin.

Academic Year 2020-2021

The 2020-2021 academic year includes fall 2020, spring 2021, and summer 2021.

- Date FAFSA available: October 1, 2019
- Deadline to submit FAFSA: March 2, 2020*
- Tax filing year to use for FAFSA: 2018

* You can submit the FAFSA after the "Deadline to Submit" date until June 30 of the following year, but priority is given on a first-come, first-served basis. You may not be considered for a Cal Grant if you submit your application after this date.

Federal School Code

American River College's federal school code is 001232. Make sure you include this on your FAFSA if you want to receive financial aid at American River College.
The California Dream Act is a law that allows undocumented and nonresident students (US citizens and eligible non-citizens) who qualify for a non-resident exemption under Assembly Bill 540 (AB 540) to receive certain types of financial aid. The California Dream Act is unrelated to the federal Deferred Action for Childhood Arrivals (DACA) program.

Instead of submitting the Free Application for Federal Student Aid (FAFSA), students for whom any of the following are true can submit the California Dream Act Application (https://dream.csac.ca.gov/) (CADAA) to receive financial aid. You are eligible to complete the CADAA if you:

- Are undocumented
- Have a valid or expired DACA status
- Are a U visa holder
- Have Temporary Protected Status (TPS)
- Meet the non-resident exemption requirements under AB 540

Financial Aid Available for Undocumented Students

Undocumented students may qualify for the following types of financial aid:

- State grants, including the California College Promise Grant (formerly BOG Fee Waiver), Cal Grants, Chafee Grants, and Student Success Completion Grant
- Assistance from EOPS, CARE, or CalWORKs
- Some scholarships
- Los Rios Promise Program
Promise Programs | American River College

Los Rios Promise

At American River College, we believe in you and your goals, and we want to see you achieve them – that's why we're making the Los Rios Promise. Promise programs offer first-time, full-time students up to two years of tuition-free education at any Los Rios college.

The Los Rios Promise covers tuition for 12 to 18 units but does not cover the cost of books or other fees. Learn about other types of financial aid (https://arc.losrios.edu/student-resources/financial-aid/types-of-financial-aid) that can help cover your expenses.

Deadline for Los Rios Promise Program Enrollment and FAFSA Completion

Eligible students must enroll in classes and submit the FAFSA/CADAA by the following deadlines to receive Los Rios Promise funds:

<table>
<thead>
<tr>
<th>2019-2020</th>
<th>2020-2021</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summer 2019: June 3, 2019</td>
<td>Summer 2020: June 17, 2020</td>
</tr>
<tr>
<td>Fall 2019: August 14, 2019</td>
<td>Fall 2020: September 8, 2020</td>
</tr>
<tr>
<td>Spring 2020: January 9, 2020</td>
<td>Spring 2021: February 1, 2021</td>
</tr>
</tbody>
</table>

Eligibility

To be eligible for the Los Rios Promise, you must:

- Be a California resident
- Be a first-time college student*
- Enroll in and maintain at least 12 units for fall and spring semesters by the deadline
- Complete the Free Application for Federal Student Aid (FAFSA) or the California Dream Act Application (CADAA) by the deadline

* Courses taken during high school (through dual enrollment or advanced education) are considered "pre-college" and do not prevent you from taking advantage of the Los Rios Promise. Students who transfer from a college other than a Los Rios college are not eligible for the Los Rios Promise.

Los Rios Promise Funds for Summer Tuition Fees

To use Los Rios Promise funds to pay for your summer tuition fees, you must do both of the following by the Los Rios Promise Program Enrollment and FAFSA Completion deadline:

- Enroll in any number of units for the summer term
- Enroll in at least 12 units for the fall semester

Eligibility for a Second Year

To apply for the Los Rios Promise Program for a second year, you must have been enrolled in at least 24 units by the Los Rios Promise Program Enrollment and FAFSA Completion deadline for the previous year.
Grants | American River College

What is a Grant?

A grant is money given to you by the federal or state government that you don't usually have to pay back.

Types of Grants for Community College Students

Learn more about the types of grants available to community college students, eligibility, and how and when to apply.

Cal Grant B

Cal Grants are awarded by the State of California and do not have to be repaid.

What it Covers

Cal Grant B Entitlement and Competitive awards provide up to $1,670 for books and living expenses, plus up to an additional $2,000 for full-time community college students. If you transfer to an eligible four-year college or university, Cal Grant B also helps pay for tuition, fees, and living expenses.

Eligibility

Cal Grant B Entitlement awards are for first-year, low-income students whose academic program is at least one academic year.

Cal Grant B Competitive awards are for disadvantaged and low-income students who have a minimum 2.0 grade point average (GPA) and are enrolled in an academic program that is at least one year long.

How to Apply

To apply for a Cal Grant, you must submit the following by March 2 each year you are eligible:

- FAFSA (https://fafsa.ed.gov/) or the California Dream Act (https://dream.csac.ca.gov/) application* (if you do not have a social security number)
- Verified Cal Grant GPA (http://www.csac.ca.gov/pod/cal-grant-gpa-information)
- * DACA and AB 540 students are not eligible for Cal Grant Competitive awards.

Cal Grant C

Cal Grants are awarded by the State of California and do not have to be repaid.

What it Covers

Cal Grant C awards pay $547 toward tuition, books, tools, and equipment for students in occupational, technical, or vocational programs at community colleges.

Eligibility

Cal Grant C awards are for students enrolled in vocational programs that are at least four months long. Funding is available for up to two years, depending on the length of your program.

How to Apply

To apply for a Cal Grant C award, you must submit the following by March 2 each year you are eligible:

- FAFSA (https://fafsa.ed.gov/) or the California Dream Act (https://dream.csac.ca.gov/) application (if you do not have a social security number)
- Verified Cal Grant GPA (http://www.csac.ca.gov/pod/cal-grant-gpa-information)

California College Promise Grant
The California College Promise Grant (formerly BOG Fee Waiver) is just for California community college students and does not have to be repaid.

What it Covers

The California College Promise Grant waives enrollment fees for eligible students. It does not cover the cost of books or other expenses.

Eligibility

You may qualify for the California College Promise Grant if you are a California resident or are exempt from nonresident fees under AB 540 and you meet the criteria of Type A, Type B, or Type C described below.

Type A

You are receiving Temporary Aid For Needy Families (TANF), Supplemental Security Income (SSI/SSP), or General Assistance.

Type B

You meet the income standards listed below. Please note:

- Family size means the number of people in your household, including yourself
- Total family income means adjusted gross income and/or untaxed income for the year listed

<table>
<thead>
<tr>
<th>FAMILY SIZE</th>
<th>2017 TOTAL FAMILY INCOME (FOR 2019/2020 SCHOOL YEAR)</th>
<th>2018 TOTAL FAMILY INCOME (FOR 2020/2021 SCHOOL YEAR)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$18,210</td>
<td>$18,735</td>
</tr>
<tr>
<td>2</td>
<td>$24,690</td>
<td>$25,365</td>
</tr>
<tr>
<td>3</td>
<td>$31,170</td>
<td>$31,995</td>
</tr>
<tr>
<td>4</td>
<td>$37,650</td>
<td>$38,625</td>
</tr>
<tr>
<td>5</td>
<td>$44,130</td>
<td>$45,255</td>
</tr>
<tr>
<td>6</td>
<td>$50,610</td>
<td>$51,885</td>
</tr>
<tr>
<td>7</td>
<td>$57,090</td>
<td>$58,515</td>
</tr>
<tr>
<td>8</td>
<td>$63,570</td>
<td>$65,145</td>
</tr>
<tr>
<td>Note</td>
<td>For each additional family member, add $6,480</td>
<td>For each additional family member, add $6,630</td>
</tr>
</tbody>
</table>

Type C

You submitted the Free Application for Federal Student Aid (FAFSA) or the California Dream Act application (if you don’t have a social security number) and it shows you have unmet financial need.

How to Apply

To apply, fill out the California College Promise Grant (https://home.cccapply.org/money/california-college-promise-grant) application online. Alternatively, you can fill out the application below and return the completed application to the Financial Aid Office.

- 19-20 California College Promise Grant Application (/shared/doc/financial-aid/forms/19-20_CCPG_Application.pdf) PDF (For Summer 2019, Fall 2019, Spring 2020)
- 20-21 California College Promise Grant Application (/shared/doc/financial-aid/forms/20-21_CCPG_Application.pdf) PDF (For Summer 2020, Fall 2020, Spring 2021)

Maintaining the California College Promise Grant

If you qualify for the California College Promise Grant, then make sure you continue to meet the following academic and progress standards to keep receiving the grant funds.

- Academic: Maintain a grade point average (GPA) of 2.0 or higher. If your cumulative GPA falls below 2.0 for two consecutive primary terms (fall/spring semesters), then you may lose your grant eligibility.
- Progress: Complete more than 50% of your coursework. If the cumulative number of units you complete is not more than 50% in two consecutive primary terms (fall/spring semesters, or fall/winter/spring quarters), then you may lose your grant eligibility.
- Combination of academic and progress standards: Any combination of two consecutive terms of cumulative GPA below 2.0 and/or cumulative unit completion of not more than 50% may result in loss of grant eligibility.

Chafee Grant for Foster Youth

Chafee Grants are awarded by the State of California to current or former foster youth. Chafee Grants do not have to be repaid.
What it Covers
A Chafee Grant can be used to pay for tuition, fees, books, supplies, transportation, living expenses, and child care.

Eligibility
To qualify for a Chafee Grant, you must meet the following criteria:

- You are a current or former foster youth who was a ward of the court, living in foster care, for at least one day between the ages of 16 and 18
- If you are or were in Kin-GAP, a non-related legal guardianship, or were adopted, you are only eligible if you were a dependent or ward of the court, living in foster care, for at least one day between the ages of 16 and 18
- You have not reached your 26th birthday as of July 1 of the award year
- You have not participated in the program for more than five years (consecutive or otherwise)

How to Apply
To apply for a Chafee Grant, you must submit the following each year you are eligible:

- FAFSA (https://fafsa.ed.gov/) or the California Dream Act (https://dream.csac.ca.gov/) application (if you do not have a social security number)
- The Chafee Grant (https://chafee.csac.ca.gov) application

Federal Pell Grant
Federal Pell Grant are awarded by the federal government and do not have to be repaid.

What it Covers
Federal Pell Grant can be used for tuition, fees, books, supplies, transportation, living expenses, and child care.

Eligibility
Federal Pell Grant is based on financial need, cost of attendance, the number of financial aid eligible units enrolled, and how long you plan to attend college. Eligible students can receive the Federal Pell Grant for up to six years (12 full-time semester or the equivalent), or 600%.

Pell Grant are usually only given to undergraduate students who have not earned a bachelor's degree or higher. In some cases, a student enrolled in a post-baccalaureate teacher certification program can receive a Federal Pell Grant. You are not eligible to receive a Pell Grant if you are incarcerated or are subject to an involuntary civil commitment upon completion of a period of incarceration for a forcible or non-forcible sex offense.

DACA and undocumented AB 540 students are not eligible to receive Federal Pell Grant.

How to Apply
Submit the FAFSA (https://fafsa.ed.gov/) every year to see if you qualify for a Federal Pell Grant. The amount of other student aid you qualify for does not affect the amount of your Federal Pell Grant.

Federal Supplemental Educational Opportunity Grant (FSEOG)
Federal Supplemental Educational Opportunity Grants are awarded by the federal government and do not have to be repaid.

What it Covers
A FSEOG can be used for tuition, fees, books, supplies, transportation, living expenses, and child care. You can receive $100 to $600 per year.

Eligibility
FSEOGs are awarded based on financial need, how early you apply, number of financial aid eligible units enrolled, and total amount of Financial Aid.

FSEOGs are only given to undergraduate students who have not earned a bachelor's or a professional degree.

DACA and AB 540 students are not eligible to receive FSEOGs.

How to Apply
Submit the FAFSA (https://fafsa.ed.gov/) each year to see if you qualify for a FSEOG. American River College has a limited amount of FSEOG funds, so make sure you submit your FAFSA as early as possible.

Student Success Completion Grant (SSCG)
What it Covers
The Student Success Completion Grant (SSCG) provides up to $4,000 per year to pay for educational costs.

Eligibility
To qualify for a SSCG, you must be:

- A Cal Grant B or C recipient
- Enrolled in at least 12 units each semester

Students enrolled in 12 to 14.99 units will receive $649 for that semester. Students enrolled in 15 or more units will receive $2,000 for that semester.

How to Apply
Students who qualify will be notified. No additional application is necessary for eligibility for the SSCG.
Federal Work-Study | American River College

What is Federal Work-Study?
The Federal Work-Study (FWS) program provides jobs to students to help them pay for their educational expenses.

Eligibility
To be eligible, you must:

- Have a complete financial aid file
- Have unmet financial need
- Be enrolled in at least six financial aid course eligible units at American River College*
- Maintain satisfactory academic progress

*If you are enrolled at multiple Los Rios colleges, then you must have an approved consortium on file for those units to be counted towards your enrollment status.

You are not guaranteed a FWS job just because you are eligible for FWS. FWS jobs are limited, so make sure you apply for a FWS job as early as possible.

Hours
FWS students work an average of 17 hours per week during the fall and spring semesters. Students may be employed for no more than 26 hours per week during a semester and no more than 40 hours per week between semesters. The number of hours may change depending on the needs of the department. Summer FWS hours are based on funding availability.

You may not work more than the number of hours you were awarded.

Pay
FWS students are paid an hourly rate at minimum wage. On average, FWS students earn up to $7,000 during the school year. Paychecks are distributed on the tenth of each month.

Disclaimer
We reserve the right to reduce your FWS award at the end of the fall or spring semester for hours not worked or due to ineligibility. Your FWS award may also be reduced if your financial need changes. You will be notified of any change via email and it is your responsibility to notify your supervisor of the change.
What is a Scholarship?

A scholarship is money given to you to help pay for your education or related expenses. Scholarships come from a variety of sources, such as your college or a private organization.

Examples of types of scholarships:

- Merit scholarships are based on a student's achievements.
- School scholarships are given to students by the school they attend.
- Work scholarships require students to work to receive scholarship money.
- Field of Study scholarships are given to students pursuing a specific field of study or academic program.
- Need scholarships are based on financial need.
- Student-specific scholarships can be based on a student's nationality, gender, race, religion, medical history, and so on.

The Financial Aid office maintains a list of local, state, and national scholarships. Enrollment verification is usually required.

LEARN MORE ABOUT SCHOLARSHIPS ➤ (HTTPS://ARC.LOSRIOS.EDU/SCHOLARSHIPS)
Federal Direct Loans | American River College

What is a Federal Direct Loan?

A federal direct loan is money you borrow from the government that you have to pay back with interest. We encourage students to apply for grants and scholarships before taking out a student loan. A loan is a serious and long-term obligation.

Loan Eligibility

To be eligible for a federal student loan, you must:

- Submit the Free Application for Federal Student Aid (FAFSA) (https://fafsa.ed.gov)
- Demonstrate that you are qualified to enroll in college by one of the following means:
  - You have a high school diploma
  - You have a General Education Development (GED) Certificate
  - You passed the California High School Proficiency Exam (CHSPE)
- Be a US citizen or eligible non-citizen with a social security number (SSN)
- Be enrolled in an eligible degree or certificate program
- Maintain satisfactory academic progress
- Register with the US Selective Service (for males age 18 to 25)
- Have never been convicted of selling or possessing illegal drugs
- Certify that you will use federal financial aid only for educational purposes
- Certify that you are not in default on a federal student loan and do not owe money on a federal student grant

All borrowers must sign the Master Promissory Note (MPN) annually. New borrowers must also complete entrance loan counseling through studentloans.gov (https://studentloans.gov).

Types of Federal Loans

Subsidized Direct Loans

Subsidized direct loans are given to eligible students who demonstrate financial need.

The federal government pays the interest on subsidized loans while you are enrolled in school at least half-time (six units in the fall or spring semester; three units in the summer semester). If you graduate, drop below half-time, or withdraw from school, then you have a six-month grace period where the federal government will continue to pay the interest on your loan. After the six-month grace period, you are responsible for paying the interest on your loan.

Unsubsidized Direct Loans

Unsubsidized direct loans are given to eligible students, regardless of their financial need. The combined amount of an unsubsidized direct loan and all other financial aid that you receive cannot exceed the cost of attendance.

Interest accrues from the time the loan is disbursed, and interest payments begin immediately but can be deferred until you are done with school. It is advantageous to pay the interest while you are in school. This way, the debt will be the principal amount only when repayment begins. Regular monthly payments begin six months after you graduate, drop below half-time status, or withdraw from school.

Annual Loan Limits
<table>
<thead>

</table>

**Borrower's Rights and Responsibilities**

When you accept a loan, you accept legal rights and responsibilities that last until the loan is repaid.

**Borrower's Rights**

You have the right to:

- Receive a copy of your promissory note either before or at the time the loan is made
- Receive a disclosure statement before repayment on your loan begins, including information about:
  - Interest rates
  - Fees
  - Loan balance
  - The number of payments
  - The amount of each payment
- A grace period after you leave school or drop below half-time status and before your loan payments begin (if applicable)
- Prepay all or part of your loans without a repayment penalty
- Receive written notice if your loan is sold to a new holder
- Apply for deferment for your loan payments for certain specified periods (if eligible)
- Request forbearance from the holder of your loan if unable to make payments and don't qualify for deferment
- Receive proof when your loan is paid in full

**Borrower's Responsibilities**

You agree to:

- Repay your loan(s), including accrued interest and fees, even if you do not:
  - Complete or find satisfaction in your education
  - Complete the program within the regular timeframe
  - Obtain employment
- Attend exit counseling before you leave school or drop below half-time enrollment
- Notify your loan holder within ten days if you:
  - Change your name, address, or phone number
  - Drop below half-time status
  - Withdraw from school
  - Transfer to another school
Loan Exit Counseling

All students who receive a loan must complete mandatory online loan exit counseling through the Department of Education. Loan exit counseling provides important information regarding repayment, deferment, and default prevention.

How to Complete Loan Exit Counseling

Visit [studentloans.gov](https://studentloans.gov/ExitCounseling) to complete loan exit counseling. You will need your FAFSA PIN to complete the loan exit counseling. Be sure to select American River College (federal school code: 001232) when asked, otherwise the Financial Aid Office will not receive confirmation that you completed the requirement.

When to Complete Loan Exit Counseling

Loan recipients must complete loan exit counseling when they do any of the following:

- Withdraw from college
- Drop below half-time units
- Transfer to another college
- Graduate

Failure to complete loan exit counseling may result in the delay of your financial aid processing.
Private Loans | American River College

What is a Private Loan?

A private loan is money you borrow from a private lender that you have to pay back with interest. We encourage students to apply for grants (https://arc.losrios.edu/grants) and scholarships (https://arc.losrios.edu/scholarships) before taking out a student loan. If you have to take out a loan, then we encourage you to learn more about federal direct loans (https://arc.losrios.edu/federal-direct-loans) before considering a private loan. A loan is a serious and long-term obligation.

Private loans are determined based on credit. They accrue interest and typically have higher interest rates than federal direct loans. Private loans also do not generally offer the same repayment protections that federal direct loans do.

Students may establish a private loan through any banking institution of their choice. Disbursements are typically made via check.

Code of Conduct for Private Loans

American River College is prohibited from engaging in any business arrangement that is a conflict of interest between the college and private lenders in accordance with the Truth in Lending Act (15 U.S.C 1638(e)). American River College does not:

- Receive any revenue sharing with any lender
- Receive gifts from lenders, guarantors, or loan services
- Have contracting arrangements providing financial benefit from any lender or affiliate of a lender
- Direct prospective student borrowers to a particular lender
- Maintain a preferred lender list
- Delay or refuse loan certifications based upon choice of private lender
- Offer funds for private loans
- Receive any compensation for members of the college that may belong to the advisory board of any lender
Academic Freedom

Statement of Principles on Academic Freedom (American Association of University Professors)

- The purpose of this statement is to promote public understanding and support of academic freedom and tenure and agreement upon procedures to ensure them in colleges and universities. Institutions of higher education are conducted for the common good and not to further the interest of either the individual teacher or the institution as a whole. The common good depends upon the free search for truth and its free exposition.

- Academic freedom is essential to these purposes and applies to both teaching and research. Freedom in research is fundamental to the advancement of truth. Academic freedom in its teaching aspect is fundamental for the protection of the rights of the teacher in teaching and the freedom of the student in learning. It carries with it duties correlative with rights.

- Teachers are entitled to freedom in the classroom in discussing their subject, but they should be careful not to introduce into their teaching controversial matter, which has no relation to their subject.

- College and university teachers are citizens, members of a learned profession, and officers of an educational institution. When they speak or write as citizens, they should be free from institutional censorship or discipline, but their special position in the community imposes special obligations. As scholars and educational officers, they should remember that the public may judge their profession and their institution by their utterances. Hence they should at all times be accurate, should exercise appropriate restraint, should show respect for the opinions of others, and should make every effort to indicate that they are not speaking for the institution.

Academic Honors

The distinction of honors and highest honors is noted on a student’s transcript for each semester in which a student has enrolled in twelve (12) units or more, and has earned a grade point average (GPA) of at least 3.0 (honors) or 3.5 or higher (highest honors). Students earning highest honors will be notified by email of their eligibility to join the honor society, Phi Theta Kappa.

Honors at Graduation

Students who maintain a high grade point average are eligible for honors at graduation. Students who maintain a grade point average of 3.0 or better are eligible for graduation with honors, and students who maintain a grade point average of 3.5 or better are eligible for graduation with highest honors. All college coursework that a student has completed is used to calculate honors at graduation (including coursework taken outside of Los Rios). The published lists of students are compiled from the data available at the time of publication and may be subject to subsequent revision.

Academic Renewal

A student may petition to have previous sub-standard grades (a D or F) earned at American River College discounted. Courses and grades which no longer reflect a student’s current educational objective and current level of academic success may upon petition be discounted in the computation of the grade point average (Title 5, Section 55046). The following conditions must apply:

- A minimum of twelve (12) consecutive months shall have elapsed since the end of the semester or summer session in which the work to be alleviated was recorded; and a minimum of twelve (12) semester units (or its equivalent) with a grade of C or Pass/Credit or better shall have been attained. The coursework must have been completed at a regionally accredited college.

- Current educational objectives must be discussed with a counselor and the counselor’s recommendation must be included on the petition.

- No more than thirty (30) units of substandard grades may be discounted.

- Under no circumstances may course work be discounted if it was used to fulfill requirements for a degree or certificate that has been awarded.

- All grades remain on the permanent record and transcript of grades. However, a proper notation on the transcript will indicate the specific grades that were discounted from the grade point average.

- Once elected, the academic renewal cannot be reversed.

- Academic renewal is not intended for courses that are required and/or will be repeated.

Students with questions regarding this policy or who want to initiate a petition should contact the Counseling office.

Attendance
For students to successfully complete their college work, regular class attendance is necessary, and students are expected to attend all sessions of classes in which they are enrolled (Los Rios Regulation R-2222). All students who remain enrolled in a class after the last day to withdraw (see the academic calendar) will be issued a letter grade for the course. If a student has stopped attending but not dropped the class, the student may receive an F grade for the course on their permanent record. Exception to this policy involves completion of the Student Petition, with appropriate signatures and documentation of extenuating circumstances.

**Excessive Absences**
Students are expected to attend all sessions of the class in which they are enrolled. Any student with excessive absences may be dropped from class (Title 5, Section 58004).

Per Los Rios Regulation R-2222, a student may be dropped from any class when that student's absences exceed six percent (6%) of the total hours of class time. Instructors shall state in each course syllabus what constitutes excessive absences for that course.

**Non-Attendance at First Class**
Per Los Rios Regulation R-2222, students who fail to attend the first session of a class may be dropped by the instructor.

**Auditing Courses**
American River College does not permit auditing of classes. Auditing is defined as attending a course without having enrolled in the course, without responsibility for completing assignments, and without receiving a grade or credit.

**Catalog Rights**
For purposes of graduation from any of the colleges of the Los Rios Community College District, students who remain in attendance in one regular session (semester or summer session) may elect to meet the requirements in effect at the Los Rios college from which the student intends to graduate, in one of three ways:

1. Requirements in effect at the time of admission to a Los Rios college
2. Requirements in effect at the time the student originally enrolled in a regionally accredited college or university
3. Requirements in effect at the intended date of graduation from a Los Rios college

Please note:

- A college may authorize or request substitution for discontinued courses.
- Students changing their major field of study may be required to complete those requirements for the major in effect at the point of change.
- For purposes of this section, “attendance” means taking classes in at least one session (semester or summer session) in each calendar year. Absence for attendance at another regionally accredited institution shall not be considered an interruption in attendance, Los Rios Policy P-7242.

**Change of Address and/or Name**
Requests to have a student's name changed are submitted directly to the Admissions & Records office. In order for this type of request to be processed, documentation (such as a marriage license, court documents, or naturalization papers) is required to verify a legal name change.

Students should report a change of address immediately. Changes can be submitted online in eServices or by submitting a Change of Data form to the Admissions & Records office. American River College is not responsible for misdirected mail if the address change is not provided by the student.

Students can submit birth date and social security number corrections to the Admissions & Records office along with proper documentation (official birth certificates or social security verification).

**Course Repetition and Repeatability**
Repetition of courses must be conducted by all California community colleges in compliance with Title 5, Sections 55040 through 55046.

**Course Repetition Where Substandard Grade is Recorded**
Where a student has received a substandard grade in a course taken at a college, a student may repeat that course up to a maximum of two (2) times in an effort to alleviate the substandard academic grade. Substandard grade is defined as a notation of D, F, NC (No Credit), NP (No Pass), or W (Withdrawal). This regulation is effective across all Los Rios colleges.

The grade and credits earned in the final enrollment shall be used exclusively in determining the grade points earned for that particular course (Title 5, Section 55042).

**Repeatable Courses**
Courses taken where a grade of C or better was earned cannot be repeated. There are, however, certain specialized courses that are designated as "repeatable" and are listed as such in the course description. These include:

- Courses for which repetition is necessary to meet the major requirements of CSU or UC for completion of a bachelor's degree
Intercollegiate athletics and their related conditioning courses may be repeated to meet requirements for California Community College Athletic Association (CCCAA) eligibility.

Intercollegiate academic or vocational competition courses with the primary purpose to prepare students for competition

Variable unit courses that are open entry/exit such as math, reading, and writing laboratory courses. Students may re-enroll in these courses as many times as necessary to complete one time the entire curriculum of the course.

Work Experience courses, which can be taken again when there is new or expanded learning on the job for a maximum of six (6) to sixteen (16) units.

Repetition Without Substandard Grades

Unless a specific exception applies, a student who has received a satisfactory grade shall not repeat the course. Satisfactory grade is defined as A, B, C, P (Pass), or CR (Credit). There are special circumstances that allow for repetition. However, the student must submit a petition requesting the course repetition. These include:

- Students may repeat a course where a course is required by a statute or regulation as a condition of continued paid or volunteer employment, or as a result of a significant change in industry or licensure standards such that repetition is necessary for employment or licensure. These repetitions are not limited and are granted based on the college's verification of established legal mandates (Cal. Code Regs., Title 5, section 55040).

- Students may repeat a course if there has been a significant lapse of time since the first grade was obtained, and:
  - If the college has a properly established recency prerequisite for a course or program (Title 5, Section 55043).
  - If the college finds that another institution of higher education to which the student seeks to transfer has established a recency requirement which the student shall not be able to satisfy without repeating the course in question (Title 5, Section 55043).

- The college finds that the student's most recent previous grade is, at least in part, the result of extenuating circumstances. Extenuating circumstances are verified cases of accident, illness, or other circumstances beyond the student's control. This is a one-time exception.

- A special course that can be repeatable by petition so that a particular student can be approved to repeat it as a disability-related accommodation.

Limitations on Active Participatory Courses

Active participatory courses are those courses where individual study or group assignments are the basic means by which learning objectives are obtained. These include kinesiology/physical education (PE) active participatory courses, as well as visual and performing arts active participatory courses (theatre arts, music, and art). Some courses in these categories are related in content and have been placed in groups that the Los Rios colleges are calling “families” of courses. Each family of courses allows for skill development beyond an introductory level.

Students are limited to taking a maximum of four courses in any one family across all four Los Rios colleges, regardless of how many courses there are. Sometimes a family of courses may include more than four. For example, the Modern Dance Technique family of courses across the four Los Rios colleges includes five courses – DANCE 330 through DANCE 334 (Modern Dance I, II, III, IV, and V).

In addition, if a student gets a substandard grade [a notation of D, F, NC (No Credit), NP (No Pass), or W (Withdrawal)] in any course within a family, the substandard grade counts as one of the four course limitations in the family. The list of families of courses is available in the Counseling office. Please consult with a counselor for more information.

Course Time Conflict/Course Overlap

Students may not enroll in two classes that meet during part of the same hour, except through a petition process. The student must state their justification for enrolling in the overlapping class, and instructors must indicate how the missed time will be made up (Title 5, Section 58031).

Good Standing

In some circumstances, a previous sub-standard grade (a D or F) can be alleviated. You may petition to discount these units in computing your grade point average (GPA) if they meet the criteria set out by the Admissions and Records policies. However, no discount will be given for coursework required for a degree or certificate that has been granted.

</tbody>
</table>

Grade Point Average
The grade point average is found by taking the (Total Grade Points Earned) divided by (Total units attempted with a letter grade).

Progress Percentage
The progress percentage is found by taking the (Total units with W, I and NC) divided by (Total units enrolled).

Pass/No Pass Grading
You may choose one course each semester from courses that allow Pass/no Pass (P/NP) grading. A petition must be filed with the admissions office before the deadline published in the Class Schedule. A grade earned with an "A", "B" or "C" grade will be recorded as P with Grade Points Per Unit. A "D" or "F" grade will be recorded as NP with no Grade Points Per Unit. Units attempted for P/NP grades are not computed in the grade point average but are used for determining progress probation and dismissal. Once you have filed for P/NP grading in a course, it cannot be changed to a letter grade. No more than 15 units of Pass/No Pass may be applied toward an AA or AS degree.

Incomplete Grading
An instructor may assign an incomplete grade, "I", when the instructor believes the student cannot complete the requirements of the class before the end of the semester due to unforeseeable emergency and justified reasons. To receive credit for the class, the student must finish the incomplete work within one year after the end of the semester. After the work is completed and evaluated, or when the time has expired, a final grade will be assigned. A student receiving an incomplete may not reenroll in the class.

In Progress
If you receive an "in-progress" grade, you must re-enroll in the class in the next semester. If you don't re-enroll, a grade will be assigned in lieu of the "in-progress."

Withdrawal from Class
A student may officially drop a class without notation on the permanent academic record/transcript prior to the point in which 15% of a class has occurred (see the academic calendar [https://arc.losrios.edu/admissions/academic-calendar] for withdrawal deadlines). Withdrawals occurring after this time, and before the point in which 75% of the class has occurred, shall result in a W notation on the permanent academic record/transcript. Official withdrawals are those that have been processed via eServices or in the Admissions and Records office.

A W grade on the permanent academic record/transcript is used for determining progress probation and progress dismissal. No withdrawals are permitted during the last 25% of a course (see academic calendar for deadlines), except due to extenuating circumstances (verified cases of accidents, illness, or other circumstances beyond the control of the student), for which a student may request withdrawal through the student petition process. After consultation with the instructor and with administrative approval, the grade may be recorded as a W rather than as a less than satisfactory or failing grade on the permanent academic record/transcript. In all other cases, after the 75% date, a student will receive a grade in the course.

Military withdrawal is available for students who are members of an active or reserve military service, and who receive orders compelling a withdrawal from courses. Students requesting military withdrawal must file a student petition and include supporting documentation.

Excused withdrawal is available when a student is permitted to withdraw from a course(s) due to specific events beyond the control of the student making his or her ability to complete a course(s) impractical. These events may include a job transfer outside the geographical region, an illness in the family where the student is the primary caregiver, when the student who is incarcerated in a California state prison or county jail is released from custody or involuntarily transferred before the end of the term, when the student is the subject of an immigration action, or other extenuating circumstances. Excused withdrawal shall not be counted in progress probation and dismissal calculation. Excused withdrawal shall not be counted toward the permitted number of withdrawals or counted as an enrollment attempt.

Probation and Dismissal
There are two types of probation: academic and progress.

Academic Probation
A student who has attempted at least twelve (12) units is placed on academic probation if the student has earned a cumulative grade point average below 2.0.

Progress Probation
A student who has enrolled in a minimum of twelve (12) semester units is placed on progress probation when W, I, or NP grades are recorded in one-half or more of all units in which a student has enrolled.
Unit Limitation
A student on either academic or progress probation may be limited to 12 or fewer units, or to a course load recommended by the student’s counselor.

Removal from Probation
A student on academic probation is removed from probation and achieves good standing when the student’s cumulative grade point average is 2.0 or higher.
A student on progress probation is removed from probation and placed in good standing when less than half of the student’s units are recorded as W, I, or NP.

Remedial Unit Limitation
The California Community Colleges Board of Governors has adopted regulations limiting the number of remedial course units a student may take to 30. These courses are usually numbered 1 through 99. Students may petition for a waiver to the 30-unit limitation through a counselor. However, federal financial aid does not allow a student to receive aid for more than 30 remedial units.

Transcripts
Order Transcripts Online
Current and former students can order transcripts and authorize the release of student records online. Students must submit a separate order for each Los Rios college they attended.

ORDER TRANSCRIPTS ONLINE ➔ (HTTPS://ARC.LOSRIOS.EDU/ORDER-TRANSCRIPTS)

Unit/Academic Load
Per Los Rios Regulation R-7211, fifteen (15) units each semester is considered a full load. Twelve (12) units each semester is a minimum full-time load and is usually acceptable to qualify for scholarships, grants, loans, and holding student offices.

Fall/Spring Semester
Eighteen (18) units per semester is a maximum load. Unit limit shall be district-wide. A petition to exceed the maximum load must be submitted in writing to the college at which the additional units will be taken prior to registration. A student may petition up to a maximum of six (6) additional units district-wide through this process.

Summer Session
Eight (8) units per summer session is a maximum load. Unit limit shall be district-wide. A petition to exceed the maximum load must be submitted in writing to the college at which the additional units will be taken prior to registration. A student may petition up to a maximum of four (4) additional units district-wide through this process.

Special Considerations
Full governmental subsistence for veterans and dependents requires the unit load of twelve (12) units (with reduced benefit amounts dependent on the total number of enrolled units).

The following categories require the minimum unit load indicated:

- International students – twelve (12) units
- Student athletes – twelve (12) units, including kinesiology/physical education

Unit of Credit
Units of credit are assigned to courses based on the "Carnegie Unit," which assigns one unit of credit for three hours of work by the student per week. Usually this means one hour of lecture or discussion led by the instructor and two hours of outside preparation by the student. In laboratory courses, three hours of work in the laboratory are normally assigned one unit of credit which may include some additional preparation outside of class time. Students can find the number of units of credit with each course description.
Enrollment Verification | American River College

Enrollment verification for child care, health insurance, or car insurance can be printed out via eServices or requested by fax or in-person. All other requests can be processed immediately by the National Student Clearinghouse for a fee.

Verifications for Child Care, Health Insurance, and Car Insurance

eServices

You can print or save an enrollment verification certificate for free through eServices (https://ps.losrios.edu/student/signon.html). From your eServices dashboard:

1. Click Student Center
2. Click Enrollment Verification (under Academics)
3. Follow the instructions to get to your printable verification

Fax and In-Person Requests

We do not accept verification requests over the phone. Faxed and in-person requests are processed in five to seven business days after we receive the request. We do not fax back verifications – all verifications must be picked up in person at Admissions and Records. You must provide a photo ID when you pick up your enrollment verification.

Other Enrollment and Degree Verifications

Requests from the following types of companies or individuals will be directed to the National Student Clearinghouse:

- Credit issuers
- Travel and consumer product companies
- Housing providers
- Scholarship providers
- Employers and employment agencies
- Verifications required by students or parents that do not include child care, health insurance, or car insurance

For your convenience, Los Rios has authorized the National Student Clearinghouse to act as its agent for verification of student enrollment and degree status. You can obtain an official Enrollment Verification Certificate at any time via the National Student Clearinghouse website at nscverifications.org (http://nscverifications.org/welcome-to-verification-services/).
In addition to regular classes, students may receive college credit when they participate in the following alternative credit and study options.

Advanced Placement (AP) Exams

American River College grants credit for College Board Advanced Placement (AP) examinations. A student who meets the following requirements may receive credit for exams they successfully passed:

- Official copies of test scores are on file with Admissions and Records
- Student is in good standing, which is defined as having completed twelve (12) units of credit and having a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of AP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Review the [AP Credit Chart](https://arc.losrios.edu/ap-scores-chart) to see how American River College grants credit for AP exams.

College-Level Examination Program (CLEP)

American River College grants credit for College-Level Examination Program (CLEP) examinations. CLEP scores fulfill general education areas only; they do not fulfill graduation competencies, requirements for any major at American River College, or enrollment limitations (such as prerequisite requirements) for any course at American River College.

A student may receive credit for CLEP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Visit the [College Board's College-Level Examination Program website](https://clep.collegeboard.org) to learn more.

CLEP scores are not accepted for transfer to the University of California. Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of CLEP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Review the [CLEP Credit Chart](https://arc.losrios.edu/clep-scores-chart) to see how American River College grants credit for CLEP exams.

International Baccalaureate (IB) Tests

American River College may award college credit for international baccalaureate (IB) higher-level course completion, if the course work is compatible with the college's curriculum. No credit will be granted for lower-level course work completed in the IB program.

A student who meets the following requirements may receive credit for IB tests they successfully passed:

- Official copies of test scores are on file with Admissions and Records
- Student is in good standing, which is defined as having completed twelve (12) units of credit and having a minimum 2.0 grade point average (GPA)

Review the [IB Credit Chart](https://arc.losrios.edu/ib-scores-chart) to see how American River College grants credit for IB tests.

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of IB scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Students who have earned credit from an IB test should not take a comparable college course because transfer credit will not be granted for both.

Credit by Examination

Under special circumstances and with department approval, students regularly enrolled and in good standing who believe they are qualified by experience or previous training may take a special examination to establish credit in a course in which they are not formally enrolled. A student who wishes to petition for credit by examination must have:
• Successfully completed a minimum of 12 units at American River College

• A minimum grade point average (GPA) of 2.0

Successful completion of a course by examination is recorded on the permanent record/transcript as a Pass (P) grade. The P grade does not enter into the computation of the student's GPA.

Limitations
A maximum of 15 units may be allowed by credit by examination. The units may not be used to satisfy the 12-unit residence requirement for graduation. Credit by examination is not applicable to all courses, and in some instances, the process may require measures of evaluation.

Some four-year colleges and universities do not accept units granted through credit by examination. Students are encouraged to meet with a counselor for more information.

For more information, contact the area dean.

Credit for Military Service
Veterans may receive credit for military service if they present papers showing honorable discharge from active duty of one year or more in the United States armed forces.

How to Apply
After you have completed one semester at American River College, submit a copy of your DD-214 (member copy 4) separation paper and a petition to the Admissions and Records Office.

You may be eligible to receive the following credit (if applicable):

• Three (3) units of living skills graduation requirements
• One (1) unit of elective credit

In some circumstances, veterans may also receive credit for satisfactory training completed in service school.

Guidance from the American Council on Education
Credit granted for military service is based on A Guide to the Evaluation of Educational Experiences in the Armed Services, published by the American Council on Education.

Students in the six-month reserve training program are not eligible for military credit. This is in accordance with the recommendation of the American Council on Education.

Students are encouraged to contact a counselor for more information.

Distance/Online Education
American River College offers instruction via the internet. This includes online course sections where all work is carried out online, and partially online course sections where instruction is divided between online and in-person modalities.

To be successful in online courses, students need to be self-directed, motivated, and able to independently complete and electronically submit assignments on schedule. Students will also need reliable access to a computer and basic internet skills.

Online Classes
In online classes, classes meet online and all coursework is done online.

Partially Online or "Hybrid" Classes
Partially online classes feature a mix of online and in-person meetings and coursework. Class schedules will indicate the day/time of the in-person, on-campus class sessions.

Online Learning Platform
All online classes are offered through Canvas (https://canvas.losrios.edu), a cloud-based learning management system used by faculty and students within Los Rios Community College District.

Learn more about online education at American River College (https://arc.losrios.edu/academics/online-education).

Independent Study
An independent study course involves an individual student or small group of students in study, research, or activities beyond the scope of regularly offered courses, pursuant to an agreement among the college, faculty member, and student(s). Independent studies require regular meetings between the student and instructor. Additionally, the instructor may require examinations or other measures of evaluation, field trips, term papers, and other assignments.

Please note that some four-year colleges and universities do not accept units granted through independent study. Students are encouraged to meet with a counselor for more information.

For the appropriate petition and course proposal form, please contact Admissions and Records (https://arc.losrios.edu/admissions-records).
Study Abroad

Study abroad can be an enlightening, maturing, and life-changing experience. Students are challenged to re-examine themselves, their attitudes, and their studies as they learn to understand new and different cultures. In cooperation with the American Institute for Foreign Study, Los Rios Community College District offers unique study opportunities in cities such as:

- London, England
- Barcelona, Spain
- Florence, Italy

Requirements

To study abroad, students must:

- Be at least 18 years old
- Be in good academic standing with 12 college units completed by the time you go abroad
- Have a minimum overall grade point average (GPA) of 2.25

During the 13-week Study Abroad program, all students take 12 units – a three-unit Life and Culture class, an additional Los Rios class, and two other classes from the list of offerings.

Financial Aid

Financial Aid is available for study abroad.

Upcoming Study Abroad Opportunities

Learn more about current and upcoming study abroad opportunities (https://arc.losrios.edu/study-abroad).

Work Experience and Internship Program

Work experience is an academic program in which students apply what they have learned in the classroom to a job or internship and work to earn college credits. There are two types of programs: vocational and general.

For more information, please visit the Work Experience and Internship Program (https://arc.losrios.edu/wexp).
Students may earn credit for College Entrance Board Advanced Placement (AP) tests with scores of 3, 4, or 5. AP scores can be used to meet American River College AA/AS general education requirements (/2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#aa-as-ge), California State University (CSU) general education requirements (/2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#csu-ge), and Intersegmental General Education Transfer Curriculum (IGETC) (/2020-2021-catalog/while-you-are-here/alternative-credit/study-options/advanced-placement-test-scores#igetc).

A student may receive credit for AP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of AP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

### AP Credit Toward American River College General Education Requirements

This table describes how passing AP scores translate into college credit at American River College, and which general education areas they satisfy (if any).

© The maximum UC credit for AP calculus exams is 8 quarter units or 5.3 semester units.

^The maximum UC credit for both AP English tests is 8 quarter units or 5.3 semester units.

% AP test meets IGETC science course and lab requirement but only grants three units toward IGETC. Student will need to earn at least seven units in IGETC Area 5 to be certified.

$ Offered May 2013 and beyond.

` The maximum UC credit for all AP physics exams is 8 quarter units or 5.3 semester units.

** Students need to complete a course that covers California State and Local Government to complete CSU American Institutions requirement.

For more information about transferring to the University of California (UC), see how UC campuses accept AP credit (http://admission.universityofcalifornia.edu/counselors/exam-credit/ap-credits/index.html).
American River College grants credit for College-Level Examination Program (CLEP) examinations. CLEP scores may be used to meet American River College AA/AS general education requirements and California State University (CSU) general education requirements; they do not fulfill graduation competencies, requirements for any major at American River College, or enrollment limitations (such as prerequisite requirements) for any course at American River College.

A student may receive credit for CLEP exams they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Visit College Board's College-Level Examination Program (https://clep.collegeboard.org/) website to learn more.

CLEP scores are not accepted for transfer to the University of California. Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of CLEP scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

### Exceptions

American River College does not offer credit for the following CLEP exams, and these exams do not satisfy associate degree general education requirements:

- College Composition
- College Composition – Modular
- College Mathematics
- English Composition (with or without essay)
- Financial Accounting
- Freshman College Composition
- German
- Information Systems and Computer Applications
- Introduction to Educational Psychology
- Introduction to Business Law
- Principles of Accounting
- Principles of Management
- Principles of Marketing
- Social Sciences and History

</tbody>
</table>

* These unit values are used only in determination of eligibility for admissions to CSU and should not be confused with the unit values applied toward GE Certification.

** Students seeking certification in GE Breadth prior to transfer must have passed the CLEP exam before this date.

*** If a student passes more than one CLEP examination in the same language other than English (such as two exams in Spanish), then only one examination may be applied to the baccalaureate (BA or BS). For each examination in a language other than English, a passing score of 50 is considered “Level I” and earns six units of credit towards the baccalaureate (BA or BS); the higher score listed for each test is considered “Level II” and earns additional units of credit and placement in Area C2 of GE Breadth, as noted.

Exceptions

CSU does not offer credit for the following CLEP exams, and these exams do not satisfy CSU GE breadth requirements:

- College Composition
- College Composition – Modular
- College Mathematics
- English Composition (with or without essay)
- Freshman College Composition
- Social Sciences and History
American River College may award college credit for international baccalaureate (IB) higher-level (HL) course completion, if the course work is compatible with the college’s curriculum. IB test scores may be used to meet American River College AA/AS general education requirements, California State University (CSU) general education requirements, and Intersegmental General Education Transfer Curriculum (IGETC). No credit will be granted for lower-level course work completed in the IB program.

A student may receive credit for IB tests they have successfully passed once the following requirements are met:

- Official copies of test scores are on file with Admissions and Records
- Student has completed twelve (12) units of credit and has a minimum 2.0 grade point average (GPA)

Students should be aware that other colleges and universities have the right to accept, modify, or reject the use of IB scores towards their graduation requirements. Check with your counselor to determine whether these test results will be accepted at the transfer institution of your choice.

Students who have earned credit from an IB exam should not take a comparable college course because transfer credit will not be granted for both.

College Safety and Security | American River College

At American River College, we are committed to maintaining a safe learning environment and supporting an ongoing comprehensive safety program. The Los Rios Police Department (LRPD) employs sworn police officers who are certified through California Peace Officers Standards and Training (POST) and are responsible for protecting life and property across the district.

LRPD has excellent working relationships with other law enforcement agencies and emergency service providers in our neighboring communities. These strong partnerships help support more effective responses in emergency situations.

Learn more about Los Rios Police Department (https://police.losrios.edu).

In This Section

- **Crime Prevention** (/2020-2021-catalog/while-you-are-here/college-safety-and-security/crime-prevention)

- **Campus Traffic Regulations** (/2020-2021-catalog/while-you-are-here/college-safety-and-security/campus-traffic-regulations)
  Learn about campus traffic regulations enforced by Los Rios Police Department.

  Learn how to report an on-campus crime or incident to Los Rios Police Department.

- **Clery Report** (/2020-2021-catalog/while-you-are-here/college-safety-and-security/clery-report)
  Each year, the Los Rios Police Department publishes the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Report.
Crime Prevention | American River College

American River College actively supports crime prevention through a number of programs, including:

Emergency Automobile Assistance

Though they are not mechanics, Los Rios Police officers are equipped and trained to start cars with dead batteries or unlock non-electric car doors. Proper identification is required for the performance of these services.

Firearms

California Penal Code Section 626.9 (h) prohibits the possession of a firearm on college grounds.

Alcohol

Consumption of, or being under the influence of, alcohol while on campus is strictly prohibited. Violators are subject to suspension, expulsion, and/or criminal prosecution (Los Rios Policy P-2443 (/shared/doc/board/policies/P-2443.pdf)).

Emergency Telephones

Outdoor, emergency telephones have been installed at strategic locations throughout the campuses. These blue phones, when accessed, will automatically connect the caller to the Los Rios Police Department.

Illegal Drugs

American River College is committed to being a drug-free campus. Violators will be subject to disciplinary procedures. The use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance is strictly prohibited. Violators are subject to suspension, expulsion, and/or criminal prosecution (Los Rios Policy P-2441 (/shared/doc/board/policies/P-2441.pdf) and Los Rios Policy P-2443 (/shared/doc/board/policies/P-2443.pdf)).

Children on Campus

It is not appropriate for children to attend classes with their parents. All children on campus must be under the direct supervision of a parent, guardian, or other authorized adult. Unattended or disruptive children will be reported to the proper authorities.

Parking

Vehicles that do not have a valid semester parking decal or daily permit properly displayed will be issued a parking citation. There is a $283 fine for parking in designated disabled spaces (including hatch marks next to disabled spaces) without a state-issued disabled decal or plate.

Sexual Harassment

Sexual harassment in any situation is unacceptable and is in violation of state and federal laws and regulations. Corrective action will be taken where evidence of sexual harassment is found (Los Rios Policy P-2424 (/shared/doc/board/policies/P-2424.pdf)).
Los Rios Police Department (LRPD) enforces the California Vehicle Code (CVC) and board-approved regulations on grounds designated for vehicle parking and traffic.

For more information, see parking regulations (https://police.losrios.edu/parking-resources/parking-regulations).
To report an on-campus crime or incident, see crime and reporting (https://police.losrios.edu/crime-and-reporting) on the Los Rios Police Department website.
Each year, the Los Rios Police Department publishes the Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Report (also known as the Annual Clery Report). This report includes information about our safety and security policies and specific crime statistics.

The classroom (including laboratories, field trips, independent study, and so on) is the essential part of any college where freedom to learn should flourish. The instructor has the responsibility for the manner of instruction and the conduct of the classroom. The instructor should not act in any way that denies the rights of students as set forth below (Los Rios Regulation R-2411 (/shared/doc/board/regulations/R-2411.pdf)).

**Student Academic Rights**

**Student Publications**

In preparing student publications, the editorial staff and faculty advisors shall be free from censorship and advance copy approval except as provided by published district policy, statutes, or college regulation. These publications should do the following:

- Adhere to canons of responsible journalism, such as avoidance of libel, indecency, undocumented allegations, attacks on personal integrity, and the techniques of harassment and innuendo.
- State on the editorial page that the opinions expressed are not necessarily those of the college or the student body.

**Support Causes**

Students shall have the right to:

- Take stands on issues
- Examine and discuss questions of interest to them
- Support causes by orderly means which are in harmony with the regular functioning of the institution

**Free Assembly and Free Speech**

Students shall have the right to hear speakers on any subject and college recognized student organizations shall have the right to present speakers on any subject. In addition, students shall have the right of free assembly on each campus subject to regulations that assure the regular functioning of the institution.

The policies and regulations shall include reasonable provisions for the time, place, and manner of conducting these activities, but shall not prohibit the right of students to exercise free expression including, but not limited to, the use of bulletin boards, the distribution of printed materials or petitions, and the wearing of buttons, badges, and other insignia.

Expression which is obscene, libelous, or slanderous according to current legal standards, or which so incites students as to create a clear and present danger of the commission of unlawful acts on college premises, or the violation of lawful district or college regulations, or the substantial disruption of the orderly operation of the college, shall be prohibited.

**Free to Organize**

Students shall have the right to form an organization around any particular interest. This right includes the freedom to organize and to join student organizations subject to published college and district regulations.

**Voice in Decision-Making**

Students shall have the right to be informed on all college matters that can be shown to be directly relevant to them by having a voice in decision making that affects their academic future, with the exception of staff appointment, termination, and tenure.

In case of conflict in determining what college matters are relevant to students, the determination will be made by a college-designated student, faculty, and administrative committee.

In addition, student representatives shall be members of all faculty and administrative committees related to students’ concerns; such student representatives shall have a vote as committee members.
Confidentiality

Students shall have the right to have their academic records treated in a confidential and responsible manner with due regard to the personal nature of the information these records contain. Students' records will be released only on the written consent of the students or as provided by law. Learn more about access to student records [here](https://arc.losrios.edu/access-to-student-records).

Academic Evaluation

Students shall have the right of protection against prejudiced or capricious academic evaluation. At the same time, students are responsible for maintaining standards of academic performance established in advance for each course in which they are enrolled.

Grievance Procedure

Students shall have the right to file a grievance as outlined in [Los Rios Regulation R-2412](https://arc.losrios.edu/shared/doc/board/regulations/R-2412.pdf), in the event of an alleged breach of their rights. American River College's designated grievance officer will hear grievances of students who believe their academic rights have been denied or violated.

Student Responsibilities

The Expectations of the College

Admission to college assumes the expectation that the student will:

- Be a responsible member of the college community
- Obey the law
- Comply with the published rules and regulations of the college
- Respect the rights, privileges, and property of the other members of the college community
- Not interfere with legitimate college affairs

Students enrolled in a class are responsible for meeting standards of performance and conduct established by the Los Rios Community College District and the instructor. Students are responsible for registering, "adding," and "dropping" classes in a timely fashion to make sure that other students have an opportunity to take classes. Students are responsible for completing and submitting all class assignments, examinations, tests, projects, reports, and so on by scheduled due dates, or face penalties.

If any problem arises regarding coursework or attendance, the student will be held responsible for initiating communication and contact with the instructor. In addition, students will be held responsible for behavior and conduct adverse to the preservation of order as established by the college and the instructor. Students are responsible for meeting their degree requirements as provided in the college catalog.

In the case of student conduct that involves an alleged or proven violation of criminal law, the disciplinary authority of the college will not be used to duplicate the function of criminal authority. Disciplinary action may be taken if the conduct also involves a violation of district or college policy.

Access to Student Records (FERPA) | American River College

Use and Release of Student Information

The Family Educational Rights and Privacy Act of 1974 (FERPA) was designed to protect the privacy of educational records and to establish the rights of students to inspect and review their educational records. It also provides control over the release of educational record information. The original intent of this legislation was to keep elementary and high school records private and to give parents access to their child's school records.

After a student turns eighteen or attends an institution of higher education (a college or university), the rights of access to the student's records transfer to the student. This means that all academic information regarding a college student goes directly to the student unless the student has given specific, written permission to release that information to someone else.

While parents understandably have an interest in their child's academic progress, they are not automatically granted access to a student's records without written consent of the student. Parents are encouraged to consult with the student if academic information is needed.

A student can give permission for a third party to access their records by filing a Student Consent for Release of Records Form (/shared/doc/admissions-records/forms/student-consent-for-release-of-student-records.pdf) (PDF) with the Admissions and Records office.
Alcohol, Drug, and Smoking Policy | American River College

Alcohol and Drug Policy

The abuse of illicit drugs and alcohol disrupts classes, compromises your physical and mental health, subjects you to criminal penalties, and impairs your ability to benefit from the learning experience. We therefore ask the college community to actively support a drug- and alcohol-free learning environment by knowing and making others aware of college policies and the substantial health and legal consequences of abuse.

District Policy

Policy P-2443: Drug and Alcohol-Free Workplace and College Premises (/shared/doc/board/policies/P-2443.pdf) states that the district “is committed to maintaining a drug- and alcohol-free workplace in accordance with the requirements of the US Drug-Free Workplace Act of 1988, and a drug- and alcohol-free college environment for students and employees in accordance with the requirements of the Drug-Free Schools and Community Act Amendment of 1989.”

Legal Sanctions

The Los Rios Standards of Student Conduct prohibit the use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance. Controlled substances include cocaine, marijuana, LSD, heroin, methadone, mescaline, peyote, and methaqualone, among others.

If you abuse drugs or alcohol on campus, or appear on campus or at a college-sponsored function under the influence of drugs or alcohol, you can be suspended, expelled, and/or criminally prosecuted. The penalties for the more common offenses are:

- Possession or use of alcohol: year in jail and/or fine
- Possession of marijuana: criminal citation and fine
- Possession of cocaine: imprisonment in a state prison
- Sales of any illegal drug: imprisonment in a state prison
- Possession or use of alcohol by a minor: one year in jail and/or fine
- If you are a student employee, you may be terminated
- You are required to report any convictions within five days of the occurrence
- You will be ineligible for financial aid

Smoking Policy

Per section 2.23 of Regulation R-1411: Use of Facilities (/shared/doc/board/regulations/R-1411.pdf), smoking, vaping, and the use of tobacco is prohibited on all district/college property. Smoking is defined as inhaling, exhaling, burning, or carrying any lighted or heated cigar, cigarette, pipe, or any other lighted or heated tobacco or other product intended for inhalation, in any matter or in any form. Smoking also includes the use of e-cigarettes. An e-cigarette is any oral device that provides a vapor of nicotine or any other substance for inhalation. E-cigarettes do not include products approved by the United States Department of Food and Drug Administration for medical treatment.
Computer and Internet Use Policy | American River College

Computer Use Policy

The following rules apply to all computer labs on campus. Specific labs may have additional rules.

General Rules

- Equipment use in the lab is intended for class assignments only – use of computers is closely monitored for compliance with acceptable use standards
- Computers are available on a first-come, first-served basis
- Food and/or drinks (including water bottles) are not allowed in computer labs at any time
- Children (under 18) are not allowed to use computer equipment unless they are current American River College students
- Report problems with computers and/or printers to computer lab staff
- A valid login may be used for assigned purposes only – sharing access with others is not permitted
- All downloading and saving must be to removable media
- Playing games on college computers is prohibited except for class assignments
- When you're done, log off the computer but don't turn the computer off
- Directions from any lab assistant or instructor concerning equipment/facilities or student conduct must be followed in order to continue use of the facilities

Respect Those Around You

- Bring your own headphones for sound control.
- Pets are not allowed, except for service animals.
- Keep noise to a minimum
- Use one workstation per person
- Keep backpacks out of the walkways
- Turn off or silence cell phones and pagers and answer phone calls outside of the lab

Software

- Software may not be copied from computers or network drives
- Installing software or games on computers is prohibited

Internet Use Policy

Internet access is limited to classroom assignments only.

The acceptable use standards concerning internet use must be followed where applicable. The following activities are not allowed:

- Transmitting unsolicited information, which contains profane language or panders to bigotry, sexism, or other forms of discrimination
- Using the internet to gain unauthorized access to any computer
- Engaging in personal attacks (writing bullying, intimidating, threatening, or harassing entries)
- Making threats (directed towards others or yourself) without expecting the recipients of those threats, the college, and the police to consider them real
- Transmitting information that contains obscene, indecent, lewd, or lascivious material or other material that explicitly or implicitly refers to sexual conduct. This includes displaying such material where other individuals could potentially view it.
- Inappropriate mass mailing, which includes multiple mailing to news groups, mailing lists, or individuals

Attempts by students to obtain, manipulate, delete, or change the contents of another user's files, passwords, etc. are regarded as infractions of the California Computer Crime Penal Code. Attempts to "break" the operating system constitute a felony under this law.
Copyright and Piracy Policy | American River College

What is a Copyright?

A copyright is a legal protection that gives the developer of an original piece of work (intellectual or artistic) exclusive rights for a certain time period. Copyright infringement is the unauthorized use of copyrighted material.

What is Piracy?

Piracy is the recreational downloading of copyrighted materials. Piracy is a violation of both federal law and college policy. The Recording Industry Association of America (RIAA) and Motion Pictures Association of America (MPAAP) have been cracking down on piracy in the US and targeting university and college networks, since this is where the highest amount of copyright infringements occur.

What is Peer-to-Peer (P2P) Software?

Peer-to-Peer (P2P) software allows users to download and distribute files from computer to computer across networks using P2P protocols, regardless of whether the user has paid for the files. When users have not paid for these files, they break federal and international copyright laws.

Piracy is not the only downside of using P2P software. P2P software allows users to access your computer and potentially hack into your private data. The result is exposure of your computer to significant security risks from viruses, worms, and hackers that could lead to possible loss of data, identity theft, and other liabilities.

College Actions for Violation

Sharing music, videos, or other copyrighted materials using Peer-to-Peer (P2P) applications over the network exposes you and anyone you share files with to legal action.

If a notice is sent from a trusted agency to American River College, then the student's account will be blocked from accessing the WiFi network. The student in question may have to go through the college's disciplinary process to regain access.

Summary of Civil and Criminal Penalties for Violation of Federal Copyright Laws

Copyright infringement is the act of exercising, without permission or legal authority, one or more of the exclusive rights granted to the copyright owner under section 106 of the Copyright Act (Title 17 of the United States Code). These rights include the right to reproduce or distribute a copyrighted work. In the file-sharing context, downloading or uploading substantial parts of a copyrighted work without authority constitutes an infringement.

Penalties for copyright infringement include civil and criminal penalties. In general, anyone found liable for civil copyright infringement may be ordered to pay either actual damages or “statutory” damages affixed at not less than $750 and not more than $30,000 per work infringed. For "willful" infringement, a court may award up to $150,000 per work infringed. A court can, in its discretion, also assess costs and attorneys’ fees. For details, see Title 17, United States Code, Sections 504, 505.

Willful copyright infringement can also result in criminal penalties, including imprisonment of up to five years and fines of up to $250,000 per offense.

Disciplinary Procedures and Due Process
| American River College

The following are the disciplinary and due process procedures for when a student is referred to the Office of Student Conduct.

1. A student who is referred for discipline is required to meet with the Student Conduct Officer. This referral means the student's alleged behavior is believed to have been a violation of the Los Rios Student Standards of Contact.

2. The student will receive a certified letter via US standard mail notifying them of their referral. In the notification, the student is instructed to make an appointment for an investigative meeting with the Student Conduct Officer.

3. At the informal, investigative meeting, the Student Conduct Officer shall interview the student for the purpose of discussing the alleged misconduct and the disciplinary action that should be taken (if any).

4. At the investigative meeting, the parties shall have the right to present statements, testimony, evidence, and witnesses, except that neither party shall have the right to be represented by an attorney.

5. The investigative meeting is mandatory. If the student fails to make an appointment and/or does not attend the meeting, then the Student Conduct Officer may review the case and initiate disciplinary action without input from the student.

6. After the investigative meeting, the Student Conduct Officer may initiate disciplinary action by filing a notice with the Vice President of Student Services and serving such notice on the student charged. This decision depends entirely on the information obtained during the investigation.

7. The student has the right to request an appeal to the disciplinary action with the Vice President of Student Services no later than seven (7) days after the service of the notice of disciplinary action. A copy of the appeal form will be mailed to you along with your notice of disciplinary action.

8. After an appeal hearing, a written decision will be mailed to the student from the Office of the President within ten days of the conclusion of the hearing.

9. At this point, the final decision for disciplinary action rests with the college president. The president may approve, reject, or modify the written decision. The decision of the college president for disciplinary action is final.

Refer to Regulation R-2442: Due Process (/shared/doc/board/regulations/R-2442.pdf) for complete information regarding student standards of conduct and due process.

Contact

For additional information on student conduct, please contact the Student Conduct Officer:

Chad Funk (Associate Vice President, Student Services)
Email: funkc@arc.losrios.edu (mailto:funkc@arc.losrios.edu)
Phone: (916) 484-8452
Academic Integrity and Responsibility

Academic integrity and responsibility mean acting honestly, conscientiously, and honorably in all academic endeavors. Students are accountable for all that they say and write. Since trust is the foundation of an intellectual community, and since student work is the basis for instructors to evaluate student performance in courses, students should not misrepresent their work nor give or receive unauthorized assistance.

Academic Dishonesty

In contrast to academic integrity and responsibility, academic dishonesty takes the form of plagiarism and/or cheating.

Plagiarism

The word plagiarism comes from the Latin word “plagiarius,” meaning kidnapper. Plagiarism is generally the taking of words, sentences, organization, and ideas from another source without acknowledging that source.

Plagiarism may include:

- Submitting papers, examinations, or assignments written/completed entirely or in part by others
- Directly copying portions of another's work without enclosing the copied passage in quotation marks for written work or without citing appropriately in an oral presentation and without acknowledging the source in the appropriate scholarly convention whether the work is presented in written or oral form
- Using a unique term or concept without acknowledging the source
- Paraphrasing or summarizing a source’s ideas without acknowledging the source
- Replicating a visual presentation, representation, or performance without acknowledging the source

Cheating

Cheating is similar to plagiarism in that it involves representing another's work as one's own. However, cheating often involves more overtly deceptive or fraudulent acts of academic dishonesty designed to gain credit for academic work that is not one's own.

Cheating may include:

- Giving or receiving unauthorized assistance during an examination
- Fabricating or altering a source of data in a laboratory or experiment
- Collaborating with others when collaboration is not permitted, or when the contributions of others are not made clear
- Using unauthorized materials or aids during an examination, including calculators, dictionaries, or information accessed via any electronic devices
- Acquiring, without permission, tests or other academic material belonging to a member of the college faculty or staff
In compliance with the Student Right-to-Know and Campus Security Act of 1990, completion and transfer rates for students attending American River College can be found on the California Community College State Chancellor's Office Student Right-to-Know Rate Disclosure Website (http://srtk.cccco.edu/index.asp).
Students and employees with a disability* who need a service animal may use a service animal (including a service animal in training) on district and college property. Therapy animals and pets are not allowed.

*Disability must be consistent with guidelines set forth by the Americans with Disabilities Act (ADA) and the Fair Employment and Housing Act (FEHA).

Service Animal Guidelines

Service animals are subject to the following guidelines:

1. A service animal is any dog or a miniature horse that is trained to do work or perform tasks for an individual with a disability.

2. Faculty, staff or student owners of service animals that wish to bring the animal to campus, are requested, but not required, to register their service animal with the Vice President of Student Services or Vice President of Administrative Services. Registration provides a quick way to demonstrate the service animal is properly on campus.

3. If owner applies for registration, owner must provide documentation of their service animal’s current shot/vaccination records at the time of registration. Visitors should check in with the Vice President’s offices.

4. If owner applies for registration, owner must provide documentation of appropriate licenses.

5. If owner applies for registration, owner should carry proof of service animal registration when accompanied by that service animal on campus.

6. The service animal must be in good health, and free of fleas and external parasites.

7. The service animal must be on a leash at all times.

8. Owner is responsible for all cleanup of animal feces.

9. Service animals that disrupt the learning environment and the ability of others to learn may be excluded from campus.

10. Service animals that are ill, unclean, noisy, or bedraggled will not be allowed on campus.

11. Service animals that show unprovoked aggressive tendencies or are deemed potentially dangerous will not be allowed on campus.

12. Service animals are not permitted to be in the following areas: mechanical rooms/custodial closets, any room where protective gear is worn, or any room that poses a potential danger to the animal.

13. Owner will be financially responsible for any damage or cleaning costs resulting from the animal being brought on to campus. Animals that cause damage may be excluded from the campus.

Individuals who bring a service animal to campus must extend courtesy and respect to colleagues, students, and visitors in the area. Owners are required to keep service animals on a leash and should consider safety, health, and the possible fears others may have in the presence of animals.
Social Media Participation Guidelines

As an institution of higher learning, American River College – by its very nature – embraces the free and open exchange of ideas. To that end, we are committed to the community’s First Amendment rights and the core values of free speech.

We believe in fostering a thriving online community. We support the various channels of social networking – Facebook, Twitter, YouTube, Instagram, and so on – as valuable tools for engaging students, staff, faculty, alumni, friends, and supporters in a constructive two-way dialogue about American River College and its mission.

At the same time, the long-term value, vibrancy, and success of any social media community depends on a shared philosophy of how to behave. It's important that members of our community become familiar with Facebook's Terms of Service (https://www.facebook.com/legal/terms), Twitter's Rules and Policies (https://help.twitter.com/en/rules-and-policies), YouTube's Policies (https://www.youtube.com/about/policies/#community-guidelines), Instagram's Terms of Use (https://help.instagram.com/581066165581870), and similar support sites for social media. The emphasis for all participants – including site administrators – should always be transparency, honesty, respect, and civility.

All content, information, and views expressed on social media belong to the individuals posting the content. These view do not necessarily reflect the official policies or positions of the college, district, or Board of Trustees. We are not responsible for unanswered posts or inaccurate information posted by others.

Here are guidelines for engaging in American River College social media platforms:

- Be respectful of the rights and opinions of others. Be willing to agree to disagree and move on.
- Stay on topic. Our social media sites are established as forums for the open and honest discussion of matters and developments related to – and limited to – our mission (https://arc.losrios.edu/about-us/our-values).
- Be transparent and honest.
- Add value. Be part of the conversation but don’t take it over.
- Avoid hateful speech, personal attacks, flaming, profanity, vulgarity, pornography, nudity, and abusive language.
- Keep personal information (for example, your phone number and address) out of your posts.
- Think before you post. Almost everything you write or post to a social media site – words, pictures, video – is public or can be discovered. If you post on any of our social media sites, then you consent that what you post can be published and you waive any expectation of privacy regarding the post. What you choose to add to the conversation today will live on long after the subject matter has come and gone as a topic of conversation.
- We encourage you to post comments and “like” articles, photos, and videos you enjoy.

On our Facebook, Twitter, YouTube, and Instagram pages and other social media platforms, our goal is to post interesting, entertaining, and educational content. We welcome your comments and suggestions. We encourage conversation and dialogue, but we want to ensure a respectful online environment and invigorating conversation for the broader college community. Our page administrators review posts and comments regularly to ensure any issues or concerns are addressed in a timely manner.

We may or may not reply to comments, but if it's provocative, fair, and insightful, chances are others will engage in the conversation.

We reserve the right to determine and remove from American River College social media sites any of the following:

- Comments, links, images, or videos that are illegal or encourage illegal activity, or are obscene, defamatory/libellous/slanderous, indecent, lewd, lascivious, sexually harassing or explicit in nature, or pose risks to the health or safety of individuals
- Comments that personally attack or threaten any person
- For students, anything that would violate District policies regarding student regulations (https://losrios.edu/about-los-rios/board-of-trustees/policies-and-regulations)
- For staff and faculty, anything that would violate District policies regarding staff and faculty regulations (https://losrios.edu/about-los-rios/board-of-trustees/policies-and-regulations)
- Successive off-topic posts by one or more individuals or groups
- Repetitive posts copied and pasted or duplicated by one or more individuals or groups
- Solicitations or advertisements
- Any materials that infringe upon the intellectual property or other rights of any third party
A student who enrolls at American River College may rightfully expect that students, faculty, and administrators will maintain an environment in which there is freedom to learn.

Student conduct must comply with federal and state laws, college rules and regulations, and Regulation R-2441: Standards of Conduct (/shared/doc/board/regulations/R-2441.pdf). Students who violate such rules and regulations are subject to disciplinary action.

**Disciplinary Offenses**

Any student found to have committed, or to have attempted to commit, the following misconduct is subject to appropriate disciplinary action:

- Continued disruptive behavior, continued willful disobedience, habitual profanity or vulgarity, or the open and persistent defiance the authority of, or persistent abuse of, members of the college community
- Assault, battery, or any threat of force or violence upon members of the college community
- Willful misconduct which results in injury or death to members of the college community, or which results in cutting, defacing, or other injury to any real or personal property owned by the district
- The use, sale, or possession on campus of, or presence on campus under the influence of, any controlled substance (See alcohol, drug, and smoking policies (https://arc.losrios.edu/about-us/our-values/student-rights-and-responsibilities/alcohol-drug-and-smoking-policies))
- Willful or persistent smoking in any area where smoking has been prohibited by law or district policy (See alcohol, drug, and smoking policies (https://arc.losrios.edu/about-us/our-values/student-rights-and-responsibilities/alcohol-drug-and-smoking-policies))
- Persistent, serious misconduct where other means of correction have failed to bring about proper conduct
- Violation of College rules and regulations including those concerning student organizations, the use of college facilities, or the time, place and manner of public expression and distribution of materials
- Obstruction or disruption of teaching, research, administrative disciplinary procedures or other college activities, including its community service activity, or of other authorized activities on college-controlled premises
- Theft of or non-accidental damage to property of the college or a member of the college community while on campus or at college-sponsored events
- Unauthorized entry to or use of college facilities
- Dishonesty, such as cheating, plagiarism, or furnishing false information to the college; forgery, alteration, or misuse of college documents, records, or identifications (See plagiarism and cheating policies (https://arc.losrios.edu/about-us/our-values/student-rights-and-responsibilities/plagiarism-and-cheating))
- Knowing possession or use of explosives, dangerous chemicals or deadly weapons on college property or at a college function without prior authorization of the college president or designated representative
- Use, possession, distribution or being under the influence of alcoholic beverages, narcotics or dangerous drugs on college property or at college-sponsored events (See alcohol, drug, and smoking policies (https://arc.losrios.edu/about-us/our-values/student-rights-and-responsibilities/alcohol-drug-and-smoking-policies))
- Soliciting or assisting another to do any act which would subject a student to expulsion, suspension, probation or other discipline pursuant to Regulation R-2441: Standards of Conduct (/shared/doc/board/regulations/R-2441.pdf)
- Violation of any order of a college president, notice of which has been given prior to such violation, and which order is not inconsistent with any of the other provisions of this policy. This notice may be given by publication in the college newspaper, by posting on an official bulletin board designated for this purpose or by any other means reasonably calculated to inform students of its provisions.
- Attempting to commit an act that would be cause for disciplinary action identified above
Student Grievance and Class-Related Concerns
| American River College

Steps to Resolution

1. Students should speak with their professor about the concern.
2. Students who feel as though they are unable to speak with their professor or resolve the situation, should then contact the instructional division area dean.

Note: Most complaints, grievances, or disciplinary matters should be resolved at the campus level. This is the quickest and most successful way of resolving issues involving the college. You are encouraged to work through the campus complaint process first.

Contact

For information on how to file a formal grievance, please contact the Student Grievance Officer:

Nisha Beckhorn (Interim Dean, Student Services, Counseling and Transfer Services)
Email: beckhon@arc.losrios.edu
Phone: (916) 484-8376

Additional Grievance Information

Issues that are not resolved at the college or district level may be presented via resources provided by the California Community Colleges Chancellor's Office. Complainants are encouraged to use the official form provided by the Chancellor's office (https://www.cccco.edu/Complaint-Process-Notice), however, that form is not required and complaints will not be considered defective or rejected if you do not use the form.

A student may file a grievance or grieve an action or decision of the district or one of its colleges when the student's status and/or rights have been adversely affected.

Grievances relating to grades are subject to Education Code Section 76224(a), which reads:

"When grades are given for any course of instruction taught in a community college district, the grade given to each student shall be the grade determined by the instructor of the course and the determination of the student's grade by the instructor, in the absence of mistake, fraud, bad faith, or incompetence, shall be final."

In addition to complaints being filed by students or employees, complaints may be initiated by other individuals or entities, such as a family member, representative, organization, or other third party wishing to file on behalf of an individual or group alleged to have suffered unlawful discrimination or harassment (Los Rios Regulation R-2423 (shared/doc/board/regulations/R-2423.pdf)).

Equal Opportunity | American River College

Equal Opportunity is the Law

American River College is an equal opportunity employer/program. Auxiliary aids and services are available upon request to individuals with disabilities through Disability Services and Programs for Students (https://arc.losrios.edu/dsps).

As a recipient of federal financial assistance, it is against the law for American River College to discriminate against any individual in the US based on the following: race, color, religion, sex (including pregnancy, childbirth, and related medical conditions, sex stereotyping, transgender status, and gender identity), national origin (including limited English proficiency), age, disability, or political affiliation or belief, or, against any beneficiary of, applicant to, or participant in programs financially assisted under Title I of the Workforce Innovation and Opportunity Act, on the basis of the individual's citizenship status or participation in any WIOA Title I-financially assisted program or activity.

American River College must not discriminate in any of the following areas:

- Deciding who will be admitted, or have access, to any WIOA Title I-financially assisted program or activity
- Providing opportunities in, or treating any person with regard to, such a program or activity
- Making employment decisions in the administration of, or in connection with, such a program or activity

Recipients of federal financial assistance must take reasonable steps to ensure that communications with individuals are as effective as communications with others. This means that, upon request and at no cost to the individual, American River College is required to provide appropriate auxiliary aids and services to qualified individuals with disabilities.

What to Do If You Believe You Have Experienced Discrimination

If you think that you have been subjected to discrimination under a Workforce Innovation and Opportunity Act (WIOA) Title I financially assisted program or activity, then you may file a complaint within 180 days from the date of the alleged violation with either American River College's Equal Opportunity Officer (or the person whom the recipient has designated for this purpose) or the Civil Rights Center.

American River College Equity Officer
Nicolas Daily
(916) 484-8163
dailyn@arc.losrios.edu (mailto:dailyn@arc.losrios.edu)

Civil Rights Center (https://www.dol.gov/agencies/oasam/centers-offices/civil-rights-center)
US Department of Labor
200 Constitution Avenue NW, Room N-4123
Washington, DC 20210

If you file your complaint with American River College, then you must wait either until American River College issues a written Notice of Final Action, or until 90 days have passed (whichever is sooner), before filing with the Civil Rights Center (see address above).

If American River College does not give you a written Notice of Final Action within 90 days of the day on which you filed your complaint, then you may file a complaint with Civil Rights Center before receiving that notice. However, you must file your Civil Rights Center complaint within 30 days of the 90-day deadline (in other words, within 120 days after the day on which you filed your complaint with the recipient).

If American River College does give you a written Notice of Final Action on your complaint, but you are dissatisfied with the decision or resolution, then you may file a complaint with the Civil Rights Center. You must file your Civil Rights Center complaint within 30 days of the date on which you received the Notice of Final Action.

La Igualdad De Oportunidades Es La Ley

Es contra la ley que este beneficiario de asistencia financiera federal discrimine de la siguiente manera: contra cualquier individuo en los Estados Unidos, sobre la base de raza, color, religión, sexo (incluyendo embarazo, parto y afecciones médicas relacionadas, estereotipos sexuales, estatus de transsexualidad e identidad de género), origen nacional (incluyendo la competencia limitada en inglés), edad, incapacidad, o afiliación o creencia política o contra cualquier beneficiario de, solicitante o participante en programas con asistencia financiera bajo el Título I del Workforce Innovation and Opportunity Act (WIOA), sobre la base del estatus de ciudadanía del individuo o la participación en cualquier programa o actividad con asistencia financiera del Título de WIOA.

El destinatario no debe discriminar en ninguna de las siguientes áreas: decidir quién será admitido, o tendrá acceso, a cualquier programa o actividad con asistencia financiera del Título 1 de WIOA; proporcionar oportunidades o el tratar a cualquier persona con respecto a dicho programa o actividad; o, tomar decisiones de empleo en la
administra de, o en relación con, tal programa o actividad.

Los destinarios de la asistencia financiera federal deben tomar medidas razonables para garantizar que las comunicaciones con las personas sean tan efectivas como las comunicaciones con los demás. Esto significa, previa solicitud y sin costo para el individuo, se requiere que los destinarios proporcionen ayuda y servicios auxiliares adecuados a personas calificadas con discapacidades.

Qué Hacer Si Usted Cree Que Ha Experimentado Discriminación

Si usted piensa que ha sido sometido a discriminación bajo una ley de Workforce Innovation and Opportunity Act I (WIOA) Titulo I programa o actividad asistida financieramente, usted puede presentar una queja dentro de 180 días a partir de la fecha de la presunta violación con cualquier.

El funcionario de Igualdad de Oportunidades del destinario (o la persona a la que el destinatario ha designado para este propósito):

American River College Oficial de Equidad
Nicolas Daily
(916) 484-8163
dailyn@arc.losrios.edu

Civil Rights Center (https://www.dol.gov/agencies/oasam/centers-offices/civil-rights-center)

US Department of Labor
200 Constitution Avenue NW, Room N-4123
Washington, DC 20210

Si presenta su queja con el destinatario, debe esperar hasta que el destinatario emita una Notificación por escrito de la Acción Final, o hasta que hayan pasado 90 días (lo que ocurra primero), antes de presentar su queja con el Civil Rights Center (véase la dirección anterior).

Si el destinatario no le da una Notificación por escrito de la Acción Final dentro de los 90 días del día en que usted presento su queja, usted puede presentar una queja ante el Civil Rights Center antes de recibir ese aviso. Sin embargo, usted debe presentar su queja de Civil Rights Center dentro de 30 días de la fecha límite de 90 días (en otras palabras, dentro de los 120 días después del día en que usted presento su queja con el destinatario).

Si el destinatario le da una Notificación por escrito de la Acción Final sobre su queja, pero usted no está satisfecho con la decisión o resolución, usted puede presentar una queja ante el Civil Rights Center. Usted debe presentar su queja de Civil Rights Center dentro de 30 días de la fecha en que recibió Notificación de la Acción Final.
At American River College, we value equity and diversity. That’s why we work toward just and fair inclusion into a society in which all people can participate, prosper, and reach their full potential.

No person shall be unlawfully discriminated against, harassed, or excluded from any benefits, activities, or programs because they possess any of the following characteristics (actual or perceived):

- Ethnic group identification
- National origin or ancestry
- Race or color
- Physical or mental disability
- Sex, gender, gender identity, or gender expression
- Medical condition
- Pregnancy or childbirth-related condition
- Political affiliation or belief
- Sexual orientation or sexual identity
- Military and veteran status
- Religion or religious creed
- Marital status
- Age (over forty)

In addition, retaliation against a person who files a complaint, refers a matter for investigation, participates in an investigation, or serves as an advocate for a complainant or respondent is prohibited by district policy.

For more information or to file a complaint, contact the American River College Equity Officer, Nicolas Daily, at dailyn@arc.losrios.edu or (916) 484-8163.
Sexual Harassment or Assault | American River College

Title IX (Sex Discrimination)

Title IX of the Educational Amendments of 1972 and subsequent amendments bans sex discrimination in schools, whether it be in academics or athletics. Title IX states:

“No person in the United States shall, on the basis of sex, be excluded from participation in, be denied benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance.”

The underlying intent of Title IX is to eliminate any form of discrimination based on gender that may interfere with a student's physical well-being, emotional well-being, and academic performance. Colleges and universities receiving federal funds bear an affirmative duty to ensure that no student (male or female) is deprived of an educational opportunity or benefit due to such discrimination.

Gender Harassment

Sex discrimination in the form of gender harassment consists primarily of repeated comments, jokes, and innuendoes directed at persons because of their gender or sexual orientation. This behavior typically is not aimed at eliciting sexual cooperation, but, like racial harassment, it contaminates the learning and work environment and has no place at American River College.

Examples of gender harassment include the following:

- Disparaging women's intellectual abilities and potential
- Using sexist statements in classroom discussions
- Disparaging the lifestyles or behaviors of gays or lesbians

Sexual Harassment Policy

It is the desire of the Los Rios Community College District Board of Trustees to provide for all students and employees an educational environment and workplace free from sexual harassment. Sexual harassment in any situation is unacceptable and is in violation of state and federal laws and regulations. Where evidence of harassment is found, appropriate corrective action shall be taken.

Definition of Sexual Harassment

Sexual harassment means unwelcome sexual advances, requests for sexual favors, and other verbal, visual, or physical conduct of a sexual nature, made by someone from or in the work or educational setting, under any of the following conditions:

- Submission to the conduct is explicitly or implicitly made a term or a condition of an individual's employment, academic status, or progress
- Submission to, or rejection of, the conduct by the individual is used as the basis of employment or an academic decision affecting the individual
- The conduct has the purpose or effect of having a negative impact upon the individual's work or academic performance, or of creating an intimidating, hostile, or offensive work or educational environment
- Submission to, or rejection of, the conduct by the individual is used as the basis for any decision affecting the individual regarding benefits and services, honors, programs, or activities available at or through the educational institution.

Sexual harassment includes, but is not limited to:

- Making unsolicited written, verbal, visual, or physical contact with sexual overtones. Some examples are:
  - Epithets
  - Derogatory comments or slurs of a sexual nature
  - Impeding or blocking movements or any physical interference with normal work
  - Derogatory posters or cartoons
- Continuing to express sexual interest after being informed that the interest is unwelcome (reciprocal attraction is not considered sexual harassment)
- Within the work environment, engaging in explicit or implicit coercive sexual behavior which controls, influences, or affects the career, salary, and/or work environment,
or any other term or condition of employment

- Within the educational environment, engaging in explicit or implicit coercive sexual behavior which controls, influences, or affects the educational opportunities, grades, and/or learning environment of the student
- Making reprisals, threats of reprisal, or implied threats of reprisal following a negative response to a sexual advance. For example, within the work environment, either suggesting or actually withholding support for an appointment, promotion, or change of assignment; suggesting a poor performance report will be prepared; or suggesting probation will be failed. Within the educational environment, either suggesting or actually withholding grades earned or deserved; suggesting a poor performance evaluation will be prepared; or suggesting a scholarship recommendation or college application will be denied
- Offering favors of educational or employment benefits, such as grades or promotions, favorable performance evaluations, favorable assignments, favorable duties or shifts, recommendations, reclassifications, and so on, in exchange for sexual favors.

**Sexual Assault**

Sexual assault includes, but is not limited to:

- Rape
- Forced sodomy
- Forced oral copulation
- Rape by a foreign object
- Sexual battery
- Domestic violence
- Dating violence
- Stalking
- Threat of sexual assault

Sexual assault is a form of sexual harassment and should be reported under the district's Discrimination and Harassment Procedures Policy P-2423 (/shared/doc/board/policies/P-2423.pdf) and Regulation R-2423 (/shared/doc/board/regulations/R-2423.pdf).

**Sexual Violence**

Sexual violence means physical sexual acts perpetrated against a person's will or where a person is incapable of giving consent due to the victim's use of drugs or alcohol. An individual also may be unable to give consent due to an intellectual or other disability. Sexual violence includes, but is not limited to, rape, sexual assault, sexual battery, and sexual coercion.

**Consent**

Consent is the informed, affirmative, conscious decision by each participant to engage in mutually agreed-upon sexual activity.

Consent must be voluntary, and given without coercion, force, threats, or intimidation. Consent requires positive cooperation in a particular sexual act, or expression of intent to engage in that sexual act through the exercise of free will.

Consent can be withdrawn or revoked. Consent to one form of sexual activity (or one sexual act) does not constitute consent to other forms of sexual activity (or other sexual acts). Consent to sexual activity given on one occasion does not constitute consent to sexual activity on another occasion. The fact that two people are, or were in, a dating or sexual relationship does not constitute consent to engage in sexual activity. Consent to a sexual act may be withdrawn or revoked at any time, including after penetration. The victim’s request for the perpetrator to use a condom or birth control does not, in and of itself, constitute consent. Once consent is withdrawn or revoked, the sexual activity must stop immediately.

Consent cannot be given by a person who is incapacitated. For example, a person cannot give consent if she/he is unconscious or coming in and out of consciousness. A person is incapacitated if she/he lacks the physical and/or mental ability to make informed, rational judgments. Examples of incapacitation include unconsciousness, sleep, and blackouts. Whether an intoxicated person (as a result of using alcohol or other drugs) is incapacitated depends on the extent to which the alcohol or other drugs impact the person's decision-making capacity, awareness of consequences, and ability to make fully informed judgments. A person with a medical or mental disability may also lack the capacity to give consent.

Being intoxicated by drugs or alcohol does not diminish a person's responsibility to obtain consent from the other party before engaging in sexual activity. Factors to be considered include whether the person knew, or whether a reasonable person in the accused's position should have known, that the victim did not give, or revoked, consent; was incapacitated; or was otherwise incapable of giving consent.

Sexual intercourse with a minor is never consensual when the victim is under 18 years old, because the victim is considered incapable of giving legal consent due to age.

**Domestic Violence**

Domestic violence is a form of sexual violence and is abuse committed against someone who is a current or former spouse, current or former cohabitant, someone with whom the abuser has a child, someone with whom the abuser has or had a dating or engagement relationship, or a person similarly situated under California domestic or
family violence law.

Cohabitant means two unrelated persons living together for a substantial period of time, resulting in some permanency of relationship. Factors that may determine whether persons are cohabiting include, but are not limited to:

1. Sexual relations between the parties while sharing the same living quarters
2. Sharing of income or expenses
3. Joint use or ownership of property
4. Whether the parties hold themselves out as husband and wife
5. The continuity of the relationship
6. The length of the relationship

Dating Violence

Dating violence is a form of sexual violence and is abuse committed by a person who is, or has been, in a social or dating relationship of a romantic or intimate nature with the victim. This may include someone the victim just met; for example, a person they met at a party, were introduced to through a friend, or met on a social networking website.

Stalking

Stalking means a repeated course of conduct directed at a specific person (when based on gender or sex) that places that person in reasonable fear for his/her or others’ safety, or to suffer substantial emotional distress.

Resources

For issues regarding sexual harassment and assault, the following resources are available:

- Los Rios Police, (916) 558-2221
- WEAVE Confidential Advocate, (916) 568-3011 or WEAVE@losrios.edu (mailto:WEAVE@losrios.edu)
- Nicolas Daily, Title IX Coordinator, (916) 484-8163 or dailyn@arc.losrios.edu (mailto:dailyn@arc.losrios.edu)
Types of Harassment | American River College

It is a priority of American River College to prevent and respond to all forms of harassment, including bullying, psychological harassment, racial harassment, religious harassment, stalking, mobbing, hazing, and backlash.

Bullying

Bullying is physical and psychological harassing behavior perpetrated against an individual, by one or more persons. Bullying can occur on the playground, in school, on the job, or any other place.

HB 1576 defines bullying as recklessly or intentionally endangering the health or safety of a student by exposing the student repeatedly and over time to physical aggression or intimidation, whether through direct physical contact or through the use of information or communication technology, resulting in bodily injury or other harm to person or property. This definition does not supersede or limit any definition of bullying developed by the Board of Education or the actual codes of student conduct adopted by school boards pursuant to Section 22.1-279.6. Bullying is punishable as a Class 1 misdemeanor.

Workplace bullying is repeated, health-harming mistreatment of one or more persons (the targets) by one or more perpetrators that takes one or more of the following forms:

- Verbal abuse
- Offensive conduct/behaviors (including nonverbal) which are threatening, humiliating, or intimidating
- Work interference (sabotage) which prevents work from getting done

Psychological Harassment

Psychological harassment is humiliating or abusive behavior that lowers a person’s self-esteem or causes them torment. This can take the form of verbal comments, actions, or gestures. Workplace mobbing is considered psychological harassment.

Racial Harassment

Racial harassment is the targeting of an individual because of their race or ethnicity. The harassment includes words, deeds, and actions that are specifically designed to make the target feel degraded due to their race of origin or ethnicity.

Religious Harassment

Religious harassment is verbal, psychological, or physical harassment used against targets because they choose to practice a specific religion. Religious harassment can also include forced and involuntary conversions.

Stalking

Stalking is the unauthorized following and surveillance of an individual, to the extent that the person’s privacy is unacceptably intruded upon and the victim fears for their safety.

Mobbing

Mobbing is violence committed directly or indirectly by a loosely affiliated and organized group of individuals to punish or even execute a person for an alleged offense without a lawful trial. The “offense” can range from a serious crime, like murder to simple expression of ethnic, cultural, or religious attitudes. The issue of the victim’s actual guilt or innocence is often irrelevant to the mob, since the mob relies on contentions that are unverifiable, unsubstantiated, or completely fabricated.

Hazing

Hazing is persecuting, harassing, or torturing in a deliberate, calculated, planned manner. Typically the targeted individual is a subordinate, for example, a fraternity pledge, a first-year military cadet, or somebody who is considered “inferior” or an “outsider.” Hazing is illegal in many instances.

Backlash

Backlash or “victim blaming” occurs when the harasser or other people in the environment blame the victim for the harassment or the resulting controversies and conflicts.
after the harassment is reported or discovered.

Backlash results when people erroneously believe the victim could stop the harassment if they really tried, or that the victim must have done something to cause the harassment. The victim may be accused of trying to get attention, covering for incompetence, or in cases where the harassment is proven, lying about the extent of the effects.

Outdated attitudes about certain kinds of harassment remain and there is often social pressure for victims to keep quiet about abuse or suffer the consequences.
Discrimination and Harassment Complaint Procedures
| American River College

How to File a Complaint

To file a complaint, fill out a Discrimination Complaint Form (/rccd/shared/doc/legal/discrimination-complaint-form.pdf) (PDF) and submit it to your equity officer. This form is not required and a complaint will not be rejected based on failure to use the form.

For more information or to file a complaint, contact the American River College Equity Officer, Nicolas Daily, at dailyn@arc.losrios.edu or (916) 484-8163.

Complaint Resolution

If it is determined that misconduct occurred, then American River College will take immediate steps to halt misconduct and remedy any effects of that misconduct.

An equity officer will hold an informal conference if the complainant wants to try and resolve the complaint informally. The equity officer will provide information about applicable laws and rules. If an informal resolution is not reached or if the complainant disagrees with the recommendation made, then the complainant may engage in a formal resolution process.
Graduation and Transfer | American River College

Make a Plan for Transfer Success

Students who plan to transfer to the California State University (CSU) system, the University of California (UC) system, or to a private or out-of-state college or university should make an education plan with a counselor. This will ensure you meet the requirements for the specific institution you plan to attend.

Transfer eligibility is based on transferable college units and/or high school records and test scores. Each institution has its own admission requirements. To prepare for transfer:

1. Decide where you want to transfer
2. Talk to a counselor about that school's specific requirements
3. Create an education plan

In This Section

Petition for a Certificate | American River College

How to Petition for a Certificate

Students can file a petition for a certificate using our online certificate petition form (https://apps.arc.losrios.edu/GraduationPetition), or they can meet with a counselor (https://arc.losrios.edu/counseling) to file a certificate petition. American River College does not automatically confer certificates because requirements vary from program to program.

Requirements

To petition for a certificate, students must:

1. Know their catalog year*
2. Complete all certificate requirements with a minimum grade point average (GPA) of 2.0
3. Complete at least 12 units toward the certificate at American River College (this does not apply to certificates that are less than 12 units)

* Usually, students follow the current catalog year. However, if you are following certificate requirements from an old catalog, then you must have maintained catalog rights (/2020-2021-catalog/graduation-and-transfer/graduation-requirements/petition-for-a-certificate#catalog-rights).

Required Documentation

The following must be on file in the Admissions and Records Office for a certificate petition to be processed:

- Official transcripts of all coursework completed at colleges outside of the Los Rios Community College District
- Official copies of AP/IB/CLEP test scores, if applicable
- A copy of DD214-military discharge papers, if veteran desires credit for military units
- List of courses in progress if attending another college
- Official final transcripts will be required at the end of the semester for final certificate evaluation
- Copy of any required competency tests, if applicable

Students must complete all certificate requirements by the end of the semester in which they petition for a certificate.

Petition Deadlines for 2020-2021

- Summer 2020: Friday, June 26, 2020
- Fall 2020: Friday, October 2, 2020
- Spring 2021: Friday, March 5, 2021

Approval or Denial

You will be notified via email if your petition is approved or denied.

If denied, then you will be notified of the missing requirements and advised to submit a new petition. If approved, then your certificate of achievement will be posted to your transcript at the end of the semester.

We mail certificates to the address listed on your petition, unless you choose to pick up your certificate. You will be notified when your certificate is available for pick-up.

Catalog Rights

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college

Certificate of Achievement vs. Department Certificate

A Certificate of Achievement requires 18 or more units, while a Department Certificate requires fewer than 18 units. In addition, a Certificate of Achievement is posted to a student’s transcript, while a Department Certificate is not. A Department Certificate cannot be posted to a student’s transcript unless it has been approved by the California Community College Chancellor’s Office, per Title 5 Regulation 55070.b.
Petition for a Degree | American River College

How to Petition for a Degree

Students can file a petition for a degree using our [online degree petition form](https://apps.arc.losrios.edu/GraduationPetition), or they can meet with a counselor [here](https://arc.losrios.edu/counseling) to file a petition for degree.

Requirements

To petition for a degree, students must:

1. Know their catalog year*
2. Complete all degree requirements with a minimum grade point average (GPA) of 2.0
3. Complete at least 12 units toward the degree at American River College

* Usually, students follow the current catalog year. However, if a student is following certificate requirements from an old catalog, then they must have maintained catalog rights ([2020-2021-catalog/graduation-and-transfer/graduation-requirements/petition-for-a-degree#catalog-rights](https://arc.losrios.edu/)).

Required Documentation

The following must be on file in the Admissions and Records Office for a degree petition to be processed:

- Official transcripts of all coursework completed at colleges outside of the Los Rios Community College District
- Official copies of AP/IB/CLEP test scores, if applicable
- A copy of DD214-military discharge papers, if veteran desires credit for military units
- List of courses in progress if attending another college
- Official final transcripts will be required at the end of the semester for final degree evaluation
- Copy of any required competency tests, if applicable

Students must complete all degree requirements by the end of the semester in which they petition for a degree.

Petition Deadlines for 2020-2021

- Summer 2020: Friday, June 26, 2020
- Fall 2020: Friday, October 2, 2020
- Spring 2021: Friday, March 5, 2021

Approval or Denial

You will be notified via email if your petition is approved or denied.

If denied, then you will be notified of the missing requirements and advised to submit a new petition. If approved, then your degree will be posted to your transcript at the end of the semester.

We mail degrees to the address listed on your petition, unless you choose to pick up your degree. You will be notified when your degree is available for pick-up.

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college
Students may graduate from American River College with the Associate in Arts (AA) or the Associate in Science (AS) degree by fulfilling the following five requirements:

1. Satisfactory completion of 60 units of collegiate work with a "C" (2.0) grade point average in a curriculum that the district accepts toward the degree. At least 12 of the 60 units must be earned at American River College.

2. Major: Complete an AA or AS Major Program of Study offered at American River College. Courses used to complete requirements for the major must be completed with a grade of "C" or better.

3. Completion of American River College's general education requirements with a minimum GPA of 2.0 in courses used for general education (21 units minimum) or possession of a Baccalaureate Degree or higher from a regionally accredited college or university in the US.*

4. All students who wish to receive an AA or AS degree from American River College must demonstrate competency in writing, reading, and mathematics, as listed in the following tables.

5. Students are held to the graduation requirements established at the time they begin college as long as they maintain their catalog rights (2020-2021_catalog/graduation-and-transfer/graduation-requirements/associate-degree-graduation-requirements#catalog-rights).

* See District Policy P-7241 (/shared/doc/board/policies/P-7241.pdf) and Regulation R-7241 (/shared/doc/board/regulations/R-7241.pdf).

Reading, Writing, and Mathematics Competencies

Catalog Rights

For the purpose of graduating or earning a certificate from any college in the Los Rios Community College District, a student who attends at least one session (whether quarter, semester, or summer) in each calendar year at any California community college, California State University, University of California, or any regionally accredited institution of higher education, may choose to meet the requirements in effect at the Los Rios college from which the student intends to graduate, as follows:

- Requirements that were in effect at the time the student was admitted to a Los Rios college
- Requirements that were in effect at the time the student originally enrolled in an accredited college
- Requirements that were in effect at the intended date of graduation from a Los Rios college
American River College has one commencement ceremony in May of each year, at the end of the spring semester. Student who meet satisfy the graduation requirements during the prior summer semester (August), prior fall semester (December), or during the spring semester may participate in the graduation commencement exercise.

All students who are eligible for an associate degree must petition for graduation.
While You Are Here | American River College

Make a Plan for Transfer Success

Students who plan to transfer to the California State University (CSU) system, the University of California (UC) system, or to a private or out-of-state college or university should make an education plan with a counselor. This will ensure you meet the requirements for the specific institution you plan to attend. Transfer eligibility is based on transferable college units and/or high school records and test scores. Each institution has its own admission requirements. To prepare for transfer:

1. Decide where you want to transfer
2. Talk to a counselor about that school’s specific requirements
3. Create an education plan

Learn about the course identification numbering system (C-ID) and how to identify which courses are transferable.
Transfer to California State University | American River College

Transfer Requirements

Students who plan to transfer to the California State University (CSU) system must meet certain requirements. The requirements differ based on whether you:

1. Were eligible for admission to a CSU directly after high school
2. Are only now eligible for admission through community college transfer

CSU accepts a maximum of 70 transferable semester units completed at a community college.

Eligible for Transfer After High School

High school eligibility is based on test scores, grade point averages, and completion of specific subject area requirements.

If you were eligible for admission to a CSU when you graduated from high school – but you decided to attend a community college first – then you can transfer to certain CSUs at any time, as long as you maintain a 2.0 grade point average for all transferable coursework.

Eligible for Transfer Through Community College

If you were not eligible for admission to a CSU when you graduated from high school, then you may be eligible for transfer after you complete the following at a California community college:

1. A minimum of 60 transferable units with a 2.0 grade point average*
2. Either of the following general education requirements:
   a. At least 30 units of CSU general education requirements, including:
      a. Area A1, A2, and A3
      b. Area B4
   b. Intersegmental General Education Transfer Curriculum (IGETC) requirements

In addition to general education and graduation requirements, we encourage you to complete lower-division preparatory courses for your major as required by the CSU to which you want to transfer. You can find lower-division major requirements at assist.org, the official state-wide repository for transfer and course articulation information.

* GPA requirements are higher for campuses or majors that are impacted or more competitive. The minimum GPA for international or non-resident students is 2.4 instead of 2.0.

Application Dates and Deadlines

Priority application deadlines for CSU:

- For fall admission, October 1 to November 30 of the prior year
- For spring admission, August 1 to 31 of the prior year
Transfer to University of California | American River College

Transfer Requirements

Students who plan to transfer to the University of California (UC) system must meet certain requirements. The requirements are slightly different, based on whether you:

- Were eligible for admission to a UC directly after high school
- Are only now eligible through community college transfer

Eligible for Transfer After High School

If you were eligible for admission to a particular UC when you graduated from high school, then you are eligible to transfer at any time if you maintain a 2.0 grade point average in transferable coursework.

Eligible for Transfer Through Community College

Subject Requirement

If you met the scholarship requirement after high school – but not the subject requirement – then you must do all of the following to transfer to a UC:

1. Take transferable college courses in the missing subject areas
2. Earn a C or better in each required course
3. Have a 2.0 grade point average (GPA) in all transferable coursework

Examination Requirement

If you met the scholarship requirement – but not the examination requirement – then you must complete a minimum of 12 semester units of transferable work and maintain a 2.0 grade point average in transferable coursework.

Scholarship Requirement

If you did not meet the scholarship requirement, then you must do the following:

1. Complete 60 units of UC-transferable college credit with a grade point average of at least 2.4 (for California residents) or 2.8 (for non-residents)
2. Complete the following course pattern, earning a grade of C or better in each course:^1
   - Two transferable courses (3 units each) in English composition
   - One transferable course (3 units) in mathematical concepts and quantitative reasoning
   - Four transferable courses (3 units each) chosen from at least two of the following subject areas: the arts and humanities, the social and behavioral sciences, or the physical and biological sciences

^1 Students who satisfy the Intersegmental General Education Transfer Curriculum prior to transferring to UC will satisfy number 2 above.

Intersegmental General Education Transfer Curriculum (IGETC)

When you complete the IGETC pattern, you partially fulfill the 60-unit requirement for transfer to UC and complete the lower division general education breadth requirements. You should request your IGETC certification from the community college you last attended when your final transcript is sent to the UC campus.

The IGETC is best if you have not yet chosen a major or a campus. Once you have selected a major, it is important to begin fulfilling any required preparatory classes for that major. This is especially true for professional or “high-unit” majors. If you are preparing for an engineering or a high-unit science major at a UC campus, then it is not advisable to use the IGETC. Instead you should concentrate on fulfilling the 60-unit admission requirement by completing lower division major preparation courses as well as the basic admission requirements listed above.

Helpful Hints
- Connect with a counselor regularly to monitor your transfer progress.

- Many courses other than the ones listed in the IGETC will transfer to UC. The units from those other courses will count toward the 60 units required to transfer as a junior. Check the catalog for the transfer status of any course.

- Though transfers do not require an associate degree, it is easy to complete one while preparing to transfer. Learn about [associate degree graduation requirements](https://arc.losrios.edu/2020-2021-catalog/graduation-and-transfer/graduation-requirements/associate-degree-graduation-requirements).

- Check with your counselor about other courses needed for your major. In many cases, it is to your advantage to complete all pre-major requirements as well as general education requirements before you transfer.
Even if American River College does not have a transfer agreement with a private or out-of-state college to which you want to transfer, you can probably receive academic credit for most of your community college classes. Most four-year institutions give full credit for general education courses and other courses designated for transfer at community college.

In addition, many out-of-state colleges participate in the Western Undergraduate Exchange (WUE) [https://www.wiche.edu/WUE/students], which offers discounts to California students in certain majors.

Find Out Transfer Requirements

Many colleges require transfer students to have completed a certain number of units, so make sure you check the requirements of the college to which you want to transfer. Transfer requirements are generally outlined in a college's catalog.
California State University General Education Requirements  
| American River College

The following American River College courses fulfill California State University (CSU) lower-division general education requirements.

A. English Language Communication and Critical Thinking

Choose one course from each area for a minimum of nine units.

Completion of all the requirements in the Intersegmental General Education Transfer Curriculum (IGETC) meet lower-division general education requirements at either a California State University (CSU) or University of California (UC) without the need after transfer to take additional lower division general education courses. All courses must be completed with grades of "C" or better.

Students can also visit assist.org (https://assist.org) to see which courses will complete lower-division major preparation requirements. Students must see a counselor to have the IGETC pattern certified before transferring. Students who have selected a specific campus for transfer should consult with a counselor before following the IGETC pattern.

Advanced Placement (AP) and International Baccalaureate (IB) examinations are appropriate for inclusion on the IGETC pattern.

Area 1: English Communication

Choose one course from each area for a total of six to nine units.

American River College offers associate degrees for transfer (AD-T) to the California State University (CSU) system. Transfer degrees provide a clear pathway to a CSU major and bachelor's degree. Associate of arts for transfer (AA-T) and associate of science for transfer (AS-T) are types of transfer degrees.

Benefits of a Transfer Degree

Students who receive an AA-T or AS-T degree are guaranteed:

- Admission to a CSU with junior standing
- Priority admission consideration to their local CSU campus or to a program that is similar to their community college major

\* This priority does not guarantee admission to specific majors or campuses.

Students who have been awarded an AA-T or AS-T are able to complete their remaining requirements for the 120-unit baccalaureate degree within 60 semester or 90 quarter units at a CSU campus.

Current and prospective community college students are encouraged to meet with a counselor to review their options for transfer and explore additional degrees which may be under development at this time.

Requirements for a Transfer Degree

AA-T or AS-T degrees require the following:

1. Complete 60 semester units or 90 quarter CSU-transferable units, including both of the following:
   a. One of the following GE patterns (check with your counselor to determine the appropriate pattern for the degree you are pursuing):
      - The Intersegmental General Education Transfer Curriculum (IGETC)
      - The Intersegmental General Education Transfer Curriculum (IGETC) for STEM (see counselor)
      - The CSU General Education Requirements
      - The CSU General Education Requirements for STEM (see counselor)
   b. A minimum of 18 semester or 27 quarter units in a major or area of emphasis, as determined by the college

2. Obtain a minimum grade point average of 2.0 in 60 CSU-transferable units. AD-T degrees also require that students must earn a C or better in all courses used in the major or area of emphasis. Pass grades can be used from colleges where Pass denotes a C or better.

American River College offers the following Associate Degrees for Transfer:

- Administration of Justice, AST
- Anthropology, AAT
- Art History, AAT
- Studio Art, AAT
- Biology, AST
- Business Administration, AST
- Early Childhood Education for Transfer, AST
- Economics, AAT
- Elementary Teacher Education, AAT

Transfer Credit

Courses accepted for transfer by the University of California (UC) and/or California State University (CSU) systems are identified as such in the course details next to "Transferable." Students who have questions regarding transferability of credit for specific courses to specific institutions should consult a counselor.

Course Identification Numbering System (C-ID)

The C-ID system is a statewide numbering system designed to identify comparable courses and facilitate articulation. Any community college course that bears a C-ID number signifies that it is equivalent in content, rigor, and student learning outcomes. Any course with a C-ID number can be assured that it will be accepted at other participating community college or CSU campuses. For example: C-ID COMM 110 at American River College will be accepted by any other college that has been approved for the same C-ID COMM 110 number.

Students should consult a counselor for specific information and help evaluating course transferability. In addition, students should visit assist.org to confirm how each college's course will be accepted for the following:

1. Majors at CSU and UC campuses
2. CSU general education requirements
3. IGETC general education requirements

Please consult a counselor to find out if your courses meet requirements at private and out-of-state colleges and universities. See an up-to-date listing of American River College C-ID approved courses at www.c-id.net.

Course Numbering (/2020-2021-catalog/programs-of-study/description-of-courses/course-numbering)
American River College has a standardized course numbering system.

Prerequisites, Corequisites, and Advisories (/2020-2021-catalog/programs-of-study/description-of-courses/prerequisites-corequisites-and-advisories)
Learn about prerequisite courses, corequisite courses, advisory courses, and the challenge process.

To Be Arranged Scheduling (/2020-2021-catalog/programs-of-study/description-of-courses/to-be-arranged-scheduling)
Learn about courses scheduled as TBA, or To Be Arranged.
Course Numbering System

American River College has a standardized course numbering system. The following numbers are designed to provide students with general information regarding the focus and intent of courses.

Course Number 1 to 99

Courses numbered 1 to 99 are credit courses that are considered developmental or basic skills and are not acceptable for the associate degree or transfer credit.

Course Number 100 to 299

Courses numbered 100 to 299 are applicable to an associate degree, but not transferable to a four-year institution.

Course Number 300 to 499

Courses numbered 300 to 499 are articulated for transfer with four-year institutions and are intended to meet major, general education, or elective credit requirements.
Prerequisites, Corequisites, and Advisories
| American River College

Enrollment Conditions

Many courses and educational programs have enrollment conditions, such as prerequisites, corequisites, or advisories on recommended preparation. These faculty-approved conditions are considered necessary and appropriate to ensure that students are adequately prepared to succeed in the course or educational program. It is the student's responsibility to meet any and all enrollment conditions.

Students may challenge a prerequisite requirement through the challenge process (/2020-2021-catalog/programs-of-study/description-of-courses/prerequisites-corequisites-and-advisories#challenge).

Prerequisite

A prerequisite is a course that a student is required to take to demonstrate current readiness for enrollment in another course or educational program. For example, in order to take ENGWR 301, a student must have already completed ENGWR 300 with a grade of C or better.

Corequisite

A corequisite is a course that a student is required to take during the same semester as another course, or prior to another course. For example, a student needs to take GEOL 300 at the same time as GEOL 301 (or before taking GEOL 301).

Advisory

An advisory is a condition of enrollment when a student is advised, but not required to meet before, or in conjunction with, enrollment in a course or educational program.

Verifying Prerequisites

Students enrolled in courses that have a prerequisite must provide verification to the instructor that they have met the prerequisite. Supporting evidence includes:

- A transcript that verifies the student has earned a C or better in the prerequisite course. Students can print an unofficial transcripts in eServices (https://ps.losrios.edu/student/signon.html). Instructors have access to this information on their roster if the class was taken within Los Rios Community College District since 2003 (prior course information cannot be viewed).
- English and/or math placement results from Los Rios Community College District

If a student enrolls in a course and does not meet the prerequisite, then the instructor must drop the student from the course.

Verifying Corequisites

Your current class schedule provides verification of current enrollment in a corequisite course. Alternatively, if you took the corequisite previously, then your transcript shows prior completion of the corequisite course.

Challenge Process

If you do not have the supporting evidence to verify a prerequisite or corequisite but you believe that you should qualify to enroll in the course, then you may challenge a prerequisite or corequisite.

Criteria for challenging a prerequisite or corequisite include:

- You have knowledge or ability to succeed in the course with the prerequisite.
- The prerequisite course is not readily available.
- You believe that the prerequisite is discriminatory or being applied in a discriminatory manner.
- You believe that the prerequisite was established in violation of regulations and/or the established district-approved policy and procedures.
To challenge a prerequisite or corequisite:

1. Submit a Prerequisite Equivalency Form ([arc/main/doc/ARC02-Admissions/ARC-Prerequisite-Equivalency.pdf](PDF)) – along with any supporting documentation – to the instructional department (locations are listed on form) at least one week prior to the start of instruction.

2. Your challenge will be reviewed by the department's prerequisite challenge committee.

3. You will be informed in writing of the committee's determination within five working days of the review.

**Exception to the Prerequisite Process – English and Math**

The prerequisite for all 300-level English courses (ENGWR, ENGED, and ENGCW) and mathematics courses (MATH and STAT) must be cleared prior to enrollment.

You will be automatically cleared to enroll in an English or math class if:

- You are currently enrolled in the appropriate prerequisite course at a Los Rios college (you must earn a C or better grade or you will be automatically dropped from the higher level course before the new semester begins).
- You have completed and passed the appropriate prerequisite course at a Los Rios college.
- You have been placed into the math or English course you want to add.

If you completed the equivalent prerequisite course with a grade of C or better at a college or university that is on the [Approved Math External Equivalency List](PDF) or [Approved English External Equivalency List](PDF) then:

- Submit unofficial or official transcripts (unless already on file with the Admissions and Records office) along with the Prerequisite Equivalency Form ([arc/main/doc/ARC02-Admissions/ARC-Prerequisite-Equivalency.pdf](PDF)) to the Admissions and Records office. Please Note: In-progress coursework cannot be used.
- If verified through a transcript, then the external course will be posted as transfer credit on your unofficial transcript, which will clear enrollment for math courses. This process may take three to five business days, so plan ahead.

If you did not find your course on the approved equivalency lists above – but you believe you have the knowledge or ability to succeed in an English or math course through other college/university coursework (or other credentials) – then you may challenge the prerequisite via the challenge process.
Some or all of the class hours for courses may be offered using the "To Be Arranged" (TBA) course scheduling option. Please refer to the class schedule listing for sections of courses for specific TBA weekly or daily class hour requirements that may apply.

Cross-Listed Courses | American River College

When a course is listed under two (or more) different departments in the catalog, the course is referred to as "cross-listed," "cross-referenced," or "same as." The cross-listed course has identical content under both departments' catalog listing.

If two (or more) courses are cross-listed, then a student can only earn credit for one of those courses. Students who are not sure which cross-listed they should enroll in are encouraged to consult with a counselor.

When a cross-listed course is repeatable, the course may be taken (under either name) the total number of times stated in the catalog descriptions of the cross-listed course.

Accounting | American River College

This degree focuses on preparation for careers in various accounting professions. It develops a common foundation in accounting and business, and provides various courses covering both fundamental and specialized accounting topics to meet individual career goals.

The Accounting certificate provides occupational training and preparation for entry-level clerical and technical positions in various accounting careers. It provides a strong background in fundamental accounting concepts and typical accounting computer applications. In addition, it provides various specialized accounting topics to meet career individual goals.

Division Dean | Kirsten Corbin
Department Chairs | Margaret Pollard

(916) 484-8361

Associate Degree

A.A. in Accounting

This degree focuses on preparation for careers in various accounting professions. It develops a common foundation in accounting and business, and provides various courses covering both fundamental and specialized accounting topics to meet individual career goals.

The Accounting Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate and perform all steps in the financial accounting cycle.
- compile and analyze costs within a company.
- analyze and communicate appropriate information to managers, investors, creditors, and other interested parties utilizing a variety of reports.
- audit financial statements and express appropriate opinions on those statements.
- integrate the principles of business, business law, ethics, and economics into accounting functions.
- apply accounting standards and techniques to one or more specialized areas of accounting.

Career Information

This degree is designed for a variety of student objectives. It includes courses required for immediate employment in accounting positions. The courses meet the requirements of governmental employers for promotional exams. Students seeking transfer to four-year universities will meet the transfer requirements of financial accounting (ACCT 301) and managerial accounting (ACCT 311). Individuals with existing bachelor's degrees can also use these courses to meet the requirements to take the exam for Certified Public Accountant.

Certificates of Achievement

Accounting Clerk Certificate

This certificate provides fundamental occupational training and preparation for entry level accounting clerk positions. The program includes basic accounting and specialized courses designed for the accounting workplace, including small business accounting, technology, and basic business principles.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- complete federal and California individual income tax returns.
- prepare federal and California corporate and partnership income tax returns.
- prepare federal estate, gift, and trust tax returns.
Accounting (ACCT)

ACCT 101 Fundamentals of College Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: BUS 105, MATH 100, MATH 104, or MATH 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.

Catalog Date: June 1, 2020

This introductory course in small business accounting covers the accounting cycle for service and merchandising businesses. Topics include the general journal, the general and subsidiary ledgers, and adjusting, correcting, and closing journal entries. Income statements, statements of owner equity, balance sheets for service and merchandising businesses are prepared and analyzed. Additional topics include cash management and bank reconciliations, accounting for sales and purchase discounts, sales taxes, merchandise inventory, and payroll.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the purpose and process of accounting and list the functions of accounting.
- define accounting elements and construct the accounting equation; analyze and record daily transactions in the general journal and post to general and subsidiary ledgers.
- complete the accounting cycle in a manual accounting system which includes journalizing, posting, trial balance, adjusting entries, adjusted trial balance, financial statements, closing entries and post-closing trial balance, and the preparation of a worksheet.
- prepare financial statements which include income statement, statement of owners' equity, and balance sheet for service and merchandising businesses.
- construct a bank reconciliation and record the entries necessary to update the accounts.
- prepare a payroll register and make appropriate journal entries to correctly record wage/salary expenses, and employer payroll tax expenses.
- record merchandise sales transactions by using merchandise sales accounts, record merchandise purchase transactions by using merchandise purchase accounts, and compute gross profit for a merchandise business.
- compute ending inventory and cost of goods sold under four different merchandise inventory valuation methods.
- prepare adjusting entries, closing entries, and multiple-step income statements for a merchandising business.
- assess financial statements by computing basic financial ratios and explaining the meanings of ratios.

ACCT 103 Intermediate Accounting - Part I

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Catalog Date: June 1, 2020

This course continues the study and application of accounting principles and techniques used in preparing and reporting the financial results of business corporations. Areas of study include cash and receivables, inventory, long-term assets, and analysis of time value of money.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the concepts, principles, and practices of financial accounting, including discussion of Generally Accepted Accounting Principles (U.S. GAAP) and International Financial Reporting Standards (IFRS) on selected topics
- prepare financial statements and related disclosures, including classified balance sheets, multiple step income statements with presentation of discontinued operations, extraordinary items, and accounting changes
• identify accounting topics where the time value of money is relevant, including calculating and comparing future and present value of cash flows
• apply the objectives and principles for managing and accounting for cash, cash equivalents, and accounts receivable
• account for inventory using alternative techniques and procedures for valuation and reporting within the financial statements
• account for acquisition, depreciation, depletion, impairment, and disposition of property, plant, and equipment
• identify and account for costs to be included in the valuation of intangible assets, including amortization, issues of impairment and presentation within financial statements
• analyze and account for complex business transactions

ACCT 104 Intermediate Accounting - Part II

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Advisory: ACCT 103
Catalog Date: June 1, 2020

This course continues the study and application of accounting principles and techniques used in preparing and reporting the financial results of business corporations. Areas of study include liabilities and contingencies, stockholders’ equity and earnings per share, investments, revenue recognition, income taxes, pensions, leases, accounting changes and error analysis, and cash flows.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• examine the concepts, principles, and practices of financial accounting, including discussion of Generally Accepted Accounting Principles (U.S. GAAP) and International Financial Reporting Standards (IFRS) on selected topics
• account for current liabilities, distinguish and present accounting treatments for contingencies
• account for bonds and long-term notes, and describe disclosures for long-term debt in various forms
• evaluate and account for transactions affecting the components of stockholders’ equity
• analyze and account for transactions affecting the components of stockholders’ equity
• analyze and account for convertible securities, stock compensation plan and earnings per share
• analyze and account for complex business transactions
• distinguish between different types of pension plans, record pension expense, and balance sheet presentation of pension asset/liability
• contrast capital leases with operating leases including the accounting procedures for both the lessee and lessor, and the financial statement presentation and disclosure requirements
• compare and contrast accounting changes versus accounting estimates, and the accounting procedures for each, including the accounting for correction of errors and analyzing the effect of errors
• contrast the direct and indirect methods of calculating cash flow from operating activities, and preparation of statement of cash flows under each method
• analyze and account for income tax liabilities currently payable and deferred

ACCT 107 Auditing

Units: 3
Hours: 54 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Advisory: ACCT 103; ACCT 104; BUS 105 or MATH 100, 104 or 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course on auditing practice and theory emphasizes attestation audits of financial statements and the accompanying footnotes. Topics include Generally Accepted Auditing Standards (GAAS), ethics, legal issues, audit planning and methodology, internal control analysis, sampling, and auditors’ reports. Additional topics include specific auditing objectives and tests of assets, liabilities, equity, revenues, and expenses.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate the roles of financial reporting and auditing in the modern business environment.
- compare and contrast the "Generally Accepted Auditing Standards" (GAAS) of the American Institute of Certified Public Accountants (AICPA) with "Auditing Standards" issued by the Public Company Accounting Oversight Board (PCAOB).
- analyze the six principles of the AICPA Code of Professional Conduct.
- assess the various components of audit risk.
- evaluate the structure of audit working papers documentation.
- compare and contrast the three methods of documenting and assessing internal controls.
- evaluate statistical and non-statistical sampling methodologies including how sample size is affected by audit risk and population size.
- ascertain appropriate audit tests for assets, liabilities, stockholders' equity, revenues, and expenses.
- evaluate resulting audit evidence for assets, liabilities, stockholders' equity, revenues, and expenses.
- distinguish the types of auditor's reports/opinions and when to apply each type of report/opinion.

ACCT 111 Cost Accounting

Units: 3  
Hours: 54 hours LEC  
Prerequisite: ACCT 311 with a grade of "C" or better  
Catalog Date: June 1, 2020

This course covers advanced managerial accounting. Topics include recording, classifying, reporting, and analyzing costs as well as examining different costing systems. The course focuses on understanding costs, appropriate accounting for them, and using them to analyze, plan, operate, and evaluate manufacturing, merchandising, and service businesses. It utilizes the industry-standard software, Excel, to do so.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the role of cost accounting in planning and making business decisions.
- differentiate between cost behaviors and use them to predict costs.
- differentiate between, account for, and report product and period costs.
- evaluate and plan profitability using cost behavior.
- use costs to make pricing and other types of business decisions.
- compare, contrast, and use process and job-order costs systems in accounting for product costs.
- prepare budgets and evaluate financial performance using variance analysis.
- evaluate organizational structure, use responsibility accounting, and allocate joint, by-product, and service department costs.
- use Excel software to account for and analyze costs.

ACCT 121 Payroll Accounting

Units: 3  
Hours: 54 hours LEC  
Prerequisite: ACCT 101 or 301 with a grade of "C" or better  
Catalog Date: June 1, 2020

This course covers current practices in payroll accounting and tax reporting, including federal and state laws that affect payroll records and reports. Topics include both manual and computer payroll systems with hands-on computer applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate and prepare the payroll records required of employers
• identify and apply the federal and state laws that affect payroll accounting and employment practices
• prepare payroll transactions, accounting entries, and payroll tax returns
• analyze and interpret payroll data to determine total costs to the employer of wages, taxes, and fringe benefits
• record payroll transactions in an automated payroll system, using a personal computer and payroll software
• evaluate automated payroll reports
• analyze and prepare various payroll forms

ACCT 125 Federal and State Individual Taxation

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Advisory: ACCT 101 or 301; AND eligible for ENGRD 116 AND ENGRWR 102; OR ESLR 320 AND ESLW 320.
Catalog Date: June 1, 2020

This course covers basic Federal and State Income Tax regulations with an emphasis on the skills necessary for the preparation of individual income tax returns. Topics include filling requirements, determination of taxable income, allowable deductions, tax computation, tax credits, other taxes, payment methods, and audit procedures. The course is a California Tax Education Council (CTEC) qualifying education course, and is offered to members of the community to enable them to become a California Registered Tax Return Preparer (CRTTP).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the constitutional origins, statutory requirements, and other legislative and administrative underpinnings of the income tax systems of the United States and California.
• compute the federal and state tax formula for individuals: gross income, adjusted gross income, taxable income, and income tax.
• describe what constitutes "substantial authority" with respect to a position taken on a tax return, and be able to locate substantial authority for such a position.
• identify where each item of income and deduction belongs on federal and state income tax returns for individuals.
• prepare basic, intermediate, and advanced federal and state individual income tax returns.
• conduct basic tax research using publicly-available research tools.
• describe the basics of income tax administration, including the audit process, reporting requirements, and taxpayer and preparer penalties, particularly California tax practitioner requirements.
• calculate state and federal taxes using applicable laws and standard forms.
• identify and calculate tax credits taxpayers are entitled to claim on their tax return.
• prepare written communication to IRS and/or clients analyzing tax issues and making appropriate recommendations.
• apply professional ethical behavior in accounting, taxation, and business.

