• integrate and synthesize information by paraphrasing, quoting, and summarizing readings within interpretative, analytical, and argumentative writing.
• incorporate and correctly cite relevant literary sources into writing.
• demonstrate advanced-level sentence structure, grammar, and vocabulary by revising, proofreading, and editing effectively.

English as a Second Language - Grammar (ESLG)

ESLG 31 Basic English Grammar

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLW 20 with a grade of "C" or better, or placement through the assessment process.
Advisory: Concurrent enrollment in other ESL courses at the appropriate level.
Catalog Date: June 1, 2020

This is a course for English language learners at the novice-high level, which provides an introduction to the basics of English grammar including parts of speech, word form, word order, and the fundamental verb tenses necessary for spoken and written discourse. It is part of the grammar sequence that prepares ESL students to take college courses leading to a certificate, degree, and/or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• exhibit skill in using basic English grammar in spoken and written discourse.
• apply fundamental rules of mechanics and demonstrate skill and accuracy in using basic English handwriting and spelling.
• understand the use of auxiliary verbs and main verbs when constructing the past, present, and future tenses and creating negative statements, yes/no questions, and information questions.
• recognize and construct simple sentences and basic compound and complex sentences.
• apply basic editing steps to discover and correct errors.
• discuss basic U.S. academic and cultural expectations.

ESLG 41 Elements of English Sentences

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLG 31 with a grade of "C" or better, or placement through the assessment process.
Advisory: Concurrent enrollment in other ESL courses at the appropriate level.
Catalog Date: June 1, 2020

This course focuses on learning academic grammar skills at the intermediate-low level, with an emphasis on fundamental grammatical structures in conversation, writing, and reading. It is part of the grammar sequence that prepares ESL students to take college courses leading to a certificate, degree, or transfer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply rules in using basic English grammar in writing, reading, listening, and speaking.
• apply fundamental punctuation and capitalization rules, such as period, comma, and question mark.
• demonstrate skill and accuracy in using basic English handwriting and spelling.
• distinguish when to use verbs in the simple (present, past, and future) and progressive tenses.
• recognize and use basic modal verbs and expressions.
• differentiate between singular and plural noun forms and count/non-count nouns.

ESLG 50 Intermediate-Mid Grammar

Units: 4
This course concentrates on the fundamental grammatical structures of English at the intermediate-mid level. It focuses on grammatical structures in appropriate contexts. Oral and written practice with an emphasis on sentence structure and verb tenses is included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate skill and accuracy in using basic English grammar
- use simple and progressive verb forms in past, present, and future
- ask questions with correct English word order
- distinguish and apply the rules for count and noncount nouns
- choose appropriate modal auxiliary verbs in different situations
- explain the differences and uses of adjectives and adverbs
- distinguish and apply the rules of gerunds and infinitives
- compare and differentiate the uses of present perfect and present perfect progressive verb tenses

ESLG 51 Grammar for Intermediate ESL Writers

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLG 41 with a grade of "C" or better, or placement through the assessment process.
Advisory: Concurrent enrollment in an ESL Listening and Speaking and/or Integrated Reading and Writing course at the student's assessed level(s).
Catalog Date: June 1, 2020

This course focuses on further practice of the forms, meanings, and usage of grammatical structures of English at the intermediate-high level. New focal points include

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use simple and progressive verb forms in past, present, and future tenses.
- formulate a variety of questions such as yes-no, wh-, choice and tag questions with correct English word order.
- use count and non-count nouns correctly with basic control of articles and other determiners.
- distinguish and apply the rules of gerunds and infinitives.
- choose appropriate modal auxiliary verbs in different situations.
- compare and differentiate the uses of present perfect and present perfect progressive verb tenses.
- apply basic editing steps to discover and correct errors.

ESLG 310 Intermediate-High Grammar

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLG 50 or 51 with a grade of "C" or better, or placement through the assessment process.
Advisory: Enrollment in an ESL Listening and Speaking, Reading, and/or Writing course at the student's assessed level(s).
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on further practice of the forms, meanings, and usage of grammatical structures of English at the intermediate-high level. New focal points include
student will be able to:

- demonstrate skill in using targeted, level-appropriate grammar when speaking, listening, and writing.
- demonstrate both written and oral competency of the 12 verb tenses and present and past modal auxiliary verbs.
- apply rules for gerund and infinitive construction.
- construct sentences containing adjective clauses.
- compose grammatically correct sentences in active and passive voice.
- create both real and unreal conditional sentences in both the present and past tenses.
- analyze writing and oral conversation which contain direct and indirect speech.

ESLG 320 Advanced-Low Grammar

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate skill in using targeted, level-appropriate grammar when speaking, listening, and writing.
- demonstrate both written and oral competency of the 12 verb tenses and present and past modal auxiliary verbs.
- apply rules for gerund and infinitive construction.
- construct sentences containing adjective clauses.
- compose grammatically correct sentences in active and passive voice.
- create both real and unreal conditional sentences in both the present and past tenses.
- analyze writing and oral conversation which contain direct and indirect speech.

English as a Second Language - Listening (ESLL)

ESLL 20 Novice Listening and Speaking

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate skill in using targeted, level-appropriate grammar when speaking, listening, and writing.
- demonstrate both written and oral competency of verb tenses and modal auxiliary uses.
- combine sentences, with emphasis on the ability to recognize, contrast, and analyze subordination and coordination.
- recognize and generate sentences using conditional and subjunctive constructions.
- demonstrate mastery of passive voice and its uses.
- integrate noun clauses and adjective clauses into everyday conversation and written usage.
- employ adverb clauses when conversing and writing.
- construct adverb and adjective phrases from clauses.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discriminate between a limited number of American English sounds
- produce a limited number of American English sounds
- express ideas and understand others during basic discussions about everyday topics with pronunciation comprehensible to a sensitive listener
- use language to help with miscommunications
- communicate by understanding and using the simple present and present progressive tenses
- demonstrate understanding of word order and pronoun use
- use and demonstrate question forms
- communicate by understanding and using basic vocabulary

ESLL 30 Novice-High Listening and Speaking

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLL 20 with a grade of "C" or better, or placement through the assessment process.
Advisory: Concurrent enrollment in ESL Reading and Writing courses at the student's assessed levels are highly recommended.
Catalog Date: June 1, 2020

This is a course in listening comprehension and practical conversation for non-native English speakers who plan to take college courses. The sounds of American English, stress, rhythm, and intonation patterns are further developed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify basic stress, rhythm, and intonation patterns of American English.
- demonstrate practical conversation skills in giving and receiving information, asking for repetition and clarification.
- recognize and produce practical speech on topics such as family, health, employment, recreational activities, culture, and geography.
- recognize some phonetic symbols and tell the differences in their sounds.
- implement and demonstrate increased vocabulary.
- implement and demonstrate simple present, present progressive, simple past, and simple future in both statement and question form.
- implement and demonstrate modals in the present tenses.

ESLL 31 Listening and Speaking for College Readiness

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLL 20 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course is part of the listening and speaking sequence that prepares ESL students to take college courses leading to a certificate, degree, and/or transfer. It focuses on learning vocabulary, participating in a variety of listening activities, and discussing a wide variety of topics. It helps students to recognize and produce the sounds, stress, rhythm, and intonation patterns of American English.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify basic stress, rhythm, and intonation patterns in English.
- demonstrate practical conversation skills in giving and receiving information, asking for repetition and clarification.
- recognize and produce sounds based on phonetic symbols.
• implement and demonstrate increased vocabulary on topics introduced in the classroom.

• implement and demonstrate grammar appropriate for this level, including simple and progressive verbs forms in both statement and question form, as well as modals in the present tense.

• demonstrate the ability to take simple notes.

ESLL 40 Intermediate-Low Listening and Speaking

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLL 30 with a grade of "C" or better, or placement through the assessment process.
Advisory: Concurrent enrollment in ESL Reading and Writing courses at the student's assessed levels are highly recommended.
Catalog Date: June 1, 2020

This is a course for non-native speakers that develops the listening and speaking skills needed to succeed in college courses. It focuses on developing phrases and sentences to communicate ideas in familiar situations. It includes group and individual listening and speaking activities, as well as continued practice of American English sounds, stress, rhythm, and intonation patterns.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• use speaking skills, both practiced and not practiced, to talk about familiar topics using increased vocabulary and grammar.

• identify key information from listening to others, such as main idea and details.

• identify a number of phonetic symbols and describe the differences in their sounds.

• use different techniques for classroom interaction, including asking for repetition and clarification.

• produce syllables, stress, rhythm, and intonation patterns of English correctly.

• implement and demonstrate verbs in the simple past and past progressive tenses.

• implement and demonstrate modals in the present tense.

• implement and demonstrate modals in the future simple tense.

• implement and demonstrate verbs in the simple present and present progressive tenses.

• implement and demonstrate verbs in the future tense.

• communicate by understanding and using increased vocabulary.

ESLL 41 Listening, Speaking and Presentation Skills for College

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLL 31 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course is part of the listening and speaking sequence that prepares students to take college courses leading to a certificate, degree, and/or transfer. It covers developing tactics to communicate their ideas in academic situations, and practice in the pronunciation of English.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• employ a variety of listening strategies to understand main ideas and details in short academic spoken text.

• produce intelligible speech during conversations, discussions, and presentations.

• demonstrate knowledge of an increased vocabulary.

• use note-taking techniques to produce organized, accurate notes on information presented in class.

• organize and present information on academic topics, including academic expectations and resources, clearly and effectively.

• discuss US academic and cultural expectations.
demonstrate clearer pronunciation through discrete and suprasegmental pronunciation practice.

apply level-appropriate verb tense forms, such as present, past, and future simple and progressive tenses.

ESLL 50 Intermediate-Mid Listening and Speaking

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLL 40 with a grade of "C" or better; or, for those not previously enrolled in an ESL listening course within the Los Rios district, placement through the assessment process.
Advisory: Concurrent enrollment in an ESL Reading and Writing course at the student's assessed level.
Catalog Date: June 1, 2020

This intermediate-mid level course, intended for non-native speakers of English, helps students understand and be understood in both familiar and unfamiliar situations. Class activities introduce academic listening and speaking activities and continue to work on pronunciation skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- speak with or without practice using appropriate vocabulary.
- initiate and respond to questions and conversations.
- combine a variety of techniques for classroom interaction, including clarification and polite interruption.
- paraphrase and summarize listening activities.
- accurately pronounce most English phonetic symbols.
- correctly respond to listening prompts.
- demonstrate correct pronunciation of the simple present and present progressive verb tenses in spoken English.
- demonstrate correct pronunciation of the simple past, past progressive, and present perfect verb tenses in spoken English.
- demonstrate understanding and correct pronunciation of the future verb tenses in spoken English.
- understand and correctly pronounce modals (can, may, etc.) and gerunds (-ing forms) in spoken English.