ACCT 128 Taxation of Corporations, Partnerships, Estates, and Trusts

Units: 4
Hours: 72 hours LEC
Prerequisite: ACCT 125 and 301 with grades of "C" or better
Catalog Date: June 1, 2020

This course provides a continuing study of federal income tax compliance with an emphasis on the taxation of business entities including corporations, partnerships, limited liability companies, S-corporations, estates, and trusts. Topics include tax and non-tax characteristics of business entities, income tax filing requirements, differences in book and taxable income, selection of accounting methods and periods, tax computation, and available credits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
list the decisions about accounting periods and methods that the various business entities must make.

describe the income tax issues that are faced by non-profit organizations.

identify the income tax issues in creating, operating, and liquidating a corporation.

prepare a corporation's federal income tax return.

identify the income tax issues in creating, operating, and liquidating a partnership and an S-corporation.

prepare partnership and S-corporation income tax returns.

describe the income tax issues in making taxable gifts and prepare a gift tax return.

describe the estate and trust income tax issues and prepare a trust tax return.

identify the primary types of state and local taxes and when they are applicable to a business entity.

cite the basic U.S. framework for taxing multinational transactions and the role of the foreign tax credit.

apply professional ethical behavior in accounting, taxation, and business.

ACCT 153 Governmental Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: ACCT 301 with a grade of "C" or better
Advisory: ENGWR 102 and ENGRD 116, OR ESLR 320 and ESLW 320; ESLL 320; MATH 100, 104 132 or BUS 105
Catalog Date: June 1, 2020

This course covers accounting and financial reporting for governmental units and institutions with emphasis on the accounting standards prescribed by the Governmental Accounting Standards Board (GASB). Additional topics include governmental budgeting and budgetary controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the environment of governmental budgeting, accounting, and financial reporting
- evaluate the role of the budget and budgetary process in the management of governmental organizations
- compare and contrast the objectives of financial reporting of governmental and corporate accounting
- compare and contrast the modified accrual basis of accounting and the full accrual basis of accounting
- evaluate the role of each fund in the fund financial statements
- compare and contrast the fund financial statements and the government-wide financial statements
- evaluate the content of a typical Comprehensive Annual Financial Report

ACCT 295 Independent Studies in Accounting

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

ACCT 301 Financial Accounting

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Advisory: ACCT 101; AND BUS 105 or MATH 100, 104, or 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW
This is the study of accounting as an information system, examining why it is important and how it is used by investors, creditors, and others to make decisions. The course covers the accounting information system, including recording and reporting of business transactions with a focus on the accounting cycle, the application of generally accepted accounting principles, the financial statements, and statement analysis. It includes issues relating to asset, liability, and equity valuation, revenue and expense recognition, cash flow, internal controls, and ethics.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the nature and purpose of generally accepted accounting principles (GAAP) and International Financial Reporting Standards (IFRS).
- explain and apply the components of the conceptual framework for financial accounting and reporting, including the qualitative characteristics of accounting information, the assumptions underlying accounting, the basic principles of financial accounting, and the constraints and limitations on accounting information.
- define and use accounting and business terminology.
- explain what a system is and how an accounting system is designed to satisfy the needs of specific businesses and users.
- summarize the purpose of journals and ledgers.
- apply transaction analysis, input transactions into the accounting system, process this input, and prepare and interpret the four basic financial statements.
- distinguish between cash basis and accrual basis accounting and explain their impact on the financial statements, including the revenue recognition and matching principles.
- identify and illustrate how the principles of internal control are used to manage and control a firm’s resources and minimize risk.
- explain the content, form, and purpose of basic financial statements (including footnotes) and annual reports, and how they satisfy the information needs of investors, creditors, and other users.
- explain the nature of current assets and related issues, including the measurement and reporting of cash and cash equivalents, receivables and bad debts, and inventory and cost of goods sold.
- explain the valuation and reporting of current liabilities, estimated liabilities, and other contingencies.
- identify and illustrate issues relating to long-term asset acquisition, use, cost allocation, and disposal.
- distinguish between capital and revenue expenditures.
- identify and illustrate issues relating to long-term liabilities, including issuance, valuation, and retirement of debt (including the time value of money).
- identify and illustrate issues relating to stockholders’ equity, including issuance, repurchase of capital stock, and dividends.
- explain the importance of operating, investing, and financing activities reported in the Statement of Cash Flows.
- interpret company activity, profitability, liquidity and solvency through selection and application of appropriate financial analysis tools.
- identify the ethical implications inherent in financial reporting and be able to apply strategies for addressing them.

### ACCT 311 Managerial Accounting

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** ACCT 301 with a grade of "C" or better  
**Transferable:** CSU; UC  
**C-ID:** C-ID ACCT 120  
**Catalog Date:** June 1, 2020

This course covers how managers use accounting information in decision-making, planning, directing operations, and controlling. It focuses on cost terms and concepts, cost behavior, cost structure, and cost-volume-profit analysis. Topics include issues relating to cost systems, cost control, profit planning, and performance analysis in manufacturing and service environments.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and illustrate the primary activities and information needs of managers and explain the role of the managerial accountant as a member of the management team.
• compare and contrast financial and managerial accounting.
• define and illustrate various cost terms, concepts, and behaviors, and evaluate their relevancy for different decision-making purposes.
• distinguish between product and period costs and prepare and evaluate a Schedule of Cost of Goods Manufactured, Schedule of Cost of Goods Sold, and Income Statement.
• prepare traditional and contribution-margin income statements and define related terms.
• explain cost-volume-profit analysis, degree of operating leverage, and safety margin and employ each as an analytical tool.
• describe the traditional types of product costing systems (including job-order and process), illustrate the flow of costs in each, and prepare related accounting records and reports.
• discuss the impact of technology on the business environment, its implications for product and service costs, and the development of activity-based costing and management.
• explain the purposes of budgeting, prepare a master budget and its component schedules, and relate the budget to planning and control.
• explain the development and use of standard costs and flexible budgets, prepare and interpret variance analysis reports, and relate them to responsibility accounting and control.
• explain the nature of and need for segment reporting and its relationship to cost, revenue, profit, and investment centers; prepare and analyze related segment reports.
• compare and contrast absorption costing and variable costing, prepare income statements using both methods, and reconcile the resulting net incomes.
• define relevant costs and benefits and prepare analyses related to special decisions.
• explain the nature of capital expenditure decisions and apply and evaluate various methods used in making these decisions; including the time value of money.
• identify the ethical implications inherent in managerial accounting and reporting and apply strategies for addressing them.

ACCT 341 Computerized Accounting

Units: 3
Hours: 54 hours LEC
Prerequisite: ACCT 101 or 301 with a grade of "C" or better
Advisory: CISC 100 or 300
Transferable: CSU
Catalog Date: June 1, 2020

This course covers major areas of computerized accounting system for small business using QuickBooks Online (QBO). Topics include setting up a new company in QBO, creating a chart of accounts, banking, recording customer and vendor transactions, using QBO inventory tracking, paying employees, making adjusting entries, and generating financial and management reports for service and merchandising businesses. This course provides students with hands-on experience in using QBO and prepares students to take Intuit certified QB certification exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify differences between manual and computerized accounting systems.
• set up a new company chart of accounts as well as customer, vendor, and employee master files.
• record transactions related to sales, purchases, and payroll for service and merchandising companies.
• complete the full accounting cycle for service and merchandise business in a computerized accounting system.
• perform bank reconciliation of checking, saving, and credit card accounts
• analyze end-of-period account balances and create appropriate adjusting and closing journal entries.
• generate and evaluate financial statements and other accounting reports.

ACCT 343 Computer Spreadsheet Applications for Accounting

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None
Corequisite: ACCT 301
Advisory: CISA 315; ENGWR 102 and ENGRD 116 OR ESLR 320 and ESLW 320; ESLL 320; MATH 100, 104, 132 or BUS 105
This course combines the study of accounting and computer spreadsheets. Projects include topics in financial accounting, managerial accounting, and financial analysis. The course focuses on accuracy, clarity, creativity, adaptability, and presentation skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create computerized spreadsheets from start to finish for accounting applications
- construct complex spreadsheet formulas and functions to develop accounting spreadsheets
- design spreadsheets that communicate accurate, succinct, and useful accounting information
- compare and contrast commonly used spreadsheet software currently used in business and industry

ACCT 361 Ethics, Fraud, and Legal Issues for Accountants

This course explores ethics, fraud, and legal issues that must be addressed by accountants, including exploration through case studies. Topics in ethics include ethical foundations as well as the unique ethical requirements of professional organizations and the California Board of Accountancy. The course also examines the legal liability of accountants. A variety of case studies are evaluated to gain perspective into ethical lapses, fraud, and legal liability.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the ethical guidelines of the American Institute of Certified Public Accountants (AICPA) and other professional accounting organizations.
- evaluate the California Accountancy Act and the implementing rules and regulations of the California Board of Accountancy.
- explore the ethical standards of the International Ethics Standards Board for Accountants (IESBA).
- assess potential legal liability for professional conduct.
- identify the common characteristics and causes of ethical lapses, fraud, and inadequate audits.
- evaluate and apply the Sarbanes-Oxley Act of 2002.

</tr>
</tbody>
</table>
This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of accounting. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies. During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of accounting related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course

- make effective decisions, use workforce information, and manage his/her personal career plans.

- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

- locate, organize, evaluate, and reference information at work.

- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

This course introduces the basic principles of property tax appraisal. It covers the economic aspects and legal definitions of market value, California Property Tax Laws and Regulations, the appraisal process, and methods of valuation. It is designed to meet the California Board of Equalization training requirements for county property tax appraisers.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply property tax laws as they pertain to the appraisal of property for tax purposes.

- analyze the appraisal process in preparation to value property for tax purposes.

- analyze data to determine land value and land allocation for tax purposes.

- analyze comparable sales information in order to value property by the sales comparable approach.

- determine appropriate costs to include in the preparation of the cost approach to value.

- evaluate income information to determine appropriate process to value property by the income approach.

- apply appraisal principles and valuation methodology to value real and personal property for property tax purposes.
This course covers the principles of property tax appraisal for tax assessment of personal property and fixtures. Topics include the economic aspects and legal definitions of market value, California Property Tax Laws and Regulations, the appraisal process, and methods of valuation. It is designed to meet the California Board of Equalization training requirements for county property tax auditor-appraisers and appraisers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- appraise personal property and fixtures for property tax purposes.
- classify property as real property, personal property, or improvements, including determining whether an improvement is a structure or fixture improvement.
- determine the taxability of personal property and fixture items in compliance with the California Constitution, Revenue & Taxation Code provisions, property tax rules, and case law.
- evaluate the factors determining value.
- evaluate the concept of Trade Level.
- apply the cost approach to determine value.
- apply equipment index factors and percent good factors in the valuation of personal property and fixtures.
Administration of Justice | American River College

ARC's Administration of Justice program offers both Associate's and Associate's for Transfer degrees. The Associate's degree covers the prevention, discovery, control and treatment of crimes, criminals, and criminality. Students desiring to enter a career concerned with the administration of justice will find that this curriculum has flexibility that allows them to prepare for specific fields included in that broad category. The Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

Associate Degrees for Transfer

A.S.-T. in Administration of Justice

The Associate in Science in Administration of Justice for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Science in Administration of Justice for Transfer (A.S.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Students desiring to enter a career concerned with administration of justice will find that this curriculum has flexibility that allows them to prepare for specific fields included in that broad category.

The Associate in Science in Administration of Justice for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate various local, state, and federal law enforcement career options.
- research the law enforcement application and hiring processes.
- critique the ethical philosophy of the American justice system.
- analyze crime causation, criminal statutes and elements of particular crimes.
- describe the various levels of punishment and corrections.
- evaluate the legal aspects of criminal investigations, constitutional law, and case law.
- identify various controlled substances and interpret their impact on society and law enforcement.
- apply laws and procedures for the collection and use of evidence.
- identify ethical standards placed on law enforcement professionals.
- communicate effectively in written and oral formats.

Career Information

Police Officer; Deputy Sheriff; Crime Scene Investigator; Identification Technician; Community Services Officer; Corrections Officer; Parole Officer; Probation Officer and a variety of support service occupations. Potential employers include: Federal, State and local law enforcement agencies (Sheriff, Police, California Highway Patrol, Federal Bureau of Investigations, Drug Enforcement Administration, Department of Justice, Crime Scene Investigations, and California Department of Corrections and Rehabilitation).

Associate Degrees

A.S. in Administration of Justice

This degree covers the prevention, discovery, control and treatment of crimes, criminals, and criminality. Students desiring to enter a career concerned with the administration of justice will find that this curriculum has flexibility that allows them to prepare for specific fields included in that broad category. The program also provides courses to prepare students for transfer to a four-year institution. Opportunities for graduates include positions as federal and state parole officers, probation officers, and correctional administrators.

A minimum of 3 units from the following:
The Administration of Justice Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate various local, state, and federal law enforcement career options.
- research the law enforcement application and hiring processes and develop an effective career strategy.
- critique the ethical philosophy of the American justice system and all participants.
- analyze crime causation, criminal statutes and elements of particular crimes and criminal procedures.
- recognize the complexities of punishment, corrections, community and human relations.
- evaluate the complex legal aspects of criminal investigations, procedures, constitutional law, and case law.
- identify various controlled substances and interpret their addictive properties, influences, and impact on society and law enforcement.
- apply laws and procedures for the collection and use of evidence.
- identify and adapt to ethical standards placed on law enforcement professionals.
- communicate effectively in written and oral formats.

Career Information

Police Officer; Deputy Sheriff; Crime Scene Investigator; Identification Technician; Community Services Officer; Corrections Officer; Parole Officer; Probation Officer and a variety of support service occupations. Potential employers include: Federal, State and local law enforcement agencies (Sheriff, Police, California Highway Patrol, Federal Bureau of Investigations, Drug Enforcement Administration, Department of Justice, Crime Scene Investigations, and California Department of Corrections and Rehabilitation).

Certificate

Homeland Security Certificate

This certificate examines the roots of terrorism, weapons of mass destruction, intelligence analysis, response methods, natural disaster incidents, threat mitigation, crisis negotiation, and conflict resolution. It explores topics directly associated with border security and security for transportation infrastructure, including: seaports, ships, aircraft, trains, train stations, highways, bridges, rail lines, pipelines, and bus systems.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- construct a historical time-line reflecting significant terrorist threats and events in the United States and globally.
- classify the roles, functions of, and interdependency among local, federal and international law enforcement and military agencies to counter and combat terrorism.
Administration of Justice (ADMJ)

ADMJ 300 Introduction to Administration of Justice

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ELSR 340 AND ELSW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D8; IGETC Area 4H
C-ID: C-ID AJ 110
Catalog Date: June 1, 2020

This course introduces the characteristics of the American criminal justice system, U.S. Constitutional Rights, criminal activity, crime causation, domestic and international criminal threats, law enforcement response to criminal activity, and future law enforcement trends. It emphasizes the components of the American justice system, due process, courts and correctional services, ethics, and leadership.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the history, structure, and function of law enforcement, courts, and correctional systems in the United States.
- explain the interaction between law enforcement, courts, and correctional systems.
- explain due process and the protections provided by the U.S. Constitution.
- analyze ethical decision making and leadership ability.
- explain crime and criminality using criminological theories.
- explain the methods, theories, and concepts associated with the sources of crime data, the emerging patterns of criminal activity, and the costs of crime.
- describe the extent of the crime problem in America.

ADMJ 301 Investigative Report Writing

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESL 340
Transferable: CSU
Catalog Date: June 1, 2020

This course provides techniques of writing facts, information, and ideas effectively in a simple, clear, and logical manner in the various types of criminal justice system reports. It emphasizes criminal justice terminology, organization of information, investigative note taking, and thorough documentation of witness statements and evidence.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and organize data for use in report writing.
write a report communicating facts and ideas in a simple, clear, and logical manner.

use vocabulary commonly used in the criminal justice system.

take notes in an interview or interrogation situation in a logical and organized manner.

discuss police ethical responsibilities and mandatory reporting requirements.

ADMJ 302 Community Relations: Multicultural Issues

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ELSR 340 AND ELSW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D7; IGETC Area 4
C-ID: C-ID AJ 160
Catalog Date: June 1, 2020

This course examines the complex, dynamic relationship between communities and the institutions of the justice system in addressing crime and conflict with an emphasis on the challenges and prospects of administering justice within a diverse, multicultural population. It addresses the role that race, ethnicity, gender, sexual orientation, social class, culture, and the criminal justice professional play in shaping these relationships. It also examines new strategies, skills, tools, and cultural knowledge necessary for personnel engaged in all aspects of the criminal justice system. Special topics include how terrorism and the need for homeland security have changed the dynamics of police-community relations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze how community perceptions of the justice system have evolved historically.
- formulate ways in which law enforcement professionals should respond to multicultural communities with a greater need for consideration, sensitivity, and improved communication skills.
- describe the changing law enforcement agency, including ethnic and racial issues within the workforce and women in law enforcement.
- describe the impact of cultural diversity on law enforcement’s duty to combat terrorism and maintain homeland security.
- examine emerging strategies, roles, and technologies for peace officers in multicultural law enforcement.
- describe the impact multiculturalism has on the courts and corrections.

ADMJ 304 Juvenile Delinquency

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ELSR 340 AND ELSW 340.
Transferable: CSU
General Education: AA/AS Area V(b); CSU Area D0
C-ID: C-ID AJ 220
Catalog Date: June 1, 2020

This course examines juvenile delinquency from a variety of perspectives, including the concept of delinquency, theories of delinquency, social, community, and environmental influences on delinquency and the juvenile justice system (past and present). An overview of adolescent problems and current approaches being utilized to confront these problems is discussed. It examines a variety of the causes of juvenile delinquency, as well as suggestions for the treatment of delinquency at both the state and local levels. It also examines the nature and extent of delinquency with relation to gender differences, family dynamics, peer and gang groups, schools, drug use, and the juvenile justice courts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate the many diverse views and perspectives that characterize the study of juvenile delinquency.
- analyze the balance of theory, law, policy, and practice as they relate to juvenile delinquency.
- examine the concept of delinquency and status offending, the measurement of delinquency, and the trends and patterns in the delinquency rate.
assess the merits of the various theoretical models that have been used to explain the onset of delinquent behavior with a focus on choice, biology, psychology, economic, cultural, and environmental influences affecting delinquency.

explain the various treatment approaches utilized to curb the onset of delinquency.

examine juvenile delinquency abroad and compare how juvenile justice systems in other nations compare with the system in the United States.

describe how gender differences, peer groups, family dynamics, schools, drug use, and abuse impact delinquency rates.

ADMJ 309 Career Preparation for Law Enforcement Occupations

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for students who are pursuing careers in law enforcement and corrections. It covers employment and career search techniques, application processes, resume development, and cover letter writing. This course prepares students for pre-employment testing, interviews, background investigations, polygraph examinations, medical screening, conditional job offers, and hiring processes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the current law enforcement labor market and develop job search skills.
- generate a completed law enforcement employment application package, including resume and cover letter.
- describe the complexity and thoroughness of the law enforcement background investigation process and identify potential career disqualifiers.
- accurately complete the California Commission on Peace Officer Standards and Training personal history statement documents.
- demonstrate ethical decision making and leadership ability.

ADMJ 320 Concepts of Criminal Law

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D8; IGETC Area 4H
C-ID: C-ID AJ 120
Catalog Date: June 1, 2020

This course examines the philosophy and structure of criminal law in the United States. Special emphasis is placed on the classification of crime, the general elements of crime, the definitions of common and statutory law, and the nature of acceptable evidence. It utilizes case studies to introduce students to criminal law and the classification of crimes against persons, property, morals, and public welfare. It also includes discussion of prosecution and defense decision making, criminal culpability, and defenses to crimes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the philosophical and historical evolution of criminal law.
- explain the adversary system and sources of criminal law.
- identify elements of offenses against the person, property, morals, and public welfare.
- analyze a criminal court case and identify elements of offenses and criminal defenses applicable to the case.
- classify crimes according to severity.
- explain capacity to commit crime, causation, and culpability.
- examine the effects of ethical conduct of government officials and the relationship to the enforcement of criminal laws.
ADMJ 322 Criminal Procedures

This course is an in-depth study of criminal procedures used to enforce substantive law at both the federal and state level. Every step of the criminal process, from arrest to appeal, is thoroughly explored.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list each step in the criminal justice process from arrest to trial.
- analyze the roles played by prosecutors, criminal defense attorneys, and judges in the criminal justice process.
- distinguish between the authority, jurisdiction, and organization of state and federal courts.

ADMJ 323 Legal Aspects of Evidence

This course examines the origins, development, philosophy, and constitutional foundations of the rules of evidence as applied in United States law. Emphasis is placed on the types of evidence and the laws governing admissibility of evidence into criminal procedures. Topics include search and seizure, hearsay evidence, witness competency, and direct and circumstantial evidence.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish between direct and circumstantial evidence and explain the impact that each has on a criminal procedure.
- recognize situations where a search warrant is required.
- distinguish among different types of evidence.
- identify the laws governing the admissibility of evidence into a criminal procedure.
- analyze the laws of search and seizure.
- critically evaluate and apply the rules of evidence to specific case facts.
- identify circumstances when a search warrant is not required.

ADMJ 330 Criminal Investigation

This course introduces basic investigative responsibilities and procedures as applied to criminal investigations. Topics include crime scene management, forensic and physical evidence handling, search and seizure, property crimes, violent crimes, organized criminal enterprises, gangs, and domestic and international terrorist
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify basic investigative responsibilities, including note taking, photographic documentation, preserving and processing evidence, and crime scene sketching.
- identify and explain the role of documentation in the criminal investigative process.
- recognize, identify, and explain the implications of a given piece of evidence in a criminal process.
- identify critical ethical issues related to criminal investigation.
- identify procedures for first responders to crime scenes.
- describe successive evolutionary stages of the criminal investigative process.
- describe the duties related to the basic functions of crime scene management including control, searching, evidence processing, and general area investigation.
- identify the role of forensic examination in a criminal investigative process.
- compare and contrast the legalities and strategies of interview and interrogation.
- research the protections granted under the fourth amendment to the U.S. Constitution including various exceptions to the rule.
- analyze activities of criminal enterprise organizations, criminal gangs, and terrorist organizations.
- identify key information sources and data systems available to investigators.
- explain the role of the investigator in the judicial process.

ADMJ 331 Patrol Procedures

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course explores the early development and present-day role of patrol operations and techniques used by local law enforcement agencies. Major topics include community policing, effective patrol strategies, gang awareness, and key factors affecting deployment of patrol resources, such as community involvement and meeting department objectives.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the patrol division organization in a law enforcement agency
- analyze the rules governing a patrol officer's conduct
- differentiate the techniques and methods used by the police to cope with the situations encountered while on patrol

ADMJ 340 Introduction to Correctional Services

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
C-ID: C-ID AJ 200
Catalog Date: June 1, 2020

This course provides an overview of the history and trends of adult and juvenile corrections including probation and parole. It focuses on the legal issues, specific laws, and general operation of correctional institutions. The relationship between corrections and other components of the judicial system is examined.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe the history and development of corrections in the United States.
- research the legal issues, specific laws, and general issues encountered in a corrections facility.
- explain the relationship between corrections and other components of the administration of justice system.
- distinguish between adult and juvenile corrections, probation, and parole.
- analyze current trends and contemporary issues within the corrections field.
Anthropology is the study of humankind around the world and throughout time, with the goal of understanding our evolutionary origins, our biological distinction as a species, and our diverse manifestations of culture. This degree provides students with basic skills in critical analysis, application of the scientific method, and cross-cultural understanding.

Associate Degrees for Transfer

A.A.-T. in Anthropology

The Associate in Arts degree in Anthropology for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Anthropology for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Anthropology is the study of humankind around the world and throughout time, with the goal of understanding our evolutionary origins, our biological distinction as a species, and our diverse manifestations of culture. A degree in anthropology provides the student with basic skills in critical analysis, application of the scientific method, and cross-cultural understanding.

The Associate in Arts in Anthropology for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- apply the science of anthropology towards a holistic understanding of human nature.
- synthesize the principles that form the foundation of anthropology.
- analyze social and ethical issues using anthropological concepts and methods.
- assess the cultural, physical, and linguistic diversity expressed in our species.

**Career Information**

The AA-T degree provides students with a solid foundation in anthropology as well as the standard prerequisites for upper division coursework leading to the baccalaureate degree. Anthropologists with graduate degrees work in archaeological excavation and museum management, the analysis of cultures, linguistics, forensics, primatology, and education. They also consult with governmental, business, and educational institutions.

**Associate Degrees**

**A.S. in Anthropology**

Anthropology is the study of humankind around the world and throughout time, with the goal of understanding our evolutionary origins, our biological distinction as a species, and our diverse manifestations of culture. This degree provides students with basic skills in critical analysis, application of the scientific method, and cross-cultural understanding.

The Anthropology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply the science of anthropology towards a holistic understanding of human nature.
- synthesize the principles that form the foundation of anthropology.
- analyze social and ethical issues related to the field of anthropology and its practical applications.
- analyze the cultural, physical, and linguistic diversity expressed in our species.

Career Information

This degree provides students with a solid foundation in anthropology as well as the standard prerequisites for upper division coursework leading to the baccalaureate degree. Anthropologists with graduate degrees work in occupations ranging from archaeological excavation, exploration, and museum management to the analysis of cultures, linguistics, forensics, primatology, teaching, and consulting with governmental and educational institutions.

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

1must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
Anthropology (ANTH)

ANTH 300 Biological Anthropology

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340  
Transferable: CSU; UC (ANTH 300 & 480 combined: maximum credit - one course)  
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B  
C-ID: C-ID ANTH 110  
Catalog Date: June 1, 2020

This course covers the concepts, methods, and theory of biological evolution and its application to the human species. There is a specific focus on molecular, Mendelian, and population genetics as well as on the mechanisms of evolution primatology, paleoanthropology, biocultural adaptations, human variation, and current bioethical issues. The philosophy of science and the scientific method serve as foundations to this course. This course is not open to students who have completed ANTH 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the scientific process as a methodology for understanding the natural world
- evaluate the nature and origins of the science of biological anthropology
- examine the basic concepts of evolution
- analyze the evidence to support evolution
- survey the various methods for dating the fossil evidence of human evolution
- compare and contrast the living primates
- explain the current hypotheses relevant to an understanding of human evolution
- analyze the fossil record evidence for human evolution
- assess the nature and causes of human diversity

ANTH 301 Biological Anthropology Laboratory

Units: 1  
Hours: 54 hours LAB  
Prerequisite: None.  
Corequisite: ANTH 300  
Transferable: CSU; UC  
General Education: CSU Area B3; IGETC Area 5C  
C-ID: C-ID ANTH 115L  
Catalog Date: June 1, 2020

This introductory laboratory course provides opportunities to become familiar with the scientific methods of biological anthropology by investigating topics in laboratory and field situations. Topics covered in the course include the scientific method, sources of biological variation and forces of evolution, human osteology, human variation, taxonomy and comparative osteology of the primates, and the fossil evidence for human evolution. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- formulate and test simple hypotheses using the scientific method
- describe the sources of biological variation
- identify the bones and important markings of the human skeleton
- calculate sex-related and age-related variations present in human populations
• differentiate the skeletons of prosimians, monkeys, apes, and humans
• recognize the locomotor patterns used by primates
• identify and date the significant anthropoid, hominoid, and hominin fossils
• evaluate problems in interpreting the fossil evidence
• evaluate mechanisms of evolution

ANTH 303 Introduction to Forensic Anthropology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: BIOL 102, BIOL 115, BIOL 430, OR ANTH 300 and 301; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course is an overview of forensic anthropology, an applied field of physical anthropology. Forensic anthropology uses the analysis of human skeletal remains to answer medico-legal questions. This course emphasizes current techniques used in analysis of human skeletal remains, medico-legal procedures, and the role of the anthropologist in the investigative process. It examines the basics of bone biology, methods of skeletal analysis, and recognition of bone pathology and trauma.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the methods and approaches of a forensic anthropologist
• apply the techniques for determining sex, age, and ethnicity from human skeletal remains
• examine a human skeleton and infer possible trauma and pathology
• discuss the legal and ethical issues of working with human remains
• apply the processes for establishing positive identification using human remains
• explain the role of the forensic anthropologist in a criminal investigation
• describe the dynamics of dental anthropology in positive identification
• evaluate the significance of human skeletal remains to overall crime scene investigation

ANTH 310 Cultural Anthropology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
C-ID: C-ID ANTH 120
Catalog Date: June 1, 2020

This course explores the various customs, traditions, and forms of social organizations from a global perspective. Topics include subsistence methods, belief and religious systems, linguistics, trade and economic systems, arts, kinship systems, marriage and family systems, technology, and changes due to internal and external forces. Gender, race, and ethnic identity are examined as well as the role of society in defining these terms. Using ethnographic case studies, this course examines how anthropological ethics, methods, and theories are applied to the study of human culture. This course is not open to students who have already completed ANTH 481.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the nature of anthropology as a discipline.
• explain the history and development of cultural anthropology.
• evaluate the impact of cultural diversity on cross-cultural communication.
• identify the consequences of ethnocentrism and/or racism on social interactions.
• assess the role of applied anthropology in addressing current global conditions.
• identify cross-cultural examples of ethnic conflict and explain its role in warfare and violence.
• assess global trends of socio-cultural change in the areas of economic and social development.
• create a chart demonstrating kin relationships.
• explain the role of ethnographic fieldwork in the study of culture.

ANTH 319 Visual Anthropology: Introduction to Ethnographic Film

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D1; IGETC Area 4
Catalog Date: June 1, 2020

This course introduces the use of film by anthropologists as a research and educational tool. A series of films depicting different cultures from around the world are viewed and evaluated. Various attributes of ethnographic film and its treatment by a number of anthropological filmmakers are examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the work of anthropologists in fieldwork settings
• identify the multi-dimensional, sensory experience of culture
• evaluate ethnographic films by analyzing specific elements: i.e. narration, sound, editing, degree of subject involvement, distortions and bias, and ethnographic context
• systematize the historical development of ethnographic film-making
• compare the style, form, and focus of different films
• analyze ethnographic films as they pertain to controversial issues in the discipline of anthropology and in popular culture
• discuss the shift away from the outsider’s point of view to visual sovereignty since the 1980s

ANTH 320 Introduction to Archaeology and World Prehistory

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D1; IGETC Area 4
C-ID: C-ID ANTH 150
Catalog Date: June 1, 2020

This course is an introduction to the theories, concepts, and methods employed by the archaeologist in the study of human history and pre-history. The development and diverse evolution of social and cultural systems are emphasized. The challenges and achievements of non-literate and traditional cultures, diverse communities, and social classes over time are also explored.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the concept of culture as used by social scientists.
• discuss the role of archaeology within the broader discipline of anthropology.
• apply the scientific method in the study of archaeological record as it pertains to human history and pre-history.
• distinguish between the various forms of dating technology and how they apply to the analysis of archaeological sites and artifacts.
incorporate archaeological evidence into an understanding of historical records and cultural behaviors.

discuss scientifically responsible and culturally respectful methods of archaeological retrieval and preservation including Cultural Resource Management (CRM) and adherence to Native American Grave Protection and Repatriation Act (NAGPRA) guidelines.

identify the various archaeological theories, methods, and techniques used to investigate the human past.

illustrate the use of archaeological methods with reference to cultural sequences.

ANTH 321 Ancient Technology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ANTH 320; Eligible for ENGRD 310 or ENGRD 312 AND ENGR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b)
Catalog Date: June 1, 2020

This course examines technological capabilities of pre-industrial societies using ethnographic and archaeological examples and an experimental approach. Topics include construction techniques of temporary and permanent structures, pottery construction, glassmaking, metallurgy, textile production, as well as bone, stone, wood, and other technologies crucial to human survival. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the relationship between technology and subsistence.
- describe the differences between extractive/reductive and transformative crafts.
- analyze textile structures for differences in construction techniques.
- compare pottery construction and firing methods.
- define basic lithic terminology.
- compare smelting and working techniques for copper, bronze, and iron.
- categorize types of structures according to construction technique.
- design an experimental project to replicate at least one of the technologies addressed in the course.

ANTH 330 Magic, Witchcraft, and Religion

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
Catalog Date: June 1, 2020

This course is a cross-cultural study of supernatural beliefs and associated rituals in traditional societies. Emphasis is on understanding the role of beliefs within the broader social context. In addition, this course examines the general functions of ritual and mythology in reinforcing cultural ideals and ethics. Similarities and differences between traditional beliefs and world religions are also explored.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the range of religious, ritual, and magical beliefs throughout the world and over time.
- analyze the socio-cultural context of religious and magical beliefs.
- describe and explain the value of diverse belief systems.
- assess anthropological approaches to data gathering and the analysis of ceremonial, magical, and supernatural practices and beliefs.
- integrate the role of belief and ritual in an understanding of medical and curing practices.
• evaluate the international and inter-ethnic implications of diverse belief systems and practices in contemporary societies.

ANTH 333 American Indians of California

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESSLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D; IGETC Area 4
Catalog Date: June 1, 2020

This course surveys the sociocultural systems of California Indians from the prehistoric period to the present. In addition to offering an overview of the diversity and complexity of aboriginal California, it includes environmental adaptations, material culture, social structure, ideology, and response to change. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe major culture areas of Native California; the environments, ecological adaptations, and features which distinguish those areas
• contrast California Indian socioculture systems with the Spanish, Russian, and U.S. systems
• describe the linguistic diversity and complexity of California Indians
• evaluate the archaeological record of California Indians
• evaluate the methods of anthropological study of California Indians and its history
• describe the impact of European contact on California Indians
• describe U.S. government policies on California Indians and how those policies affected Native communities

ANTH 334 Native Peoples of North America

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESSLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
Catalog Date: June 1, 2020

This course is an introductory survey of traditional Native American societies. It describes the peoples and cultures of North America and emphasizes native ecological adaptations, languages, social organizations, religions, mythologies and world views, and artistic representations. It also explores the interrelatedness of Indigenous Native American groups through trade, intermarriage, and other forms of cultural exchange. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the unique, major native culture areas of North America as well as the environments, the native ecological adaptations, and the major cultural features which distinguish those areas.
• contrast social or cultural systems within Native North America and between the Native American and the Euro-American systems.
• describe the linguistic diversity and complexity of Native North America.
• explain the archaeological record of Native Peoples of North America.
• compare Native and Western systems of categorization.
• evaluate the history and methods of anthropological study of North American Native Peoples.
• examine current issues among Native Peoples of North America.
• analyze the relationship between Indigenous Native American groups and the French trappers, the various European colonists (including French, English, Russian, and Spanish), and the Mexican government.
• analyze the role of ethnicity, ethnocentrism, and/or racism in shaping the ethnic experience of Native Americans.

ANTH 335 Research Methods in Anthropology

Units: 3
Hours: 54 hours LEC
Prerequisite: ANTH 300 or 310 with a grade of "C" or better
Transferable: CSU; UC
General Education: CSU Area D; IGETC Area 4
Catalog Date: June 1, 2020

This course introduces research methods for the field of anthropology. It emphasizes familiarization with specific observational research methods and the practical application of these methods in a contemporary setting. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• conduct qualitative observational research on both human and non-human primates
• distinguish the participant-observation method from other observational methodologies
• formulate a testable hypothesis
• measure outcomes that support or refute a hypothesis by creating research applications in field settings
• distinguish an ethogram from an ethnography
• analyze patterns in research data

ANTH 336 Anthropology of Sex, Sexuality and Gender

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D1; CSU Area D3; IGETC Area 4A
Catalog Date: June 1, 2020

The course is an introductory overview from a global anthropological perspective of the relationship between sexual behavior and sexuality as well as gender and other socially ascribed statuses. Diverse modern and past human and non-human primate communities are compared bio-culturally. Integrating the basic branches of anthropology -- cultural, biological, linguistic and archaeological anthropology -- the course examines the role, function, and evolution of sex in the human primate. It examines the relationship between sex, sexuality, gender to adaptation as well as to social behavior and to cultural variation. The implications of research methodologies and theory in investigating sex, sexuality, culture and biology are evaluated.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain and synthesize the goals, methods and distinctive features of the discipline of anthropology.
• predict general ethical concerns in anthropological research.
• evaluate specific ethical dilemmas in anthropological research on sex, sexuality and gender.
• apply linguistic anthropology concepts to the study of sex, sexuality and gender.
• describe the range of variations in sexual norms across primate species and cross-culturally across human societies.
• analyze the difference between genetic/biological/essentialist definitions of gender and cultural ascriptions of genders.
• compare and contrast sexual selection hypotheses and evolutionary adaptation hypotheses about both specific, non-human primate sexual traits or behavior and human sexual traits or behaviors.
• evaluate the successes and limitations of reconstructing prehistoric gendered or sexuality phenomena.
• deconstruct a current topical issue in the anthropology of sex, sexuality and gender.
• recount core theoretical claims about sex, sexuality and gender in the behavioral sciences with special reference to the anthropological perspective and contribution.
• review changes in the role of gender or sexual identities in anthropology as a profession.

ANTH 341 Introduction to Linguistics

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area II(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
C-ID: C-ID ANTH 130
Catalog Date: June 1, 2020

This introductory course serves as a foundation for understanding language from an anthropological perspective. It addresses such core questions as how, what, when, where, why, and with whom humans communicate. The course topics are formed along three core areas:
(1) structural linguistics, which include phonetics, phonology, morphology, syntax, and semantics;
(2) historical linguistics, which include language origin and evolution, structural change, and language genetics; and
(3) sociocultural linguistics, which include child and adult language acquisition, and cultural and psychological constraints within the context of linguistic ethnography.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• demonstrate an understanding of anthropological linguistics, methods, and theory.
• evaluate in cross-cultural perspective how paralanguage and nonverbal communication alter and enhance social communication in humans, as well as in non-human primates.
• describe the biocultural origins of language and the development of language over time.
• interpret language using structural linguistic techniques.
• recognize the dynamic interrelationship between language and culture, including their acquisition.
• examine the relevance of language in sociocultural issues.
• assess factors and consequences of language change and extinction.

ANTH 370 Primatology

Units: 3
Hours: 54 hours LEC
Prerequisite: ANTH 300
Advisory: CSU; UC
Transferable: CSU Area D1; IGETC Area 4A
Catalog Date: June 1, 2020

This course provides an analysis of nonhuman primate comparative morphology, behavior, and ecology. Areas of study include general primate morphology, diet and ecology, behavior including reproduction and social systems, cognition and intelligence, and primate conservation issues. Primates in both captive and free-ranging settings are examined. Field trips for primate observations may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• compare the physical characteristics of the three major categories of nonhuman primates: prosimians, monkeys, and apes
• describe the different social and mating systems of nonhuman primates
• relate various behavioral patterns with the specific ecology associated with these nonhuman primates
• critique current conservation strategies for primates in captivity and in the wild to determine viability

ANTH 372 Primatology Field Studies

Units: 2
This course provides practical experience in non-human primate observational studies. The Sacramento Zoo serves as the field site where observations on non-human primates are conducted. Focus is on training in research methodology and observational techniques. Field trips to the Sacramento Zoo are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- collect behavioral observations on non-human primates
- differentiate behaviors of non-human primates and establish an ethogram
- contrast the behavior of captive with wild non-human primates
- distinguish characteristics of individual non-human primates
- apply different research designs in observational methodology

ANTH 391 Life and Culture Study Abroad

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Enrollment Limitation: The student must complete the pre-enrollment process into the Los Rios Community College District Study Abroad program as required by the American Institute for Foreign Studies (AIFS).
Transferable: CSU
Catalog Date: June 1, 2020

This course allows students to acquire a level of global competence while enrolled in the Los Rios Study Abroad program. Global competence is a continuing process of acquiring specific economic, historical, and geopolitical knowledge, which supports the intercultural communication skills and authentic lived experiences that allow a person to function in another culture, and result in attitudes of cultural appreciation and interdependence. While participating in a specific Study Abroad program the student will have opportunities to study and generally survey the host country's historical, cultural, and geopolitical influences, as well as the societal structures, to develop an understanding and appreciation of the host culture as different from U.S. American culture. Students may find information about the pre-enrollment meetings at the Study Abroad website, located at: http://www.arc.losrios.edu/Study_Abroad.htm

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify aspects of social, physical, and/or emotional well-being for the local community students are studying in, while considering present and future conditions in societies across the globe.
- incorporate specific cultural, geopolitical, economic, and social knowledge into academic and personal contexts for an understanding of global competence.
- analyze personal beliefs, values, and attitudes about the host culture that the student had prior to an intercultural experience and aspects of ethnocentric behavior that can occur within intercultural communication and relations.
- demonstrate an understanding of concepts of physical and emotional wellness to make wise lifestyle choices and develop these skills and competencies to understand oneself as a whole person (integral to one's environment).
- identify and explain aspects of culture shock and techniques to cope with and reduce its effects on physical and emotional wellness.
- describe the value of international travel as a part of lifelong learning and personal wellness.
- undertake thoughtful consideration of divergent points of view and utilize multiple perspectives in considering information.
- develop a foundation for cultural pluralism, a rejection of previous personal prejudices, and knowledge of and comfort with others unlike one's self.
- participate in the larger community beyond campus in a positive manner demonstrating an understanding of personal responsibility in the larger context.

ANTH 480 Honors Biological Anthropology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
This course is an introduction to the science of biological anthropology. It is a seminar-style honors course which approaches the topical material through class discussion which encourages problem solving techniques focusing on current anthropological issues. Weekly topical issues are presented in a case study format. Critical thinking skills are emphasized in responding to these issues. Topics include evolutionary theory, heredity, human variation, taxonomy and behavior of the living primates, and the fossil evidence of human evolution. This course differs from ANTH 300 in that it is offered as a seminar-style class with an emphasis on academic journal articles. This course is not open to students who have completed ANTH 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the nature and origins of the science of biological anthropology
- identify the evidence that supports the evolution, genetics, and heredity of the human species
- critique diverse hypotheses presented to explain human evolution
- assess the diversity of living primates and describe how the study of these animals helps scientists understand human evolution
- describe the fossil record evidence for human evolution
- explain the current hypotheses and factors that are relevant to understanding human evolution
- identify the nature and causes of human diversity
- define problem-solving techniques applicable to current issues relevant to biological anthropology
- synthesize anthropological concepts from primary reading sources
- critique theories regarding human behavioral ecology and the continuing influence of human activity on the environment

ANTH 481 Honors Cultural Anthropology

Units: 3
Hours: 54 hours LEC
Prerequisite: Placement into ENGWR 480 through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D1; IGETC Area 4A
C-ID: C-ID ANTH 120
Catalog Date: June 1, 2020

This course is an introduction to the various customs, traditions, and forms of social organization in both Western and non-Western societies. Multicultural perspectives are examined for such topics as subsistence methods, belief and religious systems, linguistics, trade and economic systems, arts, kinship systems, marriage and family systems, technology, and changes due to internal and external forces. This seminar-style honors course approaches the topical material through class discussion which encourages problem-solving techniques focusing on current anthropological issues. This course is not open to students who have completed ANTH 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the 4-field nature of anthropology and the importance of fieldwork in the discipline
- explain how the history and development of cultural anthropology as a discipline has affected its current theoretical perspectives
- generalize the relationship between subsistence patterns and their impact on other aspects of culture such as marriage, religion, and political and social organization
- analyze and interpret kinship charts
- identify the role of enculturation in personality development and in the interpretation of gender and gender roles
- assess global trends of socio-cultural change in the areas of economic and social development
- analyze cross-cultural examples of ethnic conflict and ethnic identity
- compare the contributions and social experiences of non-Western, non-Eurocentric cultures
- identify the consequences of ethnocentrism and/or racism on social interactions
• assess the impact of cultural diversity on cross-cultural interaction

• apply the concepts of cultural anthropology in daily life

ANTH 494 Topics in Anthropology

Units: 1 - 3
Hours: 18 - 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116; OR ESLR 320 and ESLW 320; OR placement through assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a concentrated study of current anthropological issues. Topics reflect contemporary issues and problems in the four traditional fields as well as an applied approach where appropriate. Issues in the area of physical anthropology are approached from a biological and ecological perspective; issues in cultural anthropology, linguistics, and archaeology are approached from a multi-cultural and international platform.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze and evaluate contemporary anthropological issues as they relate to human biology and culture

• recognize the dynamic nature of the field of anthropology

• evaluate contemporary issues from an anthropological perspective

• demonstrate an awareness of and an appreciation for our increasingly diverse population

• evaluate the effects of the biological or cultural past on current issues

ANTH 495 Independent Studies in Anthropology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
American River College conducts, in cooperation with industry, a number of apprenticeship programs. An apprenticeship program is a formal system of occupational training from one to five years, that combines paid employment, on-the-job training and job related college instruction in order to develop skilled workers.

Apprenticeship programs are a cooperative effort between employers, the Department of Labor (DOL) and/or the Division of Apprenticeship Standards (DAS), and the college.

Enrollment in an apprenticeship course is limited to registered apprentices. Information on admission to apprenticeship status can be obtained from the local trade in which you are interested, or from the office of the Dean of Technical Education.

Associate Degrees

A.A. in Pile Driver Apprenticeship

This program concentrates on training pile driver apprentices to the specific levels required for the construction industry and has been approved by the State of California Division of Apprenticeship Standards. It includes safety, blueprint reading, commercial construction processes, building codes, estimation, welding, and various pile driving topics.

Catalog Date: June 1, 2020

The Pile Driver Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Pile Driver apprentice.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the pile driver’s tools of the trade.
- analyze, interpret, and apply national building codes relating to pile driving.
- analyze and interpret construction blueprints.
- evaluate, lay out, and construct various project types.
- identify and select appropriate materials for each phase of construction.

**Career Information**

Upon completion of this certificate, students may find employment in the following sectors: government, residential and commercial construction, and utilities.

**A.A. in Acoustical Installer Apprenticeship**

This degree concentrates on training apprentices to the specific levels required for the acoustical installer industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial acoustical installer processes, building codes, estimation, and various carpentry topics.

Total Units: 36

The Acoustical Installer Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

### Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Acoustical Installer apprentice.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify the components of a personal fall protection system (PFPS) and a personal fall arrest system (PFAS).
- calculate elevations from information obtained from residential plot and foundation plans.
- calculate contributory leg loads.
- formulate proper layout, cutting, and material installation procedures for the installation of braced and unbraced soffits.
- explain how to install stringer system reinforced perimeter locations, bridge obstructions, and additional bracing.
- extract the information necessary to construct a Photovoltaic support structure using a set of blueprints.
- install an acoustical ceiling conforming with the regulations of the Office of Statewide Health Planning and Development.
- analyze and perform methods of joining and welding plastic materials.
- describe the importance of a construction schedule and daily job log and organize labor in conjunction with the construction schedule.

### Career Information

Acoustical technicians are in high demand. The acoustical industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the Acoustical industry.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Carpenter apprentice.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the carpenter’s tools of the trade.
- analyze, interpret, and apply national building codes relating to carpentry.
- analyze and interpret residential and commercial construction blueprints.
- evaluate, layout, and construct various systems such as floor, wall, roof, and concrete form.
- evaluate and layout a building site using architectural drawings.
- calculate elevations by using an engineer’s rod and various leveling devices.
- estimate and order material for construction projects.
- identify and select appropriate materials for each phase of construction.
- develop interpersonal skills with customers, co-workers, and different trades-workers.
• plan projects with given information such as blueprints, specifications, and contract documents.

Career Information

Carpenter technicians are in high demand. The carpenters industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the carpenters industry.

A.A. in Drywall/Lathing Apprenticeship

The drywall/lathing apprenticeship degree concentrates on training apprentices to the specific levels required for the drywall/lathing industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, metal framing, blueprint reading, exterior/interior wall finishes, welding, residential and commercial construction process, building codes, estimation, and various construction topics.

The Drywall/Lathing Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

• Be a registered Drywall/Lathing apprentice.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the drywall/lathing craftsman's tools of the trade.
- analyze, interpret, and apply national building codes relating to the drywall/lathing profession.
- analyze and interpret residential commercial construction blueprints.
- evaluate, lay out, and construct various metal framing systems such as floor, wall, roof, and arches.
- calculate elevations using various leveling devices.
- identify and select appropriate material for each phase of construction.
- estimate and order material for construction projects.
- plan projects with given information such as blueprints, specifications, and verbal and written information.
- install advanced lathing and drywall systems.

Career Information

Drywall/lathing technicians are in high demand. The drywall/lathing industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the drywall/lathing industry.

A.A. in Electrical Apprenticeship

This program provides instruction in the installation, operation, and maintenance of the electrical distribution systems in commercial and industrial sites. Topics include safety training, AC and DC electrical theory, metering, electronics, use of electrical codes, raceways, conductors, grounding, motors, transformers, fire alarm systems, fiber optics, instrumentation, building automation and heating, ventilating and air conditioning (HVAC) systems.

Total Units: 48.6

The Electrical Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:
• Be a registered electrical apprentice.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• apply commercial and industrial safety procedures on job sites.
• analyze, interpret and apply national, state and local electrical codes.
• apply electrical mathematics in calculating resistance, current, voltage, and power in a DC series circuit.
• demonstrate use of meters to confirm electrical calculations and to troubleshoot AC and DC circuits.
• analyze, identify, and evaluate electrical mathematics in RL, RC, LC, and RLC series, parallel, and combination circuits.
• describe and apply the requirements of Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA) 70E work practices.
• define principles of basic AC and DC motor theory.

Career Information

Upon completion of this certificate, students may find employment in the following sectors: government, residential and commercial construction, and utilities.

A.A. in Ironworkers Apprenticeship

This program includes training for Field Ironworkers and Reinforcing Ironworkers, provided in major ironworker components to meet Division of Apprenticeship Standards (DAS) guidelines.

Total Units: 38

The Ironworkers Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate safely working in a field construction environment.
- analyze and interpret blueprints.
- interpret and apply welding codes.
- demonstrate proper selection, use, care, preparation, and handling of fiber lines, steel cables, wire ropes, chains, slings, cranes, ladders, scaffolds, and helicopter rigging.
- define, identify, interpret, and analyze uniform building codes (UBC), classifications, plans, schedules, charts, and specifications commonly used in the ironworker trade.
- describe and apply reinforcing techniques and principles to concrete structures using steel, bar supports, bar splicing, and welding.
- perform proper structural steel erection on bridges, overpasses, and large buildings.
- weld various ferrous metals using common welding processes and safety guidelines.
- set cable tensions and pre-stress reinforcing steel to industry standards.

A.S. in Plumbers/Pipefitters Apprenticeship

This degree includes the training for plumbers to meet the Division of Apprenticeship Standards (DAS) journey worker guidelines for the plumbers apprenticeship program.

</tbody>
</table>

The Plumbers/Pipefitters Apprenticeship Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Plumbers and Pipefitters apprentice.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- apply hot pass and cover pass procedures.
- identify personality traits to work effectively with others.
- negotiate difficult workplace situations.
- practice conflict resolution.
- evaluate and develop project schedules.
- draft and properly complete construction documents.
- demonstrate uphill pipe welding method.
- list National Inspection Testing Certification (NITC) requirements for medical gas systems.
- demonstrate ability to apply applicable plumbing codes.

Career Information

Plumbers and pipefitters are in high demand. The plumber and pipefitters industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the plumbing industry.

A.A. in Sheet Metal Apprenticeship

The Sheet Metal Apprenticeship certificate concentrates on training apprentices to the specific levels required for the construction industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial processes, building codes, estimation, and various sheet metal topics.

</tr>
</tbody>
</table>

The Sheet Metal Apprenticeship Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the sheet metal worker’s tools of the trade.
- analyze, interpret, and apply national building codes relating to sheet metal construction.
- analyze and interpret residential and commercial construction blueprints.
- acquire skills and knowledge to make a successful transition to a journey-level position in the sheet metal worker trade.
- demonstrate the ability to apply mathematical concepts to the sheet metal trade.
- demonstrate proficiency in the principles, concepts and applications in metal fabrication methods.

Career Information

Upon completion of the Sheet Metal Apprenticeship certificate, students may find employment in the following sectors: government, residential and commercial construction and maintenance, utilities, and facilities management. Students may further their career as a licensed contractor.

A.A. in Sheet Metal Service Technician Apprenticeship

The Sheet Metal Service Technician Apprenticeship Associate of Arts concentrates on training apprentices to the specific levels required for the construction and the heating, ventilation, and air conditioning (HVAC) industries. This program has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial processes, building codes, estimation, and various sheet metal topics. It includes the servicing, start-up, and balancing of HVAC systems.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the sheet metal worker's tools of the trade.
- analyze, interpret, and apply national building codes relating to sheet metal and mechanical construction.
- analyze and interpret residential and commercial construction blueprints.
- demonstrate the proper start-up and balancing of different HVAC systems.
- demonstrate troubleshooting techniques on various HVAC systems.

Career Information

Upon completion of the Sheet Metal Service Technician Apprenticeship certificate, students may find employment in the following sectors: government, residential and commercial construction and maintenance, HVAC servicing, utilities, facilities management, and central plant operations. Students may further their career as a licensed contractor.

Certificates of Achievement

Acoustical Installer Apprenticeship Certificate

This program concentrates on training apprentices to the specific levels required for the acoustical installer industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial acoustical installer processes, building codes, estimation, and various carpentry topics.

Enrollment Eligibility
To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Acoustical Installer apprentice.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- identify the components of a personal fall protection system (PFPS) and a personal fall arrest system (PFAS).
- calculate elevations from information obtained from residential plot and foundation plans.
- calculate contributory leg loads.
- formulate proper layout, cutting, and material installation procedures for the installation of braced and unbraced soffits.
- explain how to install stringer system reinforced perimeter locations, bridge obstructions, and additional bracing.
- extract the information necessary to construct a Photovoltaic support structure using a set of blueprints.
- install an acoustical ceiling conforming with the regulations of the Office of Statewide Health Planning and Development.
- analyze and perform methods of joining and welding plastic materials.
- describe the importance of a construction schedule and daily job log and organize labor in conjunction with the construction schedule.

Career Information
Acoustical technicians are in high demand. The Acoustical industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the Acoustical industry.

### Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Carpenter apprentice.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Demonstrate safe working practices in a field construction environment.
- Demonstrate proper selection, use, care, preparation, and handling of the carpenter's tools of the trade.
- Analyze, interpret, and apply national building codes relating to carpentry.
- Analyze and interpret residential and commercial construction blueprints.
- Evaluate, layout, and construct various systems such as floor, wall, roof, and concrete form.
- Evaluate and layout a building site using architectural and other related drawings.
- Calculate elevations by using an engineer's rod and various leveling devices.
- Estimate and order material for construction projects.
- Identify and select appropriate materials for each phase of construction.

### Career Information

Carpenter technicians are in high demand. The carpenters industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the carpenters industry.

### Drywall/Lathing Apprenticeship Certificate

The drywall/lathing apprenticeship certificate concentrates on training apprentices to the specific levels required for the construction industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, metal framing, blueprint reading, exterior/interior wall finishes, welding, residential and commercial construction process, building codes, estimation, and various construction topics.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Drywall/Lathing apprentice.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the drywall/lathing craftsman's tools of the trade.
- analyze, interpret, and apply national building codes relating to the drywall/lathing profession.
- analyze and interpret residential commercial construction blueprints.
- evaluate, lay out, and construct various metal framing systems such as floor, wall, roof, and arches.
- calculate elevations using various leveling devices.
- identify and select appropriate material for each phase of construction.
- estimate and order material for construction projects.
- plan projects with given information such as blueprints, specifications, and verbal and written information.
- install advanced lathing and drywall systems.

**Career Information**

Drywall/lathing technicians are in high demand. The drywall/lathing industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the drywall/lathing industry.
Electrical Apprenticeship Certificate

This program provides instruction in the installation, operation, and maintenance of the electrical distribution systems in commercial and industrial sites. Topics include safety training, AC and DC electrical theory, metering, electronics, use of electrical codes, raceways, conductors, grounding, motors, transformers, fire alarm systems, fiber optics, instrumentation, building automation and heating, ventilating and air conditioning (HVAC) systems.

</table>

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered electrical apprentice.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply commercial and industrial safety procedures on job sites.
- analyze, interpret and apply national, state and local electrical codes.
- apply electrical mathematics in calculating resistance, current, voltage, and power in a DC series circuit.
- demonstrate use of meters to confirm electrical calculations and to troubleshoot AC and DC circuits.
- analyze, identify, and evaluate electrical mathematics in RL, RC, LC, and RLC series, parallel, and combination circuits.
- describe and apply the requirements of Occupational Safety and Health Administration (OSHA) and National Fire Protection Association (NFPA) 70E work practices.
- define principles of basic AC and DC motor theory.

Career Information

Upon completion of this certificate, students may find employment in the following sectors: government, residential and commercial construction, and utilities.

Ironworkers Apprenticeship Certificate

This program includes training for Field Ironworkers and Reinforcing Ironworkers, provided in major ironworker components to meet Division of Apprenticeship Standards (DAS) guidelines.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- analyze and interpret blueprints.
- interpret and apply welding codes.
- demonstrate proper selection, use, care, preparation, and handling of fiber lines, steel cables, wire ropes, chains, slings, cranes, ladders, scaffolds, and helicopter rigging.
- define, identify, interpret, and analyze universal building codes (UBC), classifications, plans, schedules, charts, and specifications commonly used in the ironworker trade.
- describe and apply reinforcing techniques and principles to concrete structures using steel, bar supports, bar splicing, and welding.
- perform proper structural steel erection on bridges, overpasses, and large buildings.
- weld various ferrous metals using common welding processes and safety guidelines.
- set cable tensions and pre-stress reinforcing steel to industry standards.

Mill and Cabinet Maker Apprenticeship Certificate

This program trains apprentices on the specific levels required for the construction industry and has been approved by the State of California Department of Apprenticeship Standards. It includes safety, blueprint reading, construction processes, building codes, estimation, and various mill and cabinet carpentry topics.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Be a registered Millwright apprentice.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate proper procedure for working on turbines.
- prepare a one-inch-thick vertical groove joint that meets AWS standards.
- produce the AWS 3G and 4G unlimited thickness practice test with FCAW.
- distinguish alternative energy sources, such as wind, nuclear, and tidal power.
- install machinery safely and effectively at the proper elevation.
- explain the layout and fabrication of header steel and methods for connecting and attaching support steel.
- explain the layout and fabrication of a monorail system.
- identify and explain plasma welding and cutting processes, components, and safety issues.
- demonstrate safe rigging practices, including hand and voice signals.
Career Information

Millwright technicians are in high demand. The millwright industry is not able to hire the amount of certified employees needed to fill the workforce and meet the needs of the industry. Students that are in this apprenticeship program are currently working in the millwright industry.

Pre-Apprenticeship Certificate

This program prepares students for entry into an apprenticeship program in the commercial and industrial building and construction industries. Topics include Leadership in Energy and Environmental Design (LEED) processes, green technologies, green building techniques, infrastructure, and transportation projects.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe basic skills required for the construction of roads, bridges, levees, and rail.
- describe the Leadership in Energy and Environmental Design (LEED) rating process.
- identify green alternatives to conventional building practices and describe the pros and cons of those alternatives.
- apply proper lifting/movement techniques applicable to green technology workforce occupations.
- determine the validity of fitness and health information using the scientific method and the relationship between scientific research and established knowledge.
- implement a personal fitness plan using proper strength and cardiovascular training.

Residential/Commercial Electrician Trainee Certificate

This program provides instruction in the installation, operation, and maintenance of the electrical distribution systems in residential and commercial sites. Topics include safety training, AC/DC electrical theory, metering, electronics, use of electrical codes, raceways, conductors, grounding, motors, transformers, fire alarm systems, fiber optics, and Heating, Ventilation, and Air Conditioning (HVAC) systems. It complies with state regulations to become an electrician trainee.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- apply residential and commercial safety procedures on job-sites.
- analyze, interpret, and apply national, state, and local electrical codes.
- apply electrical mathematics in calculating AC/DC series, parallel, and combination circuits.
- identify different wiring methods for conductors, cables, and conduits.
- analyze functions of blueprints, specifications, schedules, addenda, and revisions in construction.
- describe the function, operation, and characteristics of a system and individual components of the system such as burglar alarms, fire alarms, information transport, HVAC, etc.

Career Information
Upon completion of the Residential/Commercial Electrician Trainee program, students may find employment in the following industry sectors: government, residential and commercial construction and maintenance, utilities, and facilities management.

Sheet Metal Apprenticeship Certificate
The Sheet Metal Apprenticeship certificate concentrates on training apprentices to the specific levels required for the construction industry and has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial processes, building codes, estimation, and various sheet metal topics.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the sheet metal worker’s tools of the trade.
- analyze, interpret, and apply national building codes relating to sheet metal construction.
- analyze and interpret residential and commercial construction blueprints.
- acquire skills and knowledge to make a successful transition to a journey-level position in the sheet metal worker trade.
- demonstrate the ability to apply mathematical concepts to the sheet metal trade.
- demonstrate proficiency in the principles, concepts and applications in metal fabrication methods.

Career Information

Upon completion of the Sheet Metal Apprenticeship certificate, students may find employment in the following sectors: government, residential and commercial construction and maintenance, utilities, and facilities management.

Sheet Metal Service Technician Apprenticeship Certificate

The Sheet Metal Service Technician Apprenticeship certificate concentrates on training apprentices to the specific levels required for the construction and the heating, ventilation, and air conditioning (HVAC) industries. This program has been approved by the State of California Department of Apprenticeship Standards. Training emphasis includes safety, blueprint reading, residential and commercial processes, building codes, estimation, and various sheet metal topics. It includes the servicing, start-up, and balancing of HVAC systems.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
- demonstrate safe working practices in a field construction environment.
- demonstrate proper selection, use, care, preparation, and handling of the sheet metal worker's tools of the trade.
- analyze, interpret, and apply national building codes relating to sheet metal and mechanical construction.
- analyze and interpret residential and commercial construction blueprints.
- demonstrate the proper start-up and balancing of different HVAC systems.
- demonstrate troubleshooting techniques on various HVAC systems.

Career Information

Upon completion of the Sheet Metal Service Technician Apprenticeship certificate, students may find employment in the following sectors: government, residential and commercial construction and maintenance, HVAC servicing, utilities, facilities management, and central plant operations.

Certificates

Green Technology Pre-Apprenticeship Certificate

This certificate prepares students for entry into an apprenticeship program in the commercial and industrial building and construction industries. Topics include green building practices, construction job site safety requirements, construction mathematics, and apprenticeship entry requirements.

Catalog Date: June 1, 2020

1This course replaces FITNS 358

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain safety regulations and safe working conditions for apprenticeship training.
- identify construction practices used by different building trades such as sheet metal workers, electricians, plumbers, pipe-fitters, and carpenters.
- describe the life cycle phases of a building and impacts on the green environment over its life cycle.

Infrastructure Pre-Apprenticeship Certificate

This certificate prepares students for entry into an apprenticeship program in the infrastructure industries such as bridge, levee, and road construction. Topics include bridge construction practices, construction job site safety requirements, construction mathematics, and apprenticeship entry requirements.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain safety regulations and safe working conditions for apprenticeship training.
- identify construction practices used by different building trades such as carpenters, bricklayers, pile-drivers, cement masons, laborers, operating engineers, and surveyors.
- describe the construction processes involved in a typical bridge building.

Utilities Worker Pre-Apprenticeship Certificate

This certificate prepares students for entry into an apprenticeship program in the utility industry. Topics include job-site safety requirements, electrical and gas principles, blueprint reading, electrical power distribution, utility pole climbing, and apprenticeship preparation.

Certificate Requirements

<table>

</tbody>
</table>

Upon completion of this program, the student will be able to:

- explain electrical fundamentals such as Ohm’s and Watt’s Law.
- define terms and vocabulary used in the utility industry.
- explain electrical and gas distribution for the utility industry.
- identify safety laws, regulations, and safe working conditions for apprenticeship.
- describe effective conflict resolution methods.
- describe the functions of transformers, electrical generators, and electrical equipment.

Career Information

This program provides opportunities for entry into the utility industry where there is high demand for trained entry level workers.

Carpentry (CARPT)

CARPT 101 Aerial Lift Safety, Construction Math, and the Apprentice

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered carpenter apprentice.
Catalog Date: June 1, 2020

This course introduces the beginning carpenter apprentice to industry safety procedures for aerial lift use, and hand and power tool safety and maintenance. It also covers construction math, financial literacy, and the role and responsibilities of the apprentice.
Upon completion of this course, the student will be able to:

- explain allowable loads for various types of aerial lifts.
- describe load capacity.
- list requirements for pre-shift inspection of aerial lifts.
- describe aerial lift operator responsibilities.
- describe safe aerial lift use.
- explain the meaning of discrimination.
- describe the different types of discrimination.
- demonstrate knowledge of the importance of financial literacy.
- describe the responsibilities of the apprentice as required by Joint Apprenticeship and Training Committee (JATC) and other governing agencies.
- calculate area, volume, and circumference.
- apply multiplication and division of fractions to construction tasks.
- convert fractions, decimals, inches, feet, fractions of inches, and non-metric to metric units.
- identify safe use and basic maintenance of hand and power tools.
- identify safe use and basic maintenance of heavy equipment.

**CARPT 106 Introduction to Apprenticeship**

**Units:** 1.5  
**Hours:** 22 hours LEC; 15 hours LAB  
**Prerequisite:** None  
**Enrollment Limitation:** Registered Carpenter Apprentice  
**Catalog Date:** June 1, 2020  

This course is an introduction to apprenticeship, tools, safety, and construction job sites in the commercial and industrial building sectors.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the hazards on a construction job site.
- demonstrate the proper safe use of a worm-drive saw.
- identify the conduct that characterizes workplace discrimination and harassment.
- demonstrate the proper use of personal fall protection equipment and anchor points.
- measure and layout different objects with a measuring tape.
- determine the perimeter, area, and volume of rectangular, triangular, and circular objects.

**CARPT 107 Rigging**

**Units:** 1.5  
**Hours:** 22 hours LEC; 15 hours LAB  
**Prerequisite:** None  
**Enrollment Limitation:** Registered Carpenter Apprentice  
**Catalog Date:** June 1, 2020  

This course familiarizes apprentices with the equipment and the procedures to safely rig and hoist various loads on the job-site. Topics include tying knots, splicing rope, calculating loads, hand signals for cranes, and inspecting rigging hardware.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- describe a basic rigging operation.
- calculate the working load limit for a specific wire rope.
- inspect wire rope using industry standard criteria.
- select the proper type sling for a specific rigging operation.
- identify the construction and purpose of shackles, hooks, eye-bolts, turnbuckles, sheaves, wedge sockets, wire rope clips, rigging beams, master links, chain falls, and come-alongs.
- identify various common knots, bends, hitches, and splices.
- calculate the center of gravity and the weight of a load on a sling.
- calculate the stress loads on the slings.
- identify standard types of cranes used in rigging.

CARPT 108 Modular System Installer Safety

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered carpentry modular systems installer apprentice.
Catalog Date: June 1, 2020

This course is an introduction to apprenticeship, tools, safety, and construction job sites in the commercial and industrial building sectors. It also covers discrimination and harassment on the jobsite.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify safe use and basic maintenance of hand and power tools.
- apply OSHA regulations.
- explain the meaning of discrimination and harassment.
- describe how hearing loss occurs and how to protect hearing.
- describe the importance of fall protection and falling object protection.
- identify modular components.
- describe the responsibilities of the apprentice as required by Joint Apprenticeship and Training Committee (JATC) and other governing agencies.

CARPT 109 Introduction to Office Modular Systems Installation

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered carpentry modular systems installer apprentice.
Catalog Date: June 1, 2020

This course introduces the installation of modular systems including major manufacturers of modular systems, applicable math, blueprints, specifications, and the creation of a realistic installation mockup. It also covers site logistics, layout of components, and personal financial literacy.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use power and hand tools to safely assemble modular systems.
- use manufacturers' catalogs to identify various components of modular systems.
- identify modular components for efficient installation.
- demonstrate the ability to add and subtract fractions and mixed numbers.
- interpret blueprint drawings and specifications.
- create a system mock-up.
- identify personal financial responsibility.

**CARPT 110 Foundations and Floors**

*Units:* 1.5  
*Hours:* 22 hours LEC; 15 hours LAB  
*Prerequisite:* None.  
*Enrollment Limitation:* Must be a registered Carpenter Apprentice.  
*Catalog Date:* June 1, 2020

This course covers layout, forming, framing, joist, sub-flooring, and foundation construction.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify appropriate types of forms for concrete foundations.
- apply joist span tables.
- analyze building and green code requirements for construction.
- evaluate, lay out, and construct a floor joist system.

**CARPT 111 Modular Systems Applications**

*Units:* 1  
*Hours:* 15 hours LEC; 21 hours LAB  
*Prerequisite:* None.  
*Enrollment Limitation:* Must be a registered carpentry modular systems installer apprentice.  
*Catalog Date:* June 1, 2020

This course introduces the modular system installer apprentice to proper tool and equipment applications required while assembling and disassembling modular office furniture systems. It also covers personal financial literacy.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply safe use of hand and power tools.
- demonstrate the proper application of hand and power tools used during assembly and disassembly of modular components.
- identify and install the custom perimeter trim products.
- create a personal monthly spending plan/budget.
- explain the use of credit and credit scores.

**CARPT 112 Structural Framing**

*Units:* 1.5  
*Hours:* 22 hours LEC; 15 hours LAB  
*Prerequisite:* None.  
*Enrollment Limitation:* Must be a registered Carpenter Apprentice.  
*Catalog Date:* June 1, 2020

This course covers basic framing systems and layout of walls, ceilings, and stairwells with wood as well as metal and alternative “green” materials such as manufactured...
CARPT 114 Form Detailing, Construction & Erection

Upon completion of this course, the student will be able to:

- identify and list appropriate materials for the construction of concrete forms.
- describe the purpose of three or more types of forms and their uses.
- draft a concrete form detail drawing and specify the function of the concrete form.
- build a concrete construction form involving bucks, block-outs, and inserts.
- calculate concrete quantities for model forms.

CARPT 115 Floor to Ceiling Wall System Construction

Upon completion of this course, the student will be able to:

- construct modular system walls and panels.
- construct modular system doors and windows.
- apply proper layout of walls.
- interpret blueprints for modular walls.
CARPT 120 Exterior Finish

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess and select the various types of exterior caulking and their uses including the use of VOC free materials.
- justify caulking choices for exterior applications.
- identify and list appropriate exterior materials and alternative materials that are VOC free.
- identify and determine the uses of exterior finish hand tools.
- research the function and application of exterior sheathing, insulation, and weatherproofing materials appropriate to local conditions.
- install an exterior door frame and door.
- identify and describe the application of six styles of windows.

CARPT 122 Interior Finish

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify interior materials and "green" practices that reduce poor indoor air quality.
- build a mockup using appropriate materials and installation methods.
- interpret information on finish materials and tasks from blueprints, schedules, and specifications.
- evaluate and perform tasks using power equipment used in interior trim in a safe manner.
- install interior door frames, doors, and trim.
- build laminated plastic materials.
- analyze the appropriate CalGreen codes that regulate and promote good indoor air quality practices.

CARPT 124 Commercial Door Hardware

Units: 1.5
Hours: 22 hours LEC; 15 hours LAB

Prerequisite: Must be a registered Carpenter Apprentice.

Student Learning Outcomes

1.5 Units: 22 hours LEC; 15 hours LAB

Enrollment Limitation: June 1, 2020

This course covers exterior design, materials, finishes, and methods of application in exterior building construction. Topics include an overview of the hazards of Volatile Organic Compounds (VOCs) and pathogens.

This course covers interior designs, materials, and methods of application in building construction. Topics include techniques of indoor air quality practices in order to reduce Volatile Organic Compounds (VOCs) and pathogens.

This course covers design, materials, finishes, and methods of application in exterior building construction. Topics include an overview of the hazards of Volatile Organic Compounds (VOCs) and pathogens.
This course covers the basic skills necessary to successfully install commercial door hardware. Topics include selecting hardware, hanging and adjusting a door and installing locks, closers, rim devices, door holders, and various accessories. It also covers codes that govern doors and hardware in commercial buildings.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the installation of flush bolts and coordinators so the doors close in proper order.
- demonstrate the installation of door stops at a predetermined angle without damage to door or jamb.
- demonstrate with given mortise lockset, a cylinder lockset and instructions for each, correctly change the hand of each lockset to given standards.
- demonstrate the installation and preparation of a door with a given cylinder lockset so it latches securely and locks the door.
- describe the function of a commercial collection of hardware and correctly identify each piece.

**CARPT 125 Fine Furnishings, Drapery, and Window Coverings**

<table>
<thead>
<tr>
<th>Units:</th>
<th>1</th>

</tr>
</tbody>
</table>

This course introduces the modular system installer apprentice to high-end and custom furniture, wall installations, draperies, and window coverings. It also covers tool selection, skills for proper installation, and manufacturers' specifications.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- construct custom counters and desks.
- use the proper fasteners for hollow and solid walls.
- apply proper installation techniques for window coverings.
- construct custom solid wood casegoods and furniture.
- assemble and install demountable partition walls.
- describe manufacturers' specifications.

**CARPT 130 Layout/Leveling Construction Site Practice**

<table>
<thead>
<tr>
<th>Units:</th>
<th>1.5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>22.5 hours LEC; 13.5 hours LAB</td>
</tr>

</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the use of leveling devices. It includes reading and interpreting an engineer's rod, horizontal and vertical setting circles, and vernier scaling. Additional topics include construction layout of horizontal and vertical angles, and Leadership in Energy and Environmental Design (LEED) practices for erosion control.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- set up and adjust a theodolite instrument, laser, and other leveling devices for proper use.
- evaluate and lay out a building site using architectural drawings.
- identify the parts of a tripod and theodolite instrument.
• measure horizontal distances with a theodolite instrument.
• calculate elevations by using an engineer's rod and various leveling devices.
• lay out horizontal and vertical angles with accuracy.
• identify erosion control measures that prevent water runoff.

CARPT 131 Introduction to Working Drawings, Construction Math and Fire Stop Installation

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Insulator Apprentice.
Catalog Date: June 1, 2020

This course introduces Insulator Apprentices to construction math, basic blueprint reading, and fire stop installation. It also covers safe use and maintenance of hand tools.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify print production and reproduction methods.
• define plan detail views and pictorial drawings and their uses.
• calculate area, volume, and circumference.
• apply multiplication and division of fractions to common insulator tasks.
• convert fractions, decimals, inches, feet, fractions of inches, and non-metric to metric units.
• describe the test standards and the rating systems for fire stopping.
• identify the purpose of proper installation of access doors.
• identify safe use and basic maintenance of hand tools.

CARPT 132 Residential Blueprint Reading and Forklift Safety

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Insulator Apprentice.
Catalog Date: June 1, 2020

This course introduces Insulator Apprentices to residential blueprint terminology and interpretation. Forklift safety is also included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the purpose, printing, modifications, and assembly of blueprints.
• interpret abbreviations, schedules, and symbols on prints.
• list the different types of orthographic and pictorial drawings.
• explain the basic use and safe operation of a forklift.

CARPT 133 Residential Insulation and Weatherization

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.

1.5 Units:
24 hours LEC; 12 hours LAB
Hours:
None.
Prerequisite:
Must be a registered Insulator Apprentice.
Enrollment Limitation:
June 1, 2020
Catalog Date:
Student Learning Outcomes

1.5 Units:
24 hours LEC; 12 hours LAB
Hours:
None.
Prerequisite:
Enrollment Limitation:
June 1, 2020
Catalog Date:
This course introduces the Insulator Apprentice to insulation and weatherization installation. Topics include environmental impact on traditional construction and organizations that provide guidelines and certification for residential insulation and weatherization.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- define the required components of residential insulation and weatherization.
- define the term “R-value” (resistance to heat flow).
- state the benefits of R-value and weatherization.
- describe the impact of typical traditional construction on the environment.
- list the organizations that provide guidelines and certification for residential insulation and weatherization.

CARPT 134 Commercial Blueprint Reading and Mobile Tower Scaffolds

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Insulator Apprentice.
Catalog Date: June 1, 2020

This course introduces Insulator Apprentices to commercial blueprint terminology and interpretation. It also covers the erection of and safe practices for welded frame mobile and rolling tower scaffolds.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- explain the purpose, printing, modifications, and assembly of blueprints.
- interpret abbreviations, schedules, and symbols on commercial and structural prints.
- list the different types of orthographic and pictorial drawings.
- interpret dimensions on structural prints.
- list criteria for welded frame and rolling tower scaffold.
- calculate contributory leg loads.
- list requirements for platform construction.
- explain the safe use and erection of welded frame and rolling tower scaffolds, materials, fall protection, and falling object protection.
- describe safe scaffold access and egress.

CARPT 135 Commercial and Industrial Insulation and Aerial Lift

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Insulator Apprentice.
Catalog Date: June 1, 2020

This course introduces the Insulator Apprentice to commercial and industrial insulation installation. It also covers the rules and regulations governing the safe use of aerial lifts.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- list the required components of commercial and industrial insulation.
- state the benefits of (resistance to heat flow) R-value
- describe the impact of typical traditional construction on the environment.
- list the organizations that provide guidelines and certification for commercial and industrial insulation.
- describe the characteristics of self-propelled and manually-propelled aerial lifts and work platforms.
- demonstrate a pre-shift inspection of an aerial lift.

CARPT 136 Energy Conservation Codes and Standards

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Insulator Apprentice.
Catalog Date: June 1, 2020

This course introduces the Insulator Apprentice to energy conservation codes and standards. It also covers Green Advantage certification and CalGreen building code requirements.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret energy conservation codes and standards.
- list the required components of green building.
- state the benefits of green building to the environment.
- describe the impact of typical traditional construction on the environment.
- identify Green Advantage certification requirements.
- interpret CalGreen building code requirements.

CARPT 137 Modular Systems Construction I

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered carpentry modular systems installer apprentice.
Catalog Date: June 1, 2020

This course introduces the modular system installer apprentices to safe and productive ways to handle modular components on a job site using the proper equipment. It also covers the proper way to lift and move modular components, protection of office equipment, basic furniture assembly, and manufacturers' specifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the proper equipment for moving different components.
- apply safe and ergonomic movements of material.
- apply proper floor protection during unloading and staging operations.
- identify the various hardware elements in furniture assembly.

CARPT 138 Modular System Construction II

Units: 1
Hours: 14 hours LEC; 22 hours LAB
Prerequisite: None.
This course introduces the modular system installer apprentices to advanced modular system construction with a focus on panelized furniture and cubicle partitions including electrical diagrams. It also covers forklift operation and safety per regulations mandated by the Occupational Safety and Health Administration (OSHA).

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assemble modular cubicle walls.
- properly disassemble modular cubicle walls.
- use proper handling and storage techniques of modular cubicle components.
- assemble panelized furniture.
- properly disassemble panelized furniture.
- use proper handling and storage techniques of panelized furniture.
- interpret electrical connection diagrams.
- operate a forklift per OSHA regulations.

**CARPT 140 Interior Systems**

**Units:** 1.5  
**Hours:** 22 hours LEC; 15 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Carpenter Apprentice.  
**Catalog Date:** June 1, 2020

This course is a comprehensive study of materials, work processes, and the proper use of tools necessary to install gypsum wallboard and interior metal studs. Topics include green practices used in construction.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the different compositions of gypsum materials used in the construction of specific wallboard products including "green" methods of installation.
- evaluate and demonstrate proper handling and storage techniques for wallboard and metal studs.
- select the appropriate fastener used for metal stud and wallboard construction.
- demonstrate the proper use of tools and equipment used in metal stud and wallboard construction.
- evaluate proper and practical cutting and fitting techniques when installing metal studs and gypsum wallboard.
- formulate proper lay out, cutting, and material installation procedures for the installation of braced and unbraced soffits.

**CARPT 141 Suspended Framing Ceiling Systems**

**Units:** 1.5  
**Hours:** 24 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Acoustical Apprentice.  
**Catalog Date:** June 1, 2020

This course introduces the acoustical apprentice to the installation of suspended framing ceiling systems and situations which require special installation techniques. It also covers industry standards and manufacturers' recommendations for proper installation of engineered ceilings, and proper tool selection and safety.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the custom perimeter trim products.
• identify the use of reference points for the installation of suspended framing.
• explain the method for attaching trim to the ceiling system.
• perform pre-shift inspections for tools, equipment, and work area.
• identify metal ceiling systems components.
• demonstrate suspended framing systems-specific installation techniques.

CARPT 142 Engineered Structural Systems

Upon completion of this course, the student will be able to:

• list lamination processes and uses.
• identify three or more truss designs and select appropriate design for a project.
• safely operate heavy timber construction tools.
• interpret a set of engineered nailing and fastening schedules and explain the purpose of such schedules.
• identify disposal of post-building materials codes.
• install a wood and wood-metal truss and its engineered manufactured components following a set of structural blueprints.

CARPT 144 Introduction to Grid Ceiling Installation

Upon completion of this course, the student will be able to:

• identify common grid ceiling components.
• interpret prints and specifications to determine the related electrical and mechanical features and layout.
• demonstrate an understanding of the standards and codes that apply to acoustical ceilings.
• identify the tools needed to install an acoustical ceiling.
• demonstrate the ability to lay out a grid ceiling.
• describe the installation process for exposed grid and concealed grid systems.
• explain the safe use of welded frame and rolling tower scaffolds, including materials, fall protection, and falling object protection.
• calculate contributory leg loads.
• list requirements for platform construction.
CARPT 145 Specialty Ceiling Systems

Upon completion of this course, the student will be able to:

- identify special ceiling systems components.
- interpret prints and specifications to determine the related electrical and mechanical features and layout.
- demonstrate an understanding of the standards and codes that apply to specialty ceilings.
- identify the tools needed to install a specialty ceiling.
- demonstrate the ability to lay out a specialty ceiling.
- describe the installation process for exposed and concealed specialty systems.
- describe the characteristics of self-propelled and manually-propelled aerial lifts and work platforms.
- demonstrate a pre-shift inspection of an aerial lift.

CARPT 146 Integrated Ceilings and Special Techniques

Upon completion of this course, the student will be able to:

- assess and perform specific installation techniques.
- apply the proper installation procedure for each system.
- explain reference points for the installation of curved trim and methods for attaching trim to the ceiling system.
- construct metal ceiling system components.
- identify the custom perimeter trim products.
- describe the tools needed for installing ceilings using special techniques.

CARPT 147 Advanced Grid Ceilings

Upon completion of this course, the student will be able to:

- assess and perform specific installation techniques in suspended framing and grid ceiling systems. It also covers industry standards, manufacturers' recommendations for proper installation of engineered ceilings, and proper tool selection and safety.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the method for attaching data grid ceiling systems.
- demonstrate specific installation techniques.
- identify perimeter trim products.
- use reference points for the installation of lineal systems.
- identify special tools needed for grid ceiling installation.
- explain the installation procedure used for each specialty system.
- identify reference points used to install building perimeter systems.
- read and write pre-shift inspections for equipment and work area.

CARPT 148 Access Floor Systems

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Acoustical Installer apprentice.
Catalog Date: June 1, 2020

This course is an introduction to the installation of Access Floor Systems. It also covers hand tool ergonomics, safety, and maintenance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the components and materials used for Access Floor Systems.
- explain how to inspect the job site, prepare the existing floor, and layout and level the access floor.
- describe tools used for layout and leveling and identify the proper testing equipment required.
- explain how to install stringer system reinforced perimeter locations, bridge obstructions, and additional bracing.
- describe the process of installing access floor panels, cutting panels, and framing around obstructions.
- explain the procedures used for installing handrails and stairs.
- describe the installation of low-profile wire management floors.
- list the uses, benefits, and code requirements of access floors.

CARPT 150 Concrete - Precast and Prestressed

Units: 1.5
Hours: 22 hours LEC; 15 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Carpenter Apprentice.
Catalog Date: June 1, 2020

This course covers the use and placement of concrete in residential and commercial construction. Topics include mixing, testing, aggregate, curing, and construction designs, as well as precast and prestressed concrete, materials, forms, molds, handling, lifting devices, and the proper disposal and recycling of materials.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the advantages and disadvantages of precast and prestressed concrete methods.
- evaluate and proportion concrete components to achieve a required slump.
- perform and compare pull-pressure tests on bolts embedded at different depths and in different locations.
• analyze a basic set of bridge plans and tilt-up wall plans.
• calculate, lay out, and construct a girder wall form with a given set of blueprints.
• define the requirements in lifting and bracing tilt-up wall panels.

CARPT 155 Commercial Concrete

Units: 1.5
Hours: 23 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Carpenter Apprentice
Catalog Date: June 1, 2020

This course covers concepts and practices of commercial concrete construction. Topics include layout and construction of bolt patterns, concrete columns, and gang forms, as well as the types and methods used to safely build, shore, and place column caps and concrete decks.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• translate a set of commercial prints and lay out job grid lines.
• construct a bolt pattern and place it at the proper location and elevation.
• build, set, and brace a round fiber form column and square wood at the correct location.
• assemble, set, and brace a wall using composite metal or plywood panels.
• erect, line, and brace a section of Aluma-wall with taper ties and strongbacks.
• identify the components of a traditional wood-shore deck system, including Ellis shores, stringers, joists, and deck plywood.
• construct a wood shore deck with column caps included.
• assemble a steel post shoring system and set it to the correct elevation.
• identify the safety hazards of silica and the corrective measures to mitigate the danger.
• calculate the amount of concrete needed for various forms.
• exhibit safe work practices in the stripping and storing of forms.

CARPT 160 Blueprint Reading-Residential

Units: 1.5
Hours: 22 hours LEC; 15 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Carpenter Apprentice.
Catalog Date: June 1, 2020

This course covers residential blueprints. Topics include "green" practices, conventions, lines, symbols, measurements, and specifications used for residential construction.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the symbols and terms used in plot, foundation, floor, elevation, detail, mechanical, and electrical plans.
• interpret technical information given on schedules and written specifications.
• construct building layout and offset construction lines.
• list appropriate steps to complete building permit application.
• project building layout lines from given lot lines.
• identify different "green" practices for residential construction.
• identify Leadership in Energy and Environmental Design (LEED) and other organization requirements for certification.
- calculate elevations from information obtained from residential plot and foundation plans.

CARPT 162 Blueprint Reading-Commercial

- Units: 1.5
- Hours: 22 hours LEC; 15 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Must be a registered Carpenter Apprentice.
- Catalog Date: June 1, 2020

This course covers commercial and industrial blueprints. Topics include conventions, lines, symbols, measurements, and specifications used for commercial and industrial construction. It also covers CalGreen codes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare graphic (blueprint) information with written (specifications) information.
- locate relevant codes in the Construction Safety Orders.
- sketch different architectural lines used on blueprints following a given legend.
- extract the information necessary to construct a photovoltaic support structure using a set of blueprints.
- estimate the quantity and cost of material needed to construct parts of the building.
- extract the information necessary to construct a section of a building using a set of blueprints.

CARPT 163 Modular System Blueprint Reading

- Units: 1
- Hours: 13 hours LEC; 23 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Must be a registered carpentry modular systems installer apprentice.
- Catalog Date: June 1, 2020

This course is an introduction to blueprint reading, project specifications, and layout for modular systems. It also covers union trust fund benefits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different lines and symbols used on print drawings.
- demonstrate proper layout of wall locations for modular systems.
- utilize a laser and target to perform elevation readings.
- identify safety hazards of working with a laser layout device.
- understand the union benefit package.

CARPT 164 Acoustical Blueprint Reading

- Units: 1.5
- Hours: 24 hours LEC; 12 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Must be a registered carpentry acoustical apprentice.
- Catalog Date: June 1, 2020

This course introduces the acoustical apprentice to advanced specialized blueprint reading. It also covers basic construction documents, project scheduling, and labor cost estimation.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- explain the purpose, printing, modifications, and assembly of acoustical blueprints.
- identify the various lines, pictorial drawings, views, symbols, and other characteristics that may be found on acoustical blueprints.
- describe the importance of a construction schedule and daily job log and organize labor in conjunction with the construction schedule.
- calculate the progress of a project in terms of completion.
- estimate the labor hours needed to complete various types of work.
- bisect lines and angles for layout purposes.
- layout segmented arches using different methods and procedures.

CARPT 170 Roof Framing

Units: 1.5
Hours: 22 hours LEC; 15 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Carpenter Apprentice.
Catalog Date: June 1, 2020

This course covers roof framing, layout, and construction. Topics include industry terminology, technical information, and construction materials and methods, all of which are used in planning and building several types of roofs. It also covers industry standards and codes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- lay out rafters for various types of roofs.
- identify five or more roof designs.
- analyze drawings of different roof types.
- calculate and construct a gable, hip, and intersecting roof.
- identify the components of roof systems.
- explain the functions of different truss designs.

CARPT 180 Stair Building

Units: 1.5
Hours: 22 hours LEC; 15 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Carpenter Apprentice.
Catalog Date: June 1, 2020

This course covers types, designs, nomenclature, and Uniform Building Code (UBC) requirements for building stairs. Topics include mathematical calculations and layout procedures for constructing stairs, landings, newels, and handrails.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- estimate the cost and materials for various types of stairs.
- determine the dimensions of stair rise and run.
- calculate and lay out risers and treads on a stair stringer with a framing square fitted with stair gauges.
- evaluate, locate, and construct landings and platforms.
- calculate and lay out form work for a self-supporting concrete stair.
- select appropriate UBC codes necessary to design and construct a stairway.
CARPT 181 Tools of the Trade and Installation of Hardwood Floors

This course introduces Hardwood Floor Layer Apprentices to the installation of hardwood floors per industry standards. It covers tool and equipment identification, safety, and proper maintenance procedures.

Upon completion of this course, the student will be able to:

- identify the proper tools and equipment needed for the installation of various hardwood floors.
- practice safe use of tools and equipment.
- apply proper tool and equipment maintenance techniques.
- use tools and equipment to properly install hardwood floors.

CARPT 182 Finishing and Repairing Floors

This course introduces Hardwood Floor Layer Apprentices to the process of finishing and repairing hardwood floors per industry standards. It also covers installation of athletic and parquet flooring.

Upon completion of this course, the student will be able to:

- apply hardwood floor finishing techniques.
- demonstrate proper floor repair processes.
- identify materials needed for athletic flooring and parquet flooring.
- apply athletic flooring installation techniques.
- apply parquet flooring installation techniques.
- identify appropriate baseboard and trim for flooring.

CARPT 190 Introduction to Welding and Cutting

This course covers welding methods, brazing, and flame cutting. Topics include thermoforming and thermosetting plastics applicable to the building construction industry.

Upon completion of this course, the student will be able to:

- explain basic theory in safety and welding techniques used for each welding process.
set up and operate oxy acetylene and arc welding equipment properly.
produce neat and strong welds on metals using oxy acetylene and arc welding equipment.
analyze and perform methods of joining and welding plastic materials.
produce welds to meet industry standards in the carpenter’s profession.

CARPT 210 The Acoustical Apprentice, Safety, and the Trade

This course introduces the acoustical apprentice to fall protection, tool safety and maintenance, and scaffold safety and maintenance. It also covers Occupational Safety and Health Administration (OSHA) 10, First Aid and CPR certifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain allowable loads for various types of scaffold.
• explain the safe use of scaffolds and materials.
• list requirements for platform construction.
• identify and safely demonstrate use of hand and power tools.
• identify the components of a personal fall protection system (PFPS) and a personal fall arrest system (PFAS).
• explain the rules and regulations of PFPS and PFAS.
• apply CPR and First Aid.
• define OSHA safety regulations.

CARPT 211 Acoustical Installer Safety

This course introduces the beginning acoustical apprentice to safe work practices in the use of rolling scaffold systems, lasers, and hand and power tools. It also covers the necessary skills to obtain a welded frame scaffold qualification card from the United Brotherhood of Carpenters (UBC).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• interpret Occupational Safety and Health Administration (OSHA) regulations for scaffold, lasers, and tools.
• safely use power and hand tools.
• identify welded frame scaffold components.
• describe the use of welded scaffold.
• explain the method for cutting trim.
• explain the use of top locks on rolling scaffold.
• demonstrate pre-shift inspections for scaffold equipment.
• describe laser safety.
• perform hand tool inspection.

CARPT 212 Infection Control Risk Assessment and Hospital Code for Acoustical Installers

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Acoustical Installer Apprentice.
Catalog Date: June 1, 2020

This course introduces the acoustical installer apprentice to the safety procedures for hospital work Infection Control Risk Assessment (ICRA). It also covers applicable building codes of acoustical ceiling systems used in hospitals.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain how local and state building codes are developed for the State of California
• define the additional installation requirements for acoustical ceilings in buildings deemed for essential services
• install an acoustical ceiling conforming with the regulations of the Office of Statewide Health Planning and Development
• describe how to read load charts
• list requirements for inspection of equipment
• list criteria for contamination from hospital remodels
• describe secondary infections that are contracted during hospital stays

CARPT 213 Acoustical Exterior Systems

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces the acoustical apprentice to the installation of acoustical exterior systems. It also covers industry standards and manufacturers’ recommendations for proper installation and safety for exterior systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate proper installation techniques.
• explain the installation procedure used for each system.
• identify custom perimeter trim products.
• use reference points for the installation of trim.
• identify metal ceiling systems components.
• identify special tools needed exterior acoustical systems.
• perform pre-shift inspections for equipment and work area.

CARPT 215 Acoustical Specialty Systems

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Acoustical Installer Apprentice.
Catalog Date: June 1, 2020
This course introduces the Acoustical Apprentice to the installation of advanced and specialty ceiling systems. It also covers hand and power tool safety and aerial lift safety.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify custom perimeter trim products.
- use reference points for the installation of fabric trim.
- explain the method for attaching sound panels to the ceiling system.
- use reference points for the installation of curved trim.
- install Z-clips.
- interpret OSHA regulations for aerial lifts.

**CARPT 220 Millwright Safety and Tool Skills**

**Units:** 1.5  
**Hours:** 24 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Millwright apprentice.  
**Catalog Date:** June 1, 2020

This course is an introduction to the safety rules and regulations required to work on job sites. It also provides Millwright 16-hour Safety certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- employ personal protective equipment.
- understand basic safety practices with hand and power tools, scaffold and fall protection use, fire protection, respiratory protection, and confined spaces as required by the Occupational Safety and Health Administration's regulations.
- identify hazards of construction like asbestos and chemicals use.

**CARPT 221 The Millwright Apprentice and the Trade**

**Units:** 2  
**Hours:** 36 hours LEC  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Millwright apprentice.  
**Catalog Date:** June 1, 2020

This course informs Millwright apprentices about the structure of their union, as well as their responsibilities and rights. It also covers union history and the development of a proper work ethic.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and explain the roles and responsibilities of union officers.
- describe the responsibilities of the apprentice as required by Joint Apprenticeship and Training Committee (JATC) and other governing agencies.
- maintain the responsibilities required by the local union's constitution.
- identify the characteristics of a proper work ethic.

**CARPT 222 Millwright Math Applications and Fall Protection**
This course reviews math applications needed by Millwright apprentices and introduces the United Brotherhood of Carpenters (UBC) Fall Protection certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- add, subtract, multiply, and divide whole numbers, fractions, and decimals.
- convert fractions, decimals, inches, feet, fractions of inches, and non-metric to metric units.
- calculate area, volume, ratio, proportion, and circumference.
- demonstrate basic layout methods for establishing a right angle.
- identify and explain the components of a Personal Fall Arrest System (PFAS), methods of restraint, and the complications from suspension trauma.
- explain the requirements of a guardrail system.
- describe fall protection anchorage points for scaffolding.

CARPT 223 Cutting and Welding I

This course introduces the safe use of hand and power tools to perform shielded metal arc welding (SMAW), oxy-fuel welding, and plasma cutting. It also covers proper ergonomics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common hazards in welding and cutting and the proper methods to eliminate them.
- explain the appropriate applications for each type of welding and associated equipment and tools.
- discuss the electrode classification system and the electrode folder components.
- properly use various electrode holders.
- demonstrate the proper usage of an inverter and rectifier.
- explain the different processes for cutting steel.

CARPT 224 Materials of Construction

This course introduces, at a basic level, the hardware Millwrights encounter on the job site. It also covers different seals, structural materials, and appropriate application.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe threads and threaded fasteners.
• identify and explain various types of threaded fasteners and appropriate applications for each.
• identify and explain various unthreaded fasteners and alignment hardware, as well as appropriate applications for each.
• describe commonly used seals and their usage.
• outline external and internal retaining rings and explain the proper usage of each.
• identify the characteristics of a variety of shapes of structural materials and appropriate applications of each.

CARPT 225 Layout Procedures for Millwrights

Units: 1
Hours: 22 hours LEC; 14 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Millwright Apprentice.
Catalog Date: June 1, 2020

This course introduces the Millwright Carpentry Apprentice to layout procedures using applied blueprint techniques. It also covers the safe use of lift trucks and rough terrain lift practices.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify layout tolerances as specified in plans.
• calculate and lay out angles using appropriate methods.
• locate and transfer benchmarks and establish elevations.
• identify the factors and equipment that contribute to lift truck stability.
• demonstrate standard hand signals and safe operations used for lift truck operations.
• apply safe practices for industrial and rough terrain lifts.

CARPT 226 Precision Optical Instruments

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Millwright Apprentice.
Catalog Date: June 1, 2020

This course introduces the Millwright Apprentice to the precision optical instruments currently used by contractors for shaft alignment. It also covers General Electric (GE) turbine familiarization as well as blueprint reading.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain how to set up and calibrate optical instruments.
• identify and troubleshoot optical instruments.
• analyze faulty readings from optical instruments.
• list the required components of GE turbines.
• identify the information provided on mechanical prints.
• identify the characteristics and uses of assembly prints.

CARPT 227 Blueprint Reading and Aerial Lift

Units: 1.5
This course introduces Millwright apprentices to blueprint terminology and interpretation. It also covers the rules and regulations governing the safe use of aerial lifts.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the purpose, printing, modifications, and assembly of blueprints.
- identify the various lines, pictorial drawings, and views that may be found on blueprints.
- interpret mechanical blueprints and welding symbols.
- describe the characteristics of self-propelled and manually-propelled aerial lifts and work platforms.
- perform a pre-shift inspection of an aerial lift.

**CARPT 228 Millwright Rigging**

- Units: 2
- Hours: 35 hours LEC; 5 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Must be a registered Millwright apprentice.
- Catalog Date: June 1, 2020

This course introduces the Millwright Apprentice to rigging. It addresses the safety regulations and practices related to rigging and rigging hardware.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the purpose of rigging and the components used.
- identify and demonstrate various types of knots, and state the limitations of each.
- describe the selection of rigging equipment and hardware to perform safe rigging practices.
- demonstrate safe rigging practices, including hand and voice signals.
- list and describe the different types of cranes used for rigging operations.
- describe the safety limits of equipment used in rigging.
- explain the rigger’s responsibility for safety on the job site.
- describe basic chain construction and design.

**CARPT 229 Cutting and Welding II**

- Units: 1.5
- Hours: 24 hours LEC; 12 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Must be a registered Millwright apprentice.
- Catalog Date: June 1, 2020

This course expands on CARPT 223 and furthers the Millwright apprentice’s knowledge of shielded metal arc welding (SMAW) procedures and welding equipment. It also covers the safe use of welding and cutting with plasma and carbon arc equipment, as well as the American Welding Society (AWS) requirements for welding 2G, 3G, and 4G, horizontal, vertical, and overhead groove joints with SMAW.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and explain the SMAW process, components, and safety issues.
• identify and explain the specifications and usage of electrodes.
• identify and explain carbon arc welding and cutting processes, components, and safety issues.
• identify and explain plasma welding and cutting processes, components, and safety issues.
• analyze and interpret weld bead examples.
• prepare a one-inch-thick groove joint that meets AWS standards.
• perform the AWS 3G unlimited thickness practice test with SMAW.

CARPT 230 Monorails

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Millwright apprentice.
Catalog Date: June 1, 2020

This course introduces Millwright apprentices to various types of monorails, the materials, safety hazards, and the safe use of hand and power tools on job sites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the types, applications, and components of monorails.
• identify basic truss designs.
• explain the layout and fabrication of a monorail system.
• describe the methods for connecting support steel.
• identify the different types of fasteners used in support steel.
• describe an overhead monorail path layout.

CARPT 231 Conveyors for Millwrights

Units: 1
Hours: 16 hours LEC; 20 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Millwright Apprentice.
Catalog Date: June 1, 2020

This course introduces the Millwright Apprentice to various types of conveyor systems including the major components and applications. It covers the methods and components used to install conveyor systems per industry standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify various types of conveyor systems and their installation procedures.
• describe common applications of conveyor systems.
• identify basic truss designs.
• describe the major components of a conveyor system.
• explain the layout and fabrication of header steel and methods for connecting and attaching support steel.
• construct an overhead conveyor system path.

CARPT 232 Machinery Installation
This course introduces the Millwright Apprentice to the proper installation of machinery per industry standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply proper site preparation and layout.
- identify and calculate anchoring devices.
- identify reference points.
- install machinery safely and effectively at the proper elevation.
- describe safety hazards during installation and during maintenance operations.

---

**CARPT 233 Machinery Maintenance for Millwrights**

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Millwright Apprentice.  
Catalog Date: June 1, 2020

This course covers the basics of millwright machinery maintenance, troubleshooting, and repair.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- select and operate various millwright equipment.
- apply maintenance recordkeeping and reports.
- apply maintenance techniques for millwright machinery.
- describe possible safety hazards associated with maintenance tasks.
- calculate wear on components to determine if replacement is needed.
- identify resources for manufacturers’ specifications on scheduled maintenance and pre-startup requirements.

---

**CARPT 234 Precision Tools for Millwrights**

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Millwright Apprentice.  
Catalog Date: June 1, 2020

This course introduces Millwright Apprentices to precision tools, accurate measurements for layout, leveling practices, and alignment per manufacturer and industry standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify various precision tools and describe their proper use and maintenance.
- demonstrate setup and use of laser alignment tools and optical instruments.
- demonstrate the proper use of an inside and outside micrometer.
explain the process of testing and setting up precision tools for accuracy.
calculate conversions for alignment.

CARPT 235 Turbines

This course introduces Millwright Apprentices to hydro, gas, and steam turbines. It covers proper assembly, installation, and maintenance per manufacturer and industry standards.

Upon completion of this course, the student will be able to:

- identify basic mechanical principles for power generation.
- list efficient hydroelectric power facilities and types of power generation.
- distinguish alternative energy sources, such as wind, nuclear, and tidal power.
- demonstrate proper procedure for working on turbines.
- identify causes of rotation in a steam turbine.
- identify different sections of a turbine.

CARPT 236 Cutting and Welding III

This course expands on CARPT 229 and furthers the Millwright Apprentice's knowledge of shielded Flux Core Arc Welding (FCAW) procedures and welding equipment. It also covers the safe use of welding and cutting with plasma and carbon arc equipment, as well as the American Welding Society (AWS) requirements for welding 3G and 4G, horizontal, vertical, and overhead groove joints with FCAW.

Upon completion of this course, the student will be able to:

- list and define the FCAW process, components, and safety issues.
- identify and explain the specifications and usage of electrodes.
- identify and explain arc welding and cutting processes, components, and safety issues.
- prepare a one-inch-thick vertical groove joint that meets AWS standards.
- produce the AWS 3G and 4G unlimited thickness practice test with FCAW.

CARPT 240 Piledriver Safety and Tools

This course introduces Piledriver apprentices to the ergonomics, safety, and maintenance of hand and power tools. It also covers hazard recognition in fall protection.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and safely demonstrate hand tools usage.
- identify and safely demonstrate power tools usage.
- perform a hand and power tool safety check prior to use.
- identify the components of a personal fall protection system (PFPS) and a personal fall arrest system (PFAS).
- explain the rules and regulations of PFPS and PFAS.

CARPT 241 Pile Driver Math Applications

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Enrollment Limitation: Must be a registered Pile Driver Apprentice.
Catalog Date: June 1, 2020

This course covers mathematical processes in the construction trade with specific focus on the pile driving industry. It also covers personal financial responsibilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply mathematics such as addition, subtraction, multiplication, and division with whole numbers, fractions, and decimals.
- convert fractions, decimals, inches, feet, fractions of inches, and non-metric to metric units.
- calculate area, volume, ratios, proportion, and circumference.
- demonstrate basic layout methods for establishing a right angle.
- apply personal financial responsibilities including credit scores, budgets creation, and credit building.

CARPT 242 Piledriver Rigging

Units: 2
Hours: 35 hours LEC; 5 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Piledriver apprentice.
Catalog Date: June 1, 2020

This course addresses the safety regulations and practices related to rigging and rigging hardware. It exceeds the requirements of OSHA Subpart CC, ANSI A10.42.2000 "Qualified Rigger," and ANSI B30.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the purpose of rigging and the components used.
- identify and demonstrate various types of knots and state the limitations of each.
- explain the selection of rigging equipment and hardware to perform safe rigging practices.
- demonstrate safe rigging practices, including hand and voice signals.
- list and describe the different types of cranes used for rigging operations.
- describe the safety limits of equipment used in rigging.
- explain the riggers responsibility for safety on the job site.
- describe basic chain construction and design.
CARPT 243 Form Detailing, Construction, and Erection for Pile Drivers

This course introduces the Pile Driver Apprentice to planning and building of form work, construction and erection of various concrete forms, and the materials and methods used. It also covers new building materials such as recycled and alternative materials.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and list appropriate materials for the construction of concrete forms.
- describe the purpose of three or more types of forms and their uses.
- draft a concrete form detail drawing and specify the function of the concrete form.
- build a concrete construction form involving bucks, block-outs, and inserts.
- calculate concrete quantities for model forms.

CARPT 244 Welding I: Introduction to SMAW

This course introduces the Pile Driver Apprentice to the safety procedures while performing Shielded Metal Arc Welding (SMAW). It also covers equipment identification and welding consumables.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify appropriate personal protection equipment including proper clothing.
- identify common hazards and the proper performance methods in welding and cutting.
- explain the appropriate applications of SMAW welding, and the associated equipment, consumables, and tools.
- describe the electrode classification system and the electrode folder components.
- explain the different processes for cutting steel.

CARPT 245 Introduction to Land and Water Pile Driving

This course introduces the Pile Driver Apprentice to pile driving practices on land and in water. Topics covered include safety, pile driving equipment, aerial lifts, cranes, and booms.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify hazards and safe practices for pile driving on land or water.
- identify pile driving equipment and accessories.
- list pile driving equipment used in land and water applications.
- identify booms and cranes and their uses.
- apply aerial lift safety practices and proper operation techniques.

CARPT 246 Welding II: SMAW Flat Position and Forklift Certification

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Piledriver apprentice.
Catalog Date: June 1, 2020

This course expands on CARPT 244 and the Piledriver apprentice's knowledge of the appropriate safety procedures when using shielded metal arc welding (SMAW) and oxy-fuel cutting and the associated components. This course focuses on welding groove joints, flat V-groove (1G), and horizontal V-groove (2G). It also provides certification as a Power Industrial Truck Operator.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe safety issues and the personal protective equipment used with shielded metal arc welding and oxy-fuel welding and cutting processes.
- describe electrode use and classification.
- demonstrate a knowledge of the types of electrode classifications and joint configurations and the welding techniques used.
- interpret weld bead examples.
- identify hazards associated with welding and cutting and power industrial truck operation.
- demonstrate an understanding of safely operating a power industrial truck and the factors that contribute to lift truck stability.

CARPT 247 Advanced Land and Water Pile Driving

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Pile Driver Apprentice.
Catalog Date: June 1, 2020

This course introduces the Pile Driver Apprentice to advanced pile driving practices on land and in water. Topics covered include understanding pile driving equipment, cranes and booms, rigs, accessories, and pile driving hammers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list pile driving rig applications and safe practices.
- explain the advantages and disadvantages of using various cranes or booms.
- describe the similarities and differences of tieback walls and bulkheads.
- define pile driving accessories and their appropriate uses.

CARPT 248 Wharfage and Marine Structures

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Pile Driver Apprentice.
Catalog Date: June 1, 2020
This course introduces the Pile Driver Apprentice to pile driving practices used in bridge erection, and the construction of wharf and marine structures. Topics include various types of lumber and heavy timber, their selection, proper application, natural defects, and basic repair work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify wharf and marine structures.
- explain bridge erection applications.
- identify lumber and heavy timber grades used in bridge, wharf, and marine construction.
- list natural occurring defects in lumber and heavy timber.
- explain force loads and timber orientation.
- apply proper fastening and joining techniques.
- describe basic repair work.

CARPT 249 Welding III: Advanced SMAW

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Pile Driver Apprentice.  
Catalog Date: June 1, 2020

This course expands on CARPT 246 and the Pile Driver Apprentice's knowledge of the appropriate safety procedures when using Shielded Metal Arc Welding (SMAW) and oxy-fuel cutting and the associated components. This course focuses on welding vertical groove joints (3G). It also covers American Welding Society (AWS) requirements for achieving a welder certification in 3G with SMAW.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe hazards and the personal protective equipment used with SMAW and oxy-fuel welding and cutting processes.
- define specific electrode classifications.
- demonstrate knowledge of oxy-fuel cutting applications.
- examine weld beads for accuracy.
- prepare a one-inch vertical joint groove meeting AWS requirements.
- practice the AWS 3G unlimited thickness test using the SMAW process.

CARPT 250 Introduction to Structural Blueprints & Layout Instruments

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Pile Driver Apprentice.  
Catalog Date: June 1, 2020

This course introduces Piledriver apprentices to structural blueprint reading and layout.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the purpose, printing, modifications, and assembly of structural blueprints.
- identify the various lines, pictorial drawings, views, and other characteristics that may be found on structural blueprints.
- interpret structural blueprints and symbols.
- explain and perform basic math in the ship builder's method.
- set up and use an automatic builder's level.

**CARPT 251 Advanced Structural Blueprints and Bridge Building**

**Units:** 1.5  
**Hours:** 24 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Pile Driver Apprentice.  
**Catalog Date:** June 1, 2020

This course introduces Pile Driver Apprentices to advanced structural blueprint reading and bridge building. Topics include bridge building practices, safety, pre-stressing, post-tensioning, and steel reinforcement of concrete. Basic concrete testing is also covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- interpret structural blueprint symbols, pictorial drawings, and specification details.
- explain steel reinforcement, pre-stressing, and post-tensioning reinforcement.
- list the major types of concrete bridges, including their design features and components.
- describe construction processes including cast-in-place, precast, segmental, cantilever, caisson, and cofferdam.
- identify safe practices for working both on land and over water.
- conduct basic concrete testing.

**CARPT 252 Falsework, Shoring, and Heavy Timber Framing**

**Units:** 1.5  
**Hours:** 24 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Piledriver apprentice.  
**Catalog Date:** June 1, 2020

This course introduces Piledriver apprentices to the construction of advanced concrete forms for bridges and shoring with the use of heavy timbers for support, known as falsework. It also covers the various building materials used to create formwork for elaborate decorative architectural designs.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and explain the purpose, components, and construction of concrete falsework.
- name the structural components that can be fabricated from formwork and concrete.
- describe channel safety guidelines followed on the job site when doing falsework.
- identify and explain form hardware and its general purpose.
- identify the most commonly used types of form ties.
- compare the five methods contractors can use to control the related costs of formwork.
- explain why support steel elements and heavy timbers are used in concrete shoring and falsework.

**CARPT 253 Advanced Formwork**

**Units:** 1.5  
**Hours:** 24 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be a registered Piledriver apprentice.  
**Catalog Date:** June 1, 2020
This course introduces Piledriver apprentices to the construction of advanced concrete forms used in all types of installations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and explain the purpose, components, and construction of concrete formwork.
- name the structural components that can be fabricated from formwork and concrete.
- describe channel safety guidelines followed on the job site.
- identify and explain form hardware and its general purpose.
- identify the most commonly used types of form ties.
- compare the five methods contractors can use to control the related costs of formwork.
- explain why support steel elements such as rebar are used in concrete.

CARPT 254 Welding IV: SMAW 4G Certification

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Piledriver apprentice.
Catalog Date: June 1, 2020

This course expands the Piledriver apprentice’s knowledge of the appropriate safety procedures when using shielded metal arc welding (SMAW) and oxy-fuel cutting and the associated components. It covers the American Welding Society (AWS) requirements for 4G certification, overhead groove joints with SMAW.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and explain the SMAW process, components, safety issues, and appropriate protective personal equipment (PPE).
- identify and explain the specifications, classifications, and usage of electrodes.
- describe the hazards associated with overhead welding.
- analyze and interpret weld bead examples.
- perform the AWS 4G practice test with SMAW.

CARPT 255 Welding V: FCAW 3G Certification

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Piledriver apprentice.
Catalog Date: June 1, 2020

This course expands on CARPT 254 and furthers the Piledriver apprentice’s knowledge of appropriate safety procedures when using flux core arc welding (FCAW) and oxy-fuel cutting and the associated components. It covers the American Welding Society (AWS) requirements for 3G certification, vertical groove joints with FCAW.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and explain the entire FCAW process, components, safety issues, and appropriate protective personal equipment (PPE).
- identify and explain the specifications, classifications, and usage of electrodes.
- describe the hazards associated with vertical welding.
- analyze and interpret weld bead examples.
perform the AWS 3G practice test with FCAW.

CARPT 256 Welding VI: FCAW 4G Certification

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Pile Driver Apprentice.  
Catalog Date: June 1, 2020

This course expands on CARPT 255 and the Pile Driver Apprentice's knowledge of the appropriate safety procedures when using Flux Core Arc Welding (FCAW) and oxy-fuel cutting and the associated components. This course focuses on welding vertical groove joints (4G). It also covers American Welding Society (AWS) requirements for achieving a welder certification in 4G with FCAW.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe hazards and the personal protective equipment used with FCAW and oxy-fuel welding and cutting processes.
- define specific electrode classifications.
- demonstrate knowledge of oxy-fuel cutting applications.
- examine weld bead examples.
- prepare overhead groove joints meeting AWS requirements.
- practice the AWS 4G unlimited thickness test using the FCAW process.

CARPT 260 Introduction to Scaffolds and Confined Space

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Must be a registered Scaffold Erector apprentice.  
Catalog Date: June 1, 2020

This course introduces Scaffold Erector apprentices to the appropriate safety procedures when using scaffolds and working in a confined space. It also covers the proper use and maintenance of hand tools.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain allowable loads for various types of scaffolds.
- calculate contributory leg loads.
- describe the requirements for platform construction.
- list the criteria for supported scaffold systems.
- describe the assembly and disassembly of scaffolds.
- compare the responsibilities of a competent person versus a qualified person.
- explain the safe use of scaffolds, materials, and proper means of access and egress.
- describe the importance of fall protection and falling object protection.
- explain the atmospheric hazards in a confined space and methods to monitor and adjust the oxygen content.

CARPT 261 Welded Frame and Mobile Tower Scaffold

Units: 1.5  
Hours: 24 hours LEC; 12 hours LAB
This course introduces the Scaffold Erector apprentice to the industry safety procedures when assembling welded frame and rolling scaffolds.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain allowable loads for welded frame and rolling tower scaffold.
- calculate contributory leg loads.
- list requirements for platform construction.
- list criteria for welded frame and rolling tower scaffold.
- describe safe scaffold access and egress.
- compare the responsibilities of a competent person versus a qualified person.
- explain the safe use of welded frame and rolling tower scaffolds and materials.
- describe the importance of fall protection and falling object protection.
- explain the importance of building scaffolds on suitable surfaces.
- identify allowable height-to-base ratios.

**CARPT 262 System Scaffold**

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Scaffold Erector apprentice.
Catalog Date: June 1, 2020

This course introduces the Scaffold Erector apprentice to industry safety procedures when erecting system scaffold, rolling scaffold, and supported scaffold.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain allowable loads for various types of scaffolds.
- calculate contributory leg loads.
- list requirements for platform construction.
- list criteria for supported scaffolds.
- describe safe scaffold access and egress.
- compare the responsibilities of a competent person versus a qualified person.
- explain the safe use of scaffolds and materials.
- describe the importance of fall protection and falling object protection.
- identify the main parts of the scaffold stair unit.
- explain the differences between safe access for users and erectors.

**CARPT 263 Hazard Awareness for Scaffold Erectors**

Units: 1.5
Hours: 26 hours LEC; 10 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Scaffold Erector Apprentice.
Catalog Date: June 1, 2020
This course introduces the Scaffold Erector Apprentice to hazards of erecting and dismantling scaffolds. It also covers aerial lift rules and regulations per industry standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify hazards and safety precautions in the scaffold industry.
- list and define types of hazards and preventative safety precautions.
- interpret Occupational Safety and Health Administration (OSHA) regulations for aerial lifts.
- identify the characteristics and uses of aerial lifts.
- describe equipment in accordance with pre-shift inspection standards.

CARPT 264 Suspended Scaffolds and Shoring Systems

Units: 1
Hours: 20 hours LEC; 16 hours LAB
Prerequisite: None
Enrollment Limitation: Must be a registered Scaffold Erector Apprentice.
Catalog Date: June 1, 2020

This course introduces the Scaffold Erector Apprentice to the safety procedures and industry rules and regulations for suspended scaffolds.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the advantages and disadvantages of suspended scaffolds.
- describe the different types of suspended scaffolds and suspension equipment and devices.
- explain and identify the requirements for outrigger beams and anchorage connections.
- identify hazards and precautions for welding from suspended scaffolds.
- explain and describe platform requirements, load capabilities and fall protection for suspended scaffolds.

CARPT 265 Tube and Clamp Scaffold

Units: 1
Hours: 20 hours LEC; 16 hours LAB
Prerequisite: None
Enrollment Limitation: Must be a registered Scaffold Erector Apprentice.
Catalog Date: June 1, 2020

This course introduces the Scaffold Erector Apprentice to the safety procedures and industry rules and regulations for erecting tube and clamp scaffold systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain allowable loads and safe access for users and erectors.
- calculate contributory leg loads.
- demonstrate knowledge of the importance of fall protection and falling object protection.
- demonstrate the safe use of scaffold materials.
- list requirements and criteria for tube and clamp scaffold erection.
CARPT 266 Blueprint Reading for Scaffold Erectors

This course introduces the Scaffold Erector Apprentice to scaffold blueprint reading.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify print production and reproduction methods.
- define detail views and describe their uses.
- interpret blueprint symbols.
- construct a perpendicular line using the shipbuilders' method.
- interpret dimensions on scaffold shop blueprints.
- demonstrate the ability to manually revise blueprints.

CARPT 268 Welding II

This course introduces the Scaffold Erector apprentice to light gauge welding using shielded metal arc welding (SMAW) and flux core arc welding (FCAW). It also covers safety, ergonomics, the safe use of hand and power tools, and tool maintenance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify welding hazards and safety methods to eliminate them.
- describe various bell resources used with the different kinds of welding and cutting.
- explain the electrode classification system.
- demonstrate the proper use various electrode holders.
- identify the different types of welding machines.
- identify the function of a rectifier and an inverter.
- explain different types of electrode folders and components.
- explain different types of welding.

CARPT 270 Mill Cabinet Safety and Tool Skills

This course introduces Mill Cabinet Apprentices to materials, safety hazards, and the safe use of hand and power tools on job sites.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify, select, maintain, and safely operate hand and power tools.
- avoid unsafe conditions and acts, and observe safety laws and regulations.
- discuss, explain, and describe the production process.
- obtain forklift operation and safety certification.

CARPT 271 The Mill Cabinet Apprentice and the Trade

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course covers the history of Mill Cabinet Apprentice and the trade. Topics include wages and benefits, workers' compensation, personal finances, job placement, collective bargaining, working conditions, and labor-management relations as they pertain to unions, contractors, and cooperatives.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze federal and state laws governing carpenters apprenticeship.
- evaluate the requirements of a job.
- identify unacceptable and acceptable working conditions.
- define terms and titles common to the construction industry.
- describe and list labor, management, contractors, and cooperatives within the area.
- understand personal financial responsibility.

CARPT 272 Math for the Trades

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course covers mathematics applications in the mill cabinet trade with specific focus on mathematical processes related to the production requirements of the industry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply mathematics such as addition, subtraction, multiplication, and division with whole numbers.
- convert fractions, decimals, inches, feet, fractions of inches, and non-metric to metric units.
- calculate perimeter, arc, volume, and weight measurements.
- calculate angles, degrees, and basic percentages.

CARPT 273 Basic Cabinet Making

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020
This course introduces Mill Cabinet Apprentices to basic cabinetry building procedures per industry standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify need, function, and process for cabinet making.
- explain and describe the production and function of various cabinet styles.
- apply design elements and principles to create functional and attractive cabinets.
- select appropriate materials and production procedures for joint strength.

**CARPT 274 Basic Blueprint Reading Mill Cabinet**

<table>
<thead>
<tr>
<th>Units:</th>
<th>1.5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>24 hours LEC; 12 hours LAB</td>

</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course introduces Mill Cabinet Apprentices to blueprint terminology and interpretation.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the purpose, printing, modifications, and assembly of blueprints.
- identify and describe the types of construction drawings and documents.
- interpret abbreviations, schedules and symbols on prints.
- convert English and metric measurements.

**CARPT 275 Machinery Maintenance for Mill Cabinet**

<table>

</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the basics of mill cabinet machinery maintenance, troubleshooting, and repair.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- operate hand and portable power saws.
- select, maintain, and operate stationary power equipment.
- explain the sequence of steps to square work pieces and operate a portable power plane.
- apply maintenance techniques for mill cabinet machinery.

**CARPT 276 Cabinet Hardware Installation**

<table>
<thead>
<tr>
<th>Units:</th>
<th>1.5</th>

<td>Enrollment Limitation:</td>
<td>Must be a registered Mill Cabinet Apprentice.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course introduces new Mill Cabinet Apprentices to basic cabinetry hardware installation procedures.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- select and identify knobs and pulls for function and appearance.
- explain various methods for mounting cabinetry hardware.
- describe and select nails, screws, and fasteners used in cabinetry installation.

CARPT 277 Sanding, Stains, and Finish Preparation

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course introduces the Mill Cabinet Apprentice to the processes of surface preparation for the staining and finishing of solid wood and veneered cabinetry.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- select abrasive materials for smoothing surfaces.
- operate portable and stationary power sanding machines.
- inspect material surfaces to determine if abrading is necessary and apply the appropriate process for surface defects such as dents, cracks, and voids.
- identify coatings for finishing wood surfaces and wood products.

CARPT 278 Advanced Machinery Operation

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course introduces new Mill Cabinet Apprentices to advanced machinery operation procedures.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- choose, maintain, and operate various saw blades, stationary power equipment, portable power planes, joiners, portable routers and Computer Numerical Control (CNC) machines.
- select, operate, and install shaper cutters, spindle shapers, and router bits.
- identify and select various machines and hand tools including shaping contours and decorative surfaces.