ESLL 51 Academic Communication, Notetaking, and College Success Skills

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLL 41 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This intermediate mid-level course, intended for non-native speakers of English, helps students understand and be understood in both familiar and unfamiliar situations. Activities include academic listening and speaking activities and a continuation of pronunciation skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- take accurate notes and use outlining skills during academic presentations.
- paraphrase and summarize after listening to academic-level discourse and presentations.
- understand and use grammar appropriate to the level, including accurate question formation and verb tense usage.
- comprehend and use vocabulary appropriate to the level.
- combine a variety of techniques for classroom interaction, including clarification and polite interruption and disagreement.
- produce rehearsed and unrehearsed language comprehensible in an English-language classroom.
- participate effectively in a pluralistic academic setting.
- accurately hear and produce many phonetic symbols, with a focus on vowels.
ESLL 310 Intermediate-High Listening and Speaking

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLL 50 or 51 with a grade of “C” or better; or, for those not previously enrolled in an ESL listening course within the Los Rios district, placement through the assessment process.
Advisory: Concurrent enrollment in an ESL Reading and Writing course, and/or Grammar course at the student’s assessed level(s).
Transferable: CSU
Catalog Date: June 1, 2020

This intermediate-high-level course, intended for non-native speakers of English, develops listening and speaking for academic purposes, including comprehension of lectures, note-taking, and classroom discussion. It includes a review of American English sounds with emphasis on understanding and producing stress, rhythm, and intonation patterns to communicate effectively.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate and reproduce most American English sounds in a controlled situation.
- accurately produce the sounds, stress, rhythm, and intonation of American English.
- demonstrate accurate notetaking.
- identify the central message and key supporting details of journalism-level language.
- choose appropriate responses in a variety of both formal and informal situations.
- convey meaning clearly in brief oral presentations.
- apply critical thinking skills to listening activities.
- develop and employ tactics to function in a pluralistic classroom, including demonstrating respect through language for respecting alternate viewpoints.

ESLL 320 Advanced-Low Listening and Speaking

Units: 3
Hours: 54 hours LEC
Prerequisite: ESLL 310 with a grade of “C” or better; or, for those not previously enrolled in an ESL listening course within the Los Rios district, placement through the assessment process.
Advisory: Concurrent enrollment in ESL Reading and Writing courses at the student’s assessed level.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides intensive practice in listening and active participation strategies for U.S. college courses. Activities include listening to extended lectures from various subject areas, refining note-taking skills, participating in in-depth discussions, and giving oral presentations. Practice of pronunciation skills is also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competency in English oral communication skills, including giving presentations and communicating effectively both inside and outside of the classroom.
- demonstrate pronunciation competency to convey intended meaning, including accuracy in sound production, syllabification, and intonation.
- compose and present dialogues and reports with appropriate pronunciation, grammar, organization, and lexical choice.
- identify central meaning and supporting details in conceptually and linguistically complex discourse such as lectures, speeches, or reports.
- compile accurate notes while listening to lectures and presentations.
- formulate and use a variety of interactive strategies effectively such as clarification, polite interruption, and agreement/disagreement strategies.
- develop and employ tactics to function in a pluralistic classroom.

English as a Second Language - Pronunciation (ESLP)
ESLR 20 Novice Reading

Units: 4
Hours: 72 hours LEC
Prerequisite: Placement through the assessment process.
Advisory: One year of adult school and concurrent enrollment in ESL Writing and Listening/Speaking courses at the student's assessed levels are highly recommended.
Catalog Date: June 1, 2020

This course, intended for non-native speakers of English, focuses on literal understanding of basic vocabulary and readings at the Novice level. There is a focus on expanding basic vocabulary through readings, word parts, and word-form activities. The concepts of using context and giving personal reactions to readings are introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- read simple words, sentences, and readings.
- respond correctly to basic comprehension questions.
- respond to and use basic vocabulary.
- identify and use appropriate word forms (nouns, verbs, and adjectives).
- identify the use of sentence word order, pronouns, and verb forms in the readings.
- write short responses to readings using learned expressions and format.

ESLR 30 Novice-High Reading

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLR 20 with a grade of "C" or better; or, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in ESL Listening and Speaking and Writing courses at the student's assessed level(s).
Catalog Date: June 1, 2020

This course focuses on literal comprehension of words, phrases, sentences, and paragraphs in short texts at the Novice-High level. Topics include core vocabulary, spelling rules, and grammar necessary to understand short readings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- read at an increased speed.
- recognize and use a larger vocabulary.
- use an American English dictionary.
- use reading strategies in understanding text.
- apply written directions to task completion and identify points of confusion.
- recognize punctuation, emphasis, and paragraph markers.
- begin to identify main ideas in reading passages.
- use background information and schemata in understanding text.

ESLR 40 Intermediate-Low Reading

Units: 4
Hours: 72 hours LEC
Placement through the assessment process.
Prerequisite: ESLR 20 with a grade of "C" or better; or, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in ESL Listening and Speaking and Writing courses at the student's assessed level(s).
Catalog Date: June 1, 2020

Student Learning Outcomes
This course, intended for non-native speakers of English, focuses on understanding vocabulary and readings at the Intermediate-Low level. It emphasizes developing reading skills, building vocabulary, and increasing fluency. Additional class activities include discussing and writing about readings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize main ideas in reading passages.
- increase receptive and productive vocabulary.
- identify vocabulary meaning based on context clues.
- write personal responses to ideas read and discussed.
- read clearly-organized, short, timed readings and answer comprehension and vocabulary-in-context questions.
- increase reading speed.
- use an American English dictionary effectively.
- locate topic sentences and major supporting details in simple readings.

ESLR 50 Intermediate-Mid Reading

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLR 40 with a grade of "C" or better; or, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in an ESL Listening/Speaking and an ESL Writing course at the student's assessed level.
Catalog Date: June 1, 2020

This course, intended for non-native speakers of English, focuses on the introduction of academic reading skills, with an emphasis on vocabulary development and literal comprehension. Course activities include reading, analyzing, discussing, and writing responses to ideas expressed in texts at the Intermediate-Mid level, as well as further practice with dictionary skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- show increased reading speed and comprehension.
- show increased vocabulary and comprehension of idiomatic American English.
- decide meanings of words based on context clues.
- find main ideas and supporting details.
- write personal responses that show understanding of readings.
- write simple summaries based on short readings.
- use a dictionary to divide, pronounce, and define words correctly.

ESLR 310 Intermediate-High Reading

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLR 50, OR ESL 55 with a grade of "C" or better OR, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in ESL Listening and Speaking and Writing courses at the student's assessed level(s).
Transferable: CSU
Catalog Date: June 1, 2020

This course, intended for non-native speakers of English, focuses on the introduction of academic reading skills at the Intermediate-High level with an emphasis on speed,
vocabulary expansion, and comprehension of ideas. It provides written and oral practice in understanding, paraphrasing, summarizing, and responding to ideas expressed in reading.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate increased reading speed and comprehension
- integrate context clues and word-attack skills in building vocabulary
- distinguish main ideas from supporting details
- differentiate fact from opinion
- infer author's intent from explicit statements
- analyze a text closely and recognize patterns of organization
- outline, paraphrase, and summarize basic concepts from readings
- demonstrate increased vocabulary by using new words in discussions and journal entries

ESLR 320 Advanced-Low Reading

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLR 310 with a grade of "C" or better; or, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in an ESL listening/speaking and an ESL writing course at the student's assessed level.
Transferable: CSU
Catalog Date: June 1, 2020

This course, intended for non-native speakers of English, focuses on refining academic reading skills with an emphasis on speed, vocabulary development, and analytical comprehension. It also includes practice in research and synthesizing skills and extensive writing based on critical analysis of readings at the Advanced-Low level.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine long, complex reading passages.
- appraise and critique reading passages for bias.
- make inferences.
- recognize a wide variety of academic and idiomatic vocabulary.
- outline, paraphrase, and summarize passages from a range of texts.
- adapt reading speed and style to material.
- apply basic research steps.
- synthesize research materials.

ESLR 340 Advanced Reading Skills Through Literature

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLR 320 with a grade of "C" or better; or, for those not previously enrolled in an ESL reading course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in ESL Listening/Speaking and Writing courses at the student's assessed levels.
Transferable: CSU
Catalog Date: June 1, 2020

This course, intended for advanced non-native speakers of English, is designed to improve vocabulary and reading skills. Readings include various forms of literature from a variety of cultures, including essays, poetry, drama, short stories, and novels. This course focuses on further development of critical thinking and reading skills needed for academic performance: (1) analysis and comprehension skills, (2) research and synthesizing skills, (3) vocabulary development, and (4) flexibility of reading rate. It also emphasizes the comparison and contrast of universal and metaphorical themes, as applied in various cultures, and includes extensive writing based on critical analysis of
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate a variety of literary works by analyzing, critiquing, and responding to readings both in class and outside of class.
- distinguish theme, draw inferences, and recognize bias in complex texts.
- integrate context clues and apply appropriate strategies to build literary vocabulary and increase mastery of idiomatic American English.
- compose written responses to literary texts demonstrating advanced comprehension and critical thinking skills.
- evaluate research sources and literary texts.
- synthesize information by paraphrasing, quoting, and summarizing.
- integrate outside sources into written responses.
- use comprehension techniques and reading rate appropriate to material and purpose.

English as a Second Language - Writing (ESLW)

ESLW 20 Novice Writing

Units: 4
Hours: 72 hours LEC
Prerequisite: Placement through the assessment process
Advisory: One year of adult school and concurrent enrollment in ESL Reading and Listening/Speaking courses at the student’s assessed levels are highly recommended.
Catalog Date: June 1, 2020

This course for non-native speakers of English focuses on the structure of English sentences, including parts of speech and word order. Emphasis is on producing clear, basic written sentences at the novice level using everyday vocabulary. Question formation is also demonstrated and practiced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- write simple sentences with correct capitalization and punctuation.
- use simple present and present progressive tenses of common verbs.
- write questions in correct word order.
- write sentences based on everyday topics and picture prompts in paragraph form.
- spell common words correctly.
- use clear handwriting placed correctly on the paper.