CARPT 279 Advanced Blueprint Reading for Mill Cabinet

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course introduces Mill Cabinet Apprentices to advanced blueprint terminology and interpretation.
Upon completion of this course, the student will be able to:

- describe the information found on a site plan and floor plan.
- explain how prints are designated in a set and list the information and specifications.
- explain the purpose of codes and regulations in the construction industry.
- describe what the Americans with Disabilities Act (ADA) is and how it impacts the mill cabinet industry.

CARPT 280 Advanced Cabinet Making

Upon completion of this course, the student will be able to:

- draw isometric, cabinet oblique, and perspective sketches.
- describe specifications and mock-up design analysis.
- identify the effects computers have on producing working drawings and cabinet making.
- create square- or profiled-edge frames and select joints for assembly.

CARPT 281 Veneers, Laminate, and Finishing

Upon completion of this course, the student will be able to:

- describe and apply the techniques of veneer and laminate application.
- identify the effects of different stains and paints on different type of veneers and the importance of specifications.
- use a router to trim edges using different bits.
- create square- or profiled-edge frames and select joints for assembly.
- explain the activities leading to a finished product.
This course introduces the Mill Cabinet Apprentice to computer-aided design and drafting using AutoCAD, Cabinet Vision, and Alphacam software systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use AutoCAD drawing tools and methods to construct accurate 2D drawings.
- create and manage drawing layers, control object properties, and edit and modify files.
- construct and edit polylines and splines.
- use editing tools and grip editing to modify geometry.
- use inquiry commands to obtain drawing information.

CARPT 283 Introduction to CNC

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course introduces the Mill Cabinet Apprentice to the operation processes, maintenance, and tooling of Computer Numeric Controlled (CNC) machines.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use AutoCAD’s precision drawing tools and methods to program CNC machines.
- control, manage, and operate CNC machines.
- construct mill project components.
- use lockout tagout procedures to retool CNC machines.
- use inquiry commands to obtain desired milling.

CARPT 284 Solid Surface Material, Fabrication, and Installation

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Mill Cabinet Apprentice.
Catalog Date: June 1, 2020

This course introduces the Mill Cabinet Apprentice to constructing counter tops and back splashes, and finishing products according to industry standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the major solid surface manufacturers and their products.
- successfully fabricate an L-shape solid surface counter top.
- demonstrate the safe use of tools and equipment necessary for constructing solid surface products.
- explain why planning is important in fabricating and installing solid surfaces.
- identify patterns and understand how they are used to transfer vital information.
- successfully repair cabinet surfaces.
CARPT 285 Advanced Project for Mill Cabinet

This course introduces the Mill Cabinet Apprentice to advanced cabinetry building procedures per industry standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret shop drawings.
- identify material quantities using information contained on plans.
- explain how to lay out a project and the purpose of specifications.
- locate and list information found in project drawings.
- construct and complete an advanced project demonstrating journeymen-level skills.

CARPT 298 Work Experience in Carpenters Apprenticeship

This course provides students the opportunity to work in the carpenters apprenticeship program for the purpose of developing specific skills to meet the goals and objectives of the carpenters Joint Apprenticeship and Training Committee (J.A.T.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in carpenters apprenticeship program.
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the carpenters Joint Apprenticeship and Training Committee (J.A.T.C.).

Drywall/Lathers (DRLTH)

DRLTH 100 Introduction to the Trade

This course is an introduction to drywall/lathing apprenticeship, state and federal apprenticeship laws, apprenticeship record keeping, apprentice evaluation procedures, general safety, work ethic, sexual harassment issues, and basic tools of the trade.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and interpret federal and state laws governing drywall/lathing apprentices.
• maintain an apprentice work record book.
• identify and avoid unsafe conditions and unsafe acts and observe safety laws and regulations.
• follow written and verbal directions.
• demonstrate proper procedures in administering first aid and CPR.
• describe drywall/lathing related organizations as they apply to the drywall/lathing apprenticeship.

DRLTH 102 Basic Applications

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course is an introduction to basic gypsum wall covering and ceiling applications. It also includes taping installations, knot recognition, and application to rigging on construction job sites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify different wall coverings.
• apply various knots to rigging situations.
• demonstrate basic gypsum wallboard coverings methods.
• apply pre-decorated gypsum wallboard.

DRLTH 103 Drywall Lathing Trade Safety

Units: 1.5
Hours: 24 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a registered Drywall-Lathing Apprentice.
Catalog Date: June 1, 2020

This course covers trade safety for drywall lathing apprentices including hospital safety, rough terrain lift truck operation, and first aid and CPR.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• list tools, materials, and equipment used in the trade.
• explain proper safety practices when working in hospitals.
• list criteria for contamination from hospital remodels.
• describe secondary infections contracted during hospital stays.
• explain medical emergency recognition.
• define the different illnesses in a medical emergency.
• explain allowable loads for various types of rough terrain lift truck capacities.
• list requirements for equipment inspection.
• demonstrate CPR in a simulated scenario.
• define first aid practices.
DRLTH 105 Mathematics for Drywall/Lathers

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers mathematical applications for the drywall and lathing trades. Topics include whole numbers, fractions, decimals, ratios, proportions, percentages, angles and degrees, areas, and volumes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply mathematics such as addition, subtraction, multiplication, and division with whole numbers, decimals, and fractions used in construction projects.
- convert measurement units used on construction job sites.
- calculate perimeter measurements, arc measurements, volume measurements, and weights.
- calculate angles, degrees, and percentages.

DRLTH 110 Residential Metal Framing

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers basic residential metal framing. It includes framing of floors, walls, doors, windows, roofs, trusses, and stairs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and list the uses of appropriate materials in framing.
- build a framed floor.
- build a framed wall with door and window openings.
- build a roof and stair frames.

DRLTH 112 Doors, Windows, Exterior Systems/Building Documents

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers the hardware, installation, and framing of doors and windows and exterior wall covering systems. It also covers blueprints and building codes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and install door and window frames.
- identify and install various doors.
- identify and install door and window hardware.
- identify, select, and install exterior wall coverings.
- analyze and interpret residential blueprints and relevant building codes.
DRLTH 120 Blueprint Reading I

Upon completion of this course, the student will be able to:

- identify the symbols and terms used in floor, elevation, and detail plans.
- interpret technical information given on schedules and specifications.
- construct building layouts from residential floor plans.
- identify the exterior wall finishes from residential plans.
- identify building codes that relate to plan interpretation.

DRLTH 121 Blueprint Reading II

This course is a continuation of DRLTH 120. Topics include interpretation, problem solving, correlating specifications, prints, addenda, notes, sections, and mathematics used with blueprints.

Upon completion of this course, the student will be able to:

- compare graphic (blueprint) information with written (specifications) information.
- identify structure and terminology used with specifications.
- identify and interpret various sections used on blueprints.
- apply calculations derived from details on blueprints.
- identify solutions for different given problems related to blueprint reading.

DRLTH 122 Blueprint Reading III

This course is a continuation of DRLTH 121. Topics include take-offs, material estimates, material requisition, job costs, and layout from blueprints.

Upon completion of this course, the student will be able to:

- identify procedures for blueprint take-offs.
• estimate the quantity of materials needed to construct requested parts of the building.
• estimate cost of material from given take-offs.
• analyze a set of prints and abstract the information necessary to construct requested sections of the building.

DRLTH 130 Welding I

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers welding and welding concepts for construction job sites. Topics include welding safety, basic welding terms, definitions, positions, and cutting operations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain basic theory in safety and welding techniques used for each welding process.
• demonstrate proper setup and operation of arc welding equipment.
• identify most commonly used welding electrode types and their basic uses.
• produce neat, strong welds on metals using arc welding equipment.
• demonstrate proper setup and operation of oxyacetylene equipment.

DRLTH 131 Welding II

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course is a continuation of DRLTH 130. Topics include safety, concepts, processes, symbols, and certification performance of welding.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the basic theory of safety and welding techniques used for each welding process.
• identify welding polarities and related symbols.
• identify most commonly used welding electrode types and their classifications.
• produce strong welds on metals using shielded metal arc welding (SMAW) and flux core arc welding (FCAW).
• identify and compare SMAW and FCAW job site applications.

DRLTH 140 Exterior/Advanced Fire Control System and Partitions

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers safety, principles, theory, and application of advanced fire control systems. Topics include principles and applications of partitions and metal framing.
Student Learning Outcomes
Upon completion of this course, the student will be able to:

- interpret the theory and principles of advanced fire control systems.
- identify principles of partitions and metal soffits.
- layout and install different fire-stopping assemblies.
- layout and install different metal stud partitions used as fire control systems.

DRLTH 142 Exterior Systems and Trims

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers safety, principles, and application of exterior wall framing, coverings, and trims.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify the principles of exterior wall framing.
- identify the principles of exterior wall coverings and trims.
- measure, cut, and assemble exterior wall coverings for commercial and residential lathing systems.
- measure, cut, and assemble wall coverings for commercial and residential foam systems.
- apply exterior lathing trims for commercial and residential applications.

DRLTH 150 Interior Metal Lathing System, Sound Control

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Drywall/Lathing Apprentice
Catalog Date: June 1, 2020

This course covers materials, principles, theory, and application of lath and plaster interior hollow walls and partitions. Topics include principles and application of sound control systems, an introduction to mathematics, and layout for building arches.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- interpret and apply the theory, materials, and principles of sound control systems.
- interpret and apply the theory, materials, and principles of lath, plaster hollow, and pre-fabricated walls.
- install interior lath wall coverings.
- describe the principles of solid lath and plaster partitions.
- interpret the principles and mathematics of arches.

DRLTH 160 Ceilings, Shaft Protection and Demountable Partitions

Units: 1.5
Hours: 21 hours LEC; 18 hours LAB
Prerequisite: None.
This course covers safety, materials, principles, theory, and installation of ceiling systems, demountable partitions, and shaft systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret and apply the theory, materials, and principles of ceiling systems.
- interpret and apply the theory, materials, and principles of shaft systems.
- install a ceiling system per specifications.
- install a shaft system per specifications.
- describe and apply the principles of demountable partitions.

DRLTH 162 Arches, Furring and Advanced Systems

Units: 1.5  
Hours: 21 hours LEC; 18 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Drywall/Lathing Apprentice  
Catalog Date: June 1, 2020

This course covers safety, materials, principles, theory, and installation of furring, arch systems, and fire retardant materials.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret and apply the theory, materials, and principles of furring systems.
- interpret and apply the theory, materials, and principles of arch systems.
- build arch systems to given specifications.
- build lathing and drywall furring systems.
- select, apply, and install fire retardant materials.

DRLTH 170 Advanced Construction Techniques

Units: 1.5  
Hours: 21 hours LEC; 18 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Drywall/Lathing Apprentice  
Catalog Date: June 1, 2020

This course covers safety, materials, principles, and theory of advanced construction techniques. Topics also include following written and verbal directions, construction directly from blueprints, and research techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and apply the theory, materials, and principles of advanced construction techniques.
- interpret blueprint information and apply it to construction projects.
- interpret and follow written and verbal directions in drywall and lathing installations.
- install advanced lathing and drywall systems.
DRLTH 298 Work Experience Drywall/Lathing Apprenticeship

This course provides students the opportunity to work in the drywall/lathing apprenticeship program for the purpose of developing specific skills to meet the goals and objectives of the drywall/lathing Joint Apprenticeship and Training Committee (J.A.T.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in drywall/lathing apprenticeship program.
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the drywall/lathing Joint Apprenticeship and Training Committee (J.A.T.C.).

Electrical Apprenticeship (ELECT)

ELECT 110 Electrical Apprenticeship I

This course is an introduction to electrical apprenticeship, electrical shop practices, basic electrical layout, tools of the trade, and construction materials. Topics include working with electrical related mathematics and basic electrical formulas.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and avoid unsafe conditions and unsafe acts, and observe safety laws and regulations on construction jobsites
- apply electrical mathematics in fractions, basic trigonometric functions, square roots, Ohm's law, and power formulas
- identify and fabricate stubs, kicks, offsets, and bend saddles using electrical metallic tubing (EMT)
- apply the metric system and metrication conversions
- apply electrical mathematics in calculating resistance, current, voltage, and power in a DC series circuit
- demonstrate basic wiring devices to specified standards
- demonstrate basic operations of motor-operated personnel lifts
- identify basic electrical materials used on construction jobsites
- identify basic motorized hand tools used on jobsites

ELECT 111 Electrical Apprenticeship II

This course covers DC theory, DC series and parallel circuits, DC combination circuits, principles of electromagnetism, and power generation. Topics include an introduction to the National Electrical Code (NEC) and basic blueprint reading.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate voltage, current, resistance, and power functions in DC series, parallel, and combination circuits
- define the principles of magnetism and electromagnetism
- list chapters and basic outline of the NEC
- analyze basic residential blueprints
- demonstrate wiring of loads in series and parallel
- demonstrate proper wiring of 3-way and 4-way switches to control a load
- develop a basic PLC program to control a motor control process
- apply the NEC to calculate cable tray fill

ELECT 120 Electrical Apprenticeship III

Units: 3
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers AC theory, AC generation, use of instruments, and phase and circuit calculations. Topics include codeology and how it applies to the National Electrical Code (NEC).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and apply electrical mathematics to AC and DC generation and phase calculations
- apply electrical mathematics to inductance, capacitance, and reactance calculations
- analyze effects of reactance in electrical circuits
- demonstrate use of meters to confirm electrical calculations and to troubleshoot AC and DC circuits
- define the basic principles of codeology
- apply codeology principles to locate information in the NEC
- develop a basic PLC program to control a motor control process
- apply the NEC to calculate cable tray fill

ELECT 121 Electrical Apprenticeship IV

Units: 3
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers AC theory in series, parallel, and combination resistive-inductive (RL), resistive-capacitive (RC), inductive-capacitive (LC), and resistive-inductive-capacitive (RLC) circuits. Topics include conduit bending using a ratcheting and mechanical bender, transformer construction and installation, and applications of the National Electrical Code (NEC).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper conduit bends using a ratcheting and mechanical bender
analyze residential and commercial blueprints and specifications
analyze and identify transformer connections and installations
analyze, identify, and evaluate electrical mathematics in RL, RC, LC, and RLC series, parallel, and combination circuits
apply codeology principles to locate information in the NEC
apply codeology principles to locate information in the NEC
develop a basic PLC program to control a motor control process
apply the NEC to calculate cable tray fill

ELECT 130 Electrical Apprenticeship V

Units: 3
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers electrical safety-related work practices specified by the National Fire Protection Agency publication 70E (NFPA 70E). It covers industrial blueprint reading, conduit bending using electro-hydraulic benders, and introductions to motor control and semiconductors. Additional topics include applying the National Electrical Code (NEC) with emphasis on grounding and bonding.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and apply the requirements of Occupational Safety and Health Administration (OSHA) and NFPA 70E work practices
- analyze and apply Kirchoff's laws and power factor correction calculations
- demonstrate proper procedure for bending conduit using an electro-hydraulic bender
- analyze industrial blueprints, specifications, schedules, and details
- draw a basic 8-pin and 11-pin relay wiring layout and properly wire it in a simple motor control circuit
- describe how a simple semiconductor operates
- describe how transistors, zener diodes, silicon controlled rectifiers (SCR), triacs, diacs, and amplifiers function
- apply the NEC to grounding and bonding of electrical systems

ELECT 131 Electrical Apprenticeship VI

Units: 3.30
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers advanced grounding topics, transformer operation and theory, and advanced industrial blueprint reading. Topics include applying the National Electrical Code (NEC) and emphasis of over-current protection, transformers and ground fault protection.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Identify grounding system components
- Describe ground fault or short circuit conditions and implications
- Identify requirements for grounding separately derived systems
- Demonstrate proper procedures for earth testing
- Demonstrate proper terminations of a three-phase transformer
• Apply NEC tables to calculate over-current protection
• Demonstrate proper layout of an electrical room using blueprints, specifications, and the NEC
• Demonstrate an exothermic weld for a grounding system

ELECT 140 Electrical Apprenticeship VII

Units: 3.30
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers lightning protection systems, AC and DC motors, motor control systems. Topics include advanced blueprints and electrical room layout, as well as building take-offs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Identify different components of lightning protection systems
• Define principles of basic AC and DC motor theory
• Demonstrate proper three-phase motor termination
• Demonstrate proper wiring of 8-pin and 11-pin relay bases
• Analyze motor control diagrams
• Demonstrate proper wiring of motor control systems
• Analyze a complete electrical room layout based on blueprints
• Demonstrate a building take-off based on a set of blueprints

ELECT 141 Electrical Apprenticeship VIII

Units: 3
Hours: 36 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Electrical Apprentice
Catalog Date: June 1, 2020

This course covers AC motor speed controls, National Electrical Manufacturing Association (NEMA) standards, motor control troubleshooting, digital electronics, and programmable logic controllers (PLCs). Topics include use of the National Electrical Code (NEC) with cable trays, electric welders, phase converters, hazardous locations, and special occupancies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe different components of a variable frequency drive (VFD)
• demonstrate proper wiring and basic programming of VFDs
• apply NEMA standards for sizing motor starters and controllers
• demonstrate proper troubleshooting techniques of motor control circuits
• describe the components of PLCs
• demonstrate proper wiring of PLCs
• develop a basic PLC program to control a motor control process
• apply the NEC to calculate cable tray fill
ELECT 150 Electrical Apprenticeship IX

This course covers fire alarms, security, power quality, stewardship training, and photo-voltaic systems. It also includes preparation for the California Electrician Certification examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the functions and parts of a fire alarm system
- explain the difference between a Class A and a Class B fire alarm circuit
- identify different types of smoke and heat detectors and signaling devices
- identify common power quality issues
- interpret data received from a Fluke 43B power quality analyzer
- identify the functions and parts of a security system
- describe functions, components, and installation methods of a typical residential photo-voltaic system
- interpret the National Electrical Code (NEC) and its use for state certification

ELECT 151 Electrical Apprenticeship X

This course covers building automation, structured cabling systems, and an introduction to instrumentation used on industrial process controls. It also covers advanced programmable logic controllers (PLCs) used in motor control circuits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe a building control network
- describe the physical components which make up a LonWorks network
- define terms associated with structured telecommunications wiring systems
- identify the elements of a structured telecommunications system
- define terms associated with instrumentation used in industrial process controls
- explain the benefits of the National Electrical Benefit Fund (NEBF)
- describe different methods of effective and ineffective leadership styles used on jobsites
- describe different models of effective and ineffective communications styles used on jobsites

ELECT 281 Green Technology High Efficiency Lighting

This course covers the latest in green technology and high efficiency lighting systems. It is designed for students who want to learn about energy-efficient lighting solutions and their applications in various industries.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the benefits of high efficiency lighting systems
- describe the different types of high efficiency lighting technologies
- explain the role of lighting in energy conservation
- design lighting systems that meet energy efficiency standards
- understand the economic benefits of using high efficiency lighting systems

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None
Enrollment Limitation: Must be a current California State Certified General Electrician.
Catalog Date: June 1, 2020
This course covers installing, troubleshooting, commissioning and maintaining advanced lighting controls, switching controls, dimming controls, occupancy sensors, photosensors and controllers, distribution relay systems, remote controlled circuit breakers, and wireless systems. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- install green technology lighting controls.
- commission green technology lighting controls.
- maintain and troubleshoot green technology high efficiency lighting controls.
- define and describe the green technology high efficiency light control systems used for energy management.
- identify the components of advanced lighting systems and use of their schematics.
- summarize the energy efficiency legislation that mandates the use of lighting controls.
- identify the energy savings potential of lighting controls.
- identify the appropriate applications for using lighting controls.

</table>

This course is an introduction to the Commercial/Residential Electrician Trainee Program. It includes safety procedures, Occupational Safety and Health Administration (OSHA) requirements, Environmental Protection Agency (EPA) requirements, basic rigging, basic electrical mathematics, Ohm's Law, Direct Current (DC) theory, and construction related CPR and First Aid. This course meets the State of California requirement to obtain an electrician trainee license. This course was previously known as ELECT 210.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and avoid unsafe conditions and unsafe acts, and observe safety laws and regulations.
explain the purpose of and demonstrate the safe use and care of both hand and power tools and equipment.

define the more commonly used hand tools.

demonstrate CPR and First Aid on adults for use on construction job sites.

calculate electrical mathematics problems with fractions, basic trigonometric functions, Ohm's Law, square roots, and power formulas.

apply electrical mathematics in calculating resistance, current, and voltage in DC series, parallel, and combination circuits.

integrate the metric system and metrication changes.

ELTRN 111 Electrician Trainee II

Units: 4
Hours: 63 hours LEC; 27 hours LAB
Prerequisite: ELTRN 110 with a grade of "C" or better
Catalog Date: June 1, 2020

This course covers Alternating Current (AC) theory, including AC and Direct Current (DC) generation, phase, and circuit mathematical calculations. It also covers the use of meters in different applications of alternating current, and provides a basic introduction to electronics and application of the National Electrical Code (NEC) to jobsite electrical installations. This course meets the State of California requirement to obtain an electrician trainee license. This course was formerly known as ELECT 211.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• calculate voltage, current, resistance, and power in AC and DC generators and phase calculations.

• apply electrical mathematics in inductance, resistance, and capacitance calculations.

• apply electrical mathematics in calculating inductive and capacitive reactance in series, parallel, and series-parallel circuits.

• apply the principles of magnetism and electromagnetism to circuits.

• define functions, operations, and characteristics of different solid state components.

• identify and apply National Electrical Codes to job-site electrical installations.

ELTRN 120 Electrician Trainee III

Units: 4
Hours: 63 hours LEC; 27 hours LAB
Prerequisite: ELTRN 111 with a grade of "C" or better
Catalog Date: June 1, 2020

This is the third course of the Commercial/Residential Electrician Trainee Program. Topics include conductors, cables, conduits, lighting systems, panelboard, switchboard, and overcurrent devices for residential and commercial installations. This course also covers reading blueprint drawings, making sketches, drawing architectural views, and identifying common blueprint scales and electrical symbols. This course as formerly known as ELECT 220.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• list different types of conductors and insulators with basic application for each type.

• identify different wiring methods for conductors, cables, and conduits.

• calculate wire size based on the National Electrical Code (NEC) ampacity tables for given installations.

• identify conductor and cable fault types and causes.

• apply NEC requirements for selecting conduits.

• demonstrate procedures for fabricating conduit bends with hand benders and power benders.

• list the functions, operations, and characteristics of various lighting systems.

• list the functions, operations, and characteristics of overcurrent devices.
list the functions, operations, and characteristics of panelboards and switchboards.
recognize symbols for electrical blueprints.
analyze functions of blueprints, specifications, schedules, addenda, and revisions in construction.

ELTRN 121 Electrician Trainee IV

Units: 4
Hours: 63 hours LEC; 27 hours LAB
Prerequisite: ELTRN 110 and 111 with grades of "C" or better
Catalog Date: June 1, 2020

This is the fourth course required for the Commercial/Residential Electrician Trainee Program. Topics include electrical grounding systems and lightning protection systems. It also includes jobsite personnel development and jobsite management. This course was formerly known as ELECT 221.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain terminology covering electrical grounding systems.
- identify different components of the grounded system.
- identify the different components of the grounding electrode system.
- calculate ground resistance using the fall-of-potential method of testing.
- identify the different components of a lightning protection system.
- list jobsite chain of command and scope of work performed by crafts.
- describe effective communication methods for jobsites.
- prepare basic documentation for jobsites.

ELTRN 130 Electrician Trainee V

Units: 4
Hours: 63 hours LEC; 27 hours LAB
Prerequisite: ELTRN 111 with a grade of "C" or better
Catalog Date: June 1, 2020

This is the fifth course required for the Commercial/Residential Electrician Trainee Program. Topics include fundamentals of motors, motor controllers, process controllers, generators, and transformers. Topics also include testing of cables, generators, and motors. This course meets the State of California requirement to obtain an electrician trainee license. This course was formerly known as ELECT 230.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the function, operation, and characteristics of various types of motors.
- describe the physical parts of most common motors.
- utilize the information on nameplates for the proper installation and operation of motors.
- demonstrate proper termination of single- and three-phase squirrel cage motors.
- describe the function, operation, and characteristics of motor controllers, circuits, and devices.
- describe the function, operation, and characteristics of motor switches and relays.
- demonstrate proper wiring of various motor control circuits.
- identify the function, operation, and characteristics of basic process control systems.
- describe the function, operation, and characteristics of Alternating Current (AC) and Direct Current (DC) generators.
- describe the function, operation, and characteristics of transformers.
select a proper transformer depending on voltage, current, and power requirements.

describe steps for various testing processes of cables, generators, and motors.

ELTRN 131 Electrician Trainee VI

Units: 4
Hours: 63 hours LEC; 27 hours LAB
Prerequisite: ELTRN 111 with a grade of "C" or better
Catalog Date: June 1, 2020

This is the sixth course required for the Commercial/Residential Electrician Trainee Program. Topics include fire alarm systems, burglar alarm systems, and information transport systems (ITS). This course also covers basic electrical requirements for heating, air conditioning, and refrigeration systems. It meets the State of California requirement to obtain an electrician trainee license. This course was formerly known as ELECT 231.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the function, operation, and characteristics of a fire alarm system and the individual components of the system.
- identify code requirements for fire alarm systems.
- select fire alarm cable and wiring method for various different jobsite conditions.
- demonstrate proper wiring of a basic fire alarm system.
- describe the function, operation, and characteristics of a burglar alarm system and individual components of the system.
- demonstrate proper wiring of a basic burglar alarm system.
- identify code requirements for burglar alarm systems.
- describe the function, operation, and characteristics of different information transport systems (ITS - voice, data, and video applications).
- demonstrate proper termination of various ITS connectors per industry standards.
- demonstrate proper installation techniques and termination procedure of fiber optic used in data communications.
- identify basic components of a heating, air conditioning, and refrigeration system.

ELTRN 180 Electrical Workers State Certification Preparation

Units: 4.5
Hours: 81 hours LEC
Prerequisite: None
Advisory: Completion of ELTRN 110 and 111.
Catalog Date: June 1, 2020

This is a preparatory course for the Electricians’ State Licensing Certification for California. It reviews basic electrical formulas and provides an in-depth review of the National Electrical Code (NEC) and safety. This course was formerly known as ELECT 280.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the NEC for the State of California as it pertains to licensure.
- apply code requirements to installations and testing procedures.
- identify and describe code terminology.
- identify and correct code infractions.

Iron Workers (IW)
IW 100 Orientation and History of the Trade

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course introduces the responsibilities of an Ironworker's Apprentice. It includes the Ironworker's rules and regulations, record keeping, evaluations and advancement, work ethic, sexual harassment issues, and basic tools. It acquaints the Ironworker Apprentice with specifications that constitute a safe working environment under the Occupational Safety and Health Administration (OSHA); including an introduction to the rights and obligations that OSHA imposes. In addition, this course provides an orientation and overview of the history of the Ironworker trade.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the historical evolution of legislative laws responsible for the creation and maintenance of safe and healthful working environments.
- employ construction safety standards prescribed by OSHA and apply safe working practices and procedures relevant to iron work.
- discuss the reinforcing iron principle.
- describe the architectural and ornamental components of ironwork.
- discuss a broader understanding of Green Construction techniques.
- discuss honesty, integrity, and basic responsibilities.
- identify structural steel components of ironwork.
- demonstrate welding and burning techniques.
- discuss the history of the Ironworker trade.
- show various rigging methods.

IW 101 OSHA 30 for Ironworkers

Units: 1.5
Hours: 25 hours LEC; 15 hours LAB
Prerequisite: None.
Enrollment Limitation: Must be a state registered ironworker apprentice.
Catalog Date: June 1, 2020

This course provides the ironworker apprentice safety standards and regulations for construction project sites as required by the Occupational Safety and Health Administration (OSHA). Topics include general safety and health provisions, OSHA citation policies, fire protection and prevention, fall protection, personal protection equipment (PPE), safe handling and storage of materials, steel erection, and lifesaving practices and equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify OSHA standards on the jobsite.
- use personal protection equipment properly.
- perform basic first aid and life saving procedures.
- perform proper fire protection and prevention practices.
- use cranes, hoists, elevators and conveyors safely.
- apply steel erection safety practices.

IW 110 Mixed Base

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
This course provides an overview of the type of construction blueprints commonly used with emphasis on function and interpretation. It offers a brief review of basic math skills and provides an opportunity to apply these skills in solving typical problems relevant to the Ironworker trade.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate facility, accuracy, and speed in adding, subtracting, multiplying, and dividing whole numbers, fractions, and decimals.
- convert a fraction, a decimal, or a percent to either of the other two forms.
- solve typical problems of the construction trade with the appropriate mathematics.
- read linear measurements accurately with a fractional ruler, a decimal ruler, a metric ruler, and a micrometer.
- read measuring tools calibrated in the metric system and demonstrate the ability to convert between traditional and metric units.
- use blueprints and construction drawings to interpret the various types of drawings used in the Ironworker trade.

IW 120 Rigging

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course introduces rigging applications such as wire rope, chains, slings, cranes, helicopters, ladders, and scaffolds. It also includes rigging safety, knot recognition and strength identification, and knot applications within rigging.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, describe, and tie knots that are most widely used in the Ironworkers' trade.
- describe the various fibers used in making lines and identify characteristics of each.
- define common terms and identify parts and structure of various types of fiber lines and steel cables.
- demonstrate the proper use, care, preparation, and handling of fiber lines and steel cables.
- apply formulas and charts that determine the proper use, care, and selection of steel cable and fiber lines and their accessories.
- demonstrate the use of the various combinations of block and tackles, their components, and compute their mechanical advantage.
- identify various hoisting devices, their anchorage, and principal parts.
- apply common rigging techniques for scaffolds, ladders, and working supports.
- demonstrate the standard hand signals used in rigging.

IW 130 Reinforcing I

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course introduces standard codes, code classifications, plans, schedules, charts, and specifications commonly used by Ironworkers. Topics include construction techniques used in reinforcing concrete members with steel, use of bar supports, placement of reinforcing iron, and general principles of bar splicing and welding. Post-tensioning and pre-stressing techniques are also introduced.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- use reinforcing concrete construction methods on foundations, floors, and roofs.
- identify the placement of reinforcing steel.
- use hand tools for the bending and shearing of reinforcing rods.
- tie reinforcing rods and calculate the proper spacing.
- research the placement of reinforcement rods in foundations, footings, floors, and roofs.
- identify bar sizes by color code and other structural symbols.
- demonstrate the unloading, handling, and storage of reinforcing bars.

**IW 131 Reinforcing II/Post Tensioning**

- Units: 1.5
- Hours: 18 hours LEC; 27 hours LAB
- Prerequisite: IW 130 with a grade of "C" or better
- Enrollment Limitation: Registered Ironworkers Apprentice
- Catalog Date: June 1, 2020

This course expands the interpretation of standard codes, code classifications, plans, schedules, charts, and specifications commonly used in the Ironworker trade. Construction techniques, use of bar supports, placement of reinforcing iron, general principles of bar splicing, and welding are presented in depth.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- discuss pre-stressing applications as they relate to structural members.
- identify appropriate materials necessary for post-tensioning systems.
- determine the use of bar supports and placement of reinforcing iron in building structures.
- differentiate wire, bar, and bonded tendons.
- demonstrate the special applications of post-tensioning systems.
- identify types of protective coatings for barrier cables.
- explain blueprint and other drawings related to post-tension.

**IW 140 Precast Concrete and Metal Buildings**

- Units: 1.5
- Hours: 18 hours LEC; 27 hours LAB
- Prerequisite: None.
- Enrollment Limitation: Registered Ironworkers Apprentice
- Catalog Date: June 1, 2020

This course covers the erection of precast concrete and metal buildings. Topics include rigging, handling, and installing of structures in a safe and economical manner. It also covers reading and interpreting charts, tables, and blueprints.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- list equipment commonly used in erecting precast concrete members and metal buildings and cite the advantages and disadvantages of each.
- define rigging arrangements, lifting devices, and picking points commonly used in hoisting precast concrete members into a structure.
- identify the five structure erection blueprint layouts used for the installation of precast concrete members.
- select appropriate equipment and handling procedures for hoisting precast concrete members and metal buildings.
- demonstrate correct safety procedures for transporting, unloading, and erecting precast concrete and metal buildings.
- demonstrate the use of shimming, bearing pads, temporary shoring, bracing, guying, and various leveling techniques.
illustrate three groups of tolerances and the role of each to which precast concrete and metal buildings must conform.

describe appropriate joint design and proper clearance ploys in preset concrete installations.

explain the importance of protecting precast concrete items from stain and damage during and after structural erection.

discuss the history of metal roofing.

assemble secondary framing systems.

troubleshoot scaffold safety.

IW 150 Welding I

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course introduces the structure of ferrous metals and their reaction to heat. It covers the equipment and materials used for shielded metal-arc welding including safety hazards, charts, key terms, electrodes, and welding current controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and demonstrate the oxy-fuel cutting process.
- identify and mitigate potential safety hazards.
- select proper electrodes for a job.
- set up primary variables for successful welding.
- describe carbon arc gouging (CAG).
- define key electrical terms.
- define terms related to voltage, including constant, variable, voltage drop, open-circuit, arc voltage, and polarity.
- demonstrate the proper use of welding equipment and machines.

IW 151 Welding II

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: IW 150 with a grade of "C" or better
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course continues the study of ferrous metals and their reactions to heat. Equipment and materials employed in the use of shielded metal-arc and gas shielded-arc are included in this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the arc welding process.
- describe the safety precautions for arc welding.
- identify weld symbols and special processes.
- differentiate between various flux core arc welding (FCAW) power source machines.
- set up the equipment for FCAW.
- troubleshoot FCAW problems.
• identify the characteristics of self-shielded flux core arc welding (FCAW-SS) electrodes.

IW 152 Welding III

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: IW 151 with a grade of "C" or better
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course focuses on skill development in shielded metal arc and flux core arc welding on ferrous and non-ferrous metals. Vertical and overhead positions on all types of joints as they relate to structural stability are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply fusion-weld techniques to heavy gauge ferrous metals using low hydrogen electrodes and flux core wire electrodes.
• demonstrate the root and face bend welding test to American Welding Society standards.
• illustrate basic joint design and weld metallurgy.
• identify the uses and applications of ferrous and non-ferrous metals.
• select the proper procedure for the application of special metal techniques.

IW 160 Lead Hazard

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None
Enrollment Limitation: Registered Ironworkers apprentice.
Catalog Date: June 1, 2020

This course describes the health effects caused by lead exposure. Topics include the Occupational Safety and Health Administration (OSHA) regulations, sampling methods, legal rights of workers, and the use of proper protective equipment and work methods.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• discuss the history of the use of lead, the modern day uses of lead, and the exposure risks to lead.
• describe how lead enters the body, as well as the short and long term health effects associated with lead exposure.
• identify government agencies that regulate occupational exposure to lead as well as the regulations written to protect workers.
• show the methods which can be used to allow identification of lead coatings on the job.
• explain the requirements under the hazard communication program; how to read, interpret, and use a material data safety sheet as well as basic labeling systems.
• discuss the laws that protect workers.
• identify protective equipment that is commonly worn on steel structure jobs where lead is present.
• demonstrate typical work methods to avoid or prevent lead exposure associated with steel structures, bridges, and demolition activities.
• identify factors on the job site that directly affect safety.
• recognize legal responsibilities in working with products containing lead.
• describe required respiratory protection and the corresponding protection factors.

IW 170 Structural I

Units: 1.5
This course covers the theory and practice of blueprint reading, structural erection procedures, and proper steel structure construction.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list various performance processes related to structural steel construction.
- discuss recommended building procedures related to structure steel construction.
- describe procedures for receiving and storing construction materials.
- explain blueprint and other drawings related to structural steel.
- identify open-web, long-span, and non-standard steel joists.
- perform job hazard analyses and describe procedures of safety meetings.

IW 171 Structural II

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: IW 170 with a grade of "C" or better
Catalog Date: June 1, 2020

This course addresses the theory and practice of blueprint reading related to structure construction. Structural erection procedures including the operation of mobile and tower cranes and proper construction of various steel structures are presented.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the performance of various processes related to structural steel.
- demonstrate the recommended building procedures in structural steel construction.
- demonstrate the proper way to receive and store construction materials.
- describe the evolution and history of early cranes.
- define proper use and application of mobile and tower cranes in relation to structural steel construction.
- identify quadrants of crane operation.
- explain the requirements for working near power lines.
- demonstrate signaling procedures with tower, mobile, and telescoping cranes.

IW 180 Architectural/Ornamental I

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Ironworkers Apprentice
Catalog Date: June 1, 2020

This course covers the procedures and practices employed by the Ironworker in architectural and ornamental iron-working. Topics include tools, anchors, fasteners, and various layout instruments. Additionally, constructing curtain wall systems, applying sealants, and glazing systems are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different types of hand tools, powder actuated tools, anchors, and fasteners.
- recognize various types of sealants and glazings.
- name the various types of layout equipment.
- construct a curtain wall.
- construct a window wall.
- install anchors and fasteners.
- prepare joints and apply various types of sealants and glazings.
- identify types of fence and guard rails.
- identify detention systems and install detention frames, doors, and hardware.
- review procedures for storefronts and entryways.

IW 183 The History of Ironworkers

<table>

</tr>
</tbody>
</table>

This course covers the history of iron-working and the Ironworker Union movement from its birth in 1896 to the present.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the key events leading up to and including the inception of the Ironworker Union.
- explain key events in the life of the Ironworker Union from its birth to the present time.
- describe the Union's influence going into the 21st century.
- describe the impact of World War II on the Ironworker Union.

IW 186 Architectural/Ornamental II

This course is a continuation of IW 180 and provides detailed information on knowledge, procedures, and practices employed by the ironworker in architectural and ornamental iron working. Topics include tools, anchors, fasteners, and various layout instruments. Additionally, constructing curtain wall systems, applying sealants, and glazing systems are covered. This course is not open to students who have taken IW 181.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different types of hand tools, powder actuated tools, anchors, and fasteners.
- recognize various types of sealants and glazings.
- name the various types of layout equipment.
- construct a curtain wall.
- build an on-site test chamber to measure air and water infiltration of window and curtain wall systems.
- install anchors and fasteners.
- prepare joints and apply various types of sealants and glazings.
IW 298 Work Experience in Ironworkers Apprenticeship

This course provides students the opportunity to work in the ironworkers apprenticeship program for the purpose of developing specific skills to meet the goals and objectives of the ironworkers Joint Apprenticeship and Training Committee (J.A.T.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in ironworkers apprenticeship program.
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the ironworkers Joint Apprenticeship and Training Committee (J.A.T.C.).

Operating Engineers Apprenticeship (OE3)

OE3 101 Introduction to Operators

This course introduces the skills and knowledge required to be a Construction Equipment Operator in the Operating Engineers Apprenticeship. Topics include an introduction to grade checking and the operation of a compactor, bulldozer, scraper, and backhoe.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures when working with construction equipment.
- demonstrate basic grade-setting skills.
- describe the starting and stopping procedures for a loader, bulldozer, scraper, and backhoe per manufacturers’ recommendations.
- demonstrate the proper operation of equipment such as a loader, bulldozer, scraper, and backhoe per manufacturers’ recommendations.
- recognize the hazards of underground construction in a typical construction job site.
- demonstrate the proper hand signals used on job sites with heavy equipment.

OE3 102 Introduction to Heavy Duty Repair

This course is an introduction to the Heavy Equipment Operator in the Operating Engineers Apprenticeship. Topics include an introduction to electrical, pneumatic, hydraulic, and power train systems for heavy duty construction equipment. Additional topics include engines and safety.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures when working with construction equipment.
- solve electrical mathematical problems with Ohm’s Law and power formulas.
- demonstrate basic skills in problem-solving as they apply to electrical system repair.
- describe the principles of hydraulics and pneumatics in heavy equipment.
- identify components of diesel engines used in common heavy equipment.
- identify components of power trains used in common heavy equipment.
- describe safety procedures for the setup, starting and stopping of oxyacetylene equipment.
- describe safety procedures when using shielded metal arc welding (SMAW).

OE3 103 Introduction to Crane Operators

Units: 12
Hours: 164 hours LEC; 156 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course introduces the skills and knowledge to be a Crane Operator in the Operating Engineers Apprenticeship. Topics include rigging, crane operations, lubrication, booms, loading, and safety regulations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures when working with construction equipment.
- demonstrate proper use of load charts with crane operations.
- explain the initial proper configuration of a crane.
- explain the proper procedures for load control and tag lines.
- explain the regulations governing cranes.
- demonstrate various hand signals used on job sites with cranes.
- explain the pre-operational steps with inspections and maintenance.

OE3 104 Introduction to Grade Setter

Units: 8
Hours: 120 hours LEC; 72 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course introduces the skills and knowledge to be a Grade Setter in the Operating Engineers Apprenticeship. Topics include an introduction to grade checking and the operations of compactors, bulldozers, scrapers, and loaders.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures when working with construction equipment.
- demonstrate basic grade-setting skills.
- describe the starting and stopping procedures for a loader, bulldozer, scraper, and backhoe per manufacturers’ recommendations.
- demonstrate the proper operation of equipment such as a loader, bulldozer, scraper, and backhoe per manufacturers’ recommendations.
OE3 110 Introduction to Dredge Operation

Units: 3  
Hours: 41 hours LEC; 39 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Operating Engineer Apprentice.  
Catalog Date: June 1, 2020

This course introduces dredge operations. Topics include principles of dredging, water safety, knot tying, hand signals, and crane operations for dredging operations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize the principles of dredging.
- demonstrate the safe operation of a dredge per manufacturers' recommendations.
- calculate the load requirements for a crane operating with a dredge platform using load charts.
- recognize proper water safety procedures for given dredge platform.
- apply different hand signals used in dredge operations.

OE3 112 Seamanship I

Units: 3  
Hours: 41 hours LEC; 39 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Operating Engineer Apprentice.  
Catalog Date: June 1, 2020

This course covers seamanship as it is required for dredge operations. Topics include boat handling, use of nautical charts, piloting, signaling, buoy safety, and general water safety requirements for dredge operations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the hazards of weather, wind, waves, currents, tides and tidal currents, and how to deal with them.
- demonstrate the proper procedures to operate a vessel for dredging operations.
- use a nautical chart to locate a navigational course.
- identify buoy markers and their application for navigational purposes.
- demonstrate the different sound signals used in vessel operations.

OE3 115 Seamanship II

Units: 3  
Hours: 41 hours LEC; 39 hours LAB  
Prerequisite: OE3 112 with a grade of "C" or better  
Enrollment Limitation: Registered Operating Engineer Apprentice.  
Catalog Date: June 1, 2020

This course is a continuation of OE3 112. Advanced topics include marine rescue, lifeboat seamanship, dredging material handling, shipboard fire suppression, and shore operations.
Upon completion of this course, the student will be able to:

- describe the hazards of weather, wind, waves, currents, tides and tidal currents, and how to deal with them during rescue operations.
- explain the proper marine rescue methods during given scenarios.
- demonstrate the proper method to operate a lifeboat during rescue efforts.
- demonstrate the proper handling of shipboard fire suppression equipment.
- explain the proper management of dredge material in order to comply with federal and local code and regulations requirements.

OE3 120 Plant Operations

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course covers the operation, maintenance, and troubleshooting of batch, crushing, screening, and washing plants in the construction industry. Topics include maintenance procedures, erecting and dismantling, and types of materials.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain plant safety requirements.
- list different materials commonly processed in batch plants.
- describe the operation of batch plants.
- demonstrate the proper procedures for lubricating and maintaining a batch plant.
- demonstrate the proper troubleshooting techniques used in a crushing plant.

OE3 121 Welding and Cutting

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers welding and oxy-acetylene used in batch, crushing, screening, and washing application plants. Topics include shop safety practices, proper selection of welding equipment, use of oxy-acetylene equipment, and proper welding techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures with each given welding and oxy-acetylene equipment.
- operate a cutting torch per manufacturer specifications.
- demonstrate the correct technique to operate an electric arc welding machine per manufacturer specifications.
- explain the techniques and methods used as a process for Shielded Metal Arc Welding (SMAW).
- explain the techniques and methods used as a process for Flux-Cored Arc Welding (FCAW).
- repair typical equipment used in plant operations by welding.
OE3 130 Backhoe & Excavator Operations

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers the safe operation of a backhoe and/or excavator. Topics include trenching safety, hazards of underground construction, sloping, grade checking, and excavation for a manhole.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the proper safety procedures to setup a backhoe and/or excavator.
- demonstrate the proper grade checking for elevation purposes.
- demonstrate the correct technique to operate a backhoe and/or excavator.
- slope a trench according to OSHA requirements.
- identify the controls for the operation of a backhoe and/or excavator.

OE3 131 Grade Checking

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers grade checking for the construction equipment operator. Topics include grade setting terminology, stake marking, laser levelers, street section grading, Global Positioning System (GPS) devices, plan reading, metric conversions, and locating underground infrastructure.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the terminology used in grade checking.
- demonstrate the proper grade checking for elevation purposes.
- setup a laser level to establish cut or fill.
- explain stake markings and terminology.
- prepare the layout of a pad with given grade stakes and blueprints.

OE3 132 Scrapers

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers the operation of a scraper. Topics include equipment safety, grading, dumping and spreading, grade checking, and operation with a scraper.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures to operate a scraper.
- demonstrate the proper grade checking for elevation purposes.
• demonstrate the correct technique to dumping and spreading with a scraper.
• demonstrate the ejector, apron, and cutting edge of a scraper.
• identify the controls for the operation of a scraper.

OE3 133 Loaders

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers the safe operation of a loader. Topics include equipment safety, loading, transporting, stockpiling, and hand signals.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the proper safety procedures to operate a loader.
• demonstrate the proper load balancing for a loader.
• demonstrate proper loading and hauling techniques of a loader.
• demonstrate the correct usage of hand signals for loaders.
• identify the controls for the operation of a loader.

OE3 134 Motor Grader

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers the operation of a motor grader. Topics include equipment safety, grading, mixing, compaction density, grade checking, and v-ditching.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the proper safety procedures to operate a motor grader.
• demonstrate the proper grade checking for elevation purposes.
• demonstrate the correct technique to mixing with required compaction density with a motor grader.
• demonstrate the operation of a global positioning system (GPS) with a motor grader.
• identify the controls for the operation of the motor grader.

OE3 135 Dozers

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020

This course covers the operation of dozers. Topics include equipment safety, cutting, spreading, and grade checking.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- explain the proper safety procedures to operate a dozer.
- demonstrate the proper grade checking for elevation purposes.
- demonstrate the correct technique to cutting and spreading with a dozer.
- demonstrate the operation of a global positioning system (GPS) with the dozer.
- identify the controls for the operation of a dozer.

OE3 136 Directional Drilling

Upon completion of this course, the student will be able to:

- explain directional drilling safety requirements.
- list different components of the tracker controller.
- describe the operation of the tracker control.
- demonstrate the procedures for lubricating and maintaining a directional drilling machine.
- demonstrate the calculations used with directional drilling machines such as hole volume, fluid-to-soil ratios, and other given methods.

OE3 140 Boom Pumps

Upon completion of this course, the student will be able to:

- list the various boom pumps with sizes and pumping capabilities.
- demonstrate the safe operation of a boom pump per manufacturers' recommendations.
- calculate the necessary mixes, additives, and slumps for the materials.
- explain potential hazards on a job site.
- apply different hand signals used in boom pumping operations.

OE3 141 Line Pumps
This course introduces line pumps, such as those for ground concrete pumping. Topics include safety, maintenance, components, controls, hand signals, and blockages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the various line pumps with sizes and pumping capabilities.
- demonstrate the safe operation of a line pump per manufacturers’ recommendations.
- calculate the necessary mixes, additives, and slumps for the materials.
- explain potential hazards on a job site.
- apply different hand signals used in line pumping operations.

OE3 142 Advanced Boom Pumps

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: OE3 140 with a grade of "C" or better
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course covers advanced boom pumps such as those used for overhead concrete pumping. Topics include advanced safety, preventative maintenance, components, controls, hand signals, blockages, and troubleshooting procedures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the various boom pumps with sizes and pumping capabilities.
- demonstrate the safe operation of a boom pump per manufacturers’ recommendations.
- calculate the necessary mixes, additives, and slumps for the materials.
- explain potential hazards on a job site.
- apply different hand signals used in boom pumping operations.
- demonstrate the troubleshooting of a boom pump with given schematic drawings.

OE3 143 Advanced Line Pumps

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: OE3 141 with a grade of "C" or better
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course covers advanced line pumps, such as those used for ground concrete pumping. Topics include advanced safety, preventative maintenance, components, controls, hand signals, blockages, and troubleshooting procedures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the various line pumps with sizes and pumping capabilities.
- demonstrate the safe operation of a line pump per manufacturers’ recommendations.
- calculate the necessary mixes, additives, and slumps for the materials.
- explain potential hazards on a job site.
- apply different hand signals used in line pumping operations.
OE3 160 Grade Setting I

This course introduces the skills and knowledge required to be a grade setter in the Operating Engineer Apprenticeship. Topics include surveying principles, plan reading, global positioning systems (GPS), cut/fill slope staking, street section grading, and pad layout.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the layout of a level pad according to the prints.
- demonstrate the proper grade checking for elevation purposes.
- demonstrate the layout for grading a street section.
- explain the markings on a grade stake for cut and fill markings.
- demonstrate the setup of a GPS file management for a Topcon system.

OE3 161 Grade Setting II

This course covers the advanced skills and knowledge required to be a grade setter in the Operating Engineer Apprenticeship. Topics include sloping pad layout, sidewalk, curb, and gutter grading, and catch point slope staking using global positioning systems (GPS) for Trimble systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the layout of a sloping pad according to the prints.
- demonstrate the proper grade checking for elevation purposes.
- demonstrate the layout for grading a sidewalk, curb, and gutter section.
- explain the markings on a grade stake for catch point slope staking.
- demonstrate the setup of a GPS file management for a Trimble system.

OE3 182 Heavy Duty Equipment Hydraulics

This course covers hydraulic systems of heavy duty equipment. Topics include pumps, actuators, hoses, schematic drawings, and similar systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• describe the fundamentals of hydraulics.
• apply and list Pascal's Laws of Hydraulics.
• define viscosity of hydraulic fluids.
• identify the different components of hydraulic systems in heavy duty equipment.
• diagnose a basic hydraulic system.

OE3 183 Engines

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This course covers the principles, operation, and diagnosis of heavy duty engines commonly used in construction equipment, such as earth moving equipment. Topics include fuel systems, specialty tool usage, and troubleshooting techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify shop safety requirements.
• define and explain how compression ignition is used in diesel engines.
• explain the operating principles of the different components in heavy duty diesel engines.
• list the functions of the fuel injection system used in modern engines.
• demonstrate component analysis when troubleshooting a heavy duty diesel engine.

OE3 184 Power Trains

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice.
Catalog Date: June 1, 2020

This covers the principles, operation, and diagnosis of heavy duty power trains commonly used in construction equipment such as earth moving equipment. Topics include shop safety, transmissions, drive-lines, differentials, and troubleshooting techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain shop safety requirements.
• list the components in the power train and explain the basic operations.
• describe the operation of three basic types of clutches.
• define the purpose and operation of a manual transmissions used in heavy duty earth moving equipment.

OE3 185 Equipment Welding

Units: 3
Hours: 41 hours LEC; 39 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Operating Engineer Apprentice
Catalog Date: June 1, 2020
This course covers welding and oxyacetylene processes used in heavy construction equipment, such as bulldozers, backhoes, or earth moving equipment. Topics include shop safety practices, proper selection of welding equipment, use of oxyacetylene equipment, and proper welding techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper safety procedures for welding and oxyacetylene equipment.
- demonstrate the correct technique to operate a cutting torch per manufacturer specifications.
- demonstrate the correct technique to operate an electric arc welding machine per manufacturer specifications.
- explain the techniques and methods used as a process for Shielded Metal Arc Welding (SMAW).
- explain the techniques and methods used as a process for Flux-Cored Arc Welding (FCAW).
- explain the basic concepts of metallurgy, inspection, testing, and distortion.

OE3 186 Lubrication Preventative Maintenance

Units: 3  
Hours: 41 hours LEC; 39 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Operating Engineer Apprentice.  
Catalog Date: June 1, 2020

This course covers lubrication preventative maintenance for the construction lube technician. Topics include lubricants, air filters, engine oils, and manufacturer services on heavy construction equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the fundamentals of lubrication.
- perform manufacturer required preventative services.
- demonstrate specified engine oil replacement on earth moving equipment.
- demonstrate the inspection of equipment by manufacturer specifications.
- measure the different fluid levels in earth moving equipment.

OE3 187 Oils, Lubricants, and Coolants

Units: 3  
Hours: 41 hours LEC; 39 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Registered Operating Engineer Apprentice.  
Catalog Date: June 1, 2020

This course covers oils, lubricants, and coolants for the construction lube technician. Topics include lubricants, engine oils, gear oils, transmission oils, grease, and coolants.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the fundamentals of lubrication.
- select hydraulic oils per manufacturer specifications for heavy construction equipment.
- record properly services being done on heavy construction equipment.
- determine the different viscosity requirements for heavy construction equipment depending on environmental conditions.
OE3 188 Servicing and Inspections

This course covers servicing and inspection skills for the construction lube technician. Topics include minor repairs, performing services, and inspecting for prevention.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform inspections on heavy construction equipment for preventative measures.
- select hydraulic oils per manufacturer specifications for heavy construction equipment.
- record properly services being done on heavy construction equipment.
- perform minor repairs on heavy construction equipment.
- select oil samples and determine potential problems with heavy construction equipment.

OE3 298 Work Experience in Operating Engineers Apprenticeship

This course provides students the opportunity to work in the operating engineers apprenticeship program for the purpose of developing specific skills to meet the goals and objectives of the operating engineers Joint Apprenticeship and Training Committee (J.A.T.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in operating engineers apprenticeship program.
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the operating engineers Joint Apprenticeship and Training Committee (J.A.T.C.).

Pre-Apprenticeship (PREAP)

PREAP 111 Infrastructure Pre-Apprenticeship

This course provides an introduction to infrastructure apprenticeships. It covers tools, equipment, materials, and techniques used for building roads, bridges, levees, and rail. Topics also include job safety, physical requirements for different job sites, employability skills for apprenticeship, and California apprenticeship laws. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• demonstrate job interview skills needed for the infrastructure apprenticeships.
• demonstrate the safe use and care of both hand and power tools.
• identify safety laws, regulations, and safe working conditions for apprenticeship training.
• demonstrate competency in basic infrastructure calculations.
• describe basic skills required for the construction of roads, bridges, levees, and rail.
• describe infrastructure construction materials and green building procedures.

PREAP 112 Infrastructure Pre-Apprenticeship I

Units: 3
Hours: 27 hours LEC; 81 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides an introduction to infrastructure construction trades apprenticeships. It covers tools, and equipment used for building and maintaining the facilities and systems that create America's infrastructure. Topics also include OSHA/jobsite safety, the safe use of hand and power tools, applied construction math, and employability skills for apprenticeship. This course is not open to students who have completed PREAP 111. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate the safe use and care of both hand and power tools.
• identify safety laws, regulations, and safe working conditions for apprenticeship training.
• demonstrate competency in basic construction calculations.
• build a small wood project based on written and verbal instructions.

PREAP 113 Infrastructure Pre-Apprenticeship II

Units: 3
Hours: 27 hours LEC; 81 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides an overview of the commercial and industrial construction trades with an emphasis on America’s infrastructure. It covers materials and techniques that are used in the infrastructure trades to construct and maintain buildings and related facilities. Topics also include an introduction to construction drawings, material handling simulators, multi-craft skills, and California apprenticeship regulations. This course is not open to students who have completed PREAP 111. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe entry level skills required for the construction of roads, bridges, levees, and commercial buildings.
• identify construction tools, materials, and fasteners.
• identify the basic components within a set of construction drawings.
• demonstrate the ability to lay out a floor plan from a given drawing.
• measure the differences in elevation with a builder’s level and with construction laser levels.

PREAP 122 Pre-Apprenticeship for Utility Workers

Units: 8
Hours: 96 hours LEC; 144 hours LAB
Prerequisite: None.
Corequisite: FITNS 358
This course provides preparation for entry-level employment skills for the utility industry. Topics include safety, basic electrical fundamentals, gas principles, excavation, working at heights, industrial ergonomics, radio procedures, and knot tying. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the nature of electricity, resistance, basic circuit laws, and Ohms’ law including alternating current
- identify the industry specific requirements of excavation
- define power generation and distribution processes
- measure circuit values using fundamental electrical laws and rules
- define terms and vocabulary uses in the utility industry
- explain gas distribution for the utility industry
- demonstrate effective conflict resolution skills
- calculate values of circuits with the aid of a calculator
- identify safety laws, regulations, and safe working conditions for the utility industry

**PREAP 141 Green Technology Pre-Apprenticeship**

**Units:** 7  
**Hours:** 77 hours LEC; 147 hours LAB  
**Prerequisite:** None.  
**Corequisite:** Concurrent enrollment in FITNS 101.  
**Enrollment Limitation:** Students must have a high school diploma or GED.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Catalog Date:** June 1, 2020

This course provides an introduction to Green Technology Pre-Apprenticeship. It covers tools, equipment, materials, and techniques used in the green fields such as electrical, plumbing, heating ventilation and air conditioning (HVAC), and carpentry. Topics include commercial and industrial building energy efficiency, building codes, sustainability, renewable energy, green building, distributed generation systems, utilities, and smart grids. Additional topics include construction drawings, safety training, construction math, and basic communication and employability skills. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the major challenges to the green environment that are caused directly or indirectly by the built environment.
- identify decisions and actions in his/her personal and work life that impact the green environment.
- describe the life cycle phases of a building and the impacts on the green environment over its life cycle.
- identify green alternatives to conventional building practices and describe the positives and negatives of each alternative.
- describe the Leadership in Energy and Environmental Design (LEED) rating process.
- explain the role of Occupational Safety and Health Administration (OSHA) in job site safety.
- recognize and identify some of the basic hand tools and their proper uses in the construction trade.
- communicate effectively in on-the-job situations using verbal and written skills.
- identify renewable and non-renewable resources and energy.
- describe the importance of sustainable renewable energy sources.

**PREAP 142 Green Technology Pre-Apprenticeship I**

**Units:** 3
This course provides an introduction to Green Technology Pre-Apprenticeship. It covers tools, equipment, materials, and techniques used in the green fields such as electrical, plumbing, heating ventilation and air conditioning (HVAC), and carpentry. Topics include reducing consumer waste, water and other natural resources, recycling, renewable energy, and green building procedures and materials. Additional topics include construction drawings, safety training, construction math, and basic communication and employability skills. This course is not open to students who have completed PREAP 141. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the major challenges to the green environment that are caused directly or indirectly by the built environment.
- calculate individual carbon footprints and identify ways to lessen them.
- recognize and identify some of the basic hand tools and their proper uses in the construction trade.
- identify renewable and non-renewable resources of energy.
- describe the importance of sustainable renewable energy sources.

PREAP 143 Green Technology Pre-apprenticeship II

Upon completion of this course, the student will be able to:

- describe the life-cycle phases of a building and the impacts on the green environment over its life cycle.
- identify green alternatives to conventional building practices and describe the positives and negatives of each alternative.
- describe the Leadership in Energy and Environmental Design (LEED) rating process.
- list the benefits of the various sustainable construction systems.

Sheet Metal (SHME)

SHME 100 Sheet Metal Apprenticeship I

This course is an introduction to the sheet metal apprenticeship program. Topics include job-site safety practices, basic drafting, basic job-site drawings, and industry terminology.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Analyze and avoid unsafe conditions and unsafe acts, and observe safety laws and regulations.
Describe general Occupational Safety & Health Administration (OSHA) and Environmental Protection Agency (EPA) requirements on construction job sites.

Demonstrate cardiopulmonary resuscitation (CPR) and first aid on adults for use on construction job sites.

Identify commonly-used hand tools in the sheet metal industry.

Apply basic construction mathematics in calculating shapes, distances, formulas and various job site-related conditions.

Demonstrate basic drafting skills and use of drafting tools.

### SHME 101 Sheet Metal Apprenticeship II

**Units:** 3.30  
**Hours:** 40 hours LEC; 58 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Registered Sheet Metal Apprentice  
**Catalog Date:** June 1, 2020

This course introduces an introduction to sheet metal field installation with an emphasis in basic sheet metal layout, parallel and radial line development and an introduction to triangulation. Topics include soft soldering and drafting of sheet metal prior to fabrication.

#### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate drafting skills to specified drawings.
- Analyze drawing scales and convert to proper specified scale.
- Demonstrate proper soldering on sheet metal fabrication.
- Identify common symbols used on mechanical drawings.
- Identify and define plan view, elevation view and develop a profile in a sheet metal layout project.
- Demonstrate specified knowledge of triangulation to develop sheet metal fittings.
- Calculate area and volume of geometric shapes.

### SHME 110 Sheet Metal Apprenticeship III

**Units:** 3.30  
**Hours:** 40 hours LEC; 58 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Registered Sheet Metal Apprentice  
**Catalog Date:** June 1, 2020

This course introduces basic layout skills for advanced pattern development. In addition topics include the basic bidding process, trigonometry for the sheet metal industry, fabrication of round fittings, and drafting of pictorial drawings.

#### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Identify hidden job costs and assemble a simple bid.
- Draft and fabricate a simple duct offset.
- Develop isometric and oblique drawings.
- Apply mathematics to fabricate complex sheet metal fittings.
- Draft isometric and oblique drawings of specified shapes.
- Draft and fabricate round duct fittings.

### SHME 111 Sheet Metal Apprenticeship IV
This course covers advanced pattern development, architectural sheet metal principles, flashing, and gutters. Topics include hoisting and rigging, as well as installation of fire and smoke dampers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate proper mitering of flashing and gutter products.
- Calculate proper water flow on architectural sheet metal products.
- Identify and demonstrate proper installation procedures for fire and smoke dampers.
- Demonstrate proper hand signals for cranes.
- Identify safe rigging practices.
- Demonstrate different knots commonly used for rigging.

SHME 120 Sheet Metal Apprenticeship V

Upon completion of this course, the student will be able to:

- Identify HVAC components.
- Measure the moisture content of air and relative humidity using a sling psychrometer and a psychometric chart.
- Calculate ventilation requirements for a given space.
- Identify three forms of heat transfer.
- List the components of a cooling systems.
- Demonstrate the use of an air duct calculator to design a duct system.
- Define a British thermal unit (BTU).

SHME 121 Sheet Metal Apprenticeship VI

Upon completion of this course, the student will be able to:
- Identify and avoid unsafe conditions and unsafe acts, and observe safety laws and regulations on construction job sites.
- Examine information in a job specification manual.
- Examine information in a heating, ventilating, and air conditioning (HVAC) unit instruction manual.
- Demonstrate proper layout of a roof curb and duct penetrations.
- Define the components in a central HVAC system.
- Construct a standing seam roof.

**SHME 130 Sheet Metal Apprenticeship VII**

**Units:** 3.30  
**Hours:** 40 hours LEC; 58 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Registered Sheet Metal Apprentice  
**Catalog Date:** June 1, 2020

This course covers the design and construction of rooftop steel, advanced plans and specifications, and duct leakage detection. It includes basic electricity for sheet metal workers.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate advanced drafting skills to specified drawings.
- Calculate air system pressure, balancing and sizing to specified requirements.
- Assemble a shop fabrication order from given drawings, blueprints and specifications.
- Demonstrate troubleshooting methods for duct leakage testing.
- Demonstrate the drafting, layout and installation of roof top steel.

**SHME 131 Sheet Metal Apprenticeship VIII**

**Units:** 3.30  
**Hours:** 40 hours LEC; 58 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Registered Sheet Metal Apprentice  
**Catalog Date:** June 1, 2020

This course covers testing, adjusting, and balancing of heating, ventilating, and air conditioning (HVAC) systems. Topics include advanced drafting elevation views of shaft duct systems and complete takeoff of a HVAC system with cost, quantity and weight.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Calculate system pressures to specified tolerances in a HVAC system.
- Design a HVAC system to given specifications and blueprints.
- Demonstrate testing of a HVAC system to calculate specified air balance.
- Identify code violations in mechanical design based on the Uniform Mechanical Code (UMC).
- Calculate quantity, cost, and weight of a given HVAC system.

**SHME 140 Sheet Metal Apprenticeship IX**

**Units:** 3.30  
**Hours:** 40 hours LEC; 58 hours LAB  
**Prerequisite:** None.
This course covers the installation of architectural metal, food service equipment, and commercial exhaust systems. It includes control wiring of these systems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate proper installation of skylight, trim, flashing and proper use of sealant.
- Select proper approved sealants for food service.
- Demonstrate proper installation of an exhaust system and control wiring.
- Identify food service codes required for installation.
- Demonstrate proper control wiring for a heating, ventilating, and air conditioning (HVAC) system.
- Demonstrate troubleshooting skills and repair a thermostat for a HVAC system.

This course covers shop foreman duties, procedures, and leadership training. In addition, the testing, adjusting, and balancing of blow pipe systems are addressed.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Identify and select Sheet Metal Air Conditioning Contractors' National Association (SMACNA) standards for ducting and blow pipe systems.
- Identify code requirements for ducting and blow pipe systems.
- Demonstrate calculations for the proper balancing of a given blow pipe system.
- Identify and analyze shop foreman responsibilities and leadership qualities.
- Demonstrate proper use of an air velocity meter.
- Identify negative and positive blow pipe systems.

This course covers oxyacetylene cutting, shielded metal arc (SMAW) and gas tungsten arc (GTAW) welding processes typically used in the sheet metal industry. Topics include welding safety procedures and maintenance techniques.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe safety procedures for the setup, starting, and stopping of oxyacetylene equipment.
- demonstrate proper cutting of a given material with oxyacetylene equipment.
- describe safety procedures when using shielded metal arc welding (SMAW) and gas tungsten arc welding (GTAW) equipment.
- demonstrate proper beads in the overhead, vertical, and horizontal positions.
• interpret common welding symbols represented on blueprints.

SHME 151 Sheet Metal Welding II

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course covers advanced shielded metal arc (SMAW) and gas tungsten arc (GTAW) welding processes typically used in the sheet metal industry. Topics include welding safety procedures and maintenance techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe safety procedures when using shielded metal arc welding (SMAW) and gas tungsten arc welding (GTAW) equipment.

• demonstrate proper beads in the overhead, vertical, and horizontal positions for advanced applications.

• demonstrate proper procedures in the welding inspection process.

SHME 298 Work Experience in Sheet Metal Apprenticeship

Units: 1 - 4
Hours: 75 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Indentured in the sheet metal apprenticeship program.
Catalog Date: June 1, 2020

This course provides students the opportunity to work in the sheet metal apprenticeship program for the purpose of developing specific skills to meet the goals and objectives of the sheet metal Joint Apprenticeship and Training Committee (J.A.T.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate competencies for effective and competitive workforce performance in sheet metal apprenticeship program.

• demonstrate mastery of specific job skills as written in learning objectives under the supervision of the sheet metal Joint Apprenticeship and Training Committee (J.A.T.C.).

Sheet Metal Technology (SMTEC)

SMTEC 100 Sheet Metal Service Technician Apprenticeship I

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course is an introduction to the Sheet Metal Service Technician Apprenticeship. Topics include environmental systems, basic refrigeration theory, balancing refrigeration systems, and field safety. It includes the testing, adjusting, and balancing of refrigeration systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Demonstrate use of tools and instruments used by sheet metal service technicians.
Recognize and practice safety precautions while working on refrigeration systems.

Identify and define the refrigeration cycle components.

Define and calculate the enthalpy necessary for refrigeration systems.

Identify different types of compression refrigeration systems.

Explain the basic refrigeration cycle.

SMTEC 101 Sheet Metal Service Technician Apprenticeship II

This course covers diagnosing refrigeration systems, charging and recovery of small hermetic systems, and servicing small heating, ventilating, and air conditioning (HVAC) package units.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Diagnose a refrigeration system on a small HVAC package unit.
- Demonstrate basic repair on a small HVAC package unit.
- Demonstrate charging a small hermetic system to specified levels.
- Demonstrate proper usage of piercing valves.
- Demonstrate proper recovery of refrigerant.

SMTEC 110 Sheet Metal Service Technician Apprenticeship III

This course covers basic electrical fundamentals and control circuits in package air conditioning units. Topics include basic motor principles, construction, and motor control circuits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Define principles of basic alternating current (AC) and direct current (DC) motor theory.
- Identify parts of a AC and DC motor.
- Describe basic motor design, construction and theory of operation.
- Analyze control diagrams in a package air conditioning unit.
- Define different applications and types of air conditioning package units.
- Demonstrate measuring for electricity with a voltage meter in an air conditioning package unit.

SMTEC 111 Sheet Metal Service Technician Apprenticeship IV

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: Registered Sheet Metal Apprentice
Enrollment Limitation: None.
Catalog Date: June 1, 2020

This course covers diagnosing refrigeration systems, charging and recovery of small hermetic systems, and servicing small heating, ventilating, and air conditioning (HVAC) package units.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Diagnose a refrigeration system on a small HVAC package unit.
- Demonstrate basic repair on a small HVAC package unit.
- Demonstrate charging a small hermetic system to specified levels.
- Demonstrate proper usage of piercing valves.
- Demonstrate proper recovery of refrigerant.

SMTEC 101 Sheet Metal Service Technician Apprenticeship II

This course covers diagnosing refrigeration systems, charging and recovery of small hermetic systems, and servicing small heating, ventilating, and air conditioning (HVAC) package units.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Diagnose a refrigeration system on a small HVAC package unit.
- Demonstrate basic repair on a small HVAC package unit.
- Demonstrate charging a small hermetic system to specified levels.
- Demonstrate proper usage of piercing valves.
- Demonstrate proper recovery of refrigerant.
This course covers hermetically sealed electric motors, motor control circuits and their protection. Topics include electrical schematics and diagrams relating to air conditioning equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate wiring a basic hermetically sealed motor.
- Identify components and functions of a basic hermetically sealed motor.
- Demonstrate the servicing of a hermetically sealed motor.
- Demonstrate the charging and recovery of a hermetic system.
- Explain the cycle of a compression system.
- Calculate the overload protection for a motor.

SMTEC 120 Sheet Metal Service Technician Apprenticeship V

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course covers duct systems including design, selection, layout, and outlets. Topics include the properties of air, airflow, and heat in heating, ventilating, and air conditioning (HVAC) system design. Additionally, types of heating systems are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Define air and the properties associated with air.
- Measure the moisture content of air and relative humidity using a sling psychrometer and psychrometric chart.
- Define the three forms of heat transfer: radiation, conduction, and convection.
- Demonstrate the use of an air duct calculator to analyze an air duct system design.
- Calculate ventilation requirements for a given building space.
- Identify different types of heating systems and their applications.

SMTEC 121 Sheet Metal Service Technician Apprenticeship VI

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course covers chilled water systems, air cooled condensers, water cooled condensers, refrigerant lines and flow control devices. Topics include heat load calculations for cooling systems and heat pump operation, components, and controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Explain heat transfer in condenser and evaporator coils.
- Identify the components in a heat pump system.
- Calculate the heat load for a cooling system.
- Describe how the reversing valve operates.
- Describe the various operating cycles of a heat pump system.
- Calculate the capacity of a refrigerant line.
- Identify different refrigerant flow control devices.

SMTEC 130 Sheet Metal Service Technician Apprenticeship VII

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course covers commercial systems such as walk-in freezers, ice makers, multi-zone systems and an introduction to computerized building management. Topics include constant volume air conditioning systems, and an introduction to pneumatic and electronic environmental system controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Describe the operation and function of a constant air volume air conditioning system.
- Demonstrate the proper installation of a pneumatic control system in order to actuate a given control device.
- Demonstrate the proper wiring of a electrical control system in order to actuate a given control device.
- Summarize the applications of a computerized building management system.
- Describe the requirements for commercial refrigeration systems.
- Describe the various methods used in charging commercial refrigeration systems.
- Describe the defrost systems used in commercial refrigeration systems.

SMTEC 131 Sheet Metal Service Technician Apprenticeship VIII

Units: 2.5
Hours: 27 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Registered Sheet Metal Apprentice
Catalog Date: June 1, 2020

This course covers variable air volume systems used in airflow regulation and their electronic control components. Topics include an introduction to the principles and components of direct digital controls (DDC) and energy management systems (EMS).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- List and describe the most common DDC control devices for inputs and outputs.
- Identify and interpret commonly used DDC symbols used on drawings.
- Define logic and logic gates in DDC control systems.
- Measure a digital signal with the proper measurement instrument.
- Explain the basic logic and function of a analog to digital and digital to analog converter.
- Demonstrate the setup and balancing of a variable air volume system.

SMTEC 140 Sheet Metal Service Technician Apprenticeship IX

This course covers commercial systems such as walk-in freezers, ice makers, multi-zone systems and an introduction to computerized building management. Topics include constant volume air conditioning systems, and an introduction to pneumatic and electronic environmental system controls.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Describe the operation and function of a constant air volume air conditioning system.
- Demonstrate the proper installation of a pneumatic control system in order to actuate a given control device.
- Demonstrate the proper wiring of a electrical control system in order to actuate a given control device.
- Summarize the applications of a computerized building management system.
- Describe the requirements for commercial refrigeration systems.
- Describe the various methods used in charging commercial refrigeration systems.
- Describe the defrost systems used in commercial refrigeration systems.

- Describe the defrost systems used in commercial refrigeration systems.
This course covers the installation and application of direct digital control (DDC) systems in energy management systems (EMS). Topics include an introduction to blueprint reading for service technicians, and the testing and balancing of heating, ventilating, and air conditioning (HVAC) systems integrated with EMS.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate the installation and programming of a direct digital system.
- Demonstrate the testing and balancing of an EMS integrated heating, ventilating, and air conditioning system.
- Analyze commercial blueprints, specifications, schedules and details.

SMTEC 141 Sheet Metal Service Technician Apprenticeship X

This course covers commissioning of direct digital control (DDC) systems in energy management systems (EMS). Topics include demand controlled ventilation systems and advanced blueprint reading for service technicians.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Program EMS software devices with given functions.
- Commission EMS devices and system.
- Explain the DDC integration requirements in order to have a properly operating system.
- Analyze industrial blueprints, specifications, schedules, and details to given requirements.
Art | American River College

This degree provides a foundation in art principles and practices and is designed for those interested in transferring to a four-year college or university, and for someone interested in furthering his/her visual arts skills. Course work includes study in art history and a wide range of 2-D and 3-D studio practice courses. 2-D refers to drawing, painting, design, and photography; 3-D refers to ceramics, jewelry, and sculpture.

Associate Degrees for Transfer

A.A.-T. in Art History

The Associate in Arts in Art History for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of Art History. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The Associate in Arts degree in Art History for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Art History for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Catalog Date: June 1, 2020

^1Excluding any courses used to fulfill the degree requirements listed above.

*The Associate in Arts in Art History for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.*

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- assess and evaluate the contributions of artists throughout history.
- identify and evaluate works of art or architecture according to their appropriate style and time frame.
- analyze and critique art and architecture within the context of their functions and meanings.
- research and assess theoretical information concerning the meanings and purposes of art and architecture.
- explain the history of cultures and civilizations and how art and architecture is a reflection of that history.
Career Information

Art historians with undergraduate degrees are placed as registrars, preparators, and curatorial staff in art museums and galleries; they can also be employed as art critics in mass media publications, such as newspapers and magazines. An advanced degree allows an art historian a wider range of possible career applications, including museums directorships, curators, instructors, preservationists, researchers, and auction house personnel.

A.A.-T. in Studio Art

Completion of this degree provides a foundation in studio art methods. Program offerings include course work in art history, 2-D, and 3-D studio practices.

The Associate in Arts in Studio Art for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts in Studio Art for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

The Associate in Arts in Studio Art for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- differentiate major historical movements and developments in the visual arts.
- compose or design works of art that utilize a combination of technique, materials, visual ideas, and experiences.
- construct and document an initial portfolio of artworks for professional presentation.
- critique artworks using correct terminology related to concepts, materials, and techniques.
- evaluate form, image, and artistic creation of visual artworks from different traditions, cultures, and civilizations.

Career Information

Individuals with four-year degrees in art may be placed in the K-12 educational field as well as in museums and galleries as registrars, preparators, and curatorial staff. Individuals may also work as fine artists, graphic artists or designers, illustrators, computer artists, and other commercial work such as freelance photographers. Advanced degrees in art may lead to careers as educators at the college or university level, art directors, art editors, curators, conservators, and restorers for museums and galleries.

Associate Degrees

A.A. in Art

This degree provides a foundation in art principles and practices and is designed for those interested in transferring to a four-year college or university, and for someone interested in furthering his/her visual arts skills. Course work includes study in art history and a wide range of 2-D and 3-D studio practice courses. 2-D refers to drawing, painting, design, and photography; 3-D refers to ceramics, jewelry, and sculpture.

Total Units: 32 - 33

The Art Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- differentiate major historical movements and developments in the visual arts.
- evaluate major trends and developments in contemporary works of art.
compose works of art that utilize a combination of techniques, materials, visual ideas, and experiences.

construct and document an initial portfolio of artworks for professional presentations.

critique and analyze subject matter in the visual arts based on theory and technique.

develop an aesthetic understanding and the ability to make value judgments within the context of images, form, and content of artistic creations.

conceive and develop conceptual structures of art imagery within a specific technical process.

assess aesthetic and visual traditions.

Career Information

An Associate Degree in art allows individuals to work in the educational field as well as in museums and galleries. Individuals may also work as graphic artists or designers, illustrators, computer artists, and other commercial work such as freelance photographers. Individuals could also work independently, producing works of art which are displayed in museums, galleries, and other exhibition spaces. Advanced degrees in art may lead to careers as educators, directors, curators, conservators, and restorers.

Certificates of Achievement

Freelance Photography Certificate

This certificate provides training for beginning careers in freelance photography. Topics include basic skills necessary for entry level photography positions or small studio businesses in photography.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

select appropriate digital and film camera equipment and software for various client-based shooting assignments
• utilize a variety of studio lighting techniques for fine art photography or commercial photography
• organize a workflow for storing and editing photographs
• apply design knowledge and skill in the use of photo editing on the computer
• evaluate digital and film photographs for aesthetic quality
• design and create photographic compositions using the principles of visual organization: unity, balance, harmony-variety, rhythm, pattern, proportion/scale, movement, and economy
• compare and contrast historical works of art as they relate to an overall formal assessment of photography
• analyze the different photographic genres throughout history
• develop portfolios of photographs for specific clients
• develop a plan for launching a career in freelance photography
• make effective decisions, use workforce information, and manage his/her personal career plans

Career Information

Job opportunities include, but are not limited to, studio assistant, studio photographer, freelance photographer, editorial photographer, stock photographer, and photo lab manager.

Gallery Management Certificate

This certificate provides a foundation of knowledge, and experience in, the everyday working practices of art museums and galleries.

^1or any other studio course from the ART, ARTNM, or ARTPH designators.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
recognize major historical developments in art and culture as they relate to museum and gallery practices.

- identify necessary skills for organizing art exhibits in a gallery setting.
- utilize advanced skills in gallery scheduling and exhibition procedures.
- apply terminology associated with the visual arts while relating to artists and the community.
- apply writing skills to create proposals for exhibitions and to generate community interest.

Certificate

Sculpture Certificate

This certificate provides training for beginning careers in metal fabrication and sculpture. Topics include the basic skills necessary for entry-level fabrication positions or small studio businesses in sculpture.

Catalog Date: June 1, 2020

A minimum of 3 units from the following:

- ART 376 Functional Sculpture (3)
- ART 373 Intermediate Sculpture (3)

Total Units: 12

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze compositional principles as they apply to three-dimensional form and space.
- create sculpture utilizing basic traditional and contemporary techniques.
- demonstrate the proper and safe use of a gas forge, the anvil, and other related metal working equipment.
- demonstrate blacksmith techniques such as punching, twisting, drawing out, and upsetting.
- utilize tools and technology such as forms, molds, crucible, melting furnace, and metal pouring equipment.
- describe the proper technique for applying patinas.
- evaluate blue print drawings as they relate to foundry casting.
- define the properties of sculptural form and space.
- demonstrate creative abilities.
- generate sculpture(s) based on a variety of source material.
- cite traditional and non-traditional metal working techniques as they apply to three-dimensional functional and non-functional art forms.
- express creativity through a process of conception, design, execution, finish, and presentation.
ART 101 Lightroom and Photoshop Basics

This course provides fundamental skills in Adobe Lightroom and Photoshop that artists, gallery personnel, photographers, and fashion industry workers need to manage image and video files for print and web purposes. Topics include file import from cameras and devices, file format, file size, and file management. It also covers Photoshop editing of image files, video files, and Photoshop processing workflows. Drawing in Adobe Photoshop using brushes and layers is introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use Lightroom catalogs to organize and archive files
- import files from various sources into Lightroom and Photoshop
- create digital slides of artwork for portfolio and competition purposes
- manage file formats and sizes for varied imaging purposes
- perform basic editing for image improvement in Lightroom and Photoshop
- use Photoshop brushes and other tools to draw for fashion and imaging purposes
- prepare files for print or web purposes

ART 300 Drawing and Composition I

This course introduces observational drawing and composition. It emphasizes the ability to perceive and define both positive and negative shapes, contour, volume, space and value using a variety of drawing media and subject matter. It focuses on the clarity of observational skills and the ability to translate three-dimensional form and space into two-dimensional drawings. Both linear and atmospheric perspective will be studied and applied to drawings. The development of dynamic compositions will be studied through the various arrangements of subject matter. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a portfolio of finished drawings in a variety of drawing media that demonstrates the ability to observe and record the characteristics of simple and complex objects using both line and value.
- apply principles of design and linear and/or atmospheric perspective to observational drawings.
- critique artworks using correct terminology related to drawing concepts, materials, and techniques.
- identify a personal style and begin an initial investigation of the issues of content.

ART 302 Drawing and Composition II

This course introduces observational drawing and composition. It emphasizes the ability to perceive and define both positive and negative shapes, contour, volume, space and value using a variety of drawing media and subject matter. It focuses on the clarity of observational skills and the ability to translate three-dimensional form and space into two-dimensional drawings. Both linear and atmospheric perspective will be studied and applied to drawings. The development of dynamic compositions will be studied through the various arrangements of subject matter. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a portfolio of finished drawings in a variety of drawing media that demonstrates the ability to observe and record the characteristics of simple and complex objects using both line and value.
- apply principles of design and linear and/or atmospheric perspective to observational drawings.
- critique artworks using correct terminology related to drawing concepts, materials, and techniques.
- identify a personal style and begin an initial investigation of the issues of content.
This course further develops the skills and concepts introduced in ART 300. It covers the relationships between formal elements such as line, shape, color, texture, value, perspective, and spatial relationships. It emphasizes the creative use of materials. It also includes critiques of student, historical, and contemporary works of art. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate intermediate level technical skills and concepts in drawing
- investigate methods toward the achievement of personal expression and self direction
- critically evaluate one's own artwork and the works of others
- design works utilizing principles of composition
- invent new methods for incorporating color theory within each artwork

ART 304 Figure Drawing I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Figure Studies (http://arc.losrios.edu/course-families#id_100008)
Prerequisite: ART 300 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID ARTS 200
Catalog Date: June 1, 2020

This course introduces and explores the human structure based on the history and traditions of the human figure in art. Skills are developed by critically analyzing, drawing, and composing the undraped figure in a representational manner from direct observation. A variety of media are introduced in the exploration of the human form. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and discuss images of the human form found in art works throughout history.
- analyze, compose, and construct a variety of figure drawing skills with respect to using line, shape, value, and color.
- demonstrate and apply a variety of drawing techniques to describe anatomy, proportion, and planar structure of the human form.
- demonstrate control over various methods and media of drawing the figure.
- discuss, critically assess, and evaluate depictions of the human form.

ART 305 Figure Drawing II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Figure Studies (http://arc.losrios.edu/course-families#id_100008)
Prerequisite: ART 304 with a grade of "C" or better
Advisory: ART 312
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course continues the study of the human figure in art as begun in ART 304. The pursuit of more complex strategies and skills are developed by critically analyzing, drawing, and composing the undraped figure. The use of color tools and the development of personal style are emphasized. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess, evaluate, and discuss depictions of the human figure found in art history.
- demonstrate through drawing a greater knowledge of human anatomy, proportion, and gesture.
- demonstrate the use of color in a variety of drawing applications and color medias.
• analyze and respond to one's own artwork and the work of others during individual and group critique(s).
• develop a subjective and personal style based on historical theory and concepts.
• create a portfolio of drawings where the figure is the focus and context.

ART 306 Facial Expression and Anatomy

Same As: ARTNM 320
Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 300 with a grade of "C" or better
Advisory: ART 304
Transferable: CSU
Catalog Date: June 1, 2020

This course covers human facial expression and anatomy using live models, anatomical references, and imagination. Issues of expression as it relates to skeletal and muscular anatomy are addressed through a series of projects. This course is not open to students who have taken ARTNM 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• draw the human skull in order to understand the three-dimensional form.
• apply facial muscular structure to the skull.
• evaluate the muscular code for universal facial expressions.
• create the human head with varying expressions using 2D media.
• create meaningful exaggerations of expression using 2D media.
• evaluate the muscles and muscle dynamics responsible for facial expression.

ART 312 Portrait Drawing

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 300 with a grade of "C" or better
Advisory: ART 304
Transferable: CSU; UC
General Education: AA/AS Area I
Catalog Date: June 1, 2020

This course introduces the study of the human image in portraiture. Emphasis is on developing the skills needed to portray specific individuals rather than a generalized image of people. Included are the history and traditions of portraiture, the use of color media, and the development of personal style. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess, evaluate, and discuss human portraiture found in art history.
• describe human facial anatomy and plane structure.
• create an accurate likeness of an individual using a variety of techniques and materials.
• develop a subjective and personal style based on historical theory and concepts.
• create a portfolio of artworks where the human portrait is the focus and context.

ART 314 Introduction to Illustration

Same As: ARTNM 370
Units: 3
Hours: 36 hours LEC; 54 hours LAB
This course is a survey of the history of illustration, defining areas of specialization and the illustrator's role in visual communication. The appropriate use of materials, tools and methods is evaluated. Illustration is analyzed as a method of visual problem solving through a series of projects with varied applications. This course is not open to students who have taken ARTNM 370.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the history of illustration.
- examine areas of specialization of illustration and analyze required skills for illustrators.
- apply illustration techniques with a variety of media.
- produce a range of visual styles.
- evaluate the appropriate style and media choice in terms of client, audience and print methods.

ART 317 Character Design

This course introduces the visual development of characters based on archetypal patterns. Students will consider backstory, personality, and physical attributes. Fundamental drawing skills such as shape, form, anatomical structure, and motion will be included. Both digital and traditional media are applied. It also covers the graphical development of characters for animation, games, comics, graphic novels, children's books, and illustrated novels. It is not open to students who have completed ARTNM 372.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop a comprehensive process for designing characters including character profile, reference, thumbnails, and refinements.
- quickly concept multiple variations for a character including body type, head structure, facial expression, motion studies, and costume.
- differentiate multiple characters based on clear, definable silhouettes.
- develop costumes for a character based on time period, environment, and social class.
- produce accurate turnarounds for a character.

ART 320 Design: Fundamentals

This course focuses on the fundamentals of design, establishing a foundation for intermediate and advanced art courses as well as developing a visual and verbal vocabulary essential to understanding and appreciating art and design esthetics. Design principles are applied through a series of studio projects that are derived from the study of both historical schools of art as well as contemporary theory. The elements of line, shape, form, spatial relationships, value, and color are analyzed in concert with their use by artists throughout history. Projects utilize a wide range of tools, media, and presentation techniques. This course is not open to students who have completed ARTNM 310.
Upon completion of this course, the student will be able to:

- design and create compositions using the principles of organization: unity, balance, harmony-variety, rhythm, pattern, proportion/scale, movement, and economy.
- build a body of work using visual gestalt theory and elements of design: line, shape, value, color, texture, and space.
- analyze works of fine art and design to critically assess components of subject, form, and content.
- compare and contrast historical works of art as they relate to an overall formal assessment of design.
- investigate modern and contemporary works of art to compare their formal similarities and differences from historical works.
- measure one's own work in terms of premise and concepts of design and their relationship to content.

**ART 323 Design: Color Theory**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** ART 320 with a grade of "C" or better  
**Transferable:** CSU; UC  
**C-ID:** C-ID ARTS 270  
**Catalog Date:** June 1, 2020

This course studies the principles, theories, and application of additive and subtractive color in two dimensions. Included is the use of color systems found in major historical and contemporary artistic styles. A portfolio of design projects in applied color systems is required. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and analyze historical and contemporary use of color in relation to color systems.
- distinguish the use of color models, including color relationships and color proportions.
- utilize stylistic technique that indicate an understanding of color application in art history.
- organize materials, vehicles, binders, opaque and transparent media, color mixing, and color interactions.
- create aesthetic designs or images, utilizing the various properties of color and color theories.
- analyze the function of color in design with regard to harmonies, contrast, emphasis, balance, form, space, light, rhythm and movement.
- integrate principles from additive and subtractive color systems to compose color compositions.
- explain how color is perceived physiologically, psychologically, symbolically and intuitively.

**ART 324 Collage and Assemblage**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1  
**Catalog Date:** June 1, 2020

This course investigates the creation of artworks using the technique of collage and assemblage (the process of assembling and adhering diverse materials and found objects onto another surface). The history of collage and assemblage and basic design theories are introduced. Development of a personal visual style is encouraged. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create collage and assemblage artworks based on found and/or chosen materials.
- organize the use of basic design elements such as line, shape, value, color, texture, space, and composition to create collage and assemblage artworks.
• develop expressive content through the manipulation of collage and assemblage techniques.

• describe historical and contemporary developments, trends, materials, and approaches in collage and assemblage.

• assess and critique collage and assemblage artworks in group, individual, and written contexts using relevant critique formats, concepts, and terminology.

• create a diverse collection of visual elements, such as fragments, scraps, or found objects to build a personal clip-art file for collage and assemblage projects.

• construct a portfolio of collage and assemblage artworks for presentation.

ART 327 Painting I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Painting
Prerequisite: ART 300 or 320 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID ARTS 210
Catalog Date: June 1, 2020

This course introduces basic techniques and materials of painting. It includes the survey of historical and contemporary development of painting with emphasis on perceptual and technical skills, such as, color theory, paint mixing and technique, and creative responses to materials and subject matter. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• create paintings that demonstrate a working knowledge of the physical properties of painting materials.

• identify, discuss, and integrate elements and principles of design into the painting process.

• evaluate and apply the basic principles of color theory to painting projects.

• construct and prepare various supports and/or substrates for painting projects.

• develop expressive content through manipulation of mark, color, value, and composition.

• describe historical and contemporary developments, trends, materials, and approaches in painting.

• assess and critique paintings in group, individual, and written contexts using relevant critique formats, concepts, and terminology.

• safely handle and use studio painting materials and equipment.

ART 328 Painting II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Painting
Prerequisite: ART 327 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course expands on the basic painting techniques and materials introduced in ART 327. It encourages the development of artistic style and general and specific criticism found in the history of painting. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop a personal painting style.

• express more fully and in greater detail the techniques of painting.

• use principles of design and color theory in painting projects.

• apply historical, contemporary, and theoretical approaches in painting projects.

• assess and critique paintings in group, individual, and written contexts using relevant critique formats, concepts, and terminology.

• construct and document an initial portfolio of paintings for professional presentation.
ART 329 Painting III

This course further develops the skills and concepts introduced in ART 327. Included is the survey of historical and contemporary styles in painting as this pertains to the development of individual style and self expression. Topics may include; post-modern expression, such as image and text; mixed-media; and combining varied styles and techniques within a single artwork. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced skills in painting techniques using a variety of materials and subjects.
- evaluate major historical and contemporary trends, using correct terminology related to concepts, materials and techniques in painting.
- analyze the relationship of using 2-dimensional and 3-dimensional sources as content and subject in painting.
- construct and document an initial portfolio of artworks for professional presentation.

ART 330 Mural Painting

This course provides a survey of mural painting as a public art form. It introduces the historical use of mural painting and examines the process of creating a mural painting by analyzing a site, researching, planning, and executing murals in public spaces, and working collaboratively with others. Field trips may be required to execute the work on location.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish the historical use of mural painting by different cultures throughout the world.
- work collaboratively with others to execute a mural as a public art form.
- evaluate and record the process of creating a mural painting from surveying the site to executing the work.
- apply and describe the planning stages in a large-scale mural project.
- adapt the appropriate media and techniques for each chosen mural site.

ART 336 Watercolor Painting

This course introduces painting with aqueous media and techniques, including watercolor, gouache, and acrylic. It emphasizes historical and contemporary development, technical skill, color relationship(s), and self-expression using aqueous media in painting. Different artists and topics are covered each semester. Field trips may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe major historical and contemporary trends in painting focusing on aqueous media.
- demonstrate skills in basic painting materials and techniques focusing on aqueous media.
- evaluate and apply the basic principles of color theory in aqueous painting technique.
- integrate elements and principles of design into the painting process focusing on aqueous media.
- prepare supports and/or substrates for painting in the aqueous media.

ART 337 Intermediate Watercolor Painting

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Course Family: Painting (http://arc.losrios.edu/course-families#id_100009)  
Prerequisite: ART 336 with a grade of "C" or better  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This course continues the study of the aqueous medium in painting begun in ART 336. More complex methods, concepts, varying approaches, and techniques using the aqueous medium are developed. Personal style is emphasized. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced skills with a variety of materials and subjects, using aqueous painting techniques.
- evaluate major historical and contemporary trends, using correct terminology related to concepts, materials, and techniques in aqueous painting.
- develop a subjective and personal style based on the concepts, materials, and techniques of aqueous painting.
- analyze and respond to one's own artwork and the work of others during individual and group critique(s).
- construct and document a portfolio of aqueous paintings for professional presentation.

ART 339 Integrating Digital Media with Traditional Media I

Same As: ARTNM 331  
Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: None.  
Transferable: CSU  
General Education: AA/AS Area I  
Catalog Date: June 1, 2020

This course combines the materials and techniques used in both new media technology and traditional art practices. It explores a wide variety of ideas, tools, and resources. Topics include history, theory, and practice surrounding digital and traditional image generation, image manipulation, image transfer, and material exploration. The course emphasizes developing unique forms of portfolio quality projects demonstrating new approaches and methods of integrating digital media with traditional media forms.

This course is not available to students who have taken ARTNM 331.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- combine materials and techniques used in both new media technology and traditional art practices.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image generation.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image manipulation.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image transfer.
- generate dynamic portfolio-quality projects, which demonstrate new approaches and methods of merging digital media with traditional media.
ART 361 Printmaking: Survey

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Printmaking (http://arc.losrios.edu/course-families#id_100010)
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID ARTS 220
Catalog Date: June 1, 2020

This course covers various printmaking techniques, including but not limited to: relief printing, (wood, linoleum, collagraph, and rubber), monotype, stencil and/or silkscreen printing, intaglio (drypoint etching), and basic pronto plate lithography. Different artists and/or visual examples are discussed each semester. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design and compose works of art using the various printmaking techniques taught in class.
- safely handle and maintain print lab equipment.
- use correct techniques for specific printmaking process being employed.
- analyze historical printmaking styles and techniques from various cultures and time periods.
- critique artworks using correct terminology related to concepts, materials, and techniques of printmaking.
- describe and develop conceptual structures of art within a specific printmaking process.
- create a portfolio of multiples demonstrating a broad range of printmaking techniques.

ART 365 Printmaking II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Printmaking (http://arc.losrios.edu/course-families#id_100010)
Prerequisite: ART 361 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers practices in various printmaking techniques. It expands on the four basic techniques taught in ART 361: relief printing, intaglio, screen printing, and lithography. It also encourages the development of a personal style and the creation of a cohesive body of work using those techniques. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design and create bodies of work using various printmaking techniques taught in class such as intaglio, relief and serigraph.
- develop and use advanced techniques for intaglio, relief, screen printing, or lithography.
- explore new techniques that can apply to contemporary practices.
- analyze developments of new processes in contemporary printmaking and apply to a variety of techniques.
- apply principles of design to printmaking images.
- develop a signature printmaking style.
- cite different historical influences and describe their impact on contemporary printmaking.
- analyze specific periods of historical printmaking and apply concepts to contemporary practice.
- create a completed body of work within sets of multiples demonstrating an understanding of the uses of specific printmaking techniques.

ART 370 Three Dimensional Design
This foundation course covers an analysis of historical and contemporary designs, primarily concerned with the visual dialogue between form and space, with focus on visual sensitivity for three-dimensional composition. Line, plane, and volume are utilized to construct 3-D forms using a variety of materials which may include but is not limited to clay, metal, wood, fibers, mixed media, plaster, and paper.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and understand the formal elements and organizing principles of three-dimensional art.
- independently produce objects, forms, and problem-solving projects that successfully incorporate the basic elements and organizing principles of three-dimensional art.
- discuss, describe, analyze, and critique three-dimensional works of art through references to the formal elements and principles of design.
- make individual aesthetic decisions and judgments related to their own design work.
- translate ideas and visual experience into tactile forms objects using both formal and conceptual approaches.
- recognize the presence of specific design elements and principles in works of art as well as in the surrounding everyday physical world, throughout history and across cultures.
- compose in three dimensions and work with a variety of media which may include but is not limited to clay, wood, metal, paint, plaster, paper, fibers, mixed media, in an appropriate and safe manner.

**ART 371 Foundry Casting for Sculpture**

This course introduces the techniques, metallurgy, and practice of casting bronze and aluminum for sculpture using the sand molding method. Emphasis is placed on historical examples, design, techniques, vocabulary, and safety. Patterns are utilized directly with sand to create sculptures in metal. Different artists and topics are covered each semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create individual art works through a process of conception, design, execution, finish and presentation.
- describe and utilize tools and technology (such as forms, molds, crucible, melting furnace, and metal pouring equipment) to create art works.
- analyze and apply safety related chemicals and metal working equipment.
- organize a foundry heat and process information/tasks both orally and in written formats.
- critique art work in both oral and written formats.
- discuss the historical and theoretical aspects of both design and techniques in art metal casting.
- describe experimental methods of metal casting, fabrication, and finish of cast art works.
- draw blueprint sketches of the artwork to be cast.
- demonstrate the proper technique for applying patinas.

**ART 372 Sculpture**

3 Units:

36 hours LEC; 54 hours LAB

**Course Family:** Sculpture (http://arc.losrios.edu/course-families#id_100011)

**Prerequisite:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.

**Transferrable:** CSU; UC

**General Education:** CSU Area C1

**Catalog Date:** June 1, 2020
This is an introductory course in sculpture. It covers expressive use of form, color, and various sculptural methods, such as additive and subtractive media using clay and plaster, and constructive media like wood and steel; found objects and other materials may also be explored. This course utilizes a problem-solving format in order to develop knowledge of technical process, formal vocabulary, and individual expression. Both historical and contemporary approaches in developing form and content are included. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create objects in various three-dimensional media.
- display basic skills and craftsmanship in creating sculptural works of art using the formal principles of design and visual elements.
- identify historical and contemporary sculpture as well as influences of non-Western sculpture.
- apply formal design and sculpture terminology to critique and evaluate artworks.

ART 373 Intermediate Sculpture

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Sculpture
Prerequisite: ART 372 with a grade of "C" or better
Advisory: CSU; UC
Transferable: CSU Area C1
Catalog Date: June 1, 2020

This is an intermediate course in the practice of the expressive use of form in three-dimensional space. It utilizes traditional additive and subtractive media, as well as constructive media, and other contemporary materials. This course utilizes a problem-solving format in order to develop knowledge of technical process, formal vocabulary, and individual expression. It examines both historical and contemporary approaches in developing form and content.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize compositional principles as they apply to three-dimensional form and space.
- discuss and demonstrate his/her knowledge of traditional and contemporary sculptural techniques.
- compare and contrast properties of sculpture form and space.
- develop his/her creative abilities and individual expression through problem-solving assignments.
- further develop the ability to generate related visual problems based on a variety of source material.

ART 374 Sculpture Lab

Units: 1 - 2
Hours: 54 - 108 hours LAB
Prerequisite: None.
Corequisite: ART 324, 370, 371, 372, 373, or 375
Transferable: CSU; UC (Credit granted only if concurrently enrolled in ART 372, 373 or 375)
Catalog Date: June 1, 2020

This course offers laboratory experience to assist in completing complex sculpture projects. It focuses on the development of a personal creative vision furthering technical skills and complex problem solving.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- analyze the relationship between content and mechanical skills in plaster fabrication to include composition, form, carving, constructing, molding, and finishing.
- exhibit skills in wax fabrication for bronze casting.
- exhibit safe and proper use of necessary mixed media equipment such as a band saw, drill press, grinder, and welders.
- exhibit skills in clay fabrication to include composition, form, molding, constructing, and finishing.
- analyze and select appropriate materials and techniques necessary to explore personal artistic vision.

ART 375 Figure Sculpture

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Figure Studies (http://arc.losrios.edu/course-families#id_100008)
Prerequisite: None.
Advisory: ART 304
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course introduces figure sculpture, using the live undraped model as reference. Concepts of human anatomy are emphasized through the use of quick gestural studies and sustained sculptural projects. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- construct sculptures of human gestures using ceramic clay.
- construct a free standing figure sculpture using an armature.
- analyze human anatomical structure through accurate representational form.
- analyze human anatomical structure using the figure to give form to personal thoughts and ideas.
- evaluate work by applying contemporary and traditional figurative sculpture concepts.

ART 376 Functional Sculpture

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Sculpture (http://arc.losrios.edu/course-families#id_100011)
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the hands-on basics of metal forming, design principles and materials used for sculpture, and functional art forms with emphasis on the use of the anvil and the gas forge. Topics include hand forging metal techniques, furniture and sculpture design, finishing processes, and the use of patinas.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design and execute sculptural concepts in the medium using the anvil and the gas forge.
- apply traditional and non-traditional metal working techniques to 3-dimensional functional and nonfunctional art forms.
- demonstrate the proper and safe use of a gas forge, the anvil and other related metal working equipment.
- demonstrate skill in the blacksmith techniques such as punching, twisting, drawing out, and upsetting.

ART 390 Ceramics

Units: 3
This course is a beginning ceramics class in hand building and throwing techniques. Elementary clay construction including pinch pot, coil, slab, and slump molds are covered as well as an introduction to the potter's wheel. Different methods of glazing and firing are studied. The history and theory of ceramics are examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify basic ceramic terminology
- distinguish between craft and fine art
- incorporate skills to build sculptural objects in clay
- create functional and non-functional ceramic work employing proficient technique
- differentiate and apply principles of design and theory to ceramic work
- research ceramic artwork and history

This is an intermediate course in wheel-throwing and sculpture techniques. It explores the technical and creative processes of ceramic pottery making and sculpture including surface treatment and various firing processes. Focus is placed on an in-depth examination of contemporary ceramics. Different artists, techniques, and projects are explored each semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate skills of wheel-throwing and hand-building ceramic techniques
- investigate the history and theory of ceramics
- create ceramic sculpture and pottery
- examine and integrate design, concept, and aesthetics in ceramic sculpture
- critique ceramic art work

This course covers alternative firing processes in ceramics which include raku, wood, soda, saggar, sawdust, and pit firing. Ceramics is explored through hand-building and wheel-throwing techniques. Glaze formulation for the firing processes is included. Emphasis is placed on in-depth examinations of the history of kilns and firing techniques. Different firing processes are explored each semester. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe characteristics of alternative kilns and firing processes.
- create and produce artwork in clay specific to alternative firing techniques.
- select clay and glazes pertinent to alternative firing processes.
- critique ceramic art work.
- practice kiln maintenance.
- demonstrate safe kiln loading, unloading, and firing practices.

**ART 398 Ceramic Murals and Tiles**

*Units:* 3  
*Hours:* 36 hours LEC; 54 hours LAB  
*Course Family:* Ceramics-Hybrid  
*Prerequisite:* ART 390 with a grade of "C" or better  
*Transferable:* CSU  
*Catalog Date:* June 1, 2020  

This course introduces ceramic mural and tile methods and techniques. It explores the technical and creative process of site-specific mural and tile making including bas relief, press molds, various surface treatments, and installation methods. Focus is placed on an in-depth examination of the history of ceramic tiles and murals.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- design artworks that are site-specific.
- research art history as it applies to projects.
- draw and design murals/tiles before producing them in clay.
- create ceramic tiles and murals.
- experiment with different surface treatments for murals.
- apply various installation techniques.

**ART 420 Film Making**

*Units:* 2  
*Hours:* 18 hours LEC; 54 hours LAB  
*Prerequisite:* None.  
*Transferable:* CSU; UC (ART 420 & 422 combined: maximum credit - one course)  
*General Education:* CSU Area C1  
*Catalog Date:* June 1, 2020  

This course involves completing a series of short, individual and/or group projects, focusing on various methods and techniques that can be used to create films/videos which are visually sophisticated and conceptually interesting. Work by contemporary and historically-significant filmmakers is also covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and discuss technical aspects of film making, comparing contemporary and historical perspectives
- identify and apply the formal elements of film making, comparing contemporary and historical perspectives
- differentiate between various types of lighting and demonstrate the relationships between lighting and form
- demonstrate distinction between subject movement, camera movement, and mechanical movement
- apply the scriptwriting principles of character uniqueness and development, subtext, conflict, content, and symbolism
- discuss and demonstrate major theories of film editing, comparing contemporary and historical perspectives
ART 430 Art and Children

This course introduces the use of artists' materials and techniques appropriate for teaching art to children. It includes the study of art history, including various movements (ism's) and concepts in creating artwork. This course covers the process of creating lesson plans, doing preparatory work for presenting art projects, and creation of drawings, paintings, and sculptures. It also covers how to identify and properly use, maintain, store, and clean commonly used art materials. Topics include proper identification, utilization, and presentation of basic art principles, and an understanding of age-specific capabilities in children. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify varying techniques for handling common art materials.
- develop skills and techniques to communicate basic art principles.
- organize an appropriate sequential plan for art education in the elementary schools.
- analyze age-specific capabilities of children in terms of the visual arts.
- propose appropriate art resources for use with specific groups of students.
- investigate a variety of cultural and age-specific methods of expression.
- assess the historical and social uses of art.

ART 440 Artists' Materials and Techniques

This course focuses on analyzing and developing artists' mediums and techniques. Historical information about various materials and their relationship to personal imagery and style are emphasized. The composition of pigments, their origins, and various binders are explored. The construction of various artists' substrates and supports as well as the techniques of matting and framing art work are also covered. A supply fee may be required for this course. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- categorize a broad sampling of artists' materials and techniques of historical, traditional, and modern practices.
- analyze the composition and use of artists' materials and techniques focusing on two-dimensional mediums.
- compare the technological advances of artists' materials and techniques throughout history.
- relate vocabulary and techniques to a variety of artists' mediums.
- explore the process of creating artists' materials and techniques based on historical, traditional, and modern practices.

ART 442 Introduction to Art Gallery Operations

This course introduces the use of artists' materials and techniques appropriate for teaching art to children. It includes the study of art history, including various movements (ism's) and concepts in creating artwork. This course covers the process of creating lesson plans, doing preparatory work for presenting art projects, and creation of drawings, paintings, and sculptures. It also covers how to identify and properly use, maintain, store, and clean commonly used art materials. Topics include proper identification, utilization, and presentation of basic art principles, and an understanding of age-specific capabilities in children. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify varying techniques for handling common art materials.
- develop skills and techniques to communicate basic art principles.
- organize an appropriate sequential plan for art education in the elementary schools.
- analyze age-specific capabilities of children in terms of the visual arts.
- propose appropriate art resources for use with specific groups of students.
- investigate a variety of cultural and age-specific methods of expression.
- assess the historical and social uses of art.
This course introduces gallery operations to art students. It involves hands-on experience in curating, planning, and installing exhibitions. A portion of this course is offered in a TBA component of 16-30 hours which may include work as a gallery attendant or gallery docent. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply knowledge obtained in art history lectures in order to create exhibitions thematically to gallery exhibitions.
- identify problems and select solutions for displaying art work.
- demonstrate responsibility for gallery scheduling and exhibition procedures.
- discuss contemporary art and artists with gallery patrons.

### ART 443 Art Gallery Operations

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Course Family: | Gallery Management (http://arc.losrios.edu/course-families#id_100015) |
| Prerequisite: | ART 442 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is a continuation in art gallery operations building on the concepts of proper handling of artwork; installing art exhibits; interacting with artists, patrons, and the public; planning and curating; inventory and maintenance of artwork; and gallery and student outreach. A portion of this course is offered in a TBA component of 16-30 hours which may include work experience as a gallery attendant or docent. Field trips are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply developed knowledge to organize art exhibitions in a gallery setting.
- identify and solve problems related to displaying artworks in an evolved and creative manner.
- demonstrate a firmer grasp of responsibility for gallery scheduling and exhibition procedures.
- develop and utilize terminology associated with the visual arts while communicating with artists and gallery patrons.
- demonstrate improved knowledge of art and culture as it relates to the history of museums and gallery institutions.

### ART 444 Art Gallery and Portfolio Preparation

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Course Family: | Studio Art and Practice (http://arc.losrios.edu/course-families#id_100014) |
| Prerequisite: | ART 442 with a grade of "C" or better |
| Advisory: | ENGWR 101 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course offers study in both sides of the business world of art, including gaining entrance into galleries as an artist and finding, installing, and advertising professional gallery exhibitions. It emphasizes the creation of individual portfolios and portfolio management. Topics include selecting exhibitions, creating announcements, organizing receptions, and sending out press releases in addition to photographing art and preparing documents to accompany exhibitions. It also covers creating artist statements, digital portfolios properly formatted on a disk, business cards, cover letters, and resumes. Field trips to galleries and museums may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and demonstrate procedures for displaying artwork.
- develop, record, and maintain accountability for gallery schedules.
- create press releases and maintain public relations and proper advertising procedures for a gallery
- develop system for organization of gallery exhibitions
- assess artwork for installation purposes
- evaluate and produce a professional portfolio of art, including digital images, artist statement, resume, cover letter, and business cards

**ART 445 Art Gallery Operations**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Course Family:** Gallery Management  
**Prerequisite:** ART 443 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course continues students’ experiences in gallery operations. It provides additional exposure to gallery operations, including planning and installing exhibitions, lighting techniques, assistance in maintaining a permanent art collection, introduction to conservation techniques, participation in staffing and docent activities, gallery and student outreach programs, and assistance with additional on- and off-campus exhibitions. A portion of this course is offered in a TBA component of 16-30 hours which may include work experience as a gallery attendant or docent. Field trips are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply practical knowledge obtained in previous gallery operation experiences.
- distinguish advanced gallery procedures and solve problems related to displaying and documenting works of art in an exhibition setting.
- prioritize responsibilities for gallery scheduling and exhibition procedures utilizing advanced skills based on previous experiences.
- integrate knowledge of contemporary and historical art and artists in the communication of art with the community.
- create proposals for exhibitions and press releases to generate community interest.

**ART 470 Art Lab**

**Units:** 1  
**Hours:** 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course offers additional lab hours to more fully develop creative vision and technical skills. It provides additional assistance in assignments and portfolio development.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and select materials and techniques necessary to explore personal artistic vision.
- develop a portfolio of artwork for presentation.

**ART 494 Topics in Art**

**Units:** 0.5 - 4  
**Hours:** 6 - 48 hours LEC; 9 - 72 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is designed to offer unique, meaningful, or transient topics in art that are not included in current course offerings. Topics may include glass blowing; air brush, encaustic, fresco, or sumi painting technique; or bronze casting, for example.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- construct projects utilizing the techniques which are demonstrated in each topic of study.
- compare and contrast art historical influences pertaining to each topic of study.
- evaluate personal skill level pertaining to each topic of study.
- evaluate the job potential in the topic of study discussed.

ART 495 Independent Studies in Art

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

ART 498 Work Experience in Art

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to art with a cooperating site supervisor. Students are advised to consult with the Art Department faculty to review specific certificate and degree work experience requirements.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of art. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of art related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Art History (ARTH)

ARTH 300 Introduction to Art

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (ARTH 300 & 480 combined; maximum credit - one course)
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID ARTH 100
Catalog Date: June 1, 2020

This course is a survey of the history and analysis of the visual arts, including drawing, painting, sculpture, architecture, and additional media. It offers a foundation for understanding art. Field trips to art galleries or museums may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critically evaluate the basic elements of an artwork.
- categorize the varying processes of art-making.
- analyze different historical periods of art.
- identify different styles of art.
- describe a new way to look at art.
- compare and contrast different art styles.
- compare and contrast different historical periods of art.

ARTH 302 Art: Stone Age Through the Middle Ages

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID ARTH 110
Catalog Date: June 1, 2020

This course is a study of the architecture, sculpture, and painting of the ancient Near East and Europe from the Stone Age through the Middle Ages. Art works of each period are discussed and related to respective cultures. Field trips and/or individual visitation to art galleries and museums are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze major periods of art from the Stone Age through the Middle Ages.
- critique individual works of art from different periods.
- compare the quality and importance of different works of art from the same historical period.

ARTH 308 Renaissance Tradition in Art

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
This course is a study of painting, sculpture, and architecture of European and U.S. cultures from the 14th century early Renaissance to the mid-19th century. Outstanding art works of each major period are discussed, analyzed, and placed within historical context. A field trip to an art museum or art gallery may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast the visual artistic developments of Western cultures from the 14th century to the mid-19th century.
- analyze important works of art from each of the major periods presented.
- compare significant stylistic innovations from different artists and historical periods.
- compare the roles of art and artists within Renaissance and later societies.

**ARTH 310 Modern Art**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A  
**C-ID:** C-ID ARTH 150; Part of C-ID ARTH 120  
**Catalog Date:** June 1, 2020

This course covers 18th, 19th, 20th and 21st century art forms including painting, sculpture, and architecture in Europe and America. Styles discussed include Neoclassicism, Romanticism, Realism, Impressionism and Post-Impressionism, and the major movements of the 20th century. Post-Modern art is also discussed. A field trip to an art museum or art gallery may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify major works of art and architecture from the Neoclassical period to the contemporary period.
- discuss and distinguish styles and stylistic changes in art from the Neoclassical period to the contemporary period.
- interpret and evaluate art and architecture from the Neoclassical period to the contemporary period within their cultural and historical contexts.
- formulate and analyze meanings and functions of art and architecture from the Neoclassical period to the contemporary period.

**ARTH 318 History of American Art**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; or ESLR 340 AND ESLW 340  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A  
**Catalog Date:** June 1, 2020

This course covers art in America from initial European contact to the present day. Topics include initial images of the New World made by Europeans; early art and architecture that reflects a synthesis of Native and European traditions; Colonial and early American art, architecture, and decorative arts; 19th-century portraits, landscapes, and history paintings; and regional and later modernist American art of the twentieth century. This course emphasizes the influence of European traditions as well as the history of a variety of cultures in the present day United States, the variety of styles and patrons in the country, and the way in which cultural values find expression in art, architecture, and decorative arts. An individual or group field trip to a museum or art gallery is required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- recall and identify major works of art and architecture created in America from the 15th century to the present day.
- compare and contrast art objects created in America from the 15th century to the present day.
- critique and analyze American art, architecture, and decorative arts based on aesthetic and functional qualities.
- identify and interpret sources of influence for American art, architecture, and decorative arts.
- synthesize American cultural values and their artistic expressions.
- describe how historical, social, or political contexts can be seen in the styles or types of art objects coming from specific American regions or eras.

**ARTH 322 Art History of the Non-Western World**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None
- **Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESR 340 AND ESLW 340.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A
- **Catalog Date:** June 1, 2020

This is a survey of art history throughout the Non-Western world. It covers the architecture, sculpture, and painting of the peoples of India, Africa, Asia, the Americas, the Arctic, Australia, and Oceania. The time period spans from the Stone Age to the 18th century. Field trips and/or individual visits to art galleries and museums are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze the different visual arts styles of Non-Western cultures.
- discuss and describe the diversity in art throughout the world.
- compare the aesthetic motivation and cultural purposes of various art forms.
- compare traditional multicultural and international art periods.

**ARTH 333 Introduction to Islamic Art**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A
- **Catalog Date:** June 1, 2020

This course surveys the art and culture of the Middle East. It focuses on Islamic art and architecture and provides fundamental information on the formation of Islamic art, its history, and philosophy. It includes visual examples from Arabic, Persian, and Indian cultures.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the influential elements in the formation and production of Islamic art considering the social, political, and historical backdrop against which Islamic art flourished, including the role of the unorthodox interpretation of Islam relating to artistic endeavors.
- demonstrate an awareness of the critical issues within the field of "Islamic art" such as the use of the term "Islamic" in Islamic art and the application of methodology in the interpretation of the art.
- demonstrate knowledge of and comparatively analyze examples of the various branches of the art and architecture and the relating arts, for example the art of the book, calligraphy, and book illumination as part of the art of the object, religious and secular architecture, and the building decorative arts as seen in the realm of architecture.
- analyze the mutual impact of Islam and other cultures both in the East and the West and identify the elements of mutual appropriation in their visual art.

**ARTH 334 International Contemporary Art**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Transferable:** UC
This course is a worldwide survey of trends in art, including painting, sculpture, and architecture since 1980, with an emphasis on the diversity of contemporary global cultures. New art mediums, such as video, computer, street art, and performance art are highlighted. This course focuses on social and political commentary in art. A field trip to a local art exhibition may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- appraise representative artists and artworks from a number of different world cultures.
- analyze current trends in painting, sculpture, photography, film, architecture, and new visual art mediums.
- evaluate an artwork’s visual elements as well as its social or political content.
- critique the effectiveness of postmodern artworks.
- analyze current controversies and legal matters in art as well as artists' changing roles as participants in contemporary society.

ARTH 335 Survey of Photography

Same As: ARTPH 345
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This course is a survey of photography. It explores the evolution of the photographic medium, its impact on art, culture, and history from the inception of photography to current trends. This survey covers various genres, including fine art, journalism, science, and social media. Field trips may be required. This course is not open to students who have completed ARTPH 345.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the different photographic genres throughout history.
- compare the different visual art periods and styles of photography.
- describe and discuss the cultural impact of photography on society.
- evaluate the influence of photography on other artistic mediums.

Art Photography (ARTPH)

ARTPH 300 Basic Art Photography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1
C-ID: C-ID ARTS 260
Catalog Date: June 1, 2020

This course examines the formal and technical aspects of 35mm film photography. Topics include critiques of major movements in the history of photography and contemporary silver-gelatin process artists. A problem-solving approach is utilized to explore compositional ideas. Camera operation, black and white film developing, and silver-gelatin printmaking are covered. Digital photography file management and editing concepts are introduced through film scans. A 35mm single lens reflex (SLR) camera as well as darkroom and portfolio supplies are required. Processing chemicals are provided. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate principles of form as they apply to basic photography.
- manage camera, lens, and exposure techniques in various shooting situations.
- choose film processing and print enlarging techniques.
- recognize various photographic trends.
- critique photographs from the history of photography, current exhibits, and student work for technical print quality and composition.
- evaluate traditional prints and digital prints.
- choose file formats and resolution for film scans.
- apply basic digital editing techniques to film scans.

ARTPH 302 Black and White Silver Gelatin Photography Lab

Units: 1
Hours: 54 hours LAB
Course Family: Studio Art and Practice (http://arc.losrios.edu/course-families#id_100014)
Prerequisite: None.
Corequisite: ARTPH 300 or 340
Transferable: CSU
Catalog Date: June 1, 2020

This course offers additional lab hours to more fully develop creative vision and technical skills in black and white silver gelatin photography. It also allows alternative process photographers additional lab hours for development of film and digital negatives. It provides additional assistance in assignments and portfolio development for ARTPH 300 and ARTPH 340.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- process film and film scan exposures, wet-lab prints, and digital prints from film scans.
- evaluate wet-lab, archival inkjet and type c-prints for content, quality, and presentation.
- prepare bodies of photographic work for varied clients including galleries, customers, and publications.

ARTPH 305 Digital Photography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ENGWR 102 and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better. ARTNM 302 with a grade of "C" or better.
Transferable: CSU; UC
General Education: AAAS Area I
Catalog Date: June 1, 2020

This is a course in basic digital photography. Topics include digital camera functions, exposure systems using f-stop and shutter speed combinations, digital shooting practices, photographic composition and aesthetics, editing tools and software, and print portfolio development. It also includes issues in contemporary photography and the history of photography. Digital cameras with adjustable f-stops and shutter speeds, camera memory cards, and re-writable memory devices are required. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- choose f-stop and shutter speed combinations for various exposure systems and situations
- evaluate digital photographs for quality and aesthetics
- critique digital and traditional photographs
- assess digital photography editing needs
prioritize software tools and applications to edit digital photographs

systematize the digital editing work flow

assemble digital and print portfolios

identify major movements and artists from the history of photography

**ARTPH 306 Photography Lab: Digital Editing**

Units: 1

Hours: 54 hours LAB

Course Family: [Studio Art and Practice](http://arc.losrios.edu/course-families#id_100014)

Prerequisite: None.