ESLW 30 Novice-High Writing

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLW 20 with a grade of “C” or better; or, for those not previously enrolled in an ESL writing course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in other ESL skills and/or an ESL Center course at the student’s assessed level.
Catalog Date: June 1, 2020

This course covers novice-high-level writing in English for non-native speakers who plan to take college courses. It provides instruction and practice in writing simple sentences, paragraph structures, and a three-paragraph essay format within the context of topic assignments.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• use basic writing and formatting conventions such as punctuation, capitalization, margins, indentation, and clear handwriting.

• describe elements of simple and compound sentences.

• construct simple and compound sentences.

• use the editing process to discover and correct error patterns.

• apply critical thinking skills in the context of reading and writing a new language.

• compose basic essays of at least three paragraphs with introductions, body paragraphs, and conclusions.

• demonstrate knowledge of high frequency words on spelling list.

ESLW 40 Intermediate-Low Writing

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLW 30 with a grade of "C" or better or, for those not previously enrolled in an ESL writing course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in other ESL skills and/or an ESL Center course at the student's assessed level.
Catalog Date: June 1, 2020

This intermediate-low course, intended for non-native speakers of English, provides brief practice in writing paragraphs with a clear beginning, middle, and end. It also introduces how to organize and focus paragraphs within basic essay structure. The writing processes introduced include multiple drafts of essays. In the process of writing multiple drafts, critical thinking skills and grammar and sentence structure in writing are also stressed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze example paragraphs and essays to identify main ideas, thesis statements, topic sentences, and supporting details.

• brainstorm ideas for writing paragraphs and short essays.

• produce academic paragraphs and five-paragraph essays on a variety of topics following instructions in prompts.

• compose thesis statements, topic sentences, and supporting sentences for paragraphs and essays.

• use basic paragraph and essay format, including titles and paragraph and margin indentations.

• write clear simple and compound sentences and basic complex sentences.

• use basic punctuation and capitalization rules.

• identify and use the basic parts of speech correctly.

• use verbs correctly in the present, past, and future simple tenses.

• use verbs correctly in the present and past progressive tenses.

• use present and future modals correctly.

• revise essay drafts for content.

• edit essay drafts to correct language and grammar.

• write timed in-class essays.

ESLW 50 Intermediate-Mid Writing

Units: 4
Hours: 72 hours LEC
Prerequisite: ESLW 40 with a grade of "C" or better or, for those not previously enrolled in an ESL writing course within the Los Rios District, placement through the assessment process.
Advisory: Concurrent enrollment in other ESL skills and/or an ESL Center course at the student's assessed level.
Catalog Date: June 1, 2020

This intermediate-mid course, intended for non-native speakers of English, covers techniques essential to essay writing in the process of teaching students to write standard five-paragraph academic essays. Verb tenses and other grammatical structures are revised, and control of sentence structure in longer pieces of writing is developed as language instruction focuses on strengthening individual proofreading and editing skills.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- brainstorm ideas for writing short essays.
- identify thesis, main ideas, topic sentences, supporting details, and concluding information in essays.
- use basic essay format, including titles and paragraph and margin indentations.
- use basic punctuation and capitalization rules.
- read and clearly understand writing prompts.
- write basic five-paragraph essays on a variety of topics following instructions in prompts.
- revise essay drafts for content.
- write using a variety of compound and complex sentences with connecting words and phrases.
- correctly use verbs in the present, past and future in simple, progressive, and perfect tenses.
- use modals and gerunds correctly.
- edit papers for verb tense consistency and errors in verb tense and form.
- write timed academic essays.

ESLW 310 Intermediate-High Writing

Units: 4  
Hours: 72 hours LEC  
Prerequisite: ESLW 50 OR ESL 55 with a grade of "C" or better OR, for those not previously enrolled in an ESL writing course within the Los Rios District, placement through the assessment process.  
Advisory: Concurrent enrollment in other ESL skills and/or an ESL Center course at the student's assessed level.  
Transferable: CSU; UC (maximum ESL & ESLW credit accepted - 8 units total)  
Catalog Date: June 1, 2020

This intermediate-high course for non-native speakers of English develops the ability to respond to a variety of essay assignments. The course focuses on writing for different purposes, sentence variety and control of a range of sentence structures.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- synthesize soundly structured, unified essays in response to prompts.
- revise and edit essays for greater focus and clarity.
- compose essays under time constraints.
- analyze and use phrases; clauses; and simple, compound, and complex sentences for clarity.
- identify strategies such as sentence combining and use them for variety and clarity.
- develop introductory, body, and concluding paragraphs in narrative, descriptive, cause-effect and argumentative essays.

ESLW 320 Advanced-Low Writing

Units: 4  
Hours: 72 hours LEC  
Prerequisite: ESLW 310 with a grade of "C" or better OR, for those not previously enrolled in an ESL writing course within the Los Rios District, placement through the ESL assessment process.  
Advisory: Concurrent enrollment in other ESL skills at the student's assessed levels and/or an ESL Center course at the student's assessed level.  
Transferable: CSU; UC (maximum ESL & ESLW credit accepted - 8 units total)  
Catalog Date: June 1, 2020

This advanced-low course for non-native speakers of English develops analytical and logical skills in the production of focused, developed and organized essays on a variety of topics. The course emphasizes the development of ideas in body paragraphs and the analysis and use of readings as a basis for ideas in argumentative essays. Sentence variety and the mechanics of English in the context of the essay are also covered in the course. Written final drafts totaling at least 6,000 words are required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose clear, well-developed, and soundly structured essays on academic topics.
- evaluate a variety of reading selections by critically analyzing, critiquing, and responding to readings both in-class and out of class.
- develop effective persuasive essays under time constraints.
- synthesize information by summarizing, paraphrasing, and quoting readings to integrate outside sources into writing.
- demonstrate near-mastery of English writing style, grammar, vocabulary, and mechanics by revising, editing, and proofreading writing effectively.
- analyze sentence, paragraph, and essay structure and apply these concepts to writing.

ESLW 340 Advanced Composition

Units: 4
Hours: 72 hours LEC
Prerequisite: ESL 325 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC ((maximum ESL & ESLW credit accepted - 8 units total))
General Education: AA/AS Area II(a); CSU Area A2
Catalog Date: June 1, 2020

This college composition course emphasizes writing, reading, critical thinking skills and research skills essential for completion of a college degree. It focuses on the needs of multilingual writers by addressing specific language and cultural content required for academic success at the college level. Writing assignments include expository and argumentative essays (6,500 words minimum in total) using MLA documentation and format. Writing assignments are based on reading of transfer-level texts that include diverse perspectives.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and synthesize complex readings that represent a diversity of perspectives.
- compose organized and unified argumentative, interpretive, and analytical essays in response to collegiate-level readings.
- identify and employ genre-specific style and rhetorical choices across a variety of assignments, such as pathos in literacy narrative or logos in an analytical research paper.
- assess the credibility of online and print sources and integrate them in writing through effective paraphrase and quotation using MLA citation formatting standards.
- integrate research from multiple academic databases and assess bias in source material for a fully documented analytical research paper in MLA format.
- revise and edit writing for clarity of ideas and accuracy in grammar, punctuation, mechanics, and appropriate diction for the collegiate level.

- FASHN 381  Couture Draping for Eveningwear (3)

Total Units: 42

The Fashion Design Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and evaluate opportunities to start a design business in the fashion industry.
- analyze fashion fundamentals, fashion trends, fashion marketing, and global influences, as they relate to changes within the fashion industry.
- identify characteristics of various fibers, yarns, finishes, and fabrics as they relate to garments.
- communicate an idea or concept through a flat sketch or illustration utilizing free-hand and computer-generated techniques.
- utilize draping techniques to create original garment designs.
- construct patterns by computer generation and the flat pattern method.
- conceive designs, construct patterns, and sew garments to be shown in a fashion show.
- describe fashion and style features of historical and contemporary periods.
- create sample constructions utilizing basic apparel sewing skills.
- construct a garment with appropriate embellishment applications.
- research and identify apparel details, styles, and elements of design.

Career Information

This degree prepares students for entry-level jobs in apparel production companies, apparel manufacturing plants, designer workrooms, and custom sewing workrooms. It also prepares students for self-employment or entrepreneurship. Examples of careers in Fashion Design include Assistant Designer, CAD Technician, Computer Digitizer, Costing Engineer, Customer Services, Designer, Design Room Assistant, Fashion Illustrator, Fashion Stylist, First Pattern Maker, Grader, Manufacturer's Sales Representative, Marker Maker, Operation Manager, Piece Goods Buyer, Product Specialist, Production Manager, Production Pattern Maker, Quality Controller, Quick Response Manager, Sales Manager, Sample Maker, Sewing Room Supervisor, Showroom Assistant, Tailor, Textile Colorist, Textile Croquis Painter, Textile Designer, Textile Researcher, Textile Tester, and Trim Buyer.

A.A. in Fashion Merchandising

This degree offers the skills necessary for jobs in fashion coordinating, promotion, visual presentation, management, merchandising, retail buying, and entrepreneurial opportunities.

The Fashion Merchandising Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- compare and contrast historical garment design to contemporary dress.
- conceive and produce a fashion show.
- develop visual displays for a window presentation.
- draft a six-month retail buying plan.
- assess characteristics of various fibers and how they relate to the finished fabric.
- draw a flat working sketch and a fashion illustration.
- apply principles of time management, cost control, and decision-making to managerial responsibilities.
- develop a business plan for a fashion related business.
- create portfolios of fashion, wedding and portrait photographs.
- analyze and demonstrate the steps of professional selling, including approach, needs assessment, presentation, overcoming objections and negotiating, closing, and servicing of the sale.
- describe how the advertising industry operates and produces advertising through the work of advertisers, agencies, media, and suppliers.
- explain how retailers use merchandise management decisions to implement their retail strategy including planning, buying, pricing, branding, and promoting their merchandise.
- develop an awareness of image projection and the impact of silent communication.

Career Information

This degree prepares students for entry-level jobs in retail merchandising, such as department store buyers, small boutique buyers, visual merchandisers, sales associates, management trainees, product developers and wholesalers. It also prepares students for self-employment or entrepreneurship.