Corequisite: ARTPH 305, 310, 322, or 360

Transferable: CSU

Catalog Date: June 1, 2020

This course offers additional lab hours to more fully develop creative vision and technical skills in digital image editing, processing, and printing. It provides additional assistance in assignments and portfolio development in ARTPH 305, ARTPH 310, ARTPH 322, and ARTPH 360.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- download and process images in LightRoom, Bridge, Camera Raw, and PhotoShop
- evaluate processing tools and software
- evaluate plug-ins and non-Adobe image processing

**ARTPH 310 Intermediate Photography**

Units: 3

Hours: 36 hours LEC; 54 hours LAB

Prerequisite: ARTPH 300 or 305 with a grade of "C" or better

Transferable: CSU

Catalog Date: June 1, 2020

This course covers the technical control of black and white photographic materials and equipment. Professional camera techniques and the creative aspects of photography are emphasized. A 35mm single lens reflex (SLR) or digital single lens reflex (DSLR) camera or digital camera with manual options is required. Darkroom and portfolio supplies are also required. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast advanced photographic controls in the production of negatives, film enlargements, and digital prints
- evaluate a fine art photograph in terms of content and technique
- analyze digital and film prints for technical and aesthetic concerns
- critique advanced photographic and printing techniques from the history of photography and current trends in photography
- choose lighting techniques for portraiture and still life photography
- evaluate lighting conditions for contrast and quality
- apply color concepts to black and white images

**ARTPH 315 Trends in Software and Social Media for Photographers**

Units: 3

Hours: 36 hours LEC; 54 hours LAB

Prerequisite: ARTPH 305 with a grade of "C" or better

Advisory: Eligible for ENGRD 116 AND ENGWR 102; OR ESLR 320 AND ESLW 320.
This course covers basic trends in photographic editing and presentation software. Editing photographs in Photoshop and file management in Lightroom along with introductions to similar software are covered. Topics include uses of social media in presentation and dissemination of photographs for commercial purposes and clients, as well as photographic output to print, social media, and the internet.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate editing software for production of photographs for varied clients
- assess appropriateness of varied social media for client-based shooting assignments
- manage large volumes of image files for varied output and clients
- edit photographs for print portfolios, digital portfolios, and the internet

ARTPH 322 Color Photography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTPH 300 or 305 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course covers the aesthetic aspects of color photography involving camera and digital techniques emphasizing uniqueness of expression. It includes a continuing exploration of form and composition, lighting and exposure, film characteristics and scanning, and digital capture and editing, with emphasis on color photography as an art form. Color correction, color management, work flow, and other digital concepts are included. A 35mm single lens reflex (SLR) or digital camera with manual options as well as memory devices and portfolio supplies are required. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- appraise creative potential of color photographic processes
- distinguish between psychological impact of colors as compared to black and white photography
- choose appropriate processes, equipment, and related techniques for chosen photographic materials
- describe major works, past and present, in the field of color photography
- critique major works in the field of color photography
- choose color correction and editing options for digital photographs
- evaluate aesthetic differences in saturation and color quality in film and digital color prints
- create a color-managed work environment linking cameras, monitors, scanners, printers and projectors to consistent profiles
- assess image capture and editing work-flow techniques for varied commercial and fine art clients

ARTPH 340 Alternative Process Photography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area I
Catalog Date: June 1, 2020

This course covers alternative photographic printing processes produced in sunlight. No camera is necessary. Image processes such as salt prints, cyanotypes, Van Dyke brown prints, gum prints, palladium prints, and wet-plate photography are covered. It includes the history of photographic processes from the daguerreotype to the digital age. Negatives are produced from digital transparencies, Xerox transparencies, transparency film, and natural objects. Varied printing substrates are covered. Papers and printing surfaces, brushes, memory storage devices, digital printing resources, safety glasses, and protective gloves are required. Chemistry is provided. Field trips may be required.
Upon completion of this course, the student will be able to:

- assess major technical developments in equipment and photographic processes
- produce photographs in major technical forms, such as salt print, brown print, cyanotype, gum print, and palladium print
- evaluate photographs by process and historical context
- develop a portfolio of photographs representing varied alternative photographic processes
- critique alternative process photographs for content and aesthetics
- evaluate the role of alternative process photographs in historical and contemporary photographic practice

**ARTPH 345 Survey of Photography**

**Same As:** ARTH 335  
**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A  
**Catalog Date:** June 1, 2020

This course is a survey of photography. It explores the evolution of the photographic medium, its impact on art, culture, and history from the inception of photography to current trends. This survey covers various genres, including fine art, journalism, science, and social media. Field trips may be required. This course is not open to students who have completed ARTH 335.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze the different photographic genres throughout history.
- compare the different visual art periods and styles of photography.
- describe and discuss the cultural impact of photography on society.
- evaluate the influence of photography on other artistic mediums.

**ARTPH 350 Documentary Photography**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** ARTHPH 300 or 305 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course provides instruction in documentary photography and photojournalism techniques and concepts. Image production and critical discussion are emphasized. A portfolio including an extensive photo essay or documentary project is required. A 35mm single lens reflex (SLR) camera or a digital camera (dSLR) with manual options as well as darkroom, digital, and portfolio supplies are required. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- differentiate between news, feature, sport, fashion, documentary, and fine art photo essays
- evaluate morality and ethics of photographic choices on documentary content
- create and edit various photographic mediums for digital, press, and exhibit formats
- evaluate photographs for content and message
- investigate current and historical movements and trends in documentary media
- prepare a photographic essay or a photographic theme
ARTPH 360 Studio Lighting

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTPH 300 or 305 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is a study in studio lighting techniques used in photography. Topics include lighting ratios, correct exposure using an electronic flash and metering, basic portraiture, choice of lighting equipment and modifiers, white balance adjustments, and color temperature. It also includes study of the history of studio photography. Black and white, color, and digital processes are included. A 35mm single lens reflex (SLR) or digital camera (dSLR) with manual options, lighting sync port, as well as darkroom or digital and portfolio supplies are required. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- arrange portable continuous light units
- evaluate studio electronic flash units
- set up lighting combinations using pre-visualization
- selectively measure lighting and evaluate ratios
- evaluate white balance and color temperature
- compose and light studio still life, portrait, and product shots
- critique darkroom and digital prints for quality and aesthetics
- combine mixed lighting for artistic and commercial photography
- organize professional photographic materials and equipment
- prepare a portfolio to apply for work in the photographic industry

ARTPH 361 Photography Lab: Studio Lighting

Units: 1
Hours: 54 hours LAB
Course Family: Studio Art and Practice (http://arc.losrios.edu/course-families#id_100014)
Prerequisite: None.
Corequisite: ARTPH 360 or 370
Transferable: CSU
Catalog Date: June 1, 2020

This course offers additional lab hours to more fully develop creative vision and technical skills in studio lighting and large format photography. It provides additional assistance in assignments and portfolio development for ARTPH 360 and ARTPH 370.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up complex hot-light compositions
- set up complex strobe light compositions
- set up location lighting

ARTPH 370 Fashion, Wedding, and Portrait Photography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTPH 300 or 305 with a grade of "C" or better
Transferable: CSU
This course is an overview of basic fashion, wedding, and portrait photography concepts. Topics include major movements in fashion and portrait photography as well as the study of specific fashion photographers. This course also includes studio portrait lighting and styling techniques specific to fashion, wedding, and portrait photography. Wedding photojournalism is also covered. A 35mm digital camera (DSLR) with manual options is required. Fashion shoots are required. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify major movements and trends in fashion, wedding, and portrait photography throughout history
- critique major fashion photographers for content and form
- assess still-photography lighting problems and identify solutions
- apply portable lighting techniques to runway, portrait, and wedding situations
- choose exposure techniques for model photography in black and white and color photography
- assess styling techniques for specific fashion, wedding, and portrait concepts
- employ wedding photojournalism techniques
- create portfolios of fashion, wedding, and portrait photographs
- assess current digital photography technology in software and hardware

This course covers careers in freelance photography including commercial photography, journalism, and fine art photography. It introduces the basic elements of implementing photography project plans, including necessary permits, aesthetic style choices, marketing, photography pricing, and portfolio presentations. This course also covers preparing, presenting, and implementing freelance photography career plans.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate personal, business, and creative strengths and insights in photography.
- research potential career opportunities in photography.
- create a personal plan and outline expectations of a career in photography.
- explain photography presentation strategies including promotional campaign, print, motion, or web based.
- assess best bookkeeping and marketing practices for photography businesses.

This course offers additional lab hours to more fully develop creative vision and technical skills. It provides additional assistance in assignments and portfolio development.

**Student Learning Outcomes**

...
Upon completion of this course, the student will be able to:

- choose film developing or digital processing techniques
- control print finishing processes for portfolio development
- produce digital and print portfolios of original photographic work

**ARTPH 495 Independent Studies in Art Photography**

**Units:** 1 - 3  
**Hours:** 54 - 162 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**ARTPH 498 Work Experience in Art Photography**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position, or job related to art with a cooperating site supervisor. Students are advised to consult with the Art Photography Department faculty to review specific certificate and degree work experience requirements.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of art photography. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of art photography related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- develop effective leadership skills at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Art New Media | American River College

This degree emphasizes visual arts produced in a digital environment. Art New Media focuses on new technology and a strong foundation in the fundamentals of visual art. Coursework includes a wide spectrum of studies in traditional and new media fundamentals relevant to art and design.

The Art New Media Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze design principles relevant to new media technology
- combine various technical skills in the field of art new media
- create visual images utilizing traditional and/or digital media
- synthesize concepts of modern art history and apply them to illustration, animation, graphic design, and web design
- conceive visual solutions for successful visual communication
- critique new media works

Career Information

Career opportunities include Graphic Designer, Character Designer, 3D Animator, Web Designer, 3D Modeler and Texture Artist, 3D Artist, Commercial Illustrator, and Print Designer.

The Technical Communications Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze audience information needs and propose solutions to aid the audience.
- design technical communication solutions for a variety of industry and government purposes.
- design and create web sites and help systems with effective visual design, navigation, and written content.
- design and publish printed pages with effective design, organization, content, and indexing.
- compose professional prose for a variety of audiences with a variety of purposes.
- compose and edit professional documents in grammatically correct, concise English.
- create and use style templates in a variety of industry standard software.

Career Information

Technical communicators may be employed in a variety of occupations in government, scientific firms, nonprofits, natural resources, finance, education, and high tech.

Certificates of Achievement
3D Rigging Technical Director Certificate

This certificate offers training on the articulation of movement for 3D objects, environments, and characters. Rigging is the process of giving a character controls for movement, therein "articulating" its range of motion, or bringing the character to life. Standard rigs for vehicles, bipedal, and quadrupedal characters are created, as well as rig variations, such as cartoon rigs to maximize flexibility. In addition, students are expected to increase efficiency of production by creating rig building tools. Also, interfacing tools are created to increase efficiency and usability of the rigs in production.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- differentiate the types of deformers to achieve a specific deformation called for by animation.
- create a concise set of animation controls.
- analyze the animator's needs to provide and refine an articulation of the full range of expressions and body movement needed to support a character's acting range.
- create a portfolio quality demonstration reel of their rigs animated.
- proficiently use a programming language to solve rigging problems, create new tools, and create interfacing tools for the animator.
- proficiently use math to solve rigging problems.
- design and maintain master rigs that can be re-used as a basis for articulating similar characters, or applying existing rigs to newly created character sculpts.
- differentiate the deformation needs of realistic musculature and traditional cartoon movement.

Career Information

Students can apply their 3D rigging skills in film, game, and broadcast, as well as local industries, such as medical, legal, engineering, Web, and fine art. Students can continue their studies in 3D rigging at a four-year college or choose an entry-level position in any of the 3D animation industries.

3D Technical Director Certificate

This certificate offers a comprehensive understanding of the computer generated three-dimensional (CG 3D) production process. It is designed for self-learners, entrepreneurs, and developers of independent content or someone looking for a high level position in a 3D animation company. A broad range of topics are covered from traditional sculpting to digital rendering. In addition to technical direction, this certificate is ideal for any 3D Generalist position.

Catalog Date: June 1, 2020

^1ARTNM 422 has a prerequisite of ARTNM 405

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- plan a production pipeline and solve 3D production issues with a holistic understanding of 3D.
- create portfolio-quality demonstration reels with animation, modeling, texturing, and rigging.
- differentiate various 3D software strengths and weaknesses.
- apply for an entry-level 3D position calling for a 3D Technical Director or 3D Generalist.
- create digital textures and materials from observing and scanning real-world surfaces and materials.
- apply textures and materials to a computer-generated environment.

**Career Information**

Students can apply 3D skills in film, game, and broadcast, as well as local industries, such as medical, legal, engineering, Web, and fine art. Students can continue their studies in 3D at a four-year college or choose an entry-level position in any of the 3D animation industries.

**ARTNM: 3D Animation Certificate**

This certificate focuses on traditional animation principles to create believable animations. Animations created range from flying logos for broadcast television, to animated product placement, to characters used for the telling of fantastic stories. It focuses on skill sets in both the traditional arts and digital environments.

**Catalog Date:** June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- research and demonstrate application of the principles of animation to tell a story with meaning through movement.
- create the motions, gestures, and expressions of three-dimensional computer graphics characters and objects.
- critique animation and regularly improve upon demonstration reels.
- create high quality 3D models from live or image reference, and animate the models for use in demonstration reels.
- create a portfolio-quality 3D animation demonstration reel.
- create animation from live reference, video reference, and from hand-drawn imagery.
- create animation in various 2D and 3D software programs and apply the principles regardless of the software differences.
- block-in movements in rough animation and show for approval in a weekly review.
- finish work for approval in a timely manner.

### Career Information

Students can apply 3D animation skills in film, game, and broadcast, as well as local industries, such as medical, legal, engineering, Web, fine art, and entrepreneurial. Students can continue their studies in 3D animation at a four-year college or choose an entry level position in any of the 3D animation industries.

### ARTNM: 3D Modeling and Texturing Certificate

This certificate combines a foundation of traditional sculpture and painting with computer generated three dimensional digital modeling and painting. High polygon modeling techniques are used to create assets for any industry in need of 3D modeling and texturing. Texturing will focus primarily on the use of manipulated and painted imagery to create complex surfaces.

Catalog Date: June 1, 2020

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- create complex 3D environments, characters, and props to be used in the any production.
- create believable models of objects from life, photographs, or hand drawn reference.
- create accurate models of the human anatomy with a clear and clean polygon flow showing muscle, fat, skin, and bone topology.
- create believable textures from reference images.
- analyze and assess the needs of a project and determine the complexity of the models and textures to match the project.
- create clean, high polygon count, polygon meshes ready for production.
- create facial structures and shape targets preparing the character for facial animation.
- create a portfolio quality modeling and texturing demonstration reel.

**Career Information**

Students can continue their studies in 3D modeling and texturing at a four year college or choose to apply their 3D modeling and texturing skills in the film, game, and broadcast industries, as well as other local industries, such as medical, legal, engineering, Web, and fine art.

**ARTNM: Character Design Certificate**

This certificate focuses on the visual concept development of believable characters. Skills in traditional and digital illustration are applied to create characters for animation, games, comics, graphic novels, children’s books, and illustrated novels.

Catalog Date: June 1, 2020

Upon completion of this program, the student will be able to:

- create believable characters using traditional and digital media
- research the environment, social and cultural structure, anatomy, costume and motion as they relate to a particular narrative
- create characters with believable gesture and movement that are consistent with the character concept
- analyze and apply facial expressions for the character that effectively describe the character within a narrative
- utilize references from photographs, illustration, and animation to create characters that effectively interact within their environment
- compile a portfolio that presents the process of character creation from research through final presentation

Career Information
Career opportunities include film, game, broadcast, and illustration industries.

ARTNM: Commercial Illustration Certificate
This certificate focuses on traditional visual art principles to clearly communicate the needs of a client and their target audience. It includes skill sets from both the traditional arts and digital media. Illustration skills are applied in areas of editorial, advertising, technical and book illustration, as well as 3D modeling and texturing, animation, set design, and product design.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- create drawn and painted images using traditional and digital media
- research and develop visual content with an understanding of the client's target audience
- develop and produce visual solutions that meet the needs of a client within a deadline
- analyze and apply color schemes to communicate a message that meets the client's needs
- research modern art and illustration history, applying concepts to illustrations to effectively communicate visually within contemporary culture
- compile a portfolio that demonstrates skill with both traditional and digital media and client based concept development

Career Information
Career opportunities include editorial, advertising, technical and book illustration, 3D modeling and texturing, animation, set design, and product design.
ARTNM: Web Design Certificate

The Web Design certificate incorporates the fundamentals of visual communication with industry-standard work flow and tools to prepare creatives and talents for the web design industry. The certificate focuses on the visual language necessary for a web designer to produce compelling graphics in the web authoring environment. Students are encouraged to further their studies in interactive design by obtaining other Art New Media Certificates such as the Interactive Design Certificate, the Digital Imagery Certificate and the Video Certificate within the Art New Media department, or similar programs at a four-year college, or encouraged to choose an entry-level position in the web design industry.

Catalog Date: June 1, 2020

Upon completion of this program, the student will be able to:

- produce compelling graphics incorporating industry-standard work flow and tools
- design visually successful web pages/web sites using visual design concepts
- evaluate content needs for target audience
- assess the most effective navigation flow
- conceive and deliver visual solutions for a client within a defined time frame

Career Information

Web design skills are used in business, government, educational institutions, and the entertainment industry.

Art New Media: Illustration Certificate

This certificate focuses on using traditional visual art principles to clearly communicate the needs of a client and/or target a specific audience. It includes skill sets from both the traditional arts and digital media. Illustration skills are applied in animation, character design, 3D modeling and texturing, set design, product design, as well as areas of editorial, advertising, technical, and book illustration.

Total Units: | 30

**Student Learning Outcomes**
Upon completion of this program, the student will be able to:

- create drawn and painted images using traditional and digital media
- research and develop visual content with an understanding of the target audience
- develop and produce visual solutions that meet the needs of a client within a deadline
- analyze and apply effective color schemes to enhance the viewer’s emotional response to the content of an illustration
- research modern art and illustration history, applying concepts to illustrations to effectively communicate visually within contemporary culture
- create a portfolio that demonstrates skill with traditional and digital media and concept development

**Career Information**
Career opportunities include animation, character design, 3D modeling and texturing, set design, product design, as well as areas of editorial, advertising, technical, and book illustration.

**Graphic Design: Intern Artist Certificate**
This certificate introduces the software and theory used by graphic designers in the design studio. It covers page layout, vector drawing, and photo manipulation basics. It also focuses on current industry trends in the digital marketplace.

**Catalog Date:** June 1, 2020

**Certificate Requirements**

COURSE CODE | COURSE TITLE | UNITS

ARTNM 359 | College Magazine: Design and Production | 3
ARTNM 401 | Introduction to Web Design | 3
ARTNM 402 | Intermediate Web Design | 3
Total Units: | 21
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess typographic hierarchy as it relates to message development.
- build digital files to specs required by the current industry.
- integrate different software files into one digital file.
- resolve digital production issues as they relate to industry standards.
- correlate deadline issues as they relate to production schedules.

Career Information

Students can apply their acquired skills for internship positions in graphic arts related jobs such as entry-level design positions, entry-level in-house design positions, and production artist positions. Or, with additional coursework, students can continue their studies at a qualified four-year college.

Graphic Design: Junior Artist Certificate

This certificate introduces software applications, industry-standard hardware, and the typographic/fundamental and technical skills necessary for today’s workplace. It focuses on visual communication through layout design, typography, and the dynamic relationship between image and type. It meets current marketplace demands by incorporating print/non-print media and the effect new technologies have on a changing communications field.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze and formulate visual communication concepts using graphic design principles and standards.
- evaluate the role of typography as a communication device and know how the graphic design field fits into today’s multimedia environment.
- design and produce two-dimensional media projects taking into account client needs, composition, color, and hierarchy of information.
- construct camera-ready art with industry standard graphic design software.
- evaluate problems generated by clients and execute visual concepts through research, thumbnails, roughs, design development and presentation.
- prioritize design and production deadlines for a deadline oriented industry.
Career Information
Students can apply their acquired skills in typography, software and concept development to apply for production artist or junior graphic designer positions.

Graphic Design: Production Artist Certificate
This certificate covers the process of digital production for printing and web. It focuses on the core software programs and current industry trends for digital media.
Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- investigate the basics of digital software for vector- and pixel- based media
- analyze specific conditions which influence digital production decisions
- categorize raster-based images and vector-based art as they relate to print and web
- calculate resolution, color modes and file size as they relate to print and web production
- construct a series of projects which build knowledge of simple and complex production issues

Career Information
This certificate prepares students for entry-level print or web production artist positions.

Technical Communications Certificate
This certificate offers an interdisciplinary program of courses in Technical Communications, Art/New Media, and Computer Information Systems to prepare students for a variety of technical writing and professional communication careers. The certificate includes the theory, writing skills, design background, and computer applications knowledge needed for jobs in technical communication.
Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze audience information needs.
- compose concise, clearly written professional documents organized with the audiences' needs in mind.
- design print and online resources that communicate organizations' values, enhance readability, and are easy to use.
- demonstrate basic skills in the use of word processing, page design, and web design applications.
- evaluate organizations' communication goals and needs based on technical writing principles.

Career Information

Technical communicators find employment in medical, scientific, high tech, business, university, and government settings. They may write white papers, tutorials, reference and procedure manuals, help systems, user assistance video scripts, grants and proposals, and more.

Certificate

Art New Media: Foundation Certificate

This entry level certificate introduces the tools and context fundamental for the field of digital media.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- construct visual composition using design fundamentals.
- construct visual composition using typography principles.
- integrate traditional media and digital media.
• construct composition based on the history of graphic design.
• create basic digital composition using industry-standard tools.

Career Information
This program prepares students to apply their knowledge and experiences in many industries that require basic digital design skills. These positions include internship and entry-level visual communication opportunities within industries such as design, arts, entertainment, business, and education.

Art New Media (ARTNM)

ARTNM 302 Digital Basics for Art New Media

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the digital environment for Art New Media. Topics include operating system(s), digital vocabulary, scanning, saving, and file formats. Distinctions between vector, bitmap, and page layout applications are made using Adobe Illustrator, Adobe Photoshop, and Adobe InDesign.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
• manage navigation skills on the operating system.
• analyze distinctions between vector and bitmap imagery.
• integrate scanning techniques.
• choose appropriate file formats.
• define digital vocabulary appropriate for the Art New Media environment.
• create work using Adobe software.

ARTNM 303 Graphic Design: Typography

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the art of visual communication and introduces the tools and concepts of visual thinking. It emphasizes the potential of typography as an effective communications tool. Additionally, it also covers historical overviews, portfolio development, and client presentations, paired with the terminology and visual language of design through the creation and evaluation of individual projects.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
• apply the tools and materials of the graphic designer.
• apply the terminology of graphic design and typography.
• analyze the use of letterform and image in visual communication.
• create designs with the principles and problem solving process of graphic design.
• evaluate projects in terms of target audience.
ARTNM 305 History of Graphic Design

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1
Catalog Date: June 1, 2020

This course covers the history of visual communications as developed by ancient cultures through the present with an emphasis on commercial design, illustration, typographic development, and technological invention. It includes modern graphic design movements of the 20th century through the expansive media innovations of today. This course focuses primarily on analysis of design from a wide range of sources and cultures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the essential components of graphic design and their functions.
- differentiate between two-dimensional graphics, electronic graphics, and the graphic object.
- identify contributions of graphic design from many cultures and nations.
- compare the influence and historical importance of such contributions.

ARTNM 320 Facial Expression and Anatomy

Same As: ART 306
Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ART 300 with a grade of "C" or better
Advisory: ART 304
Transferable: CSU
Catalog Date: June 1, 2020

This course covers human facial expression and anatomy using live models, anatomical references, and imagination. Issues of expression as it relates to skeletal and muscular anatomy are addressed through a series of projects. This course is not open to students who have taken ART 306.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- draw the human skull in order to understand the three-dimensional form.
- apply facial muscular structure to the skull.
- evaluate the muscular code for universal facial expressions.
- create the human head with varying expressions using 2D media.
- create meaningful exaggerations of expression using 2D media.
- evaluate the muscles and muscle dynamics responsible for facial expression.

ARTNM 322 Beginning Digital Art

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I
C-ID: C-ID ARTS 250
Catalog Date: June 1, 2020

This introductory digital art course focuses on digital media processes, including software and hardware tools that facilitate creative visual and conceptual approaches to digital art making. A wide range of digital imaging techniques are explored, and time-based processes are introduced, leading to the creation of digital images, animations/videos, and mixed media objects. The course also explores artists' uses of new technologies in contemporary art-making practices. A vocabulary of new media terms and practices is developed through discussions and critiques.
Upon completion of this course, the student will be able to:

- integrate working knowledge of digital media processes including software and hardware tools for the purpose of digital art making.
- construct creative visual and conceptual approaches to digital art making.
- synthesize contextual understanding of contemporary artistic explorations using new technology.
- integrate vocabulary of new media terms and practices for discussions and critiques of digital art.
- solve problems actively and independently to achieve creative objectives.

**ARTNM 324 Digital Design**

**Units:** 3
**Hours:** 36 hours LEC; 54 hours LAB
**Prerequisite:** None.
**Advisory:** ARTNM 303; Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340; AND ART 300 OR ART 320 and ARTNM 302
**Transferable:** CSU
**Catalog Date:** June 1, 2020

This course is an introduction to fundamental design principles using the basic tools of Adobe Illustrator. It applies design skills and the tools of the software application to produce individual portfolio-quality projects.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and apply basic tools of Adobe Illustrator.
- create, manipulate, and edit images.
- create an effective project plan.
- evaluate completed design projects.
- create a professional portfolio presentation.

**ARTNM 325 Intermediate Digital Design**

**Units:** 3
**Hours:** 36 hours LEC; 54 hours LAB
**Prerequisite:** ARTNM 324 with a grade of "C" or better
**Transferable:** CSU
**Catalog Date:** June 1, 2020

This course is a continuation of ARTNM 324. It defines advanced elements of graphic design, composition, and gestalt visual principles as they relate to dominance, hierarchy, balance, and color. These topics are combined and applied to the tools and advanced imaging capabilities of Adobe Illustrator.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the use of basic tools in Adobe Illustrator.
- analyze color modes, including RGB, spot color, and CMYK.
- compare the use and purpose of vector-based art vs. raster-based images.
- identify the characteristics and importance of visual composition as they relate to gestalt visual principles.
- produce advanced effects and techniques by combining tools in Adobe Illustrator.
- assemble design elements and typography using advanced techniques and Adobe Illustrator tools.
ARTNM 326 Digital Painting

This course introduces the fundamental principles of color, drawing, and painting using the basic tools of Corel Painter. Visual communication skills of color, drawing, and painting are applied to produce individual portfolio-quality projects.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and apply basic tools of Corel Painter
- apply tools to create, manipulate, and edit images
- develop an effective concept through research and drawn concepts, imagery, and refinement
- evaluate painting and drawing projects from initial concept through completion
- create a professional portfolio presentation

ARTNM 328 Beginning Digital Photo Imagery

This course is an introduction to computer-based photographic imaging with emphasis on utilizing cutting edge digital imaging tools to realize design objects. Basic operating principles of Adobe Photoshop are covered. Topics include scanning, basic photo correction, selections, layer basics, adjustment layers, basic masking and channels, typography, vector drawings, and compositing. Design fundamentals are discussed. Topics include positive and negative space relationship, unity, balance, and basic color theory. Concept development is also introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create photo manipulation using the basic tools of Adobe Photoshop.
- create digital composition with a successful positive and negative space relationship.
- create a unified digital composition.
- create a balanced digital composition.
- choose colors utilizing Color Theory.
- critique a visual composition using design fundamentals in unity, balance, and color theory.
- conceive a design concept using sketches and thumbnails.

ARTNM 330 Intermediate Digital Photo Imagery

This course is a continuation of ARTNM 328 Digital Photo Imagery, focusing on advanced application of digital image manipulation software and techniques. Students will explore complex compositing, advanced masking, and the use of specialized tools for creating visually striking images. Topics include advanced digital photography techniques, image layering, and the integration of multiple elements to create cohesive designs. The course emphasizes the development of critical thinking and problem-solving skills in the context of digital imagery creation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create sophisticated digital compositions with advanced techniques.
- apply principles of visual design to digital projects.
- utilize specialized digital tools for image manipulation.
- critique and analyze digital imagery effectively.
- present a comprehensive portfolio of digital projects.
This course introduces the intermediate techniques of digital photo imagery in Adobe Photoshop. Topics include the terminology of digital photo imaging, intermediate masking, channel and curve techniques, photomontage history and techniques, intermediate black and white techniques, issues surrounding dynamic range, color correction, features of the Action and History palettes, exploration of Layer Blending Modes, printing and/or transferring images onto various different media, working with large format images, and commercial printers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- produce photomontages using intermediate skills associated with industry standard photo imaging software.
- analyze and apply intermediate compositing techniques such as masking.
- synthesize both the design concept and design process to produce sophisticated visual compositions.
- coordinate with service bureaus and commercial printers to produce quality output.
- analyze and critique photomontages in terms of design aesthetics and technical competence.

ARTNM 331 Integrating Digital Media with Traditional Media I

Same As: ART 339
Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
General Education: AA/AS Area I
Catalog Date: June 1, 2020

This course combines the materials and techniques used in both new media technology and traditional art practices. It explores a wide variety of ideas, tools, and resources. Topics include history, theory, and practice surrounding digital and traditional image generation, image manipulation, image transfer, and material exploration. The course emphasizes developing unique forms of portfolio quality projects demonstrating new approaches and methods of integrating digital media with traditional media forms.

This course is not available to students who have taken ART 339.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- combine materials and techniques used in both new media technology and traditional art practices.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image generation.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image manipulation.
- create successful compositions using knowledge of history, theory, and practice surrounding digital and traditional image transfer.
- generate dynamic portfolio-quality projects, which demonstrate new approaches and methods of merging digital media with traditional media.

ARTNM 332 Digital Video

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ARTNM 302
Transferable: CSU
Catalog Date: June 1, 2020

This course applies the principles of cinematography and editing to the production of digital video. Industry standard software is employed to capture/import, edit, and produce high-end visual productions. The course includes transitions, multiple layers, alpha channels, and composite green screen segments. Evaluation of multimedia projects containing video segments in terms of design aesthetics and technical competence is included. This course examines the genres of documentary, short narrative film, title sequencing, and experimental film.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critique and apply the basic principles and practices of digital video editing.
• apply the principles of cinematography to the creation of digital video.
• create digital video within the software production environment.
• create plans for digital video segments, using appropriate formats and compression options for output.
• evaluate multimedia projects containing video segments in terms of design aesthetics and technical competence.

ARTNM 352 Design for Publication

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ART 320 or ARTNM 310 AND ARTNM 302.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the basic operating principles of digital page layout software using Adobe InDesign. Principles of typography and the development of the printed page are applied to individual portfolio-quality projects. Areas of focus include book, magazine, and newspaper design, as well as publications such as newsletters, journals, and catalogs. An overview of promotions, such as fliers, posters, and brochures is also included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• define the terminology of type.
• apply typography in various kinds of publications.
• analyze how type determines the messages communicated.
• relate the function of typography to other design elements.
• apply grid systems to page composition.
• evaluate layout design for a wide variety of publications.
• create a document that includes master pages and folios.
• create a document that includes typography, imported images, and text documents.
• determine color palette for a document.

ARTNM 354 Digital Prepress

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTNM 352 with a grade of "C" or better
Advisory: ARTNM 302 AND ENGWR 102 and ENGRD 116 OR ESLR 320 and ESLW 320
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces digital prepress for graphic design using industry standard software, like Adobe InDesign. Areas of focus include desktop production for commercial offset printing, preparation of print-ready digital files, paper selection, and the language necessary to properly communicate with commercial printers. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply prepress skills with page layout software
• define terms to properly communicate with commercial printers using industry language
• prepare camera-ready digital files for commercial offset printing, digital, and silk screen methods
• analyze different types of paper in relation to requirements for printing and identify the appropriate paper for the job
• identify printing presses and determine which press matches specific job requirements
ARTNM 358 College Magazine: Art Selection and Editing

Units: 1 - 2
Hours: 12 - 24 hours LEC; 18 - 36 hours LAB
Prerequisite: None.
Advisory: ARTH 300 and ARTNM 302
Transferable: CSU
Catalog Date: June 1, 2020

This course provides instruction in the editing of ARC's college magazine, the American River Review, for national competitions sponsored by organizations such as the Columbia Scholastic Press Association and the Associated Collegiate Press. The course focuses on the implementation of a submission process for art work including art handling, tracking of submissions, photography for print and evaluation of submissions. It may be taken four times for credit. A portion of this course may be offered in a TBA component of 6-20 hours which may include photographing 2D and 3D artwork, scanning or photographing photographic artwork, downloading or scanning digital submissions, and production organization such as reformatting and naming files, organizing files into media groups for evaluation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and articulate criteria used for the critique of visual art in competitions
- critique art work submissions
- analyze art works based on defined criteria for competitive panels
- compare and contrast the merits of submitted artwork
- evaluate visual art based on defined criteria
- select visual art for publication for a magazine submitted for competition
- apply production techniques for magazine quality digital images
- compile submissions for entry in competition
- prepare for participation in competition in national competitions

ARTNM 359 College Magazine: Design and Production

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ARTNM 302, 324, 328, 352, or 354
Transferable: CSU
Catalog Date: June 1, 2020

This course provides instruction in the design and production of ARC's college magazine, the American River Review, for national competitions sponsored by organizations such as the Columbia Scholastic Press Association and the Associated Collegiate Press. The course focuses on the graphic design, digital production, and printing of a literary and fine art magazine as well as the publicity, marketing, fund-raising, and distribution of the magazine. It provides the design staff a collaborative experience with the editorial staff taught by the English Department. It may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate leadership ability and group effectiveness in the production of a college magazine.
- develop and implement graphic design concepts into a literary and art magazine.
- develop and produce typographic solutions, visual grid systems, stylizing headings and paragraphs and special feature page layouts.
- explain the principals of visual communication as they relate to page layout and legibility.
- produce industry standard print ready PDF files.
- describe the basic departmental structure of a graphic design studio.
• apply basic work flow management systems used by graphic design studios to meet high pressure deadlines.
• describe core digital production issues as they relate to one color and four-color process printing.
• relate basic raster and vector art requirements as they relate to digital file preparation used for off-set printing.
• collaborate effectively with editorial and design teams to compete in national magazine competitions.

ARTNM 370 Introduction to Illustration

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the history of illustration.
• examine areas of specialization of illustration and analyze required skills for illustrators.
• apply illustration techniques with a variety of media.
• produce a range of visual styles.
• evaluate the appropriate style and media choice in terms of client, audience and print methods.

ARTNM 372 Character Design

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop a comprehensive process for designing characters including character profile, reference, thumbnails, and refinements.
• quickly concept multiple variations for a character including body type, head structure, facial expression, motion studies, and costume.
• differentiate multiple characters based on clear, definable silhouettes.
• develop costumes for a character based on time period, environment, and social class.
• produce accurate turnarounds for a character.
This course introduces the storyboarding process for a range of industries, from film and game entertainment to the industrial and medical industries. It includes creating artwork for the visual interpretation of scripts and provided concepts, as well as developing original ideas. In addition, conceptual exercises, drawing practice, and the use of cinematic rules used in the industry are covered. Topics also include scale and camera angle, camera movement, character staging, composition, basic editing processes, creating animatics, and story reels.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- understand the visual language of cinematic storytelling.
- analyze the three act storytelling structure.
- apply the three act storytelling structure to film.
- demonstrate the ability to translate a script into a storyboard sequence.
- demonstrate the ability to create original story content and translate it into an animatic storyboard sequence.
- prioritize and budget time for storyboarding.

ARTNM 401 Introduction to Web Design

This course introduces technical and conceptual aspects of creating interactive visual media for screen-based delivery. It concentrates on designing standards-based web sites and applying standardized best practices to web design. This course introduces the basics of layout for visual communication by tightly integrating the design concepts with technical execution in a web environment. It also applies industry-standard authoring tools, and closely examines the meaning and validity of interactivity. Meaning and validity of interactivity are closely examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design standards-based websites integrating basic design principles into the application of industry-standard authoring tools
- produce a design from idea to publishing applying industry-standard design workflow
- build information architecture for effective content flow
- create meaningful interactivity
- test and advertise published websites
- critique and analyze websites for their effectiveness in visual communication

ARTNM 402 Intermediate Web Design

This course covers production and intermediate design processes for the web with an emphasis on visual design. It employs various industry standard software applications to create original graphics, control layout and type, process images, and publish professional web pages and/or sites. Topics include an in-depth discussion on the processes and the strategies of combining text, images, animation, video, and audio elements to create compelling visual experiences for web users.
Upon completion of this course, the student will be able to:

- create web pages and sites using intermediate skills associated with standard web authoring tools.
- design sophisticated visual compositions and layouts for the web and mobile devices.
- synthesize both the design concepts and production process to build web projects.
- create interactions on web pages that use digital media and simple animations to increase usability.
- select and apply appropriate navigation patterns for a wide range of screen sizes.
- build and test prototypes for usability.
- analyze and critique a website in terms of design aesthetics and technical competence.

**ARTNM 404 Interactive Basics**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** ARTNM 328, ARTNM 401, or CISW 300  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces the design and delivery of rich interactive content suitable for graphical experiences across personal computers, mobile devices, and screens. Topics include generating interactivity between vector-based graphics, animation, integration of digital audio, raster graphics, and digital video. Industry standard workflow from image authoring to interactive authoring is discussed in detail. Visual design principles and interface design concepts are integrated into the making of portfolio-quality projects.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create images and animation using the tools of a web authoring software.
- create and modify simple objects using design principles.
- create images using layers to form successful composition.
- design the interactivity of sound, video, and animation into a website and mobile device ready website.
- create interactive interface elements using scripting.
- create multimedia web projects to the published to the Web.

**ARTNM 405 Digital 2D Animation**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** ART 300 and ARTNM 302  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course provides techniques for using the traditional principles of animation with industry-standard software. Topics include animating a bouncing ball, ball with a tail, ball with legs, full body bipedal, and a face synchronized to audio. Character animation topics involve locomotion, such as walking and jumping, using the traditional principles. Technical issues, such as frame-by-frame animation (cell animation), rotoscoping, interpolated or f-curve animation, are discussed and applied. Projects can be published on the Web, CD-Rom, DVD, and video.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply the twelve principles of animation to a bouncing ball.
- create humanoid locomotion using the twelve principles of animation.
analyze and apply walk mechanics to humanoid characters.
create basic facial animation synchronized to audio.
analyze and apply the visual component of a phoneme, known as viseme.
create animations with personality and mood.
critique animations on a daily basis.
incorporate criticisms into animations on a daily basis.

ARTNM 406 Design for Tablets

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ARTNM 330, 352, and 402
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces production and design processes of tablet-based media. Various industry standard software applications are employed to create compatible websites, digital documents, PDF presentations, and ePub creations. Topics include the processes and the strategies of combining text, images, animation, video, and audio elements to create compelling visual experiences for tablet-oriented mobile media.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explore trends in tablet-oriented design in regards to size, format, and layout
- determine which publication format works best to communicate design content
- analyze and compare the production capabilities of various design software
- create design layout, navigation system, and media content using mobile design principles
- identify computer languages used for mobile media design

ARTNM 420 Introduction to 3D Modeling

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ART 320, ART 370, ARTNM 302, or ARTNM 370
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces computer-generated three-dimensional, or CG 3D, modeling using industry standard software. The primary focus of this course is modeling using polygons, surfaces, and curves to produce quality demo reel renders of the models. Objects range from simplistic primitive shapes to sophisticated models of animals and plants. Software application tools, such as Autodesk Maya and Pixologic Zbrush, are applied to produce content for use in 3D printing, film, game, fine art, broadcast, medical and industrial animation, and more.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create portfolio quality polygon meshes based on found objects.
- create portfolio quality polygon meshes by translating a 2D image to a 3D object.
- compare and contrast form and space to shape and line.
- research industry standard modeling techniques.
- critique the level of realism and believability of images, according to industry standards.
- create portfolio quality images of a still life from found objects.
ARTNM 421 3D Character Modeling

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTNM 420 with a grade of "C" or better
Advisory: ART 375
Transferable: CSU
Catalog Date: June 1, 2020

This course is a continuation of ARTNM 420. Industry techniques and issues related to humanoid character modeling are analyzed and applied. Industry issues, such as the topology flow of human anatomy, facial blend targets, and joint correction, are developed. Clothing, hair, and accessories are added to the characters, strictly following concept designs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the human anatomical structure for static and dynamic characters.
- create accurate topology for face deformation.
- create accurate edge flow for deformation by assessing movement of human joints, muscles, bone, fats, and skin.
- create facial blend targets for lip synching and facial expression.
- create clothing and hair that naturally flow with the character.
- create a character based on concept designs, strictly following the original concept.
- create a template male and female face and body.
- create an image reference library for character modeling.

ARTNM 422 3D Animation

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ARTNM 405 with a grade of "C" or better
Advisory: ART 375, DANCE 390, or TAP 300
Transferable: CSU
Catalog Date: June 1, 2020

This course provides 3D animation techniques using industry standard software. It covers the traditional principles from the golden years of Disney Studios as they are applied and translated to the computer-generated 3D (CG 3D) environment, and also to characters that walk, breathe, and act according to the twelve principles of animation. Topics also include weight, thought process, and the wave principle. Technical issues, such as walking along an uneven ground, importing and blending MoCap data, and locomotion around obstacles, are addressed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the twelve animation principles to objects and characters using industry standard software.
- differentiate keyframe and f-curve animation and use the strengths of both techniques.
- differentiate pose-to-pose animation and straight-ahead animation and use the strengths of both techniques.
- create a demonstration reel quality animation.
- create clear poses blocking the storytelling keys of a shot.
- critique animations and regularly improve upon animations.
- communicate thought process and weight in the animation of characters.
- create animations of bipedal characters.

ARTNM 423 3D Texturing
This course provides texturing techniques, or image mapping, using industry standard software, such as Adobe Photoshop, Pixologic Zbrush, and Autodesk Maya. Topics include photo-manipulation, unwrapping and painting hard-surface and sub-division surface models and creating a texture library. Environment and character-texture maps are created using image-mapping techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create textured surfaces for computer-generated 3D objects.
- prepare unwrapped objects for image mapping.
- create environments and atmospheres from image mapping and procedural textures.
- create textures using image mapping and procedural mapping.
- create textures for organic characters.
- differentiate texture solutions for varying final outputs.
- create a texture library from photographic and hand painted imagery.

ARTNM 429 3D Rigging and Rig Building

This course provides skills for the articulation of computer-generated three-dimensional, or CG 3D, objects. Projects include the creation of rigs for inanimate objects with the intent to animate, and the creation of a full body rig for bipedal and quadrupedal characters. Scripting languages and rig building tools are utilized to expedite the rigging process. 3D production issues, such as interfaces for animators, are addressed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create rigs that articulate the range of movements of an object.
- diagnose the needs of an object's movement.
- create a concise set of animation controls.
- create rigs that are true to the material of an object.
- create supporting rigs and rig elements that the rigging team can apply to a set of objects.
- research and proficiently apply math and programming skills to solve production problems.
- plan and communicate the needs of the object verbally and in written form to the rigging team.
- create portfolio-quality rigs.

ARTNM 431 3D Short Production

This course provides skills for the articulation of computer-generated three-dimensional, or CG 3D, objects. Projects include the creation of rigs for inanimate objects with the intent to animate, and the creation of a full body rig for bipedal and quadrupedal characters. Scripting languages and rig building tools are utilized to expedite the rigging process. 3D production issues, such as interfaces for animators, are addressed.
This course surveys and practices the pipeline of computer generated three dimensional (CG 3D) imagery based on real world short production scenarios; productions that are three minutes or less. The essential skills needed to survive in the Sacramento Valley CG 3D markets are covered. Areas of focus include a variety of real world short production scenarios, such as court room scene reenactment, work-at-home online markets, small business CG 3D logo, as well as visualization projects in the medical, invention, architectural, and landscaping fields.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the CG 3D production pipeline and apply the pipeline as defined by the needs of the client.
- create a visualization based on a client's product plans.
- critique and revise work routinely to maintain a competitive edge in the CG 3D markets.
- creatively solve production problems in order to deliver content on time and on budget.
- create a demonstration reel designed with his/her specific strengths using the CG 3D production pipeline.
- create an online presence using free web resources and nominally priced resources to expose his/her demonstration reel to gain employment.
- choose techniques for projects confidently knowing how to solve the unique production problems.

ARTNM 450 Portfolio for Art New Media

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: Completion of 9 units from one Art New Media Certificate with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

The course provides essential skills, strategies and processes involved in organizing, selecting, writing and marketing one's creative work. Topics include file organization, file accessibility and backup, research techniques, target identification, resume building, letter of interest, portfolio construction, building resumes, interview techniques, interview body language, job research, and portfolio presentation. The portfolio can be tailored for application for jobs in the creative industry, transfer to 4-year art or graphics programs, graduate schools, gallery exhibitions, artist residencies, scholarships and artist grants.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate opportunities in the creative fields.
- create a resume tailored to art/design-related goals.
- research requirements for the job or school program desired.
- evaluate and compile a portfolio with examples of work to target a job or school program desired.
- professionally present the portfolio.
- examine interview techniques as they pertain to body language, mental preparation, standard interview questions and answers.

ARTNM 495 Independent Studies in Art New Media

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

ARTNM 498 Work Experience in Art New Media
This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of art new media. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of art new media related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
ASL-English Interpreting | American River College

This program provides an integrated series of coursework in American Sign Language (ASL) and ASL-English interpretation to prepare students for entry-level positions. The series provides academic coursework based on a Deaf-centered framework that encourages students to embrace an empowered collaboration with Deaf people. A foundation in ASL discourse and interpretation is established through theoretical models. Emphasis is on the practical application of these models and knowledge in the areas of human relations, language skills, interpreting skills, cultural competence, service learning, and professionalism.

Division Dean       Diana Hicks
Department Chairs  Erica West Oyedele

(916) 484-8653

Associate Degree

A.A. in ASL-English Interpreter Preparation Program

This program provides an integrated series of coursework in American Sign Language (ASL) and ASL-English interpretation to prepare students for entry-level positions. The series provides academic coursework based on a Deaf-centered framework that encourages students to embrace an empowered collaboration with Deaf people. A foundation in ASL discourse and interpretation is established through theoretical models. Emphasis is on the practical application of these models and knowledge in the areas of human relations, language skills, interpreting skills, cultural competence, service learning, and professionalism.

The ASL-English Interpreter Preparation Program Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Successful completion of one of the following: a) Graduation from an accredited high school in the United States; b) General Educational Development (GED) Test; c) California High School Proficiency Examination (CHSPE) prior to time of application; d) An Associate of Arts/Associate of Science degree or higher from a regionally accredited college; e) A high school diploma from a school outside the United States with transcripts evaluated by a National Association of Credential Evaluation Services (NACES) approved independent agency. Such cases will be evaluated on an individual basis; f) College attended outside the United States with transcripts evaluated by a NACES approved independent agency, demonstrating A.A./A.S. degree or higher. Such cases will be evaluated on an individual basis.

- Completion of DEAF 316: American Sign Language IV or the equivalent, with a grade of “C” or better.

- A completed pre-enrollment application.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Pre-enrollment applications and deadlines for the ASL-English Interpreter Preparation Program (IPP) are available from the Humanities Division, the coordinator of the IPP or at the ARC IPP website. The Interpreter Preparation Program currently accepts students once per year for the Fall semester which begins in August. Applications for the Fall semester are available by February 15th and the deadline to submit the application is by the second Friday in April.

- Only qualified applicants who meet the educational requirements and follow the pre-enrollment procedures will be considered for the program. Meeting all these requirements does not guarantee acceptance into the program.

- Upon completion and acceptance of the pre-enrollment application, students will participate in an interview/screening process conducted by the Interpreter Preparation Program. Should the number of qualified applicants exceed available space in the program, selection will be based on the rankings from the interview/screening process.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- discuss and apply knowledge of linguistic, cross-cultural, and interpretation theories.

- demonstrate communicative competency in English and in ASL through effective communication in a variety of settings with Deaf and hearing participants of varying age, gender, and ethnicity.

- analyze, identify, and apply personal, professional, and ethical decisions in a manner consistent with theoretical models and standard professional practices that align in service with the goal of the setting and Deaf and hearing participants.

- demonstrate interpersonal competencies that foster effective communication and productive collaboration with colleagues, Deaf and hearing consumers, employers, and team members in an interpreting context.

- formulate effective interpretations both consecutively and simultaneously following a practice profession framework.

- develop an on-going professional action plan integrating interactions with Deaf related organizations, connections with interpreter employers, and the implications of
Career Information

American Sign Language-English interpreters are in demand locally, regionally, and nationally. A qualified American Sign Language-English interpreter enjoys a rewarding, highly flexible career. This field is expanding; growth in the job market is projected.

Certificate of Achievement

ASL-English Interpreter Preparation Program Certificate

This program provides an integrated series of coursework in American Sign Language (ASL) and ASL-English interpretation to prepare students for entry-level positions. The series provides academic coursework based on a Deaf-centered framework that encourages students to embrace an empowered collaboration with Deaf people. A foundation in ASL discourse and interpretation is established through theoretical models. Emphasis is on the practical application of these models and knowledge in the areas of human relations, language skills, interpreting skills, cultural competence, service learning, and professionalism.

Catalog Date: June 1, 2020

Career Information

American Sign Language-English interpreters are in demand locally, regionally, and nationally. A qualified American Sign Language/English interpreter enjoys a rewarding, highly flexible career. This field is expanding; growth in the job market is projected.

ASL-English Interpreting (INTRP)

INTRP 300 Ethics and Professional Standards of Interpreting

Units: 3
Hours: 54 hours LEC
Prerequisite: INTRP 303 and 305 with grades of "C" or better
This course provides an exploration of personal ethics and values, the Registry of Interpreters for the Deaf (RID) Code of Professional Conduct, and interpersonal relations as they relate to professional and ethical decision-making. Emphasis is on professional integrity, managing personal and professional behaviors, and conflict resolution for interpreters.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze personal ethics and mores as an American and as part of the D/deaf community.
- distinguish ethical standards within the RID Code of Professional Conduct.
- formulate ethical decisions regarding presented case studies.
- assess personal and professional behaviors appropriate to intercultural interpreted interactions.
- analyze ethical fitness regarding professional integrity, conflict resolution, and lifelong learning.
- assemble portfolio documentation related to a professional business plan.

INTRP 301 Discourse Analysis & Translation

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Enrollment Limitation: Acceptance into the Interpreter Preparation Program through a pre-enrollment application and interview/screening process.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides a foundation in discourse analysis and an introduction to translation with a focus on understanding the context, intentions, and cultural norms used during various communication events. Topics include conversational signals, prosodic features, register variation, message analysis, and message transfer and translation. This course is formerly known as SILA 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the sociolinguistic aspects that impact communication and their influence on linguistic variation in various contexts.
- identify appropriate conversational signals and incorporate prosodic features in ASL and English.
- apply a 10-step discourse analysis process to examine the meaning and structure of ASL and English texts in various contexts.
- analyze and reformulate the meaning in main ideas, idea units, and word-level translations from the source text.
- appraise translation work based on various ASL and English source texts through ongoing self-assessment and peer review.

INTRP 303 Orientation to the Interpreting Profession

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Enrollment Limitation: Acceptance into the Interpreter Preparation Program through a pre-enrollment application and interview/screening process.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides a working knowledge of the interpreting profession. Topics include the history of the interpreting field, personal and professional demands, laws and regulations, certification and evaluation standards, extra linguistic knowledge and the employment environment. Career-long learning, self-awareness, and intrapersonal and interpersonal skills are explored during this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess intrapersonal and interpersonal skills and aptitudes as they relate to the interpreter, colleagues, consumers, and employers.
• identify and discuss the major historical eras and professional organizations in the field of interpreting.
• research state regulations, state and national laws, and evaluation standards that affect the interpreting profession.
• describe current practices regarding business skills and the employment environment.
• plan a progression of courses to complete the American River College Interpretation Preparation Program.

INTRP 305 ASL to English Interpreting

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: INTRP 303 with a grade of "C" or better
Corequisite: INTRP 307
Transferable: CSU
Catalog Date: June 1, 2020

This course provides basic skills in translation and consecutive interpreting from American Sign Language (ASL) to English. Topics include a theoretical analysis of the interpreting process, application of academic and world knowledge, and an introduction to fundamental interpreting skills and techniques for professional interactions.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• appraise cognitive processing and interpreting theory related to translation and consecutive interpreting.
• apply academic and world knowledge during ASL to English translation and consecutive interpreting.
• analyze and integrate register and discourse analysis.
• manage the flow of communication during the interpreting process.
• assess source language comprehension and incorporate feedback from the D/deaf consumer to modify interpretation.
• construct equivalent discourse in the target language, English, while monitoring message output.
• analyze the effectiveness of model, self, and peer interpreting performance by applying contemporary theories of performance assessment and peer review.
• choose appropriate personal, interpersonal, linguistic, cultural, and knowledge-based skills for professional interactions.

INTRP 307 English to ASL Interpreting

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: INTRP 303 with a grade of "C" or better
Corequisite: INTRP 305
Transferable: CSU
Catalog Date: June 1, 2020

This course provides basic skills in translation and consecutive interpreting from English to American Sign Language (ASL). Topics include a theoretical analysis of the interpreting process, application of academic and world knowledge, and an introduction to fundamental interpreting skills and techniques for professional interactions.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• appraise cognitive processing and interpreting theory related to translation and consecutive interpreting.
• apply academic and world knowledge during English to ASL translation and consecutive interpreting.
• analyze and integrate register and discourse analysis.
• manage the flow of communication during the interpreting process.
• assess source language comprehension and incorporate feedback from the hearing consumer to modify interpretation.
• construct equivalent discourse in the target language, ASL, while monitoring message output.
• analyze the effectiveness of model, self, and peer interpreting performance by applying contemporary theories of performance assessment and peer review.
choose appropriate personal, interpersonal, linguistic, cultural, and knowledge-based skills for professional interactions.

INTRP 310 Introduction to Deaf Blind Interpreting

Units: 0.5
Hours: 9 hours LEC
Prerequisite: INTRP 303 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an orientation to the Deaf-Blind community. Topics include sighted guide techniques, environmental and ergonomic considerations, modifications to the interpreting models, and additional responsibilities when interacting with Deaf-Blind individuals.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- outline an overview of the field of interpreting and working with Deaf-Blind persons.
- analyze the most common modes of communication used when interacting with Deaf-Blind people.
- choose the preferred type of communication and interpretation techniques.
- describe environmental and ergonomic considerations.
- identify modifications to the interpreting mode.

INTRP 312 Introduction to Oral Transmission

Units: 0.5
Hours: 9 hours LEC
Prerequisite: INTRP 303 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides exposure to, background in, and techniques for oral transmission and interaction with oral Deaf people. Topics include speechreading skills, articulation, and support techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate heightened awareness, sensitivity, and the need for specialized communication with Deaf and hard-of-hearing people who prefer oral communication.
- outline environmental factors influencing the oral transmission process.
- apply factors influencing the process of speechreading.
- analyze and use verbal support techniques in oral interpreting.
- analyze and use support techniques in oral interpreting.
- transmit a message orally, using various techniques.

INTRP 314 Introduction to Multicultural Communication

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Advisory: INTRP 305 and 307
Transferable: CSU
Catalog Date: June 1, 2020

This course is a focus on the field of multicultural communication. Cultural and linguistic diversity, personal life experiences, and enhancing racial and ethnic diversity in the interpreting profession are emphasized.
Upon completion of this course, the student will be able to:

- analyze the depth and breadth of a multicultural and/or multilingual situation.
- appraise cultural implications of personal cultural norms, behaviors, and values.
- describe the cultural and linguistic diversity of the life of a specific cultural group.
- interact in a culturally sensitive manner with a specific cultural group.

This course provides intermediate knowledge and skill development in the area of simultaneous interpreting. Both American Sign Language (ASL) to English and English to ASL interpreting skills are incorporated. Topics include an application of the interpreting process, a focus on analytical and composition skills, incorporation of cultural considerations, and team interpreting.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assess interpreting situations to determine if qualified to accept the job.
- appraise cognitive processing, interpreting theory, and dual task strategies related to consecutive and simultaneous interpreting.
- evaluate academic and world knowledge during English to ASL and English to ASL simultaneous interpreting.
- assess source language comprehension and incorporate feedback from the consumer to modify interpretation.
- construct equivalent discourse in the target language while monitoring message output.
- choose appropriate personal, interpersonal, linguistic, cultural, and knowledge-based skills for professional interactions.
- examine the impact of cultural differences on interpreting situations.
- manage the flow of communication during the interpreting process.
- provide interpreting services that reflect awareness and sensitivity to culturally and ethnically diverse groups.
- analyze the effectiveness of model, self, and peer interpreting performance by applying contemporary theories of performance assessment and peer review.

This course provides basic skills in transliteration. It incorporates both ASL to English and English to ASL literal to idiomatic transliteration skills. Topics include language and consumer assessment, contact signing forms, semantic appropriateness, syntactic considerations, prosodic features, lipshadowing, lipreading, and fingerspelling reception and production.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast interpretation and transliteration.
- conduct linguistic assessments of various signed models.
- analyze context and content of source language in English, contact signing, and ASL.
- transliterate contact signing language samples demonstrating skills outlined in the contact signing assessment strategies.
- assess and demonstrate knowledge of the variety of cultural identifications by Deaf consumers.
- research vocabulary building related to ASL, English, and contact signing.
- produce ASL to English and English to ASL literal to idiomatic transliterations using information processing and assessment strategies.
- use appropriate ergonomics within the transliterated setting.

**INTRP 330 Introduction to Educational Interpreting, K-12**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** INTRP 305 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces interpreting in the educational setting with a focus on the elementary and secondary levels of education. Emphasis is on vocabulary development and enrichment specific to educational interpreting, resource development, team building, roles and responsibilities, communicating with children, and ethics.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify mandated reporting situations and their impact in K-12 settings.
- analyze the roles and responsibilities of the student, instructor, and interpreter in a variety of K-12 settings.
- describe the various non-interpreting tasks which may be required of educational interpreters (tutor, aide, notetaker, lunchroom/playground/hall monitor, sign language teacher, resource, etc.).
- identify the characteristics of settings in which educational interpreting may be provided (classroom, field trips, parent-teacher conferences, Individual Education Plan meetings, assemblies, sporting events, theater, driver's education, etc.).
- assess, analyze, and interpret Deaf children's language samples.
- apply the RID Code of Professional Conduct and Educational Interpreter Performance Assessment Guidelines for Professional Conduct for educational interpreting.
- interpret effectively for mock classroom environments.

**INTRP 332 Introduction to Educational Interpreting, Post Secondary**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** INTRP 305 and 307 with grades of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an introduction to interpreting in the educational setting with a focus on the postsecondary level of education. Emphasis is on vocabulary development and enrichment specific to educational interpreting, resource development, team building, roles and responsibilities, communicating with children, and ethics.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- choose translations that demonstrate lexical and syntactic flexibility for basic source texts in the educational setting.
- compile remedies for specific educational interpreting situations.
- identify unique characteristics of the variety of settings in which educational interpreting might be provided.
- research possible resources in the academic setting and community in preparation for a given educational interpreting assignment.
- assess, analyze, and interpret Deaf students' language samples.
- evaluate and document effective team interpreting strategies.
- interpret effectively in live and videotaped situations.
INTRP 334 Introduction to Medical Interpreting

Units: 1
Hours: 18 hours LEC
Prerequisite: INTRP 305 and 307 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

The course is an introduction to interpreting in the medical setting. Logistics, role and ethics, the impact of culture and language use are considered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast medical environmental strategies, including positioning and sight lines.
- choose translations that demonstrate lexical and syntactic flexibility for basic source texts in the medical setting.
- generate appropriate ethical and cultural constructs in medical situations.
- detail the role and responsibilities of an interpreter in a medical setting.

INTRP 336 Introduction to Performing Arts Interpreting

Units: 1
Hours: 18 hours LEC
Prerequisite: INTRP 305 and 307 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to interpreting in the performing arts setting. Character development, the function of space in American Sign Language (ASL), environmental considerations, team collaboration, and interpretation are considered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and construct characters related to a source text.
- determine and outline appropriate environmental strategies, including positioning and sight line techniques.
- choose appropriate morphological and syntactic linguistic features.
- compose an interpretation of a performing arts text.
- evaluate strategies in working as a member of an interpreting team.

INTRP 338 Introduction to Social Services and Employment Interpreting

Units: 1
Hours: 18 hours LEC
Prerequisite: INTRP 305 and 307 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to interpreting in social services and employment settings. Environmental considerations, interpretation, resource building, teamwork, and ethics are considered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast environmental strategies, including positioning and sight lines.
- interpret ASL/English in a variety of social service and employment mock environments.
compose strategies in working as a member of a team.

- research and incorporate interpretation strategies regarding specific settings including Deaf Safe, designated interpreter, corporate environment, and Department of Rehabilitation.
- apply ethical and cultural considerations in social services and employment-related situations.

**INTRP 340 Introduction to Video Relay and Telephone Interpreting**

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** INTRP 305 and 307 with grades of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an introduction to video relay and telephone interpreting. Environmental considerations, vocabulary development, resource building, video relay and telephone processes, etiquette, and ethics are considered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate appropriate environmental strategies including positioning and lighting techniques.
- research methods to be used when telephone interpreting.
- analyze models in video interpreting.
- construct situation-specific strategies for interpreting on video and telephone.
- outline ethical and cultural considerations in specific settings.
- interpret effectively in live and videotaped situations.

**INTRP 342 Introduction to Religious Interpreting**

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** INTRP 305 and 307 with grades of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an introduction to interpreting in the religious setting. Environmental considerations, vocabulary development, resource building, introductory knowledge, and ethics are covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast environmental strategies, including positioning, lighting, and sight lines.
- plan a discourse analysis for representative texts in the religious setting.
- specify resources available for specific religious settings.
- research and outline strategies in working as a member of a team.
- formulate interpretations regarding specific prayers and hymns.
- describe appropriate ethical and cultural considerations in religious situations.

**INTRP 344 Introduction to Working with a Certified Deaf Interpreter**

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** INTRP 305 and 307 with grades of "C" or better  
**Transferable:** CSU
This course is an introduction to interpreting while working with a certified Deaf interpreter (CDI). Topics include: language and communication variation; specialized skills of the CDI; explanation of the role, function, and process of Deaf/hearing teams; and an introduction to the conjoint work involved in the collaborative interpreting process.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify language and communication variations within hearing culture both situational and temporary.
- outline the specialized skills and experience that the certified Deaf interpreter brings to the team.
- explain the role, function, and process of Deaf/hearing interpreting teams with an understanding of the possible power imbalances involved.
- examine aspects of the conjoint work involved in a collaborative interpreting process.

INTRP 349 Signing for Dependency Situations

Units: 0.5
Hours: 9 hours LEC
Prerequisite: INTRP 303 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an introduction to the signs used by Deaf people related to sex, alcohol, and drug abuse. Resources available to Deaf people including Deaf Hope, Deaf Safe, and sobriety meetings are covered. Methods for interpreting these resources are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify signs used in substance dependency and sexual situations.
- research resources regarding sobriety available to Deaf people.
- research resources regarding sexual assault, domestic violence, and keeping safe for Deaf people.
- analyze the ASL resources available in substance dependency and sexual situations.

INTRP 350 Service Learning for Interpreters

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: INTRP 301 and 303 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an opportunity to collaborate to build relationships with the Deaf community. Topics include aligning goals and values of the Deaf community through a reciprocal, respectful, and mutually rewarding partnership, resulting in progress toward the Deaf community’s goals and enhanced learning of the responsibilities between future practitioners and the communities in which they work. A portion of this course may be offered in a TBA component of 27 hours which will include service learning provision.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the relationship between Deaf community assets and capacity of the partnership to address identified needs.
- apply models of social change and experiential learning to personal experience.
- collaborate to construct service learning projects that are responsive to community needs.
- demonstrate cross-cultural and ASL discourse competencies during direct interaction and indirect conversations when Deaf community members are present.
INTRP 352 Mock Interpreting I

This course provides an opportunity to interpret for live or taped presenters in class. Focus is on application of text analysis, assignment preparation, team interpreting, and information processing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the ability to research and prepare for an in-class interpretation.
- analyze and document principles of Demand Control Schema related to team interpreting.
- produce a simultaneous interpretation that contains main points.
- assess interpreting performance and identify strategies for improvement.

INTRP 354 Mock Interpreting II

This course provides an opportunity to interpret for an ongoing college class. Focus is on application of text analysis, assignment preparation, information processing, the role of the educational interpreter, and giving and receiving feedback. A portion of this course may be offered in a TBA component of 40.5 hours which may include preparation for and interpreting in mock interpreting settings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research and prepare for an interpreting assignment.
- analyze and document principles of Demand-Control Schema in an interpreted assignment.
- integrate techniques for primary tasks inclusion, text analysis, and process management.
- formulate a simultaneous interpretation for a full class period while working with a team.
- assess interpreting performance and identify strategies for improvement.

INTRP 356 Fieldwork in Interpretation

This course provides an opportunity to apply classroom learning to real-world practice in interpreting in both on-campus and off-campus settings. It also provides an opportunity to take one of the national evaluation system examinations. A portion of this course may be offered in a TBA component of 108 hours which may include observation of interpreters and individual and team interpreting practice.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- formulate skills that enhance relationships with other employees, consumers, and the employer.
- choose specific professional skills applied to the delivery of interpreting services with Deaf and hearing consumers.
- analyze and document principles of interpreter observation and Demand-Control Schema for five different settings/days.
- research interpreting practices working with at least one interview with an interpreting services manager.
- complete employment application procedures such as a resume, cover letter, and interviewing techniques.
- prepare for and take a national skills-based assessment.
- document his/her work throughout the ARC Interpreter Preparation Program via a capstone portfolio.

**INTRP 495 Independent Studies in Sign Language Studies - Interpreting**

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None  
Transferable: CSU  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Astronomy is part of the general education program at American River College. The astronomy course offerings include Introduction to Astronomy, The Solar System, Stars/Galaxies/Cosmology, Introduction to Astrobiology, Honors Introduction to Astronomy, Independent Studies in Astronomy, and an Astronomy Laboratory. All courses comply with general education transfer requirements.

Division Dean  Dr. Rina Roy
Department Chairs  Shih-Wen Young
(916) 484-8107

Associate Degree

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Catalog Date: June 1, 2020

### Astronomy (ASTR)

**ASTR 300 Introduction to Astronomy**

This course covers topics in modern planetary and stellar astronomy, such as dwarf, jovian, terrestrial, and extrasolar planets and the life cycle of stars, black holes, and supernovae. It also includes topics on cosmology and galactic astronomy, such as dark matter, dark energy, the Big Bang, and the expansion of the Universe.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate early models of the solar system using the scientific method and outline the historical events that led to our current model.

---

### Student Learning Outcomes

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.
apply theories and models from classical physics and modern physics to explain astronomical observations, such as the motion of objects in the sky, the formation of planets, and the life cycle of stars.

classify the planets as terrestrial or jovian and list the characteristics of each category.

discuss the discovery of new Kuiper belt objects and how their existence changed our definition of what a planet is.

describe how extrasolar planets are detected and discuss their properties.

describe the structure of the Sun and its source of energy.

explain how astronomers collect light from distant stars and discuss what can be learned from analyzing that light.

classify different types of stars and galaxies, and discuss the stellar life cycle in the context of stellar evolution.

describe the astronomical evidence for dark matter and dark energy, and discuss their implications.

describe the scientific evidence and models regarding the nature and origin of the Universe, including its evolution from the Big Bang up to today.

ASTR 310 The Solar System

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100, 104 or 132 with a grade of "C" or better, AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (ASTR 300, 310 and 320 combined: maximum credit, two courses)
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course explores the nature and evolution of the solar system. Topics include the night-time sky, the history of astronomy, the tools of astronomy, and the origins and characteristics of planets, their satellites, and other components of the solar system. Emphasis is placed on how astronomers gain and refine their knowledge of the Universe and interpret the latest results of planetary exploration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and explain the apparent motion of stars and planets in the night-time sky over the course of a day, a season, and a year.
- evaluate early models of the solar system using the scientific method, and outline the historical events that led to our current model.
- apply current scientific theories and models from classical and modern physics to explain astronomical observations, such as the motion of objects in the solar system and the formation and evolution of planets and the Sun.
- classify the planets as terrestrial or jovian and list the characteristics of each category.
- describe the role plate tectonics, volcanism, and magnetic fields play in shaping the surfaces, habitability, and other properties of different planetary bodies.
- identify the larger moons in the solar system and describe what makes them unique.
- identify other elements of the solar system, such as comets and asteroids; describe their characteristics and what can be learned from them.
- discuss the discovery of new Kuiper belt objects and how their existence changed our definition of what a planet is.
- describe how extrasolar planets are detected and discuss their properties.
- describe the structure of the Sun and its source of energy.

ASTR 320 Stars, Galaxies, and Cosmology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100, 104 or 132 with a grade of "C" or better, AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (ASTR 300, 310, and 320 combined: maximum credit, two courses; ASTR 320 and 480 combined: maximum credit, one course; ASTR 320 and 481 combined: maximum credit, one course)
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course explores the nature and evolution of stars, galaxies, and the Universe. Topics include the history of astronomy, the tools of astronomy, star classification, stellar...
evolution, neutron stars, black holes, and the Big Bang. Emphasis is placed on how astronomers gain and refine their knowledge of the Universe and interpret the latest results of space exploration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate early models of the Universe using the scientific method and outline the historical events that led to our current model.
- explain how astronomers collect light from distant stars and discuss what can be learned from analyzing that light.
- apply theories and models from classical physics and modern physics to explain astronomical observations, such as the formation of black holes, the red-shift of light coming from distant galaxies, and the life cycle of the Sun.
- classify different star types and discuss their life cycles in the context of stellar evolution.
- classify galaxies and describe how they formed and evolved.
- describe the astronomical evidence for dark matter and dark energy, and discuss their implications.
- discuss the scientific evidence and models regarding the nature and origin of the Universe, including its evolution from the Big Bang up to today.

ASTR 330 Introduction to Astrobiology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100, 104 or 132 with a grade of "C" or better, AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (ASTR 300, 310 and 320 combined: maximum credit, two courses)
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course explores the possibilities of life beyond Earth and what we can learn from terrestrial life forms surviving in extreme conditions. Topics include the origin, biology, and evolution of life on Earth, habitability and interior energy sources of Earth and other planets in the solar system, the likelihood of life existing on other planets or moons within our solar system, attempts to locate life within our solar system, and attempts to communicate with intelligent life in other parts of the galaxy.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the origin of life on Earth and describe the evidence supporting the current models.
- describe how plate tectonics, volcanism, the atmosphere, and magnetic fields influenced the evolution of life on different planetary bodies.
- construct a set of criteria for determining the likelihood of finding life in a particular environment.
- evaluate the evidence for past microbial life on Mars.
- discuss the possibility of finding life on other planets or moons in the solar system.
- assess the chances of communicating successfully with technically advanced civilizations elsewhere in the galaxy.
- describe the nature of life on Earth: from cells to DNA, Darwinism, and the evolution of species.
- discuss topics related to astrobiology, such as the Cambrian explosion, mass extinctions, and genetic engineering of artificial life forms.
- identify different types of extremophiles and discuss how life can exist under such extreme conditions.

ASTR 400 Astronomy Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: ASTR 300, 310, 320, or 330
Transferable: CSU; UC
General Education: CSU Area B3; IGETC Area 5C
Catalog Date: June 1, 2020

This course covers the practical use of a telescope for visual observation of astronomical objects and the analysis of astronomical data. Topics may include constellation
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up and align a telescope.
- locate constellations and deep sky objects in the night sky with the aid of a telescope and star chart.
- explain the apparent motions of the planets, Sun, and stars.
- explain eclipses and the phases of the Moon.
- explain sunspots and the basic functioning of the Sun.
- analyze astronomical data.
- list different types of spectra used by astronomers and explain what they reveal about the composition and the temperature of stars.
- organize data on stellar properties to create a Hertzsprung-Russell (HR) diagram.
- estimate the age of the Universe based on Hubble’s Law and the Hubble time.

ASTR 481 Honors Astronomy: Stars, Galaxies, and Cosmology

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | Placement into ENGWG 480 through the assessment process. |
| Advisory: | MATH 100 or 132 with a grade of “C” or better |
| Transferable: | CSU; UC (UC Credit limitation: ASTR 320 and 481 combined: maximum credit, one course) |
| General Education: | AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C |
| Catalog Date: | June 1, 2020 |

This seminar-style course is an in-depth introduction to astronomy, focusing on stars, galaxies, and cosmology. It approaches current topics in astronomy through class discussion and laboratory activities, with an emphasis on critical thinking, problem-solving techniques, and conceptual reasoning.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- systematize astronomical conceptual knowledge while evaluating current astronomy theories and observations.
- discuss modern topics and problems pertaining to stellar evolution, galactic astronomy, cosmology, and related areas.
- estimate the age of the Universe based on Hubble’s Law and the Hubble time.
- explain how astronomers collect light from distant stars and discuss what can be learned from analyzing that light.
- classify different star types and discuss their life cycles in the context of stellar evolution.
- describe the astronomical evidence for dark matter and dark energy, and discuss their implications.
- discuss the scientific evidence and models regarding the nature and origin of the Universe, including its evolution from the Big Bang up to today.
- apply theories and models from classical physics and modern physics to explain astronomical observations, such as the formation of black holes, the red-shift of light coming from distant galaxies, and the life cycle of the Sun.
- conduct optical and radio telescope observations and data analysis.
- set up and align a telescope.
- explain the apparent motions of the planets, Sun, and stars.

ASTR 495 Independent Studies in Astronomy

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Automotive Collision Technology | American River College

This degree or certificate provides an extended combination of classroom and hands-on shop experience to prepare for careers in all phases of automotive collision technology. Topics include component repairs, structural and nonstructural repairs and refinishing. It also covers various automotive systems, such as heating and air-conditioning, suspension steering, and electrical.

Division Dean
Gary Aguilar

Department Chairs

The Automotive Collision Technology, Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and estimate automotive collision damage.
- develop a repair plan.
- repair automotive collision mechanical damage.
- repair frame/unibody automotive collision structural damage.
- repair automotive collision body damage.
- refinish automotive collision damage.

Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising careers with high wages. Students who have successfully completed this program are working as non-structural, structural, refinish and estimating technicians. The U.S. Labor Department reports that job opportunities for auto collision specialists are excellent because of the large number of older workers who are expected to retire in the next 5 to 10 years. In addition, it points out that experienced technicians are rarely laid off and that employers prefer to hire graduates of a formal training program for which provides a foundation in the latest collision technology, including the techniques and equipment used on the job.

Certificates of Achievement

Automotive Claims Estimator Certificate

This program provides the technical and practical skills necessary to properly diagnose collision-damaged vehicles and to document the cost and time necessary to repair collision-damaged vehicles. The use of state-of-the-art, computer-generated estimating programs and video imaging are used to prepare itemized estimates on collision-damaged vehicles. The procedures to prepare itemized estimates detailing the required procedures and parts necessary to correctly repair the vehicle are also covered.

Catalog Date: June 1, 2020

Total Units: 16

^Keyboard proficiency test. This program can be completed in 15 units if student passes keyboarding test.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- complete an accurate repair estimate
- apply technical skills necessary to remove, replace and align damaged cosmetic and mechanical related components
- recognize and identify direct, indirect and secondary damage on collision-damaged vehicles
- create a marketing plan for a small business utilizing appropriate data
- analyze the four functions of management: planning, organizing, directing, and evaluating
- demonstrate methods for building effective customer service teams
Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising careers with high wages. The U.S. Labor Department reports that job opportunities for auto collision specialists are excellent because of the large number of older workers who are expected to retire in the next 5 to 10 years. In addition, it points out that experienced technicians are rarely laid off and that employers prefer to hire graduates of a formal training program because it provides a foundation in the latest collision technology, including the techniques and equipment used on the job.

Automotive Collision Technology. Certificate

This program provides a combination of classroom and hands-on shop experience to prepare for careers in all phases of automotive collision technology repair. Topics include component repairs, structural and non-structural repairs and refinish. It also covers various automotive systems, such as heating and air-conditioning, suspension steering, and electrical.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and estimate automotive collision damage
- repair automotive collision mechanical damage
- repair frame/unibody automotive collision structural damage
- repair automotive collision body damage
- refinish automotive collision damage

Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising careers with high wages. Students who have successfully completed this program are working as apprentice shop technicians. The U.S. Labor Department reports that job opportunities for auto collision specialists are excellent because of the
large number of older workers who are expected to retire in the next 5 to 10 years. In addition, it points out that experienced technicians are rarely laid off and that employers prefer to hire graduates of a formal training program because it provides a foundation in the latest collision technology, including the techniques and equipment used on the job.

Certificates

Automotive Collision Technology-Non-Structural Certificate

This certificate provides a combination of classroom and hands-on experience to prepare for careers in non-structural automotive collision technology. Topics include automotive collision basic, component and non-structural repairs. This certificate is intended for students who have completed the Automotive Collision Technology Certificate and need to obtain a higher skill level to obtain higher I-CAR pro levels.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify collision damage
- repair vehicle sheet steel
- determine repair or replace based on I-CAR/ASE criteria
- repair hybrid vehicles to meet legal safely standards

Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising career with high wages. Students who have successfully completed this program are working as body repair technicians. The U.S. Labor Department reports that job opportunity for auto collision specialists are excellent because of large number of older workers who are expected to retire in the next 4 to 10 years. In addition, it points out that experienced technicians are rarely laid off and employers prefer to hire graduates of a formal training program because it provides a foundation in the latest collision technology, including the techniques and equipment used on the job.

Automotive Collision Technology-Refinish Certificate

This program provides a combination of classroom and hands-on shop experience to prepare for a career in automotive collision technology refinishing. Topics include component repair, non-structural repairs and, refinishing. This certificate is intended for students who are interested in exploring the field of Automotive Collision Refinish.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- identify color matching and solutions
- apply color blending procedures including application
- apply paint material with proficiency
- polish repaired surface to factory finish
- prepare surface in all application phases
- remove and install adjacent parts for quality refinish preparation

Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising careers with high wages. Students who have successfully completed this program are qualified candidates for refinish apprenticeships. The U.S. Labor Department reports that job opportunities for auto collision specialists are excellent because of the large number of older workers who are expected to retire in the next 5 to 10 years. In addition, it points out that experienced technicians are rarely laid off and that employers prefer to hire graduates or a formal training program because it provides a foundation in the latest collision technology, including the techniques and equipment used on the job.

Automotive Collision Technology-Structural Certificate

This program provides a combination of classroom and hands-on shop experience to prepare for a career in automotive collision structural repairs. This certificate is intended for students who have completed the Automotive Collision Technology Certificate and need to obtain a higher skill level in the field.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify structural damage
- mount and measure vehicles
- pull and square damaged structural areas
- perform collision related welding of sheet steel
- remove and install components

Career Information

This program provides training and hands-on experience in high-demand skills that lead to promising careers with high wages. Students who have successfully completed this program are working as frame/unibody technicians. The U.S. Labor Department reports that job opportunities for auto collision specialists are excellent because of the large number of older workers who are expected to retire in the next 5 to 10 years. In addition, it points out that experienced technicians are rarely laid off and that employers prefer to hire graduates of a formal training program because it provides a foundation in the latest collision technology, including the techniques and equipment used on the job.
ACT 100 Automotive Collision Basics

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the basics of automotive collision repair of traditional, electric, and electric hybrid vehicles. Topics include use and disposal of hazardous materials; lighting, starting, and charging systems; and appropriate use and maintenance of tools and equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze fundamental damage on a vehicle.
- use, handle and dispose of hazardous chemicals.
- recognize tools and use them safely.

ACT 110 Component Repairs

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ACT 100 with a grade of "C" or better
Catalog Date: June 1, 2020

This course provides the technical principals and theories to perform limited and supervised repairs to collision-damaged vehicles. It covers how to safely remove, inspect, replace, and align bolt-on body components per vehicle manufacturers' specifications. It covers protection of mechanical and electrical systems, removal of damaged parts, removal and re-installation of movable glass, diagnosis of wind noise and water leaks, and techniques applicable to damaged vehicles. Students enrolled in the Collision Technology program at American River College (ARC) may be eligible to apply for Inter-Industry Conference on Automotive Collision Repairs (I-CAR) points and I-CAR certifications. This ARC-ACT/I-CAR alliance course also prepares students for Automotive Service Excellence (ASE) testing and National Automotive Technicians Education Foundation (NATEF) training standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply technical skills necessary to remove, replace, and align damaged mechanical and cosmetic sheet metal components per manufacturers' specifications.
- identify direct, indirect, and secondary damage on collision-damaged vehicles.
- demonstrate the correct and safe use, operation, and application of power and hand tools used in auto collision repair.
- examine, adjust, and replace movable door glass and associated electrical systems.
- assess and eliminate vehicle wind noise and water leaks.

ACT 120 Non-Structural Repair

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ACT 100 with a grade of "C" or better
Catalog Date: June 1, 2020

This course provides the technical principles and theories to perform limited and supervised repairs to collision-damaged vehicles. It covers the fundamentals and theory of automotive collision repair procedures including composite repairs and replacements. Foam application techniques pertaining to noise reduction and structural strength are implemented. Additionally, metal straightening theory and techniques for steel and aluminum repairs, and the decision to make repairs vs. replacement are included. Students enrolled in the Collision Technology program at American River College (ARC) may be eligible to apply for Inter-Industry Conference on Automotive Collision Repair (I-CAR) points and I-CAR industry certifications. This ARC-ACT/I-CAR alliance course also prepares students for Automotive Service Excellence (ASE) testing, and National Automotive Technicians Educational Foundation (NATEF) training standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- repair and align damaged sheet metal and component parts on late model vehicles.
• evaluate the types of damage on collision damaged vehicles.
• determine procedures, techniques, and tools used to repair collision damaged vehicles.
• operate power and hand tools used in vehicle collision repair.
• evaluate repair vs. replacement decisions.
• implement composite repairs and replacement techniques.
• utilize structural and Noise Vibration Harshness (NVH) foams in the repair process.

ACT 130 Structural Repair

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ACT 100 and 131 with grades of "C" or better
Catalog Date: June 1, 2020

This course covers principles and theories of automotive collision repair, including component alignment, component replacement, structural panel repair or replacement, corrosion protection, and chassis/frame alignment. Sectioning and full-panel replacement techniques and procedures are covered, including welding and self-piercing rivet adhesive bonding. Required corrosion protection techniques are applied. Students enrolled in the Collision Technology program at American River College (ARC) may be eligible to apply for Inter-Industry Conference on Automotive Collision Repair (I-CAR) points and I-CAR industry certifications. This ARC-ACT/I-CAR alliance course also prepares students for Automotive Service Excellence (ASE) testing, and National Automotive Technicians Education Foundation (NATEF) training standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and analyze structural damage to collision damaged vehicles.
• inspect and measure damage using industry standard procedures and equipment.
• restore collision damaged aluminum and steel to pre-accident condition.
• evaluate composite paneled vehicles and body panels for repair versus replacement decisions.
• remove, repair, replace, and install panels on Unibody type systems.
• apply theory, techniques, and procedures for restoration of structural panels.
• determine type and application technique of corrosion protection materials.

ACT 131 Automotive Collision Welding

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the various processes of welding in automotive collision repairs using metal inert gas (MIG) and tungsten inert gas (TIG). Topics include preparation, welding, and finishing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• perform Sheet and .120 Steel welding with metal inert gas (MIG) and tungsten inert gas (TIG) on Standard, High Strength Steel (HSS), Advanced High Strength Steel (AHSS), Ultra High Strength steel (UHSS) and Boron Steel
• perform Sheet and .120 Aluminum welding with MIG and TIG
• perform Sheet and .120 Stainless Steel welding with MIG and TIG
• repair collision damage

ACT 140 Automotive Refinishing
This course covers the principles and theories of paint finish application, tinting, color evaluation, and color adjustments. Topics include paint application techniques, new and emerging paint technologies, color identification, and interpreting vehicle color codes. This course also addresses multiple compliances with regulations as determined by the Occupational Safety and Health Administration (OSHA), the Environmental Protection Agency (EPA), the Clean Air Act, and the Sacramento Municipal Air Quality Air Management District (SMAQMD) pertaining to Volatile Organic Compounds (VOC's). Students enrolled in the Automotive Collision Technology (ACT) program at American River College (ARC) may be eligible to apply for Inter-Industry Conference on Automotive Collision Repair (I-CAR) points and I-CAR industry certifications. This ARC-ACT/I-CAR alliance course also prepares students for Automotive Service Excellence (ASE) testing and National Automotive Technicians Education Foundation (NATEF) training standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze the principles and theories of tinting technology.
- evaluate color and color adjustment for industry's current refinishing products.
- interpret and comply with regulations for OSHA, EPA, the Clean Air Act, and SMAQMD VOC.
- implement refinishing application techniques.

**ACT 150 Advanced Collision Frame & Unibody**

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | ACT 100 and 120 with grades of "C" or better |
| Catalog Date: | June 1, 2020 |

This course covers the principles and theories of advanced chassis design, development, and construction. Extensive bracket and frame fabrication and welding are emphasized.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- design automotive frames or modifications
- cut and form 18gage to 3/8" steel and aluminum
- weld similar and dissimilar metal thicknesses to specification
- mount, measure, and assemble frame components

**ACT 152 Advanced Collision Suspensions**

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | ACT 110, 120, 130, and 140 with grades of "C" or better |
| Catalog Date: | June 1, 2020 |

This course covers the principles and theories of advanced suspension design, development, and construction. Topics include big brakes and air suspensions.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- design and plan automotive suspension assemblies
- modify suspensions including big brakes
- design and plan steering assemblies
- install suspension and steering assemblies
ACT 154 Advanced Collision Drivetrain

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ACT 110, 120, 130, and 140 with grades of "C" or better
Catalog Date: June 1, 2020

This course covers the principles and theories of advanced engines and transmissions. Topics include engine performance tuning and transmission selection.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify engine types
- modify and install engine and transmission components
- select, modify, and install transmissions
- interpret fuel injection fuel maps and adjust fuel injection systems

ACT 156 Advanced Collision Refinish

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ACT 110, 120, 130, and 140 with grades of "C" or better
Catalog Date: June 1, 2020

This course covers the principles and theories of advanced custom show-quality automotive finishes. Topics include primers, color coats, special effects, clear coats, and polishing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- plan and refinish a car from start to finish
- prepare surface for a custom hot rod finish to a high standard of excellence
- demonstrate proper usage of spray guns
- polish the refinished surface to a mirror-like appearance

ACT 161 Automotive Collision Software Systems, Estimating I

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides the technical and practical skills necessary to properly diagnose collision-damaged vehicles and to document the cost and time necessary to repair collision-damaged vehicles. The use of state-of-the-art computer generated estimating programs and video imaging are used to prepare itemized estimates on collision-damaged vehicles. The procedures to prepare itemized estimates detailing the required procedures and parts necessary to correctly repair the vehicle are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- complete an accurate handwritten repair estimate.
- identify a vehicle's codes and parts.
- use the procedure pages (P-pages) to determine appropriate steps for a given job estimate.
- demonstrate proficiency in establishing a step-by-step sequence for estimating and using this same technique for all estimates.
- explain the function of the California Bureau of Automotive Repair.
- use the Mitchell Ultra-Mate Estimating System to accurately produce computer assisted estimates.
- diagnose and analyze collision-damaged vehicles.

ACT 298 Work Experience in Collision Technology

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the automotive collision field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the automotive collision field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Automotive Technology | American River College

The automotive technology program is a combination of classroom and hands-on shop experiences that prepare students for careers in all phases of automotive service and repair on all types of cars. Students are trained on the use of workshop manuals in traditional and computerized formats, hand held meters and scanners, and special shop tools including power and hand tools.

Highlights include:

- ASE certified instructors and programs.
- Students may begin 5-week courses 3 times during the semester.
- 5-week courses allow completion of some certificate programs in one semester.
- Small class size ensures individual attention and access to specialized equipment.
- Preparation for ASE and State Smog Certification (Emissions Control) exams.

Division Dean: Gary Aguilar
Department Chairs: Ben French

Associate Degrees

A.S. in Automotive Analysis

This program prepares students for entry-level employment as smog and driveability service technicians. It also prepares students for Automotive Service Excellence (ASE) certification in Engine Repair A1, Automatic Transmissions/Transaxles A2, Electrical A6, Engine Performance A8, and Advanced Engine Performance L1. This program also fulfills the Bureau of Automotive Repair (BAR) requirements for California State Smog Check Inspector and California State Smog Check Repair Technician test candidates.

Catalog Date: June 1, 2020

**The Automotive Analysis Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.**

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and implement safety procedures involved in the diagnosis, service, and repair of all major automobile and light truck systems.
- describe the function, operation, and characteristics of all major components in the following automotive systems: engines, automatic transmissions, electrical, air conditioning, emission control and computerized engine controls.
- identify and follow manufacturer's standards for proper automobile diagnosis and repair.
- operate hand and power tools necessary for automobile and light truck repair.
- operate diagnostic equipment and interpret test results.
- analyze, diagnose, and repair automotive engines, automatic transmissions, electrical systems, fuel delivery systems, ignition systems, emissions control systems, and computerized engine controls.
- operate a variety of aftermarket and factory scan tools.

### Career Information

Automotive Technician Smog Check Technician

### A.S. in Automotive Component Service Technician

This degree prepares the student for employment repairing of various automobile components including those requiring computer technology.

Catalog Date: June 1, 2020

The Automotive Component Service Technician Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- diagnose and repair major automotive components.
- describe the relationships between automotive components.
- complete service and repair work to industry time and quality standards.
- follow federal EPA guidelines for handling and use of hazardous material found in an automotive shop.
- demonstrate safe work practices in the auto shop.

Career Information

Employment as a technician, shop foreman, service manager for new car dealers, automotive repair shops, and fleet operators.

A.S. in Automotive Technology

This program prepares students for entry-level positions in the automotive industry with emphasis on engine management systems, emission controls, and complete automotive systems diagnosis and repair. It prepares students for all nine Automotive Service Excellence (ASE) certifications including Advanced Engine Performance (L-1). This program also fulfills the Bureau of Automotive Repair (BAR) requirements for California State Smog Check Inspector and California State Smog Check Repair Technician test candidates.

The Automotive Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply algebraic and mathematical concepts essential to advancement in the automotive industry.
- operate equipment and tools safely.
- evaluate, adjust, test, and diagnose components/system malfunctions.
- diagnose, assess, and repair manual and automatic transmissions and transaxles.
- locate, download, and analyze technical manuals from the Internet, digital, and text sources.
- diagnose, diagnose, and repair automotive electrical and electronic systems to ASE performance level.
- diagnose, troubleshoot, and repair basic air conditioning (AC) systems.
- diagnose, disassemble, inspect, clean, and reassemble components of the steering and suspension system.
- analyze, diagnose, and repair engines to ASE performance levels.
- analyze and repair fuel injection systems to ASE standards.
- diagnose engine emission control systems to ASE standards.
- prepare for the State Smog Check Inspector and California State Smog Check Repair Technician tests.

Certificates of Achievement

Air Conditioning Service Certificate

This certificate program prepares the student for an entry level position in the automotive industry. This program also prepares the student for Automotive Service Excellence (ASE) certification in Air Conditioning A-7.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Identify and implement safety procedures involved in the service and repair of Automotive Heating, Ventilation, Air Conditioning (HVAC) systems.
- Describe the function, operation and characteristics of each component in automotive HVAC systems.
- Operate diagnostic equipment and interpret results from the equipment.
- Diagnose automotive HVAC systems including manual, semi-automatic, and automatic.
- Repair automotive HVAC systems including manual, semi-automatic, and automatic.
- Diagnose engine cooling systems.
- Repair engine cooling systems.
- Follow Federal EPA guidelines for the handling and use of refrigerants.

### Alternative Fuels and Green Vehicle Technology Certificate

This certificate covers the various technologies used in the alternative fuels vehicles of today. Topics include biodiesel production, hybrid electric vehicles, and fuel cell technology.

Catalog Date: June 1, 2020

#### Certificate Requirements

<table>

#### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- perform basic automotive services on alternative fuels vehicles.
- describe different alternative fuels vehicle designs.
- describe the process of making biodiesel.
- analyze electrical and electronic components and identify failures.
- use automotive test equipment such as digital multimeters and scan tools.
- perform high voltage system disable procedures on hybrid electric vehicles.

#### Career Information

Alternative fuels is an emerging career field that is rapidly growing. This certificate prepares automotive technology students for entrance into this field, from servicing alternative fuels vehicles to developing alternative fuels technology. Additional career opportunities are likely as the industry continues to grow.

### Automotive Analysis Certificate

This program prepares students for entry-level employment as smog and driveability service technicians. It also prepares students for Automotive Service Excellence (ASE) certification in Engine Repair A1, Automatic Transmissions/Transaxles A2, Electrical A6, Engine Performance A8, and Advanced Engine Performance L1. This program also fulfills the Bureau of Automotive Repair (BAR) requirements for California State Smog Check Inspector and California State Smog Check Repair Technician test candidates.

Catalog Date: June 1, 2020

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- identify and implement safety procedures involved in the diagnosis, service, and repair of all major automobile and light truck systems.
- describe the function, operation, and characteristics of all major components in the following automotive systems: engines, automatic transmissions, electrical, air conditioning, emission control, and computerized engine controls.
- identify and follow manufacturer's standards for proper automobile diagnosis and repair.
- operate hand and power tools necessary for automobile and light truck repair.
- operate diagnostic equipment and interpret test results.
- analyze, diagnose, and repair automotive engines, automatic transmissions, electrical systems, fuel delivery systems, ignition systems, emissions control systems, and computerized engine controls.
- operate a variety of aftermarket and factory scan tools.

**Career Information**

Automotive Technician Smog Check Technician

**Automotive Component Service Technician Certificate**

This certificate prepares the student for entry level employment in the repairing of various automobile components including those requiring computer technology.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- diagnose and repair automotive major automotive components.
- describe the relationship between automotive components.
- complete service and repair tasks to industry time and quality standards.
- follow federal EPA guidelines for handling and use of hazardous material found in an automotive shop.
- demonstrate safe work practices in the auto shop.

### Career Information

Employment as a technician for new car dealers, automotive repair shops, and fleet operators.

### Automotive Emissions Inspection and Repair Technician Certificate

This certificate prepares students for entry-level positions in the automotive industry as emissions inspectors or emissions repair technicians. It meets the state of California requirements for students seeking to apply for a California state smog inspector and/or repair license(s).

Catalog Date: June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- operate emission analyzers and tools safely.
• evaluate, adjust, test, and diagnose components/system malfunctions.
• research, download, and analyze technical manuals from the Internet, digital, and text sources.
• inspect, diagnose, and repair automotive electrical and electronic systems at Automotive Service Excellence (ASE) performance level.
• inspect, diagnose, and repair engines to ASE performance levels.
• inspect, diagnose, and repair fuel injection systems to ASE and BAR standards.
• diagnose engine emission systems to ASE and Bureau of Automotive Repair (BAR) standards.
• prepare for state smog inspector and repair technician certifications.

Career Information
California State Smog Inspector and California State Smog Repair Technician.

Automotive Technology Certificate
This program prepares students for entry-level positions in the automotive industry with emphasis on engine management systems, emission controls, and complete automotive systems diagnosis and repair. It prepares students for all nine Automotive Service Excellence (ASE) certifications including Advanced Engine Performance (L-1). This program also fulfills the Bureau of Automotive Repair (BAR) requirements for California State Smog Check Inspector and California State Smog Check Repair Technician test candidates.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• evaluate vehicle horsepower safely and effectively by use of diagnostic equipment.
• analyze and demonstrate safe operating practices both in the shop and track environment with stock and modified vehicles.
• validate and summarize outcomes of fuel, timing and power band modifications through hands-on exposure to live data derived before and after modifications.
• apply performance based principles to construct and operate a vehicle for competition, including classification divisions within a sanctioned racing organization.
• organize maintenance schedules and record keeping in order to keep vehicle competitive throughout a season.
• accurately interpret computer software data to make adjustments and modifications to improve performance and/or economy of a modern vehicle.

Career Information

The “Tuner” industry is a rapidly growing industry. Professional technicians today are modifying vehicles for both on and off road application. This certificate prepares the students for the following career opportunities: alternative fuels diagnostic technician, off-road performance tuner, and a racing team crew member.
Parts and Service Certificate

This certificate provides training for automotive parts and service advisors. Topics include parts knowledge, integrated computer management software, scheduling, inventory control, hazardous materials and warranty documentation requirements.

Catalog Date: June 1, 2020

</tbody>
</table>
Upon completion of this program, the student will be able to:

- demonstrate accepted safety and work procedures, including Occupational Safety and Health Administration (OSHA) and proper hazardous materials disposal.
- service and repair the starter systems of 2-cycle and 4-cycle small engines.
- identify the external and internal parts of 2-cycle and 4-cycle small engines.
- determine the proper lubrication and fuel requirements for 2-cycle and 4-cycle small engines using factory maintenance data.
- service and repair the cooling and oil systems of 2-cycle and 4-cycle small engines.
- remove, rebuild, install, adjust, and tune 2-cycle and 4-cycle small engine fuel delivery and ignition system components.

The automotive small engines industry is growing and in need of technicians. This certificate prepares students for employment in many different areas, including horticulture, off road vehicles, marine applications, and many others.

**Snap-On™ Certification Certificate**

This certificate prepares students for entry-level positions in the automotive industry. It provides the knowledge and skills needed for certification using current Snap-On™ diagnostic tools.

Catalog Date: June 1, 2020

Upon completion of this program, the student will be able to:

- demonstrate safe, accurate use of tools and equipment.
- apply accurate measurement techniques.
- explain screen orientation and how to navigate through different functions of the VERUS scanner.
- perform the proper procedure to do an oil change on a vehicle.
- locate and analyze technical manuals from online computerized databases.
• apply retrieved data to specific vehicle conditions.

Career Information

The automotive industry is growing and in need of technicians. Snap-On™ certifications are in high demand.

Transmission Service Certificate

This certificate program prepares the student for an entry-level position in the automotive industry. This program includes Automotive Service Excellence (ASE) certification in A-2 automatic transmission and A-3 manual drive-train.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• analyze an automotive transmission, applying elements of drive-train theory.
• investigate an automotive electrical malfunction by locating, testing and identifying the failure in order to make the necessary repairs.
• research on-line and computer based automotive data sources in order to identify the correct repair procedure, and locate safety campaigns and bulletins.
• describe the operation of drive-train components in order to report and justify a recommended repair procedure.
• apply gear theory to drive-train malfunction.
• evaluate and recognize the drive-train malfunction.

Career Information

Entry-level positions in automatic transmission, clutch, and drive-train repair.

Undercar Service Certificate

The Undercar Service certificate provides entry-level training in performing repairs to automotive suspension, brake, and exhaust systems.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- develop a resume and cover letter to plan for future career opportunities.
- perform run-out and parallelism evaluations on brake rotors and machine to manufacturer’s specifications.
- measure and analyze suspension angles of a modern automobile and make adjustments necessary to bring the angle within manufacturer’s specifications.
- identify modern exhaust system components and demonstrate how they relate to California emission control laws.
- research and synthesize brake, suspension, and exhaust system information on electronic service manuals to provide information on repairs to meet industry standards.

Career Information

This certificate provides students with knowledge for entry-level careers in the automotive suspension, brake, and exhaust repair facilities.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
describe shop orientation and safety issues.

- discuss the basics of vehicle service including oil, lubrication, inspection, and replacement of fluids.
- demonstrate proper handling, use, and disposal of hazardous materials in the automotive shop environment, combined with safety test.
- practice safety precautions and procedures when inspecting and repairing braking systems.
- analyze the various brake components used on automobiles and describe the functions of each.
- evaluate and diagnose brake components/system malfunctions.
- reassemble and adjust all components of the brake system following service manual procedures.
- arrange, clean, inspect, and measure all components of brake systems following established service manual procedures.

Career Information

The automotive brakes industry is growing and in need of technicians.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze, describe, and avoid unsafe working conditions and unsafe acts, as well as observe safety regulations in an auto repair facility.
- identify the various components used on automotive steering and suspension systems and describe the function of each.
- perform geometric centerline and thrust line alignments.
- disassemble, inspect, clean, and reassemble all components of the steering and suspension systems in accordance to service manual procedures.
- determine the need for and perform four-wheel alignments.
- diagnose any malfunction of the steering suspension components used on automobiles.

Career Information

The automotive suspension and steering industry is growing and in need of technicians.
Automotive Technology (AT)

AT 100 Technical Basics for the Automotive Professional

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: None
Catalog Date: June 1, 2020

This course presents theoretical and practical training for entry-level automotive technicians. It presents basic automotive diagnosis and service procedures used in automotive shops. Projects performed in an automotive shop environment provide hands-on experience with industry shop tools. Shop service operations which meet Automotive Service Excellence (ASE) standards including safety, electrical, and other general automotive procedures are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate safe, accurate use of tools and equipment.
- incorporate the proper use of a tap and die to repair threads.
- apply accurate measurement techniques.
- perform the proper procedure to do an oil change on a vehicle.

AT 105 Mathematics for Automotive Technology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Corequisite: AT 100
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course covers mathematics relative to the automotive trades. Course topics include the metric system, fraction, decimal equivalents, basic equations, ratio and proportion, gear ratio calculations, power, efficiency, and torque. This course is designed for Automotive Technology majors and covers all automotive-related mathematical areas from basic technician calculations to shop money management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve equations that contain addition, subtraction, multiplication, and division.
- use fractions, decimals, and percentages in automotive measurement and finance.
- identify metric and standard units of measurement.
- perform metric to standard unit conversion.
- calculate engine displacement, horsepower, and compression ratios.
- solve problems regarding gear ratios, hydraulics, or electrical systems.
- properly fill out an automotive repair order that includes parts, labor, and sales tax.

AT 106 Automotive Shop Operations

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces operations of automotive dealerships, independent shops, and fleet shops. Emphasis is placed on the various influences that affect the technician's position within the operation. Topics include service, sales, parts, and financial operations. Customer Satisfaction Index (CSI) and the Bureau of Automotive Repair (BAR) are discussed. Field trips to local shops may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify all of the dealership's departments and their functions
- critique dealership, independent, and fleet shop operation
- analyze how flat rate affects the technician
- analyze and evaluate the advantages and disadvantages of working in dealership, independent, and fleet shops
- evaluate the effectiveness of the Customer Satisfaction Index (CSI) in the service department
- evaluate the Bureau of Automotive Repair (BAR) rules and regulations regarding technician repair responsibilities

AT 107 Employability Skills for Technical Careers

Same As: ET 250 and WELD 150
Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: ENGRD 116 with a grade of "C" or better; OR ESLR 320, ESLL 320, and ESLW 320 with a grade of "C" or better.
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides the opportunity to explore technical careers while developing valuable work and life skills. It is an introduction to a variety of technically-related occupations, emphasizing technical careers in the Sacramento area. Activities are designed to enhance personal development, employability skills, and self esteem through leadership, citizenship, and character development. This course is not open to students who have completed ET 250 or WELD 150.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify personal interests.
- demonstrate effective communication skills.
- demonstrate personal qualities that are desirable in the workplace.
- create long-term and short-term goals.

AT 108 Successful Automobile Selling Skills

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers successful automobile sales techniques. Topics include the process of selling cars, from greeting the consumer to closing the sale. It also covers understanding today's information age consumer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze a customer's automobile needs.
- list the steps for selling automobiles.
- create a sales draft.
- describe financing options.
- describe warranty options.
**AT 110 Automotive Brakes**

Units: 3  
Hours: 26 hours LEC; 84 hours LAB  
Prerequisite: None.  
Corequisite: AT 100 and 180  
Advisory: AT 181 and 188  
Catalog Date: June 1, 2020

This course covers the theory, design, adjustment, and repair or overhaul of brake systems and components. It covers the proper operation of power and hand devices used in the servicing of brake systems and components. This course meets Automotive Service Excellence (ASE) A5 standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- practice safety precautions and procedures when inspecting and repairing braking systems.
- analyze the various brake components used on automobiles and describe the functions of each.
- evaluate and diagnose brake components/system malfunctions.
- identify the special tools necessary to properly diagnose and repair brake component/system malfunctions.
- properly use special tools in diagnosing and repairing brake system malfunctions.
- arrange, clean, inspect, and measure all components of brake systems following established service manual procedures.
- refinish brake rotors and/or brake drums following established service manual procedures.
- reassemble and adjust all components of the brake system following service manual procedures.

**AT 130 Manual Drive Trains and Axles**

Units: 3  
Hours: 26 hours LEC; 84 hours LAB  
Prerequisite: None.  
Corequisite: AT 100 and 180  
Advisory: AT 181 and 188  
Catalog Date: June 1, 2020

This course covers the basic principles of manual transmissions and transaxles and service. Topics include clutches, manual transmissions and transaxles, drive line and shafts, differentials/limited slip differentials, and four-wheel drive/all-wheel drive. This course meets Automotive Service Excellence (ASE) standard A3.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply manual transmission theory to transmission operation.
- analyze and repair clutch problems.
- diagnose, assess, and repair manual transmissions and transaxles.
- diagnose, assess, and repair drive (half) shaft and universal joint/constant velocity joints.
- troubleshoot rear axle ring and pinion gears, differential case assembly, limited slip differential, and axle shafts.
- disassemble and assemble four-wheel drive components.
- determine and apply proper safety and repair procedures.
- diagnose, assess, and repair clutch hydraulic and cable release systems.

**AT 140 Advanced Automotive Skill and Speed Development**

Units: 3  
Hours: 22.5 hours LEC; 94.5 hours LAB  
Prerequisite: None.  
Corequisite: AT 100
This course covers automotive component diagnosis and repair, including brakes, suspension, heating and air conditioning, engine, transmissions, and other areas in preparation for competing in the regional, state, and national Skills USA competition. This course may be taken up to four times with different competitions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret customer's complaints, evaluate vehicle condition, and diagnose proper repair procedures in a competitive environment.
- analyze and replace engine cooling and heater system hoses in a competitive environment.
- perform cooling system tests and determine necessary action in a competitive environment.
- examine, replace, and adjust drive belts, tensioner, and pulleys in a competitive environment.
- solve a spongy brake pedal problem and correct condition in a competitive environment.
- explain the requirements for the Skills USA competition.

AT 143 Automotive Parts

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Corequisite: AT 100
Catalog Date: June 1, 2020

This course introduces the key workings of automotive systems and their related parts. It also offers preparation for the Automotive Service Excellence (ASE) P-2 Parts Specialist test. Topics include suspension systems, hazardous waste regulations, and inventory management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- look up parts using a paper catalog or computer-based system.
- explain the importance of inventory control and perform physical inventory.
- describe key automotive systems and parts application to assist customers in the repair of a vehicle.
- explain hazardous waste regulations as they apply to both transport and disposal, as well as the application of Material Safety Data Sheets (MSDS), in the automotive industry.
- apply the principles of recruiting and hiring, as well as writing of schedules, to ensure proper staffing.
- explain the different types and applications of common chemicals used in the automotive industry.
- utilize customer service skills when working with customers.
- utilize team building, coaching, and one-on-one interaction to facilitate the relationship between a supervisor and employee.

AT 145 Automotive Exhaust System

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: AT 100 with a grade of "C" or better
Catalog Date: June 1, 2020

This course is an introduction to the principles and service of exhaust systems, including pipe bending, cutting, welding, installation, repair, and inspection. It offers preparation to students for the Automotive Service Excellence (ASE) X1 exhaust systems test, which is required for the ASE Under-Car Specialist Certificate. Various welding techniques are covered during the semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- perform standard welding operations.
- verify the integrity of a weld.
- determine center and depth of bends, and rotation of pipe.
- perform pipe bending operations.
- determine and perform appropriate exhaust repairs on catalytic converters, mufflers, resonators, pipes, manifolds, and hangers.
- explain state and federal standards for exhaust systems.

**AT 146 Automotive Service Consultant**

| Units: | 3 |
| Hours: | 45 hours LEC; 27 hours LAB |
| Prerequisite: | None. |
| Corequisite: | AT 180 |
| Advisory: | AT 100 |
| Catalog Date: | June 1, 2020 |

This course introduces the basic requirements needed to perform the duties of an automotive service consultant. It also offers preparation for the Automotive Service Excellence (ASE) C-1 Service Consultant exam. Topics include utilization of diagnostic flow charts, recruiting techniques, and small business operations.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply Bureau of Automotive Repair (BAR) regulations as an automotive service consultant.
- apply ethical practices to selling of automotive services and repairs.
- explain hazardous waste regulations as they apply to disposal and storage in the automotive repair facility.
- dispatch work in an orderly and efficient process to maximize technician productivity and profitability.
- document all services performed according to Motorist Assurance Program (MAP) standards and BAR regulations.
- utilize recruiting techniques that include print and electronic sources.
- apply proper interview techniques and hire qualified personnel to staff repair facility.
- use diagnostic flow charts to perform repairs on vehicle to reduce comeback repairs.
- describe how a small business operates.

**AT 156 Light Duty Diesel/Green Diesel Technology**

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | None. |
| Advisory: | AT 314 |
| Catalog Date: | June 1, 2020 |

This course introduces the diagnosis and repair of light duty diesel vehicles and covers the theory and operation of light duty diesel engines and their fuel delivery systems. Topics include diesel engine characteristics, early mechanical fuel delivery systems, early cylinder head design, and early engine construction. It also covers how to prepare these engines for conversion to green technology, such as low sulfur fuel, biodiesel, and alternative fuels. This course along with AT 157 is applicable for the field technician seeking training for ASE A9 certification and preparation for green technologies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the basic operation of diesel fueled vehicles.
- explain the differences between diesel and gasoline engine design.
- diagnose basic diesel engine driveability problems.
- perform basic diesel engine mechanical diagnostic procedures.
• evaluate the diesel fuel injection system's compatibility with low sulfur and biodiesel fuels.

AT 157 Advanced Light Duty Diesel/Green Diesel Technology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: AT 156 and 330
Catalog Date: June 1, 2020

This course focuses on late model turbocharged light duty diesel vehicles operating on low sulfur, biodiesel, or alternative fuels. Topics include computer controlled injection, emission control systems, sensors, actuators, computer modules, exhaust gas recirculation (EGR) systems, particulate traps, selective catalytic reduction (SCR) systems, and lean oxides of nitrogen (NOx) traps. Diagnosis and repair of these systems are covered using computer diagnostic equipment to meet state emission compliance. This course along with AT 156 is applicable for the field technician seeking training for ASE A9 certification and preparation for green technologies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the operation of common rail diesel fuel injection systems.
• explain the differences between late model diesel and older diesel engine design.
• diagnose basic driveability problems on late model diesel vehicles.
• perform basic diesel engine turbo charger diagnostic procedures.
• evaluate high pressure fuel system compatibility with biofuels and biofuel impact on diesel emissions.
• test diesel engine emissions and emission control systems.

AT 177 Bureau of Automotive Repair (BAR) Emissions Update UT032

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: AT 332 with a grade of "C" or better
Catalog Date: June 1, 2020

This course improves technicians’ abilities to diagnose and repair emissions failures on complex computer-controlled vehicles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the various network topologies used in On-Board Diagnostics (OBD) controlled vehicles.
• identify Controller Area Network (CAN) communication protocols used in OBD equipped vehicles.
• diagnose the cause of CAN communication failures on OBD equipped vehicles.
• use the Air Resources Board's Catalytic Converter database to identify California-legal catalytic converters.
• use an OBD scan tool to retrieve Mode 6 data.
• interpret the meaning of Mode 6 data retrieved from OBD equipped vehicles.

AT 178 BAR Repair Technician Update UT055

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course improves automotive repair technicians' abilities to diagnose and repair emissions failures on complex computer-controlled vehicles that use variable valve lift and valve timing technologies.
Upon completion of this course, the student will be able to:

- differentiate between fuel system and mechanical failures.
- discuss advanced diagnostic strategies to exclude possible causes of emission failure.
- identify the operation and strategies of variable valve timing and variable valve lift systems.
- explain the use of a diagnostic scan tool to diagnose variable valve timing and variable valve lift systems.

**AT 180 Automotive Data Acquisition**

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the skills needed to adequately retrieve and apply automotive data, including on-line technical manuals and computerized shop management programs. Computer-based automotive service repair order generation is covered as well as usage and application currently utilized in many automotive repair facilities.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- locate and analyze technical manuals from online computerized databases.
- apply retrieved data to specific vehicle conditions.
- use various computerized shop management programs.

**AT 181 Snap-On Multimeter Basics**

<table>
<thead>
<tr>
<th>Units:</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>18 hours LEC; 9 hours LAB</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course explores the functionality and capability of the digital multimeter to improve technicians' diagnostic expertise when working with electrical related problems and prepares them for the Snap-on certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- choose the proper position on the rotary dial for testing.
- interpret the display readings and symbols.
- test for voltage.
- test for resistance.

**AT 182 General Motors Diagnostic Tools**

<table>
<thead>
<tr>
<th>Units:</th>
<th>2</th>

<tbody>
<tr>
<td>Hours:</td>
<td>27 hours LEC; 27 hours LAB</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course explores the functionality and capability of General Motors diagnostic tools to improve technicians' expertise when working with On-Board computer-related problems.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up the Tech 2 for vehicle malfunction diagnosis.
- set up the MDI for vehicle malfunction diagnosis.
- explain screen orientation and how to navigate through different functions of the Tech 2 scanner.
- explain screen orientation and how to navigate through different functions of the MDI scanner.
- use the Tech 2 to program a control module.
- use the MDI to program a control module.

AT 184 Toyota Techstream - Automotive Diagnostic Use and Operation

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the functionality and capability of Toyota’s Techstream to improve technicians’ diagnostic expertise when working with On-Board computer-related problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up the Techstream for vehicle malfunction diagnosis.
- explain screen orientation and how to navigate through different functions of the Techstream.

AT 186 Snap-On MODIS – Automotive Diagnostic Use and Operation

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the functionality and capability of Snap-On’s MODIS (Modular Diagnostic Information System) to improve the technician’s diagnostic expertise when working on On-Board computer related problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up the MODIS for vehicle malfunction diagnosis.
- explain screen orientation and how to navigate through different functions of the MODIS scanner.

AT 188 Snap-On SOLUS – Automotive Diagnostic Use and Operation

Units: 1
Hours: 18 hours LEC; 9 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the functionality and capability of Snap-On’s SOLUS to improve the technician’s diagnostic expertise when working on Board computer-related problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• set up the SOLUS for vehicle malfunction diagnosis.
• explain screen orientation.
• navigate through different functions of the SOLUS scanner.

AT 189 Snap-On VERUS – Automotive Diagnostic Use and Operation

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the functionality and capability of Snap-On’s VERUS to improve technicians’ diagnostic expertise when working with on-board computer-related problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• set up the VERUS for vehicle malfunction diagnosis.
• explain screen orientation and how to navigate through different functions of the VERUS scanner.

AT 190 Advanced Student Projects

Units: 2
Hours: 108 hours LAB
Prerequisite: AT 100 with a grade of “C” or better
Catalog Date: June 1, 2020

This course provides opportunities to pursue advanced laboratory projects in all eight of the Automotive Service Excellence (ASE) educational areas. Projects are selected by the Automotive Department.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply automotive systems specifications and tolerances to modern systems.
• demonstrate skills in repair techniques.
• construct a complete automotive project.
• research automotive information and specifications from written and Internet sources.

AT 251 Automotive Electronic Accessories and Installation

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: AT 330 or ET 302
Catalog Date: June 1, 2020

This course covers the principles and processes involved in the installation of mobile entertainment, security, positioning, and other electrical and electronic related systems and components. Safety, circuit diagrams, inspection, wiring, installation, and troubleshooting techniques are covered along with the operational characteristics of the various electrical circuits. This course offers preparation to become a qualified Mobile Electronics Certified Professional (MECP) installer. This course is not open to students who have taken ET 251. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply safety procedures pertaining to the installation and operation of vehicle entertainment/electronic components.
install, test, and operate the various types of mobile electronic equipment.

differentiate and analyze the operating characteristics of electronic circuits and installed components under normal and abnormal conditions.

interpret diagrams, solder and repair wiring, test and inspect installed components.

troubleshoot installed accessories using electronic test equipment and other measuring devices.

research mobile electronic circuits and device components using manufacturer's data, library resources, the Internet, and electronic shop manuals.

master the objectives of the MECP certification test and become a qualified mobile electronics certified installer.

AT 294 Topics in Automotive Technology

Units: 0.5 - 3
Hours: 9 - 54 hours LEC; 27 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides opportunity to study current topics in automotive technology that are not included in existing courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop analytical and critical thinking skills as they apply to automotive technology
- demonstrate an understanding and apply principles of automotive technology
- explain automotive technology as it applies to this topic

AT 295 Independent Studies in Automotive Technology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

AT 298 Work Experience in Automotive Technology

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to the automotive industry with a cooperating site supervisor. Students are advised to consult with the Automotive Department faculty to review specific certificate and degree work experience requirements.
Advisory: AT 100; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the automotive field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
demonstrate mastery of specific job skills in the automotive field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.

- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

AT 301 Small Gas Engines, Outdoor Power Equipment

**Same As:** HORT 330  
**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers the basic operational theory, servicing, adjusting, and maintenance of 2-cycle and 4-cycle small gas engines as they pertain to the automotive and horticulture industries. In addition, the small engine repair skill areas included in the regional, state, and national Skills USA competitions are covered. AT 301 and/or HORT 330 may be taken two times for credit for a maximum of 8 units, using different equipment.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate accepted safety and work procedures, including Occupational Safety and Health Administration (OSHA) and proper hazardous materials disposal.
- identify the external and internal parts of 2-cycle and 4-cycle small engines.
- determine the proper lubrication and fuel requirements for 2-cycle and 4-cycle small engines using factory maintenance data.
- service and repair the cooling and oil systems of 2-cycle and 4-cycle small engines.
- service and repair the starter systems of 2-cycle and 4-cycle small engines.
- remove, rebuild, install, adjust, and tune 2-cycle and 4-cycle small engine fuel delivery and ignition system components.
- disassemble, inspect, repair, and assemble a single cylinder 2-cycle and 4-cycle engine.
- list the Skills USA competition requirements.
- list the Skills USA competition judging criteria.
- prepare to compete in Skills USA competition.

AT 309 Introduction to Hybrid and Electric Vehicle Technology

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** AT 315 with a grade of "C" or better  
**Advisory:** AT 110, 310, 313, 314, and 322  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers the theory and operation of hybrid and electric vehicle operation. Each of the major manufacturers' vehicles is discussed along with the safety and service procedures that apply to these vehicles. Hands-on activities include major service procedures and basic diagnostics on the most common hybrid and electric vehicles in the market today. It is recommended that a student take the electrical, brakes, and air conditioning courses or a have previous field experience before taking this course.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- analyze and avoid unsafe conditions and unsafe acts in compliance with safety laws and regulations in the auto work place.
- explain basic electric and hybrid vehicle operation.
- identify the different types of hybrid vehicles in use today.
- perform routine services on full electric and hybrid electric vehicles following manufacturer's procedures.
- perform high voltage system disable and enable procedures.
- pull generic and manufacturer specific data trouble codes from hybrid vehicle computer systems.
- interpret basic hybrid electric vehicle scan data to determine battery state of charge and temperature.

AT 310 Heating and Air-Conditioning Systems

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: None.
Corequisite: AT 100
Advisory: AT 181 and 188
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to automotive heating and air conditioning theory. It meets Automotive Service Excellence (ASE) standard A7 and combines performance testing and repair practices as utilized in the industry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply safety precautions in handling of refrigerant R-12 and R134-a.
- describe the basic operation of each component in the typical automotive air conditioning (A/C) system.
- identify the different types of compressors and controls.
- use the manifold gauge set in discharging, evacuating, and charging automotive A/C systems.
- diagnose and troubleshoot basic A/C systems.
- list basic components of automatic temperature control (ATC) systems.
- identify basic five parts of an A/C system.
- detect and repair leaks using electronic and dye leak detection systems.

AT 311 Suspension and Steering Systems

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: None.
Corequisite: AT 100
Advisory: AT 181 and 188
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to advanced principles and service of suspension and steering systems, including alignment of equipment, alignment procedures, and the diagnosis and repair of suspension components. It meets Automotive Service Excellence (ASE) A4 certification standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze, describe, and avoid unsafe working conditions and unsafe acts, as well as observe safety regulations in an auto repair facility.
- use measuring instruments and procedures proficiently.
- identify automotive service tools and equipment.
- identify the various components used on automotive steering and suspension systems and describe the function of each.
- diagnose any malfunction of the steering suspension components used on automobiles.
- analyze tire wear problems and/or vibrations and perform the necessary repairs.
- disassemble, inspect, clean, and reassemble all components of the steering and suspension systems in accordance to service manual procedures.
- analyze alignment angles to determine need for two- or four-wheel alignment.
- determine the need for and perform four-wheel alignments.
- perform geometric center-line and thrust-line alignments.
- perform tire balancing procedures.

**AT 313 Automatic Transmission and Transaxles**

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: None.
Corequisite: AT 100
Advisory: AT 181 and 188
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the basics of automatic transmission and transaxle principles and service. Topics include hydraulic principles, diagnosis and service, power conversion, and automatic transmission operation. AT 313 and AT 317 together meet Automotive Service Excellence (ASE) standard A2.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply automatic transmission theory to transmission operation.
- remove, disassemble, and assemble gear train, shafts, bushings, oil pump, and case.
- remove, inspect, and replace friction and reaction units.
- diagnose and assess transmission and transaxle mechanical and hydraulic systems.
- troubleshoot and analyze transmission and transaxle electronic systems.
- assess condition of fluids, filters, and gaskets.
- determine and apply proper safety and repair procedures.
- assess and adjust bands as necessary.

**AT 314 Automotive Engine Repair**

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: None.
Corequisite: AT 100 and 105
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the principles, operation, and diagnosis of automotive engines, including basic engine operation and construction, parts identification and location, engine dis-assembly procedures, engine diagnosis, engine repair and rebuilding procedures, and engine reassembly procedures. Completion of AT 314 and AT 332 meet Automotive Service Excellence (ASE) A1 standards.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- troubleshoot internal engine malfunctions.
• analyze engine components for wear and/or tear.
• evaluate repairs by checking them with measurement and test equipment.
• diagnose and repair engines at ASE performance standard levels.

AT 316 Alternative Fuels and Advanced Technology Vehicles

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: AT 100
Transferable: CSU
Catalog Date: June 1, 2020

This hands-on course provides an overview of both conventional and alternative fuels with their impact on vehicle emissions in both gasoline and diesel engines. In addition, advanced vehicle technologies such as hybrid electric, direct injection, and fuel cells are explored. Topics include gasoline, E85, M85, diesel, biodiesel, CNG, LPG, LNG, RNG, EVs, HEVs, fuel cells, and dynamometer testing. Completion of this course helps students prepare for the Automotive Service Excellence (ASE) F1 Alternative Fuels Certification in addition to the ASE L3 Hybrid/Electric Vehicle Specialist Certification. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the basic chemical composition of various fuels.
• analyze the benefits and challenges of various fuels.
• identify the major components on a variety of alternative fuel vehicles (AFVs).
• perform before and after repair emission tests and analyze the results.
• conduct vehicle efficiency tests and describe the test results.

AT 317 Advanced Drivetrain

Units: 3
Hours: 26 hours LEC; 84 hours LAB
Prerequisite: AT 313 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers advanced aspects of automatic transmissions, automatic transaxles, manual drivetrains, diagnosis, service, and repair. Topics include mechanical, electrical, and electronic diagnosis, diagnosis and repair of vibration problems, advanced scan tool operation, and dynamometer testing. AT 317 and AT 313 together meet Automotive Service Excellence (ASE) standard A2.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• diagnose electronic failures using electronic test equipment.
• analyze data received from vehicle scan tests.
• test electronic and electrical components and identify failures.
• identify vibration problems using electronic test equipment.
• assess electronic, mechanical, or hydraulic failures.
• increase repair speed and skill.
• diagnose and perform in-vehicle repairs.
• identify hybrid powertrain components.

AT 325 Engine Performance Testing & Tuning
This course explores the performance and efficiency of modern vehicle engine systems through the use of engine dynamometers and flowbench test equipment. Course topics include dynamometer performance testing, high performance engine assembly, engine computer reprogramming, fuel injector flow testing, forced induction systems and how to achieve maximum performance by choosing components that complement each other. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate safe practices as related to the automotive performance industry.
- evaluate engine efficiency and/or performance through the use of test equipment.
- repair serviceable parts to improve vehicle performance and/or efficiency.
- modify engine systems to improve vehicle performance and/or efficiency.
- analyze engine performance enhancements for effectiveness and feasibility.

AT 327 Introduction to Motorsports

This course is an introduction to motorsports through lecture, hands-on activities, and raceway experience. It discusses the operation of a race team, racing events, and race track operation. Course topics include the setup and modification of vehicle safety equipment, suspension, braking, and data acquisition systems. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate safe practices related to performance vehicles and racing events.
- perform most vehicle safety and performance modifications required to complete sanctioned racing events.
- describe the components of a technical inspection within a sanctioned racing event.
- participate in team activities at race track promotional events.
- identify career opportunities in motorsports.