Certificates of Achievement

Fashion Design Certificate

This certificate provides the skills necessary to coordinate original design concepts with manufacturing, marketing, and merchandising practices. Course work concentrates on apparel construction techniques, pattern drafting, historic and current fashion trends, hand and computer illustration, textiles, and entrepreneurial opportunities as they relate to the fashion industry.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- research various career opportunities in fashion retail.
- assess the primary retail management functions, including time management, cost control, and decision making.
- evaluate the process of successful apparel product development.
- identify and define a target retail customer.
- describe the characteristics of various textile fabrications in relation to their use in textile items.
- assess the role of various advertising media as related to the fashion industry including newspaper, television, radio, and the internet.
- compare and contrast various retail locations, including shopping centers and malls, central business districts, and nontraditional locations, such as airports and hospitals.

Career Information

This certificate prepares students for entry level jobs in fashion retailing, including department store manager trainees, small boutique associate managers, sales associates, assistant buyers, and image consultants.

Patternmaking and Draping Certificate

This certificate is intended for students who have completed the Apparel Construction Certificate and need to obtain a higher skill level in the field. It explores draping and advanced apparel construction techniques, and develops beginning, advanced, and computer patternmaking skills. It offers students the necessary sewing and patternmaking skills to enter the job market.

FASHN 294 Topics in Fashion

This course provides opportunities to study topics in fashion that are not included in current course offerings. Individualized topics may be developed in cooperation with the fashion industry to meet specialized training needs.

Upon completion of this course, the student will be able to:

- describe current subject matter as identified in cooperation with the fashion industry.
- apply skills to the level covered in the topical course outline.
- analyze and interpret data to complete written reports as designed for the topic.

FASHN 300 Introduction to the Fashion Industry

This course is a survey of the complex diversity of today’s fashion industry. It introduces the process of how the fashion business works in sequential order from the concept to the consumer. It also provides an overview of fashion design, production, distribution, and merchandising. Field trips may be required.

Upon completion of this course, the student will be able to:

- analyze and sketch style variations and interpret them in fabric.
- design and organize a fashion apparel line.
- recommend appropriate sewing equipment, supplies, and techniques for a given project.
- research entrepreneur opportunities and market segments in the fashion industry.
- create original patterns using flat pattern methods, draping techniques, or computer patternmaking software.
- construct a garment from an original pattern utilizing advanced sewing construction techniques.

Career Information

This certificate prepares students for entry level design-related jobs in apparel production companies, designer workrooms, and custom sewing workrooms. It also prepares students for self-employment or entrepreneurship. Examples of careers in Fashion Design include Assistant Designer, Designer, Design Room Assistant, Fashion Illustrator, Fashion Stylist, First Pattern Maker, Sample Maker, Sewing Room Supervisor, and Tailor.
Upon completion of this course, the student will be able to:

- identify how history and society changes fashion trends.
- analyze international and American fashion trends and explain how they relate to each other.
- describe how fashion progresses from the conception of a design to the final product.
- explain the globalization of fashion in today's market.
- explain fashion adoption theories in relation to consumer acceptance.
- analyze marketing techniques as they relate to the fashion industry.

FASHN 310 Fashion Analysis/Clothing Selection

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020  

This course explores how social, political, cultural, technological, and environmental influences are reflected in current fashion trends. Attitude of dress, aesthetics, image projection, and gender roles are explored as a form of silent communication. Consumer buying behavior and the response towards fashion trends are examined from varying generational viewpoints. Other aspects of fashion analysis include identifying apparel details, styles, and utilizing the elements and principles of design as they relate to fashion.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine current fashion trends and how they relate to cultural, social, political, technological, and environmental influences.
- analyze various consumer demographics and their impact on fashion trends.
- analyze image projection and its impact on silent communication.
- critique consumer buying behavior and how it relates to fashion choices.
- research and identify apparel details, styles, and elements of design.

FASHN 320 Textiles

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: None.  
Transferable: CSU; UC  
Catalog Date: June 1, 2020  

This course is a study of natural and man-made fibers, methods of yarn and fabric production, methods of coloration, and finishes applied to yarns and fabrics. Topics include fiber chemistry; fiber, yarn, and textile production, properties, and performance; and textile specifications, regulations, testing, and innovations. It covers the selection, use, and care of fabrics as they relate to apparel, home furnishings, and sustainability.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- match names to characteristics of various natural and manufactured fibers.
- recognize different yarn structures and their relationship to textile properties and performance.
- interpret the characteristics of natural and manufactured fibers for their best use with apparel and home furnishings.
- identify fibers through lab tests.
- analyze the characteristics of woven, knit, and non-woven fabric with textile properties and performance.
- recognize differences in fabric dyeing, printing, and finishing processes.
- evaluate best uses of textiles based on fabrication characteristics, properties, performance, and sustainability.
build a collection of textiles for a specific purpose based and outcome based on textile characteristics, properties, performance, and sustainability.

FASHN 330 History of Western World Fashion

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area I; CSU Area C1
Catalog Date: June 1, 2020

This course provides a comprehensive survey of how fashion has been influenced by major world historical events. Selected eras of history are viewed within a cultural, political, and economic context as expressed in dress. Emphasis includes cross-cultural influences on major fashion trends of the Western world from selected historical periods from the time of the Egyptians to the present. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research and identify fashion and style features of selected historical periods from the time of the ancient Egyptians to the present day.
- identify how a garment changes from one period to another.
- analyze how politics, economics, technology, culture, and art have affected clothing styles in specific historical periods.
- compare historical clothing design to contemporary clothing design.
- use historical styles as inspiration for contemporary clothing designs.

FASHN 334 Vintage Costuming

Same As: TA 434
Units: 0.5 - 2
Hours: 4.5 - 18 hours LEC; 13.5 - 54 hours LAB
Prerequisite: None.
Advisory: FASHN 357 or TA 430; and eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course covers the principles and techniques involved in developing and constructing period costumes and/or accessories through individual fabrication of costume pieces. The historical period or topic changes each semester. It is open to all skill levels, with basic knowledge of sewing recommended. This course is not open to students who have completed TA 434. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research and identify historical costume pieces as covered in the specific semester's topic.
- compare and contrast the costume pieces of different historical periods.
- analyze the design and construction techniques necessary to create a period costume as specified in the specific semester's topic.
- construct period costume pieces as covered in the specific semester's topic.

FASHN 342 Fashion Illustration

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: ART 300 and 304
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to freehand and computer-generated fashion illustration. Illustration concepts unique to fashion are explored using various freehand drawing techniques.
techniques and computer design software. Design elements and principles including color, texture, line, balance, and apparel details are incorporated into the illustrations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the difference between a flat working sketch and a fashion illustration.
- draw freehand working sketches of fashion figures.
- communicate an idea or concept through a sketch generated by a freehand illustration.
- utilize basic computer skills in the development of a flat sketch.
- develop and revise hand-drawn sketches into more sophisticated illustrations using design illustration software.
- create storyboards that incorporate layouts supported by both freehand and computer-generated illustrations.

FASHN 344 Fashion Illustration II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: FASHN 342 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds on the skills acquired in FASHN 342. Emphasis is placed on advanced design and illustration skills utilizing computer software. Topics include creating custom brushes and symbols, digital textile design and technical flats. The design process and layout techniques for fashion presentations are also introduced.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design a fashion collection using computer design software.
- create a layout for a fashion presentation.
- create a digital textile design appropriate for a fashion collection.
- utilize custom brushes and symbols to draw fashion illustrations.
- create a technical flat that meets industry standards.

FASHN 357 Apparel Construction I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces basic apparel construction techniques. It emphasizes the development of sewing skills, the use and care of equipment, and selection of proper tools and fabric. No previous sewing experience is required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recommend appropriate fabrics, notions, and tools for individual projects.
- distinguish garment constructions found in ready-to-wear clothing.
- create sample constructions utilizing basic sewing techniques.
- assemble and sew a garment using a commercial pattern.
FASHN 358 Apparel Construction II
This course focuses on the application and evaluation of apparel construction techniques, fit, and pattern alterations. Current fashion fabrics and shaping materials are introduced. Emphasis is on developing advanced skills in garment construction.

Upon completion of this course, the student will be able to:

- recommend appropriate sewing equipment, supplies, and techniques for a given project.
- construct a garment using advanced sewing construction techniques.
- create samples for a technique book using advanced sewing construction skills.
- make basic alterations to clothing patterns.

FASHN 359 Knitwear Construction
This course introduces basic knitwear apparel construction techniques. It emphasizes sewing equipment, supplies, and techniques specific to knits. Topics include knit fabric manipulation, knit pattern selection, and special knit construction techniques. A knit garment is created.

Upon completion of this course, the student will be able to:

- recommend appropriate sewing equipment, supplies, and techniques for a knit project.
- construct a garment using knitwear sewing techniques.
- create samples for a technique book using knitwear sewing techniques.
- analyze knit fabrics appropriate for various types of commercial patterns.

FASHN 362 Tailoring Techniques
This advanced apparel construction course introduces traditional and contemporary tailoring techniques. Topics include custom fitting, pattern work, fabric selection, and sewing methods specific to tailored garments. A lined tailored jacket or coat is created.

Upon completion of this course, the student will be able to:

- select appropriate fabrics and patterns to create a tailored garment.
- alter a pattern to create a custom fit.
- build a tailored jacket or coat from a commercial pattern.
FASHN 363 Fashion Accessories and Embellishments

Units: 1.5  
Hours: 18 hours LEC; 27 hours LAB  
Prerequisite: FASHN 357 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course provides students with embellishment skills for trending fashion and couture level garments. Topics include embroidery, beading, fabric manipulation, applique, trims, and threadwork, with an emphasis on up-to-date interpretations of classic techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recommend embellishment applications for specific garment and accessory designs.
- compile examples of various types of embellishment fabrics, trims, and techniques.
- analyze past and present, and forecast future fashion and accessory embellishment trends.
- interpret various types of embellishments by constructing an accessory and enhance a garment with appropriate embellishment applications.
- identify proper tools and supplies for various embellishment techniques.
- state the elements of design and design principles that affect the overall appearance of the various embellishments.