AT 330 Automotive Electrical Systems

This course covers the principles, operation, and diagnosis of automotive electrical systems including fundamentals of electricity (DC), electrical circuits, battery operation, fundamentals of magnetism, charging systems, starting systems, and electrical schematics. Along with completion of AT 331, this course meets Automotive Service Excellence (ASE) certification standards for the A6 Electrical Systems certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- identify and avoid unsafe conditions and unsafe acts in compliance with safety laws and regulations in the auto work place.
- calculate electrical mathematical problems with Ohm’s Law, fractions, square roots, and power formulas.
- solve basic problems as they apply to electrical system repair.
- analyze electrical components for malfunction.
- read and interpret basic electrical schematics for system diagnosis and repair.
- evaluate repairs by utilizing test equipment such as a Digital Volt Ohm Meter (DVOM) and a Voltage Amperage Tester (VAT-40).
- diagnose and repair simple electrical systems at industry ASE performance standard levels.

**AT 331 Advanced Automotive Electrical Systems**

**Units:** 6  
**Hours:** 81 hours LEC; 81 hours LAB  
**Prerequisite:** AT 180 and 330 with grades of “C” or better  
**Advisory:** AT 110 and 310  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers the principles of advanced electrical diagnostics. Topics include automotive computers, vehicle networks, driver information systems and accessories, supplemental restraint systems, antilock brakes, tire pressure monitoring systems, and climate control. Along with completion of AT 330, this course meets Automotive Service Excellence (ASE) certification standards for the A6 Electrical Systems certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and avoid unsafe conditions and unsafe acts in compliance with safety laws and regulations in the auto work place.
- solve advanced problems as they apply to electrical system repair.
- analyze electrical and electronic components for malfunction.
- research and interpret advanced electrical schematics for system diagnostics and repair.
- evaluate repairs using test equipment, such as digital volt-ohm meters (DVOM), digital storage oscilloscopes (DSO), and scan-tools.
- diagnose and repair automotive electronic systems at industry ASE performance standard levels.

**AT 332 Engine Performance & Electronic Engine Controls**

**Units:** 6  
**Hours:** 81 hours LEC; 81 hours LAB  
**Prerequisite:** AT 331 and AT 333 with grades of “C” or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers the principles, operation, and diagnosis of automotive engine performance systems including engine mechanics, ignition, fuel delivery, and electronic engine controls. It includes extensive troubleshooting, use of diagnostic test equipment, lab oscilloscopes, scantools, and emission analyzers. Along with completion of AT 333, this course meets Automotive Service Excellence (ASE) certification standards for the A8 Engine Performance certification. This course is formerly known as AT 326.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and avoid unsafe conditions and unsafe acts and observe safety laws and regulations.
- determine logical diagnostic tests to run based upon vehicle symptoms.
- evaluate service and repair methods according to industry and ASE approved standards.
- analyze and diagnose engine mechanical, electrical and fuel control problems.
- evaluate information obtained from diagnostic equipment.
- diagnose and correct emission problems effectively.
evaluate the setup and operation of a digital storage oscilloscope (DSO).

evaluate information obtained from diagnostic equipment.

AT 333 California State Smog Check Inspector Training

Units: 6
Hours: 81 hours LEC; 81 hours LAB
Prerequisite: AT 314 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the Bureau of Automotive Repair (BAR) certified Level 1 and Level 2 smog inspector training. Topics include smog check laws, rules and regulations; standards of practice; engine theory, design, and operation; emission control theory, design, identification, operation, and testing; smog inspection visual and functional testing procedures; and loaded mode emission testing. It is required for first-time licensed inspection technicians. Along with completion of AT 332, this course meets Automotive Service Excellence (ASE) certification standards for the A8 Engine Performance certification. This course is formerly known as AT 323.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and avoid unsafe conditions and unsafe acts and observe safety laws and regulations.
- identify a vehicle by year, make, model, and certification status.
- verify emission control equipment needed.
- evaluate the condition of emission control equipment, and correctly report the condition.
- describe the laws, regulations, and procedures associated with the smog check program.
- test vehicles using appropriate emission testing procedures while observing visual, functional, and tailpipe emission testing procedures.
- explain why inspections are necessary, as well as why vehicles are equipped with emission controls.
- evaluate information obtained from diagnostic equipment.

AT 334 BAR Specified Diagnostic and Repair Training

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

State law currently requires that applicants for a Smog Check Repair license possesses Automotive Service Excellence (ASE) certifications in the following areas: A6 – Automotive Electrical/Electronic systems; A8 – Automotive Engine Performance; L1 – Advanced Engine Performance.

This course is an intensive review of automotive electrical/electronic systems, engine mechanical systems, emission control systems, and computer control systems as they relate to automotive emissions controls. It satisfies the ASE certification requirement when applying for a Smog Check technician license and may be used by the applicant in lieu of the ASE certifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and test electrical circuits and locate electrical faults.
- explain the proper use of electrical test equipment.
- interpret electrical wiring diagrams and their role in troubleshooting electrical systems.
- solve problems related to circuit resistance.
- apply organized troubleshooting techniques.
- define electrical terms of watts, voltage, current, and resistance.
- test ignition systems and computer components systems with an oscilloscope.
• explain the theory of the four stroke engine.
• diagnose engine mechanical faults.
• explain the use and operation of five-gas exhaust analyzers as required for emissions diagnosis.
• explain diagnostic principles of advanced engine performance.
• analyze and diagnose computerized engine control systems.
• analyze engine control failures.
• analyze and troubleshoot internal engine failures and their effect on exhaust emissions.

AT 495 Independent Studies in Automotive Technology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and preserve our world’s biodiversity. The Biology courses at ARC provide students with the breadth and depth of knowledge necessary to more fully understand the living world. The Biology Department offers a wide range of lecture, laboratory, and field courses for majors and non-majors alike, whether for transfer, vocational training, or general interest.

Division Dean
Dr. Rina Roy

Department Chairs
Justin Moore

Associate Degrees for Transfer

A.S.-T. in Biology

The Associate in Science in Biology for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Science in Biology for Transfer (AS-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) the Intersegmental General Education Transfer Curriculum for Science, Technology, Engineering, and Mathematics (IGETC-STEM).

Catalog Date: June 1, 2020

The Associate in Science in Biology for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) the Intersegmental General Education Transfer Curriculum for Science, Technology, Engineering, and Mathematics (IGETC for STEM).

Student Learning Outcomes

Upon completion of this program, the student will be able to:
• apply the scientific method: define problems clearly, construct testable hypotheses, design and execute appropriate experiments, analyze data, and justify appropriate conclusions.

• demonstrate knowledge of scientific terminology and interpret principle concepts of biology.

• demonstrate content knowledge, laboratory skills, and study skills to be successful at a four-year institution.

• record and analyze data using appropriate laboratory skills and instrumentation.

• assemble and critically evaluate technical information from the scientific literature.

• apply safe laboratory practices.

• work effectively in groups, as leaders or team members, to solve problems and interact productively with a diverse group of peers.

• demonstrate awareness of the role of biology in contemporary societal and global issues.

Associate Degrees

A.S. in Biotechnology

This degree provides the theory and skills necessary for entry into the biotechnology field, which uses cellular and molecular processes for industry or research. Course work includes practical laboratory skills with emphasis on good laboratory practice, quality control, and regulatory issues in the biotechnology workplace. Completion of the degree also prepares the student for transfer at the upper division level to academic programs involving biotechnology.

The Biotechnology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply biological and chemical concepts to biotechnology research and its practical applications.
- demonstrate biotechnology laboratory procedures involving protein and DNA techniques, cell culture methods, and solution preparation.
- design and interpret experiments involving biotechnology laboratory procedures.
- evaluate biotechnology laboratory practices in the context of good laboratory practice, quality control, and regulatory issues.
- analyze biotechnology data using mathematical and statistical methods.
- integrate laboratory skills and theory into job-related tasks in the biotechnology workplace.
- appraise social and ethical issues related to advances in biotechnology research and its practical applications.

Career Information

This degree prepares the student for entry-level work in the bioscience industry in the areas of research and development, production, clinical testing, and diagnostic work. Potential employers include biotechnology and pharmaceutical companies, as well as laboratories in hospitals, government, and universities.

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Total Units: 18

\[^{1}\text{must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science.}\]

\[^{2}\text{The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.}\]

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.

**Certificate of Achievement**

**Biotechnology Certificate**

This certificate provides the theory and skills necessary for entry into the biotechnology field, which uses cellular and molecular biology processes for industry or research. Course work includes practical laboratory skills with emphasis on good laboratory practice, quality control, and regulatory issues in the biotechnology workplace. This certificate is suitable for preparing the student for the biotechnology workplace at the support personnel level.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- apply biological and chemical concepts to biotechnology research and its practical applications.
- demonstrate biotechnology laboratory procedures involving protein and DNA techniques, cell culture methods, and solution preparation.
- design and interpret experiments involving biotechnology laboratory procedures.
- evaluate biotechnology laboratory practices in the context of good laboratory practice, quality control, and regulatory issues.
- assess the impact of biotechnology on social and ethical issues.

**Career Information**

This certificate prepares the student for entry-level work in the bioscience industry in the areas of research and development, production, clinical testing, and diagnostic work. Potential employers include biotechnology and pharmaceutical companies, as well as laboratories in hospitals, government, and universities.

**Biology (BIOL)**

**BIOL 102 Essentials of Human Anatomy and Physiology**

- **Units:** 4
- **Hours:** 54 hours LEC; 54 hours LAB
- **Prerequisite:** None.
- **General Education:** AA/AS Area IV
- **Catalog Date:** June 1, 2020

This course examines body systems from an anatomical and physiological point of view. The basic anatomy and physiology of all the body systems are covered with an emphasis on developing vocabulary in each area. This course meets the minimum science requirements for Paramedic, Healthcare Interpreting, Gerontology, Health Care, and Funeral Service programs.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify major organs, cavities, bones and bone markings, muscles, and blood vessels on models or drawings.
- explain how different organ systems contribute to the maintenance of the living cells of our bodies.
- explain how different organ systems work together to maintain homeostasis.
- correlate course knowledge of organ systems to disease, aging, and healing processes.
- integrate the body's structural design with its functioning to explain how life is maintained.
- differentiate between credible sources of scientific information and anecdotes or stories.

**BIOL 103 Human Anatomy for Funeral Services**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None  
**Corequisite:** FSE 300  
**Enrollment Limitation:** An off-site clinical laboratory component of the course may require a background check, drug screening, and testing for hepatitis B.  
**General Education:** AA/AS Area IV  
**Catalog Date:** June 1, 2020

This course is an intensive study of the structure of the human body. It covers the basic terminology of anatomy, microscopic anatomy, the four major tissue types, and all the organ systems of the human body. Topics include the following systems: integumentary, skeletal, muscular, nervous, cardiovascular, respiratory, digestive, urinary, and reproductive. Laboratory assignments develop skills of observation, investigation, and identification of selected structures. It emphasizes the regions and structures relevant to embalming techniques through the dissection of a human cadaver. This course is designed for students preparing for a career in funeral service.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify all body parts, body structures, organs, and tissues of the human body at a detailed level on models.  
- assess and identify structures on a previously dissected human cadaver.  
- demonstrate proper dissection technique on an undissected human cadaver.  
- dissect and identify specific anatomical structures in human cadavers that are relevant to embalming procedures.  
- analyze the relationships between anatomical systems by applying principles of the scientific method and inquiry.  
- identify specific anatomical guides, linear guides, and anatomical limits of structures relevant to embalming procedures.  
- demonstrate appropriate behavior in the presence of a human cadaver.  
- enumerate ethical issues regarding working with human cadavers.

**BIOL 130 Microbiology for Funeral Service**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** CHEM 130 with a grade of "C" or better  
**Corequisite:** FSE 312 and 330  
**Advisory:** BIOL 300 with a grade of "C" or better  
**Catalog Date:** June 1, 2020

This course covers a survey of the basic principles of microbiology. It relates these principles to Funeral Service Education especially as they pertain to sanitation, disinfection, public health, infectious disease, and embalming practice.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify basic microbial morphology and describe basic microbial physiology.  
- interpret the relationships and interactions between a host and a parasite.  
- assess the effect of environmental disinfection and decontamination procedures.  
- describe the fundamentals of the infectious disease process.  
- categorize specific and nonspecific defense mechanisms against disease.  
- distinguish between the various methods of transmission of infectious disease.  
- differentiate between normal flora, true pathogens, and opportunistic pathogens.  
- identify examples of human disease and corresponding infectious agents with special emphasis on control and prevention of disease.
BIOL 295 Independent Studies in Biology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

BIOL 300 The Foundations of Biology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (BIOL 300, 303 & 310 combined: maximum credit - two courses; no credit for BIOL 300 if taken after BIOL 400)
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course for non-science majors covers basic biological principles and how they relate to humans. Topics include an introduction to the philosophy of science and basic cell chemistry, structure, and physiology. An introduction to basic genetics (transmission and molecular) as well as some biotechnology principles are discussed. Additionally, human body systems, evolution, reproduction and development, as well as ecology and human impacts on the environment are addressed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain basic cellular, anatomical, and physiological mechanisms by which organisms, including humans, maintain homeostasis.
- describe the basic processes of cellular reproduction and genetics.
- describe implications of modern biotechnologies.
- apply evolutionary theory to various organisms.
- evaluate new situations using the scientific method, including evaluating the validity of data and forming appropriate conclusions.
- propose solutions to biological problems.
- analyze data using quantitative reasoning and basic mathematical concepts.
- analyze changes in biodiversity over time.

BIOL 301 Evolution

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This non-science majors course is an introduction to evolutionary biology. It explores the history of life and the mechanisms that give rise to the diversity of life on earth. Topics include the scientific method, the history of evolutionary thought, the origins of life, population genetics, speciation, evolutionary developmental biology and systematics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze new situations using the scientific method, evaluate the validity of data, and form appropriate conclusions.
- describe the contribution of key individuals to the development of the theory of evolution.
explain the forces that act to change the genetics of populations over time.

explain the concept of species and how new species form.

explain recent discoveries in the field of evolutionary developmental biology.

describe major events in the evolution of life on earth.

BIOL 303 Survey of Biology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: MATH 100 or 132 with a grade of "C" or better
Transferable: CSU; UC (BIOL 300, 303 & 310 combined: maximum credit - two courses; no credit for BIOL 303 if taken after BIOL 310 or 400)
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This course covers the basic principles of cell biology, genetics (transmission and molecular), ecology, and evolution. It also emphasizes the process of science, interrelationships among living organisms, and the relationship of biological structures and functions. Laboratory activities include plant and animal dissection. This course provides science preparation for those entering a Multiple Subject Teacher Credential Program. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify properties that are common to all living things, and identify representatives of the major groups of organisms
- compare and contrast the structures and functions of cells, tissues, and organ systems of major groups of organisms
- apply the scientific method: use inquiry, data collection, quantitative reasoning, and basic mathematical concepts to analyze the results of a simple experiment
- assess the scientific quality of information based on scientific processes
- explain how the mechanisms of evolution and the evidence supporting the theory of evolution account for both the unity and diversity of life
- interpret results of ecological studies, including graphs, diagrams, and charts
- correlate the basic concepts of DNA synthesis, cell division, sexual reproduction, and transmission genetics
- understand the importance of gene expression in creating the organism

BIOL 305 Natural History

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This course covers basic biological and ecological principles to explain the origin and diversity of living organisms. Topics range from landscape formation and habitats to the adaptations organisms have evolved to live in their environment. Although this is a broad survey course, it emphasizes California environments. Dissection is not part of this curriculum. This course is designed as an introductory course and for non-majors who enjoy the outdoors. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the biological differences in structure and function of several California ecosystems.
- examine the different relationships between species.
- apply general biological and ecological concepts to explain origins of life hypotheses, extant biological diversity, and individual traits that promote survival, growth, and reproduction.
- incorporate the principles of natural selection to explain relationships between species’ adaptations and the environment.
• explain the mechanisms of evolution and their impact on adaptations over geologic time.
• recognize common species of plants and animals in the field, and the biomes of California.
• assess the importance of climate and geology to plant and animal adaptations.
• evaluate the importance of biodiversity to ecosystem health.
• record observations on adaptations and ecology in natural environments.
• evaluate biological data and form logical conclusions suggested by the data.
• assess the scientific quality of information based on the process of science and the scientific method.

BIOL 310 General Biology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: MATH 32, MATH 42, or STAT 105 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (BIOL 300, 303 & 310 combined: maximum credit - two courses)
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This laboratory course for non-science majors covers basic biological principles and how they relate to humans. Concepts include cell chemistry, structure, and physiology; genetics (transmission and molecular); biotechnology; human body systems; evolution; reproduction and development; ecology; and human impacts on the environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain major molecular, cellular, physiological, ecological, and evolutionary principles.
• apply major molecular, cellular, physiological, ecological, and evolutionary principles to basic biological problems.
• apply the scientific method to a biological problem.
• assess information from a variety of sources for scientific validity and meaning.
• analyze a particular biological structure and explain its function.
• evaluate a hypothesis in the laboratory using inquiry, data collection and analysis, quantitative reasoning, and basic mathematical skills.

BIOL 322 Ethnobotany

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area VI
Catalog Date: June 1, 2020

This course focuses on the multicultural use of plants. Emphasis is on the identification and use of plants from several cultures including the American Indians, Europeans, South Americans, and Chinese. Topics include the use of plants for food, medicine, basketry, technology, shelter, and music. Sight recognition of plants is emphasized. An analysis of ethnicity and ethnocentrism is also included. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify herbs, shrubs, and trees using plant keys
• compare and contrast uses of plants from many cultures
• prepare American Indian foods
• gather and prepare plants according to appropriate seasons and methods
• compare and contrast ethnobotanical issues facing American Indians, South Americans, Europeans, and Chinese
BIOL 332 Introduction to Ornithology

Unit: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This introductory course covers the biology and natural history of birds. Topics include evolutionary origins of birds and of flight, avian anatomy and physiology, and bird behavior, such as migration, song, feeding ecology, and mating systems. Conservation strategies are also investigated. Laboratory work explores bird structure and function, taxonomic classification, and species identification, particularly of those found in California and the western United States. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the nature of scientific thought and methodology as it applies to the analysis of avian biology
- compare and contrast the current scientific hypotheses regarding the evolution of birds and flight and evaluate the evidence supporting these views
- analyze the evolutionary forces that have led to specific avian adaptations to flight, including morphological, physiological, and behavioral traits
- explain the genetic mechanisms that generate bird biodiversity
- assess the scientific quality of information based on the process of science and the scientific method in the field of ornithology
- identify the major conservation concerns in the field of ornithology and the scientific efforts that may mitigate these threats
- evaluate the effectiveness of citizen science, digital data, and metadata systems to obtain quality ornithological data
- demonstrate the proper use of binoculars and field guides in order to identify birds in the field

BIOL 342 The New Plagues: New and Ancient Infectious Diseases Threatening World Health

Unit: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course explores the biology, epidemiology, and pathology of selected pathogens such as prions, viruses, bacteria, protozoa, fungi, and helminths that threaten public health on a global scale. It explores the interaction between human behavior and disease agents on the emergence of new infectious agents and the re-emergence of ancient plagues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast the anatomical and functional characteristics of infectious agents.
- describe the etiology, transmission, epidemiology, treatment, and prevention of major infectious diseases.
- explain how host defenses respond to infectious agents.
- assess the effects of selected infectious agents on human populations throughout history.
- evaluate factors that lead to the emergence or re-emergence of infectious diseases worldwide.
- apply microbiology concepts to current issues in human health and infectious disease.
- list examples of infectious agents used as biological weapons.
demonstrate expertise for a specific infectious disease by preparing an oral research presentation including visual illustrations.

explore how infectious diseases can be controlled by vaccines, antimicrobial agents, and behavioral and social changes.

BIOL 352 Conservation Biology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
Catalog Date: June 1, 2020

This course introduces biological and ecological principles involved in understanding and analyzing environmental problems and exploring scientifically sound conservation approaches. Major topics include forms and patterns of biodiversity, values of biodiversity, threats to biodiversity, conservation at the population and species levels, applied conservation biology, and conservation and sustainable development at the local, regional, national, and international levels. This course places emphasis on scientific processes and methodology, while also examining the economic, social, political, and ethical aspects of conservation issues. Course themes are explored through extensive use of interactive case studies, discussion, and activities surrounding relevant current events. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply fundamental biological and ecological terms, concepts, and principles to the critical analysis of conservation issues
- examine biodiversity in terms of biological structure, composition, and function at the genetic, species, ecosystem, and landscape levels
- analyze the interrelationships between biological, physical, and social systems
- assess the scientific integrity of information
- evaluate the effectiveness of conservation strategies
- apply the scientific process to conservation problem solving and personal decision making

BIOL 370 Marine Biology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (BIOL 370 & 482 combined: maximum credit - one course)
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This course is an introduction to marine biology. It includes the study of cell biology, evolution, physical oceanography, marine algae, marine vertebrate and invertebrate animals, and the ecology of various marine zones. Field trips focusing on the Central and Northern California coast are required and serve as the laboratory component of this course. Field experiences may include but are not limited to natural history of the rocky intertidal, invertebrate identification, salt marsh ecology, sandy beach ecology, or estuary ecology. This course is not open to students who have completed BIOL 482.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and analyze the interrelationships between chemistry, geology, biology, and ecology in the ocean.
- explain oceanographic phenomena, such as waves, currents, and tides.
- identify and classify the various life forms in the ocean.
- evaluate major adaptations of various organisms and their evolutionary origins.
- compare and contrast various marine zones.
- apply the scientific method to a biological problem by formulating hypotheses and analyzing data.

BIOL 375 Marine Ecology
This course for non-science majors is an introduction to the marine physical environment, the diversity of marine life, and the complex interactions between the two. It uses the marine environment as a model for introducing the key concepts of the scientific method, ecology, evolution, biodiversity, and sustainability.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the interconnectedness between the physical environment and living organisms.
- describe the interconnectedness among different living organisms in marine ecosystems.
- describe the interconnectedness between humans and the marine environment.
- explain how evolutionary processes have influenced marine organism adaptations and the biodiversity of marine communities.
- apply basic ecological principles (e.g., biodiversity, community dynamics, primary production, the niche, energy flow, or nutrient cycles) to marine organisms and/or marine ecosystems.
- apply the concept of sustainability to the human use of marine resources.
- paraphrase and evaluate the scientific credibility of websites and/or magazine articles related to current marine ecology issues.

---

**BIOL 390 Natural History Field Study**

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None |
| Advisory: | MATH 32, MATH 42, or STAT 105 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area IV; CSU Area B2; IGETC Area 5B |
| Catalog Date: | June 1, 2020 |

This course focuses on the ecology and natural history of specific habitats of biological interest. Course content varies according to field destination but may include topics in botany, zoology, marine, conservation, and geography. Field study methodology and tools are also covered. Field trips are required and field trip expense fees may be required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate biological and ecological concepts and processes to specific locations in California
- describe site-specific biological and ecological phenomena
- analyze the interrelationships between biological, physical, and social systems at a particular site
- hypothesize about the causal mechanisms, both evolutionary and environmental, that make the natural history of specific field sites unique
- compose field notes
- collect and analyze field data
- demonstrate the use of field equipment

---

**BIOL 400 Principles of Biology**

| Units: | 5 |
| Hours: | 54 hours LEC; 108 hours LAB |
| Prerequisite: | CHEM 400 with a grade of "C" or better |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 |
| Transferable: | CSU; UC |
| General Education: | AAAS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C |
| Catalog Date: | June 1, 2020 |
This course introduces biological concepts important for a general understanding and background for biology majors and pre-professional programs. Emphasis is on the scientific method and basic processes common to all forms of life. Topics include cell structure and function, cell physiology, cell reproduction, Mendelian and molecular genetics, evolution, and ecology.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the scientific method.
- demonstrate skills in laboratory procedures and apply critical thinking in laboratory experiments.
- evaluate data generated in the laboratory for validity and scientific meaning.
- analyze interactions between biological systems.
- assess a problem and formulate a solution in the laboratory by using inquiry, data collection and analysis, quantitative reasoning, and basic mathematical concepts.

**BIOL 410 Principles of Botany**

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: BIOL 400 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC

This course covers the general principles of botany for science majors. It builds upon and applies concepts developed in cell and molecular biology to the study of plants. It covers the anatomy and physiology, morphology, ecology, diversity, and evolution of higher plants. Thorough cladistic analysis is used to study phylogenetic relationships among the cyanobacteria, protists, fungi, and all major plant phyla. It also covers general ecological principles. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify plant cells, tissues, and organs
- describe the development of the primary and secondary plant body from the seed to the mature plant
- evaluate the environmental adaptations of plants as these adaptations relate to the plants’ anatomy, morphology, and physiology
- demonstrate the use of plant keys to identify botanical organisms in the field
- identify examples of how plants utilize hormones to interact with and respond to the external environment
- describe the physiological pathways that plants utilize to create and store sugars and to uptake minerals
- classify organisms into their respective domain, kingdom, and phyla based on their identifying characteristics
- analyze evolutionary trends among fungi, cyanobacteria, protists, and plants
- describe the major advances and evolutionary trends of the plant phyla as they adapted further onto land (charting nonvascular plants through anthophyta)
- generate hypotheses relating to ecology
- state basic ecological principles
- apply the scientific method

**BIOL 415 Introduction to Biology: Biodiversity, Evolution, and Ecology**

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: BIOL 400 with a grade of "C" or better
This course, intended for science majors, introduces the ecological and evolutionary processes that shape biodiversity, relating the patterns of biodiversity to small and large scale environmental effects. The diversity of life on Earth (including animals, plants, fungi, protists, and additional unicellular organisms) is covered. Overarching themes include evolutionary mechanisms, phylogenetic analysis, interactions of organisms with the environment, and global processes and patterns. Not open for credit to students who have completed BIOL 410 and BIOL 420 with a grade of C or better. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and give examples of the levels of organization seen in living things from cells, organs, tissues, and tissue systems to ecosystems.
- explain evolutionary mechanisms for both macroevolution and microevolution and how they relate to the diversity of life. Apply them to specific examples.
- investigate various mechanisms used by organisms to produce, store, and use energy.
- describe processes involved in embryologic development of major taxa stressing the patterns observed and relating them to evolutionary principles.
- use evolutionary mechanisms to critique the major body plans of organisms showing they are a result of environmental adaptations and shared ancestry.
- compare and contrast anatomical and physiological characteristics of major taxa. Focus on evolutionary relationships and adaptations to the environment.
- systematize various phyla by creating phylogenetic trees using anatomical and physiological data. Use trees to extrapolate the relationship of organisms. Evaluate hypothetical trees.
- identify basic ecological principles.
- identify, compare, and contrast life cycles observed in the major taxa with the focus on how these life cycles relate to evolutionary mechanisms and ecological principles.
- identify, compare, and contrast representative reproductive strategies seen in major phyla; detail how these relate to evolutionary mechanisms and ecological principles.
- analyze the relationship of organisms to their biotic and abiotic environment.
- integrate ecological principles with issues that affect the human condition.

BIOL 420 Principles of Zoology

Upon completion of this course, the student will be able to:

- describe reproductive and developmental processes used by animals.
- demonstrate anatomical characteristics of animals using dissection methods.
- list the characteristics of the major animal phyla.
- construct phylogenetic trees based on anatomic, physiologic, and embryologic data.
- interpret phylogenetic trees.
- compare and contrast anatomy and physiology of the animal phyla.
- analyze the environmental adaptations of animals based on anatomic and physiologic characteristics.
- evaluate the microevolutionary processes that produce patterns in nature.
• evaluate phylogenetic hypotheses with anatomic and physiologic data.
• integrate developmental, anatomical, and environmental data to hypothesize evolutionary relationships between animals.

BIOL 430 Anatomy and Physiology

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 305, 309, or 400 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AAAS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
C-ID: Part of C-ID BIOL 115S
Catalog Date: June 1, 2020

This course emphasizes the integration of structure and function of the human body. It is built on the study of anatomical terminology, cells, and tissues, followed by expansion into the integumentary, skeletal, muscular, and nervous systems. Laboratory study is enhanced by the microscopic investigation of tissues, examination of anatomical models, cadavers, and the dissection of preserved material. Laboratory activities may also include both wet-lab experiments and computer simulations. BIOL 431 must be subsequently taken to complete the study of all major body systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assemble general anatomical structures within the hierarchy of levels of organization
• incorporate appropriate anatomical terms to demonstrate the position and relationship of anatomical structures
• predict negative and positive feedback responses to changes in homeostasis
• correlate the chemical structure of atoms and molecules with their physiological functions
• predict the function of a particular cell based on its organelles
• examine how tissues establish the framework of organs and systems
• integrate the type of tissue present with the function of the organ
• identify specific anatomical components of the integumentary, skeletal, muscle, and nervous systems using appropriate tools (microscope, models, preserved organs, and cadaver prostheses)
• describe the mechanisms of neural communication and control
• describe the mechanisms of muscle contraction
• evaluate data collected during experimental challenges to homeostasis
• apply knowledge of physiological changes to cellular and organ pathology

BIOL 431 Anatomy and Physiology

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: BIOL 430 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312; OR ESLR 340
Transferable: CSU; UC
General Education: AAAS Area IV
C-ID: Part of C-ID BIOL 115S
Catalog Date: June 1, 2020

This lecture and laboratory course in human anatomy and physiology emphasizes the integration of structure and function. It provides students with an understanding of the structure, function, and regulation of the human body through the physiological integration of the following systems: cardiovascular, lymphatic, respiratory, digestive, urinary, endocrine, and reproductive. Laboratory study is enhanced by the microscopic study of tissues, examination of anatomical models, and the dissection of preserved material. Laboratory activity is also enhanced by the examination of whole cadavers as well as prosected head, torso, upper and lower extremities, and individual organs. Laboratory activities also include both wet-lab experiments and computer simulations. Both BIOL 430 and BIOL 431 must be taken to complete the study of all major body systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• identify specific anatomic components of the endocrine, cardiovascular, immune, respiratory, urinary, digestive, and reproductive systems using appropriate tools (microscope, models, preserved organs, and cadaver material)

• diagram the functional relationship between each organ and the system to which it belongs

• illustrate the relationship between basic embryonic development and mature functional structures

• correlate the mechanisms by which the functional cells of each of the major systems respond to maintain homeostasis

• evaluate the neuronal and hormonal responses to changes in cardiovascular and respiratory dynamics

• evaluate the neuronal and hormonal responses to changes in digestive dynamics

• measure physiologic data during challenges to cardiovascular, respiratory, urinary, and digestive systems

• collect data through experimental challenges to cardiovascular, respiratory, urinary, and digestive challenges to homeostasis

• predict the outcome of pathophysiological changes to various body systems

**BIOL 440 General Microbiology**

**Units:** 4  
**Hours:** 54 hours LEC; 72 hours LAB  
**Prerequisite:** CHEM 305, 309, or 400 with a grade of "C" or better  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340; AND BIOL 300 or CHEM 306 with a grade of "C" or better.  
**Transferable:** CSU; UC  
**General Education:** CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C  
**Catalog Date:** June 1, 2020

This course introduces microorganisms and their effects on human health. It examines the structure, physiology, metabolism, and genetics of microorganisms. Laboratory work includes aseptic technique, morphological and biochemical properties of microorganisms, and medically relevant issues regarding microorganisms.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• analyze the properties of microorganisms in terms of cellular anatomy and physiology.

• summarize the properties of microorganisms in terms of biochemistry and genetics and correlate these properties to applications in biotechnology.

• apply microbiology concepts to current issues in human health and infectious diseases.

• demonstrate proper microbiology laboratory techniques involving microscopy, biochemical tests and diagnostic media to characterize microorganisms of significance to human health.

• describe how physical and chemical methods can be used to control microbial growth.

• explain how the human body interacts with various microorganisms through symbiotic relationships and host defenses.

**BIOL 442 General Microbiology and Public Health**

**Units:** 5  
**Hours:** 54 hours LEC; 108 hours LAB  
**Prerequisite:** CHEM 306, CHEM 309, or CHEM 400 with a grade of "C" or better; OR CHEM 305 with a grade of "C" or better and one of the following: BIOL 300, BIOL 303, or BIOL 310 with a grade of "C" or better.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 with a grade of "C" or better.  
**Transferable:** CSU; UC  
**General Education:** CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C  
**Catalog Date:** June 1, 2020

This course provides a survey of bacteria, viruses, fungi, protozoa, and helminths that are associated with human infectious diseases and public health. It examines their cellular and molecular structure, physiology, metabolism, and genetics. Laboratory work introduces methods for cultivating and characterizing microorganisms.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• evaluate the anatomical, physiological, biochemical, and molecular properties of microorganisms.
• apply microbiology concepts to advances in biotechnology.
• evaluate how physical and chemical methods can be used to control microbial growth.
• apply microbiology concepts to current issues in public health and infectious disease.
• explain how host defenses interact with pathogenic microorganisms.
• design and evaluate experiments involving microscopy, biochemical tests, DNA techniques, and diagnostic media.
• describe various infectious diseases, including the causative agent(s), signs and symptoms, pathogenesis, virulence factors, epidemiology, diagnosis, treatment, and prevention.

BIOL 482 Honors Marine Biology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: Placement into ENGWR 480 through the assessment process.
Transferable: CSU; UC (BIOL 370 & 482 combined: maximum credit - one course)
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3; IGETC Area 5B; IGETC Area 5C
Catalog Date: June 1, 2020

This course is an honors level introduction to marine biology. Using a seminar style, it explores physical oceanography, marine algae, marine vertebrate and invertebrate animals, and the ecology of various marine zones. Field trips focusing on inter-tidal organisms of the Central and Northern California Coast are required. A portion of this course may be offered in a TBA component of 54 hours which may include but is not limited to designing and conducting experiments in the rocky intertidal, invertebrate identification, salt marsh ecology, sandy beach ecology, estuary ecology, or comparative anatomy of fishes. The course is not open to students who have completed BIOL 370.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the interrelationships between chemistry, biology and ecology in the marine environment (including oceanographic phenomena such as waves, currents, and tides).
• examine and support with experimental data the mechanisms of cell biology which allow marine organisms to survive in their environment.
• categorize and contrast the various life forms found in the marine environment.
• analyze and interpret data from current scientific journals and evaluate the broader implications of each study.
• formulate hypotheses in marine biology, design experiments to test them, and interpret and present the data.
• critique plans of action for marine conservation.

BIOL 491 Science Skills and Applications II

Units: 0.5
Hours: 27 hours LAB
Prerequisite: None.
Corequisite: Current enrollment in a science, nutrition, or nursing course.
Transferable: CSU
Catalog Date: June 1, 2020

This course offers individualized instructional modules designed to acquire or improve study strategies for science, nursing, or nutrition courses. Strategies include goal setting, the intensive study cycle, graphic organizers, constructing and interpreting graphs, mastering science vocabulary, self monitoring while reading, coding method of reading, and advanced problem solving. This course is offered in a flexible TBA format of 27 laboratory hours to accommodate the student's schedule. Registration is open through the ninth week of the semester. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop short- and long-term goals and assess progress in reaching these goals.
• refine time management techniques and apply new techniques for avoiding procrastination.
• analyze vocabulary development strategies and apply pertinent ones to science courses.
• choose and apply the appropriate problem-solving strategies for science courses.
• construct and interpret various graphs of scientific data.
• apply active reading strategies in science texts.
• create content-based graphic organizers to facilitate understanding of complex topics.
• utilize the strategies of intensive study cycles.
• assess performance on science course exams in order to modify study strategies.

BIOL 495 Independent Studies in Biology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Biology - Field Studies (BIOLFS)

Biotechnology (BIOT)

BIOT 301 Biotechnology and Human Health

Units: 3
Hours: 54 hours LEC
Prerequisite: BIOL 303, BIOL 310, BIOL 400, BIOL 440, BIOL 442, or BIOT 307 with a grade of “C” or better
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces biotechnology as it pertains to human health and disease. Topics include an introduction to molecular biology and genetics, recombinant DNA technology, biopharmaceutical products, forensics and genetic testing, stem cells and regenerative medicine, genomics and bioinformatics, and ethical issues arising from biotechnology disease diagnosis and treatment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• relate biological macromolecules, such as nucleic acids and proteins, to their physical properties and cellular function.
• integrate the roles of DNA, RNA, and proteins with the expression of genetic traits of cells and organisms.
• analyze the scientific concepts underlying biotechnology techniques.
• evaluate new developments in biotechnology research on current human health and disease issues.
• explain how information-based biotechnology approaches, such as genomics and bioinformatics, are used to address biomedical issues.
• examine current ethical and social issues in the use of biotechnology for human health.

BIOT 305 Introduction to Bioinformatics

Units: 1
Hours: 14 hours LEC; 14 hours LAB
Prerequisite: BIOL 303, BIOL 310, BIOL 400, BIOL 440, BIOL 442, BIOT 301, or BIOT 307 with a grade of “C” or better
Transferable: CSU
Catalog Date: June 1, 2020

This course examines the basic concepts and techniques in bioinformatics, the computer analysis of nucleic acids and proteins. Topics include biotechnology databases, database searching, structure and function analysis of biological molecules, sequence alignment and analysis, and biological applications of bioinformatics.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain biological applications of bioinformatics concepts.
- design data retrieval strategies from bioinformatics databases.
- set up a data analysis using bioinformatics computational tools.
- analyze structure and function bioinformatics data.

BIOT 307 Biotechnology and Society

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course examines the scientific and social impact of biotechnology by introducing basic technical concepts to examine recent advances. Topics include biotechnology applications in medicine, agriculture, industry, and the environment, and their ethical implications and public perception.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain biotechnology applications in medicine, agriculture, and industry.
- correlate recent advances in biotechnology research with new products and processes.
- evaluate social and ethical issues involving biotechnology.

BIOT 311 Biotechnology Laboratory Methods - Molecular Techniques

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: BIOL 300, BIOL 303, BIOL 310, BIOL 400, BIOL 440, BIOL 442, or BIOT 307 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers basic concepts and techniques to work effectively in a bioscience laboratory. Topics include laboratory solution preparation, recombinant DNA methods and nucleic acid analysis techniques, protein separation and analytical techniques, good laboratory practice, and product quality issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- organize and prepare materials needed for nucleic acid and protein laboratory techniques.
- design and perform laboratory procedures involving manipulation of nucleic acid and protein samples.
- interpret and evaluate the results of nucleic acid and protein analysis experiments.
- assess biotechnology laboratory procedures on the basis of good laboratory practice, quality control, and regulatory issues.

BIOT 312 Biotechnology Laboratory Methods - Microbial and Cell Culture Techniques

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: BIOL 300, BIOL 303, BIOL 310, BIOL 400, BIOL 440, BIOL 442, or BIOT 307 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers basic concepts and techniques to work effectively in a bioscience laboratory. Topics include media preparation, microbial and plant cell culture
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- organize and prepare materials needed for culture media preparation, aseptic cell cultures, and DNA and enzyme diagnostic tests.
- design and perform laboratory procedures involving microbial and cell culture techniques, DNA analysis of microbiological samples, and microbial enzyme diagnostic tests.
- interpret and evaluate the experimental results of cell culture experiments, microbial DNA analysis, and enzyme diagnostic tests.
- assess the quality of laboratory data using descriptive statistical measures.

BIOT 498 Work Experience in Biotechnology

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to biotechnology with a cooperating site supervisor. Students are advised to consult with the Biotechnology Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of biotechnology. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in biotechnology related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Associate Degrees for Transfer

A.S.-T. in Business Administration

The Associate in Science in Business for Transfer (AS-T) degree provides students with a major that fulfills the general requirements for transfer to the California State University. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Science in Business for Transfer (AS-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Students should work closely with their ARC counselor to ensure that they are taking the appropriate coursework to prepare for majoring in Business at the four-year college they wish to transfer to.

Catalog Date: June 1, 2020

1Students can also select one of the following courses if not already used: MATH 340, STAT 300.

The Associate in Science in Business Administration for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and explain the major functional areas of the business organizations including management, marketing, finance, and accounting.
- apply commonly used computer application programs to create relevant business documents.
- apply accounting and mathematical concepts and principles in making decisions about business operations.
- assess the relationships and interdependencies of economic, social, legal, and global environments in which businesses operate.

Career Information

Account executive, analyst, bank employee, buyer, manager, entrepreneur, financial planner, government service, insurance representative, investment counselor, public administration, purchasing agent, retail/industrial sales, stockbroker. Some options may require more than 2 years of study and additional licensing.

Associate Degrees

A.A. in General Business

This degree is designed to provide a strong foundation for those entering into a variety of business fields in the private and public sector. It includes coursework that is essential for entry-level positions and enhances the knowledge base of those who are seeking career progression.

Work Experience (498) courses are limited to 3 units maximum towards degree requirements.

The General Business Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and explain the major functional areas of business organizations including management, marketing, finance, and accounting.
- develop leadership skills and abilities that are effective in managing a multicultural workforce.
- analyze practical business problems and utilize critical thinking and research skills in the evaluation of alternative solutions.
- apply accounting concepts and principles in making decisions about business operations.
- integrate management principles in relationship to finance, personnel, products, services, and information.
- communicate effectively verbally and in writing in various business settings.
- apply commonly used computer application programs to compose relevant business documents.

Career Information

Account executive, analyst, bank employee, buyer, clerk, data-entry clerk, data-entry specialist, entrepreneur, financial planner, government service, insurance representative, investment counselor, manager, marketing, market research, office assistant, public administration, purchasing agent, retail/industrial sales.

A.A. in Small Business Management

The Small Business Management degree provides training and education for those wishing to own or manage a small entrepreneurial venture. The various elements involved in starting and operating a small business are covered.

Total Units: 33 - 34

The Small Business Management Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Evaluate the feasibility of success when starting a new business venture.
- Research and compose a business plan that can be used for planning as well as financing.
- Employ appropriate management, finance, accounting, and marketing techniques required in operating a business.

Certificates of Achievement

Business Information Worker Certificate

This certificate prepares students for entry-level office, computer, and administrative support positions in a variety of industries.

### Business (BUS)

#### BUS 100 English for the Professional

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None  
**Advisory:** BUSTEC 300.1, ESLR 310, and ESLW 310 with grades of "C" or better  
**Catalog Date:** June 1, 2020

This course prepares students for professional business communication and BUS 310: Business Communications. It presents principles of correct and effective English usage as applied in business. Included are skills and techniques of written communication, sentence structure, word usage, punctuation, spelling, business vocabulary, and business and employment document formatting. It emphasizes critical thinking and effective writing techniques by analyzing written communication and composing and organizing paragraphs into effective business documents. Proofreading skills are stressed throughout the course.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify, select, and use appropriate writing aids, references, and Internet resources used in business writing.
- prepare documents that exhibit a clear understanding of the structure of English grammar, word usage, punctuation, spelling, and business vocabulary.
- produce documents that demonstrate the essentials of sentence structure, critical thinking, and effective business writing.
- compose coherent, well-developed, unified paragraphs within documents.
- proofread, edit, and evaluate written sentences, paragraphs, and basic business documents.
- research, create, proofread, edit, and evaluate employment documents.
BUS 105 Business Mathematics

This course reviews basic mathematical skills and introduces equations and formulas in solving for unknowns. Calculations for banking, commercial discounts, retail and wholesale markup-markdown, payroll computations, simple and compound interest, bank discount, present value, taxes, insurance, depreciation, and financial statements are explored. This course is recommended for business majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- add, subtract, multiply, and divide whole numbers, fractions, and decimals.
- use fractions, decimals, graphs, and statistics to calculate values.
- analyze application problems.
- solve for unknowns by using formulas, variables, and equations.
- evaluate financial alternatives based on mathematical formulas.
- demonstrate accuracy, neatness, thoroughness, promptness, and speed as they pertain to business mathematics.

BUS 110 Business Economics

This course is designed for two-year Accounting, Business, Computer Information, Marketing, and Real Estate majors. Both microeconomic and macroeconomic theory are covered with the emphasis towards applications. This course does not meet ECON 302 or 304 requirements for transfer students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize and analyze the interaction between macro and micro economics.
- summarize the history of economic thought and its relevance to modern business practices.
- evaluate the effect of government economic actions on business and industry.
- analyze current economic events and their effect on the business community.
- apply various economic principles to business disciplines such as marketing, finance, law, accounting, and ethics.

BUS 210 The Business Plan

This course offers an organized, step-by-step approach to preparing a business plan. All sections of the business plan are covered.
Upon completion of this course, the student will be able to:

- describe the essential elements of a business plan.
- identify resources needed to create a business plan.
- analyze target markets.
- develop a business plan.
- evaluate business plans based on quality and thoroughness of content.
- project start-up, monthly, and yearly costs.

**BUS 212 Marketing for Small Businesses**

| Units: | 1 |
| Hours: | 18 hours LEC |
| Prerequisite: | None. |
| Advisory: | BUS 350; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Catalog Date: | June 1, 2020 |

This course covers how small businesses market products and services to consumers through the creation of a marketing plan. Topics include identifying target markets and utilizing the marketing mix to most effectively reach customers.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the marketing mix: product or service, price, place, and promotion.
- describe competitive advantages for a small business and how to utilize this within the marketing mix.
- analyze potential markets.
- create a marketing plan for a small business utilizing appropriate data.

**BUS 214 Financing a Small Business**

| Units: | 1 |
| Hours: | 18 hours LEC |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

This course covers the sources and methods of raising capital for small businesses. It explores how much money is needed and where it can be obtained, start-up costs, and projecting monthly and yearly costs. Financial ratios and key financial statements are also covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate available sources of money for entrepreneurs.
- evaluate typical requirements and qualifications for obtaining various types of financing.
- interpret financial statements and apply key financial ratios.
- arrange and present financial needs and financial statements.
- predict financial needs of the business, one time and ongoing.

**BUS 216 Essential Records for the Small Business**

| Units: | 1 |
| Hours: | 18 hours LEC |
| Prerequisite: | None. |
| Advisory: | ENGWR 51 and ENGRD 15, OR ESLR 310 and ESLW 310; BUS 105 and 350 with a grade of "C" or better. |
This course emphasizes the various types of records that small businesses must keep. The focus is on financial, employment, and tax records. Simple, easy-to-use record-keeping systems are covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe how adequate recordkeeping systems help increase the chance of a small business’s survival.
- identify specific tax treatment of the various types of business organizations.
- research and list how to report business income and expenses, employment taxes, and business use of the home.
- explain and perform the process of completing and filing employment tax and income tax.
- state the factors used in determining the need for professional tax and/or accounting assistance.
- construct a filing system with specific document categories for your own business to organize all your pertinent records.
- define the various types of business records that a small business will encounter during startup and operations.

**BUS 218 Management Skills for the Small Business**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None  
**Advisory:** ENGWR 51 and ENGRD 15, OR ESLR 310 and ESLW 310; BUS 105 and 350 with a grade of "C" or better.  
**Catalog Date:** June 1, 2020

A small business owner must understand and motivate others to help the business reach its objectives. This course covers planning and organizing work flow, delegating responsibilities, leadership styles, decision making, stress management, and working with employee organizations, all of which help the business reach its objectives.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the four functions of management: planning, organizing, directing, and evaluating.
- list the traits and characteristics of effective leaders.
- analyze the skills used in training and motivating employees.
- describe the steps used in making decisions and the importance of decision-making skills.
- define the different types of leadership styles.
- formulate a leadership plan and style conducive to a specific small business.

**BUS 220 Retailing and Merchandising for the Small Business**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None  
**Advisory:** ENGWR 51 and ENGRD 15, OR ESLR 310 and ESLW 310; BUS 105 and 350 with a "C" grade or better.  
**Catalog Date:** June 1, 2020

This course emphasizes retailing concepts, such as inventory control and turnover rates, selecting merchandise sources, using trade and cash discounts, pricing, markup and markdown, and shrinkage control. It also includes how to develop a merchandising plan, inventory control system, and assessing consumer behavior and demographics.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- develop, evaluate, and implement a merchandise plan.
- analyze pricing theories, including markup and markdown.
• describe various inventory control systems.
• analyze how to meet customers' needs.
• interpret and compare data from various financial records.
• design and construct an inventory control system for a small business.

BUS 224 Customer Service

This course introduces a study of the principles involved in building and delivering effective customer service. It focuses on providing value-added service through improved attitude, improved listening, conflict management, problem solving, and successful customer service interactions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the importance of customer service and its relationship to the success of any business.
• describe effective strategies to improve communication
• analyze the role of customer services in the marketing of a good and/or service.
• explain how to develop customer relationships.

BUS 228 Selling Techniques for the Small Business

The class focuses on those skills needed to successfully engage in the sales process of products/services. Special emphasis is given to small business owners and their needs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• define the steps in the sales process.
• differentiate among different types of selling.
• identify and demonstrate effective elements of communication style.
• relate the various skills of professional selling techniques to the small business.

BUS 250 Survey of International Business

This course is a comprehensive overview of international business, designed to provide both beginners and experienced business people with a global perspective on international trade, including foreign investments, impact of financial markets, international marketing, and the operation of multi-national corporations.
Upon completion of this course, the student will be able to:

- compare and contrast domestic business practices and foreign business operations
- interpret and discuss the impact on international trade of economic, cultural, financial, political, and geographic differences.
- explain the differences in development outcomes between market and non-market economies
- construct a strategic plan for opening up global markets for a small business.
- research and assess demographic information for foreign countries or markets to identify which would be most suitable to export goods and services.

BUS 294 Topics in Business

Units: 0.5 - 4
Hours: 9 - 72 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course provides opportunities to study topics in business that are not included in current course offerings. Individualized topics may be developed in cooperation with business and industry to meet specialized training needs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe current subject matter as identified in cooperation with business and industry.
- apply skills to the level identified by the instructor in development of each semester's offering.
- analyze and interpret data to complete written reports as designed prior to each semester's offering for the topic.

BUS 295 Independent Studies in Business

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

BUS 300 Introduction to Business

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b)
C-ID: C-ID BUS 110
Catalog Date: June 1, 2020

This course provides a multidisciplinary examination of how culture, society, economic systems, legal, international, political, financial institutions, and human behavior interact to affect a business organization's policy and practices within the U.S. and a global society. It covers specific areas such as management, marketing, finance, accounting, economics, and computer information systems. It is a core requirement for business majors. This course provides an overview that is helpful for selecting a specific career and/or major in the field of business.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• describe the economic, social, legal, and governmental environments in which business organizations operate.

• define and describe the key management functions of planning, organizing, leading, and controlling.

• identify the marketing mix and the key tools, terms, and strategies related to each element.

• define business ethics and explain the role of social responsibility in an organization.

• identify how business operates in an international/global environment including interdependence, integrated financial markets, and legal, social, cultural, factors.

• compare and contrast the advantages/disadvantages in each form of business ownership.

• explain the importance of finance to the operations of business.

BUS 310 Business Communications

Units: 3
Hours: 54 hours LEC
Prerequisite: BUS 100 or ENGRWR 300 with a grade of "C" or better
Advisory: BUSTEC 300.1
Transferable: CSU
General Education: AA/AS Area II(a)
Catalog Date: June 1, 2020

This course provides the basic concepts for understanding communication in a changing business environment and focuses on practicing the strategies and principles of effective communication in business situations. Tools to communicate effectively in a fast-paced technological, global marketplace are emphasized. This experience provides opportunities to create, edit, evaluate, and critique business documents and reports. A formal research paper using research and analytical skills, and drawing conclusions and making recommendations is required. A business presentation is prepared and delivered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply communication theory, effective writing techniques, and interpersonal communication skills to business situations.

• analyze case studies, evaluate communication problems, and develop appropriate solutions to problems presented.

• compose written communications and business presentations that reflect analytical and decision-making skills.

• organize documents in proper business formats.

• formulate research problem, plan and conduct research, analyze data, develop logical conclusions and recommendations, organize material into a proper report format.

• use effective presentation techniques to deliver a business or client-focused presentation.

• evaluate ways that technology is changing business communication, including positive and negative effects.

BUS 312 Workplace Behavior and Ethics

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: BUSTEC 300.1 and CISC 300 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course introduces basic procedures that promote effective workplace practices. Specific topics include communicating effectively, working on teams, problem-solving, preparing and processing information, understanding business ethics, researching ethical business standards, and implementing ethical principles. Activities and techniques help to develop competencies needed in the workplace to communicate with coworkers and customers effectively.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze personal communication skills in the workplace to respond appropriately to the communication styles of others.

• work effectively on a team.
• identify barriers to good communication and choose effective techniques to overcome them.
• explain active listening techniques—simple signals, mirroring and paraphrasing—to identify facts and feelings.
• specify appropriate guidelines when giving or following instructions.
• demonstrate skills in conflict resolution situations by keeping calm and calming others.
• collect and interpret information and data that can be organized to formulate and implement a solution.
• use various forms of technology to communicate in the workplace.
• assess some personal values and be able to relate how they fit within the ethical standards of an assigned organization.
• define ethical issues and develop ethical plans of action that are appropriate for use in a business setting.
• compare different ethical policies or codes of conduct from at least three organizations.
• prepare a professional portfolio or e-portfolio of acquired workplace skills.

BUS 317 Managing Workplace Conflict

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on identifying and understanding the underlying causes of workplace conflict and strategies for managing conflict effectively. It explores the impact of conflict on workplace communication, decision making, and leadership. It includes practical and strategic skills to prevent escalation of conflict and defuse disruptive behaviors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain and assess the role personality and negotiating temperament plays in workplace conflict management.
• analyze the negotiation process, strategies, and techniques for effective conflict resolution in the workplace.
• apply a situational approach to workplace conflict resolution.
• evaluate benefits and drawbacks of various conflict management strategies in the context of the workplace.

BUS 320 Concepts in Personal Finance

Same As: ECON 320
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area V(b); AA/AS Area III(b); CSU Area D2
Catalog Date: June 1, 2020

This course covers how to analyze financial affairs for lifelong decision making. It examines the basics of financial planning, analysis, and decision making in areas of budgeting, taxes, credit, money management, insurance, investments, and retirement with an emphasis on principles to develop economic decision-making skills. This course is not open to students who have completed ECON 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• examine economic needs, establish financial goals, and design a personal financial plan to achieve them
• apply economic principles and concepts to develop a financial plan
• assess the changing economic environment and develop alternative plans or contingency plans so the personal financial plan remains viable
• analyze the various investment options to aid in successful financial planning
- apply the concept of the time value of money
- explain types of risk and risk management methods to develop a risk management plan
- analyze advantages and disadvantages of credit, determine the cost of credit, and assess the types and sources of credit
- construct, implement, review, and revise a financial plan

BUS 330 Managing Diversity in the Workplace

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3
Catalog Date: June 1, 2020

The course examines the leadership skills and abilities needed to manage a multicultural workplace. It focuses on the workplace impact of various historical, social, and cultural experience/perspectives related to gender, age, ethnicity, and disability. Workplace issues related to the diversity of the American consumer and global consumer impact on the United States are analyzed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define culture within the context of the United States workplace.
- evaluate demographic trends in order to determine the effects upon the United States society and workplace.
- analyze how language, gender, race, ethnicity, and organizational culture interact to produce a motivating organizational climate.
- apply leadership skills and abilities that are effective in managing a multicultural workforce.
- analyze the impact of cultural, historical, and stereotypical perspectives on the workplace.

BUS 332 Cross-Cultural Customer Service

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on defining and developing skills to ensure customer service satisfaction and success. Emphasis is placed on dealing with difficult situations and people from a cross-cultural perspective, and on bringing out the best in others. It provides practical, hands-on techniques for those engaged in customer contact.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- adapt to different customer behavior styles.
- describe techniques to handle angry customers.
- evaluate verbal and non-verbal cues in appraising a conflict situation.
- apply positive communication and listening techniques.
- apply strategies for service recovery.
- communicate effectively with a diverse customer population.

BUS 340 Business Law

Units: 3
Hours: 54 hours LEC
This course focuses on the law in its relationship to the environment of business. Topics covered include the American legal system as an instrument of economic, social, and political control, sources and processes of law, contracts and sales, agency, business organizations, ethics, and the regulatory process.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define and explain important legal principles and analyze how they affect business and personal issues.
- describe the federal and state court system's structure and organization and how court procedures are applied during the litigation process including trial.
- assess the need for law and its importance to our society.
- analyze legal situations, think logically, distinguish fact from opinion, and formulate strategies based on legal precedents.
- interpret regulatory laws, legislation and statutes and discuss how they promote fair competition in a private enterprise economic system.
- assess and apply legal principles by analysis of case problems.

**BUS 350 Small Business Management/Entrepreneurship**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course provides an overview of the various elements involved in starting and operating a small business. It covers developing a business plan, finding financial resources, developing personal and business goals, managing employees, meeting legal requirements, understanding marketing concepts, and other topics of interest to the entrepreneur.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assess how to start a business and which form of business organization should be used.
- explain the importance of a business plan, a financial plan, and a marketing plan.
- apply principles of management and marketing relevant to the small business.
- evaluate financial reports.
- analyze the impact of legal requirements and government regulations as related to the operation of the small business.
- describe the financing process and how to access capital.

**BUS 495 Independent Studies in Business**

**Units:** 0.5 - 4  
**Hours:** 27 - 216 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**BUS 498 Work Experience in Business**
This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of business. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in business related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.

- make effective decisions, use workforce information, and manage his/her personal career plans.

- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

- locate, organize, evaluate, and reference information at work.

- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
The degree is designed to develop advanced skills needed for upper-level administrative support and office management careers. The course work includes communication skills, organizational management, business documents and projects, teamwork, financial data, ethics, and a variety of computer and office technologies.

The Administrative Professional Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- manage office operations including employee supervision, records management, supplies and equipment, administrative support, financial statements, and customer service.
- evaluate business projects, generate task lists, and prioritize completion of work.
- integrate word processing, spreadsheet, database, presentation, and electronic information management systems to complete business projects.
- create, revise, and evaluate verbal and written business messages demonstrating business communication techniques.
- utilize critical thinking, problem solving, and organizational management skills to complete work independently or in a group.
- analyze ethical dilemmas, utilize ethical decision-making processes, and determine appropriate ethical behavior.

Career Information

Typical career opportunities include clerical, administrative support, and executive assistant positions with private industry, non-profit organizations, and government entities.

A.A. in Virtual Administrative Professional

This degree offers enterprising individuals an opportunity to develop their own business ventures to perform administrative tasks using new technology and the Internet. The current trend toward "outsourcing" work supports the growing need for virtual professionals. Confidence in being customer focused and creative are essential activities of this program. The goal of the virtual administrative professional degree is to assist students in developing a niche that meets the needs of today's employers.

The Virtual Administrative Professional Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- categorize essential records into an adequate record keeping system.
- compose written communications and deliver oral presentations for business proposals and projects that focus on the audience.
- explain the importance of a business plan, financial plan, and marketing plan for a business.
- create, arrange, and edit business documents using word processing features.
- select different technologies and software to complete business projects.
- design a virtual office atmosphere which includes marketing oneself, satisfying clients, and managing resources and capital.
- manipulate and format data into a worksheet and database.
- choose appropriate search strategies when using the Internet.

Career Information

Typical career opportunities include administrative professional, executive and/or personal assistant, real estate virtual assistant, online assistant, meeting planner, travel planner, desktop publisher, graphic designer, clerical recruiter, newsletter editor, virtual meetings organizer, and virtual assistant. Industries that virtual professionals support are sales, law, finance, church, Internet enterprises, marketing firms, public relations, direct mail, concierge, authors, contractors, and therapists.

Certificates of Achievement

Business Information Worker Certificate

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Perform keyboarding tasks successfully and competently in the workplace.
Business Technology (BUSTEC)

BUSTEC 100.1 Keyboarding Skills: Beginning

This course helps students improve their keyboarding speed and accuracy. Individualized skill improvement plans are based on a computerized assessment of computer keyboarding speed and accuracy. This course is not open to students who have previously completed the first module of BUSTEC 100. This course is for students who know how to correctly touch type and want to improve their keyboarding speed and accuracy. Students who want to learn to correctly touch type should take BUSTEC 300.1. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- touch type using proper technique.
- touch type with increasing speed and accuracy.

BUSTEC 100.2 Keyboarding Skills: Intermediate

This course helps students improve their keyboarding speed and accuracy and builds upon the skills learned in BUSTEC 100.1. Individualized skill improvement plans are based on a computerized assessment of computer keyboarding speed and accuracy. This course is not open to students who have previously completed the second module of BUSTEC 100. This course is for students who know how to correctly touch type and want to improve their keyboarding speed and accuracy. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate speed and accuracy improvement as defined in the skill improvement plan.
- incorporate touch typing and proper keyboarding techniques to complete skill-building exercises and improve keyboarding speed.
- incorporate proofreading techniques and business vocabulary to complete skill-building exercises and timed writings.

BUSTEC 100.3 Keyboarding Skills: Advanced

Solve business problems using current business technology and software applications.

Apply appropriate rules and procedures for the business environment while demonstrating critical-thinking techniques.

Produce job search documents and demonstrate job search skills.

Career Information

Typical career opportunities are entry-level clerical positions.
This course helps students improve their keyboarding speed and accuracy and builds upon the skills learned in BUSTEC 100. Individualized skill improvement plans are based on a computerized assessment of computer keyboarding speed and accuracy. This course is not open to students who have previously completed the third module of BUSTEC 100. This course is for students who know how to correctly touch type and want to improve their keyboarding speed and accuracy. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate speed and accuracy improvement as defined in the skill improvement plan.
- demonstrate improved productivity by applying appropriate business keyboarding vocabulary and proofreading techniques.
- identify and correct spelling errors quickly and accurately.

BUSTEC 101 Computer Keyboarding: 10-Key

Units: 1
Hours: 12 hours LEC; 18 hours LAB
Prerequisite: None
Advisory: BUSTEC 300.1 with a grade of "C" or better
Catalog Date: June 1, 2020

This course introduces the numeric keypad and alphanumeric data entry. Course content focuses on developing proper 10-key technique, speed, and accuracy. Simulated employment tests based on industry standards are included. Ten-key certification testing is completed at the end of the course.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- operate a numeric keypad by touch at a rate of 8,000+ keystrokes/hour with 98 percent accuracy.
- demonstrate proper ergonomic techniques for 10-key operation when completing a variety of job-related tasks.
- critique 10-key techniques and select appropriate skill-improvement activities.
- examine business documents and select the correct information for alpha/numeric input.
- complete 10-key certification testing.

BUSTEC 110 Business Procedures for Professional Success

Units: 3
Hours: 54 hours LEC
Prerequisite: BUSTEC 300.3 with a grade of "C" or better
Advisory: BUSTEC 310
Catalog Date: June 1, 2020

This course provides preparation for the business professional in electronic workplaces. Topics include business communication, records management, and preparation of business documents. Critical thinking, problem solving, teamwork, supervision skills, administrative procedures, and information processing technologies are used to complete assignments and activities as a business professional. These skills provide the background for advancement to supervisory and management positions. Primary emphasis is on processing documents using skills in word processing, spreadsheets, presentation graphics, database, and email. Career planning and development are addressed.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- solve business problems involving decision making and critical thinking.
- communicate effectively both orally and in writing as a member of a business team.
- use operating systems and application software to perform business tasks.
- apply business procedures for the use and operation of business technologies.
- demonstrate supervision and management skills to facilitate workflow and productivity.
- identify strategies that address and improve ethical business behavior.
demonstrate independent initiative and carry out oral and written instructions.

BUSTEC 125 Clerical Assistant

Units: 6
Hours: 90 hours LEC; 54 hours LAB
Prerequisite: BUSTEC 300.1 with a grade of "C" or better; or ability to touch type at 25 wpm.
Corequisite: BUSTEC 101
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; or ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course covers the skills needed for entry-level clerical positions. Topics include word processing and spreadsheet applications; American Records Management Association (ARMA) filing procedures; office procedures and communications, including telephone, mail, email, and Internet; soft-skills; and employability skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify appropriate resources and/or procedures for completing office tasks.
- classify and file documents according to the American Records Management Association (ARMA) rules.
- incorporate effective communication techniques to oral and written communications.
- prioritize tasks, prepare schedules, and use organization techniques to manage workflow.
- integrate appropriate word processing functions for maintaining productivity, including creating and editing business documents while selecting appropriate functions.
- utilize appropriate spreadsheet functions to plan, build, test, format, and print; enter formulas; sort data; and create charts or graphs.
- identify employment resources and job search techniques.
- demonstrate appropriate soft-skills required to be successful in the professional office environment.

BUSTEC 126 Outlook: Basics

Same As: CISA 126
Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: BUSTEC 300.1
Catalog Date: June 1, 2020

This course introduces Microsoft Outlook, the industry-leading personal information management software. Topics include understanding and navigating the Outlook environment, creating and sending email, using email special features, managing Outlook contacts, using an electronic calendar, and creating tasks and to-do items. BUSTEC 126/CISA 126 and BUSTEC 127/CISA 127 taken together are considered sufficient preparation to pass the Microsoft Office Specialist certification for the Microsoft Outlook application and the communications portion of the International Computer Driver's License (ICDL) Module 7: Information and Communication. This course is not open to students who have completed CISA 126.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- send and receive email utilizing the special features of Outlook.
- create and modify contacts in an address book.
- create and organize Outlook calendar items.
- incorporate tasks and to-do items into the personal information management software.
- distinguish between Outlook in an Exchange environment and a stand-alone environment.
- identify the potential risks associated with the use of email.
BUSTEC 127 Outlook: Tools

This course presents the advanced personal information management tools in Outlook. Topics include working with multiple email accounts, using rules and folders, incorporating advanced calendar and contact features, collaborating using sharing and delegate features, and customizing the Outlook user interface. In addition, the course covers the integration of Outlook with other applications in the Microsoft Office suite. Additionally, BUSTEC 126/CISA 126 and BUSTEC 127/CISA 127 taken together are considered sufficient preparation to pass the Microsoft Office Specialist certification for the Microsoft Outlook application and the communications portion of the International Computer Driver's License (ICDL) Module 7: Information and Communication. This course is not open to students who have completed CISA 127.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- incorporate multiple email accounts into Outlook.
- integrate rules and folders into communication management.
- apply Outlook features to find, manage, and archive information.
- collaborate with other Outlook users by using sharing and delegates.
- customize contacts and calendars using advanced Outlook features.
- revise the Outlook user environment.

BUSTEC 300.1 Keyboarding/Applications: Beginning

This course introduces touch typing of alphabetic, numeric, and symbol keys. It covers keyboarding techniques, speed-and-accuracy development, and essential computer-keyboarding information. This course is specifically designed for the beginning typist as well as those who have been typing for a long time using improper technique. This course is not open to students who have previously completed the first module of BUSTEC 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the proper use of keyboarding techniques.
- demonstrate the ability to key using the touch method.
- demonstrate the ability to touch-type 25+ WPM for two minutes with a maximum of five errors.
- revise documents using proper grammar and punctuation.
- use proofreader marks to revise documents.

BUSTEC 300.2 Keyboarding/Applications: Document Formatting

This course provides beginning to intermediate document formatting and skill development for academic, employment, personal, and businesses purposes. This course builds upon skills learned in BUSTEC 300.1 to provide students with additional computer keyboarding skills in the creation and modification of word processing documents.
It covers use of an office-level word processing program to create and format business correspondence, academic reports, business reports, and tables. English grammar, spelling, punctuation, and proofreading are reinforced throughout. Timed writing tests are used to increase keyboarding speed and accuracy. This course is not open to students who have previously completed the second module of BUSTEC 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the ability to touch-type 35+ WPM for three minutes with a maximum of five errors.
- use proofreader marks to revise documents.
- revise documents using proper grammar and punctuation.
- create and edit properly formatted business letters and memos using appropriate word processing features.
- create and edit properly formatted business and academic reports using appropriate word processing features.
- create and edit properly formatted boxed, open, and ruled tables using appropriate word processing features.

BUSTEC 300.3 Keyboarding/Applications: Advanced Document Formatting

Units: 1
Hours: 12 hours LEC; 18 hours LAB
Prerequisite: BUSTEC 300.2 with a grade of “C” or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300 or BUS 310; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides advanced skill development of documents for business, academic, employment, or personal use. This course builds on skills learned in BUSTEC 300.2. This course includes enhancing proofreading proficiency, reinforcing communication skills, increasing speed and accuracy, and using features of a current office-level word processing program to create a variety of business documents with advanced formatting. This course is not open to students who have previously completed the third module of BUSTEC 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the ability to touch-type 40+ WPM for five minutes with a maximum of five errors.
- use proofreader marks to revise documents.
- revise documents using proper grammar and punctuation.
- create and edit properly formatted business letters, personal business letters, and memos using advanced word processing features.
- create and edit properly formatted business and academic reports including report front and end matter using advanced word processing features.
- create and edit properly formatted employment documents using word processing features.

BUSTEC 305 Business Technology Essentials

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on the integration of technology and administrative skills in a business environment. Topics include hardware and software; electronic, voice, and fax communications; electronic calendars; internet resources; digital copiers and scanners; and the virtual office. This is an introductory course recommended for all business students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the terms associated with business information systems and technologies.
- compare hardware and software options available for creating, storing, and distributing business information.
- choose an appropriate technology for completing work assignments.
- manage business tasks by integrating available technologies and organizational procedures.
- use the basic features of business machines including copiers, scanners, faxes, phones, and computers.
- locate sources of information on current business technology trends.

**BUSTEC 310 Introduction to Word/Information Processing**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** BUSTEC 300.1 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course reviews basic word/information processing and introduces intermediate and advanced formatting for correspondence, tables, reports, newsletters, presentations, and other business-related documents. It emphasizes formatting and document production techniques to produce professional business documents used in today's workplace. Intermediate and advanced word processing topics include tables, columns, themes and styles, merge, graphics, macros, collaboration, and templates.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- utilize word processing features to create, edit, preview, save, and print documents.
- manage files and folders.
- create business letters, personal business letters, memorandum, and reports.
- analyze document content and make accurate decisions regarding layout, production, and distribution.
- use formatting tools such as columns, tables, borders and shading, color, symbols, charts, graphics, and text boxes to enhance the appearance of business documents.
- assemble documents using appropriate word processing functions, including headers/footers, styles, templates, comments, table of contents, and index generators.
- verify document accuracy using proofreading and editing tools.

**BUSTEC 313 Web-based Conferencing and Presentations for the Business Professional**

**Units:** 2  
**Hours:** 36 hours LEC  
**Prerequisite:** None.  
**Advisory:** BUS 310 and CISA 340  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course develops business presentation skills indispensable in today's job market. Topics include data evaluation, content planning and organizing, visual aid development, and methods of presentation including web (video) conferencing and podcasting. Strategies for interviews, meetings, training, and group presentations typically found in a business environment are explored.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the different types of business presentations and mediums available
- analyze the purpose of a business presentation
- select the correct presentation style and medium to deliver content
- prepare presentation content, handouts, online polls and notes for delivery
- create supportive visual aids such as slidedecks, flipcharts, and white boards
- develop charts, graphs, and other illustrations to support ideas
evaluate presentation styles and provide feedback for improvement
create, edit, and deliver business presentations as part of a team
create, edit, and deliver web-based business presentations

BUSTEC 332 Integrated Business Projects

Units: 3
Hours: 54 hours LEC
Prerequisite: BUSTEC 110 with a grade of "C" or better
Advisory: BUSTEC 310, CISA 315, and CISA 320
Transferable: CSU
Catalog Date: June 1, 2020

This course applies office administration skills and procedures using a suite of software. Course content integrates word processing, spreadsheet, database, presentation, and communication software to create, format, revise, share, and maintain business documents and data. Hands-on business projects require use of current office systems and incorporate problem-solving skills and real world business simulations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the concepts and features of integrating software functions.
- integrate the use of word processing, spreadsheet, database, presentation, and electronic communication software to create, format, revise, share, and maintain business documents and data.
- analyze the purpose of a business project and select software to complete the project.
- utilize electronic communication to send and receive business correspondence and attachments beyond the simple use of e-mail.
- organize and manage electronic files on local and cloud storage devices.
- operate in a team to create, edit, and maintain business projects.

BUSTEC 350 Virtual Careers and Technologies

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course explores careers in a virtual environment and identifies techniques and technologies needed by virtual workers. Specific topics include types of virtual environments, technologies and skills needed in a virtual office, ways to establish and manage a virtual career, effective communication, and job opportunities. This course also examines issues for career preparation in a virtual environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the different types of virtual environments
- define terms that relate to virtual environments
- assess the skills and work habits necessary for virtual careers
- analyze ways to establish and manage a virtual career
- evaluate technologies utilized in virtual careers
- apply communication tools and techniques for a virtual environment
- locate and identify job opportunities
American River College’s chemistry program offers you a high quality education whether you are seeking to transfer to a 4-year college, obtain an Associate’s Degree, or seeking to obtain career technical education. The highly trained faculty in the Chemistry Department is committed to rigorous academic standards, large selection of classes, student-friendly atmosphere, and interactive classes. Our diverse faculty is dedicated to teaching and learning. They have backgrounds that cover all aspects of chemistry. The department provides hands-on experiential learning as well as access to a nationally award-winning peer assisted tutorial program (Beacon).

Division Dean
Dr. Rina Roy

Department Chairs
Michael Payne
Kristin Casale

(916) 484-8107

Associate Degree

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Catalog Date: June 1, 2020

### Chemistry (CHEM)

#### CHEM 83 Strategies for Problem Solving in General, Organic and Biological Chemistry

**Units:** 0.75  
**Hours:** 40.5 hours LAB  
**Prerequisite:** None.  
**Corequisite:** CHEM 309  
**Catalog Date:** June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 309 at American River College. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
- demonstrate quantitative, qualitative, and descriptive problem solving skills as they relate to the study of chemistry.
apply study habits that enable mastery of chemistry.
build expertise and increased competence in problem solving strategies through practice.

CHEM 84 Strategies for Problem Solving in General Chemistry I

Units: 0.75
Hours: 40.5 hours LAB
Prerequisite: None.
Corequisite: CHEM 400
Catalog Date: June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 400 at American River College, with content that will be specific to CHEM 400. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
• demonstrate quantitative, qualitative, and descriptive problem-solving skills as they relate to the study of chemistry.
• apply study habits that enable mastery of chemistry.
• build expertise and increased competence in problem-solving strategies through practice.

CHEM 86 Strategies for Problem Solving in Organic Chemistry I

Units: 0.75
Hours: 40.5 hours LAB
Prerequisite: None.
Corequisite: CHEM 420
Catalog Date: June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 420 at American River College. Pass/No Pass Only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
• demonstrate quantitative, qualitative, and descriptive problem-solving skills as they relate to the study of chemistry.
• apply study habits that enable mastery of chemistry.
• build expertise and increased competence in problem-solving strategies through practice.

CHEM 87 Strategies for Problem Solving in Organic Chemistry II

Units: 0.75
Hours: 40.5 hours LAB
Prerequisite: None.
Corequisite: CHEM 421
Catalog Date: June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 421 at American River College.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
- apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
- demonstrate quantitative, qualitative, and descriptive problem-solving skills as they relate to the study of chemistry.
- apply study habits that enable mastery of chemistry.
- build expertise and increased competence in problem-solving strategies through practice.

### CHEM 130 Chemistry for Funeral Service

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** None  
**Corequisite:** BUS 340, FSE 310, and FSE 320  
**Enrollment Limitation:** Acceptance into the Funeral Service Education program.  
**Catalog Date:** June 1, 2020

This course is a survey of the basic principles of chemistry as they relate to funeral service. Topics include chemical principles involved in sanitation, disinfection, public health, and embalming practices. It also covers the development and use of personal, professional, and community sanitation practices, as well as use of and precautions related to potentially harmful chemicals that are currently used in the field of funeral service.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe selected facts of general chemistry as a basis for studying organic and biochemistry.
- explain the essential characteristics of autolysis, hydrolysis, fermentation, and putrefaction in the area of chemistry of decomposition.
- identify the characteristic features of solutions, suspensions, emulsions, and the processes of diffusion as they relate to the embalming process.
- describe the characteristic features of organic compounds.
- compare the characteristics of carbohydrates, lipids, and proteins in the area of basic biochemistry.
- describe representative chemicals in embalming fluids (arterial, cavity, and accessory) and give their respective functions.
- list the potentially harmful chemicals used in the preparation room and the precautions to be taken with each.

### CHEM 305 Introduction to Chemistry

**Units:** 5  
**Hours:** 72 hours LEC; 54 hours LAB  
**Prerequisite:** MATH 100 or 132 with a grade of "C" or better  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSW 340.  
**Transferable:** CSU; UC (Credit Limitation: No credit if taken after CHEM 400)  
**General Education:** AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C  
**C-ID:** C-ID CHEM 101; Part of C-ID PHYS 140  
**Catalog Date:** June 1, 2020

This course covers general principles of chemistry, such as unit analysis, atomic structure, nomenclature, mole concept, stoichiometry, and gases. It also introduces organic chemistry and biochemistry. This course is primarily designed for allied health majors.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and set up measurements of physical quantities and convert units of physical quantities via the use of dimensional analysis.
- name and write formulas of elements, ions, acids, and ionic and molecular compounds.
- describe atomic theory and interpret the periodic table.
- apply the mole concept toward stoichiometry-related problems and chemical reactions.
- identify the variables used to describe properties of a gas.
- formulate qualitatively and quantitatively the effect of change of one or more variables on one another.
- describe chemical bonds, intermolecular forces in the liquid state, solubility of substances, and the concept of osmosis, and their applications.
demonstrate the properties of acids and bases and convert acid concentration to pH and vice-versa

classify, distinguish, and contrast the classes and structural features of organic and biological compounds

CHEM 306 Introduction to Organic and Biological Chemistry

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: CHEM 305 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (Credit Limitation: No credit if taken after CHEM 400)
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 102
Catalog Date: June 1, 2020

This course is a continuation of CHEM 305. It covers the organic functional groups and reactions involved in the chemistry of life (biochemistry) as applied to the health sciences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, name, and draw structures of organic compounds including hydrocarbons, alcohols, organic acids, esters, amines, and amides
- defend predicted physical properties of hydrocarbons, alcohols, organic acids, esters, amines, and amides based on their chemical structure
- classify reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides
- predict products from reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides
- compare the physical and chemical properties of carbohydrates, lipids, proteins, enzymes, and nucleic acids
- compare and contrast the structures and functions of carbohydrates, lipids, proteins, enzymes, and nucleic acids in the body
- compare and contrast the processes of DNA replication and transcription, RNA translation, and common types of mutations
- predict the chemical reactions used in carbohydrate and lipid metabolism
- evaluate the energy yield from carbohydrate and lipid metabolism in the body

CHEM 309 Integrated General, Organic, and Biological Chemistry

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: MATH 100, 129, or 132 with a grade of "C" or better, or placement through the assessment process.
Advisory: One year of high school chemistry with a grade of "C" or better; AND MATH 120 or MATH 133; AND eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
Catalog Date: June 1, 2020

This course is an intensive survey of general, organic, and biological chemistry specifically designed for students majoring in nursing and other health-related fields. Topics include general chemistry, organic chemistry, and biological chemistry as they apply to the chemistry of the human body. This course satisfies the requirements of those health-care programs which require one semester of chemistry. Students enrolled in this course are strongly encouraged to co-enroll in CHEM 83.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the fundamental features of chemistry including measurement of physical properties such as mass, volume, density, pressure, temperature, solutions, concentrations, and dilutions.
- apply the concept of unit analysis towards medical dosage calculations.
- differentiate between physical and chemical properties of matter.
- name and write chemical formulae of cations, anions and inorganic and organic compounds.
- evaluate various types of chemical reactions, both organic and inorganic.
• qualitatively compare spontaneous and nonspontaneous processes.
• analyze the phenomena of diffusion, osmosis, dialysis, and transport mechanisms of particles through cell membranes based on their physical properties.
• describe intermolecular forces and apply them in the understanding of basic principles of biochemistry and physical characteristics of organic compounds.
• differentiate between functional groups when they appear in an organic structure.
• relate the physical and chemical properties of compounds containing functional groups.
• differentiate typical acid and base formulae and compare the behavior associated with acids and bases.
• apply Le Chatlier's equilibrium principles in the understanding of blood buffers.
• distinguish various functions of four major classes of biomolecules in living cells.
• distinguish key structural features and properties of these classes of biomolecules.
• compare the processes of DNA replication, transcription, and translation.
• compare major biochemical components in common catabolic pathways for carbohydrates and fatty acids and compare the output from those processes.

CHEM 310 Chemical Calculations

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MATH 100, 129, or 132 with a grade of "C" or better
Corequisite: MATH 120 or 133
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area IV
Catalog Date: June 1, 2020

This course introduces calculations, terminology, chemical techniques, and laboratory techniques. It provides intensive problem solving skills necessary for CHEM 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• solve chemical calculation problems, for example, unit conversion and theoretical yield calculations, in a clear and logical fashion.
• describe and explain organizational trends of the periodic table, for example, atomic mass, periods and groups, metals, nonmetals, metalloids, and atom size.
• describe the structure of an atom and predict common ions formed.
• formulate the name of inorganic compounds (molecular and ionic) and acids.
• identify the type of chemical reaction given reactant(s) and product(s) and balance the chemical reaction using coefficients.
• predict the products of inorganic chemical reactions using solubility rules.
• use the ideal gas law and the gas laws to predict temperature, pressure, volume, mass, or molar quantity of a gas.
• perform calculations involving mass percents, molarity, solution stoichiometry, and pH.
• complete lab experiments in a safe and timely manner, after receiving written and/or verbal instructions.
• demonstrate the proper use of laboratory glassware and equipment by collecting and recording scientific measurements in data tables with the correct number of units and significant figures (i.e. graduated cylinder, balances, thermometer, buret, pipet, and metric ruler), and the recording of observations (physical and chemical changes and properties).

CHEM 400 General Chemistry I

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better AND one of the following: 1) CHEM 310 with a grade of "C" or better; or, 2) Previous chemistry course with a grade of "C" or better AND a passing score on the Chemistry Assessment Test from the Assessment Center at American River College.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 110; Part of C-ID CHEM 120S
This course covers the basic principles of chemistry with an emphasis on chemical calculations, chemical reactions including balancing of complicated reduction-oxidation (REDOX) reactions, stoichiometry, gas laws, thermochemistry, atomic structure and bonding theories, ionic equations, solutions, intermolecular forces and phases of matter, and acid/base chemistry including titrations and pH. Laboratory work is devoted to investigations of the theoretical work discussed in lecture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- successfully complete laboratory experiments (involving evaluation of experimental data and confirmation of physical constants) in a safe and timely manner, after receiving written and/or verbal instructions.
- demonstrate the proper collection and recording of scientific measurements in tables with the correct units and number of significant figures (i.e. measuring mass, volume, temperature, length, and pressure), and the recording and evaluation of observations (physical and chemical changes and properties).
- analyze and then solve chemical calculation problems that involve solids, solutions, or gases, in a clear and logical fashion; for example, stoichiometry, acid-base, and colligative property problems.
- analyze and then solve chemical calculation problems that involve heat energy transfers in calorimeters or chemical reactions; for example, determining the heat of fusion, heat of solution, heat of reaction, and heat capacity.
- construct balanced chemical equations from written descriptions of chemical reactions.
- synthesize data into computer-generated graphical outputs and make predictions by interpolation using linear and non-linear regression analyses.
- evaluate errors related to experimental procedures and assess their effects on experimental results.
- predict the products of inorganic chemical reactions using solubility rules and the activity series, by assessing electrolyte strength, and by employing the fundamental rules of acid/base chemistry.
- apply chemical naming rules to inorganic molecular and ionic compounds, acids, and simple straight-chain hydrocarbons.
- predict changes in solution properties based on colligative property calculations; for example, changes in boiling point, freezing point, vapor pressure, and osmotic pressure.
- explain how and why substances dissolve in other substances and perform calculations to evaluate solution concentration in various units (molar, molal, % mass, mole fraction).
- use the ideal gas law and the empirical or combined gas laws to predict temperature, pressure, volume, mass, or molar quantity of a gas.
- explain and predict observable properties of gases (pressure, temperature, volume) from an understanding of the behavior of the individual particles in a gas.
- produce Lewis structures of simple molecules and polyatomic ions and predict their shape and relative polarity.
- label the parts of a phase diagram, use it to predict the temperature and pressure at which phase changes will occur, and construct heating curves that include phase changes.
- analyze the structure of an atom and explain the origin of atomic emission spectra.

CHEM 401 General Chemistry II

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 400 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: Part of C-ID CHEM 120S
Catalog Date: June 1, 2020

This course is a continuation of the principles of chemistry with emphasis on equilibria, bonding, thermodynamics, kinetics, and electrochemistry. A brief introduction to organic chemistry is included. Laboratory work is devoted to qualitative analysis and experiments dealing with the theoretical work discussed in lecture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the basic concepts and theories of kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry.
- cite examples of the importance and relevancy of chemical concepts.
- solve quantitative problems in kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry through the mathematical application of basic principles.
evaluate and solve qualitative problems using the basic principles of kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry.

conduct a variety of qualitative and quantitative inorganic laboratory experiments utilizing a variety of chemistry instrumentation such as spectrophotometry and pH meters.

analyze experimental data to compare and contrast theoretical value versus experimental values.

design appropriate laboratory procedures for open-ended inquiry experiments.

prepare written laboratory reports describing and interpreting hands-on laboratory experiments.

demonstrate safe laboratory practices and proper materials handling.

CHEM 420 Organic Chemistry I

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 401 with a grade of "C" or better
Transferable: CSU; UC (CHEM 420 & 423 combined: maximum credit - one course)
C-ID: C-ID CHEM 150; Part of C-ID CHEM 160S
Catalog Date: June 1, 2020

This course is designed to prepare students who are majoring in chemistry or chemical engineering, for transfer to a four-year institution, or to prepare students for entrance into professional schools in the fields of medicine, pharmacy, or dentistry. Emphasis is on the application of modern principles regarding structure, reactivity, methods of synthesis and physical properties of carbon compounds.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- name saturated and unsaturated hydrocarbons, alkyl halides, and alcohols
- analyze the relationship between the molecular structure of an organic molecule and its physical properties and chemical reactivity
- analyze reaction mechanisms to predict products of organic chemistry reactions
- propose reaction mechanisms for common organic chemistry reactions
- identify a compound given its molecular formula, infrared spectrum, and nuclear magnetic resonance (NMR) spectrum
- design multi-step organic syntheses
- analyze organic compounds through the operation of instruments such as the refractometer, Fourier transform infrared spectroscopy (FTIR), nuclear magnetic resonance spectroscopy (NMR), gas chromatography (GC), and polarimeter
- perform laboratory techniques such as separation, synthesis, purification, identification, and characterization of organic compounds utilizing both macro- and micro-scale procedures
- evaluate experimental data

CHEM 421 Organic Chemistry II

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 420 with a grade of "C" or better
Transferable: CSU; UC
C-ID: Part of C-ID CHEM 160S
Catalog Date: June 1, 2020

This course covers general physical and chemical properties of aromatic compounds, ethers, carbonyl compounds, amines, carbonyl derivatives, and biological compounds of interest. It also includes mass spectrometry, ultraviolet-visible (UV-VIS) spectroscopy, and carbon-13 nuclear magnetic resonance (NMR). Special attention is given to development of reaction mechanisms, methods of organic synthesis, and instrumental analysis as they apply to organic chemistry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate principles of chemical reactions and mechanisms to organic functional groups
• propose reaction mechanisms for common organic chemistry reactions
• plan the synthesis of organic compounds utilizing the specific reactions of functional groups
• describe biochemical processes using organic reactions
• determine the structure of organic compounds by evaluating mass spectra, NMR spectra, UV-VIS, and infrared (IR) spectra
• perform laboratory experiments using both macro- and micro-scale procedures
• evaluate experimental data

CHEM 423 Organic Chemistry - Short Survey

Units: 5  
Hours: 72 hours LEC; 54 hours LAB  
Prerequisite: CHEM 401 with a grade of "C" or better  
Transferable: CSU; UC ((CHEM 420 & 423 combined: maximum credit - one course))  
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C  
Catalog Date: June 1, 2020

This course is a survey of carbon containing compounds with emphasis on organic compounds of biological interest. Topics include the chemistry of organic functional groups, Infra Red spectroscopy, and mechanisms of reactions. This course is designed primarily for students majoring in the life sciences, nutrition/dietetics, and related fields. This course is not recommended for students majoring in chemistry, chemical engineering, medicine, dentistry, pharmacy, or chiropractics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• validate structural and bonding theories towards the reactivity of the functional groups of organic chemistry.

• name alkanes, alkenes, alkynes, alcohols, ethers, acids, esters, aldehydes, ketones, amides, amines, and aromatic molecules using the International Union of Pure and Applied Chemistry (IUPAC) system.

• predict mechanisms and intermediates in the understanding of organic reactions.

• identify organic compounds through the interpretation of Infra Red spectral data and degree of unsaturation.

• differentiate between structural isomers, stereoisomers, and resonance forms.

• analyze the effect of reagents, solvents, catalysts, temperature, and pressure in reactions.

• develop the conversion of one organic functional group to another.

• propose route synthesis of simple organic molecules.

• evaluate concepts of organic chemistry towards understanding of biochemistry topics such as carbohydrates, proteins, and lipids.

CHEM 495 Independent Studies in Chemistry

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Community Services offerings enable you to improve the quality of your life through lifelong learning. This program of fee-based classes is designed to serve individuals with educational goals that do not require college credit.

Community Services Education (CSERV)

CSERV 2010 Emergency Medical Technician Renewal

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

Course is designed to review basic prehospital topics and skills required for National Registry of Emergency Medical Technician recertification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Understanding National Registry recertification guidelines and course requirements.
- Justify prehospital treatment plans aligned to a variety of common chief complaints.
- Demonstrate minimum performance competency of required Emergency Medical Technician skills as required by Title 22 of the California State Code of Regulations.
- Discuss signs and symptoms, treatment standards and communication requirements associated with common prehospital medical and trauma responses.
- Justify patient management performance as it compares to local, state and national Emergency Medical Services standards.

CSERV 2011 Emergency Medical Technician Skills Competency Verification

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to provide Emergency Medical Technicians (EMT) the opportunity to verify EMT-Skills Competency as required by the California Emergency Medical Services Authority.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate minimum performance competency on all Title 22 EMT required skills. Skills include: Trauma assessment, Medical assessment, airway emergencies, breathing emergencies, AED & CPR, circulation emergencies, neurological emergencies, soft tissue injuries, musculoskeletal injury, and obstetrical emergencies.
CSERV 2013 Pediatric Advanced Life Support

The PALS course gives healthcare professionals the knowledge and skills to better recognize and treat critically ill infants and children.
The course uses a scenario-based, team approach to teach pediatric emergency management of pediatric patients approaching or already in respiratory or cardiac arrest.
The course covers treatment beyond the first few emergency minutes and goes through stabilizing patients or transport phases of a pediatric emergency, in or out of the hospital.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Diagram and perform the emergency treatment of infants and children at risk for cardio-pulmonary arrest.
- Summarize systematic approach to pediatric assessment.
- Demonstrate effective respiratory management in a infant or child in respiratory failure.
- Validate skills for 1- and 2-person CPR and AED skills for infants and children.
- Demonstrate defibrillation and synchronized cardioversion for pediatric patients.
- Demonstrate intraosseous access and fluid bolus administration.
- Put into action effective resuscitation team dynamics

CSERV 2014 Pediatric Advanced Life Support Renewal

The PALS course gives healthcare professionals the knowledge and skills to better recognize and treat critically ill infants and children.
The course uses a scenario-based, team approach to teach pediatric emergency management of pediatric patients approaching or already in respiratory or cardiac arrest.
The course covers treatment beyond the first few emergency minutes and goes through stabilizing patients or transport phases of a pediatric emergency, in or out of the hospital.
Recertification/renewal is provided to professional with a current provider level PALS certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Recall the systematic approach to pediatric assessment.
- Adapt treatment plans to accurately reflect changes in patient acuity.
- Summarize the effective dynamics utilized during pediatric resuscitation events.
- Demonstrate minimum competency of the PALS Core Cases.

CSERV 2015 Advanced Cardiac Life Support

Emergency Health Care Providers frequently manage patients with life-threatening cardiac events. This course will enhance their skills in treating adult victims of cardiac arrest or other cardiopulmonary emergencies . This course emphasizes will include:

- importance of basic life support CPR to patient survival
- integration of effective basic life support with ACLS interventions
- importance of effective team interaction and communication during resuscitation

The course includes simulated clinical scenarios that encourage active, hands-on participation through learning stations where students practice essential skills individually, as part of a team, and as team leader.
Upon completion of this course, the student will be able to:

- Diagram and perform the emergency treatment of adults at risk for cardio-pulmonary arrest.
- Summarize systematic approach to adult cardiac assessment.
- Demonstrate effective respiratory management in an adult in respiratory failure.
- Validate skills for 1- and 2-person CPR and AED skills for adult cardiac arrest patients.
- Demonstrate defibrillation and synchronized cardioversion and transcutaneous pacing for the adult patient.
- Demonstrate intraosseous access and fluid bolus administration.
- Put into action effective resuscitation team dynamics

CSERV 2016 Advanced Cardiac Life Support Renewal

Units: 0  
Prerequisite: None.  
Catalog Date: June 1, 2020

Emergency Health Care Providers frequently manage patients with life-threatening cardiac events. This course will enhance their skills in treating adult victims of cardiac arrest or other cardiopulmonary emergencies. This course emphasizes will include: • importance of basic life support CPR to patient survival • integration of effective basic life support with ACLS interventions • importance of effective team interaction and communication during resuscitation The course includes simulated clinical scenarios that encourage active, hands-on participation through learning stations where students practice essential skills individually, as part of a team, and as team leader. Recertification assumes experience as a provider of ACLS.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate minimum treatment competency of the required ACLS Core Cases.

CSERV 2018 National Registry Paramedic Licensure Preparation

Units: 0  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course is designed to prepare paramedic students for the National Registry of Emergency Medical Technicians-Paramedic Licensure Examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Discuss pathophysiology, signs and symptoms, and emergency care of patients with medical-based complaints.
- Discuss pathophysiology, signs and symptoms, and emergency care of patients with trauma-based complaints.
- Demonstrate minimum competency for all required NREMT Advanced Skills.

CSERV 2019 National Registry Paramedic Licensure Testing

Units: 0  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course is designed to test paramedic students for minimum skills competency for the National Registry of Emergency Medical Technicians-Paramedic.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Demonstrate minimum standards of skills competency as set by the National Registry of Emergency Medical Technicians. Advanced skills tested follow NREMT policies and procedures.

CSERV 2020 12 Lead EKG Interpretation and Advanced Cardiac Care

Units: 0  
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for practicing health care professionals who manage and treat emergency cardiac patients. The course presents current concepts involving 12 lead EKG application, interpretation and associated advanced emergency cardiac care.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Explain Acute Coronary Syndromes.
- Analyze various reperfusion therapies.
- Identify and interpret EKG complexes and wave forms.
- Diagnose cardiac abnormalities using a variety of 12-Lead EKGs.
- Demonstrate standard application of the 12-Lead EKG monitor.
- Examine a variety of emergency cardiac care standards as they relate to various EKG interpretations.

CSERV 2021 MCI & Incident Command System Basics

Units: 0  
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for Public Safety professionals interested in understanding the basic concepts of both the Incident Command System (ICS) and Mass Casualty Incidents (MCI). The course provides students with simulated opportunities to implement the ICS when presented with MCI events.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Examine the basic elements of the Incident Command System.
- Compare command procedures used at small-, medium-, and large-scale medical incidents.
- Describe the functional components of the incident command system in terms of command, finance, logistics, operations, and planning.
- Employ the incident command system given a variety of mass casualty incidents.

CSERV 2022 Trauma Life Support

Units: 0  
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to provide students with the knowledge and skills to better manage trauma patients in the prehospital environment. The courses involves international standards that enable the student to master the latest techniques in rapid trauma assessment, identification of immediate life-threatening injuries and the appropriate medical interventions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• Perform an effective scene size up and determination of the mechanisms of injury.
• Using the Priority Plan, determine patient acuity levels during a rapid trauma assessment.
• Analyze trauma treatment implementation and adapt to align with changing patient conditions.
• Recognize signs and symptoms associated with Shock Syndromes.
• Demonstrate airway management, fluid resuscitation skills, spinal management skills, and extremity trauma skills.
• Given a variety of trauma-based scenarios, utilize appropriate trauma assessment and management skills for adults, children, the elderly, pregnant patients and those under the influence of alcohol or drugs.
• Perform trauma management skills during traumatic cardiopulmonary arrest.

CSERV 2030 Russian for Business and Travel I

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This is an introductory course in Russian that emphasizes basic business and travel-related vocabulary as well as cultural/nonverbal aspects of Russian business communication. This low-stress course introduces only the grammar and structures absolutely necessary for speaking and is oriented to the development of travel and business speech habits. It covers such topics as formal and informal greetings and farewells, getting acquainted, talking about self and family, asking for directions and transportation, describing weather, feelings and emotions. The course also enhances participants' general understanding of Russian-speaking cultures and introduces some significant aspects of Russian geography and modern history. No prior knowledge of Russian is required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• use basic Russian conversational skills in travel and business meetings as well as for personal enjoyment.
• initiate simple statements and answer basic questions related to greetings and farewells, directions, self-introduction, giving a tour, talking about time, days of the weeks and weather, discussing some feelings and emotions.
• demonstrate basic knowledge of Russian geography and an understanding of some of the more significant aspects of contemporary Russian business culture.
• integrate basic Russian language and cultural knowledge in a variety of situations.
• cope with and understand basic speech situations related to business and travel.

CSERV 2031 Russian for Business and Travel II

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This is an introductory course in Russian that emphasizes basic business and travel-related vocabulary as well as cultural/nonverbal aspects of Russian business communication. This low-stress course introduces only the grammar and structures absolutely necessary for speaking and is oriented to the development of travel and business speech habits. It covers such topics as airport procedures, baggage claim information, daily routine, hotel-related phrases, money, and vocabulary and ethics of phone conversations. The course also enhances participants' general understanding of Russian-speaking cultures and introduces some significant aspects of Russian geography and modern history. Intended for community members with minimal previous knowledge of Russian.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• use basic Russian conversational skills in travel and phone conversations.
• initiate simple statements and answer basic questions related to airport procedures, transportation, accommodation, and personal belongings.
• express some feelings, emotions, likes and dislikes.
• demonstrate basic knowledge of Russian geography and an understanding of some of the more significant aspects of contemporary Russian business culture.
• integrate basic Russian language and cultural knowledge in a variety of situations.
• cope with and understand typical speech situations related to business and travel.
CSERV 2040 Medical Spanish: Part 1

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to help community members and people who are interested in helping the sick by providing the following: Medical Spanish Terminology and phrases for non-native speakers of Spanish wishing to enhance their ability to communicate with their Spanish-speaking patients, as well as for native speakers of Spanish wishing to broaden their use of medical terminology in order to be able to communicate more effectively with their family members in a variety of health settings. Emphasizes oral communication in a variety of medical settings by focusing on basic language exchange between doctor/nurse and patient. No prior knowledge of Spanish required.

*Provider Approved by the Board of Registered Nursing for 32 Contact Hours per 8-week course. Provider #CEP15540.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use Spanish conversational skills in a variety of medical settings.
- listen to and pronounce words in Spanish that focus primarily on medical terminology.
- communicate information, ask questions and discuss physical symptoms with some grammar provided.
- gain sensitivity and understanding of the Spanish-speaking cultures as well as how to best approach Spanish-speaking patients.

CSERV 2041 Medical Spanish: Part 2

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to help community members and people who are interested in helping the sick by providing the following: Medical Spanish Terminology and phrases for non-native speakers of Spanish wishing to enhance their ability to communicate with their Spanish-speaking patients, as well as for native speakers of Spanish wishing to broaden their use of medical terminology in order to be able to communicate more effectively with their family members in a variety of health settings. Emphasizes oral communication in a variety of medical settings by focusing on vocabulary and phrases used by specialists and their patients. Basic prior knowledge of Spanish recommended.

*Provider Approved by the Board of Registered Nursing for 32 Contact Hours per 8-week course. Provider #CEP15540.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use Spanish conversational skills in a variety of medical settings.
- listen to and pronounce words in Spanish that focus primarily on medical terminology.
- communicate information, ask questions and discuss physical symptoms with some grammar provided.
- gain sensitivity and understanding of the Spanish-speaking cultures as well as how to best approach Spanish-speaking patients.

CSERV 2042 Medical Spanish: Part 3

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to help community members and people who are interested in helping the sick by providing the following: Medical Spanish Terminology and phrases for non-native speakers of Spanish wishing to enhance their ability to communicate with their Spanish-speaking patients, as well as for native speakers of Spanish wishing to broaden their use of medical terminology in order to be able to communicate more effectively with their family members in a variety of health settings. Emphasizes oral communication in a variety of medical settings by focusing on vocabulary and phrases used at medical centers and hospitals. Some prior knowledge of Spanish, along with the ability to converse in both the present and the past, recommended.

*Provider Approved by the Board of Registered Nursing for 32 Contact Hours per 8-week course. Provider #CEP15540.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use Spanish conversational skills in a variety of medical settings.
• listen to and pronounce words in Spanish that focus primarily on medical terminology.
• communicate information, ask questions and discuss physical symptoms with some grammar provided.
• gain sensitivity and understanding of the Spanish-speaking cultures as well as how to best approach Spanish-speaking patients.

CSERV 2043 Medical Spanish: Part 4

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to help community members and people who are interested in helping the sick by providing the following: Medical Spanish Terminology and phrases for non-native speakers of Spanish wishing to enhance their ability to communicate with their Spanish-speaking patients, as well as for native speakers of Spanish wishing to broaden their use of medical terminology in order to be able to communicate more effectively with their family members in a variety of health settings. Emphasizes oral communication in a variety of medical settings by focusing on different health problems current to society. Some prior knowledge of Spanish with the ability to converse in the present, past and future recommended. *Provider Approved by the Board of Registered Nursing for 32 Contact Hours per 8-week course. Provider #CEP15540.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• use Spanish conversational skills in a variety of medical settings.
• listen to and pronounce words in Spanish that focus primarily on medical terminology.
• communicate information, ask questions and discuss physical symptoms with some grammar provided.
• gain sensitivity and understanding of the Spanish-speaking cultures as well as how to best approach Spanish-speaking patients.

CSERV 2080 BAR A-6 Alternative - Electrical and Electronic Systems Training

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is an intensive Bureau of Automotive Repair-approved review of automotive electrical/electronic systems. It partially satisfies the ASE certification requirement when applying for a Smog Check technician license.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• test electrical circuits and faults.
• diagnose electrical problems using analog and digital meters and logic probes.
• define faults using test equipment.
• interpret electrical wiring diagrams and their role in troubleshooting.
• solve problems related to circuit resistance.
• evaluate effect of circuit resistance on temperature and driveability.

CSERV 2081 BAR A-8 Alternative - Engine Performance Systems

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is an intensive Bureau of Automotive Repair-approved review of automotive engine performance systems. It partially satisfies ASE certification requirement when applying for a Smog Check technician license.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- apply organized troubleshooting techniques
- test ignition systems with oscilloscopes
- diagnose fuel metering systems
- diagnose engine mechanical problems
- use four-gas analyzers for emissions diagnostics

CSERV 2082 BAR Approved L-1 Alternative

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is preparation for the Bureau of Automotive Repair (BAR) – approved Advanced Engine Performance Exam. Topics covered include Power Train Diagnosis, Computer Control Diagnostics, Ignition System Diagnostics, Fuel and Air Induction Diagnostics, Emission Control Diagnostics, and I/M Failure Diagnosis. The BAR L-1 Alternative test is administered at the end of the class.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain diagnostic principles of Advanced Engine Performance
- diagnose engine control systems
- analyze engine control failures
- analyze and troubleshoot internal engine failures and their effect on engine exhaust systems

CSERV 2083 Bureau of Automotive Repair Emissions Update

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is required for all licensed smog technicians who need to meet California emissions control smog license renewal standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform pre-inspection and final inspection procedures.
- identify vehicles requiring special testing procedures
- apply the current rules and regulations in performing a Smog Check inspection
- use current state-of-the-art diagnostic equipment.
- evaluate catalytic converter test results.
- analyze the Smog Check vehicle inspection report and apply appropriate diagnostic techniques.

CSERV 2087 California Council on Diesel Education and Technology 1 (CCDET 1)

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is offered to individuals who have received emissions code violations. It covers the California Council on Diesel Education and Technology, or CCDET requirements for Heavy Duty Vehicle Inspection and Periodic Smoke Detection Programs. Topics include common causes of high diesel smoke levels and smoke
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Address causes of excess smoke.
- Demonstrate test procedures as they relate to smoke emissions.
- Demonstrate test procedures as they relate to opacity testing.

CSERV 2089 California Council on Diesel Education and Technology 2 (CCDET 2)

Units: 0
Prerequisite: None.
Catalog Date: June 1, 2020

This course is offered to individuals who have received emissions code violations. It covers the California Council on Diesel Education and Technology, or CCDET requirements for After-treatment and Maintenance as it applies to Diesel exhaust. Topics include strategies to reduce diesel particulate matter and Heavy Duty Diesel Engine certification standards.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Describe new heavy-duty diesel engine certification standards.
- Demonstrate diesel particulate reduction strategies.
- Demonstrate proper application of sensor technology as it applies to emissions standards.
Associate Degrees

A.S. in CIS: Computer Networking Management

This degree covers network administration technologies, techniques, and the hardware and software used in today's business/enterprise networking environment. Major topics covered include installation, configuration, and troubleshooting of network operating systems. The degree stresses the knowledge and skills required for the day-to-day operation, business aspects, security and management of computer networks. This degree has three distinct concentrations with specific courses for each concentration track:

1. Microsoft Windows networking concentration, focusing on preparing for the Microsoft Certified Systems Engineer (MCSE) and/or the Microsoft Certified Systems Administrator (MCSA) certification.
2. Linux/Unix networking concentration, focusing on preparing for the administration of commercial Linux/Unix servers and network environments.
3. Cisco router and network administration concentration, which covers all the objectives of the Cisco Certified Network Associate (CCNA) certification exam.

Catalog Date: June 1, 2020

The CIS: Computer Networking Management Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- **WINDOWS CONCENTRATION:**
  - install, configure, monitor, manage, backup, and customize a Microsoft server.
  - design, construct and apply group policies and NTFS file system permissions to secure files and network resources.
  - design, construct and troubleshoot a Microsoft Active Directory network using Microsoft workstation and server operating systems.

- ** CISCO CONCENTRATION:**
  - design, evaluate, construct and implement a routed IP network using industry standard routing protocols and routing equipment, in a wired or wireless configuration.
  - design, evaluate, construct and implement a multilayer switching network using switching protocols, such as Ethernet, in a wired or wireless configuration.
  - design, install and test Wide Area Network (WAN) connectivity solutions.
  - design and evaluate basic security and access solutions in a switched or routed LAN or WAN.
  - design, evaluate, specify, and install various types of network media.

- **LINUX/UNIX CONCENTRATION:**
  - install, configure, monitor, manage, backup, and customize a Linux server.
  - design, evaluate and implement and troubleshoot typical Linux server services in the areas of user accounts and security, printing, web server, telnet server, firewall, email server, domain name service, dynamic host configuration protocol, network file system, and Microsoft Windows compatibility.

Career Information

This degree is designed for career/technical students who plan to enter the work force as well as working IT professionals that wish to upgrade their skills. Typical careers a student could expect to pursue include network technical support staff, network administrators, network designers, network systems engineer, network troubleshooters, and information systems security specialists.

A.S. in CIS: Computer Programming

This degree includes general topics in the field of computer programming as well as focused topics related to one commonly used programming language. General topics include the use of an operating system, and the translation of a problem statement into a generic program solution. Programming language-specific topics include syntax, program structuring, language constructs and proper programming methods.

The CIS: Computer Programming Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe how programming relates to the development of an information system.
• develop programs using the top-down method.
• apply structured programming techniques.
• translate a detailed design document into a computer programming language solution.
• verify the syntactic correctness of a program.
• verify the logical correctness of a program.
• analyze the behavior of a program and locate defects.

Career Information

Upon completion of the computer programming degree, a student meets the minimum qualifications as an entry-level programmer/developer.

A.S. in CIS: Database Management

The CIS: Database Management degree focuses on relational database technology used in the business environment. The emphasis is on selecting the appropriate system platform for database deployment. Course work includes database system design and programming for desktop, enterprise and Internet platforms, structure query language (SQL) programming, introductory principles of modular programming, system design and problem solving, desktop operating systems, electronic spreadsheets and a variety of introductory business courses.

The CIS: Database Management Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• describe relational database technologies for desktop, enterprise and Internet platforms.
• explain and discuss database theory and principles.
• employ relational database technologies for either desktop, enterprise and Internet platforms to solve common business problems using standard database principles and practices.
• assess and document information system requirements.
• employ modular programming concepts in program development.
• design and code elementary programs encountered in business and government.
• identify interactive web publishing situations requiring database solutions.
• create interactive web database.
• analyze practical business problems and utilize critical thinking in the determination of alternative solutions.
• apply communication theory, effective writing techniques, and interpersonal communication skills to business situations.
• analyze and explain the nature and purpose of accounting and its function in business.

A.A. in CIS: Microcomputer Applications

This degree focuses on the use of the microcomputer and current, commonly used software to solve problems in a business environment. Course work includes microcomputer applications in database management, desktop publishing, electronic spreadsheets, presentation graphics, operating systems, word processing, and at least one programming language.

Total Units: 37

The CIS: Microcomputer Applications Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design and manage database tables, queries and forms.
- produce reports for use in a typical business environment.
- evaluate the basic computing needs of a business by developing associated documentation and presentations.
- create spreadsheet formulas and manipulate business data.
- compose and format typical business communications documents according to industry standards.
- combine data from different software applications into one document.
- compose simple computer programs using basic logic.
- apply file management techniques in organizing computer data.

A.S. in CIS: PC Support Management

The CIS: PC Support Management degree covers the use and maintenance of a microcomputer’s hardware, software and network connections in today’s business environment. Course work includes learning basic computer skills in configuration, use, and troubleshooting major hardware components, different operating systems, and applications in a standalone and network environment. Additionally, the degree introduces basic business and project management skills. This program covers all the objectives of the Computing Technology Industry Association (CompTIA) A+ certification exam.

1Taken on the Windows operating system.

The CIS: PC Support Management Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Identify the names, purpose, and characteristics of system components.
- Evaluate and demonstrate basic procedures for adding and removing field replaceable components for desktop computers.
- Analyze and demonstrate the installation and troubleshooting of current operating systems, applications and basic networking technology used in industry.
- Formulate back-up, recovery, and system protection plans for the operating system in a network environment.
- Develop proficiency in customer service skills to effectively diagnose and communicate microcomputer software and hardware-related problems and solutions at the user level.
- Demonstrate the techniques to manage a project, control costs, and schedule resources employing management software.
- Recognize within the information technology (IT) field the diverse business environment associated with support issues.
- Configure and implement data security methods for protecting computers and networks from unauthorized access.

**A.S. in Computer Science**

This degree provides a comprehensive exposure to programming languages, algorithms and problem solving in preparation for upper division computer science courses. The Computer Science degree includes substantial course work in mathematics required by most university computer science programs.

Catalog Date: June 1, 2020

The Computer Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate various programming language solutions to a proposed problem.
- recommend tools and techniques for each step in the development of a computer program.
- integrate the basic mathematical knowledge that is fundamental to computer science into the solutions of proposed problems.
- evaluate the theories and core techniques of computer science using scientific methods.

A.S. in Cybersecurity and Information Assurance

This program prepares IT professionals to apply knowledge and experience in network security, risk management, intrusion detection, remediation, and digital forensics to safeguard infrastructure and secure data and business operations. Courses deliver proven methods for information security using software analysis techniques, web engineering, cloud management, and networking strategies to prevent, detect, and mitigate cyberattacks. This program also provides preparation for several nationally recognized, high demand certifications in the field of Cybersecurity.

The Cybersecurity and Information Assurance Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- define best practices for configuring cyber defense and countermeasures.
- design organizational plans for securing data and while maintaining the confidentiality, integrity, and availability (CIA) of the information transmitted over communication networks.
- explain how security principles and cyber defense concepts impact organizational policies and practices.
- analyze security risks mitigation processes to identify, evaluate, prioritize, and prevent potential security threats.
- critique plans to secure and manage physical and virtual infrastructures for legal and secure cloud operations.
- outline legal issues that should be included within the security awareness training and education program of an organization.
- analyze applicable laws and policies to legally protect the organization against security incident.
- determine how to address vulnerabilities and threats in cellular and mobile network technologies.
- prioritize and establish a disaster recovery plan for the enterprise.
- develop security incident response plans that align to an organization’s security goals and objectives and maintain business continuity.

Career Information

A.A. in Technical Communications

This is an interdisciplinary course of study designed to prepare students for employment as professional writers and communicators in a variety of media intended to instruct and inform audiences. The degree program includes substantial course work in writing, information design, editing, page design, online help development, web site creation, and the use of industry standard applications.

The Technical Communications Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze audience information needs and propose solutions to aid the audience.
- design technical communication solutions for a variety of industry and government purposes.
- design and create web sites and help systems with effective visual design, navigation, and written content.
- design and publish printed pages with effective design, organization, content, and indexing.
- compose professional prose for a variety of audiences with a variety of purposes.
- compose and edit professional documents in grammatically correct, concise English.
- create and use style templates in a variety of industry standard software.

Career Information

Technical communicators may be employed in a variety of occupations in government, scientific firms, nonprofits, natural resources, finance, education, and high tech.

Certificates of Achievement

CIS: Computer Networking Management Certificate

The CIS: Computer Networking Management certificate provides instruction for entry-level and IT professionals aiming for skill enhancement on the specific knowledge and skills required to master one of three industry standard network technologies:

- Microsoft Windows networking concentration, focusing on preparing for the Microsoft Certified Systems Engineer (MCSE) and/or the Microsoft Certified Systems Administrator (MCSA) certification.
- Linux/Unix networking concentration, focusing on preparing for the administration of commercial Linux/Unix servers and network environments.
- Cisco router and network administration concentration, which covers all the objectives of the Cisco Certified Network Associate (CCNA) certification exam.

</tbody>
</table>

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- demonstrate competency in basic Microsoft Windows and Linux operating system terminology, command line interface commands, account management, and file management and storage.
• define networking terminology, protocols, industry standard models, and best practices for configuring network operating system services.
• configure and implement basic data security methods for protecting servers, workstations and networks from unauthorized access.
• evaluate and demonstrate basic procedures for troubleshooting and replacing field replaceable components in microcomputers.
• implement, evaluate and troubleshoot a transmission control protocol/internet protocol (TCP/IP) addressing scheme.
• define, implement, evaluate and troubleshoot the most common utilities and protocols of the TCP/IP suite.

CISCO CONCENTRATION:
• design, evaluate, construct and implement a routed network using TCP/IP and industry standard routing protocols and state of the technology routing equipment, in a wired or wireless configuration.
• design, evaluate, construct and implement a multilayer switching network using switching protocols, such as Ethernet, in a wired or wireless configuration.
• design, install and test Wide Area Network (WAN) connectivity solutions.
• design and evaluate basic security and access solutions in a switched or routed LAN or WAN.
• evaluate, specify, and install various types of network media.

LINUX/UNIX CONCENTRATION:
• install, configure, monitor, manage, backup, and customize a Linux server.
• design, evaluate and implement and troubleshoot typical Linux server services in the areas of user accounts and security, printing, web server, telnet server, firewall, email server, domain name service, dynamic host configuration protocol, network file system, and Microsoft Windows compatibility.

WINDOWS CONCENTRATION:
• install, configure, monitor, manage, backup, and customize a Microsoft Windows server.
• design, construct and apply group policies and NTFS file system permissions to secure files and network resources.
• design, construct and troubleshoot a Microsoft Active Directory network using Microsoft workstation and server operating systems.

CIS: Computer Programming Certificate

This certificate includes general topics in the field of computer programming as well as focused topics related to one commonly used programming language. General topics include the use of an operating system, and the translation of a problem statement into a generic program solution. Programming language-specific topics include syntax, program structuring, language constructs and proper programming methods.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply techniques of structured programming.
- design programs using object-oriented methodology.
- analyze problems related to computer programming.
- design algorithms to solve problems related to programming.
- develop specifications of an information system based on requirements.
- compare alternative implementations of programmed solutions using a variety of criteria.
- describe how programming fits in the context of the development of an information system.

Career Information

This programming certificate enables people who are already in the information technology or computer fields to develop or supplement their skills with the experience of an additional programming language.

CIS: Database Management Certificate

The CIS: Database Management certificate involves the study of relational database technology used in the business environment. The emphasis is on selecting the appropriate system platform for database deployment. Course work includes database system design and programming for desktop, enterprise and Internet platforms, structure query language (SQL) programming, introductory principles of modular programming, system design and problem solving, desktop operating systems, and electronic spreadsheets.

</table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe relational database technologies for desktop, enterprise and Internet platforms.
- explain and discuss database theory and principles.
- employ relational database technologies for either desktop, enterprise and Internet platforms to solve common business problems using standard database principles and practices.
- assess and document information system requirements.
- employ modular programming concepts in program development.
- design and code elementary programs encountered in business and government.
- identify interactive web publishing situations requiring database solutions.
- create interactive web database applications.

CIS: Microcomputer Applications Certificate

This certificate involves the use of the microcomputer and current, commonly used software to solve problems in a business environment. Course work includes microcomputer applications in database management, desktop publishing, electronic spreadsheets, presentation graphics, operating systems, and word processing.

Career Information

This programming certificate enables people who are already in the information technology or computer fields to develop or supplement their skills with the experience of an additional programming language.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design and manage database tables, queries and forms.
- produce reports for use in a typical business environment.
- evaluate the basic computing needs of a business by developing associated documentation and presentations.
- create spreadsheet formulas and manipulate business data.
- compose and format typical business communications documents according to industry standards.
- combine data from different software applications into one document.
- apply file management techniques in organizing computer data.

CIS: PC Support Certificate

The CIS: PC Support certificate covers the use and maintenance of a microcomputer’s hardware, software and network connections in today’s business environment. Course work includes basic computer skills in configuration, use, and troubleshooting major hardware components, different operating systems, and applications in a standalone and network environment. This program covers all the objectives of the Computer Technology Industry Associates (CompTIA) A+ certification exam.

1Taken on the Windows operating system.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Identify and recognize the names, purpose, and characteristics of system components by sight or definition.
- Evaluate and demonstrate basic procedures for adding and removing field replaceable components for desktop computers.
- Analyze and demonstrate understanding for installation and troubleshooting current operating systems, applications and basic networking technology used in industry.
- Formulate back-up, recovery, and system protection plans for the operating system in a network environment.
- Develop proficiency in customer service skills to effectively diagnose and communicate microcomputer software and hardware-related problems and solutions at the user level.
- Configure and implement data security methods for protecting computers and networks from unauthorized access.

### Computer Information Security Essentials Certificate

This program provides basic cyber operations knowledge of internal and external threats to information assets, compliance requirements, risk management, disaster recovery, and computer forensics. It also provides preparation for the Computing Technology Industry Association (CompTIA) Security+ exam. It is a stackable certificate pathway to the CISS certificate and degree.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the fundamental concepts of the cyber security discipline and use to provide system security.
- identify the Federal, State and Local Cyber Defense partners/structures.
- compare and contrast different types of standards including: laws, regulations, policies, voluntary, and framework-based standards.
- assess the impact of legal/regulatory standards on a given system.
- discuss the rules, laws, policies, and procedures that affect digital forensics.
- describe the steps in performing digital forensics from the initial recognition of an incident through the steps of evidence gathering, preservation and analysis, through the completion of legal proceedings.
- plan, organize, and perform penetration testing on a simple network.
- describe the role of cybersecurity in supporting and encouraging ethics, as well as where cybersecurity practices can cause ethical conflicts.
- evaluate the effectiveness of applications of cybersecurity in preventing crime and abuse.
- assess the effectiveness of a security program.
- develop contingency plans for various size organizations to include: business continuity, disaster recovery and incident response.
- evaluate responsibilities related to the handling of data as it pertains to legal, ethical and/or agency auditing issues.
- evaluate and categorize risk 1) with respect to technology; 2) with respect to individuals, and 3) in the enterprise, and recommend appropriate responses.

Career Information

Cybersecurity Engineer Cyber Operations Planner IT Security Specialist Information Security Analyst IT Privacy Analyst IT Risk Analyst Information Security Auditor

Cybersecurity and Information Assurance Certificate

This certificate prepares IT professionals to apply knowledge and experience in network security, risk management, intrusion detection, remediation, and digital forensics to safeguard infrastructure and secure data and business operations. Courses deliver proven methods for information security using software analysis techniques, web engineering, cloud management, and networking strategies to prevent, detect, and mitigate cyberattacks. This program also provides preparation for several nationally recognized, high demand certifications in the field of Cybersecurity.

Upon completion of this program, the student will be able to:

- define best practices for configuring cyber defense and countermeasures.
- design organizational plans for securing data and while maintaining the confidentiality, integrity, and availability (CIA) of the information transmitted over communication networks.
- explain how security principles and cyber defense concepts impact organizational policies and practices.
- analyze security risks mitigation processes to identify, evaluate, prioritize, and prevent potential security threats.
- critique plans to secure and manage physical and virtual infrastructures for legal and secure cloud operations.
- outline legal issues that should be included within the security awareness training and education program of an organization.
- analyze applicable laws and policies to legally protect the organization against security incidents.
- determine how to address vulnerabilities and threats in cellular and mobile network technologies.
- prioritize and establish a disaster recovery plan for the enterprise.
- develop security incident response plans that align to an organization’s security goals and objectives and maintain business continuity.

Career Information

Internet Marketing Certificate

This certificate offers a program of study for students seeking jobs that require skills in technical marketing applications. It provides opportunities to combine traditional marketing theory with the technical skills needed in today's business environment. Courses address current technology-based business communications, marketing, Internet strategies, applications, and trends.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:
- identify and create effective Internet marketing strategies that enhance business relationships with present and future customers.
- apply communication theory, effective writing techniques, and presentation skills to business situations.
- utilize software applications designed to present and promote business in print and visual media.
- devise a marketing plan using social media applications and content platforms for marketing both small and large businesses.
- analyze various software applications for Search Engine Optimization (SEO), analytic tools, web-building and blog applications, email marketing, and other technical marketing tools.

Career Information

Career opportunities include titles such as social media administrator, digital marketing director, campaign specialist, marketing/events coordinator, media marketing, social media squad, Internet marketing communications, and communications and social media coordinator.

Network Administration Essentials - Windows Certificate

This program provides the information and skills necessary for network administration professionals to administer a Windows Active Directory domain-based enterprise network. It also provides preparation for several Microsoft Certified Systems Engineer (MCSE) certification exams.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Define best practices for configuring network operating system services.
- Construct and apply group policy settings at the Organizational Unit (OU), domain, site or local machine level.
- Apply Windows group policy and NTFS file system permissions to secure the workstations, the internal network and shared resources.

Technical Communications Certificate

This certificate offers an interdisciplinary program of courses in Technical Communications, Art/New Media, and Computer Information Systems to prepare students for a variety of technical writing and professional communication careers. The certificate includes the theory, writing skills, design background, and computer applications knowledge needed for jobs in technical communication.

Catalog Date: June 1, 2020

Total Units: 15 - 17

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- analyze audience information needs.
- compose concise, clearly written professional documents organized with the audiences' needs in mind.
- design print and online resources that communicate organizations' values, enhance readability, and are easy to use.
- demonstrate basic skills in the use of word processing, page design, and web design applications.
- evaluate organizations' communication goals and needs based on technical writing principles.

**Career Information**

Technical communicators find employment in medical, scientific, high tech, business, university, and government settings. They may write white papers, tutorials, reference and procedure manuals, help systems, user assistance video scripts, grants and proposals, and more.

**Web Developer Certificate**

This certificate offers a program of study for students seeking jobs in the fields of web-based programming and web application development. It provides opportunities to develop the necessary skills and aptitudes for creating and maintaining interactive, database-driven web applications.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze how an interactive web application is developed using static web pages, forms, client-side scripts, server-side scripts, subroutine or class libraries, and relational databases.
- evaluate informational or business needs that could benefit from a web application and design an appropriate web application that address those needs.
- create and debug scripts in at least one client-side and at least one server-side scripting language.
- construct embedded Structured Query Language (SQL) commands to access, display, modify, add, and delete information via a web application.
- integrate graphic principles and programming functionality with a web application.
- demonstrate basic use of both Linux and Windows Operating System command-line interface.
- devise or choose efficient algorithms for the solution of problems using the control structures of structured programming.
- design software using object-oriented methods to develop event driven programs for both applets and applications.

### Web Publishing Certificate

This certificate offers a program of study for students seeking jobs in the fields of web publishing, design, and development. It provides opportunities to develop the necessary skills for creating and maintaining large web sites for industry, government, and nonprofit agencies. General development of web publishing skills, including a thorough grounding in the HyperText Markup Language (HTML), Internet protocols, and web standards, is emphasized.

**Catalog Date:** June 1, 2020

</table>
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- research the differences in goals, techniques, and costs between traditional print publishing and web publishing.
- create a functional web site using HyperText Markup Language (HTML) and Cascading Style Sheets (CSS).
- incorporate dynamic and interactive features into a web site using client-side or server-side scripting.
- evaluate web accessibility issues when designing web sites.
- integrate graphic principles and programming functionality with a web application.
- demonstrate basic use of both Linux and Microsoft Windows operating system commands.

Certificate

CIS: Mobile Programming Certificate

This certificate offers a program of study for students seeking jobs in the fields of mobile application development. It provides opportunities to develop the necessary skills and aptitudes for designing, developing, and testing a variety of application programs for mobile devices.

Catalog Date: June 1, 2020

Certificate Requirements

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- develop a mobile application program using tools included in a software development kit.
- design software using object-oriented methods to develop event-driven programs for mobile application programs.
- publish mobile applications in an application marketplace.

Career Information
Mobile devices such as tablets and smart phones continue to be more cost effective and versatile. Due to the portability, cost, built-in devices and user-friendliness, mobile devices gain much popularity in end-user and commercial markets. As a result, there is a great demand for developers and software engineers who can write application programs for mobile devices. A developer with this certificate can work as an independent mobile application developer or join a team of developers in software firms that specialize in mobile application development.

Computer Information Science - Applications (CISA)

CISA 126 Outlook: Basics

This course introduces Microsoft Outlook, the industry-leading personal information management software. Topics include understanding and navigating the Outlook environment, creating and sending email, using email special features, managing Outlook contacts, using an electronic calendar, and creating tasks and to-do items.

BUSTEC 126/CISA 126 and BUSTEC 127/CISA 127 taken together are considered sufficient preparation to pass the Microsoft Office Specialist certification for the Microsoft Outlook application and the communications portion of the International Computer Driver's License (ICDL) Module 7: Information and Communication. This course is not open to students who have completed BUSTEC 126.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- send and receive email utilizing the special features of Outlook.
- create and modify contacts in an address book.
- create and organize Outlook calendar items.
- incorporate tasks and to-do items into the personal information management software.
- distinguish between Outlook in an Exchange environment and a stand-alone environment.
- identify the potential risks associated with the use of email.

CISA 127 Outlook: Tools

This course presents the advanced personal information management tools in Outlook. Topics include working with multiple email accounts, using rules and folders, incorporating advanced calendar and contact features, collaborating using sharing and delegate features, and customizing the Outlook user interface. In addition, the course covers the integration of Outlook with other applications in the Microsoft Office suite. Additionally, BUSTEC 126/CISA 126 and BUSTEC 127/CISA 127 taken together are considered sufficient preparation to pass the Microsoft Office Specialist certification for the Microsoft Outlook application and the communications portion of the International Computer Driver's License (ICDL) Module 7: Information and Communication. This course is not open to students who have completed BUSTEC 127.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- incorporate multiple email accounts into Outlook.
- integrate rules and folders into communication management.
- apply Outlook features to find, manage, and archive information.
- collaborate with other Outlook users by using sharing and delegates.
CISA 160 Project Management Techniques and Software

This introductory course covers the responsibilities of a project manager. It includes the knowledge needed to manage a project, control costs, and schedule resources. It also introduces the use of project management software to track project resources, tasks, and milestones. This course is not open to students who have taken MGMT 142.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- construct a basic plan of action utilizing project management software.
- compare and contrast various theories of leadership and motivation.
- explain the principles of project management with regard to case studies.
- demonstrate the ability to formulate a project plan, given specific scenarios.
- assess the inherent advantages and shortcomings in various software packages.

CISA 171 Introduction to Adobe Acrobat

This course introduces Adobe Acrobat tools for creating, editing, reading, and printing Portable Document Format (PDF) documents. Topics include software navigation, converting other file types to PDF, and customizing output quality. Additional topics include modifying PDF files, placing documents on-line, adding digital signatures and security, creating presentations, creating dynamic forms, manipulating graphics, and using Acrobat in a review cycle.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create and enhance Adobe Portable Document File(s)(PDF).
- convert images, emails and non-PDF file types to a PDF file and evaluate the optimum balance between file size and quality for specific needs.
- formulate a document review cycle, using different levels of document security to limit users' ability to manipulate the contents.
- produce dynamic forms that capture and share information electronically.
- analyze documents for user accessibility and flexibility.
- effectively use Adobe Acrobat Help.
- scan a paper document to a PDF file.

CISA 305 Beginning Word Processing

This course covers the basics of using word processing software. It includes the creation, editing, and printing of documents. It covers the use of features such as font, size, and style, along with the basics of document formatting and page layout. Students will learn how to create, edit, and print documents using the software.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create and format documents using word processing software.
- use basic features such as font, size, and style.
- use basic formatting options such as bold, italic, and underline.
- use basic page layout features such as margins, columns, and header/footer.
- create, edit, and print documents using word processing software.
- use basic document templates and styles.
- use basic document security and collaboration features.
This course introduces students to fundamental word processing skills and techniques that are essential to global information sharing. It engages students in real-world case studies while demonstrating the entire document production process including creating, editing, and formatting documents. This course culminates with the study of intermediate-level features such as creating tables, working with themes and graphics, and merging multiple documents.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop and analyze document requirements.
- create various documents that require the integration of text, charts, and/or graphics for distribution or presentation.
- design strategies for merging and integrating source data from different applications.
- work with multiple documents, templates, as well as techniques for using and editing pre-designed styles from the style gallery.
- analyze appropriate layout and design of documents for specific audiences.
- solve errors in document formatting, layout, unreadable characters, and common error messages.

CISA 306 Intermediate Word Processing

Units: 2  
Hours: 27 hours LEC; 27 hours LAB  
Prerequisite: CISA 305 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course builds upon previous instruction in the use of a word processing application with an emphasis on advanced information documents and reports. It includes formatting multiple page documents, integrating Word with other programs, advanced graphics, working with templates, building forms, and complex commands. It also covers working with references, building table of contents and figures, and customizing Word.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze document requirements to determine the most efficient page layout and format for multi-column documents that also include graphics.
- develop multipage documents that include section headers and footers, a table of contents, a table of figures, an index, and a citation style.
- manage document styles by explore existing styles, modify built-in styles, create paragraph styles, create character, list, and table styles.
- plan and create online forms and tables for efficient data display and input data into customized forms.
- create references by customizing footnotes, modifying citations and captions, and generating a bibliography.
- develop text for a report that include embedded objects and information and data from another Word file.
- import spreadsheet and database files into word processing applications.
- link and manage linked spreadsheet and database files.
- enhance newsletters and single- or multi-column documents with a variety of graphics, imported clip art and scanned images.
- explore collaboration options such as commenting with a document, tracking changes, managing reviews, and comparing documents.

CISA 308 Exploring Word Processing and Presentation Software

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course introduces word processing and presentation software. The basic features and skills of creating, editing, and formatting documents; inserting tables and graphics, and enhancing word processed documents and presentations are covered.
Upon completion of this course, the student will be able to:

- evaluate efficient techniques in creating and formatting typical business documents
- analyze document requirements and use correct features when creating business documents that require the integration of text, charts, and/or graphics for distribution or presentation
- compare various data manipulation features such as cut/copy/paste, sort, and merge
- choose from among various formatting options such as: margins, headers/footers, and page orientation
- create and format tables for efficient data display utilizing options in table properties
- evaluate and analyze appropriate layout and design for specific audiences
- design a basic presentation

CISA 315 Introduction to Electronic Spreadsheets

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISC 100 or 300
Transferable: CSU
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course introduces the basic concepts and applications of an electronic spreadsheet program, including organizing, creating, and modifying a spreadsheet. It presents the basics of entering data in a worksheet using columns and rows, labels, and values; completing worksheet calculations using formulas and functions; and producing professional looking charts. In addition, the course introduces formatting, sorting, querying, and multi-sheet management. It also introduces 3-D cell referencing, financial functions, "Goal Seek," "LOOKUP," "What If," and decision-making.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- navigate to and from storage locations, open and close a spreadsheet application, and recognize window components
- explain spreadsheet software, identify window components, and write labels, values, and simple formulas
- revise cell and worksheet entries, choose worksheet views, and use the auto-summation feature
- create complex formulas and functions, and round a value with a function
- define relative cell reference and absolute cell reference, copy formulas and functions with relative and absolute cell references, and revise relative and absolute cell references formulas and functions
- format all or portions of a worksheet using standard layouts, formats, styles, alignments, and themes
- apply colors, patterns, borders, special number formats, and conditional formatting; as well as renaming and moving worksheets
- apply spreadsheet features such as employing text functions to format data, consolidating data using a formula, using a formula to consolidate data, and identifying and revising errors within formulas
- apply application features such as developing a logical formula with the IF function and the AND function, as well as calculating payments with the PMT function
- plan, design, create, and revise embedded as well as stand-alone charts based on commonly used standards
- perform basic chart tasks such as selecting labels and values, choosing a chart type, and moving and resizing a chart
- perform basic chart tasks such as changing a chart’s design, annotating and drawing on a chart, and inserting images and objects within a chart

CISA 316 Intermediate Electronic Spreadsheets

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: CISA 315 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the advanced concepts and applications of an electronic spreadsheet program, including organizing, creating, and modifying a spreadsheet. It presents the basics of entering data in a worksheet using columns and rows, labels, and values; completing worksheet calculations using formulas and functions; and producing professional looking charts. In addition, the course introduces formatting, sorting, querying, and multi-sheet management. It also introduces 3-D cell referencing, financial functions, "Goal Seek," "LOOKUP," "What If," and decision-making.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- navigate to and from storage locations, open and close a spreadsheet application, and recognize window components
- explain spreadsheet software, identify window components, and write labels, values, and simple formulas
- revise cell and worksheet entries, choose worksheet views, and use the auto-summation feature
- create complex formulas and functions, and round a value with a function
- define relative cell reference and absolute cell reference, copy formulas and functions with relative and absolute cell references, and revise relative and absolute cell references formulas and functions
- format all or portions of a worksheet using standard layouts, formats, styles, alignments, and themes
- apply colors, patterns, borders, special number formats, and conditional formatting; as well as renaming and moving worksheets
- apply spreadsheet features such as employing text functions to format data, consolidating data using a formula, using a formula to consolidate data, and identifying and revising errors within formulas
- apply application features such as developing a logical formula with the IF function and the AND function, as well as calculating payments with the PMT function
- plan, design, create, and revise embedded as well as stand-alone charts based on commonly used standards
- perform basic chart tasks such as selecting labels and values, choosing a chart type, and moving and resizing a chart
- perform basic chart tasks such as changing a chart’s design, annotating and drawing on a chart, and inserting images and objects within a chart
This course is a continuation of CISA 315 (Introduction to Electronic Spreadsheets) with emphasis on workbook design and integration, template design, use of complex formulas, and built-in financial, logical, and database functions. It also includes look-up tables, the use of worksheet analysis tools, macros, and data integration.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compile, arrange, and protect worksheets and workbooks, add a worksheet background, group worksheets, and insert hyperlinks.
- confirm custom views of a worksheet and prepare and save a workbook for distribution.
- plan, create, and format a table, add and sort table data, and use a formula in a table.
- locate, revise, and delete table data and distribute a table.
- synthesize a table, create a custom table filter, and filter a table with the advanced filter.
- discover and validate values in a table, extract table data, summarize table data, and create subtotals.
- plan, edit, enable, record, and run a macro.
- use the personal macro workbook, assign a macro to a button, and assign keyboard shortcuts to macros.
- modify a chart, add chart elements and a style, format chart axes, and create a combination chart.
- reorganize a data series, revise a data source, identify data trends, and summarize data with sparklines.
- define what-if analysis, use solver for complex what-if analysis, and use scenario manager to track what-if analysis and generate a summary.
- extend figures using a data table, use goal seek, and use the analysis toolpak to analyze data.

**CISA 318 Exploring Spreadsheet Software**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces spreadsheet software. Topics include navigating a spreadsheet, editing and formatting data, using formulas and functions, inserting and formatting charts and graphics, basic database features, and analyzing data.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- plan, build, test, and document worksheets
- create formulas and manipulate data using mathematical operators in addition to financial, statistical, and logical functions
- design spreadsheet formatting using colors, patterns, and borders
- design worksheet entries with relative, mixed, and absolute cell references
- plan and construct various types of charts based on the most effective and appropriate display of data
- analyze worksheet data using "what-if" scenarios and "Goal Seek"
- evaluate basic database sorting and filtering techniques
- assess data from the Internet using a browser, search, and hyperlink capabilities
- create web queries to get real-time spreadsheet data from web sites
- design headers, footers, annotations, and other documentation
- analyze data using subtotals, pivot tables, and pivot charts
- create standardized workbooks using templates, styles, and macros
CISA 320 Introduction to Database Management

This course introduces the use of database management programs on the microcomputer. It includes designing a database; storing, searching, and updating files; and designing and producing printed reports.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe basic database functions, such as developing a query, and sorting, searching, filtering, and calculating data
- create database structures, and import and export data
- design and create database tables, queries, joins, forms, and reports
- use database functions, such as filing, retrieving, updating, and calculating

CISA 322 Design and Development of Desktop Database Applications

This course covers strategies for the design and development of desktop database applications. Topics include database objects, data types, data integrity, relational tables, joins, relationships, domain constraints, complex queries, forms, reports, sharing data with other applications, and data maintenance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze needs and determine appropriate data structures and solutions.
- create tables, queries, forms, and reports.
- formulate multiple table queries with complex criteria.
- design forms for data entry and data views.
- interpret data with crosstab queries, pivot tables, and reports.
- build tables by importing delimited data and exporting data to spreadsheet applications.
- design and implement multiple table data management systems involving custom forms, reports, and labels.
- manage, backup, and repair database objects.

CISA 330 Desktop Publishing

This course provides an overview of desktop publishing (DTP) and a major desktop publishing application program. It includes page layout skills needed to produce newsletters, brochures, flyers, reports, and other marketing material. Additionally, it covers importing and placing graphics and text, using layers, master pages, frames, creating graphics using the pen tool, and working with color both digitally and in print.
Upon completion of this course, the student will be able to:

- develop settings and preferences to create single and multi-page documents.
- apply the vocabulary and tools associated with navigating the desktop publishing work area.
- define the proper use of text tools, such as leading, tracking, and kerning.
- create and apply styles to format text.
- assemble, import, and arrange text and graphics working with frames and layers.
- create, set up, apply, and modify master pages.
- prioritize layers, and stack, align, and distribute frames/objects on a page.
- apply colors to objects and text.
- create graphics using the Pen tool.
- originate commonly used printed marketing documents using desktop publishing software.
- analyze the potential for desktop publishing use in business and organizational communications.

**CISA 331 Intermediate Desktop Publishing**

**Units:** 2  
**Hours:** 27 hours LEC; 27 hours LAB  
**Prerequisite:** CISA 330 with a grade of "C" or better  
**Advisory:** BUS 100  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course builds upon previous desktop publishing software concepts and study. Topics include working with effects and advanced techniques, applying styles, importing and linking graphics, tabs and tables, and working with transparency effects. It also covers producing long documents and book features, output and exporting to PDF format, and creating interactive documents for online use.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assemble text using formatting styles and grids.
- apply styles, tabs, and rules to paragraphs and long text.
- create complicated printed documents.
- create or import, modify, and enhance tables.
- apply opacity, effects, color blends, and object styles to visually enhance documents.
- create book files, table of contents, and indexes.
- combine multiple documents into a book file.
- export and generate an Adobe PDF file.
- convert a print document for online use.

**CISA 340 Presentation Graphics**

**Units:** 2  
**Hours:** 27 hours LEC; 27 hours LAB  
**Prerequisite:** None.  
**Advisory:** CISC 300  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course provides an in-depth look at using presentation software in business environments. Topics include elements of good presentation design, slide show...
techniques, integrating and linking of various software applications and media, animation effects, and the production of presentations using a variety of software and hardware.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate effective design principles and concepts when preparing presentations.
- apply audience analysis techniques to establish criteria for the presentation approach.
- evaluate visual presentations by utilizing standard guidelines, tools, and techniques used in today's business world.
- integrate graphics, word processing and spreadsheet information, and sound in the development of a presentation.
- create visual appeal through custom animation, transitions, and motion paths.
- create hyperlinks, and also embed and link objects and files.
- create and edit tables, charts, diagrams, templates, and custom photo album presentations.
- plan and publish presentations for the Web.

CISA 345 Technical Marketing Applications

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISC 305
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an overview of online marketing applications. It includes creating websites using cloud based software, building media-rich content for blogs, and developing marketing strategies using Search Engine Optimization (SEO) tools such as Google Analytics. It also covers email marketing software to create and manage mailing lists, newsletters, and automated campaigns. Additionally, it covers audience building with other cloud based marketing tools such as podcasts, ebooks, webinars, and more. All software used in this course is free, cloud based, and mobile.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop a website using online template tools
- create a blog and connect it with a website
- evaluate and prepare Search Engine Optimization (SEO) and Inbound Marketing tactics
- create SEO content types (content marketing) to include text, images, video, graphics, and presentations
- assess and set up webmaster tool applications and measurement techniques used to evaluate digital marketing (analytics)
- examine paid search marketing pay-per-click (PPC)
- utilize an online application to set up an email marketing campaign
- research other internet marketing platforms such as podcasts, ebooks, and webinars

CISA 346 Social Media Applications

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Advisory: CISC 305
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces a variety of social media applications and content platforms for marketing both small and large businesses. It includes popular applications for online social networking services (Facebook Pages for business), microblogging (Twitter), visual bookmark boards (Pinterest), video-sharing websites and YouTube channels, Internet based photo and video sharing apps (Instagram and Snapchat), and image editing mobile apps specifically for marketing. It also includes tracking social media, apps and integration, link building, and monetization.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze various forms of social media technology used in marketing
- create a business platform using online social networking services
- set up and use a microblogging application
- create and add content to a visual bookmark board application
- create and use Internet based photo and video sharing applications
- edit, compress, and create graphics using online photo editing and graphic marketing design applications
- originate, edit, and post video for marketing purposes using online video editing and hosting sites
- combine and set up links for all media to connect and promote for business
- critique social media for marketing using analytic tools and applications

CISA 348 Exploring Presentation Graphics

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides students with sufficient knowledge and skills to prepare presentations in a variety of courses. Topics include planning, designing, and preparing presentations; enhancing presentations with media; creating posters, tables, and statistical charts; interactivity, advanced animation, and hyperlinks; customizing a slide show; and collaborating, securing, and sharing a presentation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- plan, design, and prepare a presentation.
- incorporate media into a digital presentation.
- create posters, tables, and statistical charts with presentation graphics software.
- incorporate interactivity, advanced animation, and hyperlinks into a digital presentation.
- adapt a digital slide show.
- develop a digital presentation collaboratively.
- construct, secure, and share a digital presentation.

Computer Information Science - Core (CISC)

CISC 100 Computer Fundamentals with Hands-on Lab

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This introductory course develops basic computer skills needed for college-level courses, workplace productivity, and personal enrichment. It provides individuals who are new to computing or who have very little computing experience with slower paced, general, non-technical information as well as in-class hands-on instruction reinforcement. This course introduces common computer terminology and concepts, file management, electronic mail, online course management, productivity application software, and the Internet.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify and name the most common digital computing devices
- identify and name basic operating system commands, tasks, and primary user interface components
- identify and name the basic components of a desktop computer system including most common interactive devices
- identify and name differences and similarities between system software and application software
- manage files and documents using file management system procedures
- use contemporary business productivity software
- use Internet and educational technologies
- use an electronic mail system
- define common computer terms

CISC 294 Topics in Computer Information Science - Core

Units: 0.5 - 5
Hours: 9 - 72 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

Current topics in computer science and information systems not covered by regular catalog offerings are examined. Topics and locations vary, including advanced subjects related to computer science, networking, programming, database, applications, PC support, security, communications, and web development and publishing. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate current issues and emerging technologies in computer science and information technology.
- apply hands-on experience using current techniques of computer science and information technology.
- examine computer science and information technology issues that affect daily lives.

CISC 295 Independent Studies in Computer Information Science - Core

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

CISC 300 Computer Familiarization

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: ENGRD 116 or ESLR 320, and the ability to touch type.
Transferable: CSU
General Education: AA/AS Area II(b); AA/AS Area III(b)
Catalog Date: June 1, 2020

This introductory course develops and improves the basic computer skills necessary for college-level courses, workplace productivity, and personal enrichment. It introduces common computer terminology and concepts, file management, electronic mail, online learning, productivity application software, and the Internet.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify and name the most common digital computing devices.
- identify and name basic operating system commands, tasks, and primary user interface components.
- employ the mouse as a navigational tool to select ribbon tabs, icons, text, and screen options.
- manage stored files using file management procedures.
- create, save, and print word processing documents using basic editing and formatting techniques.
- create, preview, save, and print spreadsheets using basic data entry, editing, and formatting techniques.
- employ Internet and educational technologies.
- employ an electronic mail system.
- define common computer terms.

CISC 305 Introduction to the Internet

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Advisory: CISC 300 and 320
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces how the Internet works and how to effectively use basic Internet services. Topics include browser basics, search engines and search techniques, e-mail, the World Wide Web, Internet security, Internet resources, the Cloud, social networking, and building basic web pages using Hypertext Markup Language (HTML).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the structure of the Internet, the World Wide Web, the Internet browser, and a web page.
- evaluate and critique various types of information sources on the Internet.
- apply and effectively use the World Wide Web and a web browser to search for and locate specific information on the Internet.
- research how technology can help with life skills, including local and world news, finding health services, educational resources, travel, and banking online.
- create professional email accounts, including using address and mailing lists, attaching files, learning proper etiquette, and identifying security risks.
- analyze Internet security risks and explain how to protect a PC from viruses, trojans, spam, spyware, rootkits, and keyloggers.
- define different types of cloud computing and explain the benefits and security risks.
- utilize social networking sites such as Facebook, Twitter, LinkedIn, photoshare, and other popular sites. Explain the marketing value and the risks with each.
- construct a basic web page using plain HTML code.

CISC 306 Introduction to Web Page Creation

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Advisory: CISC 305
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the production of web pages, including design, layout, construction, and presentation. A web authoring tool is used to format a web page and Extensible Hypertext Markup Language (XHTML) is introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate content needs for a web page.
• design a web page.
• create and format web pages using a web authoring tool.
• publish web pages to a web server.
• apply industry standard web design techniques.

CISC 308 Exploring Computer Environments and the Internet

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the fundamentals of microcomputer hardware, software, and computer networking, focusing on operating systems. The fundamentals of the Internet and Internet tools are also introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• classify various types of computers and how they work
• distinguish the basic components of a computer
• evaluate effective procedures for creating and managing folders
• design custom computer settings utilizing the control panel and other accessories
• create effective operating system searches to locate files, folders, and data stored within folders using various filenames and wildcards
• choose the correct commands to capture and print screens
• evaluate operating system commands required to store, manage, back-up, access, and maintain files stored on various drives and other storage devices
• create, modify, and delete files using Windows Explorer
• compare and contrast basic operating system and Internet terminology and concepts
• design efficient Internet search techniques using search engines and subject directories

CISC 310 Introduction to Computer Information Science

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID BUS 140; C-ID ITIS 120
Catalog Date: June 1, 2020

This course examines information technology and its role in solving business problems. Topics include information systems, database management systems, networking, e-commerce, ethics and security, and computer systems hardware and software components. These concepts and related methods are applied through hands-on projects to develop computer-based solutions to business problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain how a computer system works.
• differentiate between the hardware and software components of a computer network.
• differentiate between the hardware components of a computer system.
• differentiate between system software and application software.
• differentiate between the most commonly used computer operating systems.
• explain the basic operation of networks.
• differentiate the types of computer networks.
• demonstrate the secure utilization of Internet resources.
• propose methods for insuring the security of business information systems.
• discuss and relate the different phases of the System Development Cycle.
• demonstrate an understanding of the development and use of information systems in business.
• recommend methods of assessing business information systems.
• solve common business problems using appropriate information technologies.
• manipulate databases using database management software.
• build software solutions to business problems using Internet technologies.
• evaluate the impact of information and computer technology on organizations and society including e-commerce, ethics, copyright, privacy, and security.

CISC 320 Operating Systems

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the basic features of the Windows operating system for the PC. Topics include managing files, folders, and libraries, operating system services, program management, maintenance of disks and storage media, Windows desktop, browser basics, and the Windows help system. A brief introduction to security and the command prompt is also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze proper file naming conventions and explain file extensions and program associations.
• apply built-in file management utilities to create, organize, copy, move, rename, and delete files, folders, shortcuts, and libraries on storage devices or media.
• explain the purpose of and use the Windows Task Manager.
• explain the purpose of and use the Windows Print manager. describe the properties of Windows objects: desktop, icons, menu structure, tool-bars, windows, dialog boxes, controls, settings, and views.
• utilize the Control Panel to configure and/or customize the properties of the desktop, taskbar, display, keyboard, mouse, and other peripheral devices.
• utilize the various types of help available by using menus, keywords, or the Internet.
• apply basic Windows maintenance utilities.
• apply basic security including anti-virus use.
• use commands at the command prompt.
• use accessory and utility programs that are installed with Windows to accomplish tasks such as write memos, edit clip art, check disk drives, play audio and video files, and burn CDs or DVDs.
• describe the properties of Windows objects: desktop, icons, menu structure, tool-bars, windows, dialog boxes, controls, settings, and views.

CISC 323 Linux Operating System

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: None.
Advisory: CISC 300 and ability to touch type.
Transferable: CSU
Catalog Date: June 1, 2020
This course introduces the Linux operating system for microcomputers. Concepts include the kernel, file structures, daemons, graphical user interfaces (GUI), open source, file security and permissions. Procedures for installing software, basic system administration and utilities, the Bourne again shell (BASH), command line interface utilities, and introduction to scripting topics are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the relationship of the operating system kernel, shell interface, windowing system, applications programs and the user to each other.
- utilize a command line interface (CLI) and GUI text editor to create and edit files in the Linux file system.
- employ the use of basic Linux GUI applets and CLI commands in file, disk, video and printer management.
- formulate CLI commands with correct syntax.
- compare Linux with other operating systems.
- utilize the Linux file system and apply industry standard file security.
- explain and define open-source theory, jargon, practice, and licensing.
- utilize a GUI and/or CLI to complete basic system administration and day-to-day tasks on the computer.

CISC 324 Intermediate Linux Operating System

Units: 1
Hours: 18 hours LEC; 18 hours LAB
Prerequisite: CISC 323 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is a continuation of CISC 323. Topics include boot loaders, Linux devices, and command line interface (CLI) system management utilities. It covers advanced Bourne Again Shell (BASH) shell scripting, including looping and decision making logic structures. Alternates to the BASH shell and regular expressions and text stream editors are introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- set up a Linux and Microsoft Windows dual booting system.
- set up, configure, and troubleshoot a boot loader.
- utilize advanced BASH CLI utilities to inspect and maintain the system and its hardware.
- compare C shell, K shell, and BASH.
- create BASH script files utilizing looping structures: do, while, until.
- create BASH script files implementing decision making logic using: if, for, case and nesting.
- describe the use of text stream editor and filters such as awk and sed.
- compose a regular expression for use by the grep utility.

CISC 350 Introduction to Data Communications

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: CISC 300 and ability to touch type.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces business data communication concepts, systems, technology, protocols, theory, and basic terminology. Specific topics include analog and digital data encoding and transmission; media; interfaces; packet, circuit, and broadcast networks; and data multiplexing.
Upon completion of this course, the student will be able to:

- Explain the evolution of data communications and the impact of technology on communication methods in business and the home.
- Define data communications terminology.
- Analyze the hardware and software needed to communicate using a standalone computer or a local area network.
- Evaluate different methods used for data communications applications.
- Design and select the equipment specifications for a small home or office network.
- Explain the primary differences between various types of data communication technologies.

CISC 351 Introduction to Local Area Networks

| Units: | 1 |
| Hours: | 18 hours LEC; 18 hours LAB |
| Prerequisite: | None |
| Advisory: | CISC 320 and 350 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course introduces local area networks (LAN) and provides hands-on training in LAN applications and network administration. Topics include planning, installing, and maintaining a LAN, responsibilities of the system administrator, and basic network security principles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the functions of a LAN and the devices that may reside on a LAN.
- examine the advantages and disadvantages of peer-to-peer LANs vs. domain-based LANs.
- explain LAN topologies, types of cabling, standards, media and access methods.
- perform the basic functions required for day-to-day LAN administration, such as: creating a directory structure and network shares, creating users and groups, defining user rights, setting access permissions, and configuring user profiles.
- analyze the advantages and disadvantages of resource sharing on a LAN and the factors to be considered when planning and implementing a LAN.
- analyze the security implications of peer-to-peer vs. centralized LAN administration.
- evaluate the security implications of a user being a member of multiple groups and the potential impacts on the effective permissions for the user.
- analyze best practices for sharing file resources and configure the Microsoft New Technology File System (NTFS) permissions for group and user needs.
- evaluate LAN security and configure shares, permissions and authentication security in accordance with best practices.
- create a plan to combat viruses, Trojans, network worms, spyware and adware as it relates to LAN security and file integrity.

CISC 361 Microcomputer Support Essentials - Preparation for A+ Certification

| Units: | 3 |
| Hours: | 42 hours LEC; 36 hours LAB |
| Prerequisite: | None |
| Advisory: | CISC 310, 320, and 350 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is the first of two courses covering support and repair for stand-alone personal computers. It includes training to troubleshoot hardware to a field replaceable component. Operating systems installation and simple networking are also covered. The course provides a firm grounding in the supporting software that runs the hardware and in distinguishing hardware from software problems. This course, along with CISC 363, prepares students for the Computing Technology Industry Association (CompTIA) A+ certification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:...
• Identify the names, purpose, and characteristics of typical microcomputer system components.
• Install, configure, optimize and upgrade personal computer components for desktop computers.
• Identify tools, diagnostic procedures and troubleshooting techniques for personal computer components.
• Diagnose common problems associated with components based upon the symptoms.
• Define the types of random access memory (RAM), form factors, and operational characteristics.
• Distinguish between popular central processing unit (CPU) chips in terms of their basic characteristics and performance.
• Assemble and disassemble microcomputers to the component level.
• Perform preventative maintenance on personal computer components.

CISC 362 Microcomputer and Applications Support

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: CISC 361 and 363
Transferable: CSU
Catalog Date: June 1, 2020

This course is an in-depth investigation of the technical, business, soft, and self-management skills technicians need to provide effective customer service and support in an information technology (IT) environment. It introduces customer service and problem solving skills needed for success in a small- or large-business environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate proficiency in customer service skills in the areas of active listening, and written and oral communication.
• diagnose, document, and communicate microcomputer problems and solutions using acceptable terminology.
• analyze and troubleshoot hardware and software problems in a variety of multi-user computer lab environments.
• apply business and team building skills for technical professionals.
• identify the causes of stress in computer support and apply stress reduction coping skills.

CISC 363 Microcomputer Support Technical - Preparation for A+ Certification

Units: 3
Hours: 42 hours LEC; 36 hours LAB
Prerequisite: CISC 361 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is the second of two courses providing a foundation in personal computer (PC) support. Hands-on skills include advanced component installation and configuration, troubleshooting component hardware, and configuring and troubleshooting major operating systems and networking hardware. This course along with CISC 361 prepares students for the Computing Technology Industry Association (CompTIA) A+ Certification exam.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Set up, demonstrate, and troubleshoot the three most commonly used PC operating systems.
• Assemble, administer, and troubleshoot a basic networking system.
• Demonstrate the installation, configuration, and troubleshooting of advanced computer devices.
• Differentiate types of physical network architectures.
• Explain disaster recovery procedures.
Support, upgrade, and add peripheral devices to notebook computers.

Identify and recover from viruses.

Identify the fundamental principles of security.

CISC 495 Independent Studies in Computer Information Science - Core

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

CISC 498 Work Experience in Computer Information Science - Core

| Units: | 1 - 4 |
| Hours: | 60 - 300 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position, or job related to computer information science with a cooperating site supervisor. Students are advised to consult with the Computer Information Science Department faculty to review specific certificate and degree work experience requirements. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of computer information science. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in computer information science related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.

- make effective decisions, use workforce information, and manage his/her personal career plans.

- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

- locate, organize, evaluate, and reference information at work.

- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

Computer Information Science - Networking (CISN)

CISN 110 Networking Technologies - Preparation for N+ Certification
This is an introductory course in networking software and hardware. Topics include communication protocols; local, wide area, and virtual networks; intra- and inter-networks; network architectures; topologies; cloud computing; security; and the Open Systems Interconnect (OSI) model. This course, along with CISN 111, provides preparation for the Computer Technology Industry Association N+ certification test.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the function and responsibility of each of the seven layers of the OSI model.
- identify industry standards, types of applications, protocols, and network connection devices.
- describe the physical characteristics and Ethernet standards of coaxial cable, STP, UTP, and fiber-optic media.
- identify a variety of media types and their key characteristics, including cost, speed and capacity, resistance to interference, and ease of installation.
- explain basic data transmission concepts, including signaling, data modulation, multiplexing, bandwidth, baseband, and broadband.
- troubleshoot network devices and create a network map to be used for network troubleshooting.
- explain the purpose of ports and sockets, and identify the ports of several common network protocols.
- describe domain names and the name resolution process.
- identify and explain the functions of the core TCP/IP settings on a computer, including IP address, subnet mask, default gateway, and DNS servers.
- understand WLAN (wireless LAN) architecture. Explore wireless security concerns and evaluate common problems experienced with wireless networks.
- demonstrate knowledge of network architectures, topology, hardware, and software.
- identify and test network cables and describe characteristics of NIC and Ethernet interfaces.

### CISN 111 Intermediate Networking Technologies

This is an intermediate course in networking software and hardware. Topics include network operating systems setup, analyzing network performance, diagnosing and repairing of network problems, and network security techniques. This course, along with CISN 110, provides preparation for the Computer Technology Industry Association N+ certification test.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and describe various types of wireless networking characteristics.
- describe and explain virtualization technologies - how they connect with a network and how infrastructure devices can be virtualized.
- identify the features and benefits of cloud computing.
- secure network connections using encryption protocols.
- explain the purposes of network segmentation.
- explain how virtual local area networks (VLANs) work and how they’re used.
- discuss physical security methods that prevent and detect intrusions.
- describe the basic concepts of network management.
- explain the most common wireless wide area network (WAN) technologies.
- identify best practices for incident response and disaster recovery.
- identify the fundamental elements of WAN service options.
- secure and troubleshoot a wireless (Wi-Fi) network.
- configure various security measures on a wireless network.
- track the processes of authentication, authorization, and auditing on a network.
- describe cloud computing categories and models, and discuss concerns regarding cloud connectivity and security.

### CISN 118 Internet Protocol Subnetting

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None.  
**Advisory:** CISN 110; and MATH 25 OR Math 41  
**Catalog Date:** June 1, 2020

This course introduces Transmission Control Protocol/Internet Protocol (TCP/IP) address assigning and subnetting. Topics include a review of binary, hexadecimal, and decimal numbering systems, classes of Internet Protocol (IP) addresses, Classless Inter-domain Routing (CIDR), and Variable Length Subnet Masks (VLSM). The future of IP addressing, version 4 (IPV4) and version 6 (IPV6), is covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Describe number system structures.
- Perform calculations using different number systems, especially adding and subtracting binary and hexadecimal numbers.
- Classify IP addresses.
- Convert binary number values to decimal number values, and decimal number values to binary number values.
- Evaluate a custom subnet mask for effectiveness in a given scenario.
- Evaluate solutions to problems using VLSMs.
- Analyze solutions to problems using CIDR.
- Explain the need for IPV6.
- Compare and contrast IPV6 and IPV4.

### CISN 119 TCP/IP Protocols

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** CISC 350  
**Catalog Date:** June 1, 2020

This course covers the TCP/IP protocol suite for the Internet. Information to support and manage TCP/IP is provided. Additional topics include routing; tunneling; IP addressing and subnetting; IP version 4 and IP version 6; virtual private networks; network address translation; ports and sockets; and many other individual protocols.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare the Open Systems Interconnection (OSI) model to the TCP/IP model
- construct valid IP addresses
- compare and contrast routing and tunneling
- demonstrate IP subnetting for IPv4
- compare IPv4/IPv6
CISN 120 Beginning Network Administration with Linux

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: CISC 323 with a grade of "C" or better
Advisory: CISC 324
Catalog Date: June 1, 2020

This course covers the basics of installation and administration of the Linux Network Operating System. Topics include installation of the Linux server, connecting to a network, how to utilize network utilities, administer and maintain network printing, protect network data, and install network applications. This course also covers how to plan, access, and manage file systems. Also included are how to plan and implement login and file system security, administer and maintain user accounts, upgrade the kernel, and back up servers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the major components of a Linux network operating system.
- discuss Linux licensing and copyright issues in layman's terms.
- design, build, and maintain a logical and organized electronic file system.
- analyze and construct user accounts and groups using best practices for security.
- utilize the basic Linux network utilities to troubleshoot network connectivity.
- install and configure network printing resources.
- install and configure network/server applications.
- analyze system backup methodologies and best practices for scheduling backups and restoring files and system state data.
- plan and implement a recompile of the Linux kernel.
- research and identify good Internet resources for obtaining answers to common problems, network anomalies and Linux server problems.

CISN 121 Network Administration with Linux: LAN Services

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: CISN 120 with a grade of "C" or better
Advisory: CISN 119
Catalog Date: June 1, 2020

This course covers Linux network administration of local area network (LAN) services. Topics focus on server and LAN services including the network file system (NFS), share resources between Linux and Microsoft Windows using Server Message Block (SaMBa), network information service (NIS), virtual network computing (VNC), remote network access, the secure shell (SSH) vs. telnet, X-windows as a network service, and dynamic host configuration protocol (DHCP). The course also covers the command scheduler (cron), monitoring and logging system activities and system events (syslog), as well as installing and configuring MySQL Structured Query Language (SQL) database management service.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss core Linux intranet services and daemons.
- configure and troubleshoot core Linux intranet services and daemons.
- install and configure services to allow a Linux system to share network resources with other Linux systems and Microsoft Windows systems.
- customize and maintain auditing and system logs.
- analyze auditing and system event logs.
CISN 122 Network Administration with Linux: Internet Services

This course covers Linux network administration of Internet services. Topics focus on server and TCP/IP services including the internet services daemon (XINETD), file transfer protocol (FTP), email, domain name service (DNS), firewall, secure shell, and proxy services. Installing and configuring the Apache Web Server and Webmin (the Linux web based administration tool) are introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss core Linux Internet services and daemons.
- customize and troubleshoot core Linux Internet services and daemons.
- define and discuss key concepts related to email, web services, and firewalls.
- install, configure and use the major Linux daemons for Internet services such as email, firewall, etc.
- install, configure and use the Apache Web Server.
- install, configure and use the Webmin Linux web-based administration tool.

CISN 140 CISCO Networking Academy (CCNA)tm: Networking Fundamentals

This course introduces the architecture, structure, functions, components, and models of the Internet and other computer networks. It surveys data communication protocols, standards, hardware and software components and basic networking concepts. Topics include the Open Systems Interconnection (OSI) and TCP/IP models, IP addressing and subnetting, routing concepts, LAN media, Ethernet, and network configuration, troubleshooting and analysis. This is the first course in preparation for Cisco CCNA certification examination. ARC is a certified Cisco Networking Academy and all courses are taught by Cisco Certified Academy Instructors (CCAI).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the importance of data networks and the Internet in supporting business communications and everyday activities.
- explain how communication works in data networks and the Internet.
- recognize the devices and services that are used to support communications across an Internetwork.
- use network protocol models to explain the layers of communications in data networks.
- describe the importance of addressing and naming schemes at various layers of data networks.
- describe the protocols and services provided by the application layer in the OSI and TCP/IP models and describe how this layer operates in various networks.
- analyze the operations and features of transport layer protocols and services.
- analyze the operations and feature of network layer protocols and services and explain the fundamental concepts of routing.
- design, calculate, and apply subnet masks and addresses to fulfill given requirements.
- describe the operation of protocols at the OSI data link layer and explain how they support communications.
- explain the role of physical layer protocols and services in supporting communications across data networks.
- explain fundamental Ethernet concepts such as media, services, and operation.
• employ basic cabling and network designs to connect devices in accordance with stated objectives.
• build a simple Ethernet network using routers and switches.
• use Cisco command-line interface (CLI) commands to perform basic router and switch configuration and verification.
• analyze the operations and features of common application layer protocols such as Hypertext Transfer Protocol (HTTP), Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), Simple Mail Transfer Protocol (SMTP), Telnet, and File Transfer Protocol (FTP).
• utilize common network utilities to verify small network operations and analyze data traffic.

CISN 141 CISCO Networking Academy (CCNA)™: Routing Protocols and Concepts

Units: 3
Hours: 54 hours LEC; 18 hours LAB
Prerequisite: CISN 140 with a grade of "C" or better
Catalog Date: June 1, 2020

This course describes the architecture, components, and operation of routers, and explains the principles of routing and routing protocols. Topics include configuring, verifying, and troubleshooting Routing Information Protocol (RIP) version 1 and 2, Enhanced Interior Gateway Routing Protocol (EIGRP), and Open Shortest Path First (OSPF) routing protocols. Basic router configuration and troubleshooting, networking theory, and IP addressing are also covered. This is the second course in preparation for Cisco CCNA certification examination. ARC is a certified Cisco Networking Academy and all courses are taught by Cisco Certified Academy Instructors (CCAI).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the purpose, nature, and operations of a router.
• explain the critical role routers play in enabling communications across multiple networks.
• describe the purpose and nature of routing tables.
• describe how a router determines a path and switches packets.
• explain the route look up process and determine the path packets will take in a network.
• configure and verify basic operations for a newly-installed router.
• describe, configure, and certify router interfaces.
• describe the purpose of static routes and the procedure for configuring them.
• configure and verify static and default routing.
• describe the role of dynamic routing protocols and place these protocols in the context of modern network design.
• describe how metrics are used by routing protocols and identify the metric types used by dynamic routing protocols.
• identify the characteristics of distance vector routing protocols.
• describe the network discovery process of distance vector routing protocols using Routing Information Protocol (RIP).
• describe the functions, characteristics, and operations of the RIPv1 protocol.
• compare and contrast classful and classless IP addressing.
• describe classful and classless routing behaviors in routed networks.
• design and implement a classless IP addressing scheme for a given network.
• describe the main features and operations of the Enhanced Interior Gateway Routing Protocol (EIGRP).
• use advanced configuration commands with routers implementing EIGRP and OSPF.
• describe the basic features and concepts of link-state routing protocols.
• describe the purpose, nature, and operations of the Open Shortest Path First (OSPF) Protocol.
• configure and verify basic RIPv1, RIPv2, single area OSPF, and EIGRP operations in a small routed network.
• demonstrate comprehensive RIPv1 configuration skills.
• use router show and debug commands to troubleshoot common errors that occur in small routed networks.
CISN 142 CISCO Networking Academy (CCNA)tm: LAN Switching and Wireless

**Units:** 3  
**Hours:** 54 hours LEC; 18 hours LAB  
**Prerequisite:** CISN 140 with a grade of "C" or better  
**Catalog Date:** June 1, 2020  

This course focuses on Layer 2 switching protocols, concepts and technologies. Topics include hierarchy LAN design, basic switch concepts and configuration, Virtual LANs (VLANs), Virtual Trunking Protocol (VTP), Spanning Tree Protocol (STP), Inter-VLAN routing, basic wireless concepts and configuration. Implementing, verifying, securing and troubleshooting converged switching technologies in a small-to-medium network, including integrating wireless devices into a LAN, are also covered. This is the third course in preparation for Cisco CCNA certification examination. ARC is a certified Cisco Networking Academy and all courses are taught by Cisco Certified Academy Instructors (CCAI).

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and correct common network problems at layers 1, 2, 3, and 7 using a layered model approach.
- interpret network diagrams.
- select the appropriate media, cables, ports, and connectors to connect switches to other network devices and hosts.
- explain the technology and media access control method for Ethernet networks.
- explain basic switching concepts and the operation of Cisco switches.
- perform and verify initial switch configuration tasks including remote access management.
- describe enhanced switching technologies such as VLANs, VLAN Trunking Protocol (VTP), Rapid Spanning Tree Protocol (RSTP), Per VLAN Spanning Tree Protocol (PVSTP), and 802.1 q.
- describe how VLANs create logically separate networks and how routing occurs between them.
- configure, verify, and troubleshoot VLANs, trunking on Cisco switches, interVLAN routing, VTP, and RSTP.
- interpret the output of various show and debug commands to verify the operational status of a Cisco switched network.
- verify network status and switch operation using basic utilities such as ping, traceroute, Telnet, Secure Shell (SSH), Address Resolution Protocol (ARP), and ipconfig, as well as the show and debug commands.
- identify, prescribe, and resolve common switched network media issues, configuration issues, autonegotiation, and switch hardware failures.
- manage Cisco IOS software.
- manage Cisco IOS configuration files (save, edit, upgrade, and restore).
- describe standards associated with wireless media, such as IEEE WI-FI Alliance and ITU/FCC.
- identify and describe the purpose of the components in a small wireless network, such as Service Set Identification (SSID), Basic Service Set (BSS), and Extended Service Set (ESS).
- identify basic configuration parameters on a wireless network to ensure that devices connect to the correct access points.
- compare and contrast Wi-Fi Protected Access (WPA) security features and capabilities of open, Wired Equivalent Privacy (WEP), and WPA-1/2 networks.
- describe common wireless-network implementation issues such as interference and misconfiguration.

CISN 143 CISCO Networking Academy (CCNA)tm: Accessing the Wide Area Network

**Units:** 3  
**Hours:** 54 hours LEC; 18 hours LAB  
**Prerequisite:** CISN 141 and 142 with grades of "C" or better  
**Catalog Date:** June 1, 2020  

This course covers wide area networks (WAN) technologies to connect small- to medium-sized business networks. It focuses on Point to Point Protocol (PPP), Frame Relay, and broadband links. Topics include network security, traffic control and access control lists (ACLs), Virtual Private Networks (VPN) and network troubleshooting, IP addressing services Network Address Translation (NAT) and Dynamic Host Configuration Protocol (DHCP) are covered, and IPv6 is introduced. This is the fourth course in preparation for Cisco CCNA certification examination. ARC is a certified Cisco Networking Academy and all courses are taught by Cisco Certified Academy Instructors (CCAI).

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- describe the impact of Voice Over IP and Video Over IP applications on a network.
- identify and correct common network problems at layers 1, 2, 3, and 7 using a layered model approach.
- interpret network diagrams.
- describe the components required for network and Internet communications.
- implement basic switch security measures such as port security, trunk access, and management VLANs.
- explain the operation and benefits of DHCP and DNS.
- configure, verify, and troubleshoot DHCP and DNS operations on a router.
- describe current network security threats and explain how to implement a comprehensive security policy to mitigate common threats to network devices, hosts, and applications.
- describe the functions of common security appliances and applications.
- describe recommended security practices to secure network devices.
- describe the purpose and types of access control lists (ACLs).
- configure and apply ACLs based on network filtering requirements.
- configure and apply an ACL to limit Telnet and SSH access to the router using the Security Device Manager command-line interface (SDM/CLI).
- verify, monitor, and troubleshoot ACLs in a network environment.
- explain the basic operation of Network Address Translation (NAT).
- configure NAT for given network requirements using SDM/CLI.
- troubleshoot NAT issues.
- describe different methods for connecting to a WAN.
- configure and verify a basic WAN serial connection.
- configure and verify a Point-to-Point Protocol (PPP) connection between Cisco routers.
- configure and verify Frame Relay on Cisco routers.
- troubleshoot WAN implementation issues.
- describe the importance, benefits, role, impact, and components of VPN technology.

CISN 300 Network Systems Administration

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None
Advisory: CISC 320, 350, and 351
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the installation and configuration of a Windows server in a client/server network. Topics include: introduction to Active Directory, local storage, file and print services, Group Policy, and basic security. Additional topics include: implementing IPv4 and IPv6, Dynamic Host Configuration Protocol (DHCP), and Domain Name System (DNS) in Windows. It also introduces server virtualization using Hyper-V. This is one of three courses preparing students for the Microsoft Certified Solutions Associate (MCSA): Windows Server certification exams.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- install and configure a Windows server.
- create, configure and implement a workgroup and a domain-based network using a Windows network operating system.
- examine and explain the administrative tools of a Windows server network operating system.
- describe and define the Windows Active Directory and its main features and uses.
• define and demonstrate the functions and configuration of Windows clients and servers in an Active Directory Domain environment.
• manage Active Directory Domain Services objects.
• configure automated Active Directory Domain Services administration.
• implement and configure IPv4 and IPv6 services.
• implement and configure Dynamic Host Configuration Protocol (DHCP).
• implement and configure Domain Name System (DNS).
• implement and configure local storage.
• implement and configure resource sharing including file and print services.
• analyze and construct user accounts and groups using best practices for security.
• implement Group Policy and secure Windows servers by using Group Policy Objects (GPOs).
• implement basic server virtualization by using Hyper-V.
• analyze and explain network resource utilization using Windows performance monitor, including performance counters and their implications.
• research and identify good Internet resources for obtaining answers to common problems, network anomalies and Windows server problems.

CISN 302 Intermediate Network Systems Administration

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: CISN 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers intermediate system administration in a Windows client/server network. Topics include core services such as user and group management, network access, and data security. Additional topics include patch management, file services, system monitoring and auditing, Active Directory and Domain Name System, and Network Policy and Group Policy. This is one of three courses preparing students for the Microsoft Certified Solutions Associate MCSA: Windows Server 2019 certification exams.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• deploy and maintain Windows Server images.
• manage and implement system updates and patches.
• configure and implement file services such as Distributed File System (DFS) and File Server Resource Manager (FSRM).
• optimize File Services.
• implement file/disk encryption.
• configure monitoring and advanced auditing.
• configure and troubleshoot Windows Domain Name System (DNS).
• configure, implement, and troubleshoot remote access including Windows Virtual Private Networking (VPN).
• install, configure, and troubleshoot Network Policy Server.
• implement Network Access Protection (NAP).
• maintain Active Directory domain services.
• manage user and service accounts.
• plan and implement Group Policy Infrastructure.
• manage user desktops using Group Policy.

CISN 307 Windows Active Directory Services
This course covers how to install, configure, and administer Microsoft Windows Active Directory services. It also focuses on implementing Group Policy and understanding the Group Policy tasks required to manage users and computers. Group Policies are used to configure and manage the user desktop environment, configure and manage software, and implement and manage security settings. Installation and configuration of Domain Naming System (DNS) and Windows Internet Naming System (WINS) are covered, as well as publishing, replication and the backup of the directory services data base.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design network architecture, topology, interdependence, and constraints in relation to an Active Directory domain.
- evaluate a plan to install, configure, and administer an Active Directory domain controller.
- analyze a plan to install, configure, administer, and evaluate Group Policy in an Active Directory environment.
- design Active Directory forests, trees, domains, and operational units.
- explain a plan to install, configure, and administer Windows Internet Naming System (WINS) services and settings.
- describe a plan to install, configure, and administer Domain Naming System (DNS) services and settings.
- formulate a plan to publish, backup, and replicate the Active Directory database.

CISN 308 Internetworking with TCP/IP

This course covers how to install, configure, manage, and support a network infrastructure using the Microsoft Windows Server products. It focuses on TCP/IP and related services, including Dynamic Host Configuration Protocol (DHCP), Domain Naming System (DNS), Windows Internet Naming Service (WINS), Internet Information Server (IIS), Public Key Infrastructure (PKI) and certificate service, Internet protocol security (IPSec), Network Address Translation (NAT), and remote access. It also covers configuring Windows as a network router, Virtual Private Network (VPN) connectivity and managing a Windows deployment using Remote Installation Services (RIS).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design an overall integration plan for implementing a network services infrastructure using TCP/IP, with connectivity to Netware, Macintosh and UNIX systems.
- evaluate a plan for workstation and server deployment using remote installation services.
- formulate a plan deploying the DHCP server service.
- analyze a plan deploying the DNS and WINS server services.
- explain a plan deploying network security using IPSec, PKI and certificate server services.
- describe a plan for Internet connectivity using NAT and Windows router.
- design a plan deploying the IIS server service.
- formulate a plan for deploying a Virtual Private Network.

Computer Information Science - Programming (CISP)

CISP 300 Algorithm Design/Problem Solving

Units: 3
Hours: 54 hours LEC
This course introduces methods for solving typical computer problems through algorithm design. Topics include assessing and analyzing computer problems in a top-down, divide-and-conquer approach that leads to a programming solution. It also covers programming plans and detailed design documents from which source code versions of programs are created.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define operators, including arithmetic, comparison, and logical operators.
- differentiate control structures, including branches (conditional statements) and loops (pre-checking and post-checking loops).
- deduce post-condition from pre-condition for control structures, including assignment statements, branches, and loops.
- construct a trace table to emulate the execution of a program that utilizes variables, various control structures, data organizations, subroutines, and parameters.
- contrast the lifespan limits and behaviors of local variables, by-value parameters, and by-reference parameters.
- compare the two methods of passing results: by-reference parameters and return value.
- compare in-line copy-and-paste coding with structured subroutines in terms of maintainability, defect containment, testability, and other metrics.
- create a subroutine to abstract one or more similar blocks of in-line code using local variables, parameters, and return values.
- differentiate roles involved in software development, including developers, analysts, and test engineers.

### CISP 310 Assembly Language Programming for Microcomputers

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** CISP 360 or 480 with a grade of "C" or better  
**Transferable:** CSU; UC ((CISP 310 & 319 combined: maximum credit - one course))  
**C-ID:** C-ID COMP 142  
**Catalog Date:** June 1, 2020

This course covers the organization and behavior of real computer systems at the assembly-language level. Topics include the mapping of statements and constructs in a high-level language onto sequences of machine instructions, as well as the internal representation of simple data types and structures. Numerical computation is examined, noting the various data representation errors and potential procedural errors.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- write simple assembly language program segments.
- demonstrate how fundamental high-level programming constructs are implemented at the machine-language level.
- compare Reduced Instruction Set Computer (RISC) versus Complex Instruction Set Computer (CISC) architectures.
- diagnose assembly language programs with common and not-so-common defects.
- structure complex logic into well defined assembly language instruction sequences and subroutines.
- evaluate common coding mistakes in C/C++ in the context of the underlying assembly language implementation.
- describe von Neumann architecture and how its components interact.

### CISP 350 Database Programming

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** CISA 320 and CISC 310  
**Transferable:** CSU

This course introduces methods for solving typical computer problems through algorithm design. Topics include assessing and analyzing computer problems in a top-down, divide-and-conquer approach that leads to a programming solution. It also covers programming plans and detailed design documents from which source code versions of programs are created.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define operators, including arithmetic, comparison, and logical operators.
- differentiate control structures, including branches (conditional statements) and loops (pre-checking and post-checking loops).
- deduce post-condition from pre-condition for control structures, including assignment statements, branches, and loops.
- construct a trace table to emulate the execution of a program that utilizes variables, various control structures, data organizations, subroutines, and parameters.
- contrast the lifespan limits and behaviors of local variables, by-value parameters, and by-reference parameters.
- compare the two methods of passing results: by-reference parameters and return value.
- compare in-line copy-and-paste coding with structured subroutines in terms of maintainability, defect containment, testability, and other metrics.
- create a subroutine to abstract one or more similar blocks of in-line code using local variables, parameters, and return values.
- differentiate roles involved in software development, including developers, analysts, and test engineers.
This is an introductory course in Structured Query Language (SQL) database programming. Topics include database normalization, subqueries, joins, import/export, privileges, and Procedural Language (PL)/SQL programming.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- compare and contrast different database implementations.
- design databases conforming to normalization guidelines.
- create and maintain relational databases.
- construct subqueries and table joins.
- construct small programs using PL/SQL.
- import/export data.

CISP 360 Introduction to Structured Programming

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 300 or 370 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area II(b)
C-ID: C-ID COMP 112
Catalog Date: June 1, 2020

This course is an introduction to structured programming and objects. Topics include program design, documentation, testing, and debugging, as well as data representation, data types, variables, constants, and operators. It also includes control structures, functions, interactive and file input/output, standard libraries, arrays, pointers, structures, classes, and objects.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- develop efficient algorithms for the solution of problems using the control structures of structured programming
- implement suitable data structures to support a given algorithm
- formulate and implement algorithms to solve complex problems using a high-level language
- use the top-down development approach to implement modular, maintainable programs
- apply the software development life-cycle for program design, development, coding style, documentation, and testing
- assess the efficiency of differing solutions to a problem
- analyze an existing algorithm implementation for errors, then develop solution program code to correct the errors
- design and use classes and objects
- compare procedural and object-oriented approaches to problem solving

CISP 362 Programming for Mobile Devices I

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None
Corequisite: CISP 300 or 370
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces mobile device programming, including devices such as cell phones and tablets. Topics include development tools, user interface design, documentation, testing, debugging, and publishing.
CISP 363 Programming for Mobile Devices II

Upon completion of this course, the student will be able to:

- acquire and install the necessary development tools for mobile device software development.
- develop basic programs with a graphical user interface.
- test and debug programs with a graphical user interface.
- publish mobile device programs.
- utilize hardware devices commonly found on mobile devices, such as GPS, accelerometer, compass, proximity sensor, and camera.

CISP 370 Beginning Visual Basic

This introductory programming course covers the development of Windows-based desktop applications using Visual Basic (VB). Topics include best practices for Graphical User Interface (GUI) design, use of the VB application development software, organizing code into procedures and functions, variable scope, structures, arrays, input data validation, calculation, file input and output, and multiple-window applications. This course is designed for those who want a strong foundation in basic programming and building GUI applications.

Upon completion of this course, the student will be able to:

- using the VB Integrated Development Environment, design and implement a GUI application using single or multiple windows.
- design and implement variables at the class level and the procedure level.
- design and implement data storage strategies for text files and databases.
- design and implement structure data types.
- design and implement programming logic using conditional execution structures and looping structures.
- design and implement programming logic using VB procedures and functions and developer defined procedures and functions, and correctly pass parameters to the procedures and functions both by value and by reference.
- design and implement input data validation and calculation.
- organize data in single dimension and multi-dimension arrays.
- build, compile, execute, test, and debug applications.

**CISP 371 Intermediate Visual Basic**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** CISP 370 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course in intermediate Visual Basic (VB) programming further examines techniques to solve programming problems. Topics include classes, objects, properties, methods, procedures, functions, hierarchies, inheritance, multiple forms, components, tables, databases, datasets, queries, menus, toolbars, report creation, testing, and debugging.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create a plan and a program that provides a solution to a well-defined programming problem.
- using tables and datasets, create programs that use text files and database files by linking, importing, exporting, and querying with emphasis on SQL.
- create user interfaces which use multiple forms, classes, objects, properties, methods, procedures, functions, hierarchies, inheritance, components, tables, menus, and toolbars.
- create event code for objects.
- create reports using Crystal Reports.
- build, compile, execute, test, and debug programs.

**CISP 400 Object Oriented Programming with C++**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** CISP 360 or 480 with a grade of "C" or better  
**Advisory:** CISC 323  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area II(b)  
**C-ID:** C-ID COMP 122  
**Catalog Date:** June 1, 2020

This course is an introduction to the C++ programming language and object-oriented programming in the Linux/UNIX environment. Topics include a programming languages overview, program analysis and design, encapsulation, overloading, classes, inheritance, virtual functions, polymorphism, templates, exception handling, and the standard template library. In addition, basic Linux/UNIX commands and make files are covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- summarize the evolution of programming paradigms and identify the characteristics of each style.
- choose Linux/UNIX commands to perform various tasks.
- create Linux/UNIX make files to automate the compilation and linking of multi-file C++ programs.
- differentiate between what is done by the preprocessor, the compiler, and the linker.
- design C++ classes that follow given specifications.
- evaluate different object-oriented solutions to programming problems.
• analyze programming problems.
• formulate object-oriented solutions to programming problems.

CISP 401 Object Oriented Programming with Java

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 380 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course introduces object-oriented programming using the Java programming language. Topics include objects, inheritance, polymorphism, interfaces, abstract classes, inner classes, error handling, graphical user interfaces (GUI), applets, threads, files, databases, and packages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• manipulate Java language syntax.
• develop event driven programs for both applets and applications.
• compare the Java language to other programming languages.
• design software using object-oriented methods.
• develop programs using inheritance and polymorphism.
• write database applications using embedded Structured Query Language (SQL).
• develop multi-threaded applications.
• use Java to create graphical user interfaces.

CISP 430 Data Structures

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISP 400 or 401 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID COMP 132
Catalog Date: June 1, 2020

This course applies object-oriented techniques for systematic problem analysis and the managing of program complexity using abstraction. Specification, design, coding, testing, and documentation of large multi-file programs are covered. It uses advanced language features such as classes, strings, non-text files, pointers, and recursion. Abstract data types such as stacks, queues, lists, binary trees, heaps/priority queues, hash tables, and graphs are examined. Various sorting and searching algorithms are presented and analyzed using Big-O notation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• propose solutions to complex programming problems and create code to implement these solutions.
• implement singly linked lists, doubly linked lists, circular linked lists, stacks, queues, trees, and graphs.
• implement recursive modules.
• implement various sorting and searching techniques.
• estimate the efficiency of various sorting and searching algorithms using Big-O notation.

CISP 440 Discrete Structures for Computer Science

Units: 3

This course applies object-oriented techniques for systematic problem analysis and the managing of program complexity using abstraction. Specification, design, coding, testing, and documentation of large multi-file programs are covered. It uses advanced language features such as classes, strings, non-text files, pointers, and recursion. Abstract data types such as stacks, queues, lists, binary trees, heaps/priority queues, hash tables, and graphs are examined. Various sorting and searching algorithms are presented and analyzed using Big-O notation.
This course is an introduction to the discrete structures used in computer science with an emphasis on their applications. Topics include functions, relations, and sets; basic logic; proof techniques; basics of counting; graphs and trees; and discrete probability.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze how formal tools of symbolic logic are used to model real-life situations, including those arising in computing contexts such as program correctness, database queries, and algorithms.
- compare mathematical induction as a proof technique to recursion and recursively defined structures as programming concepts.
- analyze a problem to create relevant recurrence equations.
- design different traversal methods for trees and graphs.
- choose between the binomial theorem for independent events and Bayes' theorem for dependent events.

CISP 480 Honors Introduction to Structured Programming

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: Placement into ENGWR 480 through the assessment process.
Advisory: CISC 310
Transferable: CSU; UC
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This honors course combines the content of both CISP 300 and CISP 360 and presents it in an accelerated fashion emphasizing projects and collaborative work. It introduces methods for solving typical computer problems by assessing and analyzing computing problems, performing algorithm design using a top-down, divide and conquer approach, and continues with implementation, documentation, testing, and debugging. Topics include structured programming, data representation, data types, variables, constants, operators, and expression evaluation. It also includes control structures, functions, interactive and file input/output, standard libraries, arrays, pointers, structures, classes, and objects. Pseudocode and an object-oriented programming language are used to create program solutions. This course is not open to students who have completed CISP 300 or CISP 360.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop, implement, and evaluate expressions using the operators prevalent in most programming languages including arithmetic, comparison, and logical operators
- develop and implement basic algorithms using sequence, selection, and repetition
- deduce pre- and post-conditions for control structures and modules
- construct a trace table to emulate the execution of a program that utilizes variables, various control structures, data organizations, modules, and parameters
- differentiate roles involved in software development, including developers, analysts, and test engineers
- develop efficient algorithms for the solution of problems using structured programming techniques
- implement suitable data structures to support a given algorithm
- formulate and implement algorithms to solve complex problems using a high-level language
- use the top-down, divide and conquer development approach to implement modular, maintainable programs
- assess the efficiency of differing solutions to a problem
- analyze an existing algorithm implementation for errors, then develop solution program code to correct the errors
- utilize standard libraries for common tasks such as file input/output and mathematical operations
- design and use classes and objects
• compare procedural and object-oriented approaches to problem solving
• apply the software development life-cycle for program design, development, coding style, documentation, and testing

Computer Information Science - Security (CISS)

CISS 300 Introduction to Information Systems Security

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: CISC 320, 350, and 351
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an introduction to network-based and Internet-based security applications and standards. Topics include encryption, security protocols, network security applications, digital signatures, protecting computers and the network from viruses, Trojans, spyware, unsolicited email, and public and private key exchange.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the fundamental concepts of the cyber security discipline and use to provide system security.
• describe potential system attacks and the actors that might perform them.
• describe cyber defense tools, methods and components, and apply cyber defense methods to prepare a system to repel attacks.
• describe appropriate measures to be taken in the event of a system compromise.
• describe why each principle is important to security and how it enables the development of security mechanisms that can implement desired security policies.

CISS 310 Network Security Fundamentals

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISN 140 or 300
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the fundamental principles and skills of Information Technology security and risk management at the organizational level. Topics include network security, compliance and operational security, threats and vulnerabilities, application and data security, host security, access control and identity management, and cryptography. It also covers the required content of the Computing Technology Industry Association (CompTIA) Security+.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the fundamental concepts and principles of the cyber security discipline and use to provide system security.
• evaluate why each principle is important to security and how it enables the development of security mechanisms that can implement desired security policies.
• describe the hardware components of modern computing environments and their individual functions.
• identify the Federal, State and Local Cyber Defense partners/structures.
• explain the basic security implications of modern computing environments.
• analyze cyber defense tools, methods and components and apply cyber defense methods to prepare a system to repel attacks.
• identify appropriate measures to be taken should a system compromise occur.
• properly use the vocabulary associated with cyber security.
• analyze common security failures and identify specific design principles that have been violated.
• evaluate different types of attacks and their characteristics.
**CISS 315 Ethical Hacking**

**Units:** 3  
**Hours:** 45 hours LEC; 27 hours LAB  
**Prerequisite:** None.  
**Corequisite:** CISS 310  
**Advisory:** CISC 300  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces the network security specialist to the various methodologies for attacking a network. Topics include the concepts, principles, and techniques necessary to attack and disable a network within the context of properly securing a network. It emphasizes network attack techniques and methodologies, and appropriate defenses and countermeasures. Supplementary hardware and software may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- examine how the internet is used for cybercrime, cyber-stalking, and other abusive behaviors.
- describe different types of attacks and their characteristics.
- examine the placement of security functions in a system and describe the strengths and weaknesses.
- identify the bad actors in cyberspace and compare and contrast their resources, capabilities/techniques, motivations and aversion to risk.
- examine how the internet is used for cybercrime, cyber-stalking, and other abusive behaviors.
- describe Federal and State laws and authorities:  
  a. Computer Security Act  
  b. Sarbanes – Oxley  
  c. Gramm – Leach – Billey  
  d. Privacy (COPPA)  
  e. USA Patriot Act  
  f. Americans with Disabilities Act, Section 508  
  g. other Federal laws and regulations  
  h. other California laws and regulations
- describe the role of cybersecurity in supporting and encouraging ethics, as well as where cybersecurity practices can cause ethical conflicts.
- examine diverse ethical dilemmas.
- explain how ethical foundations are applied to situations arising from the interconnected world.
- evaluate the effectiveness of applications of cybersecurity in preventing crime and abuse.
- describe what an ethical hacker can and cannot do legally.
- identify ports, protocols, and services.
- construct software configuration settings that will assist in protecting the PC.
- defend a computer and a LAN against a variety of different types of security attacks using a number of hands-on techniques.
- practice and use safe techniques on the Internet.
- identify the tools and methods a "hacker" uses to break into a computer or network.
- evaluate the effectiveness of applications of cybersecurity in preventing crime and abuse.
- plan, organize, and perform penetration testing on a simple network.

**CISS 330 Implementing Internet Security and Firewalls**

**Units:** 3  
**Hours:** 45 hours LEC; 27 hours LAB  
**Prerequisite:** CISS 310 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020
This course covers network and Internet security and deployment of industry standard countermeasures, including configuring Virtual Private Network (VPN) connections. Topics include the evaluation, implementation, and management of secure remote-access technologies. Also covered is the configuration of network firewalls, and allowing access to key services while maintaining security. This course is not open to students who have completed CISS 325.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze problems, recommend solutions, products, and technologies to meet business objectives.
- recommend best security practices to achieve stated business objectives based on risk assumptions.
- actively protect information technology assets and infrastructure from external and internal threats.
- monitor systems for anomalies, proper updating, and patching.
- evaluate and perform planning, testing, and implementation of software and hardware deployed.
- assist in incident responses for any breaches, intrusions, or theft.
- recommend best practices for effective configurations and maintenance of Virtual Private Networks (VPNs) and firewalls.
- explain how network defense tools (firewalls, IDS, etc.) are used to defend against attacks and mitigate vulnerabilities.
- implement Network Security Components (Data Loss Prevention, VPNs/firewalls).

CISS 341 Implementing Windows Operating System Security

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISC 320, CISC 351, and CISS 310
Transferable: CSU
Catalog Date: June 1, 2020

This course provides in-depth information on the Microsoft Windows desktop operating system security features, as well as step-by-step configuration for effective operating system security. The techniques needed in order to maintain the integrity, authenticity, availability, and privacy of the system and user data are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate network security from the perspective of the Microsoft Windows client operating system.
- assess how to secure data using a Microsoft Windows operating system.
- demonstrate use of the tools required to configure client operating system services.
- examine and configure network services in accordance with best current security practices.
- differentiate, describe, and configure file sharing services and file system security permissions in accordance with best security practices.
- evaluate and describe the relationships between major network services.
- compare and contrast the roles of security, ethics, and privacy management issues regarding data storage.
- define and differentiate user rights and file permissions in terms of security.
- set up an appropriate file encryption method to optimize security on a multi-user workstation.

CISS 342 Implementing Linux Operating System Security

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Advisory: CISC 323 and CISS 310
Transferable: CSU
Catalog Date: June 1, 2020
This course provides in-depth information on Linux/UNIX operating system security features, as well as step-by-step configuration for effective operating system security. The techniques needed in order to maintain the integrity, authenticity, availability, and privacy of the system and user data are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate network security from the perspective of a Linux/UNIX client operating system.
- assess how to secure data using a Linux/UNIX operating system.
- demonstrate use of the tools required to configure client operating system services.
- examine and configure network services in accordance with best current security practices.
- differentiate and describe file sharing services and file system security permissions.
- configure file sharing services and file system security permissions in accordance with industry standard security practices.
- evaluate and describe the relationships between major network services.
- compare and contrast the roles of security, ethics, and privacy management issues regarding data storage.
- define and differentiate user rights and file permissions in terms of security.
- configure an appropriate file encryption method to optimize security on a multi-user workstation.

CISS 350 Disaster Recovery

This course provides methods for identifying vulnerabilities and implementing countermeasures to prevent and mitigate failure risks in the information technology infrastructure for the business enterprise. Topics include disaster recovery, development of a disaster recovery plan, risk assessment, and development and implementation of disaster recovery policies and procedures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast different types of standards that impact information systems including: laws, regulations, policies, voluntary, and framework-based standards.
- list the applicable laws and policies related to cyber defense and describe the major components of each pertaining to the storage and transmission of data.
- outline and explain the roles of personnel in planning and managing security, including: board of directors, senior management, Chief Information Security Officer (CISO), IT management (CIO, IT Director, etc.), functional area management, information security personnel, and end users.
- examine the placement of security functions in a system and describe the strengths and weaknesses.
- develop contingency plans for various size organizations to include: business continuity, disaster recovery, technology recovery, and incident response.
- develop system-specific plans for: the protection of intellectual property, the implementation of access controls, and patch and change management.
- describe responsibilities related to the handling of data as it pertains to legal, ethical, and/or agency auditing issues.
- develop a security program, identifying goals, objectives, and metrics.
- apply knowledge to effectively manage a security program.
- assess the effectiveness of a security program.
- describe how risk relates to a system security policy.
- describe various risk analysis methodologies.
- evaluate, categorize, and recommend appropriate responses to risks with respect to technology, individuals, and in the enterprise.
- compare the advantages and disadvantages of various risk assessment methodologies.
- select the optimal risk assessment methodology based on needs, advantages, and disadvantages.
CISS 360 Computer Forensics and Investigation

**Units:** 3  
**Hours:** 45 hours LEC; 27 hours LAB  
**Prerequisite:** None  
**Corequisite:** CISS 310  
**Advisory:** CISC 324 and CISS 350  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces the methods used to conduct a computer forensics investigation. Topics include an overview of computer forensics as a profession, the computer investigation process, operating systems' boot processes and disk structures, data acquisition and analysis, ethics, and a review of standard computer forensic tools. The course topics map to the objectives of the International Association of Computer Investigative Specialists (IACIS) certification.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define computer forensics concepts as a profession.
- list the applicable laws and policies related to cyber defense and describe the major components of each pertaining to the storage and transmission of data.
- discuss the rules, laws, policies, and procedures that affect digital forensics.
- identify how the type of legal dispute (civil, criminal, private) affects the evidence used to resolve it.
- describe their responsibilities related to the handling of data as it pertains to legal, ethical and/or agency auditing issues.
- assess and compare computer forensic tools used in investigations.
- construct and employ digital evidence controls to safeguard the results of the forensic investigation.
- describe the steps in performing digital forensics from the initial recognition of an incident through the steps of evidence gathering, preservation and analysis, through the completion of legal proceedings.
- evaluate methods for the acquisition/analysis of widespread, non-PC devices.
- critique a forensic analysis and prepare reports for private-sector management and/or law enforcement.
- prepare a report on email investigation methods for a forensic analysis.
- describe and compare graphic image recovery methods.
- compose forensic analysis reports using technical jargon and non-technical terms.
- use one or more common DF tools, such as EnCase, FTK, ProDiscover, Xways, SleuthKit.

Computer Information Science - Web (CISW)

CISW 300 Web Publishing

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None  
**Advisory:** CISC 300 and 305  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an introduction to publishing on the World Wide Web. Topics include creating web pages with the Hyper Text Markup Language (HTML), organizing a series of pages into a web site, and uploading web pages to a server. This course makes extensive use of the computer tools necessary to insert HTML tags, create images, and view web documents. It takes beginning web designers through the process of designing, building, and publishing a working web site.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- develop web pages applying structured design principles using current standards of Hyper Text Markup Language (HTML)
• publish documents on the World Wide Web using File Transfer Protocol (FTP) software and Secure Shell (SSH/Telnet) software
• build, maintain, and organize a working web account on a web server
• develop web site design concepts using both Cascading Style Sheet (CSS) structures and table structures
• develop web site navigation using links, buttons, and menu options
• create web forms using standard HTML form tags
• produce basic web graphics and incorporate them on a web page using HTML and CSS

CISW 304 Cascading Style Sheets

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: CISW 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course continues the study of technical aspects of standards-based web design for experienced students and web professionals. Topics include the separation of content from presentation, dynamic user interaction, and designing for alternative devices using Cascading Style Sheets (CSS) in combination with Hypertext Markup Language (HTML).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the differences among versions of CSS, including issues of cross-platform compatibility.
• utilize proper CSS syntax for developing internal and external style sheets.
• differentiate between the class and id attributes, determine which should be used for a specific situation, and apply it using industry standards.
• combine selectors to refine style definitions for a group of elements and/or contextually to one or more elements when used together.
• apply CSS Positioning (CSS-P) to position and layer objects on multiple web pages.

CISW 310 Advanced Web Publishing

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISW 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds upon previous web publishing concepts and study. The primary focus of this course is the systematic development of interactive web sites. Topics include cascading style sheets, dynamic HTML, forms, client-side scripting with JavaScript, Common Gateway Interface (CGI) scripting with Perl, and web-database interactivity.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop web pages using advanced design concepts with Cascading Style Sheets (CSS)
• apply the basic concepts and syntax of JavaScript
• construct web pages with structured HTML that incorporate basic JavaScript functions such as mouse rollovers, window popups, slideshows, and form validation
• produce basic web pages using a server-side scripting language such as Perl
• develop a simple server side database using database software such as MySQL and integrate it into a web page using a server-side scripting language
• incorporate JavaScript with the server-side scripting language and database software

CISW 321 Web Site Development using Dreamweaver
This course covers the use of Dreamweaver, a visual web-authoring tool, to develop and publish websites. Topics include creating web pages that contain text, images, links, tables, forms, Cascading Style Sheets, and image maps, as well as how to enhance web pages with Flash elements and built-in scripting languages. Additional topics include developing effective website structures, using website management tools, website documentation, making global updates to a website, and using advanced Dreamweaver features.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize web authoring software to create, manage, and maintain websites.
- develop and manage effective website file structures.
- design and create websites that have effective information design and site navigation.
- develop standards for website consistency.
- utilize built-in scripting languages to industry standard for web page enhancements.
- create documentation for web pages, websites, and website project work flow.
- plan and construct websites.

CISW 350 Imaging for the Web

This course takes an in-depth look at graphics for the Web. Industry standard graphic software is used to technically develop original graphics as well as to manipulate found imagery. Topics include understanding Web file formats, compressing graphics for use on the Web, editing and enhancing graphics, extracting elements, and using layers. This course also covers creating buttons and intuitive navigational elements, making background textures and images, and creating simple animation/video.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the various graphics file formats and select when to use one format over the other
- compress and optimize graphics for quick uploading on Web pages
- edit and enhance photos using graphic software tools
- select specific areas of an image to extract, copy, combine, or reposition
- create, view, hide, arrange, and select layers
- create buttons, banners and navigation icons for Web pages
- assemble and manipulate background images and textures
- compose simple compressed animations and videos for use in Web pages

CISW 355 Web Imaging Projects

This course covers the use of Dreamweaver, a visual web-authoring tool, to develop and publish websites. Topics include creating web pages that contain text, images, links, tables, forms, Cascading Style Sheets, and image maps, as well as how to enhance web pages with Flash elements and built-in scripting languages. Additional topics include developing effective website structures, using website management tools, website documentation, making global updates to a website, and using advanced Dreamweaver features.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize web authoring software to create, manage, and maintain websites.
- develop and manage effective website file structures.
- design and create websites that have effective information design and site navigation.
- develop standards for website consistency.
- utilize built-in scripting languages to industry standard for web page enhancements.
- create documentation for web pages, websites, and website project work flow.
- plan and construct websites.
This course is a continuation of CISW 350. It covers the creation of graphics for the Web for marketing and advertising. It introduces the steps, procedures, and common problems encountered when producing quality graphics for professional websites. Topics include compressing and upload times, cropping and resizing, digital camera imaging, retouching and fixing photographs, photographic special effects and filters, rasterizing text, and implementing backgrounds, buttons, themes, image maps, and videos. Industry photo editing applications are utilized.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- generate and manipulate graphics from a variety of graphics software
- appraise and implement graphics for client and client base
- compare different technologies that can be used to capture and acquire digital images
- examine how color and image resolution affect image quality
- differentiate among Web graphic file formats and determine when to use them
- analyze website concepts and marketing techniques
- evaluate a user's short-term and long-term goals
- collect information, such as photos or existing logos, from users in a non-technical environment

**CISW 360 Beginning Flash**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None  
**Advisory:** ARTNM 324, CISW 300, and CISW 350  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course introduces the design and the development of Flash-based interactive web sites and applications. Topics include the creation of simple vector-based graphics, buttons, animation and movies, and the integration of sound, raster graphics, and video.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create and modify simple Flash objects
- create images and animation using the basic features of Flash
- incorporate simple images on layers to form successful composition
- integrate sound, video, and animation into a web page
- produce interactive interface elements that utilize basic scripting capabilities
- publish multimedia web projects to the Internet

**CISW 370 Designing Accessible Websites**

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** CISW 300 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course provides an overview of the methods that are used to design websites for people with disabilities. Current legal requirements for accessible websites, especially the Americans with Disabilities Act (ADA), are emphasized.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the current legal requirements for designing websites for people with disabilities.
• compare various tools for the assessment of accessibility of web pages.
• formulate coding strategies for generating accessible websites.
• assess the accessibility levels of various types of websites.
• locate disability and web accessibility resources.
• test specialized browsers and other Internet software for people with disabilities.

CISW 400 Client-side Web Scripting

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISW 300 with a grade of "C" or better
Advisory: CISP 300 and CISW 310
Transferable: CSU
Catalog Date: June 1, 2020

This course emphasizes the creation of dynamic and interactive web sites using a client-side scripting language such as JavaScript/Ajax. Topics include the Document Object Model of web pages, core features of the client-side scripting language, event handling, control of windows and frames, functions, and form validation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop web pages using advanced design concepts with Cascading Style Sheets (CSS) and JavaScript.
• analyze the Document Object Model and the concepts behind asynchronous JavaScript and XML (Ajax).
• define the core structures, statements, and syntax of the JavaScript language.
• construct web pages with structured HTML that incorporates basic JavaScript functions such as mouse rollovers, window popups, slideshows, and form validation.
• develop web pages that use the Ajax Engine.
• produce scripts that integrate the Ajax Engine with server-side scripts written in Php or Perl.
• develop database tables using a web database software such as MySQL.
• integrate server-side scripts with Php or Perl using the Ajax Engine.
• write Ajax scripts that incorporate the canvas element and cookies.

CISW 410 Middleware Web Scripting

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CISW 300 with a grade of "C" or better
Advisory: CISP 300 and CISW 310
Transferable: CSU
Catalog Date: June 1, 2020

This course emphasizes the creation of interactive web sites using a middleware scripting environment such as PHP or Active Server Pages (ASP). Topics include core features of the middleware scripting language, embedding server commands in HTML pages, control structures, functions, arrays, form validations, cookies, environmental variables, email applications, and database-driven web applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare server-side and client-side scripting languages for the web.
• apply the core structures, statements, and syntax of the middleware scripting language.
• write functions using the middleware web scripting language.
• process form data using the middleware scripting language.
• develop web page navigation using the middleware scripting language.
• produce a web-server based database and apply the basic query structure and table joins.
• develop web pages that use session storage or session cookies.
• apply web page design concepts using the middleware scripting language.
# Associate Degree

## A.A. in Dance

This degree provides an educational and practical foundation for students pursuing a professional career in dance. It is designed to create avenues toward further study and employment in educational dance, choreography, cultural dance, and dance performance. Topics include cultural dance forms, intermediate dance technique, performance studies, and nutrition. Students interested in transferring to a four-year college should meet with a counselor to determine the appropriate coursework.

**Catalog Date:** June 1, 2020

Choreography:
A minimum of 2 units from the following:

- DANCE 402 Elements of Choreography (1)
- DANCE 403 Choreographic Studies (2)

Production:
A minimum of 3 units from the following:

- DANCE 415 Dance Production: Rehearsal and Backstage Organization (3)
- DANCE 416 Dance Production: Choreography and Costumes (3)
- DANCE 417 Dance Production: Studio and Stage (3)

Performance:
A minimum of 3 units from the following:

- DANCE 430 Jazz Dance Performance Group (3)
- DANCE 431 Performance Group: Master Hip Hop Crew (3)
- DANCE 432 Dance Performance: Contemporary Dance Alliance (3)

Total Units: 18

The Dance Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the basic structure of the human body and its potential for movement
- recount the historical and personal significance of cultural dance
- list the educational requirements for employment as a dance educator
- compare the standards of class etiquette required for participation in ballroom, urban Hip Hop, modern, and ballet dance courses
- discuss the level of training and commitment required for a concentration in dance performance
Dance (DANCE)

DANCE 300 Diverse Cultures in Dance

This course compares and contrasts three forms of indigenous, ethnic, and culturally derived dance. Students learn the traditional significance, origins, movement patterns, and basic steps of the dance form. Field trips may be required.

Upon completion of this course, the student will be able to:

- analyze and discuss the diverse dance culture that he or she is living in.
- list the elements of indigenous dance that act as a form of communication and expression of community beliefs.
- describe the effects of racism, sexism, and ethnocentrism on ethnic, cultural, and indigenous dance forms.
- explain the structure of three different cultural dance forms.
- perform three basic movements from ethnic, cultural, and indigenous dance and be able to compare and contrast these forms.
- explain the definitions for indigenous, cultural, ethnic, and popular dance and classify dances done today into an appropriate category.
- compare and contrast the similarities and differences in three forms of indigenous dance.

DANCE 301 Belly Dancing

This course covers the basic movements, cultural values, and history of belly dance. It includes warmups, movement across the floor, center floor work, combinations, dances, and performance technique. Musical instruments, rhythms, costumes, and choreography are also covered. Field trips may be required.

Upon completion of this course, the student will be able to:

Career Information

This degree is designed for those pursuing a career in professional dance. It prepares dancers for entry-level positions and for transfer to four-year colleges and universities.

Dance (DANCE)

DANCE 300 Diverse Cultures in Dance

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area III(a); AA/AS Area VI; CSU Area E2
Catalog Date: June 1, 2020

Student Learning Outcomes

This course compares and contrasts three forms of indigenous, ethnic, and culturally derived dance. Students learn the traditional significance, origins, movement patterns, and basic steps of the dance form. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate current trends, philosophies, and companies in professional dance
- examine twelve areas for improvement in performance level
- justify the importance of visualization, creativity, and critical feedback in dance education
- demonstrate the necessary technique and performance skill for audition into a four-year institution or application to entry level employment in a professional dance setting
- notate choreography and transpose from video into movement

DANCE 301 Belly Dancing

Units: 1
Hours: 54 hours LAB
Course Family: Cultural Dance (http://arc.losrios.edu/course-families#id_100031)
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers the basic movements, cultural values, and history of belly dance. It includes warmups, movement across the floor, center floor work, combinations, dances, and performance technique. Musical instruments, rhythms, costumes, and choreography are also covered. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate current trends, philosophies, and companies in professional dance
- examine twelve areas for improvement in performance level
- justify the importance of visualization, creativity, and critical feedback in dance education
- demonstrate the necessary technique and performance skill for audition into a four-year institution or application to entry level employment in a professional dance setting
- notate choreography and transpose from video into movement

Career Information

This degree is designed for those pursuing a career in professional dance. It prepares dancers for entry-level positions and for transfer to four-year colleges and universities.
• discuss the history of belly dance.
• identify three basic on-the-spot movements of belly dance.
• discuss the use of three props often found in belly dance.
• identify the sound of three musical instruments that are used in belly dance.
• perform one movement for each of the three sections of the body.
• demonstrate the difference between side-travel and forward-travel steps.

DANCE 302 African Dance

| Units:     | 1
| Hours:     | 54 hours LAB
| Course Family: | Cultural Dance (http://arc.losrios.edu/course-families#id_100031)
| Prerequisite: | None.
| Transferable: | CSU; UC
| General Education: | AA/AS Area III(a); CSU Area E2
| Catalog Date: | June 1, 2020

This course covers basic movement from African and West African styles of dance. Afro-Haitian and Afro-Caribbean styles may also be included, as well as an investigation of the Dunham technique and process of African dance. It includes beginning level warmup, across the floor movement, and center combinations to varied drum rhythms. No previous dance experience is necessary. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• perform two African dances from different geographic origins.
• explain why African dance is called the 'Mother of All Dance'.
• discuss the impact of Katherine Dunham's technique on African dance.
• evaluate the usefulness of drumming rhythms in African dance.
• demonstrate the range of motion for a basic African dance arm movement.
• define the African vocabulary word used as a greeting and as a signal to begin an African class or dance.
• choreograph and perform a one-minute African dance with three other dancers.

DANCE 304 Polynesian Dance I

| Units:     | 1
| Hours:     | 54 hours LAB
| Course Family: | Cultural Dance (http://arc.losrios.edu/course-families#id_100031)
| Prerequisite: | None.
| Transferable: | CSU; UC
| General Education: | AA/AS Area III(a); CSU Area E2
| Catalog Date: | June 1, 2020

This course covers basic dances from Polynesia, including dances from Tahiti, Hawaii, and New Zealand. Topics include: warm ups, center dances, and cultural vocabulary. The origin, history, and cultural importance of Polynesian dance is presented. No dance experience is necessary for this course. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate typical elements from Hawaiian, Tahitian, and New Zealand dance.
• compare and contrast the dances of Hawaii and Tahiti.
• identify individual Polynesian dances by origin.
• warm up using basic movements taken from one New Zealand dance.
• identify the time period of a dance learned in class.
DANCE 305 Hawaiian Dance I

This course covers the basic components of Hawaiian dance within its traditional context. It provides an opportunity to study the history, origin, and cultural importance of hula. Topics include: basic Hawaiian vocabulary for dance and the creation of floral adornments. This course is for students with little or no experience in Hawaiian dance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform ten typical elements of Hawaiian dance.
- explain the differences between the styles of hula called Kahiko and Auana.
- recognize and list the time period and historical context of each dance studied.
- analyze and chart the geographic and cultural origins of each dance studied.
- identify key dance steps and break down the timing, rhythm, and placement in one dance sequence.
- design and create a fresh foliage adornment for Hawaiian dance.

DANCE 306 Polynesian Dance II

This course offers further study of Polynesian dance within its traditional context. It continues the basic technique of Polynesian dance begun in DANCE 304 with a more rigorous training approach by adding faster tempos and more complex components. This course includes more intricate rhythms, timing, and footwork, with the original meanings and historical content intact. The origin, history, and vocabulary of Polynesian dances are explored with an emphasis on the current cultural importance of Polynesian dance within a changing society. This course is for students with previous training in Polynesian dance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- state the time period and historical context of each dance studied.
- perform a three-minute Polynesian dance.
- correctly spell and pronounce 25 Polynesian vocabulary words.
- write a three-page critique of a live or DVD Polynesian dance performance.
- choreograph a brief contemporary Polynesian dance that uses elements of technique from New Zealand or Tahiti dance.
DANCE 307 Hawaiian Dance II

Units: 1
Hours: 54 hours LAB
Course Family: Cultural Dance (http://arc.losrios.edu/course-families#id_100031)
Prerequisite: None.
Enrollment Limitation: DANCE 305 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course offers further study of Hawaiian dance within its traditional context. It continues the basic hula technique begun in DANCE 305 with a more rigorous approach by adding faster tempos and more complex components. This course includes more intricate footwork, timing, and communication of the steps with the original meanings and historical content intact. The origin, history, and vocabulary of Hawaiian dances are explored with an emphasis on the current cultural importance of hula in a changing Hawaiian population. This course is for students with previous training in Hawaiian dance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recite the history and meaning of three traditional Hawaiian dances.
- explain the importance of continuing to teach the tradition of hula dances.
- describe the effects of European influence on the traditions of Hawaiian dance and culture.
- list the consequences of continuing to allow European traditions, adornments, and rhythms to invade or overwhelm the traditional practices of hula dance.
- create and use in context the traditional adornments for three dances.
- tell the story of connecting with ancestors and the kind of communication with them that is said to be embedded within the act of performing a hula dance.

DANCE 310 Jazz Dance I

Units: 1
Hours: 54 hours LAB
Course Family: Jazz Dance Technique (http://arc.losrios.edu/course-families#id_100032)
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers the concepts of beginning alignment, simple balance, single turns, and basic technique for jazz dance. It provides a foundation in the basic steps, vocabulary, history, and traditions of various jazz dance styles. The focus is on small group dances that use space in a full-out and presentational style. This course is for students without previous dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the concepts of dancing full-out, eating space, marking, and dancing on the beat.
- demonstrate within a group, a two-minute jazz dance combination.
- write an evaluation of the basic technique used in a live dance concert.
- explain the origins of three different jazz dance styles.
- list three basic errors in alignment.
- break down a difficult combination or transition by slowing it down, saying it out loud, and greatly enlarging the movements.

DANCE 312 Jazz Dance II

Units: 1
Hours: 54 hours LAB
Course Family: Jazz Dance Technique (http://arc.losrios.edu/course-families#id_100032)
Prerequisite: None.
Enrollment Limitation: DANCE 310 with a grade of "C" or better or by audition.
This course continues to refine the basic skills begun in DANCE 310 and further instills proper alignment and technique for jazz dance. This course offers students an opportunity to explore new learning styles through the continued study of jazz dance with more complex rhythms, new vocabulary, varied methods of counting, and new spatial problems to be solved. This course is for students with some previous jazz dance training. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- perform a two-minute jazz dance combination within a group.
- write a critique of a live dance concert performance with the emphasis on expressing and defending a personal opinion concerning the technique of dancers in the performance.
- use two learning styles for learning complicated movement.
- apply one theory of jazz dance technique to a full warm up series.
- name the most common error in isolation technique of moving the head, neck, and shoulders.
- identify the originator of one theory of jazz dance technique.
- explain the progression of movement for chasse kick ball change, rocking horses, and run, run, grand jete.

DANCE 313 Jazz Dance III

Units: 1
Hours: 54 hours LAB
Course Family: Jazz Dance Technique
Prerequisite: None.
Enrollment Limitation: DANCE 312 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the foundation of basic steps and turns begun in DANCE 312 and further instills proper alignment and technique. It introduces more complex combinations in center, a greater vocabulary of movement across the floor, and a better understanding of technique for multiple jazz turns. This course is for students with previous jazz dance training. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- execute two jazz pirouettes, turning in plie, ending in eleve, with proper jazz alignment, and placing the final foot down after the balance in eleve.
- perform a one-minute jazz dance combination with flawless execution.
- use at least one learning method that empowers quick-study learning for dance.
- write a critique of a live dance concert focusing on the showmanship and technique of the dancers.
- recite the progression of the foot and leg as it comes out of any jump or leap and reaches the floor.
- explain the consequences of over-rotation, incorrect alignment, over-extended arms and over-shot foot placement on multiple turns.

DANCE 314 Jazz Dance IV

Units: 1
Hours: 54 hours LAB
Course Family: Jazz Dance Technique
Prerequisite: None.
Enrollment Limitation: DANCE 313 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the study of jazz dance focusing on allegro movement studies with quicker, more complex combinations in center, a more difficult vocabulary of
movement across the floor, and progressive technique for multiple jazz turns. It emphasizes changes of directions, dynamics, and levels. This course is for students with previous jazz dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- translate the shape of the turn and circumference of the circle made by the arms into the speed of the turn.
- manipulate shape, angles, energy, and speed to move the body in dance.
- support a balance with the breath by feeling the center of the movement being controlled or released from within the core of the body.
- explain why movements from the floor to standing and from standing to the floor are said to be the most difficult transitions for dancers to make.
- execute eight eight-counts of high energy movement in a presto tempo and an adagio manner without losing the percussive values of the jazz style movement.
- perform a series of center turns with up to four turns integrating showmanship and flawless execution with the technique.

This course continues the study of jazz dance with rigorous emphasis on allegro movement, jumps, leaps, and technique for multiple turns. Topics include the propensity of jazz dance to absorb the movements of many cultures and to utilize the current social climate in reflecting the era in dance. This course is for students with previous jazz dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate a live dance concert for the showmanship, technique, and execution that the dancers exhibit in the performance of their dances.
- create innovative movement that can be expressed in a solo combination by combining jazz styles and using research findings to add cultural content.
- demonstrate a one-minute jazz dance in two different styles of jazz.
- identify the origins of two different styles of jazz dance.
- dramatize a jazz dance combination by transferring the emotional qualities and subtext of a newspaper story into movement for emotional content.
- manipulate a standard dance frame or alignment to support an off-balance movement.
- explain how jazz dance reflects the social and political climate of its era.

This course covers the basic alignment, steps, and technique suitable for beginners in ballet. It provides a foundation in the etiquette, vocabulary, and traditions of classical ballet and allows for certain physical modifications to the turnout that is required in more advanced coursework. Included is a progression of barre exercises designed to develop alignment, strength, range of motion, and balance. This course is for students with little or no ballet training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• identify 25 ballet steps as you see them correctly performed.
• explain the relationship of the working foot to the floor in a beginning progression of first position tendu, degage, and grand battement barre exercises.
• use constructive criticism for beginning ballet partner work.
• list the three countries that were the most active in the early evolution of classical ballet.
• explain the use of open fourth and open fifth positions as they relate to the idea of forced turnout in beginning ballet.
• perform basic positions one through five and reverence using proper alignment.
• demonstrate a chaine turn with a final pose ending.

DANCE 321 Ballet II

Units: 1
Hours: 54 hours LAB
Course Family: Ballet Technique (http://arc.losrios.edu/course-families#id_100033)
Prerequisite: None.
Enrollment Limitation: DANCE 320 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course reinforces the foundation begun in DANCE 320 and offers an opportunity to perfect basic steps while introducing new combinations at the barre. The origins and purpose of ballet are introduced, along with new vocabulary words, more complex barre combinations and more intricate steps across the floor. The emphasis is on balance, using plie, and extending range of motion. This course is for students with some basic ballet training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate a one-minute ballet combination that incorporates steps from the vocabulary list.
• critique a live dance concert by using the errors made and the excellence achieved by the performers.
• define twenty-five ballet vocabulary words and spell them correctly.
• identify the French king who was responsible for most of the development of codified classical ballet.
• explain the origin and meaning of the word cambre.
• explain the relationship between the foot and the floor in the barre exercises tendu, degage, and grand battement.

DANCE 322 Ballet III

Units: 1
Hours: 54 hours LAB
Course Family: Ballet Technique (http://arc.losrios.edu/course-families#id_100033)
Prerequisite: None.
Enrollment Limitation: DANCE 321 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course refines the technique begun in DANCE 321 and introduces more complex steps, new vocabulary, and longer, more difficult combinations. The emphasis is on technique for vertical jumps, multiple turns, and higher extensions with focus also on the continued development of strength. This course is for students with previous ballet training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• critique a live dance concert by offering kudos for the selections that were met with approval and alternative solutions for errors in technique, presentation, execution or showmanship.
• demonstrate a one-minute ballet combination that incorporates steps that are included on the vocabulary list.
• identify the correct spelling and definition for twenty-five words of ballet vocabulary
- execute a fluent double pirouette right and left.
- explain concepts for training jumps by formulating a strategy for or against bringing the heels down at the end of each jump.
- perform a developpe extension in second of either leg and hold for five seconds on flat without assistance from the barre.

DANCE 323 Ballet IV

Units: 1  
Hours: 54 hours LAB  
Course Family: Ballet Technique (http://arc.losrios.edu/course-families#id_100033)  
Prerequisite: None.  
Enrollment Limitation: DANCE 322 with a grade of "C" or better or by audition.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course continues the study of ballet begun in DANCE 322, focusing on concepts for improved technique, better balance, and stronger placement for the upper body. Allegro and adagio combinations are introduced and warm ups are designed to prepare for more difficult center work. This course is for students with previous ballet training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critique a live dance concert with emphasis on suggestions for correcting errors in technique.
- perform a two-minute dance that includes developpe, pirouette, arabesque, and attitude.
- explain the reasoning behind creating steps that were designed only for royals to perform.
- describe the progress of a fouette that flips but does not turn.
- explain why, in a pique turn, one leg never straightens and the other never bends.
- spell 25 words of vocabulary used in this class.

DANCE 324 Ballet V

Units: 1  
Hours: 54 hours LAB  
Course Family: Ballet Technique (http://arc.losrios.edu/course-families#id_100033)  
Prerequisite: None.  
Enrollment Limitation: DANCE 323 with a grade of "C" or better or by audition.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course continues the study of ballet technique begun in DANCE 323 and promotes greater learning by offering a wider variety of steps, new vocabulary, more difficult barre, turns, leaps, historical information, and the introduction of basic partner dances. This course is designed for students with previous ballet technique and experience. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform a double pirouette right and left.
- critique a professional or regional ballet performance.
- explain the reason we speak mostly French in ballet class and give credit to the artist responsible.
- demonstrate an Italian attitude, a professional American attitude, and a Russian attitude and explain the differences.
- explain why a perfect reverence will have the head lowered far enough to show the crown of the head.
- perform a two-minute partner dance in a character style.
DANCE 326 Ballet: Variations and Combinations

This course utilizes technique and history covered in all previous ballet courses and initiates the process of studying and interpreting ballet variations and combinations. Combinations are newly created and appropriate for each dancer, while performance of variations, traditionally given as a reward for hard work, will be assigned by individual merit and group ability. New vocabulary, variation details, shocking dance history, famous performances, and the ballets that they sprang from are covered. This course may only be taken en pointe by permission and is designed for more experienced dancers. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain how the execution of a classical ballet variation is both a work of art and an athletic endeavor.
- describe which major muscle groups are called upon for strength in dancing either the man’s or woman’s Bluebird Variation from the Sleeping Beauty ballet.
- research a classical variation and note what others have said about its historical value to classical ballet as danced by several ballerinas or danseurs.
- explain the value of learning classical variation materials.
- paraphrase the story of at least one classical ballet and pinpoint the social crisis or human dilemma from the ballet that is still in evidence today.
- clarify the use of variations within a classical ballet by describing the focus of the ballet and how this variation exists within it.
- perform one classical ballet variation and one contemporary ballet combination.
- display a portfolio in which an electronic recording of your performance of one classical variation and one contemporary ballet combination is included.

DANCE 330 Modern Dance I

This course provides a solid foundation in technique, alignment, and vocabulary for modern dance. It offers study in the history and traditions of modern dance and an appreciation for its importance in American dance. Individual expression and creativity are encouraged with an emphasis on problem solving and techniques for dealing with basic design, time, shape, and energy concepts for modern dance movement. This course is for students with little or no modern dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain proper alignment for modern dance.
- describe the quality of movement known as percussive.
- list the movement progression and breathing pattern for a suspend-release fall.
- create an across-the-floor combination that includes vibratory and sustained movements.
- demonstrate a running triplet.
- write a live dance performance critique.

DANCE 332 Modern Dance II
This course furthers the study of modern dance begun in DANCE 330 and continues the emphasis on organic movement that fills space with dynamic movements and an energetic flow of the body. Momentum and extension from the core of the body are introduced as well as explorations in space and energy. This course is designed for students with some experience in modern dance technique. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a one-minute piece of choreography using the explorations, technique, and topics studied in class.
- spell twenty five words from the modern dance vocabulary list used for this course.
- explain the energy, momentum, and flow for a dancer moving side to side across the floor.
- explain what is meant by the shout, “Eat space!”
- critique a formal live dance concert.
- define the meaning of full out, mark, and hand mark.

DANCE 333 Modern Dance III

This course furthers the technical study of modern dance that was begun in DANCE 332 and extends the technique to include studies of time and distance. It encourages technique that results in full out movement, better alignment for strength and balance, and concepts for hopping, jumping, and leaving the ground. The study of modern dance innovators is included. This course is for students with some experience in modern dance technique. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform a two-minute piece of choreography that is developed from explorations included in this course.
- critique the technical ability of dancers in a live dance company performance.
- spell twenty-five modern dance vocabulary words from the vocabulary list for this class.
- present thirty-six eight counts of choreography utilizing the concepts of space, making shapes, and changing intensity that were taught in class.
- perform the same unaccompanied sixteen counts of movement in a fast tempo, a slow-motion speed, and at a moderate rate.
- explain the progression of movement for landing in a modern jump.

DANCE 334 Modern Dance IV

This course furthers the technical study of modern dance that was begun in DANCE 333 and continues the technique to include studies of time and distance. It encourages technique that results in full out movement, better alignment for strength and balance, and concepts for hopping, jumping, and leaving the ground. The study of modern dance innovators is included. This course is for students with some experience in modern dance technique. Field trips may be required.
This course furthers the technique of modern dance studied in DANCE 333 and places the emphasis on explorations of percussive, sustained, and suspended movement qualities with time and effort changes. Utilizing exact repetition, gradual changes, and the human breath, exercises to maintain technique are developed for strength training and imagery as well as inspiration for choreography. This course requires prior modern dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the concept of working out the middle of the dance before choreographing the beginning or the end.
- write a critique of the choreography for a live dance performance.
- create dance movement out of gestures.
- choreograph and perform a one-minute, modern dance solo.
- explain sustained movement and why it is such an easy source of contrast.
- identify movements that reveal the dancer as an athlete.
- apply the concepts of Haiku poetry to dance movement and beats.

DANCE 335 Modern Dance V

Units: 1  
Hours: 54 hours LAB  
Course Family: Modern Dance Technique (http://arc.losrios.edu/course-families#id_100034)  
Prerequisite: None.  
Enrollment Limitation: DANCE 334 with a grade of "C" or better or by audition.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course furthers the concepts and technique used in DANCE 334 and places the emphasis on explorations of percussive, sustained, and suspended movement qualities with time and effort changes. Utilizing exact repetition, gradual changes, and the human breath, exercises to maintain technique are developed for strength training and imagery as well as inspiration for choreography. This course requires prior modern dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- choreograph a three-minute piece of dance using the essence of topics selected in class such as fear, horror, and safety.
- critique a dance performance that includes the dancers' biographies, educational degrees and dance training.
- explain the progression and intensity of a movement that has the quality of a full body wave, ripple, and droplet of water.
- create a series of movements that flow with, explain, and illustrate the essence of a Haiku poem.
- explain the theory behind retrograde movement and why some parts of it are impossible to execute.
- tell a story through dance that has a beginning, a middle, and an end, but change the order of the dance story to the ending first, the beginning in the middle, and the middle in the end.
- use walking as a dance movement.

DANCE 340 Ballroom Dance

Units: 1  
Hours: 54 hours LAB  
Course Family: Ballroom Dance Technique (http://arc.losrios.edu/course-families#id_100035)  
Prerequisite: None.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course provides a foundation for ballroom dance that includes the etiquette, vocabulary, history, and traditions of ballroom dance. The emphasis is on thoughtful partner work, basic ballroom technique, and basic dances. This course is for students with little or no experience in ballroom dance.
Upon completion of this course, the student will be able to:

- exhibit proper alignment and dance form for a ballroom dancer.
- explain the etiquette and social refinements of ballroom dance.
- show tolerance and respect for the ideas and abilities of others during a dance routine.
- identify the appropriate dance style for a specific piece of music.
- explain how leading and following techniques utilize nonverbal communication skills.
- use dance etiquette to put dance partners at ease and allow for a more positive dancing experience.
- demonstrate a one-minute basic dance routine.

DANCE 341 Ballroom Dance II

Units: 1
Hours: 54 hours LAB
Course Family: Ballroom Dance Technique (http://arc.losrios.edu/course-families#id_100035)
Prerequisite: None
Enrollment Limitation: DANCE 340 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course furthers the study of ballroom dance technique begun in DANCE 340 and emphasizes swift execution and new partnering concepts. It includes more complex movement and introduces the potential for improvisation. It also refines the basic skills and builds on them to allow for a greater understanding of ballroom dance forms. This course is designed for students with some experience in ballroom dance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagram the appropriate foot pattern and steps for both partners in a basic waltz.
- evaluate the role of proper dance frame and alignment for non-verbal communication in ballroom dance.
- demonstrate social dance etiquette in partnering.
- detail the need for dance etiquette in dealing effectively with the limitations of others on the dance floor.
- chart the foot patterns of both partners for East Coast swing, West Coast swing, and basic swing dance.
- analyze and correct errors in performance related to foot position, dance positions, and technique.

DANCE 342 Ballroom Dance III: Club Dancing

Units: 1
Hours: 54 hours LAB
Course Family: Ballroom Dance Technique (http://arc.losrios.edu/course-families#id_100035)
Prerequisite: None
Enrollment Limitation: DANCE 341 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the foundation in alignment, etiquette, and ballroom dance styles begun in DANCE 341. It allows for more advanced study and builds confidence and ability in competitive forms of ballroom. The focus is on the execution of those dances known as Club Dances in the competitive ballroom field. These dances introduce showmanship and require more skill, better timing, and specific use of non-verbal communication. This course is designed for students with ballroom dance experience.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the importance of listening, counting, and using a line of dance.
• debate the pros and cons of the dress codes that are imposed on elite, slammer, and middle-sized dance clubs.
• define the greatest historical safety threat involving ballrooms, discos, and clubs.
• create an original amalgamation of a dance phrase.
• clarify the importance of the names Skippy Blair, Latin Symbolics Dance Company, Tony Manero, and Van McCoy in the world of disco and nightclub dance and identify which are fictional and which are real.
• recite the footwork for a basic nightclub two-step and choose a piece of current music to dance to in this style.
• explain to a partner the need for non-verbal communication in club dances.

DANCE 343 Ballroom Dance IV: Latin

Units: 1
Hours: 54 hours LAB
Course Family: Ballroom Dance Technique (http://arc.losrios.edu/course-families#id_100035)
Prerequisite: None.
Enrollment Limitation: DANCE 341 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the foundation in alignment, etiquette, and technique that was begun in DANCE 341. It allows for more advanced study specifically in Latin styles of dance. These dances introduce professional showmanship and fluent use of non-verbal communication with a focus on more complicated rhythms. This course is designed for those students with experience in ballroom dance technique.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• predict the outcome of movement errors in direction and the consequences of proceeding in the incorrect direction.
• demonstrate the Latin dance paso doble and explain the meaning and subtext for this dance.
• sketch or draw out a salsa dance costume design for both partners and describe how the length of a skirt or any additions might improve the look of the dancing partners together.
• summarize the differences and similarities in foot patterns, music and meaning for the salsa, rhumba, and samba dances.
• outline a plan of study to learn a choreographed routine for a cha-cha and use some improvisations.
• originate an amalgamation or an improvisation in the Latin style, keeping the movement smooth and continuous.

DANCE 344 Ballroom Dance V: Swing

Units: 1
Hours: 54 hours LAB
Course Family: Ballroom Dance Technique (http://arc.losrios.edu/course-families#id_100035)
Prerequisite: None.
Enrollment Limitation: DANCE 342 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course maintains the foundation of alignment, etiquette, and basic steps begun in DANCE 342 and furthers the technique and execution with a new vocabulary of steps, and intricate partnering technique. It includes more strenuous movement and introduces the potential for tricks, turns, and more advanced dance sections that connect the basic steps. This course is designed for students with previous ballroom dance experience.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• diagram foot patterns for both partners in a single-time swing, double-time swing, and triple-time swing.
• experiment with turns for an East Coast swing and come up with an innovation or amalgamation for one segment of the dance.
• report the story that began the dance phenomenon and goes along with the name for the Lindy hop.
recommend appropriate music for a West Coast swing, an East Coast swing, and a Lindy hop.

demonstrate in slow motion the common outcomes for errors when using one hand for single-time, double-time or triple-time swing steps.

produce a section of improvisation, an amalgamation of styles, and an innovative turn for any swing dance.

DANCE 345 Ballroom Dance VI: Tango

Units: 1  
Hours: 54 hours LAB  
Course Family: Ballroom Dance Technique  
Prerequisite: None  
Enrollment Limitation: DANCE 343 with a grade of "C" or better or by audition.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course builds on the foundation of DANCE 343. It challenges the student to master difficult forms of tango and requires a comprehensive effort to perfect quick-study, execution, balance, and technical ability. The emphasis is on complex steps that require keen timing, focus, showmanship and partnering skills. This course is designed for students with previous ballroom dance training.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- exhibit showmanship and technique in a one-minute Argentine tango dance routine.
- chart the foot patterns for both partners in two styles of tango.
- define the origins and history of tango.
- create and add video to a portfolio that includes tango styles and demonstrates achievement of required proficiency levels.
- interview your partner, using ballroom etiquette to discern their level of interest in swango, Argentine tango, and American tango styles.
- explain the need for non-verbal communication in both social Tango and competitive tango improvisations.
- discuss the showmanship necessary to execute the quality of passion in a respectful, realistic manner.

DANCE 348 Ballroom Challenge: Competition and Performance

Units: 1  
Hours: 54 hours LAB  
Course Family: Ballroom Dance Technique  
Prerequisite: Audition  
Enrollment Limitation: Audition  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course includes ballroom dance training for competition and performance. It focuses on refining performance levels of intermediate-to-advanced technique in at least three classic styles, such as Waltz, Foxtrot, and East Coast Swing, as well as three Latin styles. Topics include audition skills and learning new styles, new routines, and a competition within class for ranking. There are opportunities to compete against other groups and perform outside of class. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform three competition-level routines for ballroom dance.
- discuss the value of confidence in showmanship and technique.
- chart memorization progress through the use of repetition with feedback and critique.
- identify the process by which a ballroom routine is recorded.
- construct a list of ten elements vital to a ballroom dance performance.
- demonstrate proper partner positions, alignment, footwork, and focus.
express a professional attitude and apply an aura of joy in dancing.
clarify the difference between practice and performance.

DANCE 351 Urban Hip Hop I

Units: 1
Hours: 54 hours LAB
Course Family: Hip Hop Technique and Competition (http://arc.losrios.edu/course-families#id_100036)
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area Ill(a); CSU Area E2
Catalog Date: June 1, 2020

This course includes basic urban-style Hip Hop moves with rapid level changes and strong floor work. Choreography is provided on a bare bones theme and developed according to individual style, ability, and personal interpretation. The history of this genre and the traditional competitive elements of Hip Hop dance are examined, as well as the role of dance in Hip Hop culture. An opportunity for exploration of Freestyle, Old Style, Poppin’, Lockin’ is provided. This course is for students with little or no experience in Hip Hop dance technique. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast Old Style, Breakin’, Poppin’, Lockin’ and current Freestyle moves.
- demonstrate a warm up that is designed to support the body during Freestyle moves.
- identify the origins of Hip Hop dance and its role in Hip Hop culture.
- identify one East Coast Old School dancer and compare their style to that of one West Coast Old School dancers.
- explain the origins of Capoeira, Soulstepping, Stomp, and Drill Team.
- demonstrate one Poppin’ and one Lockin’ movement.

DANCE 352 Urban Hip Hop II

Units: 1
Hours: 54 hours LAB
Course Family: Hip Hop Technique and Competition (http://arc.losrios.edu/course-families#id_100036)
Prerequisite: None.
Enrollment Limitation: DANCE 351 with a grade of “C” or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area Ill(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the technique and alignment begun in DANCE 351 on a more comprehensive level. It presents rigorous exercises for the development of strength and kinesthetic awareness. It also uses a vocabulary of intricate steps. The focus is on locomotor movements across the floor to improve smooth execution and center combinations to develop hard-hitting percussive styles. This course is for students with some previous urban Hip Hop dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare Old School moves with New School moves.
- create a choreographed dance combination by building on the steps taught in class.
- interpret musical timing during a thirty-second improvisational performance of Freestyle urban Hip Hop dance.
- identify ten urban Hip Hop dance steps by name when performed correctly.
- perform a three-minute urban Hip Hop dance.
- create a clear visual punch line within an urban Hip Hop dance combination.

DANCE 353 Urban Hip Hop III
This course builds on the styles and technique studied in DANCE 352. The emphasis is on exercises to encourage strength and agility, developing a dance persona, and on combinations that introduce new styles and increase the degree of difficulty with floor work. This course is for dancers with previous urban Hip Hop dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- perform a three-minute urban Hip Hop dance that includes floor work, a spot turn, and a punchline move.
- explain the origins of B-boys and B-girls.
- create a signature dance move based on your own dance persona.
- identify Turfing, Waving, and Bone Breaking styles when performed.
- perform a one-minute Freestyle center dance to familiar music.
- demonstrate three differences between Old School moves and New School moves.

---

**DANCE 354 Urban Hip Hop IV**

This course builds on the foundation provided in DANCE 353. The focus is on improvisation, Freestyle, Cyphering, and battling. Musicality and storytelling are explored along with floor work, rapid tempos, and building upper body strength. This course is for students with previous urban Hip Hop dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- choreograph a dance that shows the origins and history of urban Hip Hop dance by using two steps from every style covered in class and placing them in chronological order.
- explain how showmanship, facial expression and dynamics can be helpful in order to to play up the emotion or the storytelling aspect of a random piece of battle music.
- perform a solo thirty-second Freestyle combination to music that is chosen at random.
- build upon the movements of other dancers while battling by biting their moves and re-creating them as a challenge in difficulty.
- explain the moves that lead to a bite, a burn or a Kill Off.
- list the three elements that need to be discovered about the other dancers in a Freestyle battle.
- insert a joke punch line while battling with another dancer by pulling the joke punch line on them or their moves.

---

**DANCE 360 Tap Dance I**

This course builds on the styles and technique studied in DANCE 352. The emphasis is on exercises to encourage strength and agility, developing a dance persona, and on combinations that introduce new styles and increase the degree of difficulty with floor work. This course is for dancers with previous urban Hip Hop dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- perform a three-minute urban Hip Hop dance that includes floor work, a spot turn, and a punchline move.
- explain the origins of B-boys and B-girls.
- create a signature dance move based on your own dance persona.
- identify Turfing, Waving, and Bone Breaking styles when performed.
- perform a one-minute Freestyle center dance to familiar music.
- demonstrate three differences between Old School moves and New School moves.

---
This course introduces the basic rhythms, walks, technique, alignment, and footwork of tap dance. It provides a foundation in the history, etiquette, and traditions of tap dance and uses tap dance vocabulary words to focus on step and riff names, their origins and meaning. This course is for students with little or no tap dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify at least eighteen single and amalgamated tap steps.
- demonstrate the components of performance alignment, shuffle step, shuffle ball change, and flap ball change.
- demonstrate clarity of tap sounds within a group.
- critique a live dance concert using knowledge of basic tap dance technique.
- explain the progression of tap sounds for eight basic tap steps.
- perform a three-minute basic tap dance routine.

**DANCE 361 Tap Dance II**

This course offers an opportunity to continue the study of tap dance with more complex rhythms, new vocabulary, and varied methods of counting. It furthers the basic technique begun in DANCE 360 and instills tap rhythms, walks, alignment for balance, counts, and footwork. This course is for students with some previous tap dance training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify at least thirty single and amalgamated rhythm tap steps.
- combine steps to form basic choreography for combinations.
- apply double and triple sounds to steps previously learned as singles.
- critique a dance performance focusing on appropriate tap technique.
- execute proper tap technique for sound by striking, brushing, or placing the correct part of the foot onto the floor.
- perform two three-minute tap routines.

This course builds on technique studied in DANCE 361 and includes new vocabulary and steps that refine the ability for quick heel or toe balances as well as new exercises for progress in speed and intricacy of taps. Clarity of sounds and timing will be emphasized. This course requires previous experience in tap dance technique. Field trips may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify a vocabulary of at least forty single and amalgamated tap steps.
- demonstrate clarity of single tap sounds.
- explain and execute sound qualities for riffs one through eight.
- perform two three-minute tap routines that utilize steps learned in class.
- choreography a series of tap steps in sequence that create a combination of twenty-four counts of eight.
- identify a progression of tap steps by name when they are demonstrated correctly.

DANCE 363 Tap Dance IV

Units: 1
Hours: 54 hours LAB
Course Family: [Tap Dance Technique](http://arc.losrios.edu/course-families#id_100037)
Prerequisite: None.
Enrollment Limitation: DANCE 362 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course continues the study of tap dance technique provided in DANCE 362. It furthers instruction with more sounds to each step and introduces the concepts of origin for tap dance. The emphasis is on Irish-based tap and the relaxation of the upper body during performance. This course is designed for students with a background in tap dance technique. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform a three-minute tap dance that contains a tap turn, a cut time section, and one sequence with a break.
- explain the origins of the heels-off Irish tap style and the reason for the lack of arm movements in traditional Irish dance.
- execute a series of eight front Irish, back Irish, and traveling Buffalo steps.
- repair a broken tap or buckle with two minutes.
- execute a syncopated time step expanded into three extra counts.
- identify an Irish-based tap sequence, a military tap sequence, and a waltz clog.

DANCE 364 Tap Dance V

Units: 1
Hours: 54 hours LAB
Course Family: [Tap Dance Technique](http://arc.losrios.edu/course-families#id_100037)
Prerequisite: None.
Enrollment Limitation: DANCE 363 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course combines the elements of tap dance begun in DANCE 363 with the foundation of Shuffle Stride or rhythm tap dance styles of the Harlem Renaissance. The taps sounds are completed very close or into the ground. Along with theatrical jumps, turns, and isolations, steps from an African American Vaudeville dance heritage are included. This course requires previous tap dance training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critique a live dance performance.
- explain a' Capella tap.
- perform a one-minute tap routine choreographed in a traditional, heels off, Irish tap style.
- define the system used to record tap dances in their totality by means of symbols, signs, and abbreviations.
- spell 25 words from the tap vocabulary list.
- explain what happened during the Harlem Renaissance.
- perform an A' Capella tap dance in Shuffle Stride and Vaudeville styles.
- identify the elements of tap that come from an African tradition, an Irish tradition, and an African American tradition.

DANCE 377 Musical Theatre Dance I

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Course Family: Musical Theatre Dance (http://arc.losrios.edu/course-families#id_100038)
Prerequisite: None.
Enrollment Limitation: Completion of DANCE 310, 320, 330, 340, or 360, with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides an opportunity to explore dance for musical theatre and builds on the basic technique covered in DANCE 310, 320, 330, 340, or 360. This course begins with a mock audition and relies upon many basic dance styles in order to provide preparation for dancing in theatrical productions. Choreographed routines and production numbers are utilized, along with monologues, audition technique, vocabulary, and guides for singing while dancing. The emphasis is on authentic era dance styles, basic partnering, and using dance to shape and define a character. This course is designed for students with some previous dance experience. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare for the musical theatre audition process with practice, intelligent choices, and a fore-knowledge of what is expected.
- convey a basic knowledge of dance history in eras from the twenties until the present.
- summarize one quick-study technique for learning theatre dance.
- explain why self-discipline is necessary in order to dance in the wide range of styles included in musical theatre dance.
- dramatize gestures, impulse actions, and everyday movements into expressions in dance form.
- assemble an organized audition bag containing items needed for an all-day audition and a call back.
- demonstrate the breath control necessary for singing while dancing.