FASHN 370 Pattern Adjustment and Clothing Alterations

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: FASHN 310 and 358 with grades of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course develops skills needed to fully understand garment fit. Topics include the identification of different body types and silhouettes, and common fit problems. Also covered is how to alter ready-to-wear garments and adjust patterns to fit a variety of common fit problems. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess body types and associate the fitting issues related to those body types.
- compare how body types differ from industry standards.
- interpret body differences into an appropriate change on corresponding design pattern pieces.
- demonstrate pin and fit techniques for menswear and womenswear of different styles.
- incorporate basic to advanced garment alteration techniques to adjust clothing items to the pinned fittings.
- operate industrial equipment used in alterations shops.

FASHN 374 Pattern Making and Design

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: FASHN 357 or TA 430 with a grade of "C" or better  
Advisory: MATH 25 or MATH 41 with a grade of "C" or better or placement through the placement process; AND eligible for ENGRD 116 and ENGWR 102 OR ESLR 320 and ESLW 320.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course introduces the flat pattern method of apparel design. Pattern making techniques are perfected using half-scale patterns. Construction techniques are introduced...
for the completion of original designs. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create various style lines in a pattern.
- create bodices, skirts, sleeves, and collars using the flat pattern method.
- draw simple sketches to represent designs.

FASHN 378 Advanced Pattern Making and Design

This course covers the creation of full-scale patterns, using advanced patternmaking techniques that include pattern drafting, flat patterning, duplicating ready-to-wear and grading. Full-scale garments are created from original designs, with an emphasis on fit and construction. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- draft basic pattern blocks.
- create a working sketch based on an original design.
- create a pattern using the principles of flat patterning.
- fit and alter a pattern.
- construct a garment in a logical, professional sequence.
- copy a design from ready-to-wear apparel.
- apply pattern grading formulas to basic garment patterns.
- formulate a cost sheet to track materials and time required for construction of a custom garment.

FASHN 379 Draping

This course applies the skills developed in FASHN 374 and introduces draping techniques using industry dress forms. Activities include developing an original design concept, draping several blocks and slopers which utilize a variety of techniques, and executing a final garment in fashion fabric.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and sketch style variations and interpret them in fabric.
- create basic garment blocks through draping techniques.
- apply draping and design principles to create an original pattern.
- transfer fabric markings of a draped garment to a paper pattern.
- evaluate the fit of a draped garment.
FASHN 380 Computer Patternmaking

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: FASHN 374 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This advanced pattern drafting course introduces industry computer software. It makes comprehensive use of patternmaking skills acquired in FASHN 374 Patternmaking. Working from a designer's sketch or photograph, patterns are drafted and completed using computer software.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- produce production patterns to industry standards.
- create patterns using computer software.
- prepare patterns for production.

FASHN 381 Couture Draping for Eveningwear

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: FASHN 379 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces advanced draping skills for the creation of eveningwear. Topics include contouring techniques, foundation garments, advanced sewing skills, working with specialty fabrics, and custom fitting. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- select fabric and garment designs appropriate for eveningwear that complements the unique figure shape of an individual.
- utilize advanced draping techniques to create a couture gown.
- construct a corset foundation for eveningwear.
- incorporate a variety of advanced-level sewing construction skills into a finished garment.

FASHN 382 Collection Design and Production

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: FASHN 358, 378, and 379 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course applies the skills obtained in previous design and patternmaking courses. Topics include designing a small collection, creating and modifying patterns, and constructing original garments. It explores the role of mood boards, costing, tech packs, and accessories. Finished collections are presented on the runway in a fashion show. One field trip may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- collect and record fashion trends and inspirations for a collection.
- choose appropriate fabric and trims for specific designs.
- design a coordinated group of garments.
- critique a garment design.
• develop a garment from an original pattern.
• summarize the differences between first and final fittings.
• select appropriate accessories to enhance the finished collection.
• calculate costing and assemble a tech pack.
• show a final collection on the runway in a fashion show.

FASHN 390 Alteration Shop

Units: 3
Hours: 18 hours LEC; 108 hours LAB
Prerequisite: FASHN 370 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on the operation and management of ready-to-wear garment alterations shop. It includes the study of starting an alterations business, local and government business rules and regulations, workroom supplies and equipment, workflow and scheduling, customer service, advertising and promotions, sales and costing, and performing garment alterations. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate basic types of alteration services and customer needs.
• identify potential target markets for an alteration business.
• design and develop alteration shop image, company profile, merchandising, and pricing strategy.
• prepare, manage, and critique accurate and efficient workflow schedules as well as client inflow, outflow, and quality control.
• generate purchase orders for workroom supplies using inventories, projected alterations, and cost-effective principles.
• apply basic pinning and alterations techniques to ready-to-wear garments.
• use formulas to construct and calculate profit and loss statements for the alterations shop.
• interpret labor laws, tax laws, licensing, and contract requirements as prescribed for small businesses by local and state government.

FASHN 393 Fashion Promotion

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a comprehensive study of the promotion and presentation techniques unique to the fashion industry, including fashion advertising, publicity, and marketing. It focuses on special events, such as fashion shows and trunk shows. It also covers the development of planning and technical skills through a fashion show production. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess the role of various advertising media as related to the fashion industry, including newspaper, television, radio, and digital media.
• construct a plan for the staging, seating, and setup of a fashion show.
• evaluate and select appropriate models for a runway presentation.
• produce a fashion show.
FASHN 395 Visual Merchandising

This course introduces current visual merchandising techniques, including equipment, lighting, and materials. The application of principles and practices in arranging and displaying fashion merchandise is covered. This practical experience with showcases, windows, and on-floor displays provides familiarity with professional fashion promotional presentations. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in handling tools, materials, and props in creating successful visual displays.
- apply principles of design to arranging and displaying fashion merchandise.
- analyze and evaluate successful displays from single store and chain organizations.
- design and construct original visual displays.
- organize and employ original ideas for displays.

FASHN 397 Fashion Retail Buying

This course addresses the practical and business aspects of the fashion industry. Topics include defining the customer and researching current buying trends. Activities specific to fashion retail buying are explored, including developing a buying and stock plan and planning market purchases. Career opportunities in retail buying and merchandising are also explored. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze industry statistics and research current trends in fashion.
- create worksheets with embedded formulas to create a six-month buying plan.
- plan market purchases and formulate a stock assortment for a six-month buying plan.
- define a target customer.
- calculate mark-ups and mark-downs.

FASHN 398 Fashion Entrepreneur

This course provides the necessary skills to become an entrepreneur in the fashion industry. It addresses the creation of a small business specific to fashion retail or apparel design and manufacturing. Topics include recognizing and creating business opportunities, as well as marketing and selling techniques. A model business plan is developed by exploring resources necessary to be successful in a fashion business.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate opportunities to start a business in the fashion industry.
- draft a mission statement for a chosen fashion related business.
- analyze how to use the principles of selling to make effective sales.
- create a business plan that relates to a specific fashion business.

FASHN 495 Independent Studies in Fashion

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

FASHN 498 Work Experience in Fashion

Units: 1 - 4  
Hours: 60 - 300 hours LAB  
Prerequisite: Students must be in a paid or unpaid internship, volunteer position, or job related to fashion with a cooperating site supervisor. Students are advised to consult with the Fashion Department faculty to review specific certificate and degree work experience requirements.  
Transferable: CSU  
General Education: AA/AS Area III(b)  
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of fashion. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies. During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of fashion related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
The fire technology program is dedicated to providing high quality training and educational programs for entry level and advanced level in-service instructional courses for those in paid and volunteer fire agencies. Our courses are categorized under the designations FT, FIRE, and FFS.

The FT courses, see page 286, are primarily degree/certificate applicable and include transferrable coursework to four-year colleges. These courses meet most fire agencies’ minimum qualifications for employment in our region and throughout California.

The FIRE courses, see page 287, and FFS courses, see page 296, are typically offered off-campus through an affiliate agency and have special enrollment limitations, prerequisites, require a different registration process, and may not be routinely offered. These courses include California State Fire Training certificate courses managed by the California State Fire Marshal.

Division Dean
Bryon G. Gustafson, Ph.D.

Department Chairs
TBD

(916) 570-5000

Associate Degree

A.A. in Fire Technology

This program focuses on preparing for a career in the fire service. It includes educational opportunities for those currently employed within the fire service and those within volunteer fire agencies. Courses include those required for transfer to four-year colleges, those required to meet eligibility requirements for employment, and those required for incentive salary increases.

Catalog Date: June 1, 2020

Total Units: 30
The Fire Technology Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- complete the duties of an entry level firefighter
- identify the fundamentals of the incident command system (ICS)
- compare and contrast the makeup of a moderate size fire department with a large fire department
- describe the components of firefighting personnel protective equipment (PPE)
- compare and contrast modern PPE with antiquated PPE
- analyze simulated fire situations for indicators of flashover versus backdraft potential and prescribe mitigation measures to prevent them from occurring
- assess the fundamentals of physical science as they relate to the fire services: measurements, energy and work theories, power and transfer of heat principles, the laws of matter and the conservation of energy, and the exothermic chemical reaction called combustion
- classify and compare various types of municipal water systems
- describe the fundamentals of building construction and apply this knowledge to fire situations where forcible entry and overhaul evolutions may weaken the already fire-weakened structure
- compare and contrast fire prevention versus fire suppression efforts
- draft a pre-fire plan
- evaluate and analyze the rate of fire spread in a structure fire
- explain the physical and chemical properties of fire
- describe how ICS is used by fire departments at emergencies
- compare and contrast the makeup of a fully paid department with a volunteer fire department

Career Information

Employment opportunities may be found in areas such as building inspection, fire investigation, fire prevention, hazardous materials specialist, public education, and firefighting.

Certificates of Achievement

Fire Technology Certificate

This program focuses on preparing for a career in the fire service. It includes educational opportunities for those currently employed within the fire service and those within volunteer fire agencies. Courses include those required for transfer to four-year colleges, those required to meet eligibility requirements for employment, and those required for incentive salary increases.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- complete the duties of an entry level firefighter
- identify the fundamentals of the incident command system (ICS)
- compare and contrast the makeup of a moderate size fire department with a large fire department
- describe the components of firefighting personnel protective equipment (PPE)
- compare and contrast modern PPE with antiquated PPE
- analyze simulated fire situations for indicators of flashover versus backdraft potential and prescribe mitigation measures to prevent them from occurring
- assess the fundamentals of physical science as they relate to the fire services: measurements, energy and work theories, power and transfer of heat principles, the laws of matter and the conservation of energy, and the exothermic chemical reaction called combustion
- classify and compare various types of municipal water systems
- describe the fundamentals of building construction and apply this knowledge to fire situations where forcible entry and overhaul evolutions may weaken the already fire-weakened structure
- compare and contrast fire prevention versus fire suppression efforts
- draft a pre-fire plan
- evaluate and analyze the rate of fire spread in a structure fire
- explain the physical and chemical properties of fire
- describe how ICS is used by fire departments at emergencies
- compare and contrast the makeup of a fully paid department with a volunteer fire department

### Career Information

Employment opportunities may be found in areas such as building inspection, fire investigation, fire prevention, hazardous materials specialist, public education, and firefighting.

### Firefighter Recruit Academy Certificate

This program provides the knowledge necessary to assume the role of firefighter with the ability to work effectively and safely with the fire environment as well as within a company in the fire department in all functions of that company. Topics include indoctrination into the fire service, general maintenance, apparatus and equipment operations, fire control, wildland firefighting, emergency vehicle operations, salvage, fire prevention and public education, fire and arson investigation, rapid intervention crew tactics, vehicle extrication, physical fitness/wellness, emergency care, and forcible entry.

**Catalog Date:** June 1, 2020

### Certificate Requirements
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and describe the history, development, structure, organization and responsibility of the Fire Service
- define, identify and apply the components and principles of the Incident Command System
- explain the core values of the fire service and its duty of providing service delivery to the public
- perform preventative maintenance to fire station, apparatus and equipment
- demonstrate the use of fire department apparatus and tools within the scope of assignment
- explain and apply the basic concept of fire control, fire and arson investigation and fire communication systems
- identify and demonstrate basic skills in public education procedures and instruction
- interpret work place rules and laws regarding harassment/discrimination policies and mandated reporting procedures
- relate to wellness programs, stress management and approved academy physical fitness programs
- identify and demonstrate first responder responsibilities for handling medical emergencies
- identify first responder responsibilities for mitigation of hazardous material incidents
- choose safe driving procedures for emergency response vehicles
- apply principles of vehicle extraction
- apply fire suppression tactics and strategies
- interpret wild land fire behavior, suppression techniques and safety measures
- demonstrate firefighter rescue and survival skills

Certificates

Fire Investigation 1A Certificate

This program provides participants with an introduction and basic overview of fire scene investigation. The focus of this course is to provide information in determining the area of fire origin in fires involving vehicles, structures, and wildland. Accidental and criminal fire causes are discussed in detail.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- distinguish the four different methods of heat transfer and compare their effects during a fire's progression
- choose the correct California Arson Law section when applying it to a factual situation
- recognize the elements necessary for the ignition and the sustained combustion of fuel and heat
- explain the elements required for an electrically caused fire to occur
- identify common scene indicators of arson and apply it to a factual situation
- describe the methodology required for a proper and thorough investigation of a structure, vehicle, and wildland fire
- differentiate between the different types of explosions and their unique effects

**Fire Investigation 1B Certificate**

This program expands on specific topics encountered by the fire investigator. These topics include detailed information on motives of fire setters; conducting a post blast scene; the investigation of a fire death; the recognition, collection, and preservation of evidence; interviewing and interrogation of witnesses and suspects; and the effect of a building's construction on the spread of fire.

Catalog Date: June 1, 2020

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- differentiate between the six common motives associated with fire setters
- examine a fire scene appraising the different safety hazardous associated with an investigation
- compare a fire scene investigation versus a post blast scene investigation
- examine a fire scene to determine the appropriate evidence to support a fire cause
- compare facts associated with an interview and an interrogation
- appraise a fire death scene to determine if a criminal act has occurred
- organize their case investigations utilizing proper case reports, resources, and insurance information

**Fire Investigation 2A Certificate**

This program provides information on how to investigate, apprehend, and convict arsonists. It focuses heavily on legal case preparation. Topics include interviewing and interrogating suspects, search and seizure, warrants, courtroom demeanor, and working with the district attorney's office.

Catalog Date: June 1, 2020

**Certificate Requirements**

<table>

</tr>
</tbody>
</table>

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- differentiate among the three effects of an explosion
- validate an arson corpus after examining a practical fire scene
- appraise an explosion scene to determine if a criminal act has occurred
- organize a fire investigation utilizing case reports, court exhibits, and testimony
- differentiate between the U.S. Supreme Court's finding and California's Supreme Court's requirements in preparing a search warrant
- recognize the elements necessary for the ignition and the sustained combustion of fuel and heat in a practical situation
- describe the methodology and procedure required for a proper surveillance operation

Fire Investigation 2B Certificate

This program provides advanced instruction in fire scene investigation, case preparation, and courtroom presentation. Topics include reviewing fire scene photography, sketching, evidence collection, interviewing and interrogation, and extensive use of simulations for developing and presenting an arson case in court.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate the proper procedure of qualifying as an expert witness in fire origin and cause
- structure interview questions with witnesses and suspects in accordance with federal and state law requirements
- identify common scene indicators of arson and apply it to a practical situation
- examine a fire scene to determine the appropriate evidence needed to support a criminal fire cause
- verify an arson corpus after examining a criminal fire scene

USDA Advanced Academy Certificate

This program is designed to provide the skills and knowledge necessary to perform as a team leader. Topics include leadership, fuels management, fire behavior, basic air operations, firing equipment and techniques, and fireline fatalities. This course is presented in a formal academy setting.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- formulate a course of action based upon a hazard assessment of the fire environment
- evaluate for additional personnel at a fire scene
- identify and apply stress control techniques
- compare the roles and responsibilities of Firing-Boss and Ignition Specialist
- recognize ignition devices
- distinguish aircraft types and their capabilities
- compare the tactical and logistical missions of an aircraft
- explain basic smoke management
- construct a fire management plan
USDA Basic Academy Certificate

This course is designed to provide the skills and knowledge necessary to perform as a skilled Wildland Firefighter. Topics include physical fitness, wellness, nutrition, first responder medical, fire prevention, maps, compass, fire line construction, hand tool use, communications, leadership, and firefighter skills. The academy is presented in a formal setting.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- construct a handline using various tools
- operate a belt weather kit
- document and analyze weather observations
- demonstrate two-rescuer cardiopulmonary resuscitation (CPR)
- evaluate types and extent of injuries
- formulate a course of immediate care after evaluating injuries
- compare and contrast media awareness related to fire safety and prevention
- inspect camp sites for fire violations and safety
- employ the four facets of physical fitness
- explain styles of leadership required in different settings

Fire Technology (FT)

FT 110 Fire Apparatus

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course covers various aspects of fire apparatus. Topics include design, typing, specifications, construction, performance capabilities, and maintenance. It also includes warning devices and the utilization of apparatus in fire service emergencies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss fire apparatus history, typing, design, specifications, and construction
- describe the operation of various fire apparatus and specialized equipment
- analyze the difficulties of maintaining fire apparatus

FT 130 Fire Company Organization and Management

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
This course explores the organization and management of a fire department and the relationship of government agencies to the fire service. It emphasizes fire service leadership from the perspective of the company officer. Topics include ethical conduct, challenges of supervision, organizational structure, communication, human resource management functions, and administrative functions.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- compare and contrast leadership versus management within a fire organization
- discuss the leader’s role and responsibilities within a fire organization
- explain the different types of fire department organizations
- identify and describe the general functions of management within a fire organization
- describe the use of the incident management system for responses involving one or more units
- describe the need for research and development at the company level

FT 170 Fire Investigation

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course introduces the general practices involved in fire investigation. Topics include determining the cause of fires (accidental, suspicious, and incendiary); types of fires; related laws; introduction to incendiary fires; motives for starting fires; recognizing and preserving evidence; interviewing witnesses and suspects; and arrest, detention, and court procedures.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe how to recognize, protect, and preserve evidence of fire cause
- explain the techniques relating to court procedures
- explain the techniques for interviewing witnesses and suspects
- diagnose the point of origin at a fire scene
- describe the scientific method of fire investigation

FT 180 Rescue Practices

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course focuses on the identification and management of rescue situations, such as proper utilization and awareness of equipment, tools, and techniques to handle various rescue situations. Topics include vehicle extrication, water rescue, vertical rescue, building collapse, radiation hazards, hazardous materials rescue, fire situations including rapid intervention awareness, and other emergency situations.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe techniques for dealing with various rescue situations
- set up emergency rescue equipment
• describe confined space rescue operations
• improvise treatments for common medical injuries, using minimal equipment

FT 190 Fire Tactics and Strategy

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course is a basic requirement for all fire suppression personnel. Topics include the principles of fire control, utilization of staffing, equipment and placement, extinguishing agents, and fire control methods on the fireground.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• discuss the historical changes in fire service tactics and strategy
• assess the differences in fire extinguishing agents and apply the most effective methods to the situation
• estimate the staffing structure and equipment needs at an emergency utilizing the Incident Command System (ICS)
• calculate the best method for extinguishing the fire on the fireground
• recognize the divisions of fire tactics and strategy
• explain the role of each fire tactics and strategy division
• apply salvage and overhaul procedures at an emergency
• categorize fireground tactics and strategies used in urban and wildland emergency situations

FT 192 Wildland Fire Control

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course covers all aspects of wildland fire fighting and introduces advances in technology for wildland fire suppression. Topics include fire behavior, weather conditions, topography factors, safety, prevention, extinguishing methods, initial attack, Incident Command System (ICS), communications, aircraft assistances, hand crews, and bulldozer operation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess wildland fire behavior as it relates to weather, fuel, and topography
• illustrate the wildland fire threat in California
• describe firefighters’ safety as it relates to wildland fire fighting
• demonstrate the methods used to bring wildland fires under control

FT 295 Independent Studies in Fire Technology

Units: 1 - 3
Prerequisite: None.
Catalog Date: June 1, 2020
FT 298 Work Experience in Fire Technology

This course provides students the opportunity to work in the Wildland Firefighter Apprenticeship Program (W.F.A.P.) for the purpose of developing specific skills to meet the goals and objectives of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester. One unit of credit is earned for each 60 hours of unpaid, or 75 hours of paid work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in the Wildland Firefighter Apprenticeship Program (W.F.A.P.)
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.)