DANCE 390 Contemporary Dance I

Units: 1
Hours: 54 hours LAB
Course Family: Contemporary Dance Technique (http://arc.losrios.edu/course-families#id_100039)
Prerequisite: None.
Enrollment Limitation: DANCE 310, 320, and 330 with a grade of "C" or better, or audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course builds upon the technique covered in DANCE 310, 320, and 330. Abilities drawn from jazz, ballet, and modern dance are required to pursue this new integrated style. Dancers select and merge three dance techniques and incorporate the vocabulary of gestural movement and non-verbal communication. Development of smooth transitions and learning to use dance steps and elements to communicate an emotional state or story line. This course is intended for students with a knowledge of ballet, modern, and jazz dance technique. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- execute smooth transitions from a gestural movement into a turn and into a fall.
- explain the progression and technique required to give the appearance of moving in a chunky modern transition with a choppy quality to the levels.
- choreograph and perform a one-minute contemporary dance solo.
- produce, for audition purposes, a DVD that includes two still head shot photos and two copies of a self-choreographed contemporary solo performance.
- complete two contemporary-style alternative balance pirouettes.
- discuss the components of contemporary dance
- suggest a way to introduce a new avenue of non-verbal communication between two partners while they are dancing a contemporary pas de deux.

DANCE 401 Pre-Pointe and Conditioning

Units: 1
Hours: 54 hours LAB
Course Family: Foundations of Dance
Prerequisite: None
Enrollment Limitation: DANCE 321, 322, 323, 324, or 325, with a grade of "C" or better, or audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers the technique and conditioning for dancing on pointe and combined with DANCE 322,323, 324, or 325, builds the strength needed for pointe work. The emphasis is on insuring that the strength and structure of the body is appropriate for pointe work. The course can be taken on flat to increase balance, strength, and alignment for ballet. It is designed for serious students of ballet with previous and on-going ballet training.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the proper ankle structure and revised alignment needed in order to work on pointe.
- execute a fifteen-second balance in first through fifth positions with both feet on the floor.
- perform an echappe with passe balance combination in center completing the combination on balance.
- relate why, when, and for whom the first pointe shoes were made.
- describe the role of imagery, spotting, and breathing in pointe work.
- put on a pair of pointe shoes quickly, placing all ribbons and elastics properly.
- execute up to fifteen minutes of exercises at the barre en pointe or in eleve or releve on flat.
- demonstrate proper care of pointe shoes and ballet flats.

DANCE 402 Elements of Choreography

Units: 1
Hours: 54 hours LAB
Course Family: Foundations of Dance
Prerequisite: None
Enrollment Limitation: Completion of DANCE 310, 320, 330, 340, 351, or 360 with a grade of "C" or better or by audition.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers the basic elements of choreography and provides an opportunity to explore basic choreographic structure. Choreographic concepts are introduced, developed, applied, and adapted to various dance styles in a manner appropriate for most styles and levels of dance. The emphasis is on the choreographic process. This course is for students with some dance background. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- incorporate twelve elements of choreography into a one-minute dance combination of any style dance.
- demonstrate the basic elements of choreographic composition.
- identify choreography that relies on literal meaning and pantomime when it is performed.
- chart a floor pattern from a section of choreography.
- explain one system of counting beats and movements in a piece of choreography.
- create and present a three-minute piece of original choreography.
- critique a live dance performance.
- explain why it is important to know who the audience is.

DANCE 403 Choreographic Studies

This course furthers the study of choreographic elements begun in DANCE 402. It allows for the study of choreography from an artistic, historical, and personal perspective and encourages students of choreography to mature by providing deeper source materials and less predictable solutions. The emphasis is on imitation and exploration that may uncover inner layers of untapped movement and gesture, including the study of selected influential choreographers and their work. This course is for students with previous dance and choreography training. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create a piece of choreography for three or four dancers.
- use a color chart and produce a rendering for a costume suitable for the theme or essence of the piece.
- discuss the most influential choreographers of the Twenty and Twenty-First Centuries.
- explain why choreography is often called a living art form.
- collaborate on a three-minute work of choreography with two other choreographers.
- perform, as a dancer, in a two-minute dance, choreographed by another student.
- venture an opinion on why we say that every work of choreography is a self-portrait.

DANCE 406 Introduction to Improvisation

This course builds on the technique covered in DANCE 312, DANCE 320, and DANCE 330. It introduces strategies for achieving improvisation without self auditing and utilizes concepts for initiating the impulse to move in any dance style. Dancers work through menus and pre-planned improvisational spring boards towards the complete freedom of dancing in a way that is not preconceived. Confidence is developed through repetition, encouragement, facing the emotional risk, and finding a sense of joy by dancing in the moment. This course is designed for students with a background in dance. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate a one-minute section of improvisation.
- improvise a one-minute dance through the use of an improvisation menu.
- explain how to feel, or count intuitively, musical phrases.
• select dance steps from memory for an improvisational dance.
• discuss how to listen to music for an improvisational road map of steps, inspiration, impulse, and dance direction.
• compare total improvisation without music, total improvisation to music, and improvisation to music with an improvisation menu plan.
• listen for inner music cues.

DANCE 415 Dance Production: Rehearsal and Backstage Organization

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Dance Composition and Production (http://arc.losrios.edu/course-families#id_100041)
Prerequisite: None.
Enrollment Limitation: Audition
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides an opportunity to perform with a focus on the rehearsal period and the importance of backstage organization. It includes lecture, choreography, rehearsal and performance, with an emphasis on production technique and nomenclature for dance. Production technique is presented through a study of the theatre areas and the choreographic necessity they present. Production problems are studied for multiple solutions and organizational requirements for safe rehearsals and performances are explored. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the on-stage areas.
• critique the performance skills of others by means of constructive criticism and suggested rehearsal solutions.
• create a schedule for choreography of a three-minute intermediate technique level dance for performance.
• define the performance space in measurements and levels.
• analyze dance rehearsal and performance space for safety.
• assess and modify problem movement through analytical means during rehearsal.
• review a live performance for application of rehearsal time, technique, and choreographic elements.
• compare and contrast the production values and necessities for modern dance, jazz dance, theatre dance, and ballet.
• choreograph and notate a three minute dance.

DANCE 416 Dance Production: Choreography and Costumes

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Dance Composition and Production (http://arc.losrios.edu/course-families#id_100041)
Prerequisite: None.
Enrollment Limitation: Audition
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides an opportunity to perform with an emphasis on production technique for dance. Choreography for production and costuming for the choreography are covered as well as how to communicate choreographic ideas and costuming goals. Technique is presented through historical study and choreographic necessity. Production problems in choreography are analyzed for multiple solutions, and safe rehearsals, and performances. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• define 25 words of vocabulary for dance production.
• rehearse and perform effectively in at least three pieces of choreography with three different costumes for a formal dance concert.
• describe the rehearsal and final dress process for a formal one-to-two-hour dance concert.
• collaborate on the creation of a three-to-ten minute work of original choreography with original costume ideas.
• explain the safety rules that apply to production in terms of backstage behavior before, during, and after performances.
• list the rules concerning eating, drinking, smoking, and costumes.
• list three different ways to deal with a quick change in performance.

DANCE 417 Dance Production: Studio and Stage

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Dance Composition and Production (http://arc.losrios.edu/course-families#id_100041)
Prerequisite: None.
Enrollment Limitation: Audition
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is a lecture-demo and production group and is designed for dancers with performance proficiency in several styles of dance. There is an emphasis on public contact with several different performance space configurations and settings. It provides for an opportunity to choreograph, perform, and convert a dance production into three or more different kinds of space configurations. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• perform a three-minute work of choreography in two different space settings.
• explain the differences between performing in the round, in a black box, on a public street, and on a proscenium stage.
• name two ways to deal with a hair ribbon or clip-on tie lost onstage when performing in the round.
• create a short sequence of choreography that contains both straight lines and circles.
• choreograph a dance for the round and convert it to a proscenium stage performance piece.
• work very closely in a closed trio position.

DANCE 430 Jazz Dance Performance Group

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Dance Performance Group (http://arc.losrios.edu/course-families#id_100043)
Prerequisite: None.
Enrollment Limitation: Audition
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is a lecture-demo and performance group and is designed for dancers with performance proficiency in several styles of dance. There is an emphasis on public contact, community outreach, dance demonstrations, and a concert performance. The history of jazz dance is covered and ethnic styles are compared. An opportunity to choreograph is offered as well. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain multicultural contributions to jazz dance.
• list twelve performance skills.
• deliver historical information for a cultural dance form by speaking directly to a lecture-demonstration audience.
• compare and contrast two cultural dance forms.
• choreograph and notate a lecture-demonstration presentation based on cultural styles that contribute to the jazz dance idiom.
• identify three jazz dance styles by era and choreographer.
create and lead a warm up for a rehearsal period that includes dancing with head rolls and quick level changes.

describe mistakes that might happen in a performance situation and propose the best way to adapt to such situations.

call a piece of choreography by counts, steps, words, and beats.

compare the performance experience of presenting to a small informal group and performing for three to five hundred people.

explain how European contact, religion, and war have effected cultural dance performances.

DANCE 431 Performance Group: Master Hip Hop Crew

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use performance technique to make an audience connection.
- perform a six-minute dance piece that includes improvisation, Freestyle, and choreographed steps.
- explain what should happen if something is accidently left on the stage during performance.
- repeat the caveat for finding blame for on-stage problems.
- perform three presentational audience connection movements.
- design costumes, choreograph, clean, and rehearse for a four minute crew dance.
- explain the sequence of events and who is responsible for a three-minute crew dance including the calling of places, lights, sound and blackout or fade.
- perform, as part of a crew, in two hours of a choreographed dance concert.

DANCE 432 Dance Performance: Contemporary Dance Alliance

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform in a 3-6 minute work of contemporary dance choreography.
• explain subtext and its relationship to the performance of a contemporary dance piece.
• name two categories of warm up that are appropriate for use in a contemporary dance rehearsal.
• create a sequence of contemporary choreography that is at least one minute in length.
• identify three choreographers who are considered contemporary in style.
• explain the use of verbs, slang language, endowment, and word pictures in contemporary dance.

DANCE 433 Performance Group: ARCH Dance Company

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Course Family: Dance Performance Group ([http://arc.losrios.edu/course-families#id_100043](http://arc.losrios.edu/course-families#id_100043))
Prerequisite: None
Enrollment Limitation: Audition
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area C1; CSU Area E2
Catalog Date: June 1, 2020

This course provides performance opportunities based on "classic" short stories, fables, and myths. The emphasis is on communicating the ideas and sentiments of well-known stories through dance. How characters might move to convey who they are and what they want is covered, as well as making transition choices to build the story line through dance. Individual portfolios are stressed and field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• use positive collaboration tools in order to work with others.
• explain how subtext can be used to make intentions and desires clear.
• explain a "classical" story in a contemporary way.
• identify three well-known choreographers who have created full-length dances on themes of Greek mythology.
• explain the plots from two "classical" ballets.
• identify three choreographic tools to use in foreshadowing.
• suggest the pacing for a dance section leading up to the story climax.
• discuss what is meant by "white" ballets.

DANCE 495 Independent Studies in Dance

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
General Education: AA/AS Area III(a)
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the topic, theme, and specific subject matter of an independent dance project.
• discuss the research and events of this independent study.
• present a portfolio of photographs, videos, or other multimedia record of dances, exercises, explorations, or choreography that resulted from this independent study.
• document the development of an independent dance project by means of a narrative journal of events.
This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of dance. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of dance related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Associate Degree

A.A. in Deaf Culture and American Sign Language Studies

This degree provides academic coursework based on a Deaf-centered framework that encourages students to embrace an empowered collaboration with Deaf people. It provides an introductory overview of the Deaf community and American Sign Language in a cultural context, with the psychosocial dynamics of people working in the Deaf community. It also emphasizes the development of skills related to paraprofessional services, in an individual or group setting, in an educational or social services agency which serves Deaf clients.

Catalog Date: June 1, 2020

The Deaf Culture and American Sign Language Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- compare and contrast characteristics that impact a Deaf person’s life in the following areas: the world of work, education, family, language, and social development.
• demonstrate ability to carry on American Sign Language conversation consistent with the ability of a 4th semester second language learner with a Deaf individual or groups of Deaf people.

• apply entry-level positions working with the Deaf community.

• demonstrate characteristics related to personal growth and adjustment in various populations within and outside of the Deaf community.

• apply skills in working with various Deaf participants within and outside of the Deaf community.

• demonstrate skills in working with school-age Deaf children in an educational setting.

• compare and differentiate the Deaf individual to individuals of diverse populations when comparing human development.

• demonstrate appropriate cultural interaction within the Deaf community.

• demonstrate ability to communicate respectfully in a Deaf-culture setting.

Career Information

This degree prepares students for entry-level positions such as paraprofessional services in an individual or group setting, in an educational or social services agency which serves Deaf clients.

Certificate of Achievement

Deaf Culture and American Sign Language Studies Certificate

This certificate provides academic coursework based on a Deaf-centered framework that encourages students to embrace an empowered collaboration with Deaf people. It provides an introductory overview of the Deaf community and American Sign Language in a cultural context, with the psychosocial dynamics of people working in the Deaf community. It also emphasizes the development of skills related to paraprofessional services, in an individual or group setting, in an educational or social services agency which serves Deaf clients.

Deaf Culture and American Sign Language Studies (DEAF)

DEAF 310 American Sign Language I

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; IGETC Area 6
Catalog Date: June 1, 2020

This is the first course in a series of five courses in American Sign Language (ASL). The instructional activities are based on an immersion approach, in which the learners develop language competency in source and target language. The emphasis is on non-speech communication. Topics include grammatical features such as adjective descriptors, differentiation between cardinal/ordinal numbers, contrastive structure, temporal aspect markers and temporal sequencing, conversational skills, narrative skills, and discussions with peers. This course is formerly known as SILA 305.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• assemble short sentence dialogs which demonstrate receptive and expressive competencies of targeted lexical and syntactical forms of American Sign Language.

• compare and contrast the characteristics of the Deaf community and the Deaf community dynamic with the hearing community.

• utilize appropriate vocabulary and communicative strategies using eye contact, body orientation, and social behaviors related to communication interaction.

• demonstrate appropriate cultural interaction within the Deaf community.

• demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 312 American Sign Language II

Units: 4
Hours: 72 hours LEC
Prerequisite: DEAF 310 or SILA 305 with a grade of "C" or better.
Advisory: Eligible for ENGRD 310 AND ENGRD 312 and ENGWR 300; OR ESLR 340 and ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area I; IGETC Area 6
Catalog Date: June 1, 2020

This is the second in a series of five courses in American Sign Language (ASL). The emphasis is on nonverbal communication. Topics include grammatical features such as adjective descriptors, differentiation between cardinal/ordinal numbers, contrastive structure, temporal aspect markers and temporal sequencing, conversational skills, narrative skills, and discussions with peers. This course is formerly known as SILA 306.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
• prepare complex dialogues that demonstrate receptive and expressive competencies of targeted lexical items from situations or narratives that occur in daily life activities.
• formulate targeted syntactical forms in ASL in dialogs.
• select appropriate vocabulary and communicative strategies in imitating, conducting, and terminating dialogs.
• analyze social customs and cultural interaction of the various groups within the Deaf community.
• demonstrate ability to communicate respectfully in a Deaf-culture setting.
• demonstrate appropriate cultural interaction within the Deaf community.

DEAF 314 American Sign Language III

Units: 4
Hours: 72 hours LEC
Prerequisite: DEAF 312 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 and ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course is the third in a series of five courses in American Sign Language. It emphasizes expressive and receptive nonverbal communication skills between signers who have preliminary American Sign Language syntactical and lexical skills. It provides an understanding of deaf cultural processes by identifying behaviors and norms from activities assigned in the class. It also includes dialogs that involve asking, empathizing, negotiating and agreeing or disagreeing. The emphasis is on non-speech communication. This course is formerly known as SILA 315.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• appraise and demonstrate receptive and expressive skills of targeted grammatical features which include the following areas: numbers when expressing time, money, counting, dates and addresses concepts; frequency verbs when expressing time and duration; locative classifiers when describing buildings and floor plans; descriptive classifiers when asked to define and describe furniture, clothing, various objects and food dishes.
• analyze lexical and grammatical patterns by signing selected or self-developed narratives.
• compare and contrast social norms of Deaf people to those personal cultural experience in signed narratives.
• demonstrate ability to communicate respectfully in a Deaf-culture setting.
• demonstrate appropriate cultural interaction within the Deaf community.

DEAF 316 American Sign Language IV

Units: 4
Hours: 72 hours LEC
Prerequisite: DEAF 314 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; or ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course is the fourth in a series of five courses in American Sign Language (ASL). It emphasizes expressive communication skills that involve locating and signing interesting facts, making major life decisions, discussing health conditions, and using money. It incorporates information and activities previously learned about Deaf culture into these narratives. The emphasis is on non-speech communication. This course is formerly known as SILA 316.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• appraise and demonstrate receptive and expressive mastery of targeted grammatical markers which include: elaborations in narratives, dialogs, utilizing signs that describe specific facts, generalizations, theories, conclusions; describing major life decisions; discussing health conditions and using money.
• formulate previously learned Deaf cultural experiences into narratives.
• apply expressive strategies in signing longer and more complex narratives including use of characterization and narrative styles.
• compose a lecture in ASL, incorporating complex ideas about health conditions.
• differentiate how people share and describe major life decisions in ASL.
• produce communication processes involving money related signs.
• appraise the facts to explain, rephrase, demonstrate, or draw conclusions to clearly present factual information.
• analyze the effectiveness of ASL performance generated by models, self, and peer by applying contemporary theories of performance assessment and peer review.
• compare and contrast Deaf and hearing cultures.
• demonstrate ability to communicate respectfully in a Deaf-culture setting.
• demonstrate appropriate cultural interaction within the Deaf community.

DEAF 318 American Sign Language V

Units: 4
Hours: 72 hours LEC
Prerequisite: DEAF 316 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This is the last course in a series of five courses in American Sign Language (ASL). It prepares for the effective communication with Deaf people. It emphasizes expressive communication skills that involve narrating unforgettable moments, telling about accidents, and storytelling. It incorporates information and activities previously learned about Deaf culture into these narratives. The emphasis is on non-speech communication. This course is formerly known as SILA 318.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• appraise receptive targeted grammatical markers which include using role shift to enhance a story, maintaining spatial agreement when using role shift, sequencing classifiers, and timing of reactions to coincide with experiences and mishaps.
• generate expressive mastery of targeted grammatical markers which include using role shift to enhance a story, maintaining spatial agreement when using role shift, sequencing classifiers, and timing of reactions to coincide with experiences and mishaps.
• formulate essential skills for storytelling related to narrating unforgettable moments and telling about accidents.
• incorporate key elements used in ASL storytelling to adapt written stories into ASL.
• organize previously learned cultural experiences into narratives.
• apply expressive strategies in signing longer and more complex narratives including use of characterization and narrative styles.
• evaluate the effectiveness of model, self, and peer ASL performance by applying contemporary theories of performance assessment.
• demonstrate ability to communicate respectfully in a Deaf-culture setting.
• demonstrate appropriate cultural interaction within the Deaf community.

DEAF 320 Fingerspelling, Classifiers and Numbers

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: DEAF 310 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides hands-on experiences with fingerspelling, classifiers and American Sign Language (ASL) numbers. Topics include expressive and receptive fingerspelling, classifiers, and ASL numbers techniques. This laboratory course enables ASL learners to develop, expand, and reinforce hands-on experiences with fingerspelling, classifiers, and ASL numbers skills while working independently, in small groups, and with media such as DVDs and recorded video clips in ASL that incorporate fingerspelling. Coursework includes study topics integrated with expressive and receptive fingerspelling, classifiers, and ASL numbers techniques. Students may register until the sixth week of the semester. This course may be taken up to two times, for a total of 1.0 unit, using different topics. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate basic receptive fingerspelling, classifiers, and ASL numbers skills with at least 70% accuracy.
- synthesize basic expressive fingerspelling, classifiers, and ASL numbers skills.
- demonstrate the ability to communicate respectfully in a Deaf-culture setting.
- demonstrate appropriate cultural interaction within the Deaf community.

DEAF 351 Introduction to American Deaf Culture

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D7; IGETC Area 4
Catalog Date: June 1, 2020

This course is a survey of four institutions which have critical impact on the psycho-social development of Deaf people: family, education, work, and society. It provides awareness and sensitivity to the unique challenges of deafhood and how they influence personal-social and communication competencies of the Deaf person. Selected visits to community events may be required. This course is formerly known as SILA 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define culture and apply the definition by using examples of typical social norms of Deaf people.
- identify the rules of Social Interaction in the Deaf community.
- define language and apply the definition by giving examples brought out from experiences with Deaf people.
- construct a detailed description of the census, racial/ethnic, education, employment, social/advocacy activities, family environment characteristics of the Deaf community.
- narrate instances of bias connected to Deaf individuals and groups.
- demonstrate appropriate cultural interaction within the Deaf community.
- demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 352 Introduction to American Deaf Education

Units: 3
Hours: 54 hours LEC
Prerequisite: DEAF 351 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b)
Catalog Date: June 1, 2020

This course surveys topics related to educating Deaf children, adults, and individuals with additional disabilities. It also covers teaching methods and philosophies, school placement issues, child development, and methods of addressing developmental and linguistic stages. Selected visits to a residential Deaf school in Fremont and/or a local mainstreaming/Deaf program school may be required. This course is formerly known as SILA 332.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- validate an analysis of a topic from a research paper that relates to education of Deaf people.
- distinguish and describe essential components of PL 94-142/Individuals with Disabilities Education Act.
- differentiate characteristics of school placement sites for Deaf children and for young deaf adults who transition from a high school education to a post-secondary education.
- list and describe the various hereditary syndromes that occur among Deaf children with additional disability conditions.
• distinguish, assess, and evaluate family dynamics of Deaf children with hearing or Deaf families.
• categorize and evaluate the research done on the effectiveness of the communication systems used by Deaf children in the educational system.
• distinguish and assess developmental processes of cognitive theory as presented by Piaget and of the development of life stages as presented by Erikson.
• demonstrate appropriate cultural interaction within the Deaf community.
• demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 355 Audism and Inequality of the Deaf

Units: 3  
Hours: 54 hours LEC  
Prerequisite: DEAF 351 with a grade of "C" or better  
Advisory: SOC 320; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D7  
Catalog Date: June 1, 2020

This course focuses on topics in the field of race and ethnicity in Deaf community. It provides theoretical background and contexts of audism and oppression. It also covers the contribution of minorities including Deaf people to the United States as well as the sociological reasons for inequality of Deaf people in the United States.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate how social processes, social inequality, and social relationships have shaped the experiences of various minorities in the United States.
• critique the processes of assimilation, accommodation, acculturation, and ethnogenesis.
• identify social processes that lead to conflict and cooperation among Deaf and hearing people in the United States.
• assess the outcomes and identify the origins of prejudice and discrimination against Deaf people in the United States.
• demonstrate appropriate cultural interaction within the Deaf community.
• demonstrate ability to communicate respectfully in a Deaf culture setting.

DEAF 370 Linguistics of American Sign Language

Units: 3  
Hours: 54 hours LEC  
Prerequisite: DEAF 316 with a grade of "C" or better, or placement through the assessment process.  
Transferable: CSU; UC  
General Education: AA/AS Area II(b)  
Catalog Date: June 1, 2020

This course provides a foundation in American Sign Language (ASL) linguistics. Topics include theoretical knowledge and practical application of phonology, morphology, syntax, and sociolinguistic aspects of ASL usage. This course is formerly known as SILA 317.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify basic concepts of language.
• analyze phonological aspects of ASL.
• examine morphological structures in ASL.
• produce appropriate syntactical structures in ASL.
• appraise and incorporate features of ASL discourse.
• demonstrate appropriate cultural interaction within the Deaf community.
• demonstrate ability to communicate respectfully in a Deaf culture setting.
DEAF 380 American Sign Language Literature

This course introduces American Sign Language (ASL) literature genres such as folklore and folktale, storytelling, visual vernacular, personification, classifier story, poetry, ABC and number stories and non-fiction narrative. Topics include analyzing and applying ASL usage in ASL literature genres.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and critique genres in ASL literature.
- identify various techniques and styles of ASL literary works.
- produce and perform different genres in ASL literature.
- analyze ASL literary works for historical, social, and cultural messages.
- comprehend literary analysis, significant linguistic and cultural aspects of ASL narratives.
- demonstrate ability to communicate respectfully in a Deaf culture setting.
- demonstrate appropriate cultural interaction within the Deaf community.

DEAF 390 Introduction to the Interpreting Profession

This course introduces general information about the field of American Sign Language (ASL)/English interpretation. Topics include regulations, certification and educational requirements, fundamental and requisite skills, the Code of Professional Conduct, and pay scale and job opportunities in the field of ASL/English interpretation. An overview of the Interpreter Preparation Program at American River College and hands-on experiences are incorporated. Pass/No Pass only. This course is formerly known as SILA 362.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compile a list of regulations, ethics, certification, and educational requirements needed to enter the interpreting field.
- assess the core interpersonal, intrapersonal, and linguistic competencies required.
- identify job opportunities and pay scales available for interpreters.
- choose a sequencing of coursework to follow in the Interpreter Preparation program at American River College.

DEAF 495 Independent Study

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Diesel/Clean Diesel Technology | American River College

Division Dean
Gary Aguilar

Department Chairs
Craig Weckman

(916) 484-8354

Associate Degree

A.S. in Diesel Technology

This degree provides training in diesel technology. Topics include an introduction to diesel technology, diesel engine repair, basic hydraulic principles of diesel technology, diesel brake systems, and diesel power trains.

Catalog Date: June 1, 2020

Degree Requirements

The Diesel Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and properly utilize shop equipment and chemicals used in the diesel repair environment including hazardous waste disposal.
- apply proper techniques for complete engine removal, disassembly, cleaning, and reassembly of diesel engine.
- identify and explain brake system components, as well as application of proper technique for removal and repair of diesel brake system components.
- select and use proper test equipment to evaluate electrical systems, including voltmeters, ammeters, and ohmmeters.
- identify and explain diesel power train components and their functions to assist in diagnosis of drive train failure.

Career Information

This degree prepares the students as diesel technicians in the following areas of specialty: brakes, engine repair, hydraulics, and electrical.
Certificates of Achievement

Clean Diesel Hybrid Technology Certificate

This program covers hybrid-diesel components. Topics include heavy duty hybrid-diesel component application, diesel-hybrid motor generators, clean diesel software, and industrial software and systems.

Catalog Date: June 1, 2020

Certificate Requirements

<table>

</tr>
</tbody>
</table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply basic principles of hybrid diesel component application to proper troubleshooting procedures.
- explain electronic control in diesel hybrid vehicles.
- apply procedural information, illustrations, diagnostic information, and wiring diagrams to Cummins INSITE and Eaton diesel systems.
- locate, download, and apply retrieved data to diesel tractor conditions.

Career Information

Various entry-level positions exist in the hybrid diesel repair industry, such as entry-level technician and hybrid service advisor.

Clean Diesel Industrial Certificate

This certificate prepares students for entry-level positions in the diesel technology industry. Topics include fabrication in the diesel technology industry.

Catalog Date: June 1, 2020

Certificate Requirements

</tr>
</tbody>
</table>

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- apply safety precautions while working in a fabrication environment.
- describe the basic steps in the fabrication process.
- show how to sheet and .120 aluminum welding with metal inert gas (MIG) and tungsten inert gas (TIG).
- outline basic frame fabrication techniques.
- explain popular uses of different metals.

Career Information

Entry level positions in the diesel fabrication, suspension, and frame repair industry. Additional career opportunities are likely as the fabrication industry continues to grow.

Clean Diesel Management Systems Certificate

This program covers hybrid diesel technology. Topics include hybrid diesel power trains, hybrid diesel high voltage systems, clean diesel software support, and industrial software systems.

Catalog Date: June 1, 2020

Certificate Requirements

<table>

</tr>
</tbody>
</table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe and explain power flow of hybrid diesel power trains.
- diagnose and repair high voltage cables, connectors, and components.
- locate, download, and apply retrieved information to diesel tractor conditions.
- communicate technical information about Cummins INSITE and Eaton diesel systems.

Career Information

Various entry-level positions exist in the hybrid diesel repair industry, such as entry-level technician and hybrid diagnostic technician.

Clean Diesel Technology Certificate

This program covers the diesel engine systems. Topics include biodiesel fuel and fuel systems, clean diesel technology, and clean diesel software support.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- access requirements for converting fossil fuel to biodiesel vehicles.
- apply basic principles to the modern diesel engine.
- apply technical information for repowering, rebuilding, and replacing diesel engine components.
- locate, download, and print information specific to diesel tractor manufacturers.
- apply manufacturer specifications for diesel engine retrofit.

Career Information

Various entry level positions exist in the diesel repair industry, such as entry level technician, hydraulic technician, and heavy equipment service advisor.

Diesel Engine Technology Certificate

This certificate is designed for students seeking employment in the diesel industry specializing in diesel engine repair.

Catalog Date: June 1, 2020

Certificate Requirements

<table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- comply with safety and environmental regulations and standards required in the diesel repair environment.
- explain and identify natural gas diesel engines, including the proper cleaning, assembly and disassembly.
- demonstrate correct welding techniques for diesel application.
- utilize safety precautions that apply to diagnose and repair electrical/electronic components.
- locate, download, and print information specific to diesel tractor manufacturers and apply it to the diesel tractor conditions.
The diesel industry is growing and is in need of highly trained/skilled technicians that can step into the workforce.

**Diesel Technology Certificate**

This certificate provides training in diesel technology. Topics include diesel brakes, hydraulics, electrical systems, and power trains.

Catalog Date: June 1, 2020

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- apply established procedures in the diesel repair industry.
- inspect and maintain various diesel engine systems.
- diagnose and repair diesel engine systems.

**Career Information**

Various entry level positions exist in the diesel repair industry, such as entry level technician.

**Light Duty Diesel Truck Certificate**

This certificate prepares students for entry-level positions in the diesel technology industry. Topics include theory and operation of light duty diesel engines, computer controlled injection, and emission control systems.

Catalog Date: June 1, 2020

**Certificate Requirements**

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the basic operations of diesel fueled vehicles.
- perform basic diesel engine turbo charger diagnostic procedures.
- test diesel engine emissions and emission control systems.
- apply procedural information, illustrations, diagnostic information, and wiring diagrams to diesel tractors.
- analyze and evaluate the advantages and disadvantages of working in dealerships, independent shops, and fleet shops.

Career Information

Entry level positions in light duty diesel technology, agriculture, and construction industry. Additional career opportunities are likely as the light duty diesel industry continues to grow.

Preventive Maintenance Certificate

This certificate prepares students for entry-level positions in the diesel technology industry. The topics include safety and environmental regulations and standards, as well as the ability to identify various diesel engine applications.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- comply with safety and environmental regulations and standards
- explain the operation of diesel engine components and systems
- identify various diesel engine applications
- demonstrate complete engine reassembly
- apply basic state and federal regulations including Occupational Safety and Health Association (OSHA) and the Environmental Protection Agency (EPA)
- apply basic principles of preventive maintenance to diesel repair

Career Information

Entry level positions in the diesel repair industry.

Diesel/Clean Diesel Technology (DCDT)

DCDT 100 Diesel Technology Basics

Units: 4
This course introduces diesel technology. Topics include shop safety, hazardous waste handling and disposal, and engine components and their function.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- comply with safety and environmental regulations and standards required in the diesel repair environment.
- explain the operation of diesel engine components and systems.
- explain the principles of interpersonal skills as required in the workplace.
- utilize technician reference manuals.

**DCDT 101 Diesel Preventive Maintenance**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course introduces the field of clean diesel technology and preventative maintenance. It covers proper safety and hazardous waste training, use of basic hand and power tools, and the basic workings of the diesel engine.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify proper use of hand and power tools used in diesel repair.
- utilize correct safety procedures for both hand and power tools used in diesel repair facilities.
- demonstrate basic functions of power tools in the shop.
- identify and properly utilize shop equipment and chemicals used in the diesel repair environment.
- demonstrate proper use of hydraulic and mechanical jacks and hoists.
- apply the basic state and federal regulations including Occupational Safety and Health Association (OSHA) and the Environmental Protection Agency (EPA).
- apply basic principles of preventive maintenance to diesel repair.

**DCDT 102 Biodiesel Fuel and Fuel Systems**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course covers the chemistry, production, and impact of biodiesel technology. It also covers how to convert vehicle fuel systems to biodiesel and how this process affects warranties.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- list the requirements for converting fossil fuel vehicles to biodiesel vehicles.
- describe the process for making biodiesel.
- compare fossil fuel to straight vegetable oil, waste vegetable oil, and biodiesel.
DCDT 103 Clean Diesel Systems

This course provides a complete overview of the clean diesel engine system. Topics include fuel injection systems, emission regulations, and diesel emission control systems.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify basic principles of the modern diesel engine.
- explain basic diesel engine fundamentals.
- identify diesel fuel injection systems.
- perform visual inspection of diesel engines.

DCDT 104 Clean Diesel Rebuild, Retrofit, Repower, Retire

This course covers clean diesel rebuilding, repowering, retrofitting, or retiring of equipment decisions. Topics include rebuilding, replacement, and retirement of diesel systems and components.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- decide whether to rebuild or replace.
- repair engine components.
- replace engine components.
- retire engine components.

DCDT 107 Hybrid Diesel Power Trains

This course covers diesel hybrid power trains found in current hybrid technology. Topics include basic diesel hybrid power trains, hybrid power modes, and power electronic carriers.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- apply high voltage safety procedures to diagnosis and repair of diesel hybrid vehicles
- explain the power flow found in diesel hybrid powered vehicles
- perform high voltage service shutdown procedures according to manufacturer manuals
- inspect and diagnose diesel hybrid power trains
DCDT 108 Hybrid Diesel High Voltage Systems

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers high voltage power systems on diesel hybrid powered vehicles. Topics include high voltage main component identification and inspection, inspection of high voltage cables, testing, re-use, and end-of-service decisions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagnose and repair diesel hybrid vehicles.
- explain high voltage flow of diesel hybrid powered vehicles.
- use electrical diagnostic tools to isolate malfunctions.
- diagnose, repair, and replace high voltage cables, connectors, and components.

DCDT 109 Hybrid Diesel Component Application

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers testing and replacement of diesel hybrid components. Topics include electronic shifting theory and diesel hybrid component application.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the application and proper troubleshooting of diesel hybrid mounted components
- explain hybrid theory power up found in the Eaton system
- diagnose and repair or replace multiple relays, Push Button Controller, Hybrid Control module, and Transmission Electronic Control Unit

DCDT 110 Diesel Engine Repair

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers basic engine principles for diesel engine repair. It covers disassembly and reassembly of diesel engine systems, including cleaning and safe removal of engines, fuel injection systems, valve trains, and engine heads.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain diesel engine theory and repair.
- identify various diesel engine applications.
- apply proper techniques for cleaning and removal of diesel engines.
- define engine performance terms.
- describe air intake and exhaust system, lubrication systems, cooling systems, fuel systems, and governors.
- demonstrate complete engine reassembly.
DCDT 111 Clean Natural Gas Engine Repair

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces clean natural gas engine repair. Topics include engine application and principles of engine operation, disassembly and reassembly of engine components and systems, and various engine systems as they relate to clean natural gas engines.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain clean natural gas diesel engine theory
- identify various clean natural gas diesel engine applications
- apply proper techniques for cleaning and removal of clean natural gas diesel engines

DCDT 112 Clean Diesel Retrofit

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers diesel engine retrofit needs for older diesel engines. Topics include troubleshooting, fault codes, welding, and diesel particulate filter systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- install selective catalytic reduction filters as part of retrofitting.
- identify diesel particulate filters in need of replacement or retrofit.
- describe current retrofit technologies in the diesel industry.
- demonstrate correct welding techniques for diesel application.

DCDT 113 Diesel Hybrid Motor Generators

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers diesel hybrid motor/generator found in current hybrid technologies. Topics include basic diesel hybrid motor/generator, hybrid power modes, and power electronic components.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize safety precautions that apply to diagnose and repair electrical/electronic components.
- explain electronic control of multiple systems found in current diesel motor/generator.
- use electronic tools found in current diesel industry and utilize flowcharts to locate the malfunctions.
- diagnose and repair or replace multiple sensors and high voltage wiring harnesses found in full authority systems.

DCDT 120 Basic Hydraulic Principles of Diesel Technology
This course introduces basic hydraulic principles and functions of the diesel engine. Topics include hydraulic fundamentals and principles, functions of hydraulic fluids, directional and flow control valves, welding, and machine hydraulic overview.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- use and apply proper safety procedures for basic hydraulic systems, including proper lifting and blocking procedures.
- demonstrate the proper use of both power and hand tools used in the diesel repair environment.
- explain the function of the basic hydraulic system.
- explain the operation of the components of the basic hydraulic system.
- identify hydraulic symbols.
- use precise measuring tools for hydraulic repair.
- explain the operation of hydraulic cylinders.
- demonstrate correct welding techniques for diesel application.

**DCDT 130 Diesel Brake Systems**

This course covers the operation of diesel brake systems and components. Topics include band, shoe, caliper, and full disc brakes.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the assembly of various brake systems and components.
- utilize the proper safety procedures for repair and replacement of diesel brake systems.
- apply proper techniques for removal and repair of diesel brake system components.
- explain the purpose of each braking component.
- demonstrate the proper use of diesel brake system repair tools.

**DCDT 140 Diesel Electrical Systems**

This course covers the operation of diesel electrical systems. Topics include sensors used in emission control, electrical circuits, test instruments, charging systems, and electrical starting systems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- select the proper test equipment to evaluate electrical systems.
- describe the function and use of new sensor technology for emissions control.
- describe the functions of various electrical system components.
- explain the differences between voltage and current.
- demonstrate the proper use of voltmeter, ammeter, and ohmmeter.
- read basic wiring diagrams.

**DCDT 142 Diesel Emission Control Systems**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course covers the emission control system of the diesel engine. Topics include performance maintenance and emissions control within emission limits.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify potential and known health effects of diesel engine emissions.
- diagnose and correct causes of emission system control failure.
- perform visual inspection of emission control systems failure.
- inspect and repair emission system control failure.

**DCDT 150 Diesel Power Trains**

**Units:** 4  
**Hours:** 54 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course covers the diesel power train. Topics include inspection and adjustment of clutch linkage, flywheel, and replacement of clutch brakes.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify power train components and their functions.
- diagnose causes of drive train failure.
- perform visual drive train inspection.
- diagnose clutch problems.
- inspect and repair hydraulic clutch slave and master cylinders.
- inspect release fork, fork shaft, and bushings.

**DCDT 162 Clean Diesel Software Support**

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course covers the skills needed to adequately retrieve and apply system information using Internet-based technical manuals specifically geared toward diesel tractor emission control systems.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- locate, download, and print information specific to diesel tractor manufacturers.
- apply retrieved data to diesel tractor conditions.
- communicate technical information to technicians as retrieved from the Mitchell1 www.tractor-trailer.net.
- apply procedural information, illustrations, diagnostic information, and wiring diagrams to diesel tractors.

This course covers the skills needed to adequately retrieve and apply Cummins INSITE and Eaton diesel engine information using Internet-based technical manuals specifically geared toward diesel tractor emission control systems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- locate, download, and print information specific to Cummins INSITE and diesel engines.
- apply retrieved data to Cummins INSITE and diesel engine conditions.
- communicate technical information to technicians as retrieved from Cummins INSITE and aftermarket diesel software.
- apply procedural information, illustrations, diagnostic information, and wiring diagrams to Cummins INSITE and diesel engines.

**DCDT 180 Industrial Fabrication I**

This course covers the various processes of welding in transportation and industrial repairs using metal inert gas (MIG) and tungsten inert gas (TIG). Topics include proper safety procedures pertaining to the fabrication of metallic and nonmetallic materials, metallic and nonmetallic fabrication techniques, and various metals and plastics used in fabrication.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- list the types of protective clothing that should be worn in a fabrication shop.
- demonstrate safety precautions while aluminum welding with metal inert gas (MIG) and tungsten inert gas (TIG).
- explain welding equipment components and accessories.
- identify and explain how to sheet .120 steel welding with metal inert gas (MIG) and tungsten inert gas (TIG) on standard, high strength steel (HSS), advanced high strength steel (AHSS), and ultra high strength steel (UHSS), and boron steel.

</table>

This course covers fabrication which involves cutting, altering, and shaping steel or other materials through the use of different tools, techniques, and processes. Topics include hot-gas and airless fabrication techniques, vehicle frames in relation to fabrication, tack welding, and filler material.
Upon completion of this course, the student will be able to:

- explain how the chassis frame, side rails, and cross-members can be repaired.
- outline basic frame fabrication techniques.
- explain the difference between pipe used for piping systems versus pipe used for structural applications.
- show how to cut and form 18 gauge to 3/8" steel and aluminum.
- demonstrate how to weld similar and dissimilar metal thicknesses to specification.

DCDT 190 Applied Projects in Clean Diesel Technology

Units: 2
Hours: 108 hours LAB
Prerequisite: DCDT 101, 110, 120, 130, 140, or 150 with a grade of "C" or better
Catalog Date: June 1, 2020

This course provides laboratory projects in clean diesel technology. Projects are selected by the Diesel Technology Department.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze performance issues in complex clean diesel technology systems.
- apply clean diesel technology system specifications and tolerances to diesel projects.
- demonstrate skills in fabrication and repair techniques.
- construct a complete clean diesel technology project.
- research clean diesel technology information and specifications using printed and Internet sources.

DCDT 191 Speed and Skill Development

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers diesel component diagnosis and repair, including electrical, hydraulics, engine, fabrication, and other areas in preparation for competing in the state fair. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret customer's complaints, evaluate vehicle condition, and diagnose proper repair procedures in a competitive environment.
- analyze and replace engine cooling and heater system hoses in a competitive environment.
- diagnose electrical system tests and determine necessary action in a competitive environment.
- demonstrate correct welding techniques for diesel fabrication application in a competitive environment.
- solve an engine code problem and correct condition in a competitive environment.
- explain the requirements for the state fair competition.

DCDT 200 Light Duty Diesel/Green Diesel Technology

Same As: AT 156
This course introduces the diagnosis and repair of light duty diesel vehicles and covers the theory and operation of light duty diesel engines and their fuel delivery systems. Topics include diesel engine characteristics, early mechanical fuel delivery systems, early cylinder head design, and early engine construction. It also covers how to prepare these engines for conversion to green technology, such as low sulfur fuel, biodiesel, and alternative fuels. This course along with DCDT 201 is applicable for the field technician seeking training for Automotive Service Excellence (ASE) A9 certification and preparation for green technologies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the basic operation of diesel fueled vehicles.
- explain the differences between diesel and gasoline engine design.
- diagnose basic diesel engine driveability problems.
- perform basic diesel engine mechanical diagnostic procedures.
- evaluate the diesel fuel injection system's compatibility with low sulfur and biodiesel fuels.

**DCDT 201 Advanced Light Duty Diesel/Green Diesel Technology**

Same As: AT 157  
Units: 4  
Hours: 54 hours LEC; 54 hours LAB  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course focuses on late model turbocharged light duty diesel vehicles operating on low sulfur, biodiesel, or alternative fuels. Topics include computer controlled injection, emission control systems, sensors, actuators, computer modules, exhaust gas recirculation (EGR) systems, particulate traps, selective catalytic reduction (SCR) systems, and lean oxides of nitrogen (NOx) traps. It covers diagnosis and repair of these systems using computer diagnostic equipment to meet state emission compliance. This course along with DCDT 200 is applicable for the field technician seeking training for Automotive Service Excellence (ASE) A9 certification and preparation for green technologies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the operation of common rail diesel fuel injection systems.
- explain the differences between late model diesel and older diesel engine design.
- diagnose basic driveability problems on late model diesel vehicles.
- perform basic diesel engine turbocharger diagnostic procedures.
- evaluate high pressure fuel system compatibility with biofuels and biofuel impact on diesel emissions.
- test diesel engine emissions and emission control systems.

**DCDT 280 Professionalism in the Industry**

Units: 3  
Hours: 45 hours LEC; 27 hours LAB  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course introduces students to the professionalism and soft skills in the heavy duty clean diesel workplace. It provides an in-depth review of skills needed, ranging from applying for jobs, interviewing by panel, professional behavior, proper diesel technology phrases used in the workplace, how to communicate professionally with clients and other employees, and many other topics for the professional diesel technician work etiquette.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• create a professional and concise resume for the clean diesel industry.
• demonstrate interviewing skills within the diesel repair industry.
• describe basic customer service skills as a clean diesel technician.
• discuss examples of appropriate clean diesel technology etiquette in the workplace.

DCDT 281 Diesel Shop Operations

Units: 4
Hours: 72 hours LEC
Prerequisite: None
Catalog Date: June 1, 2020

This course introduces operations of dealerships, independent shops, and fleet shops. It emphasizes the various influences that affect the technician’s position with the various operations. Topics include service, sales, parts, and financial operations. Customer Satisfaction Index (CSI) is also discussed. Field trips to local shops may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• identify all of the dealership’s departments and their functions.
• critique dealership, independent, and fleet shop operations.
• analyze and evaluate the advantages and disadvantages of working in dealerships, independent shops, and fleet shops.

DCDT 298 Work Experience in Clean Diesel Technology

Same As: ACT 298
Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to the clean diesel technology field with a cooperating site supervisor. Students are advised to consult with the Diesel Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the clean diesel technology field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 ours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• demonstrate mastery of specific job skills in the clean diesel technology field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
• make effective decisions, use workforce information, and manage his/her personal career plans.
• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
locate, organize, evaluate, and reference information at work.

demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

DCDT 1000 ASE Diesel Engines (T2)

Units: 0.25
Hours: 4.5 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Diesel Engines T2 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the ASE certificate exam requirements.
- utilize ASE test taking strategies.
- understand how the ASE exam is scored.
- discuss general engine diagnostics, including cylinder head, valve train, and engine block diagnosis and repair.
- summarize the diagnosis and repair of lubrication, cooling, air induction, exhaust, and fuel systems.
- explain starting and charging systems diagnosis and repair.

DCDT 1001 ASE Drive Train (T3)

Units: 0.25
Hours: 4.5 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Drive Train T3 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the ASE certificate exam requirements.
- utilize ASE test taking strategies.
- understand how the ASE exam is scored.
- explain clutch and transmission diagnosis and repair.
- summarize drive shaft, universal joint, and drive axle diagnosis and repair.

DCDT 1002 ASE Brakes (T4)

Units: 0.25
Hours: 4.5 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Brakes T4 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• explain the ASE certificate exam requirements.
• utilize ASE test taking strategies.
• describe how the ASE exam is scored.
• summarize air brake diagnosis and repair.
• discuss air supply and service systems.
• discuss the mechanical foundation, wheel hub, and parking brakes.
• illustrate hydraulic brakes diagnosis and repair.
• describe Air and Hydraulic Antilock Brakes Systems (ABS), Automatic Traction Control (ATC), and Electronic Stability Control Systems.

DCDT 1003 ASE Suspension & Steering (T5)

Units: 0.25  
Hours: 4.5 hours LEC  
Prerequisite: None  
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Suspension and Steering T5 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the ASE certificate exam requirements.
• utilize ASE test taking strategies.
• summarize how the ASE exam is scored.
• discuss steering system, suspension, frame, and 5th wheel diagnosis and repair.
• describe wheel alignment diagnosis, adjustment, and repair.

DCDT 1004 ASE Electrical/Electronic Systems (T6)

Units: 0.25  
Hours: 4.5 hours LEC  
Prerequisite: None  
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Electrical/Electronic Systems T6 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the ASE certificate exam requirements.
• utilize ASE test taking strategies.
• understand how the ASE exam is scored.
• summarize general electrical/electronic system diagnosis, and battery and starting system diagnosis and repair.
• explain lighting and vehicle systems diagnosis and repair.

DCDT 1005 ASE Industrial Refrigeration Systems (T7)

Units: 0.25  
Hours: 4.5 hours LEC
This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Industrial Refrigeration Systems T7 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the ASE certificate exam requirements.
- utilize ASE test taking strategies.
- summarize how the ASE exam is scored.
- discuss HVAC systems and a/c system and component diagnosis, service, and repair.
- discuss heating and engine cooling systems, operating systems, and related controls diagnosis and repair.

DCDT 1006 ASE Preventive Maintenance Inspection (T8)

Units: 0.25
Hours: 4.5 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Preventive Maintenance T8 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the ASE certificate exam requirements.
- utilize ASE test taking strategies.
- summarize how the ASE exam is scored.
- discuss engine systems, cab, and hood.
- explain automotive electrical/electronics and frame and chassis, including brakes, drivetrain, steering, tires, wheels, suspension, frame, and 5th wheel.
- describe the road/operational test.

DCDT 1007 ASE Light Vehicle Diesel Engines (A9)

Units: 0.25
Hours: 4.5 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course prepares the Medium/Heavy Duty Truck Technician for taking the Automotive Service Excellence (ASE) Exam for the Light Vehicle Diesel Engine A9 certification test.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the ASE certificate exam requirements.
- utilize ASE test taking strategies.
- summarize how the ASE exam is scored.
- discuss general diagnostics, cylinder head and valve train diagnosis and repair, and engine block diagnosis and repair.
- describe lubrication and cooling systems diagnosis and repair, air induction and exhaust systems diagnosis and repair, and fuel systems diagnosis and repair.
Early Childhood Education | American River College

The course work in the ARC Early Childhood Education department is approved by the California Commission on Teacher Credentialing as meeting the requirements for the California Child Development Educational Permits. Students who complete selected certificates in the ECE program, along with required experience, are recommended by the American River College faculty to the Commission on Teacher Credentialing for direct issuance of Child Development Permits.

All students enrolled in coursework that requires lab work at our campus Child Development Center or at an off-campus facility, must show proof of TB Clearance (done within the previous 6 months), and documentation of all required immunizations.

Division Dean Diana Hicks
Department Chairs Alina Cervantes

Associate Degrees for Transfer

A.S.-T. in Early Childhood Education for Transfer

The Associate in Science degree in Early Childhood Education (ECE) for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of early childhood education. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The degree is designed to facilitate students’ successful transfer to certain California State University (CSU) campuses that prepare them for advanced study in a variety of graduate programs, as well as a variety of careers such as teaching, Child Development Specialist, Program Directors, and Child Life Specialists. With a BA in ECE/Child Development, students are eligible for the Master Teacher and Site Supervisor levels of the CA Child Development Permit, using the Alternative Qualifications category.

The Associate in Science degree in ECE for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to certain California State University campuses.

The Associate in Science degree in ECE for Transfer (A.S.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements. The ECE courses required in this program are part of the CA Curriculum Alignment Project, Lower Division 8 coursework.

Catalog Date: June 1, 2020

The Associate in Science in Early Childhood Education for Transfer for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- synthesize child development research with principles and practices for early childhood teaching to create early learning environments that are respectful, supportive, and challenging for all children, from infancy through adolescence.
- design inclusive, culturally and linguistically appropriate learning environments, based on child development, child observations, family information and knowledge of culturally diverse child rearing practices.
- incorporate strategies for building respectful, reciprocal family and community relationships in order to support families with their children's development and learning.
- assess children's learning through observation, documentation, and interpretation, using results to guide curriculum and teaching strategies.
- recommend developmentally appropriate and culturally relevant approaches to teaching and learning that include respectful, supportive relationships with children and families, and curriculum that support foundational skills and concepts in language, math, science, art, and social relationships.
- demonstrate practices that maintain standards of health, nutrition, and safety in group care early childhood settings.
- apply ethical standards of behavior accepted by the profession of early childhood education.

Associate Degrees

A.A. in Early Childhood Education

This program provides a foundation for in-depth early childhood teacher preparation both through strong general education and through introductory studies in child development and in early childhood curriculum and pedagogy. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, the child in the context of family and culture, and health and safety practices for early childhood educators.

Total Units: 38

The Early Childhood Education Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- synthesize child development research with principles and practices for early childhood teaching to create early learning environments that are respectful, supportive, and challenging for all children, from infancy through adolescence.
- design inclusive, culturally and linguistically appropriate learning environments, based on child development, child observations, family information, and knowledge of culturally diverse child rearing practices.
- incorporate strategies for building respectful, reciprocal family and community relationships in order to support families with their children’s development and learning.
- assess children’s learning through observation, documentation, and interpretation, using results to guide curriculum and teaching strategies.
- recommend developmentally appropriate and culturally relevant approaches to teaching and learning that include respectful, supportive relationships with children and families, and curriculum that supports foundational skills and concepts in language, math, science, art, and social relationships.
- demonstrate practices that maintain standards of health, nutrition, and safety in early childhood settings.
- apply ethical standards of behavior accepted by the profession of early childhood education.

Career Information

Upon completion of this degree, students possess the competencies required to work as a teacher in both private and public early care and education settings, serving infants through preschool-age children. Additionally, the individual can work as a teacher in before-and-after school programs, serving school-age children.

Certificates of Achievement

Associate Teacher Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the
profession, observation techniques, age-appropriate curriculum, and the child in the context of the family and community. Additionally, there is a focus on practicing these concepts in a supervised field/lab environment. With documented work experience, the student is also eligible to apply to the Commission on Teacher Credentialing for the Associate Teacher Child Development Permit.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- analyze the influence of family, community and culture on the child and identify local resource agencies that support families.
- plan and implement developmentally appropriate indoor and outdoor environments that support children's learning through play, exploration, and problem-solving.
- build on systematic observations of children's behavior to design, implement, and evaluate developmentally appropriate learning activities for young children.
- distinguish and apply positive guidance and conflict-resolution strategies that teach children self-discipline and effective, respectful social skills within a diverse group of peers.

**Career Information**

This certificate allows the student to work as a teacher in a private early care and education (Title 22) program, serving infants/toddlers, preschool-age children, and school-age children in before-and-after school programs. With the Associate Teacher Child Development Permit, an individual can work as an assistant or associate teacher in a publicly funded (Title 5) early care and education program.

**Curriculum Specialist Certificate**

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, and two supervised field/lab experiences. Additionally, this specialization provides a choice of coursework focusing on curriculum areas for teaching young children.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- build on systematic observations of children's behavior, interests, and the classroom environment to design, implement, and evaluate developmentally appropriate learning activities for groups of young children.
- formulate an educational philosophy to guide in the curriculum of an early care and education program.
- evaluate curriculum for sound pedagogy, content, and breadth, including planning for the learning environment, the daily routines, and the individual needs of the children.

Career Information

Upon completion of this specialization certificate, students are eligible to be teachers in privately funded (Title 22) early care and education programs and/or associate teachers in publicly funded (Title 5) programs serving young children and their families.

ECE: Culture and Diversity Specialist Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, child development, health and safety practices, the child in the context of the family and community, age-appropriate anti-bias curriculum and a supervised field/lab experience. Additionally, it offers a specialization in culture and diversity issues within early childhood education settings, including the study of the values, issues, and counseling needs of diverse populations, as well as the cognitive and emotional aspects of prejudice as it relates to institutional and individual discrimination. Upon completion of this specialization certificate, the individual is eligible to be a teacher in a private (Title 22) early care and education program. With verified work experience, the individual is also eligible to apply to the California Commission on Teacher Credentialing for an Associate Teacher Child Development Permit to work as an associate teacher in a public (Title 5) early care and education program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze the influence of family, community, and culture on the child's development and identify ways to respond to the diversity of cultures represented in an early childhood education setting.
- plan and implement a developmentally appropriate, anti-bias, and culturally relevant classroom environment that supports children's learning through play, exploration, and problem-solving.
• build on systematic observations of children's behavior and the classroom environment to design, implement, and evaluate developmentally appropriate, anti-bias, and culturally relevant learning activities for young children.

• describe and apply positive guidance and conflict-resolution strategies that teach children self-discipline and effective, respectful social skills within a diverse group of peers.

• analyze how one's own cultural background, societal beliefs, and values impact their work with children and families.

• advocate for and promote culturally relevant and anti-biased education in the early childhood education community.

• examine the values, issues, and needs of diverse populations by race, ethnicity, class, gender identity, sexual orientation, developmental ability, and age.

• identify the cognitive and emotional aspects of prejudice as it relates to institutional and individual discrimination.

Career Information

Upon completion of this specialization certificate, the individual is eligible to be a teacher in a private (Title 22) early care and education program and is eligible to apply to the California Commission on Teacher Credentialing for an Associate Teacher Child Development Permit to work as an associate teacher in a public (Title 5) early care and education program.

Early Childhood Education Management Specialist Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, and a supervised field/lab experience. Additionally, it covers administration and management issues relating to the operation of center-based early care and education programs.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• apply child development principles to development of a philosophy statement to guide the design and operation of a child development program.

• appraise and implement quality care for young children in group settings, including curriculum and environments for children birth through adolescence.

• manage respectful and reciprocal interactions between children, families and teachers.

• utilize knowledge of developmentally appropriate curriculum, environments, observation and guidance to assess one's own strengths and weaknesses in working with young children.

• critique and implement practices in maintaining health/safety standards and preventing infectious disease in group care settings.

• support and implement licensing requirements for privately and publicly funded child development programs.

• demonstrate leadership in staffing, budgets, enrollment, professional development and program implementation for privately and publicly funded programs.
Career Information

Upon completion of the certificate and with additional documented experience, the student exceeds the minimum educational requirements for employment as a director/manager of a privately funded early care and education program. The minimum requirements are outlined in Title 22 (Department of Social Services) regulations for child care licensing.

Infant Specialist Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, and age-appropriate curriculum. Additionally, it focuses on infant development and the care of education of infants/toddlers in group settings along with information for lactation consultants.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate and apply knowledge of infant development to create infant and family programs that are respectful, supportive, and challenging for children from the prenatal period through the first three years after birth.
- design infant and toddler programs that build respectful, reciprocal family relationships and support optimal infant and toddler development and learning both at home and in group settings.
- incorporate systematic assessment strategies using observation, documentation, and interpretation in order to guide decisions about support for infant and toddler development and curriculum.
- design, implement, and evaluate developmentally effective curriculum and teaching plans that connect knowledge of academic content to meaningful and challenging learning environments for infants and toddlers.
- demonstrate practices in maintaining health/safety standards and managing infectious disease in group settings.
- develop a continuing professional growth plan and advocate for public policy that supports infants, toddlers, their families and the profession of early childhood education.

Career Information

Upon completion of this certificate, students exceed the minimum requirements to be a teacher of infants and toddlers in privately funded early childhood education programs (as required by Title 22 of the California Social Services Code of Regulations). Additionally, students qualify as an associate teacher of infants and toddlers in publicly funded early childhood education programs (as required by Title 5 California Code of Regulations).
Master Teacher Certificate

This certificate builds on the teacher level certificate with additional coursework on adult supervision, emphasizing the mentors role in the development of early childhood education professionals. It also includes six units of specialized study, allowing students to select a particular focus (i.e. the arts, health and safety, children's literature, culture and diversity, curriculum, and infant care). Upon completion of this certificate, the student is eligible to be a lead teacher in a private (Title 22) early care and education program, and, with documented work experience teaching children and supervising staff, is eligible to apply to the California Commission on Teacher Credentialing for a Master Teacher Child Development Permit to work as a lead teacher in a public (Title 5) early care and education program.

1. If ECE 415/NUTRI 320 was taken for the Teacher Certificate, it may be used towards a Specialization for the Master Teacher level. The certificate will then be a total of 50 units.

2. ECE 430 may be used for this specialization, even if it was used for the Teacher Level Certificate. The certificate will then be a total of 50 units.

3. ECE 331 may be used for the Master Teacher specialization, even when used toward the Teacher Certificate. If ECE 331 is used, then this certificate totals 50 units.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply child development principles to lead a teaching team in the design and evaluation of environments that are anti-bias, respectful, supportive, and challenging for all children, from infancy through adolescence.
- design early childhood programs that build respectful, reciprocal, and culturally informed family relationships with the intention of engaging families in their children's development and learning.
- select and utilize systematic child, program, and staff assessment tools to lead a teaching team in developing curriculum and teaching strategies.
- demonstrate practices in maintaining health and safety standards and preventing infectious disease in group-care settings.
- evaluate and implement curriculum and teaching plans, as evidenced through documentation, that support foundational skills and concepts in language, math, science, art, and social relationships.
- apply principles and practices for teaching that pull from a selected concentration of early childhood studies.
- create a continuing professional growth plan and advocate for public policy that supports children, families, and the profession of early childhood education.
- examine the role and development of early childhood education professionals as mentors and leaders in creating and leading anti-bias early childhood education programs.

### Career Information

Upon completion of this certificate, the individual is eligible to be a lead teacher in a private (Title 22) early care and education program, and with documented work experience teaching children and supervising staff, is eligible to apply to the California Commission on Teacher Credentialing for a Master Teacher Child Development Permit to work as a lead teacher in a public (Title 5) early care and education program.

### School Age Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, and a supervised field/lab experience. Additionally, it covers specific school-age program requirements and activities.

**Catalog Date:** June 1, 2020

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- distinguish developmental levels and appropriate activities for children in grades K-8 using systematic observation.
- create an appropriate and flexible environment for a variety of before- and after-school programs and full-day programs.
- analyze and apply positive guidance strategies that teach school-age children self-discipline and effective and positive interactions among a diverse group of peers.
- demonstrate respectful and positive interactions among a diverse population of children, families, staff and the community.
- implement practices in maintaining health and safety standards and preventing infectious disease in group settings with children ages five through fourteen.

**Career Information**

Upon completion of this certificate and with appropriate documented experience, the student exceeds the minimum requirements for employment as a teacher in privately funded before-and-after school child care programs. These requirements are outlined in Title 22 (Department of Social Services) regulations for child care licensing.

**Site Supervisor Certificate**

Administration of early care and education programs is the main focus of this certificate. Topics include administration, supervision and coordination of staff in early childhood settings. Additionally, it provides the educational coursework that serves as the core curriculum for the early childhood education field. Along with documented experience, this certificate leads to the Site Supervisor Permit issued by the California Commission on Teacher Credentialing and is required of those individuals supervising a publicly funded early childhood education site.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- formulate an educational philosophy to guide the operation of an early childhood program.
- support culturally respectful interactions among children, parents, teachers and the community.
- evaluate curriculum for sound pedagogy, content, and breadth, including planning for the learning environment, the daily routines, and the individual needs of children.
- manage program planning, budgeting, governing boards, enrollment, and personnel in accordance with the regulations of Title 5 (California Education Code of Regulations) and Title 22 (California Social Services Code of Regulations).
- create procedures for implementing standards of health, nutrition, and safety in group care early childhood education settings.
- plan professional and personal growth and advocacy activities to support children, families and teachers.

Career Information

Upon completion of this certificate, the student exceeds the minimum requirements to work as a director/site supervisor in a privately funded early care and education program. With documented experience supervising staff, the student also meets the requirements to work as a director/site supervisor in a publicly funded early care and education program.

Special Needs Specialist Certificate

This certificate provides the educational coursework that serves as the core curriculum for the early childhood education field with a specific focus on working with children with special needs. Topics include an introduction to the profession, observation techniques, age-appropriate curriculum, and a supervised field/lab experience in a fully-inclusive classroom. Additionally, this specialization includes a course introducing the student to issues relating to speech and language development.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate and apply knowledge of typical and atypical development to create early childhood classrooms that are respectful, supportive, and challenging for all children.
- design curriculum and programs for children with special needs that build respectful, reciprocal family relationships and support optimal development and learning both at home and in group care settings.
• incorporate systematic assessment strategies using observation, documentation, and interpretation in order to guide decisions about support for children with special needs.

Career Information

Upon completion of this specialization certificate, students are eligible to be teachers in fully-inclusive, privately funded (Title 22) early care and education programs and/or associate teachers in fully-inclusive, publicly funded (Title 5) programs serving young children and their families.

Teacher Certificate

This certificate provides a foundation for in-depth early childhood teacher preparation both through general education and through introductory studies in child development and in early childhood curriculum and pedagogy. Additionally, it covers culture and diversity issues in early childhood and health and safety practices. Students must verify required teaching experience to be recommended to the Commission on Teacher Credentialing for issuance of the Teacher Child Development Permit.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• confirm child development principles in creating environments that are healthy, respectful, supportive, and challenging for all children, from infancy through adolescence.

• design early childhood programs that build respectful, reciprocal family relationships with the intention of involving families in their children’s development and learning.

• utilize systematic child assessment strategies in order to guide decisions about curriculum and teaching strategies.

• evaluate and implement curriculum and teaching plans, as evidenced through documentation, that support foundational skills and concepts in language, math, science, art, and social relationships.

• demonstrate practices in maintaining health/safety standards and preventing infectious disease in group-care settings.

• analyze principles of culturally relevant and anti-biased education in developing and analyzing early childhood curriculum and environments that respond to and respect diverse cultures and individual needs of children.

• develop a continuing professional growth plan and advocate for public policy that supports children, families and the profession of early childhood education.
Early Childhood Education (ECE)

Upon completion of this certificate and with appropriate documented experience, the student meets the requirement for employment as a teacher in publicly funded early care and education programs, serving infants through preschool-age children. The student also meets the requirements to work as a teacher in a privately funded early care and education program, as well as in a before-and-after school-age program.

Certificate

Family Child Care Certificate

This certificate provides a foundation in early childhood education and includes courses specific to family child care providers. Additional topics include child development theories and principles, the child in the context of the family, and general health and safety practices.

Catalog Date: June 1, 2020

Upon completion of this program, the student will be able to:

- describe and implement developmentally appropriate activities for infant through school-age children.
- demonstrate respectful and reciprocal interactions with children and their families.
- construct home-style, appropriate environments for group care of young children.
- evaluate components of a quality family child care program and apply California licensing regulations.
- demonstrate practices in maintaining health/safety standards and preventing infectious disease in family child care settings.
- create a parent contract for family child care.
- assess needs of families and refer them to community resources.

Career Information

Upon completion of this certificate, the student is prepared to offer quality in-home child care to families in the community.

Early Childhood Education (ECE)

ECE 294 Topics in Early Childhood Education

Units: 0.5 - 4
Hours: 9 - 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020
This course provides opportunity to study current topics in early childhood education which are either not included in current offerings, or require emphasis beyond that offered in existing courses.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Examine current topics in Early Childhood Education
- Illustrate best practices with young children based on child development theories and research
- Generalize different levels of professionalism

ECE 295 Independent Studies in Early Childhood Education

Units: 1 - 3  
Prerequisite: None.  
Catalog Date: June 1, 2020

ECE 300 Introduction to Principles and Practices in Early Childhood Education

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU  
C-ID: C-ID ECE 120  
Catalog Date: June 1, 2020

This course is an introduction to early childhood education, including an overview of the history of the field, evolution of professional practices and ethics, educational principles that support child development from birth through the school-age years, and teaching practices based on observation, documentation, and interpretation of children’s behavior. Site visits may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- relate current perspectives on childhood, the care of children, and early childhood education to historical and cultural contexts.
- identify career paths, certification options, professional associations, and dispositions for working within the early childhood field.
- discriminate among philosophies of early childhood education in regards to assumptions about how young children learn and how early childhood teachers should teach.
- describe principles and practices that guide teaching when working with young children, to include the development of play-based learning environments, routines that involve children in applying emerging skills, and strategies that support young children’s social competence.
- identify the role of observation, documentation, and interpretation of children’s play as a tool for planning curriculum for young children and assessing their learning.

ECE 305 Introduction to Family Child Care

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course examines the operation of a family child care business, including developmentally appropriate teaching practices in Early Childhood Education. It includes California licensing regulations, health and safety standards, business practices, and appropriate practices and curriculum for children in a family child care setting.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify the components of a successful, culturally responsive, and developmentally appropriate licensed family child care home.
develop a plan for a licensed family child care facility, including philosophy, curriculum, policies, routines, guidance practices, communication and marketing.

interpret and reference the legal regulations of family child care homes in California (Title 22), fire code, and other health and safety requirements.

examine anti-bias and culturally responsive strategies for engaging and supporting diverse families.

ECE 312 Child Development

Same As: PSYC 372
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: PSYC 372, 373, and ECE 312 combined: maximum credit, one course)
General Education: AA/AS Area V(b); CSU Area D9; CSU Area E1; IGETC Area 4I
C-ID: C-ID CDEV 100
Catalog Date: June 1, 2020

This course is a study of the growth and development of children from the prenatal stage through adolescence. For each stage of development, the physical, cognitive, linguistic, social-moral, and emotional aspects of development, with attention to both typical as well as atypical development in each area, are discussed in reference to relevant research and theories. The course covers research methods and data collection approaches. The influences of culture, family, and the interaction of maturational and environmental factors are studied. The material in this course is designed as a foundation for early child care and education, teaching, and parenting. This course is not open to students who have completed PSYC 372.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the main characteristics of physical, cognitive, and social emotional development from birth through adolescence
- identify the roles of genetic and environmental influence on development
- identify the characteristics that exemplify typical and atypical development from birth through adolescence
- describe current and prominent theories of child development
- compare and contrast diverse parenting approaches and educational experiences in reference to developmental outcomes throughout childhood and adolescence
- apply theories to teaching and child-rearing practices with a focus on current topics in education for children from diverse backgrounds
- identify typical behavior of children and their individual differences and special needs (physical, cognitive, emotional, and social development)
- analyze the influence of culture, race/ethnicity, socioeconomic status, family and society structure on a developing child from birth through adolescence

ECE 314 The Child, the Family and the Community

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D7; IGETC Area 4G
C-ID: C-ID CDEV 110
Catalog Date: June 1, 2020

This course covers the child's development within the family and the community. It focuses on socialization methods, parenting style, and the impact of family, culture, school, community, and the media on the child's development. This course offers the opportunity to research and review the diverse community resources available to support the child and the family.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and evaluate changing family structures and roles in relation to social, cultural, and economic influences.
- describe and compare the influence of diverse cultures on the socialization of children.
- critically analyze the impact of stress factors on the child within culture and society.
- examine theories of socialization that address the interrelation of the child, family, and community, with specific reference to Urie Bronfenbrenner's Ecological...
Systems Theory.

- examine the impact of socialization, family history, and life experiences, on one's own developmental outcomes, and assess how this impacts relationships with children and families.
- critically review public policy related to the well-being of children and families.
- identify the roles, functions, and services offered to the child and family by community resources, including resources for children with special needs.

ECE 316 Mass Media and Young Children

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the impact of mass media on socializing young children with emphasis on the influence of mass media on development, including the impact of television, movies, commercial advertising, books, and popular music. It also includes strategies for minimizing the negative influences of mass media on children.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe how media affect children's overall development, attitudes, and behavior
- analyze a wide range of media for messages about race, gender, class, and violence
- identify the political and economic forces that shape and control the media
- utilize effective strategies and resources for combatting the negative effects of media on young children
- employ a variety of developmentally appropriate media literacy activities for young children
- identify approaches and resources for activism and advocacy around media issues

ECE 320 Curriculum and Interactions in Early Childhood Education

Units: 4
Hours: 36 hours LEC; 108 hours LAB
Prerequisite: ECE 300 AND ECE 312 or PSYC 372 with a grade of "C" or better.
Enrollment Limitation: Students must show proof of negative tuberculosis as well as immunizations for influenza, pertussis, and measles prior to participating in the lab.
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.
Transferable: CSU
C-ID: C-ID ECE 130
Catalog Date: June 1, 2020

This course provides supervised experience working with children in an early childhood setting. Topics include principles of curriculum development, classroom design, and child guidance, with opportunity to apply these key teaching principles in practical situations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply developmentally appropriate principles and practices to support young children's optimal development and learning within healthy, safe, respectful, supportive, and challenging learning environments.
- assess one's own teaching with respect to the teacher's role in providing best and promising practices in early childhood education.
- design, develop, and evaluate play-based learning environments for young children, routines that involve young children in applying emerging ideas and skills, and developmentally appropriate and inclusive learning activities for young children.
- plan, implement, and evaluate experiences that support young children in building a foundation for language and literacy, math and science, social sciences, and the arts.
- plan for children's learning using observation, documentation, and interpretation of their actions, ideas, and feelings.
- develop respectful and reciprocal relationships with families, with particular attention paid to those whose children have special needs, and supporting families whose home language is other than English.
demonstrate communication and guidance strategies that support the development of young children’s social competence.

analyze possibilities for children’s learning within play-based curriculum that support children’s cognitive, language, creative, physical, and social/emotional development.

ECE 321 Advanced Practicum in Early Childhood Education

| Units:  | 4 |
| Hours:  | 36 hours LEC; 108 hours LAB |
| Prerequisite: | ECE 320 with a grade of "C" or better |
| Enrollment Limitation: | Current Tuberculosis clearance. |
| Transferable: | CSU |
| C-ID: | C-ID ECE 210 |
| Catalog Date: | June 1, 2020 |

This advanced course provides supervised experience as a teacher in an early childhood education program. It is aimed at leadership in the areas of developing environments for learning, child observation and assessment, documentation of children’s work, behavior guidance, group management, collaborative teaching, building relationships with families, and effective preparation and implementation of curriculum.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a statement of philosophy and a list of guiding principles and practices for early childhood teaching, using current research and theory in child development.
- design, arrange, observe, and evaluate a complete classroom environment wherein children construct knowledge within a context of play.
- plan, implement, observe, and evaluate the overall and ongoing curriculum and learning encounters, verifying opportunities to apply emerging skills in the areas of language and literacy; math and science; the arts; physical development; and social sciences.
- demonstrate the use of observation, documentation, and interpretation for curriculum planning, assessment of children’s learning, and advocacy in regards to making visible children’s learning.
- organize communication systems within a classroom that involve families in the process of curriculum and program design.
- support the development of a climate of care and respect among children, teachers, and families by applying strategies for negotiating disputes, fostering caring relations, and sharing responsibility.
- assess one’s own teaching experiences to guide practice.

ECE 325 Positive Guidance Strategies with Young Children

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course introduces strategies that teachers and parents can use to help young children develop social and emotional skills. It examines theories, research, and practical applications for teachers in early childhood classrooms and parents at home. Developmental stages of children’s behavior, positive discipline techniques, and promotion of social-emotional skills are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine child development theories and research in regard to positive guidance strategies.
- summarize key practices from dominant guidance theories.
- analyze early childhood care and education physical environments, schedules, materials, activities, and practices for the effects on children’s behavior.
- assess children’s behavior and apply effective guidance practices in daily interactions.
- identify teaching and parenting practices that foster social-emotional skills.
- identify factors which have both positive and negative impacts on brain development and how these variables influence the development of executive functioning.
ECE 326 Making Learning Visible Through Observation and Documentation

This course links critical and reflective thinking to observation and assessment of young children’s development. It prepares teachers of young children to use observation, documentation, and interpretation strategies to improve program quality in early childhood settings. Multiple forms of child assessment and early childhood program assessment are explored. Site visits may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the purpose, value, and use of formal and informal assessments, including ethical and legal concerns.
- evaluate the strengths and limitations of common assessment tools with respect to children’s diverse cultures, home languages, and developmental capabilities.
- recommend changes to play environments, guidance strategies, curriculum activities, and care routines based on systematically recorded observational data that documents children’s actions, ideas, and feelings.
- demonstrate children’s developmental progress using observational documentation of children’s ideas and behavior.
- analyze the effectiveness of photo documentation in conveying how young children learn within quality early childhood settings.
- integrate observed documentation of children’s ideas, feelings, and actions to engage children’s families and others as active partners in developing early childhood curriculum and programs.

ECE 330 Infant and Toddler Development

This course provides a study of infants and toddlers from pre-conception to age three including physical, cognitive, language, social, and emotional growth and development. It applies theoretical frameworks to interpret behavior and interactions between heredity and environment. Additionally, it emphasizes the role of family and relationships in development.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate biological and environmental factors that influence pre-conception and prenatal health, development, and early parenting.
- outline the major developmental milestones, characteristics, and growth patterns of children from conception through 36 months.
- demonstrate developmentally appropriate observation skills in the areas of physical, social, emotional, and/or cognitive development of infants and toddlers.
- analyze the multiple contextual influences on infant and toddler development, including the influence of culture, diverse family practices, and interrelationships between heredity and environment.
- use current research to explain a variety of developmental issues in the first three years including the impact of birth practices on the newborn and family.
- relate developmental theory to infant and toddler development, interactions, and relationships.
- compare and contrast caregiving practices and environments that support optimal development.

ECE 331 Care and Education of Infants and Toddlers

Units: 3
Hours: 54 hours LEC
Prerequisite: ECE 312
Corequisite: ECE 312
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320
Transferable: CSU
C-ID: C-ID ECE 200
Catalog Date: June 1, 2020

This course links critical and reflective thinking to observation and assessment of young children’s development. It prepares teachers of young children to use observation, documentation, and interpretation strategies to improve program quality in early childhood settings. Multiple forms of child assessment and early childhood program assessment are explored. Site visits may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the purpose, value, and use of formal and informal assessments, including ethical and legal concerns.
- evaluate the strengths and limitations of common assessment tools with respect to children’s diverse cultures, home languages, and developmental capabilities.
- recommend changes to play environments, guidance strategies, curriculum activities, and care routines based on systematically recorded observational data that documents children’s actions, ideas, and feelings.
- demonstrate children’s developmental progress using observational documentation of children’s ideas and behavior.
- analyze the effectiveness of photo documentation in conveying how young children learn within quality early childhood settings.
- integrate observed documentation of children’s ideas, feelings, and actions to engage children’s families and others as active partners in developing early childhood curriculum and programs.
This course applies current theory and research to the care and education of infants and toddlers in group settings. It examines essential policies, principles, and practices that lead to quality care and developmentally appropriate curriculum for children birth to 36 months.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize the essential policies and practices of quality infant and toddler programs, including primary caregiving, quality indicators, and practices that support the unique abilities of children from birth through 36 months of age.
- demonstrate strategies to promote healthy relationships in the care and education of infants and toddlers, including reciprocal communication techniques and respectful practices with diverse families served.
- evaluate and design appropriate infant and toddler curriculum and environments based on observation, documentation, and reflection.

ECE 342 Constructive Math and Science in Early Childhood Education

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

The course is an introduction to the constructivist approach to teaching math and science concepts in early childhood education. The content and teaching techniques support the perspective that children construct knowledge through a dynamic, interactive process that facilitates their development of working theories related to math and science. Topics include an overview of the role of the teacher in developing appropriate experiences for children and a review of current standards and guidelines, including California's Early Learning Foundations and Frameworks.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify inquiry skills and concepts children are building in early childhood and provide meaningful opportunities for children to apply and master these skills and concepts.
- define and implement effective approaches to teaching and learning science and mathematics in early childhood education.
- demonstrate teaching techniques that encourage and support children in actively developing understandings of the processes involved in mathematical and scientific knowledge.
- develop and evaluate important elements of a science-rich and math-rich learning environment.
- design and evaluate curriculum in math and science using an inquiry-based approach.
- generalize knowledge of the constructivist/inquiry approach to design curriculum that is culturally respectful and inclusive as well as considerate of children's prior experiences gaining knowledge about the world.
- analyze mathematic and science curriculum concepts based on the knowledge of relevant research and knowledge of child development.
- critique the important concepts in children's construction of knowledge in mathematics and science in comparison to product-driven repetition and drill practices.

ECE 343 Language and Literacy Development in Early Childhood

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course prepares early childhood educators and others working with young children to recognize, understand, and enhance the emergent language and literacy experiences and skills of young children. The knowledge of developmentally appropriate language and literacy practices improves early childhood educators' ability to support young children in the early years (birth to five years) to build a strong foundation for learning to read and write in the primary grades. Topics include an overview of the teachers' role in developing appropriate language and literacy experiences for young children, including ways to support the child learning English as a second language.
Upon completion of this course, the student will be able to:

- describe developmental patterns in early literacy learning and research-based teaching practices that help children build a foundation for rich vocabularies and language fluency for reading and writing.
- design and define developmentally appropriate goals and expectations for young children’s achievement in reading and in writing.
- incorporate developmentally appropriate teaching practices that support children’s language and literacy knowledge from birth through age five.
- evaluate and define program policies (staff development, curricular resources, and assessment) that support early childhood language and literacy teaching and learning.
- analyze practices and assess issues that support young children learning a second language while simultaneously maintaining competence in the home language.
- evaluate and demonstrate strategies of collaboration with children’s families to implement projects that support children’s literacy experiences both at school and at home.

**ECE 350 Introduction to Elementary Teaching with Field Experience**

Same As: ENGED 324  
Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Before students can attend the school site for field work, they are required to show proof of TB clearance. They may also need to complete a fingerprint clearance through the cooperating school district, if the district requires it.  
Advisory: ECE 312 or PSYC 372  
Transferable: CSU  
General Education: AA/AS Area III(b)  
C-ID: C-ID EDUC 200  
Catalog Date: June 1, 2020

This course introduces the concepts and issues related to teaching diverse learners in today’s contemporary schools, kindergarten through grade 12 (K-12). Topics include teaching as a profession and career, historical and philosophical foundations of the American education system, contemporary educational issues, California’s content standards and frameworks, and teacher performance standards. In addition to class time, this course requires a minimum of 45 hours of structured fieldwork in public school elementary classrooms that represent California’s diverse student population, and includes cooperation with campus-approved certificated classroom teachers.

This course is not open to students who have completed ENGED 324.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify academic requirements and experiences needed to become a credentialed elementary school teacher
- evaluate attitudes, actions, behaviors, and responsibilities that define the role of a professional educator in a public school setting
- demonstrate objective, descriptive, and interpretative observation skills
- analyze learning theory through planning, teaching, and interaction with elementary students
- examine and assess issues concerning diversity in elementary student backgrounds, interests, experiences, and abilities
- identify school and community resources that address issues concerning diversity
- develop a personal preliminary philosophy of teaching, examining personal characteristics, assumptions and beliefs, and experiences which could affect development as a teacher
- apply course content to classrooms through structured assignments, observations, and reflections

**ECE 356 Programs for the School-Age Child**

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; or ESLR 340 AND ESLW 340  
Transferable: CSU  
Catalog Date: June 1, 2020

This course introduces students to the fundamentals of planning, implementing, and evaluating programs for out-of-school time programs (before-school, after-school, and...
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the developmental milestones of children in grades K-8
- demonstrate how developmental milestones are characterized within a school-age program setting
- design, implement, and evaluate high-quality, age-appropriate activities for school-age programs
- develop schedules and routines for school-age children
- identify the differences in program models for school-age children
- differentiate between programs offered to school-age children
- analyze budget, staffing patterns, staff qualifications, and facility management for use in before-school, after-school, and summer programs
- evaluate a variety of environments for school-age programs

ECE 358 Activities for the School-Age Child

This course focuses on design, implementation, and evaluation of developmentally appropriate activities for the school-age child (K-8). Curriculum areas include games, construction, art, music and movement, science and nature, and drama. It explores other topics including cooperative program planning, environments, guidance techniques, and the importance of positive interpersonal relationships between the adults and the children in the program. This course may require students to conduct observations in a school-age classroom.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recall developmental stages and characteristics of children TK-8, including risk factors or stress related issues school-aged children might face.
- examine and analyze children's activities, ideas, and interests as sources for developmentally-appropriate curriculum planning.
- design and evaluate a variety of activities appropriate for school-aged children in group settings including strategies and activities that reduce stress.
- analyze and apply guidance strategies for school-age children in a group setting.
- describe strategies for establishing supportive adult-child relationships in the school-age classroom.
- discuss the role of environment in developmentally appropriate curriculum planning for school-age children.
- critique school-age child care practices through observation and practical research.

ECE 361 Introducing Young Children to Visual Arts

This course prepares teachers in early childhood education with strategies for introducing young children to the media and tools of drawing, painting, sculpting, and other visual arts commonly used by young children to represent and understand the world around them. The focus is on observing children’s natural ways of exploring each medium and learning strategies to facilitate and document children's emerging skills and relationship with each medium. Included are strategies for designing early childhood environments that promote children's exploration of visual arts.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate and observe the developmental progression of children's exploration and use of the tools and media of drawing, painting, sculpting, and construction.
- demonstrate the attributes, selection, and use of expressive media and tools commonly used with young children.
- create interest areas within an early childhood classroom that provide developmentally appropriate media, tools, and settings for young children's independent exploration and use of a variety of expressive media.
- design encounters with expressive arts media and tools that present challenges and problems appropriate to children's developmental interests and abilities for each phase of development from infancy through eight years of age.
- evaluate early childhood classroom environments for their capacity to promote young children's comfort and competence in using expressive media to represent impressions, feelings, and experiences.
- summarize anecdotal observations of children's encounters with the tools and media of expressive art and make visible children's learning through developmental portfolios and displays.
- design documentation that supports reflective examination among teachers, families, and children of the aesthetic and cognitive dimensions of children's work.

ECE 363 Music and Movement with Young Children

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| General Education: | AA/AS Area I |
| Catalog Date: | June 1, 2020 |

This course introduces students to theoretical principles and practical applications for integrating appropriate music and movement experiences in early childhood settings. It focuses on using music and movement as strategies for forming a classroom community of learners, and managing behaviors, routines, and transitions. This course also explores incorporating culturally diverse music and movement activities to support children's understanding and acceptance of differences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe how music and movement supports a young child's growth in all developmental domains.
- plan, implement, and evaluate music and movement experiences and environments for young children, including children with special needs.
- use music and movement as a strategy for forming a classroom community of learners, and for managing behaviors, routines, and transitions.
- create a repertoire of songs, finger plays, rhymes, chants, and movement activities to support children's development.
- identify strategies for using culturally diverse music and movement experiences to support children's understanding and acceptance of differences.

ECE 404 Children with Special Needs

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | ECE 312 or PSYC 372 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course introduces the variations in development of children with special needs ages birth through eight and the resulting impact on families. It includes an overview of historical and societal influences, laws relating to children with special needs, and the identification and referral process. Observations in public or private children's centers, schools, and agencies may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize various exceptionalities and conditions of children and identify interventions based on the developmental continuum.
- evaluate the role of history and society in shaping current policies related to best practices of inclusion and serving children with special needs.
- collaborate with families and community members in supporting inclusion of children with special needs.
• describe the sequence of development and the inter-relationships among developmental areas.
• identify community resources that meet the needs of children with special needs and their families.
• explain various strategies that support collaborative practices in promoting the optimal development of children within the context of their families and communities.
• summarize the steps in the referral process including observation, documentation, screening, and assessment.
• identify the benefits of using a strength-based approach in working with children with special needs and their families.

ECE 407 Curriculum and Strategies for Children with Special Needs

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ECE 404 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides supervised experience working with young children with special needs in inclusive early care and education settings with an option to work in a non-inclusive classroom (e.g., a diagnostic preschool, preschool communication class, social communication class, or autism special day classroom). This course covers curriculum and intervention strategies for working with children with special needs and partnering with their families as well as the importance of cultural competence. It focuses on the use of observation and assessment in meeting the individualized needs of children and families in inclusive and non-inclusive classrooms. Topics include integration strategies, classroom environments, and individualized instructional strategies for children. This course emphasizes creating modifications, accommodations, and/or adaptations to the environment, routines and curriculum, role of the teacher in partnering with families, and working with interdisciplinary teams.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate program, educational, and professional policies, based on special education laws and evidence-based practices.
• design and implement curriculum strategies based on children’s individualized needs in inclusive and natural environments.
• advocate for effective partnerships with families, interdisciplinary team members, and community resource specialist.
• explain current special education laws and their impact on early childhood practice.
• describe strategies that support the central role of families and their collaborative partnerships with team members and community professionals.
• demonstrate knowledge of reflective practice, cultural responsiveness, confidentiality, and professional practices when working with colleagues, children, and families.
• practice various formal and informal observation and assessment procedures used to guide identification and intervention decisions.
• identify curriculum, environment, and natural learning opportunities to meet individualized outcomes and goals of young children and families.
• design modifications and accommodations based on observation, evidence-based practices, and legal requirements to support children’s development.

ECE 414 CPR and Pediatric First Aid

Same As: HEED 311
Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (HEED 310, 311, 316 & ECE 414 combined: maximum credit-1 course)
Catalog Date: June 1, 2020

This course meets the requirements for American Red Cross certification in California Child Care Health & Safety Training which includes adult, child, and infant CPR and pediatric first aid. It also includes legal considerations, avoiding disease transmission, responding to sudden illnesses and injuries, and recognition of common childhood diseases. This course is not open to students who have completed HEED 311.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze and implement triage techniques
• assess the emergency care of life-threatening conditions
• evaluate and formulate emergency first aid techniques for common childhood injuries and illnesses
• demonstrate infant, child, and adult CPR skills
• appraise disease transmission prevention techniques as they relate to CPR and first aid procedures
• plan and design a functional first aid kit

ECE 415 Children's Health, Safety and Nutrition

Same As: NUTRI 320
Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
C-ID: C-ID ECE 220
Catalog Date: June 1, 2020

This course examines basic nutrition, health, and safety needs of children from the prenatal period through school age. Topics include introduction to early childhood curriculum, laws, regulations, standards, policies, and procedures related to child health, safety, and nutrition. It emphasizes integrating and maintaining the optimal health, safety, and nutritional concepts in everyday planning and program development for all children, along with the importance of collaboration with families and health professionals. This course is not open to students who have taken NUTRI 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the interrelationship between health, safety, and nutrition as it relates to the well-being of children.
• develop various methods of collaboration with families and teachers that promote the health, safety, and nutrition of children.
• identify community resources that promote the health, safety, and nutrition of children.
• evaluate assessment tools and policies that protect the health, safety, and nutrition of children in child care settings.
• employ safe food handling techniques for preventing food-borne illnesses.
• assess the general symptoms and management of common infectious diseases that may occur in childhood.
• identify potential hazards in children's environments and describe how to make them safer.
• identify nutrient needs during fetal development, infancy, and childhood.
• identify and explain the major nutrients and their food sources.
• evaluate a child's nutrient intake by comparing it with current nutrition standards and recommendations.
• compare nutrition, health, and safety practices from the perspective of culturally diverse communities.

ECE 420 Administration I: Programs in Early Childhood Education

Units: 3
Hours: 54 hours LEC
Prerequisite: ECE 300 with a grade of "C" or better; and either ECE 312 or PSYC 372 with grades of "C" or better; Or, BA in Child Development or related field from a regionally accredited college or university.
Advisory: ECE 320
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the administration of early childhood programs. It covers program types, budgets, management, regulations, laws, and the development and implementation of policies and procedures. It also examines various administrative tools, philosophies, and techniques needed to open, organize, and operate an early care and education program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply administration skills in various types of early care and education programs.
• compare and contrast various program structures, philosophies, and curriculum models.
• identify strategies to ensure equity and respect for children, families, staff, and colleagues.
• demonstrate knowledge of strategic and fiscal planning.
• summarize systems and methods to support sound fiscal operations in a variety of early care and education settings.
• demonstrate knowledge of compliance with regulatory systems.
• evaluate components of quality programs, facilities, and operations.
• assess various methods and tools of evaluation.
• examine effective policies and procedures for staffing and scheduling.

ECE 422 Administration II: Personnel and Leadership in Early Childhood Education

</tbody>
</table>

This course covers effective strategies for personnel management and leadership in early care and education settings. It includes legal and ethical responsibilities, supervision techniques, professional development, and reflective practices for a diverse and inclusive early care and education program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate effective practices for managing and leading staff and administering early care and education programs.
• implement ongoing professional development plans based on evaluation of staff and administrator needs.
• establish professional relationships and facilitate collaboration and communication between colleagues, families, and stakeholders.
• evaluate the factors needed to create a diverse and inclusive environment.
• identify components of hiring practices, observation, and evaluation practices of staff.
• describe the legal requirements and responsibilities of administering an early care and education program.
• formulate strategies for compensation and professional growth opportunities in programs.
• summarize essential practices for collaboration with staff, families, and community.
• articulate the importance of professional integrity and confidentiality.

ECE 424 Adult Supervision: Mentoring in a Collaborative Learning Setting

<table>

</tbody>
</table>

This course covers principles and methods of supervising student teachers, volunteers, staff, and other adults in early care and education settings. Emphasis is on the roles and development of early childhood professionals as mentors and teachers working collaboratively to guide a teaching team or individual within a classroom setting. This course satisfies the adult supervision requirement for the CA Child Development Master Teacher Permit and Site Supervisor permit issued by the CA Commission on Teacher Credentialing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• individualize mentoring and supervision strategies based on the roles and developmental stages of adult learners, including student teachers.
• demonstrate competency in communication and reflective practices when working with diverse adult populations.
• evaluate and use a variety of personnel, program, and environmental assessment tools to inform leadership decisions.
• identify characteristics of effective leaders and mentors.
• critique and practice strategies to support adult learners.
• demonstrate reflective practice, cultural competency, and ethical conduct.

ECE 430 Culture and Diversity in Early Childhood Education

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.
Transferable: CSU
General Education: AA/AS Area V(b); AA/AS Area VI
C-ID: C-ID ECE 230
Catalog Date: June 1, 2020

This course examines the development of social identities in diverse societies, including theoretical and practical implications of oppression and privilege as they apply to young children, families, early childhood programs, and teaching practices. Various classroom strategies are explored emphasizing culturally and linguistically appropriate anti-bias approaches supporting all children in becoming competent members of a diverse society. It also includes self-examination and reflection on issues related to social identity, stereotypes and bias, social and educational access, media, and schooling.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• critique theories and identify ways in which cultural and family patterns affect children’s behavior and identity.
• analyze various aspects of children’s experience as members of families targeted by social bias considering the significant role of education in reinforcing or contradicting such experiences.
• compose rationale and goals for a multicultural, anti-bias early childhood program.
• distinguish stereotypic and biased classroom materials and environments.
• examine how children develop an awareness of differences and how prejudice may be formed in the early years.
• describe various techniques teachers can use when responding to children’s developing discriminatory behaviors.
• evaluate the impact of personal experiences and social identity on teaching effectiveness.

ECE 432 Leadership in Diversity

Units: 3
Hours: 54 hours LEC
Prerequisite: ECE 430 with a grade of “C” or better
Transferable: CSU
Catalog Date: June 1, 2020

This course expands upon ideas developed in ECE 430. It discusses ways for teachers to effectively engage in and support anti-bias work and the creation of equitable education systems. Specific cultural differences and ways to respond to the unique needs of diverse classroom communities are addressed. Additionally, it critically discusses the role of individual perspective and suggests ways for teachers to respond to diverse viewpoints of families and staff in an anti-bias classroom.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• choose specific ways to respond to the unique needs of diverse classroom populations and families when implementing anti-bias education.
• demonstrate effective techniques early childhood education professionals can use to communicate about anti-bias education with families and communities, including policy and philosophy statements.
• analyze approaches that most effectively involve parents and staff as partners in the learning environment of an anti-bias classroom, including support for English language learners and multicultural families.
• devise and apply strategies to recruit and support under-represented groups, including men, to become more involved in the field of early childhood education.
• identify ways to take part in anti-bias work, focusing on the teacher as an agent of change and developing effective strategies when working with administrators and
staff who are indifferent or opposed to this approach.

ECE 455 Environment Rating Scales in Early Childhood Programs

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course examines Environment Rating Scales (ERS): Infant/Toddler (ITERS), Early Childhood (ECERS), School-Age Care Programs (SACERS), and Family Child Care (FCCERS) as tools for quality improvement in a variety of child development programs. It emphasizes theory and best practices in order to evaluate classrooms, materials, and interactions between adults and children. Site visits will be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the basic quality components, subscales, and items contained within the ERS.
- administer an ERS by evaluating early childhood classrooms and playgrounds.
- measure early childhood classrooms and playgrounds using ERS quality scales for a total score, average score, and subscale scores.
- evaluate strategies while using an ERS to improve efficiency in collecting information and ensure accurate scores.
- apply observer guidelines to minimize the effect on a classroom while conducting an ERS.
- compose an action plan to improve quality components of the students' own early childhood classrooms and playgrounds.
- effectively communicate summary reports and results of ERS evaluations to classroom teachers and administrators.

ECE 495 Independent Studies in Early Childhood Education

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Economics is the study of how individuals and societies choose to use limited resources for production of goods and services and how they distribute them for current and future consumption. Economics is divided into two major areas: macroeconomics and microeconomics. Macroeconomics studies decision-making at the national level. Macroeconomics topics include gross domestic product, unemployment, inflation, and money and banking. Microeconomics studies decision-making at the individual household, business firm, and industry levels. Microeconomics topics include theories of the firm and consumer behaviors.

Courses offered by the Economics Department are designed to satisfy general education requirements at American River College, and they are transferable to the CSU system, the UC system, and other fine institutions of higher learning in the United States. Furthermore, these economics courses will provide students with essential tools to analyze contemporary national and international economic issues.

Division Dean  Kathy Sorensen (Interim)
Department Chairs  Chiuping Chen

(916) 484-8283

Associate Degree for Transfer

A.A.-T. in Economics

The Associate in Arts degree in Economics for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Economics for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Students interested in transferring to a CSU campus to pursue a bachelor's degree in Economics should meet with a counselor to confirm the courses required for lower-division preparation in the major.

Catalog Date: June 1, 2020

The Associate in Arts in Economics for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- explain terms and concepts used in macroeconomics and microeconomics.
- evaluate models to explore consequences of economic policy proposals on households and businesses.
- evaluate economic models to explore the consequences of macroeconomic events and the probable consequences of macroeconomic policy proposals on the whole economy.
- solve problems requiring the application of economics, statistics, and mathematics.
- apply accounting and economic concepts and principles in making decisions about firm operations.

**Economics (ECON)**

**ECON 302 Principles of Macroeconomics**

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 100 or 132 with a grade of "C" or better, or placement through the assessment process.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferrable: CSU; UC
General Education: AAAS Area V(b); CSU Area D2; IGETC Area 4B
C-ID: C-ID ECON 202
Catalog Date: June 1, 2020

This course is an introduction to macroeconomics. It is concerned with the economic well-being of the national economy. Topics include supply, demand, aggregate supply, aggregate demand, equilibrium, money, banking, taxation, inflation, employment, and economic growth.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain terms and concepts used in macroeconomics
- examine the effects of government policy on individuals and businesses
- evaluate economic models to explore consequences of economic events and probable consequences of economic proposals
- relate the concepts of macroeconomics to his or her own community and personal experiences
- assess the relationship between economic stability and public policy
- list the causes of macroeconomic instability
- predict the role of United States in the global economy given the present international economic conditions
ECON 304 Principles of Microeconomics

This course covers the interaction with individuals and business firms in the marketplace to determine prices, output, employment, and efficient utilization of economic resources. Topics include marginal utility, costs of production, and natural resource economics. This course also covers resource allocation under conditions of competition, monopoly, oligopoly, and monopolistic competition.

Upon completion of this course, the student will be able to:

- explain terms and concepts used in microeconomics
- construct analytical economic models
- evaluate models to explore consequences of economic proposals on households and businesses
- relate the concepts of microeconomics to his or her own community and personal experiences
- assess the relationship between government policies and business decisions
- list and explain examples of government intervention in the market system

ECON 305 Introduction to Economies of Africa

This course introduces various topics on Africa's economies, such as indigenous economic systems, why Africa remains poor, pre- and post-colonial development strategies, the cold war factor, development finance, and new theories on development. Additionally, the politics of international development including China's expanding role in Africa are examined.

Upon completion of this course, the student will be able to:

- apply macroeconomics concepts to the economies of Africa.
- list the causes of poverty in Africa.
- assess the relationship between colonialism and current economic systems in Africa.
- predict Africa's role in the future global economy.
- explain why Africa matters to the rest of the world.
- compare the challenges of job creation in Africa to those in United States.

ECON 320 Concepts in Personal Finance

This course focuses on the principles of personal finance, including investment strategies, financial planning, and the role of financial institutions. Students will learn to develop effective money management skills and understand the impact of financial decisions on personal financial health.

Upon completion of this course, the student will be able to:

- explain the role of financial institutions in the economy.
- evaluate different types of financial instruments and investment options.
- develop a personal budget and manage finances effectively.
- understand the consequences of credit usage and debt management.
- analyze and interpret financial statements and reports.
This course covers how to analyze financial affairs for lifelong decision making. It examines the basics of financial planning, analysis, and decision making in areas of budgeting, taxes, credit, money management, insurance, investments, and retirement with an emphasis on principles to develop economic decision-making skills. This course is not open to students who have completed BUS 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine economic needs, establish financial goals, and design a personal financial plan to achieve them
- apply economic principles and concepts to develop a financial plan
- assess the changing economic environment and develop alternative plans or contingency plans so the personal financial plan remains viable
- analyze the various investment options to aid in successful financial planning
- apply the concept of the time value of money
- explain types of risk and risk management methods to develop a risk management plan
- analyze advantages and disadvantages of credit, determine the cost of credit, and assess the types and sources of credit
- construct, implement, review, and revise a financial plan

ECON 495 Independent Studies in Economics

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College (ARC). They must also discuss the study with a professor from the Department of Economics at ARC in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Electronic equipment is present everywhere in our lives. From computerized traffic signals to personal computers and cellular telephones, modern electronic systems make our everyday lives easier, safer, and more efficient. Electronic technicians design, develop, build, install, repair and maintain many different types of sophisticated electronic devices.

The American River College Electronics program combines broad based Electronic and Telecommunications training with the newest specialty areas (such as Robotics, Fiber Optics, Programmable Interface Controllers and Stamp Microcontrollers). By working closely with our industry partners, we ensure our curriculum is relevant and meets industry current and future needs. This relevant and up-to-date education prepares graduates for excellent career opportunities in the Electronics, Robotics or Telecommunications fields.

American River College is an official NARTE (National Association of Radio and Television Engineers) Federal Communication Commission (FCC) test site and offers an FCC license preparation course.

The Electronic Systems Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus
sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design and build several of the most common circuits used in electronics technology.
- calculate the mathematical relationships among voltage, current, resistance, capacitance, inductance, reactance, frequency, and phase angle as they relate to electronic circuits.
- analyze aviation, marine, and commercial communication systems that are covered in the FCC General Class Radiotelephone license examination.
- analyze operating and defective electronic circuits by interpreting data from a variety of test and measurement equipment.
- differentiate and diagram schematic symbols used in electronic and electrical industrial applications.
- use common hand tools in the mechanical installation of copper and fiber optic cabling used in sophisticated communication systems.
- research and interpret basic electronic components using manufacturers’ data manuals, library resources, and the Internet.
- evaluate electrical parameters using various types of test and measurement equipment used in the analysis of power supply, amplifier, and general electronic circuits.

Career Information

This degree provides students with the knowledge to successfully enter a variety of electronics and telecommunication careers. Working closely with our industry partners and contacts ensures our curriculum is relevant and meets the current and future needs of the Electronics and Telecommunications Industry. American River College is an official test site of the National Association of Radio and Telecommunication Engineers (NARTE) for the Federal Communication Commission (FCC) General Radio Telephone License. Obtaining the Associate of Science degree and the certificate improves the opportunities for quality employment and career advancement.

A.S. in Mechatronics

This degree provides training in a multi-disciplinary field focusing on industrial automation. Topics include electricity, electronics, industrial motor controls, programmable logic controllers, robotics, AC/DC drives, mechanical design, and manufacturing technologies.

The Mechatronics Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
• integrate the principles of mechanical, electronic, and electrical technologies into the design of mechatronic systems.

• evaluate mechanical and electrical solutions to technological problems.

• apply industry-appropriate design techniques to develop technical design documents from a conceptual design.

• design robotic and machine automation systems using mechatronic principles.

• evaluate welding projects in accordance with welding procedures and specifications.

• contrast DC, AC, brushless, servo, and stepper motor operation.

• create technical documentation/presentations of models from the mechanical engineering discipline in both technically correct and visually pleasing solid, orthographic, and section view formats.

• design programmable logic controller (PLC) programs demonstrating input/output capabilities.

• design programs for an operator interface terminal (OIT) demonstrating input/output capabilities.

Career Information

This degree prepares students for the following technical and supervisory career opportunities: industrial mechanical/electrical systems technician, food processing machine service technician, facilities systems technician, waste water systems technician, manufacturing coordinator, field service technician, and mechanical electrical machine systems installer.

Certificates of Achievement

Advanced Electronics and Telecommunications Certificate

This certificate provides training in electronic system component identification and characteristics, semiconductor theory and application, power supply design and operation, telecommunication copper and fiber optic systems, the mathematics for circuit analysis, and advanced troubleshooting. It is designed to be completed in two semesters.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• analyze circuit operating characteristics by applying Ohm's, Watt's, and Kirchhoff's laws.

• research and interpret basic electronic components using manufacturers' data manuals, library resources, and the Internet.

• analyze and apply mathematics, including logarithms and decibels to determine, analyze, and control outputs when problem solving transistor and field effect transistor (FET) circuits.

• evaluate electrical parameters using various types of test and measurement equipment used in the analysis of power supply and amplifier circuits.

• apply mathematics and semiconductor theory to identify, evaluate, and troubleshoot electronic circuits.

• calculate the mathematical relationships among voltage, current, resistance, capacitance, inductance, reactance, frequency, and phase angle as they relate to electronic circuits.
• construct and test circuits on prototyping boards and printed circuit boards.
• design and simulate circuits in software.

Career Information

This certificate program enables students to find employment in the electronics industry or to progress up the career ladder. Skills development in the critical areas along with electronics and telecommunications theory and laboratory practice make this an ideal certificate for those wishing to upgrade and update their electronics skills.

Biomedical Equipment Technology Certificate

This certificate covers the theory, operation, maintenance, troubleshooting, and certification of biomedical equipment used in hospitals, medical device manufacturers, or other service organizations. It includes an in-depth study of frequently used medical equipment.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• evaluate the data from basic preventive maintenance tests on the following equipment: multi-parameter physiological monitor, electrocardiogram (ECG) machine, blood pressure monitor, defibrillator, pulse oximeter, infusion pump, and electrosurgical unit.
• distinguish and list various medical imaging technologies.
• set up standard electrical measurement tools and differentiate the uses for calibration and troubleshooting of medical equipment.
• set up the following equipment: multi-parameter physiological monitor, ECG machine, blood pressure monitor, defibrillator, pulse oximeter, infusion pump, and electrosurgical unit.
• categorize biopotentials and electrodes as they relate to basic human anatomy and physiology systems.
• associate the applicable regulation with the regulating organizations.
• list and compare the different types of bioelectric amplifiers, signal processing circuits, and isolation circuits.
• compare and contrast the protocols for working in the operating room and special care units in the hospital.

Career Information
Digital Home Technology Integration Certificate

This certificate provides training to configure, integrate, maintain, and troubleshoot electronic and digital home integration systems. Coursework provides the essential skills for residential networking concepts, components, and information on home network installation. This includes techniques to install, trim, terminate, and troubleshoot cabling systems. In addition, it provides the training and skills necessary to integrate audio, security, and environmental controls in a complete system.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design a home data network
- construct a home telephone network
- evaluate and troubleshoot a home network
- assemble a home audio and video network
- build a wireless home network
- certify a home data and telephone network
- set up a security and fire alarm system in a home
- apply industry standards to system design for a home

Career Information

This certificate prepares individuals to design, install, and support residential networks and home integration for employment in the home technology industry. It develops the technicians' ability to configure, integrate, maintain, and troubleshoot home theater, music, security, and home networks.

Digital Repair and Upgrade Technician Certificate

This certificate combines basic electronics theory and application with computer repair and support skills. Topics including high-tech soldering along with component and system level electronics are focused on in the electrical area. Computer repair skills and support are covered in the computer area.

Total Units: 18 - 21

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply the rules of electrical safety for working with personal computers and associated equipment.
- describe the terminology used for working with personal computers.
- categorize the components inside a personal computer.
- upgrade and install new and updated software programs.
- research and download updated system drivers from the Internet.
- compare and evaluate solder connections in accordance with industry standards.
- evaluate operational characteristics of electronic components and devices operating under normal and abnormal conditions.
- differentiate resistance, capacitance and inductive devices and their operating characteristics.
- analyze and troubleshoot basic electronic circuits.
- research and interpret basic electronic components using manufacturers’ data manuals, library resources, and the Internet.

Career Information

This certificate prepares the student for a wide variety of jobs in the computer industry such as network communication cable installer, interface troubleshooter, and fiber optic installer.

Electronic Systems Technology Certificate

This certificate combines broad-based electronic and telecommunications training with specialty areas such as robotics, fiber optics, programmable interface controllers (PICs), and stamp micro-controllers.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design and build several of the most common circuits used in electronics technology.
- calculate the mathematical relationships among voltage, current, resistance, capacitance, inductance, reactance, frequency, and phase angle as they relate to electronic circuits.
- analyze aviation, marine, and commercial communication systems that are covered in the FCC General Class Radiotelephone license examination.
- analyze working and defective electronic circuits by interpreting data from a variety of test and measurement equipment.
- differentiate and diagram schematic symbols used in electronic and electrical industrial applications.
- use common hand tools in the mechanical installation of copper and fiber optic cabling used in sophisticated communication systems.
- research and interpret basic electronic components using manufacturers’ data manuals, library resources, and the Internet.
- evaluate electrical parameters using various types of test and measurement equipment used in the analysis of power supply, amplifier, and general electronic circuits.

Career Information

This certificate provides students with the knowledge to successfully enter a variety of electronics and telecommunication careers. Working closely with our industry partners and contacts ensures our curriculum is relevant and meets the current and future needs of the Electronics and Telecommunications Industry. American River College is an official test site of the National Association of Radio and Telecommunication Engineers (NARTE) for the Federal Communication Commission (FCC) General Radio Telephone License.

Fiber Optics Certificate

This certificate is an introduction to fiber optics technology. Topics include fusion and mechanical splicing, fiber connectivity, optical time domain reflectometer (OTDR), and other specialized test equipment operations. System design, installation, troubleshooting, and repair are emphasized. Courses in communication theory and copper cabling are included in the certificate, producing a technician with a wide variety of skills.

Total Units: 12

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- define the terminology used with single mode fiber optic cable.
- apply correct safety procedures when working with high power fiber optic modules and test equipment.
- calculate the attenuation in a complete fiber optic communication system.
- inspect and identify fiber optic system problems.
- evaluate communication system components for a given application.
- compare fiber optic component specifications using manufacturers’ data manuals, reference books, and the Internet.
• perform inspection and quality control of fusion and mechanical fiber optic splices.

Career Information

This certificate prepares students for entry-level employment in a wide variety of positions in the telecommunication and fiber optic industry. It is also valuable for people working in the industry to upgrade their skill level to include the newest advancements in fiber technology.

Mechatronics Certificate

This certificate provides training in a multi-disciplinary field focusing on industrial automation. Topics include electricity, electronics, industrial motor controls, programmable logic controllers, robotics, AC/DC drives, mechanical design, and manufacturing technologies.

• design programs for an operator interface terminal (OIT) demonstrating input/output capabilities.

Career Information

This certificate prepares students for the following career opportunities: industrial mechanical/electrical systems technician, food processing machine service technician, facilities systems technician, waste water systems technician, manufacturing coordinator, field service technician, and mechanical electrical machine systems installer.

Robotics Certificate

The certificate provides an overview of the application, programming, and design of robotic systems and components. It covers the theory and application of electronics,
sensors, controllers, and robots. Various robotic platforms are used to give a wide understanding of all types of current and future systems.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and describe the terminology used when working with microcontrollers.
- program a microcontroller.
- compare brushed DC, brushless DC, stepper, and RC servo motor characteristics.
- construct and program mobile and pick-and-place robots.
- calculate speed and acceleration of robotic motion.
- describe the principles of sensors used to measure pressure and temperature.
- create simple electronic schematics using basic schematic symbols.
- analyze and troubleshoot basic electronic circuits.
- diagnose simple circuit failures with standard electronic measurement devices.
- design a PLC Logic circuit demonstrating input/output capabilities and timer and counter operation.

Career Information

This certificate may lead to careers in the following: robotics technician, manufacturing technician, automated warehouse technician, and facilities technician.

Telecommunication Specialist Certificate

This certificate provides both theory and hands-on application using fiber optics, coaxial cable, and CAT 6 data cable. All aspects of communication systems are covered including antennas, transmitters and receivers, transmission lines, and signal propagation. System design and troubleshooting are also included.

Catalog Date: June 1, 2020

Upon completion of this program, the student will be able to:

- evaluate potential problems associated with electrostatic discharge (ESD).
- analyze and troubleshoot basic electronic circuits.
- compare and contrast series and parallel resistive, capacitive, and inductive devices.
- analyze the differences between surface-mount techniques and through-hole techniques.
- analyze and describe the components of a complete telecommunication system.
- design an office building telecommunication system using fiber optics and copper cable.
- examine and evaluate the decibel losses and gains in a complete fiber optic communication system.
- assess safety hazards when working with fiber optic systems and associated test equipment.
- perform repairs and adjustments to electronic communication systems according to factory specifications.
- install epoxy, hotmelt, anaerobic, and mechanical connectors on multimode fiber optic cable.
- prepare cost estimates for fiber optic and copper network installation using computer software.
- identify and diagram schematic symbols used in industrial electronic and electrical applications.
- analyze aviation, marine and commercial communication systems that are covered in the FCC General Class Radiotelephone license examination.
- apply FCC rules and regulations governing commercial, aviation, and marine communication systems to practical communication systems.

Career Information

This certificate provides training for design, installation, and maintenance of any type of wired or wireless communication system such as remote monitoring, radio frequency (RF) control, radio and television transmitters, public safety and government communication equipment, and fiber optic systems.

Certificates

Basic Electronics and Telecommunications Certificate

This certificate provides training in basic electronics theory and applications, telecommunication copper and fiber optic systems, and surface mount soldering devices (SMD). It also includes schematic symbol interpretation and basic electronic troubleshooting. This certificate can be completed in one semester, making it an ideal stepping stone to the Advanced Electronics and Telecommunications certificate.

Upon completion of this program, the student will be able to:

- evaluate potential problems associated with electrostatic discharge (ESD).
- assess safety hazards when working with electronic systems.
- create simple electronic schematics using basic schematic symbols.
- construct, analyze, and troubleshoot basic electronic circuits.
- apply electrical concepts to measure and evaluate resistance, capacitance, and inductive devices and circuits.
- synthesize and analyze electronic circuitry using computer electronic-simulation software.
- diagnose simple circuit failures with basic electronic measurement devices.
- assemble electronic circuits using basic soldering techniques.
- solve mathematical and algebraic problems as applied to electronic circuits.
- apply Ohm's, Watt's, and Kirchhoff's laws to determine and analyze circuit operating characteristics.

Career Information

This certificate is designed for anyone wanting to enter the electronics or telecommunications industry. It satisfies the requirements of a variety of entry-level positions such as printed circuit board (PCB) assembler, telecommunication field technician, or rework technician.

Basic Mechatronics Certificate

This certificate provides introductory training in the multidisciplinary field of mechatronics, which combines mechanical and electronic technologies. Topics include introductory courses in electronics, programmable logic controllers, basic CAD design, and welding.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- integrate the basic principles of mechanical, electronic, and electrical technologies into the design of mechatronic systems.
- evaluate mechanical and electrical solutions to technological problems.
- apply basic design techniques to develop technical design documents.
- design basic robotic and machine automation systems using mechatronic principles.
- create and evaluate welding projects in accordance with welding procedures and specifications.

Career Information

This certificate prepares students for internships and entry-level employment with local industries using mechatronic and design principles.
ET 101 Introduction to Amateur Radio

This course introduces the fundamentals of amateur radio for public and emergency communication. It covers the equipment, procedures, and uses for amateur (Ham) radio.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the fundamental purpose for amateur radio services.
- diagram a typical amateur radio setup.
- describe the typical method to contact and disconnect from an amateur radio station.
- describe the licensing requirements for an amateur radio license.

ET 103 Ham Radio Technician License Preparation

This course covers the fundamentals of amateur radio required to pass the national Association for Amateur Radio Relay League (ARRL) amateur radio operators technician license. Topics include wave theory, operator rules, proper radio operation, electronics review, and regulations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the fundamental purposes of Amateur Radio Services.
- solve basic problems using Ohm's Law and problems involving frequency, wavelength, and power.
- describe basic electronic components such as resistors, capacitors, inductors, transistors, diodes, and integrated circuits.
- describe the concepts of modulation and demodulation.
- describe basic types of radio wave propagation.
- describe the basic functions of dipole, ground plane, and beam antennas.
- recognize the symptoms of receiver overload, over and under modulation, distortion, radio frequency (RF) feedback, off frequency signal fading, and noise.
- recognize electrical, radiation, and lightning hazards associated with transmitters and antennas.

ET 115 Fiber Optics and Telecommunication Cabling

This course introduces the concepts of telecommunication cable installation and connection practices and standards. It includes the study of commonly used fiber optic and copper cable types and connectors, installation tools, and test equipment. It emphasizes installation techniques in practical situations. Laboratory activities provide practical hands-on experience in the operation and use of tools and test equipment specific to the telecommunication industry. Field trips may be required.
Student Learning Outcomes
Upon completion of this course, the student will be able to:

- analyze and describe the components of a complete telecommunication system.
- assemble and construct connectors and plugs used in telecommunication systems.
- design an office building telecommunication system using copper cable.
- inspect and repair, if necessary, copper cable connections and installations.
- employ common hand tools in the mechanical and electrical installation of a communication system.
- analyze test equipment data to determine the location of a communication system failure.
- identify and describe the use of tools and test equipment necessary for fiber optic and copper cable installations.
- identify safety hazards when working with telecommunication systems.
- evaluate communication system components and select the best equipment for a given application.

ET 193 Introduction to Robotics and Sensors

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

This course is an introduction to robotics, controllers, and sensors. Topics include the operation and design of robots and sensors, hardware component selection, assembly, and software programming of various types of sensors and robotic assemblies. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- apply the rules of electrical safety and work envelope dangers.
- identify and describe the terminology used when working with robots and sensors.
- diagnose robot hardware and software problems.
- describe the principles of pressure, pressure indicators, and pressure transducers.
- compare the principles of temperature, temperature indicators, and temperature transducers.
- identify robot end-effectors used to accomplish special tasks.
- list the different detection methods used to sense objects.
- evaluate the increased complexity and usefulness of robots through history.
- identify the physical construction of robotic bases and carriers.
- compare DC, stepper, and servo motor characteristics.

ET 197 Introduction to Mechatronics

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | ET 302 with a grade of "C" or better |
| Catalog Date: | June 1, 2020 |

This course introduces mechatronics, the combination of electronic and mechanical components and systems used in the control and transmission of mechanical power. Topics include the analysis of electric controls, programmable logic controllers (PLCs), electromagnetic devices, sensors, pneumatic devices, and electric motors.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
- differentiate open- and closed-loop electrical control methods.
- describe and diagram a PLCs architecture.
- design a PLC Logic circuit demonstrating input/output capabilities and timer and counter operation.
- contrast DC (direct current), AC (alternating current), and stepper motor operation.
- compare digital sensor technologies.
- differentiate and diagram pneumatic power systems.
- compare pneumatic schematic symbols and analyze the operation of pneumatic valves and actuators.
- diagnose PLC hardware and software issues.

ET 250 Employability Skills for Technical Careers

**Same As:** AT 107 and WELD 150

**Units:** 2

**Hours:** 36 hours LEC

**Prerequisite:** None.

**Advisory:** ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320, ESLL 320, and ESLW 320 with a grade of "C" or better.

**General Education:** AA/AS Area III(b)

**Catalog Date:** June 1, 2020

This course provides the opportunity to explore technical careers while developing valuable work and life skills. It is an introduction to a variety of technically-related occupations, emphasizing technical careers in the Sacramento area. Activities are designed to enhance personal development, employability skills, and self esteem through leadership, citizenship, and character development. This course is not open to students who have completed AT 107 or WELD 150.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify personal interests.
- demonstrate effective communication skills.
- demonstrate personal qualities that are desirable in the workplace.
- create long-term and short-term goals.

ET 253 Industrial Communication Systems Support

**Units:** 4

**Hours:** 54 hours LEC; 54 hours LAB

**Prerequisite:** ET 302 with a grade of "C" or better

**Catalog Date:** June 1, 2020

This course covers the operation, repair, and assembly of personal computers (PC), portable test units (PTU), and communication systems. Safety, terminology, component identification, file management, industry specific hardware and software, and upgrades in industry are among the topics covered. Wired, wireless, voice over Internet protocol (VoIP), analog/digital communications, and synchronous optical networks (SONET) are also covered. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- support electrostatic discharge (ESD) safety devices and procedures.
- evaluate the major components inside a PTU.
- set up, install, and configure a hard drive to meet industry specifications.
- diagnose computer memory modules and industry-specific cards.
- test upgraded and installed software programs.
- plan, download, install, configure, and test updated system drivers.
- evaluate different features of cable and digital subscriber line (DSL) modems.
- choose common hardware and software test systems for troubleshooting and repair of PTUs.
- research and evaluate electronic communications equipment.
- set up test media and voice communication systems.
- set up and configure security and surveillance systems.
- assess Internet protocol (IP) based measurement setup and control systems using static and dynamic IP addresses.
- evaluate wireless fidelity (Wi-Fi) and VoIP systems.

ET 260 Introduction to Medical Ultrasound Equipment

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Corequisite: ET 425
Catalog Date: June 1, 2020

This course provides in-depth training for maintaining ultrasound equipment used in the biomedical field. It covers imaging modes, physical principles, transducers, system block diagrams, common peripherals, Doppler effect, image quality, test equipment, and troubleshooting.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare ultrasound transducers that convert physiological properties to electrical signals.
- configure standard electrical measurement tools and differentiate the uses for calibration and troubleshooting of ultrasound equipment.
- diagnose typical failures of transducers from displayed waveforms.
- compare standard and Doppler ultrasound technologies.
- create a block diagram and list the different components, transducers, signal processing circuits, and displays used in ultrasound equipment.

ET 261 Introduction to Biomedical Equipment Networking

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Advisory: ET 253 and 302;
Catalog Date: June 1, 2020

This course provides an overview of the Digital Information Communication of Medicine (DICOM) system. DICOM is a patient data system for medical devices to communicate with the hospital database. Topics include interface standards, test equipment, troubleshooting, and applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare DICOM networking protocols.
- set up standard and specialized electrical measurement tools for the testing and troubleshooting of medical networks.
- diagram a typical medical equipment network.
- create a network interface cabling diagram including color codes and connector types.
- list typical test equipment used for DICOM communication troubleshooting.

ET 262 Introduction to Respiratory Therapy Ventilators

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
This course provides in-depth training for the maintenance of respiratory ventilation machines used in the biomedical field. It covers respiratory ventilator basics, ventilator block diagrams, patient circuits, test equipment, and troubleshooting.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagram the patient circuit for a respiratory ventilator.
- demonstrate the use of standard electrical measurement tools.
- differentiate the uses of electronic instruments for calibration and troubleshooting of respiratory ventilator equipment.
- diagnose typical failures of respiratory ventilators.
- create a block diagram and list the different components, transducers, signal processing circuits, and displays used in respiratory ventilation equipment.

ET 263 Introduction to Medical X-ray Imaging Equipment

Units: 1
Hours: 18 hours LEC
Prerequisite: ET 425 with a grade of "C" or better
Catalog Date: June 1, 2020

This course provides an introduction to the maintenance of medical X-ray imaging equipment. It covers X-ray generators, components of vacuum tube and solid state imaging chains, cameras, digitizing methods, processing, display methods, and radiation safety.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate types of X-ray and nuclear medicine equipment used for diagnostic purposes.
- set up standard electrical measurement tools and specialized instruments for the calibration and troubleshooting of X-ray equipment.
- diagnose typical failures of X-ray imaging equipment.
- create a block diagram and list the different components used in the imaging system.
- describe the dangerous health effects from the exposure of X-rays and nuclear radiation.
- diagram typical vacuum tube and digital X-ray generators.
- differentiate legacy film displays from digital imaging systems.

ET 294 Topics in Electronics Technology

Units: 0.5 - 5
Hours: 9 - 90 hours LEC; 27 - 270 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This is an individualized course developed in cooperation with industry to meet specialized training needs. It may be taken four times with no duplication of topics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Apply the rules of electrical safety when working with stamp microcontrollers.
- Identify and describe the terminology used when working with stamp microcontrollers.
- Safely work with line voltage components that are interfaced to stamp microcontrollers.
- Demonstrate the proper use of Electro Static Discharge (ESD) precautions when working with stamp microcontrollers.
- Program and troubleshoot the stamp microcontroller using P-Basic language.
- Identify and properly name the internal components that make up the stamp microcontroller.
- Demonstrate the assembly of the Parallax Boe-Bot kit.
- Download updated microcontroller software from Parallax.
- Program the Parallax Boe-Bot for various robotic tasks.

### ET 295 Independent Studies in Electronics Technology

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

### ET 298 Work Experience in Electronics Technology

| Units: | 1 - 4 |
| Hours: | 60 - 300 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position, or job related to the electronics industry with a cooperating site supervisor. Students are advised to consult with the Electronics Technology Department faculty to review specific certificate and degree work experience requirements. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| General Education: | AAAS Area II(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the electronics industry. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the electronics industry related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

### ET 302 Principles of Electricity and Electronics

| Units: | 4 |
This introductory course explores the field of electronics and electricity. Topics include the theory of AC, DC, Ohm's law, inductance, and capacitance. Theory is reinforced through the use of electronic simulation software and hands-on lab experiments using industry instruments. Field trips to local electronics industries may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create simple electronic schematics using basic schematic symbols.
- analyze and troubleshoot basic electronic circuits.
- apply electrical concepts to measure and evaluate resistance, capacitance, and inductive devices.
- compare and contrast series and parallel resistive, capacitance, and inductive circuits.
- synthesize and analyze electronic circuitry using computer electronic-simulation software.
- diagnose simple circuit failures with standard electronic measurement devices.
- assemble electronic circuits using basic soldering techniques.

ET 308 Technical Soldering Practices and Techniques

| Units:     | 2 |
| Hours:     | 18 hours LEC; 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course provides training in the standards, processes, and techniques related to the field of lead and lead-free soldering. It emphasizes the differences between lead and lead-free soldering processes. Topics include safety, Electrostatic Discharge (ESD), Printed Circuit Board (PCB) components and assembly, electronic components and identification, lead and lead-free soldering and desoldering techniques in Plated Through Hole (PTH), Surface Mount Device/Technology (SMD/SMT), and fine to ultra-fine-pitch soldering. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate, set up, and operate a wide variety of soldering and desoldering equipment, workstations, and fixtures that may require visual observation
- describe the difference between lead and lead-free soldering processes, plated through hole and surface mount technology, and various soldering wire and fluxes
- recognize, prepare for, and prevent potential problems associated with electrostatic discharge (ESD)
- inspect and evaluate solder connections in accordance with industry standards
- identify quality soldering and correct defective solder connections
- compile and assemble materials required for soldering electronic circuit components
- demonstrate the skill of soldering and desoldering under varying conditions

ET 309 Soldering and Cabling Quality Standards

| Units:     | 3 |
| Hours:     | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | ET 115 and 308 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers Interconnecting and Packaging Council (IPC) standards for the inspection and evaluation of printed circuit boards and cable assemblies used in the electronics industry. It prepares students to take the tests for IPC Electronic Circuits Specialist and Certified IPC Application Specialist certifications. Field trips may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the purpose and application of the IPC/WHMA-A-620 (A-620 Standard) requirements and acceptance for cable and wire harness assemblies certifications.
- identify the materials, components, and requirements to meet the standards of the IPC J-standard and A-standard.
- describe hardware installation for wire and terminals, plated through-hole technology (PTHT) components, and surface mount technologies (SMT) components to meet the IPC J-STD-001 J-standard and IPC A-standard.
- describe the general soldered connection acceptance requirements for PTHT and SMT connections including lead and lead-free solder.
- describe the test methods and related standards including statistical process control methodology and inspection skills to meet the IPC standards.
- describe cable and wire preparation, measuring cable assemblies, wire bundle securing, shielding, and protective coverings to meet the IPC A-620 standard.

ET 312 Mathematics for Circuit Analysis

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers the foundations for the analysis of electrical and electronic circuits. It includes the analysis of direct current (DC), alternating current (AC), transformer, capacitor, inductor, and energy conversion circuits.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve mathematical and algebraic problems as applied to electronic circuits.
- apply Ohm's, Watt's, and Kirchhoff's laws to determine and analyze circuit operating characteristics.
- analyze and organize data into graphs and perform simple transformations.
- demonstrate the operation of a scientific calculator for solving math, word, and circuit problems.
- evaluate the operating parameters of voltage and current divider circuits.
- analyze and interpret the mathematical relationships between voltage, current, resistance, capacitance, inductance, reactance, frequency, and phase angle as they relate to AC circuits.
- calculate voltage, current, power, turns, and impedance ratios for transformers.
- evaluate resistor-inductor (RL) and resistor-capacitor (RC) circuits and time constants.

ET 322 Semiconductors and Nanotechnology

| Units: | 4 |
| Hours: | 54 hours LEC; 54 hours LAB |
| Prerequisite: | ET 302 with a grade of "C" or better |
| Corequisite: | ET 312 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is a detailed study of semiconductor devices and their applications. Semiconductor components - such as diodes, transistors, op-amps, including their use in complex circuits - are covered. Nanotechnology theory and devices, including their present and possible future applications, are studied. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• compare the physical construction and theory of operation of junction diodes, bipolar junction transistors, field effect transistors, and operational amplifiers.

• troubleshoot linear and switch-mode power supplies.

• diagnose amplifier, power supply, and driver circuit problems.

• calculate theoretical operating characteristics and compare to measured results on operating amplifier circuits.

• diagram and label the functional blocks of amplifiers and power supplies.

• interpret schematic diagrams and formulate solutions to problems in electronic circuitry.

• assess data from a variety of test and measurement equipment used in the analysis of power supply, and amplifier circuits.

• describe basic nanotechnology building blocks and their possible uses.

• design and simulate circuits in software.

• construct and test circuits on prototyping boards and printed circuit boards.

ET 335 Integrated Circuits with Computer Applications

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 302 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers integrated circuits (ICs) and applications used in industrial and consumer products. Topics include digital theory and applications from standard transistor-transistor-logic (TTL) logic circuits to complex circuits built on programmable logic devices (PLDs). Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• operate an oscilloscope and a variety of measurement equipment to measure and interpret electrical signals.

• analyze schematic diagrams.

• evaluate a signal through a circuit using a schematic diagram and an oscilloscope.

• compare the schematic symbol, truth-table, and theory of operation of the seven basic logic gates.

• generate decoder circuits from logic gates and evaluate the output of decoder circuits.

• convert logic circuits to Boolean equations.

• convert Boolean equations to logic circuits.

• analyze and simplify Karnaugh maps from Boolean equations.

• compare the schematic symbol, truth-table, and theory of operation of the three basic latches.

• design and evaluate decoder display circuits.

• analyze the operation of "divide by n" counter circuits.

• design timer circuits using the 555 timer and RC circuits.

• construct and evaluate analog-to-digital converters.

• compare the operational characteristics of digital devices.

ET 369 The Design and Fabrication of Electronics Projects

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: ET 322 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an opportunity to design and build advanced projects. It includes work on approved electronics projects outside the scope of typical classroom
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- plan and design an electronics project that is marketable or meets a need of society.
- build an electronics project to meet industry specifications.
- assemble a working electronics model using commercially and custom fabricated components.
- research material and components using manufacturers’ data books and the Internet.
- fabricate plastic, metal, and composite parts for an electronics project.
- design electrical circuits using computer simulation software.
- prepare a list of materials, a cost spreadsheet, and an estimate of manufacturing costs.
- create a clear and concise operation or instruction manual that would enable someone with no engineering background to successfully operate the project.
- prepare and present an industry-style presentation on the design, application, and manufacturing of the project.

ET 380 Introduction to Electronic Communications

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 302 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers electronic communications including UHF, VHF, microwave, satellite, and fiber optics. AM and FM transmitters, transmission lines, antennas, and receivers are analyzed down to the component level. Propagation, wave theory, decibels, and signal transmission limitations are also covered. Technician safety and proper test equipment use are stressed throughout the course. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- operate a variety of major electronic circuits used in communication equipment.
- analyze and troubleshoot various problems in electronic communication circuits.
- perform repairs and adjustments to electronic communication systems to operate at factory specifications.
- design and build several common circuits used in electronic communication systems.
- diagnose problems in electronic communication systems.

ET 381 Electronic Communication Regulations

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ET 312, 322, or 380
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an overview of the Federal Communication Commission (FCC) General Radiotelephone license requirements. It also covers the electronics theory and the rules and regulations mandated by the FCC. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the requirements for the FCC General Class Radiotelephone license.
differentiate maritime and international law and operating procedures.
apply alternating current (AC) and direct current theory.
apply basic semiconductor principles for diodes and transistors.
apply operational amplifier and digital theory.
apply receiver and transmitter theory.
apply antenna theory.
apply aircraft navigation equipment theory.
apply marine navigation equipment theory.

ET 385 Digital Home Technology Integration

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 115 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the fundamentals of Home Technology Integration (HTI). It includes the study of and practical experience in installation, integration, and troubleshooting of entertainment, voice, security, data, and networking systems found in the home or small office. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and describe the components in a Home Technology Integration (HTI) system.
- design a complete HTI system according to factory specifications.
- assess safety hazards when working with HTI systems.
- analyze test equipment data to determine the location of a HTI system failure.
- evaluate HTI components and select the best for a given application.
• identify and describe the use of tools and test equipment necessary for HTI system installations.

• inspect and repair, if necessary, existing HTI system installations.

ET 388 Fiber Optics

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 302 with a grade of "C" or better
Advisory: ET 380
Transferable: CSU
Catalog Date: June 1, 2020

This course in fiber optics covers optical theory and operation including the complete fiber optic communication system. It includes fiber optic terminology and instruction in the use of tools and equipment associated with fiber optic installation and maintenance. Tests of the fiber optic systems are performed using sophisticated equipment such as optical power meters and optical time domain reflectometers (OTDR). It also includes system design and troubleshooting procedures. A field trip may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze and describe the components in a complete fiber optic communication system.

• analyze and troubleshoot basic fiber optic system problems.

• compare fiber optic component specifications using manufacturers' data manuals, reference books, and the Internet.

• calculate the losses and gains in a complete fiber optic communication system.

• contrast the differences between a fusion splice and a mechanical splice.

• evaluate ST fiber optic jumper cables using a laser source and an optical power meter.

• contrast the differences between ST, SC, and FC fiber optic connectors.

• calculate the attenuation of a complete fiber optic communication system.

• assess safety hazards when working with fiber optic systems.

• compose a parts list for a typical fiber optic system installation.

• design a complete operational fiber optic communication system.

ET 420 Microcontrollers and Digital Signal Processors

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: ET 335
Transferable: CSU
Catalog Date: June 1, 2020

This course is an in-depth study of microcontrollers and digital signal processors (DSP). It focuses on digital concepts, such as data flow, internal architecture, memory, data converters, special registers, and the interfacing of input/output devices, sensors, and motors. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• categorize tasks best handled by a microcontroller or DSP.

• analyze software routines of typical digital input and output devices.

• modify and troubleshoot software routines demonstrating digital system operations.

• design interface circuits and modify software routines for input and display devices.

• design circuits and modify microcontroller software routines to interface with sensors and motors.

• create and troubleshoot DSP routines for power supplies and motor control.
diagnose and correct microcontroller hardware and software problems.

ET 421 Advanced Electronic Communications

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 253 and 380 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers advanced analog and digital electronic communications including digital two-way radio, cellular, microwave, satellite, and broadcast communications. Topics include digital radio frequency theory, digital transmitters and receivers, P25 digital radio, antennas, software-defined radios, and related industry test equipment.

Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the programming of a function generator to generate basic electronic communication signals and use an oscilloscope for measuring and analyzing signals.
- program a software defined radio (SDR) to tune in radio frequency (RF) signals and display the frequency spectrum.
- create and display digital communication signals using an arbitrary function generator.
- organize blocks describing FM transmitters and receivers.
- differentiate RF and microwave frequencies, wavelengths, feedline characteristics, and safety precautions.
- differentiate broadcast and broadband communication.
- describe and measure the radiation patterns for different types of antennas.
- describe P25 digital radio characteristics and the benefits over analog two-way radios.

ET 425 Introduction to Biomedical Equipment Technology

Units: 4
Hours: 72 hours LEC
Prerequisite: ET 302 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the fundamentals of biomedical equipment and the responsibilities of electronics technicians in the medical device service industry for hospitals, medical device manufacturers, or other service organizations. It includes a detailed study of the theory, operation, and maintenance of hospital equipment, systems and procedures, and the related electronic systems. Additional topics include basic anatomy and physiology as they relate to the biomedical equipment. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- categorize biopotentials and electrodes as they relate to basic human anatomy and physiology systems.
- compare and contrast various temperature and pressure transducers (e.g. ECG electrodes, ultrasound transducers, pressure transducers) that convert physiological properties to electrical signals.
- set up different types biomedical equipment and differentiate their uses for calibration and troubleshooting.
- list and compare the different types of bioelectric amplifiers, signal processing circuits, and isolation circuits.
- distinguish and list various medical imaging technologies.
- identify and describe medical equipment used to measure physical and electrical functions of the heart such as flow rate, pressure, bioelectricity, and electroconduction.
- diagram the leads used in a standard 3-lead, 5-lead, and 12-lead electrocardiogram.
- list the major electrical, chemical, radiation, biological, and fire hazards.
list the regulatory agencies affecting the biomedical business.
identify and describe medical equipment used to analyze blood.
compare and contrast the protocols for working in the operating room and special care units in the hospital.
identify and describe medical equipment and respiratory transducers used to test the mechanics of breathing and typical parameters of respiration.
diagnose typical failures of transducers from displayed waveforms.

ET 426 Advanced Biomedical Equipment Technology

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ET 425 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the operation, maintenance, troubleshooting, and certification of biomedical equipment used in the medical device industry. It includes an in-depth, hands-on study of frequently used medical equipment preparing electronic technology students for a biomedical technician internship or trainee position in a hospital, medical device manufacturer, or other service organization. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- measure grounding and leakage current with an electrical safety analyzer.
- associate the applicable regulation with the regulating organizations.
- diagram the standard leads and set up an electrocardiogram (ECG) simulator to performance test an ECG monitor.
- set up the following equipment: multi-parameter physiological monitor, ECG machine, blood pressure monitor, defibrillator, pulse oximeter, infusion pump, and electrosurgical unit.
- evaluate the data from basic preventive maintenance tests on the following equipment: multi-parameter physiological monitor, ECG machine, blood pressure monitor, defibrillator, pulse oximeter, infusion pump, and electrosurgical unit.
- analyze electrical measurements from specialized testers for electrosurgery and defibrillator equipment.

ET 490 Advanced Student Projects Laboratory

Units: 2
Hours: 108 hours LAB
Prerequisite: ET 335 or 380 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an opportunity for students to pursue advanced electronics projects to learn and practice skills needed in the construction, installation, maintenance, and repair of electronic devices.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze malfunctions in complex electronic equipment.
- describe the functions and operation of various electronic equipment.
- demonstrate skills in fabrication and repair techniques.
- design and construct an electronics project.
- research electronics information and specifications from printed and Internet sources.
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Emergency Medical Technology | American River College

Paramedicine is an allied health specialty whose practitioners respond to emergencies before a patient reaches a hospital, rendering basic and advanced medical treatment before and during transport to a medical facility. Classroom, clinical and field internship training prepares paramedics to assess and treat a wide variety of medical emergencies. The knowledge, skills and experience gained through the 12-month paramedic program allows students to meet the responsibilities outlined in the Department of Transportation’s Emergency Medical Services Education Standards. Certificate

Emergency Medical Technician (EMT) Certificate

This program prepares students to function as certified Emergency Medical Technicians. Training topics include the skills necessary to provide emergency medical care at a basic life support level with a fire, ambulance, or other specialized service. This program is conducted in compliance with Title 22, Division 9, Chapter 2 of the California Code of Regulations and Emergency Medical Technician (EMT). A "C" or better is required to obtain a course completion certificate.

Catalog Date: June 1, 2020

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Documentation of current American Heart Association CPR Basic Life Support certification. No other form of CPR certification is accepted. Students must be present and provide a copy of the AHA CPR certification on the first day of the course. Not open to students with current NREMT or California State certification or licensure as an EMT, EMT-Basic, Advanced EMT or paramedic.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Verification of current American Heart Association Basic Life Support CPR certification. No other form of CPR certification is accepted. Students must be present and provide a copy of the AHA CPR certification on the first day of the course. Not open to students with current NREMT or California State certification or licensure as an EMT, EMT-Basic, Advanced EMT or paramedic.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate the nature and seriousness of the patient's condition or extent of injuries.
Emergency Medical Technology (EMT)

EMT 110 Emergency Medical Technician (EMT) Didactic

This course provides academic preparation and psychomotor skills training to prepare the student for EMT 111, the Basic Life Support (BLS) clinical and field practicum. Successful completion of EMT 110 and EMT 111 will make the student eligible to take the National Registry of EMTs (NREMT) EMT certification exam. Topics include the BLS knowledge, application, and problem solving necessary to work as an EMT (formerly known as EMT-Basic or EMT-1) in the Emergency Medical Services (EMS) field for an ambulance service, fire department, emergency department, or other specialized service. A "C" letter grade as well as successful completion of the EMT 110 Exit Exam and psychomotor skill tests are required to be eligible for EMT 111. The course conforms to the 2007 National EMS Scope of Practice Model and 2009 EMS National Education Standards and complies with Title 22, Division 9, Chapter 2 of the California State Code of Regulations. This course is approved by the Emergency Medical Services (EMS) Agency of the Sacramento County Health Department. Field trips and off-campus lab assignments may be required.

Upon completion of this course, the student will be able to:

- evaluate the acuity of an illness or injury during simulated patient care encounters based on a given scenario, assessment findings and diagnostic data.
- formulate a field diagnosis, a differential diagnosis and an appropriate plan for treatment and transport, given a set of typical signs, symptoms and vital signs data.
- perform typical BLS tasks safely and effectively while conforming to NREMT and California State standards.
- demonstrate the requisite knowledge, knowledge application and problem-solving ability appropriate for an entry-level EMT during a validated, predictive Exit Exam covering the same topic areas as the NREMT certification exam.
- list the appropriate pharmacological knowledge required for the medications outlined in the National EMT Scope of Practice Model.
- describe the methods and skills needed to safely and effectively administer the medications outlined in the National EMT Scope of Practice Model during a simulated patient encounter.
- demonstrate the affective attributes expected of an entry-level EMT and Allied Healthcare professional.

EMT 111 Emergency Medical Technician (EMT) Practicum

This course provides academic preparation and psychomotor skills training to prepare the student for EMT 111, the Basic Life Support (BLS) clinical and field practicum. Successful completion of EMT 110 and EMT 111 will make the student eligible to take the National Registry of EMTs (NREMT) EMT certification exam. Topics include the BLS knowledge, application, and problem solving necessary to work as an EMT (formerly known as EMT-Basic or EMT-1) in the Emergency Medical Services (EMS) field for an ambulance service, fire department, emergency department, or other specialized service. A "C" letter grade as well as successful completion of the EMT 110 Exit Exam and psychomotor skill tests are required to be eligible for EMT 111. The course conforms to the 2007 National EMS Scope of Practice Model and 2009 EMS National Education Standards and complies with Title 22, Division 9, Chapter 2 of the California State Code of Regulations. This course is approved by the Emergency Medical Services (EMS) Agency of the Sacramento County Health Department. Field trips and off-campus lab assignments may be required.

Upon completion of this course, the student will be able to:

- apply emergency medical care based on assessments and findings.
- demonstrate proper procedures in lifting, moving, and positioning a patient to minimize discomfort and prevent further injury.
- utilize communicating, transporting, and record keeping skills.

Career Information

Emergency Medical Technicians operate in a variety of settings from public emergency services, private industry and health care facilities. EMT employment varies from community to community and is considered a growing occupation within the Allied Health professions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply emergency medical care based on assessments and findings.
- demonstrate proper procedures in lifting, moving, and positioning a patient to minimize discomfort and prevent further injury.
- utilize communicating, transporting, and record keeping skills.
This course provides the supervised practical lab hours necessary to complete EMT education after completion of EMT 110. Successful completion of EMT 110 and EMT 111 will make the student eligible to take the National Registry of EMTs (NREMT) EMT certification exam. The student is placed in the clinical and field environments necessary to obtain the minimum required patient contacts. This course conforms to the 2007 National EMS Scope of Practice Model as well as the 2009 EMS National Education Standards and complies with Title 22, Division 9, Chapter 2 of the California State Code of Regulations. This course is approved by the Emergency Medical Services (EMS) Agency of the Sacramento County Health Department. Field trips or off-campus lab assignments are required. This course is Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the affective attributes associated with both an EMT and an Allied Healthcare professional.
- assess, manage, treat and either transport or prepare for transport a minimum of ten ill or injured patients utilizing fundamental EMT knowledge and skills.
- explain the practical responsibility of the EMT during the transfer of care using personal experience with actual prehospital and hospital patient contacts.
- demonstrate, during simulated or actual patient contacts, the appropriate strategies used when confronted by a patient-initiated refusal of care and/or transport.
- draft patient care reports, for at least five actual patient contacts, that exceed the minimum standards for prehospital documentation and data entry.
- interview, using the appropriate therapeutic communication techniques, all the parties necessary to acquire the information necessary to ascertain an actual or simulated patient's condition.

EMT 150 Advanced Emergency Medical Technician (AEMT) Didactic

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HEED 310 and 323 with grades of "C" or better
Enrollment Limitation: Current Healthcare Provider CPR or equivalent recognition and California State EMT certification are required. The student must be able to purchase online resources as well as a uniform and other lab equipment. This course is not available to certified NREMT or California State Advanced EMTs or paramedics.
Advisory: AH 110, BIOL 102, and PMED 105; ENGWR 102, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; MATH 32 (Pre-Algebra), or MATH 42 (Algebra Readiness - Part II)
Catalog Date: June 1, 2020

This course provides academic preparation and psychomotor skills training to prepare the student for EMT 151, the Advanced Emergency Medical Technician (AEMT) clinical and field Internship. Successful completion of EMT 150 and EMT 151 will make the student eligible to take the National Registry of EMTs (NREMT) Advanced EMT certification exam. Topics include the Limited Advanced Life Support (LALS) knowledge, application and problem solving skills necessary to work as an AEMT (formerly known as EMT-Intermediate or EMT-2) in the Emergency Medical Services (EMS) field for an ambulance service, fire department, emergency department or other specialized service. A "C" letter grade as well as successful completion of the EMT 150 Exit Exam and psychomotor skill tests are required to be eligible for EMT 151. The course conforms to the 2007 National EMS Scope of Practice Model and 2009 EMS National Education Standards and complies with Title 22, Division 9, Chapter 3 of the California State Code of Regulations. This course is approved by the Emergency Medical Services (EMS) Agency of the Sacramento County Health Department. Field trips or off-campus lab assignments are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish between sub-acute, acute and unmanageably ill or injured patients during simulated patient care encounters based on a given scenario, assessment findings and diagnostic data.
- formulate a field diagnosis, a differential diagnosis and an appropriate plan for LALS treatment and transport, given a set of typical signs, symptoms and vital sign data.
- demonstrate the willingness and ability to perform the typical LALS procedures and tasks safely and effectively while conforming to NREMT and California State standards.
- demonstrate the requisite knowledge, knowledge application and problem-solving ability appropriate for an entry-level AEMT during an Exit Exam covering the same topic areas as the NREMT certification exam.
- perform, in a safe and effective manner, the administration of LALS medications outlined in the National EMT Scope of Practice Model during a static skill exam or simulated patient encounter.
- choose the BLS and LALS airway management techniques optimal for a simulated patient with a given condition in a variety of typical field conditions.
- demonstrate the affective attributes expected of an entry-level AEMT and Allied Healthcare professional.

EMT 151 Advanced Emergency Medical Technician (AEMT) Internship

Units: 3.5

This course is not available to certified NREMT or California State Advanced EMTs or paramedics.

Enrollment Limitation:
AH 110, BIOL 102, and PMED 105; ENGWR 102, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; MATH 32 (Pre-Algebra), or MATH 42 (Algebra Readiness - Part II)

Advisory:
June 1, 2020
Catalog Date:

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish between sub-acute, acute and unmanageably ill or injured patients during simulated patient care encounters based on a given scenario, assessment findings and diagnostic data.
- formulate a field diagnosis, a differential diagnosis and an appropriate plan for LALS treatment and transport, given a set of typical signs, symptoms and vital sign data.
- demonstrate the willingness and ability to perform the typical LALS procedures and tasks safely and effectively while conforming to NREMT and California State standards.
- demonstrate the requisite knowledge, knowledge application and problem-solving ability appropriate for an entry-level AEMT during an Exit Exam covering the same topic areas as the NREMT certification exam.

- choose the BLS and LALS airway management techniques optimal for a simulated patient with a given condition in a variety of typical field conditions.
- demonstrate the affective attributes expected of an entry-level AEMT and Allied Healthcare professional.
This course provides supervised clinical and field internship experience at the Limited Advanced Life Support (LALS) scope of practice. Successful completion of EMT 150 and EMT 151 makes the student eligible to take the National Registry of EMTs (NREMT) Advanced Emergency Medical Technician (AEMT) certification exam. The course conforms to the 2007 National EMS Scope of Practice Model and 2009 EMS National Education Standards and complies with Title 22, Division 9, Chapter 3 of the California State Code of Regulations. This course is approved by the Emergency Medical Services (EMS) Agency of the Sacramento County Health Department. Field trips or off-campus lab assignments are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assess, manage, treat, and either transport or prepare for transport ill and injured patients utilizing fundamental AEMT knowledge and skills.
- analyze typical and unusual case studies that reflect the practical responsibility of the AEMT during the transfer of care using his or her experience with actual prehospital patient contacts.
- critique, in a quality improvement format, simulated or actual patient contacts including the LALS treatment of medical and trauma patients as well as cases of patient-initiated refusal or care and/or transport.
- draft patient care reports for at least ten actual LALS patient contacts that exceed the minimum standards for prehospital documentation and data entry.
- interview, using the appropriate therapeutic communication techniques, all the parties needed to acquire the information necessary to ascertain an actual or simulated patient's condition.
- demonstrate the affective attributes associated with both an AEMT and an Allied Healthcare professional.
- assess, provide care for, and document a minimum of ten individual ALS patients to whom the intern appropriately administered intravenous fluids, LALS medications, a perilaryngeal airway or defibrillation in either the hospital or field setting.

**EMT 298 Work Experience in Emergency Medical Technology**

- **Units:** 1 - 4
- **Hours:** 60 - 300 hours LAB
- **Prerequisite:** None.
- **Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position, or job related to the emergency medical technology field with a cooperating site supervisor. Students are advised to consult with the Emergency Medical Technology faculty to review specific certificate and degree work experience requirements.
- **Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
- **General Education:** AA/AS Area III(b)
- **Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the emergency medical technology field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the emergency medical technology field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
• develop effective leadership skills at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

• locate, organize, evaluate, and reference information at work.

• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
This certificate provides training in all aspects of solar photovoltaic (PV) system design, cost estimation, sales, and installation. It also includes training in oral presentations and management skills. The courses included in the certificate also qualify students to take the North American Board of Certified Energy Practitioners (NABCEP) PV Entry Level Certificate of Knowledge Exam.

Total Units: 22

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the components in a complete grid-tie PV system.
- construct solar PV battery charging systems.
- analyze test equipment data to determine the location of the "sweet spot" on a solar PV panel's Current-Voltage (IV) curves.
- identify tools and test equipment necessary for solar PV panel installations.
- identify different sizes of wire according to American Wire Gauge (AWG) tables.
- describe the advantages of obtaining the NABCEP Associate Certificate of Knowledge Certificate.
construct a simulated roof system using industry standard building materials.

calculate the amount of yearly solar radiance in relationship to shading using the Solmetric's SunEye predictor and software.

inspect and repair malfunctioning components in a functioning grid tie solar PV system.

estimate the yearly power output for a solar photovoltaic system using both the SunEye and the Pathfinder sun angle and shade predictor.

identify typical locations of electrical/mechanical failures in PV systems.

maximize communication effectiveness by specifying, planning for, and adapting to the specific audience.

identify and analyze factors that contribute to effective design, development, and delivery of presentations.

relate the communication process to public speaking situations.

assess the ways to start a business and which form of business organization should be used.

explain the importance of a business plan, a financial plan, and a marketing plan.

describe the financing process and how to access capital.

apply principles of management and marketing relevant to the small business.

evaluate financial reports.

analyze the impact of legal requirements and government regulations as related to the operation of the small business.

Career Information

This certificate prepares students for entry level employment in a wide variety of positions in the PV industry. It is also valuable for people working in the PV industry to upgrade their skills to include the newest advancements in solar technology. Career opportunities include PV system designers, PV systems outside sales, PV equipment and associated component sales representatives, and a variety of other emerging careers in this field.

Solar Energy Technology Certificate

This certificate provides training in all aspects of solar photovoltaic (PV) system design, installation, troubleshooting, and repair. The courses included in the certificate also qualify students to take the North American Board of Certified Energy Practitioners (NABCEP) PV Associate Certificate of Knowledge Exam.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the components in a complete grid-tie PV system.
- construct solar PV battery charging systems.
- analyze test equipment data to determine the location of the “sweet spot” on a solar PV panel's Current-Voltage (IV) curves.
- identify tools and test equipment necessary for solar PV panel installations.
- identify different sizes of wire according to American Wire Gauge (AWG) tables.
- analyze and describe the advantages of obtaining the NABCEP Associate Certificate of Knowledge Certificate.
Energy (ENERGY)

ENERGY 140 Electrical Applications for Solar Installers

This is an introductory course in Solar Photovoltaic (PV) energy. It covers how solar PV energy works and how to assess if PV is feasible in a variety of situations. Topics include calculating and measuring PV power outputs for different conditions, using software tools and hardware for calculating and sizing PV systems, and measuring and analyzing shading conditions. Additionally, it addresses how to install and connect necessary components. Field trips may be required.

Upon completion of this course, the student will be able to:

- describe the components in a complete grid-tie PV system.
- construct solar PV battery charging systems.
- calculate the correct gauge wire for a given solar PV panel array.
- inspect and repair, if necessary, malfunctioning components in a grid-tie solar PV system.
- employ common hand tools in the mechanical installation of both a grid-tie and a battery solar PV system.
- analyze test equipment data to determine the location of the "sweet spot" on a solar PV panel's current-voltage (IV) curves.
- identify tools and test equipment necessary for solar PV panel installations.
- evaluate which different types of solar PV panels would have the most power output for a given application.
- assess safety hazards when working with PV systems.
- estimate the power output for a solar PV panel for a given sun angle.
- construct an electrical conduit that has both right and left 90-degree bends.
- identify different sizes of wire according to American Wire Gauge (AWG) tables.
- calculate the battery amperage required for a stand-alone PV system.

Career Information

This certificate prepares the student for entry level employment in a wide variety of positions in the PV industry. It is also valuable for people working in the PV industry to upgrade their skills to include the newest advancements in solar technology. Career opportunities include PV installers, PV service technicians, and other emerging careers in this field.

Energy (ENERGY)

ENERGY 141 Electrical & Mechanical Applications for Solar Installers

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: ET 302
Catalog Date: June 1, 2020

This is an introductory course in Solar Photovoltaic (PV) energy. It covers how solar PV energy works and how to assess if PV is feasible in a variety of situations. Topics include calculating and measuring PV power outputs for different conditions, using software tools and hardware for calculating and sizing PV systems, and measuring and analyzing shading conditions. Additionally, it addresses how to install and connect necessary components. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- construct a simulated roof system using industry standard building materials.
- calculate the amount of yearly solar radiance in relationship to shading using the Solmetric's SunEye predictor and software.
- inspect and repair malfunctioning components in a functioning grid-tie solar PV system.
- assess safety hazards in respect to fire, shock, and falls when installing or repairing PV systems.
- estimate PV system using both the SunEye and the Pathfinder sun angle and shade predictor.
- identify typical locations of electrical/mechanical failures in PV systems.
- calculate the correct gauge wire and number of wires in a metal raceway according to National Electrical Code standards.
- construct an emergency backup power system using solar PV panels and gel-cell batteries.
This is an advanced course in Solar Photovoltaic (PV) energy. Topics include using hardware and software tools for shading and correct orientation of solar panels, the effect PV panel orientation has on system power output and efficiency, what effect optimum PV panel loading has on power produced, and how to perform a load analysis on a residence. Additionally, it covers the use of various manufacturers’ software to calculate PV panel string sizing for optimum efficiency when working with grid-tie inverters. National Electrical Code (NEC) and fire code wire sizing, fusing, and other safety instructions and procedures are stressed. The successful completion of this course and ENERGY 142 qualify students to take the North American Board of Certified Energy Practitioners (NABCEP) Associate Achievement Exam leading to the NABCEP PV Installation Professional Certificate. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and describe the advantages of obtaining the NABCEP Associate Achievement Award and the PV Installation Professional Certificate.
- construct a simulated roof system using industry standard building materials.
- calculate the amount of yearly solar radiance in relationship to shading using the Solmetric’s SunEye predictor and software.
- calculate the correct gauge wire and number of wires in a metal raceway according to NEC code standards.
- inspect and repair malfunctioning components in a functioning grid-tie solar PV system.
- employ common hand tools such as saws, drills, and framing squares used in building a simulated roof structure.
- analyze test equipment data to determine the voltage drop on low voltage, high current wires.
- attach solar PV panel mounting rails and associated hardware to a roof while retaining the ability of the roof to be watertight.
- evaluate the different types of solar grid-tie inverters and determine which configurations would have the highest efficiency and most power output for a given situation.
- assess safety hazards with respect to fire, shock, and falls when installing or repairing photovoltaic systems.
- estimate the yearly power output in watt-hours per year for a solar PV system using both the SunEye and the Pathfinder sun angle and shade predictor.
- evaluate, draft, and construct a simple solar panel one-line drawing using graphics software.
- examine and classify different sizes of wire according to American Wire Gauge (AWG) tables.
- develop a solar PV panel string size using SMA America LLC. string sizing software and then modify the design for one half of the power output.

ENERGY 142 NABCEP Associate Certification Preparation

This advanced course in solar photovoltaic (PV) energy includes preparation for the North American Board of Certified Energy Practitioners (NABCEP) PV Associate Certificate of Knowledge Exam. Topics include hardware and software tools used for determining percent of shade and orienting solar panels, the effect of PV panel orientation on system power and efficiency, and the load analysis. Additionally, it covers calculating PV panel string sizing when working with grid tie inverters as related to the NABCEP test. National Electrical Code (NEC) and fire code wire sizing, fusing, and other safety instructions and procedures are reviewed. The successful completion of this course and ENERGY 141 meets the requirements to take the NABCEP certified associate solar PV installers and service technicians entry level certificate of knowledge of PV systems test. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the advantages of obtaining the NABCEP PV Associate Certificate of Knowledge
- calculate the amount of yearly solar radiance in relationship to shading using the Solmetrics SunEye predictor and software
- calculate the correct wire gauge according to National Electrical Code standards
- analyze test equipment data to determine the voltage drop on low voltage, high current wires
- identify hazards involved with PV installation, maintenance, and troubleshooting
- calculate AC and DC current, voltage, and resistance in a given circuit
- use maps, compasses, and other instruments to determine true south
- identify key points on current-voltage (IV) curves
- describe the qualification tests for PV cells and modules
- describe the effect of cell temperature to PV panel output voltage and power
- calculate the battery amperage required for a stand-alone PV system
- calculate voltage drops in wiring, fuses, combiners, and connectors
- identify typical electrical/mechanical failures in PV systems

ENERGY 143 Solar Photovoltaic Systems Design, Installation, and Troubleshooting

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: ENERGY 141 with a grade of 'C' or better
Catalog Date: June 1, 2020

This advanced course in solar photovoltaic (PV) energy offers the opportunity for hands-on experience designing, installing, and troubleshooting grid-tie and stand-alone PV systems. Topics include hardware and software tools used in the solar PV industry, blueprint reading, calculating component size and capacity, and personal safety. Additionally, it covers calculating PV panel string sizing when working with grid-tie inverters and battery sizing when designing stand-alone PV systems. National Electrical Code (NEC) and fire code wire sizing, fusing, and other safety instructions and procedures are reviewed. Ten-hour Occupational Safety and Health Administration (OSHA) training is provided. Students must pay the OSHA required fee in order to obtain the OSHA safety card. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess safety hazards when working with photovoltaic (PV) systems.
- evaluate which types of solar PV panels are best in various PV installations.
- employ common hand tools in the mechanical installation of both a grid-tie and a battery solar PV system.
- calculate the battery amp-hours required for a stand-alone PV system.
- construct solar PV grid-tie systems.
- interpret blueprint drawings and what their symbols represent.
- calculate the voltage and amperage of bi-modal PV systems.
- diagram fuses, combiner boxes, and disconnects in grid-tie and stand-alone PV systems.
- interpret NEC wiring codes for PV installations.
- calculate voltage drops for short and long distances.
- calculate the maximum number of wires allowed in a conduit using NEC tables.
- describe the benefits of solar incentives.
- resolve typical problems with solar PV systems.
- label all equipment and cable runs per NEC code.
- describe various energy sources that can be interfaced with photovoltaic systems.
- identify new career paths in the solar power industry.

ENERGY 303 Energy and Sustainability

Same As: NATR 303
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 120, 125, 129, 133 or higher; NATR 300, or an equivalent transferable life science course; and Eligible for ENGRD 310 or ENGRD 312
This course investigates fundamentals of energy and impacts of energy systems on society and the environment. It explores energy resources, efficiency, conservation, and emerging technologies. Specifically addressed are mechanics, advantages, disadvantages, and sustainability of current and future energy systems. This course also focuses on economic, cultural, political, and environmental aspects of energy production and consumption in the context of the built environment, transportation, food systems, manufacturing, and public services. Field trips may be required. This course is not open to students who have completed NATR 303 or ET 303.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the concept of sustainability as it relates to energy
- examine geographic, socioeconomic, cultural, and environmental considerations of energy production and consumption
- explain technologies involved in solar thermal, solar photovoltaic, hydroelectric (large and small scale), nuclear fission, wave/current/tidal, geothermal, biomass, and wind (onshore and offshore) energy systems
- compare conventional fossil-fuel based energy systems with current alternatives
- examine the relationships between energy production and consumption scenarios and their contributions to atmospheric greenhouse gas concentrations and air, water, and soil pollution
- evaluate alternative energy policies for North America, Europe, and the world
- interpret the results of a residential energy audit and recommend actions
- critically evaluate more sustainable approaches and practices in energy use for heating, lighting, food systems, the built environment/transportation/infrastructure, manufacturing, and public services
- examine strategies for dealing with production and consumption fluctuations and energy storage issues
- understand considerations for energy systems related to temporal and spatial scale and connectivity, including potential for distributed energy systems, aging of the electrical grid, land use conflicts, and timelines for taking newer technologies to scale
- evaluate the potential for emerging opportunities in nanotechnology and biomimicry with respect to energy systems
The Engineering program offers courses necessary to transfer to a four-year university where students can complete a bachelor’s degree in various branches of engineering. Most lower division engineering programs require the following ARC courses: Mathematics 400, 401, 402, 420; Physics 410, 421, 431; Chemistry 400; Engineering 401, 413, 420. Students should consult the institution to which they wish to transfer for specific lower division requirements.

Division Dean  Dr. Rina Roy
Department Chairs  Shih-Wen Young

(916) 484-8107

Associate Degrees

A.S. in Civil Engineering

This degree provides the foundation in mathematics, science, and engineering needed to transfer to a four-year institution as a major in civil engineering. The courses in this degree meet most of the lower division requirements for several nearby universities. Since each university has its own unique requirements, additional coursework will be required prior to transfer. Students should meet with a counselor to determine which additional courses are required for successful transfer to a particular institution.

Catalog Date: June 1, 2020

The Civil Engineering Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- solve problems by applying knowledge of mathematics, including differential and integral calculus and differential equations.
solve problems by applying knowledge of science, including chemistry and physics.

use technology to increase productivity.

apply knowledge of mathematics, science, and engineering to identify, formulate, and solve basic civil engineering problems.

describe the ethical and professional responsibilities of an engineer and situations where engineering solutions can impact society.

A.S. in Electrical Engineering

This degree provides the foundation in mathematics, science, and engineering needed to transfer to a four-year institution as a major in electrical engineering. The courses in this degree meet most of the lower division requirements for several nearby universities. Since each university has its own unique requirements, additional coursework will be required prior to transfer. Students should meet with a counselor to determine which additional courses are required for successful transfer to a particular institution.

Catalog Date: June 1, 2020

*The Electrical Engineering Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.*

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- solve problems by applying knowledge of mathematics, including differential and integral calculus and differential equations.

- solve problems by applying knowledge of science, including chemistry and physics.

- use technology to increase productivity.

- apply knowledge of mathematics, science, and engineering to identify, formulate, and solve basic electrical engineering problems.

- describe the ethical and professional responsibilities of an engineer and situations where solutions can impact society.

A.S. in Mechanical Engineering

This degree provides the foundation in mathematics, science, and engineering needed to transfer to a four-year institution as a major in mechanical engineering. The courses in this degree meet most of the lower division requirements for several nearby universities. Since each university has its own unique requirements, additional coursework will be required prior to transfer. Students should meet with a counselor to determine which additional courses are required for successful transfer to a particular institution.

ENGR 300 Introduction to Engineering

This course is an introduction to the engineering and engineering technology professions, and their place in industry. It includes an explanation of the engineering and engineering technology options and curricula involved. Topics include an emphasis on problem-solving techniques used in engineering and engineering technology. This course is recommended for all entering engineering, engineering technology, and design technology students.

Upon completion of this course, the student will be able to:

- solve problems by applying knowledge of mathematics including differential and integral calculus and differential equations.
- solve problems by applying knowledge of science, including chemistry and physics.
- use technology to increase productivity.
- apply knowledge of mathematics, science, and engineering to identify, formulate, and solve basic mechanical engineering problems.
- describe the ethical and professional responsibilities of an engineer and situations where engineering solutions can impact society.

Student Learning Outcomes

Engineering (ENGR)

ENGR 300 Introduction to Engineering

Units: 1
Hours: 18 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is an introduction to the engineering and engineering technology professions, and their place in industry. It includes an explanation of the engineering and engineering technology options and curricula involved. Topics include an emphasis on problem-solving techniques used in engineering and engineering technology. This course is recommended for all entering engineering, engineering technology, and design technology students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the engineering and engineering technology professions and explain their place in society and industry.
- identify, compare, and contrast the various options in engineering and engineering technology, and coursework leading to them.
- evaluate engineering or engineering technology as a potential career objective, and explain the necessary aptitudes, abilities, and training needed to succeed in these professions.
- analyze the applicability of the engineering profession and related fields to life experience and interests.
ENGR 310 Engineering Survey Measurements

This course covers the basic fundamentals of surveying for engineers. Electronic surveying instruments are used to develop the principles of measurement for distance, elevations, and angles. Additional topics include systematic and random errors, line directions, profiles and cross sections, traverse computations, horizontal and vertical curves, earthwork quantity calculations, and manual and CAD (computer-aided drafting) production of engineering plans. This course is intended for civil engineers, but may also be required for other programs.

Upon completion of this course, the student will be able to:

- compare survey equipment typically encountered by engineers.
- interpret and evaluate surveying related problems.
- formulate concepts from construction, surveying, and engineering topics to solve problems.
- construct a neat, well organized, logical presentation of surveying problems and their solutions.
- use field work data to produce manual and CAD engineering plans.
- describe the surveyor's role in developing civil engineering projects.

ENGR 312 Engineering Graphics

This course covers the principles of engineering drawings in visually-communicated engineering designs and an introduction to computer-aided design (CAD). Topics include the development of visualization skills, orthographic projections, mechanical dimensioning and tolerancing practices, the engineering design process, and design analysis. Assignments develop sketching and 2D and 3D CAD skills. The use of solid modeling CAD software is an integral part of the course.

Upon completion of this course, the student will be able to:

- apply rules of orthographic projection to create multi-view drawings.
- create pictorials from orthographic views.
- use computer-aided design (CAD) software to create 2D engineering drawings, including working drawings and assembly drawings.
- use CAD software to create 3D models and assemblies.
- create auxiliary and section views of an object following correct conventions.
- apply standards of dimensioning and tolerancing to engineering drawings.
- apply the engineering design process to a design project.

ENGR 401 Introduction to Electrical Circuits and Devices

Units: 4
Hours: 72 hours LEC
Prerequisite: PHYS 421 with a grade of "C" or better
Corequisite: MATH 420
Transferable: CSU; UC

This course covers the principles of electrical circuits and devices, with an emphasis on the analysis and design of electrical systems. Topics include DC circuits, AC circuits, and semiconductor devices. The course also covers the basics of circuit simulation using computer-aided engineering software.
This course covers the fundamentals of electrical circuit theory and analysis for engineers. Topics include time domain circuit analysis techniques, circuit reduction techniques, frequency domain circuit analysis, first- and second-order circuits with natural and step responses, and operational amplifiers. This course provides a solid foundation for upper division engineering courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret the effects of instrumentation used for measurement on those measurements.
- differentiate the optimum method of circuit analysis for a particular circuit configuration.
- evaluate boundary conditions on first- and second-order circuits.
- construct and evaluate the solutions to electrical circuit problems.
- verify solutions from one system by the design and analysis of an equivalent system that reduces the complexity of the original circuit.

ENGR 412 Properties of Materials

This course presents the internal structures and resulting behaviors of materials used in engineering applications, including metals, ceramics, polymers, composites, and semiconductors. It emphasizes developing the ability both to select appropriate materials to meet engineering design criteria and to understand the effects of heat, stress, imperfections, and chemical environments upon material properties and performance. Laboratories provide opportunities to directly observe the structures and behaviors discussed in the course, to operate testing equipment, and to analyze experimental data. This course was formerly known as ENGR 413.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the relationship between the internal structure of materials and their macroscopic properties.
- analyze and explain methods of altering the structure of materials by mechanical, chemical, or thermal means in order to change material properties.
- perform mathematical calculations in materials applications.
- interpret and evaluate data regarding the properties, processing, and performance characteristics of materials, and use it as a basis to recommend appropriate material(s) to meet engineering design criteria.
- measure material properties and/or evaluate processing treatments using standard materials testing equipment and techniques.
- compose laboratory reports that communicate the collection, analysis (including statistical), and interpretation of experimental data according to professional engineering standards.

ENGR 420 Statics

This course covers the study of bodies in equilibrium with emphasis on force systems, structures, distributed loads, and friction. It emphasizes analytical rather than graphical methods of problem solving.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- resolve basic engineering mechanics problems through the use of free-body diagrams and static equilibrium principles.
analyze any equilibrium problem in a simple and logical manner.

generate diagrams that summarize the relationship between load, shear, and bending moments.

combine methodologies and principles of friction to solve problems involving dry friction.

produce and solve equilibrium equations for forces on members of engineering structures such as trusses and frames.

ENGR 495 Independent Studies in Engineering

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degrees for Transfer

A.A.-T. in Elementary Teacher Education

The Associate in Elementary Teacher Education for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of Elementary Teacher Education. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The Associate in Arts degree in Elementary Teacher Education for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Elementary Teacher Education for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Total Units: 56 - 57

The Associate in Arts in Elementary Teacher Education for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- apply the scientific method using inquiry, data collection, quantitative reasoning, and basic mathematical concepts to analyze results
- assess teaching practices and learning conditions through application of child development theories
- evaluate attitudes, actions, and behaviors indicative of a professional educator
- apply analytical reading and writing, research, and critical thinking essential for completing assigned tasks
- explain relationships and interactions between humans and the earth
- apply knowledge of world history and cultures to identify the values of a culture and work with others of diverse cultures
- analyze statistical data
- present information effectively to an intended audience
- compare and contrast various forms and styles of music, artworks, and theatrical performances

**Career Information**

Public or private instructional assistant or classroom aide, grades K-8; private tutor; publishing and textbook salesperson; curriculum and test developer; teacher, grades K-12 with additional education

**A.A.-T. in English**

The Associate in Arts in English for Transfer (AA-T) degree provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of English. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The Associate in Arts in English for Transfer (AA-T) degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts in English for Transfer (AA-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a "C" or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

# Student Learning Outcomes

Upon completion of this program, the student will be able to:
• analyze rhetorical and literary patterns to extract meaning, whether stated directly or implied
• discuss authors, forms, and movements of literature in English
• define and employ terminology of literary analysis
• compose essays that are generally free of sentence errors and that support a clear thesis with unified paragraphs
• evaluate and integrate research materials to support an original argument
• employ current Modern Language Association (MLA) bibliographic methods and forms

Certificate

Literary Publishing Certificate

This certificate benefits students who are interested in the business of publishing literary works. Work required to edit and publish American River Review forms the core of the certificate. Additional coursework focuses on the various literary genres from reading, writing, and editing perspectives. The College Literary Publishing course serves as the capstone experience for the certificate program and provides students an opportunity to work in the role of acquisitions editors for Ad Lumen Press, American River College's university-style literary press.

Catalog Date: June 1, 2020

*ENGCW 450 must be taken one time, but it may be taken a second time as elective credit toward the certificate.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• compose literary works using the full process of drafting, receiving feedback, revising, editing, and proofreading.
• examine literary works from various genres, styles, cultural perspectives, and historical periods.
• critique literary works.
• assess literary works for publication.
• recommend editorial changes to authors of literary works.
• assemble a collection of literary works for publication.

Career Information

This certificate prepares students for careers in publishing houses of full-length or periodical literature. In addition, students may use the skills to work on publications such as yearbooks, creative writing magazines, newspapers, and newsletters in a commercial or educational setting.
English - Creative Writing (ENGCW)

ENGCW 400 Creative Writing

This introductory creative writing course provides writing experience with three or four of the following genres: short story, poetry, creative nonfiction, and script writing for theater or film. In addition, it covers the relationship between cultural events and literary conventions and to do so with an awareness of literature's role in culture, emphasizing diverse experiences and perspectives. This course includes analysis of literary models from diverse cultures, faculty and class critiques of texts, and discussion of literary techniques, such as voice, metaphor, imagery, dialogue, and narrative in each covered genre. This course encourages students to develop an original voice, reflecting their unique backgrounds and experiences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze works of creative literature in their historical and cultural contexts.
- compose and revise manuscripts in at least three of these four genres: poetry, short fiction, creative nonfiction, and script writing for theater or film.
- assess creative work by other writers, using workshop principles.
- investigate sources of publication, including traditional and new media.

ENGCW 410 Fiction Writing Workshop

This creative writing course concentrates on fiction writing, including the analysis of fiction written during the semester. Topics include the examination of literary styles in traditional and contemporary fiction as well as revising and editing processes. A portfolio of original work and a conference with the instructor are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose short stories or novel chapters
- evaluate fiction using literary standards
- interpret and analyze published stories
- revise original fiction
- investigate sources of publication
- create a portfolio of original short fiction

ENGCW 420 Poetry Writing Workshop

This introductory writing course: focuses on poetry, including the analysis of poetry written during the semester. Topics include the examination of literary styles in traditional and contemporary poetry as well as revising and editing processes. A portfolio of original work and a conference with the instructor are required.
This creative writing course focuses on poetry, offering students the opportunity to develop a personal voice while also developing the skills to analyze and appreciate contemporary poetry. Students examine literary styles and elements in traditional and contemporary poetry, practice revision, and offer constructive critiques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose poems using a variety of techniques
- analyze and evaluate published poetry for elements and meaning
- evaluate peers’ writing using workshop principles
- revise poems to develop purpose and style
- investigate sources of publication, including traditional and new media

ENGCW 421 A Short Course in Poetry Writing

Units: 1
Hours: 18 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better; or placement into ENGWR 300 or ENGWR 480 through the assessment process.
Advisory: ENGCW 400
Transferable: CSU; UC
Catalog Date: June 1, 2020

This creative writing course is an abbreviated version of the three-unit Poetry Writing Workshop, ENGCW 420, focusing on the writing of several poems. It examines literary styles in traditional and contemporary poetry and demonstrates revising and editing processes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose formal and free verse poems.
- evaluate narrative and lyrical elements of poems.
- analyze themes in poems.
- revise poems for style and content.

ENGCW 430 Creative Non-Fiction Writing Workshop

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This creative writing course concentrates on the literary essay and explores the factual and experiential sources of creative non-fiction. It covers the writing of various kinds of essays, such as memoir, autobiography, personal essays, reflective nature writing, prose with poetic elements (prose-poetry), and fact-based or philosophical writing with a definite literary, stylistic component. Course readings include one full-length work of creative non-fiction. Topics in this course also include analysis of classical and modern essays for elements such as voice, point of view, and structure.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use methods for exploring various sources of factual and personal writing
- analyze published works for factual content, structure, voice, and literary style
• compose creative non-fiction essays according to the ethical principles of the genre
• critique unpublished writing in a workshop setting
• revise creative nonfiction writing
• devise prompts for heuristic writing exercises leading to the development and revision of drafts

ENGCW 441 Feature Film Screenwriting Workshop I

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better; or placement into ENGWR 300 or ENGWR 480 through the assessment process.
Advisory: ENGCW 400, ENGWR 300, or ENGWR 480
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course introduces the writing of feature-length film scripts. It requires three proposals for projects, one of which is developed through the first act in official screen format, plus scene descriptions for major scenes, character sketches, and plot outlines. Several classic feature films and/or scripts are analyzed for their writing strengths.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• outline a three-act feature film plot.
• create film characters.
• compose visual description.
• formulate film dialogue.
• draft scripts in the industry-standard "speculation" format.
• evaluate professional scripts and peer writing.
• construct scenes, sequences, and a first act of a feature length script.

ENGCW 450 College Literary Magazine

Units: 3
Hours: 54 hours LEC; 18 hours LAB
Prerequisite: ENGWR 101 with a grade of "C" or better, or placement through the assessment process.
Advisory: ENGCW 400, ENGCW 410, ENGCW 420, ENGCW 430, ENGWR 300, or ENGWR 480
Transferable: CSU
Catalog Date: June 1, 2020

This course provides instruction and editorial staff experience in producing a literary and fine arts magazine. Editorial staff collaborate with art selection or design staff in Art New Media to prepare ARC's college magazine, the American River Review, for national competitions sponsored by organizations such as the Columbia Scholastic Press Association and the Associated Collegiate Press. The course focuses on the selection and editing of literary content, and on the publicity, marketing, fund-raising, and distribution of a magazine. It may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• create and develop competitive literary standards for the American River Review
• evaluate and analyze submissions for publication in the American River Review
• compose publicity and other business communication for the magazine's purposes
• recommend revisions to authors seeking publication in the magazine and awards in contests
• manage data and e-mail for the magazine's purposes
• collaborate effectively with editorial and design teams to compete in national magazine contests
• prepare literary manuscripts for national competitions
ENGCW 455 College Literary Publishing

Units: 3
Hours: 54 hours LEC; 18 hours LAB
Prerequisite: ENGCW 450 with a grade of "C" or better
Advisory: ENGCW 400, ENGCW 410, ENGCW 430, ENGLT 300, ENGLT 321, ENGLT 341, ENGWR 300, ENGWR 301, ENGWR 303, ENGWR 480, or ENGWR 481
Transferable: CSU
Catalog Date: June 1, 2020

This course provides instruction and editorial staff experience in the selection of literary works of high artistic merit for publication by Ad Lumen Press, American River College's professional literary press. It focuses on evaluating and selecting literary works submitted for publication by the public, making of editorial recommendations to the Ad Lumen Press Editorial Board, communicating in a professional manner with the public, and providing publicity for the press.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop competitive literary standards for Ad Lumen Press
- evaluate and analyze submissions for publication by Ad Lumen Press
- recommend submissions to the Ad Lumen Press Editorial Board
- manage data and correspondence with internal and external entities for purposes related to the business of Ad Lumen Press
- collaborate effectively with editorial staff and the Ad Lumen Press Editorial Board
- prepare literary manuscripts for national competitions

ENGCW 495 Independent Studies in English - Creative Writing

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

English - Education (ENGED)

ENGED 305 Structure of English

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course is a study of the structure of English grammar, both descriptive and prescriptive. It includes the study and practice of traditional grammar and standard usage, with emphasis on the relationship to writing (2000 word writing requirement) and the teaching of language arts; it also includes an introduction to the history of the English language as it relates to irregularities in modern English. This course is designed for those who plan to teach or who are especially interested in grammar as it relates to writing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the effectiveness of commonly used semantic, morphological, and syntactic definitions of parts of speech
- identify the various grammatical structures used in English, such as phrases, clause types, and sentence types
create examples of the various grammatical structures used in English, such as phrases, clause types, and sentence types

explain grammatical structures, sentences types, and movement tests used in traditional English grammar

distinguish between standard and nonstandard usage as applied to writing and correct common writing errors in English grammar, punctuation, orthography, usage, and convention

apply the principles of traditional English grammar to writing and writing instruction

design an audience-appropriate grammar lesson plan

ENGED 320 Service Learning: Tutoring Elementary Students in Reading

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Students are required to show proof of TB clearance and, if required by the school district, complete a fingerprint clearance through the cooperating school district before they can attend the school site for field work.
Advisory: Eligible for ENGRD 310 or ENGRD 312; OR ESLR 340
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course covers basic methods of tutoring elementary school children reading below grade level. The class meets on campus for the first part of the semester for tutor training. Students are then placed at a nearby elementary school for in-depth practice tutoring elementary children in reading. This course offers field experience for teacher preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate elementary students' reading and comprehension skills using a variety of assessment techniques
- develop appropriate strategies to motivate students, modify behavior, and enhance reading skills
- design lesson plans incorporating activities for the improvement of fluency and reading comprehension
- critique children's literature for its quality and reading level appropriateness
- demonstrate interpersonal communicative skills with diverse student populations

ENGED 324 Introduction to Elementary Teaching with Field Experience

Same As: ECE 350
Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Before students can attend the school site for field work, they are required to show proof of TB clearance. They may also need to complete a fingerprint clearance through the cooperating school district, if the district requires it.
Advisory: ECE 312 or PSYC 372
Transferable: CSU
General Education: AA/AS Area III(b)
C-ID: C-ID EDUC 200
Catalog Date: June 1, 2020

This course introduces the concepts and issues related to teaching diverse learners in today's contemporary schools, kindergarten through grade 12 (K-12). Topics include teaching as a profession and career, historical and philosophical foundations of the American education system, contemporary educational issues, California's content standards and frameworks, and teacher performance standards. In addition to class time, this course requires a minimum of 45 hours of structured fieldwork in public school elementary classrooms that represent California's diverse student population, and includes cooperation with campus-approved certificated classroom teachers.

This course is not open to students who have completed ECE 350.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify academic requirements and experiences needed to become a credentialed elementary school teacher
- evaluate attitudes, actions, behaviors, and responsibilities that define the role of a professional educator in a public school setting
demonstrate objective, descriptive, and interpretative observation skills
analyze learning theory through planning, teaching, and interaction with elementary students
examine and assess issues concerning diversity in elementary student backgrounds, interests, experiences, and abilities
identify school and community resources that address issues concerning diversity
develop a personal preliminary philosophy of teaching, examining personal characteristics, assumptions and beliefs, and experiences which could affect development as a teacher
apply course content to classrooms through structured assignments, observations, and reflections

ENGED 495 Independent Studies in English - Education

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. English - Laboratory (ENGLB)

English - Literature (ENGLT)

ENGLT 300 Introduction to Fiction

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course covers the study of fiction as a type of literature. It typically examines at least twenty short stories and at least three novels, critically analyzing plot, setting, character, theme, and style. This course includes fiction written in English, as well as fiction in translation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• distinguish fiction as a specialized literary genre.
• discover and analyze literary devices used in works of fiction.
• analyze the larger patterns and historical continuity of short stories and novels.
• analyze works of fiction as a reflection of the authors' cultures and values.
• compose essays and other writings that analyze, interpret, and evaluate fiction.

ENGLT 304 Introduction to Poetry

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
This course introduces the art of poetry. It includes the analysis and appreciation of poetry as a type of literature with careful attention to the elements of poetics, the various styles of poetry, and major poets and poetic movements. Poetic theories and poems by a wide variety of traditional and contemporary poets as well poetic theory are examined.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- distinguish poetry as a specialized literary genre.
- identify poetic devices and effectively integrate a discussion of those devices into analysis of poetry.
- analyze poetic movements and forms of poetry while investigating specific works and writers.
- compose essays and other writings that analyze, evaluate, and respond to poetry.
- analyze poetry as a reflection of poets’ cultures and values.

### ENGLT 308 The Graphic Novel and Manga

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** ENGWR 101 with a grade of "C" or better  
**Advisory:** ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B  
**Catalog Date:** June 1, 2020

This course critically examines graphic novels and manga. It explores the social, cultural, and historical contexts reflected in these mixed-media genres, analyzing thematic, character, and structural development and exploring the relationship of image and text in this development. This course typically includes at least five full-length works as well as numerous background readings.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- differentiate between comics, graphic novels, and manga
- differentiate between icons, symbols, and metaphors
- evaluate the qualities of icons and analyze how those qualities affect the text and story
- evaluate graphic novels and manga for elements of narrative structure
- evaluate the page layout and panel transitions
- analyze the relationship of images to text
- compose essays and other written responses that analyze and evaluate graphic novels and manga

### ENGLT 310 English Literature I

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** ENGWR 300 or 480 with a grade of "C" or better  
**Advisory:** ENGWR 301, 303, or 481  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C2; IGETC Area 3B  
**C-ID:** C-ID ENGL 160  
**Catalog Date:** June 1, 2020

This course surveys representative works in English literature from the Anglo-Saxon period through the eighteenth century. It traces the development of medieval, Renaissance, and Restoration prose, poetry, and drama, introducing methods of literary analysis and research. Historical movements and the cultural contexts of particular works and authors are also covered. Whenever possible, works are read in their entirety.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- identify literary devices and apply them effectively to literary works.
- analyze the larger patterns and historical continuity of early English literature from the Anglo-Saxon period through the 18th century.
- compose essays that respond to, analyze, and evaluate literary works.
- analyze early English poetry, prose, fiction, and drama as a reflection of the authors' cultures and values.

**ENGLT 311 English Literature II**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ENGWR 300 or 480 with a grade of "C" or better
- **Advisory:** ENGWR 301 or 481
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C2; IGETC Area 3B
- **C-ID:** C-ID ENGL 165
- **Catalog Date:** June 1, 2020

This course is a survey of representative works in English literature from the late eighteenth century through the present, covering the Romantic, Victorian, modernist, and postmodern periods. Prose, poetry, and drama are represented, and whenever possible, works are read in their entirety.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify literary devices and apply them effectively to literary works.
- analyze the larger patterns and historical continuity of English literature from the late 18th century to the present.
- compose essays that respond to, evaluate, and analyze literary works.
- analyze English poetry, prose, fiction, and drama of the late 18th century through the present as reflections of the authors' culture and values.

**ENGLT 320 American Literature I**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ENGWR 300 or 480 with a grade of "C" or better
- **Advisory:** ENGWR 301, 303, or 481
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area I; CSU Area C2; IGETC Area 3B
- **C-ID:** C-ID ENGL 130
- **Catalog Date:** June 1, 2020

This course surveys representative texts in American literature from the precolonial period to the Civil War and introduces students to a literary tradition born from many languages and ethnicities. Considering a variety of contexts, it examines writing as a device to reflect and create a rapidly changing world marked by political revolution, expanding commerce, and the rise of print culture. Readings—from a variety of fictional and nonfictional texts—and discussion highlight the multicultural nature of American literature and society. Whenever possible, texts are read in their entirety.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compose appropriate academic discourse, using the conventions of critical literary analysis.
- analyze and interpret themes found in the literature and intellectual movements of the period, using a variety of rhetorical strategies and modes of literary criticism.
- relate specific literary works to their historical, philosophical, social, political, regional, or aesthetic contexts.
- integrate research, evidence, and independent and collaborative thought into writing and critical thinking.

**ENGLT 321 American Literature II**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** ENGWR 300 or 480 with a grade of "C" or better
- **Advisory:** CSU; UC
- **Transferable:** AA/AS Area I; CSU Area C2; IGETC Area 3B
- **General Education:** C-ID ENGL 130
- **C-ID:** June 1, 2020
- **Catalog Date:** June 1, 2020

This course surveys representative texts in American literature from the precolonial period to the Civil War and introduces students to a literary tradition born from many languages and ethnicities. Considering a variety of contexts, it examines writing as a device to reflect and create a rapidly changing world marked by political revolution, expanding commerce, and the rise of print culture. Readings—from a variety of fictional and nonfictional texts—and discussion highlight the multicultural nature of American literature and society. Whenever possible, texts are read in their entirety.
This course surveys representative American literature from the post-Civil War period until the present, with consideration of important aspects of American literary history. Readings—from a variety of stories, novels, plays, and poetry—and discussion highlight the multicultural nature of American literature and society.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify literary devices and apply them effectively to literary analysis.
- analyze the larger patterns and historical continuity of America's literature while investigating specific works and writers.
- compose focused analyses and arguments showing insights into themes explored and arguments made by American authors, using various rhetorical strategies and modes of literary criticism.
- relate the literary works to their historical, philosophical, social, political, regional, and/or aesthetic contexts.
- integrate research, evidence, and independent and collaborative thought into writing and critical thinking.

ENGLT 327 Literature of California

This course examines the literature of California in the context of its ethnic, social, political, geographical, and intellectual history. It covers a wide range of multi-ethnic, multicultural, and cross-cultural literature (fiction, non-fiction, poetry, memoirs, essays, and films), such as Native American legends, early California exploration accounts, prose and poetry from the California heartland, and Hollywood crime fiction, with emphasis on what makes the California experience unique.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify literary devices and apply them correctly to literary analysis.
- analyze the larger patterns, the multi-ethnic and multicultural contrasts and conflicts, and the historical continuity of California's literature while investigating specific works and writers.
- compose essays and other writings that respond to, evaluate, and analyze literary works.
- analyze California literature as a reflection of the authors' cultures and values.

ENGLT 330 African American Literature

This course is a survey of representative African American writers from the slave narratives to the present. This comprehensive literary study includes analysis of significant historical and cultural influences and relevant critical approaches and contexts in a variety of literary genres. This course is not open to students who have completed ENGLT 486.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate African American literature critically
• assess historical significance of African American literature
• compose transfer-level essays analyzing African American literature
• demonstrate an appreciation for the contributions of African American writers and the political, social, and historical significance of their works
• demonstrate critical thinking skills through discussions and written analytical essays
• incorporate bibliographic research effectively into analytical papers

ENGLT 335 Latino, Mexican-American, and Chicano Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of “C” or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course explores literature (poetry, short stories, novels, creative nonfiction, and performance) authored by Latino writers. It typically examines the following themes: resistance, survival, identity, homeland, immigration, the border, socio-political activism, gender, and sexuality. All or most of each text is in English. Knowledge of the Spanish language is helpful but not required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• appraise influences from other arts to literary production by Latinos.
• research complexity of identity (including multiethnic, multiracial, and multinational aspects) depicted in literary works by Latinos.
• compare and contrast literary devices used in literary works by Latinos.
• build upon knowledge of the forms and themes of literature by Latinos.
• evaluate and critique literature by Latinos and make connection to an author’s geographic region and socio-historical context.

ENGLT 338 Native American Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of “C” or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303, or ENGWR 481
Transferable: CSU; UC
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course examines a range of Native American perspectives as expressed through autobiography, fiction, poetry, and drama. Emphasis is placed on Native authorship. The literature highlights the survival strategies of indigenous cultures in the face of historical and present-day colonization. This course examines how Native literature is a reflection of the social and cultural movements that have shaped, been shaped by, and interacted with the Native community. Included are samples of Native literary voices from North, South, and Central America. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the major themes in the Native American experience
• evaluate personal values and ideas relative to a text
• analyze major literary elements and employ a variety of critical approaches
• apply critical theory about race, ethnicity, and ethnocentrism to a text
• judge a text’s level of authenticity as a Native work of literature
• compare literary texts
compose essays and other writing that respond to, evaluate, and analyze literary texts

identify important cultural themes in a work of literature

ENGLT 340 World Literature I

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better
Advisory: ENGWR 301 or 481
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
C-ID: C-ID ENGL 140
Catalog Date: June 1, 2020

This course surveys world literature in translation from antiquity through the early seventeenth century. In addition to significant works in the western tradition, masterpieces of non-western literature are studied. Ancient world cultures and historical movements are introduced, along with methods of literary analysis and research. The entire range of genres is represented and, whenever possible, works are read in their entirety.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify literary devices and apply them effectively to literary analysis
• analyze the larger patterns and historical continuity of early world literature while investigating specific works and writers
• compose essays and other writings that respond to, evaluate, and analyze literary works
• analyze early world poetry, prose, fiction, and drama as a reflection of the authors' cultures and values

ENGLT 341 World Literature II

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better
Advisory: ENGWR 301 or 481
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
C-ID: C-ID ENGL 145
Catalog Date: June 1, 2020

This course surveys world literature in translation from the late seventeenth century to the present. In addition to significant works in the Western tradition, masterpieces of non-Western literature from Asia, Africa, the Middle East, and Central and South America are studied. The entire range of genres is represented, and, whenever possible, works are read in their entirety.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify literary devices and apply them correctly to literary analysis.
• analyze the larger patterns and historical continuity of later world literature while investigating specific works and writers.
• compose essays and other writings that respond to, evaluate, and analyze literary works.
• assess later world poetry, prose, fiction, and drama as a reflection of the authors' cultures and values.

ENGLT 345 Mythologies of the World

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
This course of mythic literature introduces characters and themes in stories from world literature: creation stories, heroic journeys, and moments of transcendent transformation. It explores the timeless metaphors of these stories, metaphors which continue to not only influence characters and stories in modern literature, but also captivate contemporary readers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between characteristics of oral and written traditions.
- evaluate traditional and contemporary texts for the functions of myth.
- analyze traditional and contemporary texts for mythic archetypes.
- evaluate a literary text for the elements of the hero’s journey.
- analyze the transformation of hero and society.
- examine liminal events and situations, assessing the effect of these events and situations.
- compose essays and other written responses that evaluate and analyze mythic texts.

ENGLT 360 Women in Literature

This course examines women as both creators of and characters in literature. It includes reading and analyzing literature from a broad range of periods, genres, and cultures. Works by both men and women are included, with emphasis on works written by women and the social and cultural contexts that produced those works.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify literary devices and apply them effectively to literary analysis.
- analyze the larger patterns and historical continuity of literature by or about women while investigating specific works and writers.
- compose essays and other writings that respond to, evaluate, and analyze literary works.
- assess literature by or about women as a reflection of the authors’ cultures and values.

ENGLT 365 Introduction to Gay, Lesbian, Bisexual and Transgender Literature

This course surveys representative literature concerning gay, lesbian, bisexual, transgender, and queer or questioning (GLBTQ) themes and issues as written by or about GLBTQ people from throughout its literary history to the present day. The comprehensive literary study includes analysis of significant historical and cultural influences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate a basic knowledge of GLBTQ literature and the cultural and intellectual trends it represents.
- recognize the contributions of GLBTQ writers to mainstream literature and the GLBTQ subculture.
ENGLT 370 Children and Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area I; CSU Area C2
Catalog Date: June 1, 2020

This course is a survey of high-quality literature, past and present, created for children, and of the criteria for selecting, evaluating, and discussing children's literature. It includes discussion of the history of children's literature and current issues such as censorship, literacy, multiculturalism, and diversity. This course is intended for prospective teachers, early childhood education (ECE) majors, librarians, parents, those interested in writing or publishing children's books, and those who enjoy children's literature. It includes reading to children in a formal group setting.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the genres of children's literature.
- analyze and apply theories and criteria for selecting and evaluating children's literature.
- describe and interpret the contributions of outstanding authors, illustrators, and critics of children's literature.
- interpret and apply the theories and practices of oral reading and storytelling.
- develop ideas and practical activities for helping children to experience, appreciate, and respond to literature.
- examine literature portraying diverse and multicultural perspectives.

ENGLT 378 Young Adult Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course presents an overview of young adult literature and is designed to incorporate the ever-changing nature of this genre. The literature addressed reflects themes of interest to young people. Topics include a review of the history of young adult literature, readings of contemporary award-winning young adult literature, as well as a look at some of the classics from the past. Authors may include Suzanne Collins, Orson Scott Card, Markus Zusak, Yann Martel, Alexandre Dumas, J. K. Rowling, Sandra Cisneros, Lois Lowry, John Knowles, and J. D. Salinger. Censorship concerns and culturally diverse selections also form a core part of the course. This course includes an analysis of literary elements, an examination of an author's style and content, and reflection on what makes a piece of literature a classic.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply criteria for evaluating young adult literature
- analyze the contributions of outstanding authors and critiques of young adult literature
- identify the significant literary elements and an author's style for a given text
- analyze and explain the influence of society on young adult literature
- compose analytical expository essays and other writing about young adult literature
This course provides an introduction to Shakespeare's works. Six to ten plays, representing the range of Shakespeare's achievement, are covered. Topics include strategies for reading Shakespeare's English, exploration of dramatic genres, and contemporary approaches to interpreting the plays. Field trips to live Shakespearean performances may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the significance of Shakespeare's literary achievement
- analyze the language of Shakespeare's plays
- evaluate the contemporary relevance of Shakespeare's plays
- compose analytical and interpretive essays about particular Shakespearean plays
- synthesize multiple interpretations of Shakespeare
- analyze and compare dramatic genres

This course introduces drama as a type of literature. Plays from various historical periods and cultures are covered, with an emphasis on the analysis of plot, characterization, setting, theme, and other literary elements of drama. Attendance at a live theater production may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify elements of literature as they apply to the study of drama.
- apply literary evaluation criteria to different plays.
- analyze the cultures that produced particular plays.
- examine and evaluate dramatic styles and their place in literature.
- assess the contemporary importance of particular plays.
- compose arguments about the interpretation of particular plays.

This course introduces science fiction and fantasy as distinct literary genres. Students will explore the literary conventions, themes, and theories associated with science fiction and fantasy through a variety of texts and media. The course emphasizes critical reading and analysis, and may include discussions of social, cultural, and historical contexts.
This course explores the literature of science fiction and fantasy. It includes an exploration of the roots of these genres—the fantastic, the Gothic, terror and horror—and the development of their diverse contemporary forms. Texts may include selections from television, film, anime, short stories, and novels.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the use of Gothic characteristics in various texts.
- compose essays and other writings that respond to, evaluate, and analyze critically the literary elements of a text.
- examine the social, cultural, historical, or political contexts that might have influenced a text.
- distinguish and assess the role of the Other.
- analyze literary works by applying various critical approaches.
- differentiate among individual subgenres, such as classic fantasy, sword and sorcery, terror, horror, space opera, and cyber punk.

ENGLT 403 Film Adaptations

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 101 with a grade of "C" or better
Advisory: ENGWR 300 or ENGWR 480, AND ENGWR 301, ENGWR 303 or ENGWR 481.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course examines the processes, problems, and successes of adapting literary, stage, and previous film material into films. It discusses faithful and unfaithful adaptations through reading the original texts and viewing the adapted films with an awareness of their historical and cultural contexts. This course analyzes intention, creative distinctions, and the limits and strengths of each medium.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply basic terminology from narrative theory, literary studies, and film studies.
- distinguish between the strengths and weaknesses inherent in the genres of short story, novel, drama, and film.
- analyze differences among genres and media.
- construct criteria for judging strengths and weaknesses of adaptations.
- evaluate films based on course concepts, such as narrative modes, genre conventions, and production exigencies.
- evaluate both literature and film in cultural context, as cultural and artistic expressions in their historical and social moments.
- compare and contrast the works studied.

ENGLT 486 Honors African American Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: Eligibility for the Honors Program.
Transferable: CSU
General Education: AA/AS Area I (effective Summer 2020); AA/AS Area VI (effective Summer 2020)
Catalog Date: June 1, 2020

This course is an advanced seminar on African American literature from the slave narratives to the present. This comprehensive literary study includes analysis of significant historical and cultural influences and relevant critical approaches and contexts in a variety of literary genres. In comparison to ENGLT 330, this honors course uses an intensive instructional methodology designed to challenge motivated students and cultivate advanced critical thinking skills. Instruction emphasizes critical thinking in a seminar style, where the focus is on analysis and evaluation of literature and literary theories. Honors students will also develop proficiency in library and internet-based research, make oral and written presentations, and participate in student-led group discussions. An MLA style research paper is also required. This course is not open to students who have completed ENGLT 330.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate African American literature critically
- assess historical significance of African American literature
- compose transfer-level essays analyzing African American literature
- demonstrate an appreciation for the contributions of African American writers and the political, social, and historical significance of their works
- demonstrate critical thinking skills in seminar-style discussion and in written analytical essays
- incorporate extensive bibliographic research effectively into analytical papers
- apply literary criticism effectively into analytical papers
- present independent research on African American literature

ENGLT 494 Topics in Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 with a grade of "C" or better
Transferable: CSU
General Education: AA/AS Area I; CSU Area C2
Catalog Date: June 1, 2020

This is a literature course to be scheduled as needed under a title describing specific content. It provides the opportunity to focus on an in-depth study of specific literary subjects or genres. The course offers an extensive study of works by significant writers of literature defined by theme, region, vocation, or human experiences. Possible titles include Retelling Stories or Literature of War.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine and compare works studied according to theme, author's style, or genre.
- compose essays and other writings that respond to, evaluate, and analyze literary works.
- analyze the use and effect of literary devices in a variety of works.
- assess poetry, prose, fiction, or drama as a reflection of the authors' culture and values.

ENGLT 495 Independent Studies in Literature

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

English - Reading (ENGRD)

ENGRD 12 Reading Center: Individualized Support Skills for ENGRD 14

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
This course offers supplemental instruction in basic reading skills for those concurrently enrolled in ENGRD 14. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define an unfamiliar word using a variety of techniques
- identify stated main idea in a paragraph
- formulate the unstated main idea of a paragraph
- identify the stated thesis in an essay
- formulate the unstated main idea of an essay
- identify the supporting ideas in an essay

**ENGRD 14 Reading Skills**

This course covers the foundations of reading skills, such as vocabulary development and basic reading comprehension.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- comprehend unfamiliar words in basic level texts using word attack skills, syllabication, context clues, and the dictionary
- apply study strategies including notetaking, annotating, and time management appropriately to promote academic success
- identify stated and implied main ideas and supporting details in fiction and nonfiction basic-level texts
- recognize paragraph patterns in nonfiction basic-level texts

This is a multifaceted course meant to engage all aspects of foundational reading skills. Topics include vocabulary strategies, textbook comprehension, and study skills, all of which can be applied to other courses. This course is not open to students who have successfully completed ENGRD 56 or ENGWR 56.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply a variety of vocabulary techniques, including structural analysis, dictionary skills, and context clues to derive the definition of an unfamiliar word
- identify stated main ideas in paragraphs
- recognize supporting details in paragraphs
- distinguish inferred meanings and draw appropriate conclusions in textbooks, periodicals, and various appropriate-level materials
- apply comprehension and study techniques such as Study, Question, Read, Recite, Review (SQ3R), highlighting, annotating, and others
- adjust techniques dependent upon the purpose for reading
- use time management and test taking skills
analyze the five elements of fiction: characters, plot, theme, setting, and conflict

differentiate text structures in paragraphs, such as example, comparison/contrast, cause and effect, sequence, definition, or classification at the appropriate reading level

identify a stated thesis in a multi-paragraph selection

formulate implied main ideas from major supporting details

ENGRD 17 Vocabulary and Spelling with Study Strategies

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course emphasizes the improvement of vocabulary and spelling with the use of learning and study strategies. Individual learning styles are utilized to learn new words in a number of contexts. Thematic readings, writing, and individual word journals are required throughout the course to supplement and reinforce spelling rules and the use of new vocabulary.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop personal study strategies to fit individual learning styles.
- practice pronouncing words correctly to avoid spelling errors.
- use the dictionary to find word meanings, pronunciations, and parts of speech.
- use a word correctly in a sentence by knowing the word's part of speech.
- use words in a sentence around an unfamiliar word to determine that word's meaning.

ENGRD 50 Reading Center: Individualized Support Skills for ENGRD 15

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Corequisite: Concurrent enrollment in ENGRD 15.
Catalog Date: June 1, 2020

This course offers supplemental practice in beginning reading skills for those concurrently enrolled in ENGRD 15. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- locate a stated thesis in an expository or persuasive essay
- formulate an unstated thesis in an expository or persuasive essay
- identify the major details that support a thesis
- apply inferential comprehension techniques to paragraphs and expository or persuasive essays

ENGRD 54 Succeeding in College Reading

Units: 1.5
Hours: 27 hours LEC
Prerequisite: Placement through the assessment process.
Corequisite: Concurrent enrollment in ENGRD 310 (Critical Reading as Critical Thinking) or ENGRD 312 (Academic Textbook Reading); AND ENGRD 314 (Speed Reading)
Catalog Date: June 1, 2020

This course offers small- and large-group instruction on reading processes, reading strategies, and critical thinking skills necessary for success in college reading.
Assignments are connected to students' ENGRD 310 or ENGRD 312 coursework. Pre-reading, reading, and post-reading processes are covered. This is a corequisite course for students who are concurrently enrolled in ENGRD 310 or 312 and ENGRD 314. Pass/No pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the reading process, which includes pre-reading, reading, and post-reading to a variety of reading tasks.
- identify the stated or implied thesis, primary and secondary supports, and patterns of organization of a variety of readings.
- apply effective and efficient study reading strategies for college-level material, such as annotating, outlining, mapping, and summary writing.
- analyze words contextually and structurally.

ENGRD 55 Reading Center: Individualized Reading Skills II

Units: 1.5  
Hours: 27 hours LEC  
Prerequisite: Placement through the assessment process.  
Advisory: ESLR 50 with a "C" or better for non-native speakers.  
Catalog Date: June 1, 2020

This course offers individualized instruction focused on discrete reading comprehension skills and application of those skills to persuasive and expository essays, textbooks, and fiction. Subjects include SQ3R (Study, Question, Read, Recite, and Review), patterns of development, and inferential comprehension. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply comprehension and study techniques such as Study, Question, Read, Recite, Review (SQ3R)
- analyze five elements of fiction: character, plot, theme, setting, and conflict
- differentiate text structures, such as comparison and contrast, cause and effect, example, sequence, definition, or classification in paragraphs and essays
- formulate implied main ideas from major supporting details

ENGRD 56 Integrated Reading, Writing and Study Skills

Same As: ENGWR 56  
Units: 6  
Hours: 108 hours LEC  
Prerequisite: ENGRD 14 (Reading Skills) with a grade of "C" or better; or 1.5 units of ENGRD 54 with a grade of "P" AND ENGRD 55 with a grade of "P"; or placement through the assessment process  
Advisory: CISC 100 with a grade of "C" or better, or equivalent skill level.  
Catalog Date: June 1, 2020

This course emphasizes the interrelationships among reading, writing, and study skills at the basic skills level. Course content, activities, and assignments integrate all three areas, providing opportunities to improve reading and writing skills in a student-centered environment. This course provides students with ongoing practice with the reading and writing processes and covers strategies for reading and writing in response to a variety of texts. Additional topics include a review of campus services and programs and effective study strategies. This is a learning community course taught by one reading and one writing instructor. Completing this course is equivalent to completing both ENGRD 15 and ENGWR 50. This course is not open to students who have already completed ENGRD 15, ENGWR 50, ENGWR 51, or ENGWR 56 with a grade of "C" or better.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the writing and reading processes in completing writing and reading assignments.
- apply a variety of idea-generating tools, such as previewing, brain-storming, and clustering, appropriate to specific reading and writing tasks.
- assess the key ideas of texts by different authors on related topics.
- assess and differentiate among main ideas, stated or implied; supporting details; and patterns of organization in paragraphs and essays.
- evaluate the different points of view of a variety of texts and distinguish the key points in the texts by using appropriate annotating and note-taking skills.
• analyze the meanings of words by applying a variety of vocabulary evaluation techniques, such as structural analysis, dictionary skills, and context clues.
• compose well-organized essays supported by specifics/details from assigned texts.
• organize paragraphs and essays to support a point of view in ways appropriate to the topic.
• compose clear, effective, and grammatically correct sentences in a variety of structures.
• format essays according to MLA guidelines.
• identify and employ appropriate and expected college-student behaviors.
• evaluate various learning styles and apply them to individual study habits.
• describe campus programs and student services and assess their relevance to student success.
• describe the types of and ways to receive counseling at American River College.
• apply time management strategies to develop an effective study schedule.

ENGRD 111 Reading Across the Disciplines: Academic and Professional Development

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Corequisite: Enrollment in a below transfer-level course.
Catalog Date: June 1, 2020

This Reading Across the Disciplines (RAD) course offers reading skills to students as they apply to various below transfer-level courses. Topics include annotating, vocabulary development, schema building, and other strategies to increase reading focus and retention. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze lectures, readings, and handouts to meet course requirements.
• synthesize material from lectures, assigned readings, and research to create appropriate study tools.
• identify the purpose for reading and adjust reading style (careful reading, general reading, skimming, or scanning) to fit the purpose.
• assess the reading process and use metacognitive strategies to increase focus.
• develop vocabulary building techniques.

ENGRD 116 Preparation for Academic Study

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course analyzes expository and argumentative essays, textbooks, and literature in preparation for ENGRD 310 and other transfer-level classes across the disciplines. It emphasizes recognition of an author's thesis, supporting details, point of view, purpose, and tone through an in-depth analysis of an essay's structure. This course also focuses on applying study strategies for comprehending and retaining information from textbooks in preparation for tests.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze words contextually and structurally
• apply the reading process such as SQ3R, PRO, and BWA to textbook selections
• apply appropriate annotations, notetaking, and mnemonic techniques
• analyze the structure of expository or argumentative essays
• identify an essay's stated or implied thesis, primary and secondary supports, and pattern of organization
• critically analyze an author's purpose, tone, bias, and point of view
- distinguish fact from opinion and claim from premise in an argumentative essay
- analyze literature or narrative non-fiction to identify elements of fiction such as setting, plot, characters, conflict, and theme
- infer authors' tone by identifying connotation, denotation, and figurative language

ENGRD 117 Reading Center: Individualized Support Skills for ENGRD 116

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Corequisite: Concurrent enrollment in ENGRD 116.
Catalog Date: June 1, 2020

This course offers instruction in intermediate reading skills. It provides supplementary practice to students who are concurrently enrolled in ENGRD 116. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish author's tone using inferential comprehension techniques
- differentiate organizational patterns in expository or persuasive essays
- apply note-taking strategies to textbook selections
- implement inferential comprehension techniques in expository and persuasive college-level selections

ENGRD 310 Critical Reading as Critical Thinking

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Concurrent enrollment in ENGWR 300.
Transferable: CSU
General Education: AA/AS Area II(b); CSU Area A3
Catalog Date: June 1, 2020

This course covers the theory and practice of critical and speed reading skills needed for successful academic performance with an emphasis on the following: (1) critical and analytical evaluation of college-level expository and argumentative essays, (2) development of flexible reading rate and speed, (3) critical analysis and evaluation of independent research, (4) vocabulary development, and (5) application of these skills to multicultural essays, journals, fiction, and nonfiction reading.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify thesis statements, stated or implied in college-level essays and articles.
- analyze content to determine major details and patterns of development.
- assess critical comprehension elements in written arguments: inference, fact and opinion, judgment, tone, bias, style, and purpose.
- evaluate the logic of arguments in college-level texts, focusing on propaganda, assumptions, faulty analogies, non-sequiturs, and deductive and inductive patterns.
- evaluate the quality and sufficiency of evidence and other forms of support for a written argument.
- create effective and efficient study reading strategies for college-level material such as annotating, outlining, mapping, and summary.
- assess reading strategies appropriate to regulate reading rate depending on reader’s purpose and varied college-level materials.
- introduce analysis and critical thinking using inductive and deductive reasoning.

ENGRD 312 Academic Textbook Reading

Units: 3
Hours: 54 hours LEC
This course concentrates on the refinement of the ability to read, understand, and respond to transfer-level textbooks across the curriculum. Emphasis is on critical and analytical reading, thinking and writing; graphics and other visual materials; discipline-based vocabulary; and reading rates as they relate to academic success.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- choose appropriate study skills for various content area courses including previewing, annotating, paraphrasing, and reviewing.
- evaluate purpose and structure in college-level textbooks with specific applications related to careers and disciplines.
- compose written responses to textbook readings.
- employ college-level, discipline-based vocabulary.
- analyze and apply appropriate reading rates to college-level material.

ENGRD 314 Reading Across the Disciplines: Speed Reading

This course offers reading skills to transfer-level students as applied to various content-area courses. Topics include the following: assessing the reading process and material to employ appropriate strategies to meet the purpose for reading; utilizing one's reading rates and styles based on purpose and material; utilizing college-level, discipline-based vocabulary; and mastering the skills needed to critically read and analyze current and future transfer-level course texts. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the reading process and material for appropriate strategies.
- identify the purpose for reading.
- adapt reading rate and style based on reading purpose and material.
- utilize college-level, discipline-based vocabulary.
- analyze college-level texts, essays, journals, and research material.

ENGRD 315 Reading Across the Disciplines for Content Courses

This course offers reading skills to students as they apply to various content-area courses. Topics include the principles of the reading process, analysis of discipline-specific reading assignments, strategies for retention, and research strategies particular to the chosen discipline. Students should contact the RAD center before enrolling. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze lectures, readings, assignments, and handouts to meet course requirements.
ENGRD 316 Reading Across the Disciplines for Content Courses II

| Units: | 0.5 |
| Hours: | 9 hours LEC |
| Prerequisite: | ENGRD 315 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course offers individualized or small-group sessions to help students who have already completed ENGRD 315 improve classroom performance. It focuses on application of inferential and critical reading strategies and study skills to specific content classes and programs. Topics include learning style assessment, how to implement appropriate reading strategies, and how to choose the best study methods. Students must come to the RAD Center and meet with a RAD staff member before enrolling. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- connect learning styles to reading strategies.
- analyze content-course material to determine the best reading strategies to use to study and retain the information in that material.
- evaluate the usefulness of different active reading strategies and apply the appropriate strategy to the assigned task.
- assess performance on content-course exams in order to modify study strategies.

ENGRD 495 Independent Studies in English - Reading

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in Reading, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in Reading and secure approval. Only one independent study for each catalog course will be allowed.

English - Writing (ENGWR)

ENGWR 50 Developmental Composition

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Corequisite: | Concurrent enrollment in ENGWR 95 or ENGWR 96. |
| Advisory: | BUSTEC 300.1 |
| Catalog Date: | June 1, 2020 |

This course focuses on developmental writing skills, emphasizing the connection between writing and reading with the goal of building fluency. It includes writing in response to assigned readings as well as practicing the writing process: prewriting, thesis development and organization of ideas, drafting of essays, and revision.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- compose summaries of assigned texts.
- distinguish between fact and opinion.
- respond to issues raised in texts.
- analyze assignments and create strategies for addressing them.
- organize ideas to improve focus.
- compose short essays with controlling ideas and support.
- demonstrate document formatting/setup.
- revise essay drafts.
- compose complete sentences with a variety of patterns.

**ENGWR 51 Developmental Writing**

| Units:     | 4 |
| Hours:     | 72 hours LEC |
| Prerequisite: | None. |
| Advisory:  | Concurrent enrollment in ENGRD 15 |
| Catalog Date: | June 1, 2020 |

This course focuses on basic writing skills, emphasizing the connection between writing and reading. It includes writing in response to short reading selections. In addition, the writing process and development of specific skills within the sentence, paragraph, and essay forms are covered in preparation for ENGWR 102 or ENGWR 103. A minimum of 3000 words of full-process writing is required. This course is not open to students who have completed ENGWR 56 or ENGRD 56 with a grade of "C" or better.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- summarize main ideas in an assigned reading
- distinguish between fact and opinion
- compose a variety of paragraphs with clear controlling ideas and support
- analyze assignments and create strategies for addressing them
- compose a clear and organized short essay
- construct a variety of sentences that demonstrate conventions of standard written English

**ENGWR 56 Integrated Reading, Writing and Study Skills**

| Same As: | ENGRD 56 |
| Units:   | 6 |
| Hours:   | 108 hours LEC |
| Prerequisite: | ENGRD 14 (Reading Skills) with a grade of "C" or better; or 1.5 units of ENGRD 54 with a grade of "P" AND ENGRD 55 with a grade of "P"; or placement through the assessment process |
| Advisory: | CISC 100 with a grade of "C" or better, or equivalent skill level. |
| Catalog Date: | June 1, 2020 |

This course emphasizes the interrelationships among reading, writing, and study skills at the basic skills level. Course content, activities, and assignments integrate all three areas, providing opportunities to improve reading and writing skills in a student-centered environment. This course provides students with ongoing practice with the reading and writing processes and covers strategies for reading and writing in response to a variety of texts. Additional topics include a review of campus services and programs and effective study strategies. This is a learning community course taught by one reading and one writing instructor. Completing this course is equivalent to completing both ENGRD 15 and ENGWR 50. This course is not open to students who have already completed ENGRD 15, ENGWR 50, ENGWR 51, or ENGRD 56 with a grade of "C" or better.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply the writing and reading processes in completing writing and reading assignments.
• apply a variety of idea-generating tools, such as previewing, brain-storming, and clustering, appropriate to specific reading and writing tasks.

• assess the key ideas of texts by different authors on related topics.

• assess and differentiate among main ideas, stated or implied; supporting details; and patterns of organization in paragraphs and essays.

• evaluate the different points of view of a variety of texts and distinguish the key points in the texts by using appropriate annotating and note-taking skills.

• analyze the meanings of words by applying a variety of vocabulary evaluation techniques, such as structural analysis, dictionary skills, and context clues.

• compose well-organized essays supported by specifics/details from assigned texts.

• organize paragraphs and essays to support a point of view in ways appropriate to the topic.

• compose clear, effective, and grammatically correct sentences in a variety of structures.

• format essays according to MLA guidelines.

• identify and employ appropriate and expected college-student behaviors.

• evaluate various learning styles and apply them to individual study habits.

• describe campus programs and student services and assess their relevance to student success.

• describe the types of and ways to receive counseling at American River College.

• apply time management strategies to develop an effective study schedule.

ENGWR 94 Succeeding in College Composition

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Corequisite: Concurrent enrollment in ENGWR 300; AND ENGWR 95 or ENGWR 96; AND ENGRD 111.
Catalog Date: June 1, 2020

This course offers small- and large-group instruction on writing processes, writing strategies, and critical thinking skills necessary for success in ENGWR 300 (College Composition). Assignments are connected to the students’ ENGWR 300 coursework. It covers drafting, revision, and editing processes. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply a recursive writing process that includes pre-writing, drafting, revising, and editing.

• summarize, analyze, and respond to readings.

• analyze and use researched sources in one’s own writing.

ENGWR 95 Beginning Writing Across the Curriculum (WAC)

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Advisory: BUSTEC 300.1 or CISC 300
Catalog Date: June 1, 2020

This course offers both individualized and group instruction in appropriate writing processes and strategies for a variety of basic written assignments in all academic disciplines. Topics include understanding writing assignments, strategies for revision, and proofreading. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate proficiency in the beginning writing skills studied

• compose and revise basic writing

• apply basic writing strategies to a variety of assignments
ENGWR 96 Intermediate Writing Across the Curriculum (WAC)

This course offers both individualized and group instruction in appropriate writing processes and strategies for a variety of college-level writing assignments in all academic disciplines. Topics include understanding writing assignments, strategies for revision, and basic documentation. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in the college-level writing skills studied
- compose and revise college-level writing
- apply appropriate writing strategies to a variety of assignments

ENGWR 101 College Writing

This course focuses on the connections between critical thinking, writing, and reading that are necessary for the independent development of essays in ENGWR 300 and other transfer-level courses. It emphasizes writing in response to various reading selections, including at least one full-length work. The essay writing process includes prewriting, thesis development and organization of ideas, drafting of essays, and revision. The course also requires outside research and includes an introduction to basic formatting and referencing of sources using MLA-style documentation. Written final drafts totaling at least 4,500 words are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze issues and ideas raised in a variety of texts
- distinguish among fact, inference and opinion
- respond to issues raised in texts
- compose essays with clear controlling ideas
- compose essays with a logical progression and organization of ideas
- develop and expand ideas that are supported by a variety of relevant details
- format documents properly
- parenthetically reference sources used in paper
- cite sources in a properly formatted works-cited page
- evaluate source credibility
- integrate credible sources using appropriate formatting standards
- revise essay drafts to improve focus and strengthen ideas
- construct sentences that demonstrate control of grammar, sentence variety, word choice, and conventions of standard written English

ENGWR 300 College Composition

This course offers both individualized and group instruction in appropriate writing processes and strategies for a variety of college-level writing assignments in all academic disciplines. Topics include understanding writing assignments, strategies for revision, and basic documentation. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in the college-level writing skills studied
- compose and revise college-level writing
- apply appropriate writing strategies to a variety of assignments

ENGWR 50 with a grade of "C" or better, or placement through the assessment process.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze issues and ideas raised in a variety of texts
- distinguish among fact, inference and opinion
- respond to issues raised in texts
- compose essays with clear controlling ideas
- compose essays with a logical progression and organization of ideas
- develop and expand ideas that are supported by a variety of relevant details
- format documents properly
- parenthetically reference sources used in paper
- cite sources in a properly formatted works-cited page
- evaluate source credibility
- integrate credible sources using appropriate formatting standards
- revise essay drafts to improve focus and strengthen ideas
- construct sentences that demonstrate control of grammar, sentence variety, word choice, and conventions of standard written English

Catalog Date: June 1, 2020
This course emphasizes writing and includes reading, research, and critical thinking skills essential for successful completion of a college degree. It covers writing assignments, including expository and argumentative essays (6,000 words minimum for course) using MLA documentation and format. It also includes reading assignments selected from a variety of transfer-level texts of substantial length. This course is not open to students who have successfully completed ENGWR 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess complex texts for audience, purpose, tone, and development.
- evaluate arguments for logical consistencies and fallacies.
- synthesize concepts and evidence from complex texts and sources.
- compose effective transfer-level essays.
- incorporate a variety of rhetorical strategies.
- integrate credible sources using appropriate citation and formatting standards.
- construct grammatically correct sentences employing a variety of structures and transfer-level diction.

ENGWR 301 College Composition and Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area A2; IGETC Area 1A
C-ID: C-ID ENGL 100
Catalog Date: June 1, 2020

This course offers study of literary texts, with emphasis on analytical reading and writing. It covers principles of argument and analysis, such as reasoning inductively and deductively. Assigned texts include novels, short stories, poems, plays or films, and literary criticism. Essays written for the course (6,000 words minimum) generalize from the texts to present carefully reasoned arguments. At least one essay includes citations from secondary sources, documented according to current MLA format. Not open to students who have successfully completed ENGWR 481.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the cultural and historical contexts of literary works
- reason inductively from examples, patterns, and structures to form generalizations
- reason deductively by drawing conclusions about literary works
- compose a thesis-driven argument of interpretation or evaluation and support it with textual evidence, using a sufficient variety and number of appropriate examples
- compare opposing interpretations by literary scholars

ENGWR 302 Advanced Composition and Critical Thinking

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better
Advisory: ENGRD 310 or 312
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area A3; IGETC Area 1B
C-ID: C-ID ENGL 120
Catalog Date: June 1, 2020

This course develops analytical skills through writing and discussion. It examines methods by which people are persuaded to think, believe, and act. It also includes
analyses of arguments or expressions of opinions for their validity and soundness. Assigned readings include a variety of essays and a book-length text. Finally, this course focuses on critically assessing, developing, and effectively expressing and supporting opinions. Essays written for the course (6,000 words minimum) draw from the texts to present carefully reasoned arguments. At least one essay includes citations from secondary sources, documented according to current MLA format. This course is not open to students who have successfully completed ENGWR 482.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze, compare, and evaluate divergent perspectives
- evaluate complex systems of values, contexts, and assumptions in texts
- compose thesis-driven arguments of interpretation or evaluation and support them with textual evidence, using a sufficient variety and number of appropriate examples
- assemble, synthesize, and evaluate online and library research for use in a written argument
- compose rhetorically sophisticated sentences to help achieve their purposes in writing

ENGWR 303 Argumentative Writing and Critical Thinking Through Literature

Units: 4  
Hours: 72 hours LEC  
Prerequisite: ENGWR 300 or 480 with a grade of "C" or better  
Transferable: CSU; UC  
General Education: AA/AS Area I(b); CSU Area A3; IGETC Area 1B  
C-ID: C-ID ENGL 105; C-ID ENGL 110; C-ID ENGL 120  
Catalog Date: June 1, 2020

Through the study of complex literary works in all major genres, this course offers instruction in analytical, critical, and argumentative writing; critical thinking; research strategies; information literacy; and proper documentation. Close reading skills and the aesthetic qualities of literature are also studied. A minimum of 6000 words of formal writing is required. Attendance at readings, plays, and/or films may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and compare the social, historical, cultural, psychological, or aesthetic assumptions of complex literary texts
- analyze formal and informal fallacies in literary analysis
- analyze and employ inductive and deductive reasoning and argumentative appeals using logos, ethos, and pathos
- analyze and interpret literary texts by identifying key elements of major genres
- analyze and interpret specific literary texts, defining and applying common literary devices
- synthesize appropriate textual evidence and examples, demonstrating appropriate academic discourse and the conventions of literary analysis
- synthesize primary and secondary sources into written work without plagiarism, demonstrating appropriate documentation format
- compose thesis-driven arguments to suit a variety of rhetorical situations, including interpretation, evaluation, and analysis
- compose essays in a style and tone appropriate to the academic community that are generally free of sentence errors of grammar, usage, and punctuation
- analyze complex literary texts, applying skills such as note-taking, annotating, and paraphrasing
- apply strategies to self-assess learning and comprehension

ENGWR 304 Advanced Writing in the Disciplines (WID)

Units: 0.5 - 1  
Hours: 9 - 18 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course offers small and large group instruction on the writing processes and writing strategies necessary to compose academic essays and reports that follow the guidelines and requirements of a specific discipline. Additionally, approaches to composing longer, more complex writing tasks following a discipline's style are taught.
Topics vary according to need and may include the principles of the writing process, analysis of discipline-specific writing assignments, strategies for revision, and research and documentation skills such as APA or MLA. In order to take this course, students must be enrolled in at least one other transfer-level course. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply discipline-specific writing strategies for transfer-level writing assignments
- demonstrate proficiency in the discipline-specific writing skills studied
- compose and revise written transfer-level assignments following the academic style required for a specific discipline

In order to take this course, students must be enrolled in at least one other transfer-level course. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply discipline-specific writing strategies for transfer-level History assignments
- demonstrate proficiency in the discipline-specific writing skills studied
- compose and revise written transfer-level assignments following the academic style required for the History discipline
This course offers small and large group instruction on the writing processes and writing strategies necessary to compose academic essays and reports that follow the guidelines and requirements of the courses in the social science disciplines. Additionally, approaches to composing longer, more complex writing tasks following the styles of one or more disciplines in this area are covered. Topics include the principles of the writing process, analysis of discipline-specific writing assignments, strategies for revision, and research and documentation skills such as APA or Chicago style. In order to take this course, students must be concurrently enrolled in at least one transfer-level social science course, such as Psychology or Sociology. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply discipline-specific writing strategies for transfer-level assignments in social science courses
- demonstrate proficiency in the discipline-specific writing skills studied
- compose and revise written transfer-level assignments following the academic style required for the social science discipline studied

ENGWR 362 Writing in the Disciplines: Composing Essays in English

This course offers instruction on the writing processes and writing strategies necessary to compose academic essays. It includes an examination of the rationale for using a process-based approach to writing as well as specific writing strategies for prewriting, conducting and using research, drafting, revising, editing, and composing metacognitive reflections.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply a variety of writing strategies for different aspects of the writing process
- demonstrate understanding of the writing strategies studied
- compose metacognitive reflections about writing that demonstrate awareness of the importance of the process and strategies taught
- compose and revise written transfer-level assignments

ENGWR 480 Honors College Composition

This honors composition course requires the analysis of professional essays and at least one full-length volume of non-fiction that exhibits complexity in both subject and structure. It emphasizes the composition of carefully reasoned, stylistically sophisticated essays of varying lengths and in varying rhetorical modes, at least one of which includes research and appropriate MLA documentation. Essays written in this course will total at least 6,500 words. The course also emphasizes presentation of independent and collaborative research. This course is not open to students who have successfully completed ENGWR 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze essays, articles, and books that are complex in both subject and structure
- evaluate one full-length volume of non-fiction for style, tone, and content
- compose carefully reasoned essays, using various rhetorical strategies
- conduct research to gather information
apply complex critical thinking skills by defining issues; gathering, analyzing, evaluating, and synthesizing ideas; and developing conclusions

evaluate sources for credibility

collaborate in presenting responses, analyses, and evaluations of reading and writing assignments

organize and present individual project results

ENGWR 481 Honors College Composition and Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 480 with a grade of "C" or better; OR ENGWR 300 with a grade of "C" or better AND placement into ENGWR 480.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area A3; IGETC Area 1B
C-ID: C-ID ENGL 120
Catalog Date: June 1, 2020

This course is an advanced seminar in critical reading and writing about literature. Through complex, in-depth reading assignments, it examines the four major genres—the novel, the short story, poetry, and drama—in works by authors representing diverse perspectives and cultures. It covers inductive and deductive reasoning about literature and the written analysis of literature, requiring at least 6,500 words of formal, analytical writing. This course also examines literary theory and research, the use of primary and secondary sources, and MLA documentation. This course is not open to students who have successfully completed ENGWR 391.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the cultural, historical, biographical, ethnic, and philosophical contexts of literary works
• assess a variety of perspectives about literary works
• examine a wide range of literary conventions
• reason inductively from examples, patterns, themes, and structures to form generalizations about literary works
• reason deductively by drawing conclusions about the meaning of literary works
• compose interpretations of diverse literary works
• analyze works of literary criticism and theory

ENGWR 482 Honors Advanced Composition and Critical Thinking

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 480 (Honors College Composition) with a grade of "C" or better; OR ENGWR 300 with a grade of "C" or better AND placement into ENGWR 480.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area A3; IGETC Area 1B
C-ID: C-ID ENGL 105
Catalog Date: June 1, 2020

This is an honors course in critical reasoning, reading, and writing, requiring a high level of competence in English composition. Complex texts—essay and book-length works—reflecting a variety of social, cultural, and historical contexts are read, discussed, and analyzed. Although this course focuses primarily on non-fictional texts, selected works of fiction may be included. This course focuses on the writing of formal academic essays which include primary and secondary research; MLA format is required for all essays, and a minimum of 6500 words is required for the course. Group and individual class presentations are required; at least one essay assignment requires independent reading. This course is not open to students who have successfully completed ENGWR 392.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the social, cultural, and historical contexts of various texts
• compose summaries of various texts
• evaluate texts for logical and emotional content
• evaluate content information for accuracy and credibility
• compose essays that integrate a variety of texts which reflect differing points of view
• compose essays that effectively address audience expectations
• reason inductively from examples, patterns, themes, and structures to form generalizations
• reason deductively by drawing conclusions about the meaning of specific details, words, or phrases
• demonstrate familiarity with a variety of schools of critical and rhetorical theory
• demonstrate appropriate documentation of sources
• demonstrate a sophisticated and effective style and vocabulary

ENGWR 495 Independent Studies in English - Writing

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
American River College offers courses in English as a Second Language (ESL) designed exclusively to provide non-native speakers of English with a command of the language necessary to pursue career, transfer and degree goals. Students whose native language is English but who need help with language fundamentals should seek courses offered in the English Department.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- write and edit clear, well-developed, and soundly structured essays on academic topics.
- summarize, paraphrase, and quote readings to integrate outside sources into writing.
- evaluate a variety of reading selections by critically analyzing, critiquing, and responding to readings both in class and out of class.
- compile accurate notes while listening to lectures and presentations.
- formulate and use a variety of interactive speaking strategies effectively such as clarification, polite interruption, and agreement/disagreement strategies using clear and comprehensible pronunciation.
- employ appropriate reading strategies and adjust reading speed appropriately to address a full range of reading tasks including reading for inferences and bias.
- demonstrate mastery of verb tenses and modal auxiliary uses.
- combine sentences, with emphasis on the ability to recognize, contrast, and analyze subordination and coordination.
Advanced-High Proficiency Certificate in English as a Second Language Certificate

This certificate recognizes attainment of English language abilities to an advanced-high level in listening, speaking, reading, writing, and grammar skills. It is suitable for use in academic classes at the community college level as well as in the workplace.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate comprehension of written and spoken English at an advanced-high level.
- produce written and spoken English at an advanced-high level.
- appraise texts and use appropriate reading strategies and reading rate effectively across a full range of reading tasks.
- comprehend a variety of complex fiction and nonfiction reading selections.
- analyze fiction and nonfiction readings for structure, audience, author intent and bias, main ideas, and literary and rhetorical devices.
- demonstrate advanced comprehension of fiction and nonfiction texts by composing written responses.
- evaluate arguments in nonfiction expository and argumentative texts.
- synthesize ideas from several complex readings, demonstrating critical thinking skills.
- draft, revise, edit, and proofread a wide variety of essay types effectively, showing mastery of English writing style, grammar, vocabulary, and mechanics.
- appraise and synthesize information on a variety of topics using library resources and credible Internet sources.
- compose a fully documented research paper based on a variety of reference works.

Certificates

Intermediate-High Proficiency in English as a Second Language Certificate

This certificate recognizes attainment of English language abilities at an intermediate-high level in listening, speaking, reading, writing, and grammar.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- communicate orally in grammatical English in everyday social and work situations.
- demonstrate comprehension of written and spoken English in work and social contexts.
- write comprehensible, grammatical English on everyday topics.

English as a Second Language (ESL)

ESL 34 Novice-High Skills Lab

Units: 0.5 - 1.5
Hours: 27 - 81 hours LAB
Prerequisite: ESLL 20, ESLR 20, or ESLW 20 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course develops, expands, and reinforces multiple English language skills at the novice-high level in an independent and/or small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, conversation and listening skills, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course may be taken up to 3 times, for a total of 1.5 units, using different modules. This course is not a substitute for other ESL courses. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize a variety of methods to communicate effectively.
- recognize and produce practical speech on topics such as family, health, employment, recreational activities, culture, and geography.
- identify main ideas, topic sentences, and supporting details in reading passages and in own writing.
- identify vocabulary meaning based on context clues.
- apply basic punctuation and capitalization rules.
- construct simple sentences using simple present, simple past, and future tenses.

ESL 37 Novice-High Integrated Reading and Writing

Units: 6
This course focuses on learning academic reading and writing skills at the novice-high level, with an emphasis on vocabulary development, reading comprehension, and the development of compositions. It covers developmental compositions with a clear beginning, middle, and end. This course is part of the reading and writing sequence which prepares ESL students to take college courses leading to a certificate, degree, and/or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use an American English dictionary.
- recognize and use a larger vocabulary.
- use reading strategies such as skimming and scanning to identify general ideas and locate specific information.
- use background knowledge and schemata to improve understanding of a reading.
- use context clues to determine the meaning of new words.
- identify basic prefixes, suffixes and roots and use that information to determine the part of speech and meaning.
- employ the writing process to complete multi-paragraph writing assignments.
- write focused compositions with a clear beginning, middle, and end based on topics covered in the course.
- apply basic steps in the writing process including prewriting, writing, editing, and revising for in-class and out-of-class writing assignments.
- use basic writing and formatting conventions including punctuation, capitalization, margins, indentations, spelling, and legible handwriting.
- produce simple sentences as well as basic compound and complex sentences with correct English syntax, punctuation, and capitalization.
- apply critical thinking skills in the context of reading and writing a new language.
- use grammar such as the simple present, present progressive, simple past, and simple future correctly according to context.
- compose basic essays of at least three paragraphs with introductions, body paragraphs, and conclusions.
- demonstrate knowledge of high frequency words.

ESL 44 Intermediate-Low Skills Lab

Units: 0.5 - 1.5
Hours: 27 - 81 hours LAB
Prerequisite: ESSL 30, ESLR 30, or ESLW 30 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course develops, expands, and reinforces multiple English language skills at the intermediate-low level in an independent and/or in small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, conversation and listening skills, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course may be taken up to 3 times, for a total of 1.5 units, using different modules. This course is not a substitute for other ESL courses. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize a variety of methods to communicate effectively.
- identify key information from listening to others, such as main idea and details.
- increase receptive and productive vocabulary.
- read clearly-organized, short, timed readings and answer comprehension and vocabulary-in-context questions.
- write clear simple and compound sentences and basic complex sentences.
- correctly use verbs in the present, past, and future in simple and progressive tenses.
- use modals correctly.
ESL 47 Intermediate-Low Integrated Reading and Writing

**Units:** 6  
**Hours:** 108 hours LEC  
**Prerequisite:** ESL 37, ESLR 30, and ESLW 30 with grades of "C" or better, or placement through the assessment process.  
**Catalog Date:** June 1, 2020

This integrated-skills course for non-native speakers of English focuses on developing academic reading and writing skills at the intermediate-low level with an emphasis on vocabulary, reading comprehension, critical thinking, and the writing process. With the information gathered through readings, students begin to use academic content to supplement their ideas in writing. Students build skills in pre-writing, structuring paragraphs, writing basic essays, and constructing a variety of sentence types. Completion of this course is equivalent to completion of both ESLW 40 and ESLR 40, and is not open to students who have completed both ESLW 40 and ESLR 40.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate comprehension of multi-paragraph level-appropriate texts.
- employ level-appropriate vocabulary building strategies.
- synthesize content from readings and apply it to writing assignments.
- use common basic English sentence patterns.
- produce academic paragraphs and simple five-paragraph essays on a variety of topics following instructions in prompts.
- exhibit an emerging ability to revise essays for content and edit for language and grammar based on feedback.

ESL 54 Intermediate-Mid Skills Lab

**Units:** 0.5 - 1.5  
**Hours:** 27 - 81 hours LAB  
**Prerequisite:** ESLL 40, ESLR 40, or ESLW 40 with a grade of "C" or better, or placement through the assessment process.  
**Catalog Date:** June 1, 2020

This course develops, expands, and reinforces multiple English language skills at the intermediate-mid level in an independent and/or small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, conversation and listening skills, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course may be taken up to 3 times, for a total of 1.5 units, using different modules. This course is not a substitute for other ESL courses. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- utilize a variety of methods to communicate effectively.
- increase both speaking rate, vocabulary, and listening comprehension in rehearsed and impromptu situations.
- initiate and respond to questions and conversations.
- show increased reading speed and comprehension.
- show increased vocabulary and comprehension of idiomatic American English.
- decide meanings of words based on context clues.
- write using a variety of compound and complex sentences with connecting words and phrases.
- correctly use verbs in the present, past and future in simple, progressive, and perfect tenses.
- use modals and gerunds correctly.
- edit writing for verb tense consistency and errors in verb tense and form.

ESL 55 Intermediate-Mid Integrated Reading and Writing

**Units:** 6  
**Hours:** 108 hours LEC  
**Prerequisite:** ESLR 40 and ESLW 40 with grades of "C" or better, or placement through the assessment process.
This intermediate-mid level integrated-skills course for non-native speakers of English is an accelerated pathway to complete 50-level coursework in reading and writing. This course integrates two existing courses, ESLR 50 and ESLW 50 and introduces academic reading skills through analyzing readings from a number of rhetorical styles as well as techniques and processes essential to reading comprehension and essay writing. Language instruction focuses on strengthening individual proofreading and editing skills. Completion of this course is equivalent to completion of both ESLW 50 and ESLR 50 and serves as a prerequisite to ESLR 310 and ESLW 310. This course is not open to students who have completed both ESLW 50 and ESLR 50.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the point, purpose, and point-of-view in readings.
- identify main ideas and supporting details in readings.
- analyze context to guess the meanings of words and to understand readings.
- identify basic organizational patterns (e.g., cause-effect, comparison-contrast, and opinion).
- identify specific elements of fiction (e.g., plot, character, setting, theme, and figurative language).
- produce simple summaries and personal responses based on readings.
- read and clearly respond to writing prompts.
- generate ideas for writing short essays by using techniques such as freewriting, listing, and clustering.
- produce well-developed, logically-organized final drafts through multiple drafts.
- use transitions to connect ideas and paragraphs effectively.
- produce essays and paragraphs with focused thesis statements, relevant topic sentences, specific examples, and details.
- use basic essay format, including titles and paragraph and margin indentations.
- write clear compound and complex sentences using correct capitalization, spelling, and punctuation.
- edit for basic verb tenses, verb tense consistency, and verb forms.
- apply strategies for writing timed essays.

ESL 94 Intermediate-High Skills Lab

Units: 0.5 - 1.5
Hours: 27 - 81 hours LAB
Prerequisite: ESL 55, ESLG 50, ESLL 50, ESLR 50, or ESLW 50 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course develops, expands, and reinforces multiple English language skills at the intermediate-high level in an independent and/or in small group environment. Coursework includes integrated study topics relative to vocabulary and study skills, reading and grammar use, idiomatic language study and application, conversation and listening skills, workplace skills, composition and writing, and assorted integrated software programs. Late registration is allowed as long as space is available and with the permission of the instructor. This course is not a substitute for other ESL courses. This course may be taken up to three times for a total of 1.5 units, using different modules. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize a variety of methods to communicate effectively.
- produce clear speech and increase speaking rate, vocabulary, and listening comprehension in rehearsed and impromptu situations.
- summarize extended oral discourse and take lecture notes.
- analyze texts and identify main ideas, supporting details, and patterns of organization.
- show increased vocabulary and comprehension of idiomatic American English.
- deduce meanings of words based on context clues.
- write using a variety of compound and complex sentences with connecting words and phrases.
- apply level-appropriate grammar and usage patterns.
ESL 311 College ESL Newsletter Production

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: ESLL 50, ESLR 50, and ESLW 50 with grades of "C" or better, or placement through the assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course offers experience in developing and producing newsletters featuring ESL student writing, interviews of students, staff, and faculty, various advice and information columns, and language tips that include grammar, vocabulary development, and pronunciation for basic language skills acquisition (four to six times a semester).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- contribute to the development and publication of a college newsletter
- research, gather, assemble, and assess original student essays, columns, poetry, photographs, Internet articles, and materials for learning English
- plan the layout of the newsletter, utilizing a desktop publishing program
- edit for accuracy
- market and distribute the newsletter on campus
- conduct and record interviews of campus figures, including faculty, staff, and fellow students, and transcribe the results

ESL 315 Intermediate-High Integrated Reading and Writing

Units: 6
Hours: 108 hours LEC
Prerequisite: ESLR 50 (Intermediate-Mid Reading) and ESLW 50 (Intermediate-Mid Writing), OR ESL 55 (Intermediate-Mid Integrated Reading and Writing)
Transferable: CSU; UC (The UC limits ESL course credit - ESL and/or ESLW courses, combined maximum credit, 8 units)
Catalog Date: June 1, 2020

This intermediate-high level integrated-skills course for non-native speakers of English is an accelerated pathway to complete 310-level coursework in reading and writing. This course integrates two existing courses, ESLR 310 and ESLW 310, and introduces academic reading skills through analyzing readings from a number of rhetorical styles as well as techniques and processes essential to reading comprehension and essay writing. Language instruction focuses on strengthening individual proofreading and editing skills. Completion of this course is equivalent to completion of both ESLR 310 and ESLW 310 and serves as a prerequisite to ESLR 320, ESLW 320, and ESL 325. This course is not open to students who have completed both ESLR 310 and ESLW 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the point, purpose, and point-of-view in readings.
- distinguish main ideas from supporting details in readings.
- infer author's intent from explicit statements.
- differentiate facts from opinions.
- demonstrate increased reading speed and comprehension.
- integrate context clues and word-attack skills in building vocabulary.
- demonstrate increased vocabulary by using new words in writing.
- outline, paraphrase, and summarize basic concepts from readings.
- synthesize soundly structured, unified essays in response to prompts.
- develop introductory, body, and concluding paragraphs in narrative, descriptive, cause-effect, and argumentative essays.
- revise essays for greater focus and clarity.
- write clear phrases; clauses; and simple, compound, and complex sentences.
• edit for verb and word form; indirect and direct speech; and passive vs. active voice.
• compose essays under time constraints.

ESL 325 Advanced-Low Integrated Reading and Writing

Units: 6
Hours: 108 hours LEC
Prerequisite: ESLR 310 and ESLW 310 with grades of "C" or better
Transferable: CSU; UC (The UC limits ESL course credit - ESL and/or ESLW courses, combined maximum credit, 8 units)
Catalog Date: June 1, 2020

This advanced-low level integrated-skills course for non-native speakers of English is an accelerated pathway to complete 320-level coursework in reading and writing. This course integrates two existing courses, ESLR 320 and ESLW 320, and focuses on refining academic reading and writing skills, as well as practice in synthesizing and integrating research into argumentative writing. Reading instruction emphasizes speed, vocabulary development, and analytical comprehension. Language instruction includes the construction of well-organized and focused academic essays on a variety of topics with a focus on the development of ideas in body paragraphs, sentence variety, and the mechanics of English. Written final drafts of essays totaling at least 6,000 words are required. Completion of this course is equivalent to completion of both ESLR 320 and ESLW 320 and serves as a prerequisite for ESLR 340 and ESLW 340. This course is not open to students who have completed both ESLR 320 and ESLW 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• examine long, complex reading passages and make inferences.
• appraise and critique reading passages for bias.
• adapt reading speed and style to material.
• recognize and use a wide variety of academic and idiomatic vocabulary.
• synthesize information from a range of texts and integrate it into writing by outlining, quoting, paraphrasing, and/or summarizing.
• apply basic research steps in the writing process.
• analyze sentence, paragraph, and essay structure and apply these concepts to composing clear, well-developed, and soundly structured essays on academic topics.
• develop effective persuasive essays under time constraints.
• demonstrate near-mastery of English writing style, grammar, vocabulary, and mechanics by revising, editing, and proofreading writing effectively.

ESL 350 Critical Reading, Research and Writing Through Literature

Units: 4
Hours: 72 hours LEC
Prerequisite: A grade of "C" or better in ESLW 340 OR a grade of "C" or better in ENGWR 300.
Transferable: CSU; UC ((maximum ESL & ESLW credits accepted - 8 units total))
General Education: AA/AS Area II(b); CSU Area A3
Catalog Date: June 1, 2020

This course covers reading and written analysis of culturally diverse complex literary works in all major genres, including poetry, drama, and fiction. It includes the development of analytical, integrative, and research skills in reading and writing. A variety of cultural and social perspectives are explored through the comparison of different ethnic groups within the U.S. as well as through library and outside research focusing on the influence of non-European and non-Western cultures on the content or style of the texts. Formal writing assignments total at least 6000 words. Attendance at readings, plays, and/or films may be required. This course is designed for students whose native language is not English.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the elements of a variety of multicultural literary texts of differing genres, demonstrating the ability to use appropriate literary terms.
• analyze and respond to diverse academic level texts with a variety of cultural, social, historical, ethnic, and philosophical perspectives.
• evaluate credibility and bias in literary print and electronic research sources.