FT 300 Fire Protection Organization

This course provides an introduction to fire protection, its career opportunities, and related fire service fields. Topics include philosophy and history of fire protection, fire loss analysis, organization and function of public and private fire protection services, fire departments as part of local government, as well as laws and regulations affecting the fire service. Additionally, fire service nomenclature, specific fire protection functions, basic fire chemistry and physics, introduction to fire protection systems, and introduction to fire strategy and tactics, are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- illustrate and explain the history and culture of the fire service
- analyze the basic components of fire as a chemical chain reaction and the major phases of fire
- differentiate between fire service training and education, and explain the value of higher education to the professionalization of the fire service
- list and describe the major organizations that provide emergency response service and illustrate how they interrelate
- discuss and describe the scope, purpose, and organizational structure of fire and emergency services
- describe the common types of fire and emergency service facilities, equipment, and apparatus
- compare and contrast effective management concepts for various emergency situations
- identify the primary responsibilities of fire prevention personnel including: code enforcement, public information, and public and private protection systems
- describe the importance of wellness and fitness as it relates to emergency services
- examine the main factors that influence fire spread and fire behavior

FT 301 Fire Prevention Technology

This course provides students the opportunity to work in the Wildland Firefighter Apprenticeship Program (W.F.A.P.) for the purpose of developing specific skills to meet the goals and objectives of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester. One unit of credit is earned for each 60 hours of unpaid, or 75 hours of paid work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in the Wildland Firefighter Apprenticeship Program (W.F.A.P.)
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.)

FT 300 Fire Protection Organization

This course provides an introduction to fire protection, its career opportunities, and related fire service fields. Topics include philosophy and history of fire protection, fire loss analysis, organization and function of public and private fire protection services, fire departments as part of local government, as well as laws and regulations affecting the fire service. Additionally, fire service nomenclature, specific fire protection functions, basic fire chemistry and physics, introduction to fire protection systems, and introduction to fire strategy and tactics, are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- illustrate and explain the history and culture of the fire service
- analyze the basic components of fire as a chemical chain reaction and the major phases of fire
- differentiate between fire service training and education, and explain the value of higher education to the professionalization of the fire service
- list and describe the major organizations that provide emergency response service and illustrate how they interrelate
- discuss and describe the scope, purpose, and organizational structure of fire and emergency services
- describe the common types of fire and emergency service facilities, equipment, and apparatus
- compare and contrast effective management concepts for various emergency situations
- identify the primary responsibilities of fire prevention personnel including: code enforcement, public information, and public and private protection systems
- describe the importance of wellness and fitness as it relates to emergency services
- examine the main factors that influence fire spread and fire behavior

FT 301 Fire Prevention Technology

This course provides students the opportunity to work in the Wildland Firefighter Apprenticeship Program (W.F.A.P.) for the purpose of developing specific skills to meet the goals and objectives of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.). Students complete work experience hours at approved training sites. Students may take up to 16 units total across all Work Experience course offerings. This course may be repeated when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester. One unit of credit is earned for each 60 hours of unpaid, or 75 hours of paid work.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance in the Wildland Firefighter Apprenticeship Program (W.F.A.P.)
- demonstrate mastery of specific job skills as written in learning objectives under the supervision of the National Interagency Joint Apprenticeship Committee (N.I.J.A.C.)
This course provides fundamental knowledge relating to the field of fire prevention. Topics include history and philosophy of fire prevention, organization and operation of a fire prevention bureau, use and application of codes and standards, plans review, fire inspections, fire and life safety education, and fire investigation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the national fire problem and the role of fire prevention.
- identify and describe fire prevention organizations and associations.
- define laws, authority having jurisdiction (AHJ), regulations, and fire codes.
- define the functions of a fire prevention bureau.
- describe inspection practices and procedures.
- identify and describe the standards for professional qualification for fire marshal, plans examiner, fire inspector, fire and life safety educator, and fire investigator.
- list opportunities in professional development for fire prevention personnel.
- describe the history and philosophy of fire prevention.

FT 302 Fire Protection Equipment and Systems

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides information relating to sprinkler design and the operation of fire detection and alarm systems. Topics include fire cause and effect, heat and smoke control systems, sprinkler systems, water supply for fire protection, standpipe systems, and portable fire extinguishers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare smoke and fire movement in various types of construction and the relationship to systems and equipment
- identify organizations that provide information or service to fire protection systems
- compare types, classifications, and effectiveness ratings of fire extinguishers
- classify distribution, installation, and test requirements for fire extinguishers
- define types, components, and operation of fire protection systems and equipment for special hazards
- identify water supply requirements, distribution systems, and testing for public and private fire protection
- classify types, components, and operation of automatic and special sprinkler systems
- choose types of standpipe systems and water supply requirements
- compare detection, alarm, and supervisory devices and systems
- compare heat and smoke control devices and hardware

FT 303 Building Construction for Fire Protection

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020
This course covers the components of building construction that relate to fire safety. Specific focus is on elements of construction and the design of structures that are shown to be key factors regarding inspecting of buildings, pre-planning fire operations, and emergency operations at fires. Topics include principles of fire and smoke growth, fire resistance construction, as well as wood, ordinary, steel, and concrete construction.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- classify safety concerns presented by the following loads: wind, snow, dead, live, fire, and impact
- evaluate fire stability for the following structural members: column, wall, arch, beam, and truss
- describe the key factors in the fire performance of three common floors and four ceilings found in wood and ordinary construction
- choose the key features of a wood frame building and their implications for fire stability
- analyze ordinary construction and cite factors in fire stability and fire spread
- list indicators of collapse in ordinary construction
- cite the possible fire hazards in various types of construction
- choose key factors that may be expected to lessen or increase the resistance of steel to stress and fire
- choose key factors that increase or lessen concrete’s resistance to stress and fire
- evaluate the probable impact of the following factors on smoke spread within buildings: buoyancy, expansion, stack effect, wind, Heating Ventilating Air Conditioning (HVAC), smoke control systems, fire protection systems, and detection systems
- define features that may adversely affect the safety of emergency operations in buildings under construction
- describe the history of fire resistance construction and its changes through the years

FT 304 Fire Behavior and Combustion

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area IV
Catalog Date: June 1, 2020

This course covers the theories and fundamentals of how and why fires start and spread, and how they are controlled. Topics include an in-depth study of fire chemistry and physics, fire characteristics of materials, extinguishing agents, and fire control techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- classify the basic laws differentiating matter and energy
- compile basic terminology, definitions, and terms associated with basic fire chemistry
- compose some of the basic chemical symbols used in chemical formula writing
- identify physical properties in the three states of matter
- describe the Department of Transportation (DOT) warning placards and labeling systems
- identify the components of fire
- describe the various methods and techniques of fire extinguishing
- list the physical and chemical properties of fire
- differentiate and explain the phenomena of fire chemistry and behavior
FT 305 Firefighter Safety and Survival

This course introduces the principles and history related to the national firefighter life safety initiatives, focusing on the need for cultural and behavioral changes throughout the emergency services profession. It emphasizes occupational health and safety of firefighters as well as their personal and organizational accountability. Topics include safety, risk management, medical and fitness standards, industry standards relating to vehicle operation and road scene safety, as well as firefighter fatality case studies and analysis. This course emphasizes best safety practices before, during, and after the emergency incident.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the risk management process and the operational influence of “after action reviews” on safety
- explain the need for annual medical evaluations and the establishment of physical fitness criteria for emergency services personnel throughout their careers
- analyze case studies of emergency scene firefighter fatalities to determine, through examination of cause and effect, how to prevent such incidents in the future
- explain how technological advancements, training standards, and investigation of accidents and “near misses” can produce a higher level of firefighter safety and survival

FT 310 Fire Service Hydraulics

This course covers the theory of water hydraulics, hydraulic distribution systems, hydraulic practices, and extinguishing agents used with fire service hydraulics. Topics include the properties of water at rest and in motion, water velocity and discharge, distribution systems, fire service pumps, friction loss calculations, engine and nozzle pressures, and fire streams. This course also focuses on standpipe systems, automatic sprinkler systems, and foam systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize the components related to water supply in fire service hydraulics.
- explain the properties of water at rest and in motion, velocity, and discharge.
- describe how water is discharged from a fire apparatus.
- explain the operational procedures of fire service pumps and their control devices.
- calculate the friction loss of water within a hydraulic system.

FT 320 Hazardous Materials

This course is an introduction to hazardous materials, including physical properties, uses in industry, and characteristics when involved in spills, fires, and accidents. It covers emergency procedures, legal requirements, and compliance with regulations. Topics include flammable and combustible liquids, flammable and non-flammable compressed gases, flammable solids and combustible metals, oxidizing agents, poison gases and liquids, radioactive substances, and corrosive materials.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe the various Department of Transportation (DOT) hazard classes
- describe the Department of Transportation's placarding and labeling system
- identify the basic physical properties and burning characteristics of the various classes of hazardous materials
- explain the need for scene isolation, scene stabilization, and incident control
- identify various acceptable methods of incident control measures depending upon the dangers of the chemicals
- analyze the health dangers and symptoms of chemical classes
- compare the safety considerations encumbered by the fire department to ensure compliance with state and federal guidelines

FT 495 Independent Studies in Fire Technology

Units: 1 - 3
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
American River College offers courses in foreign languages designed to help students develop a command of a variety of languages necessary to pursue career, transfer and degree goals.

Associate Degree for Transfer

A.A.-T. in Spanish

This degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Spanish for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

A minimum of 3 units from the following:

- FREN 411: Intermediate French (4)
- FREN 412: Intermediate French (4)
- HIST 327: History of the Chicano/Mexican American (3)
- HIST 373: History of Mexico (3)
- ITAL 411: Intermediate Italian (4)
- ITAL 412: Intermediate Italian (4)
- SOC 325: Chicano Culture (3)
- SPAN 361: Conversational Spanish, Intermediate (3)

Total Units: 19

The Associate in Arts in Spanish for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate proficiency in the five skills as mandated by the competency guidelines of the American Council of the Teaching of Foreign Languages (ACTFL): comprehension, speaking, reading, writing, and understanding the people and culture of the Spanish-speaking countries.

- utilize correct grammatical structures of standard Spanish.

- read Spanish proficiently as found, for example, in Spanish language newspapers, magazines, short stories, essays, and selections of poetry written by Spanish, Spanish-American, and Chicano authors.

- demonstrate appropriate writing and composition skills in Spanish.

- critique and discuss Latin American and Peninsular literature in a historical context.

- analyze and discuss major historical events and periods in the history of Spanish-speaking countries.

- compare and contrast aspects of the Spanish-speaking culture that are different or similar to one's own culture.

- compare and contrast aspects of Spanish to another modern language.

Career Information

This degree is designed to facilitate students' successful transfer to four-year colleges that prepare them for a variety of career opportunities, such as airlines/travel, banking, bilingual education, bilingual telecommunications, emergency services, foreign service, Foreign Language Teacher, imports and exports, international business, intelligence/military services, IRS/State Franchise Tax Board, law enforcement/correctional officer, social services, translating/interpreting, and tourism. Some careers may require additional training specific to the trade.

French (FREN)

FREN 401 Elementary French

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 6
Catalog Date: June 1, 2020

This course introduces the language and culture of the French-speaking world. It includes the development of listening, speaking, reading, and writing French with emphasis on the communicative skills, as well as the fundamentals of French pronunciation and grammar.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate basic information, concepts, and ideas in written and spoken French.

- respond appropriately to written and spoken French on a variety of topics, such as discussing plans for the future, making comparisons, and talking about past events.

- compare and contrast the nuances of French-speaking cultures with those of the English-speaking in the United States and their own culture.

- analyze and apply the grammatical rules of French and compare them with their own language.

- describe everyday aspects of French life such as gestures, expressions, daily life, family life, cuisine, fashion, film, art, literature, and music.

- become familiar with a variety of aspects of the Francophone world.

- discuss, in a limited way, the film, art, literature, and music of France and the Francophone world.

FREN 402 Elementary French

Units: 4
Hours: 72 hours LEC
Prerequisite: FREN 401 with a grade of "C" or better or 2 years of high school French.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 6
This course follows FREN 401 and provides continued development of all language skills (listening, speaking, writing, and reading), with emphasis on communicative skills. Language acquisition is approached through a historical and cultural perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate basic information, concepts, and ideas in written and spoken French at a second semester level, such as discussing habitual past actions, hypothetical situations, future plans, giving commands, offering opinions, and expressing doubts.
- demonstrate a broader use of French vocabulary for practical, everyday use on a variety of topics, such as the home, city, holidays, vacation, and social and environmental issues.
- analyze and apply additional grammatical rules of French and compare them with one's own language.
- compare and contrast the nuances of French-speaking cultures with those of English-speaking culture in the United States and their own cultural experiences. Explore topics such the variety of housing options, the French educational system, customary celebrations, Paris and other major French cities, West Africa, the history of immigration in France, and social and environmental issues.
- discuss more broadly the film, art, music, and literature of France and the Francophone world.

FREN 411 Intermediate French

Units: 4
Hours: 72 hours LEC
Prerequisite: FREN 402 with a grade of "C" or better or 3 years of high school French.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This is the first course in a two-course sequence designed for intermediate students of French. It builds on the skills acquired in beginning level French in order to increase students' active vocabulary, reinforce their mastery of basic grammar, and develop their ability to deal with more complex structures (ex. verbal phrases, subordinate clauses). Films, phonetic exercises, and other auditory materials, as well as a variety of readings (literary classics, non-fiction, contemporary journalism, etc.) are used to increase students' proficiency in French, increase historical and cultural awareness, and also to develop critical thinking skills. It provides opportunities for students to use more language, with greater flexibility and proficiency, on a wider range of topics, and to speak and write at greater lengths. Additionally, it includes additional exploration of French and Francophone cultures. This course prepares students for FREN 412.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate information, concepts, and ideas in written and spoken French.
- apply/recognize similarities and differences between French and their own language.
- interpret written and spoken French on a variety of topics, such as films, adolescence, identity, student experiences, exile, and colonization.
- recall and consistently apply grammatical rules, such as the use of present and past tenses, the imperative, relative pronouns, demonstrative pronouns, and personal pronouns.
- recognize prominent examples of film, art, music, history, and literature from French and Francophone cultures, and relate them to their own cultures.
- make connections to other courses through a variety of learning strategies and critical-thinking skills that are useful across the curriculum.

FREN 412 Intermediate French

Units: 4
Hours: 72 hours LEC
Prerequisite: FREN 411 with a grade of "C" or better or 4 years of high school French.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course is the second course in a two-course sequence designed for intermediate students of French. This course advances students' vocabulary and solidifies their command of grammar, including more complex components. It also enables increased comprehension of and proficiency in French. Lastly, it expands their historical and cultural knowledge of the French and Francophone worlds, furthering greater cross-cultural awareness.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use French to discuss and comprehend a variety of topics, such as canonical French literary texts, historical events and their significance, socio-cultural diversity, and contemporary politics.

- apply and analyze more complex grammatical structures, such as all uses of the subjunctive, pluperfect, future perfect, past conditional, the passé simple and its literary uses, and indefinite words and expressions.

- produce paragraphs and compositions in French to communicate, to demonstrate comprehension, to express information, to compare and contrast ideas, or to construct arguments.

- use a range of strategies to maintain communication: request clarification, repeat, restate, rephrase, and circumlocute.

- identify, analyze, and discuss classic and contemporary works of literature, art, music, and film, such as works by Cyrano de Bergerac, Jules Verne, and Eric-Emmanuel Schmitt.

- understand and discuss key moments and their lasting significance in French and Francophone history, such as French colonization in the Maghreb, the independence of former colonies, immigration, and French conceptions of national identity.

- make connections to other courses through a variety of learning strategies and critical-thinking skills that are useful across the curriculum.

FREN 495 Independent Studies in French

Units: 1 - 3  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

German (GERM)

GERM 351 Conversational German, Elementary

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is designed for students at the first-semester level in German. Conversations and discussions, both controlled and spontaneous, are used to develop basic skills in German. Emphasis includes oral proficiency and development of German culture awareness.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use basic conversational skills in everyday German.

- apply critical thinking language skills to cultural and social situations.

- collect, analyze, evaluate, and apply information about the cultures and peoples of the German world.

GERM 352 Conversational German, Elementary

Units: 3  
Hours: 54 hours LEC  
Prerequisite: GERM 351 with a grade of “C” or better or two years of high school German  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is designed for students at the second-semester level in German. It continues the development of oral-aural skills in German through conversations and discussions, both controlled and spontaneous. Emphasis includes oral proficiency and development of German cultural awareness.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- improve basic conversational skills in everyday German.
- apply critical thinking language skills to cultural and social situations.
- collect, analyze, evaluate, and apply information about the cultures and peoples of the German world.
- demonstrate conversational fluency in practical situations.

**GERM 401 Elementary German I**

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** None  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6  
**Catalog Date:** June 1, 2020

This course is an introduction to the language of the German-speaking people. It includes the fundamentals of German pronunciation and grammar, as well as the development of listening, reading, and writing with emphasis on the communicative skills.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- produce language that communicates information, concepts, and ideas about and in German to an audience of listeners and readers.
- engage in conversations and written correspondence in German to provide and obtain information, express feelings and emotions, and exchange opinions.
- interpret written and spoken German on a variety of topics such as personal data, families, weather, classes, schedules, daily routine, activities, and emotions.
- apply the grammatical rules of German and compare them to those of another language.
- connect German language and culture to other disciplines.
- define and examine some cultural differences.
- integrate German language and cultural knowledge within and beyond the classroom setting.

**GERM 402 Elementary German II**

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** GERM 401 with a grade of "C" or better or two years of high school German  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6  
**Catalog Date:** June 1, 2020

This course continues to develop proficiency in speaking, reading, and writing German. It also explores the German culture and affords opportunities to make cross-linguistic and cross-cultural comparisons.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the four major skills of understanding, speaking, writing, and reading German.
- analyze patterns of the German language and compare German with another language.
- collect and evaluate information about the country, culture, and people of Germany.
- respond appropriately to written and spoken German on a variety of topics, such as food and cooking, workplace and household, daily life at home, and transportation and travel.
- compare various aspects of the German-speaking cultures with those of another culture.
- connect German language and culture to other disciplines.
- integrate German language and cultural knowledge within and beyond the classroom setting.
GERM 411 Intermediate German

Units: 4
Hours: 72 hours LEC
Prerequisite: GERM 402 with a grade of "C" or better or three years of high school German
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course, which is the third in a series of four German courses, continues to develop proficiency in speaking, listening, reading, and writing German. It reviews German grammar and offers readings of varied texts, which further explore study of historical and cultural background of German-speaking countries and afford opportunities to make cross-linguistic and cross-cultural comparisons.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the ability to speak and write German by means of discussions, oral reports, recitations, summaries, and compositions.
- interpret written and spoken German on a variety of topics such as childhood, youth, vacations, health and illnesses, and multicultural society.
- apply rules of the German language and recognize similarities and differences between German and another language.
- describe some everyday aspects of German culture, such as vacations, family traditions, fashion, health issues, and social responsibility.
- identify prominent examples of art, music, history, and literature from German culture.
- compare German culture to other cultures.
- connect German language and culture to other disciplines.
- integrate German language and cultural knowledge within and beyond the classroom setting.

GERM 412 Intermediate German

Units: 4
Hours: 72 hours LEC
Prerequisite: GERM 411 with a grade of "C" or better or four years of high school German.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course continues development of listening, speaking, reading, and writing skills through reading, discussing, and interpreting various works of German literature; writing summaries, reports and short compositions; and studying the historical, artistic, and cultural background of the German-speaking world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- speak German at an intermediate level in discussions and oral reports.
- write compositions and critical analyses in German.
- synthesize grammatical, cultural, and thematic material to expand communicative abilities.
- collect, analyze, evaluate, and apply information about German-speaking countries and cultures.
- compare new information about the German language and culture with familiar concepts and ideas.
- recognize distinctive viewpoints, cultural practices, and perspectives of German speakers.

GERM 495 Independent Studies in German

Units: 1 - 3
Prerequisite: None.
Transferable: CSU
ITAL 351 Conversational Italian, Elementary I

Upon completion of this course, the student will be able to:

- use basic conversational skills in everyday Italian.
- apply critical thinking language skills to cultural and social situations.
- collect, analyze, evaluate, and apply information about the cultures and peoples of the Italian world.

ITAL 352 Conversational Italian, Elementary II

Upon completion of this course, the student will be able to:

- demonstrate improved basic conversational skills in everyday Italian.
- apply critical thinking language skills to cultural and social situations.
- collect, analyze, evaluate, and apply information about the cultures and peoples of the Italian-speaking world.
- demonstrate conversational fluency in practical situations.

ITAL 401 Elementary Italian

Upon completion of this course, the student will be able to:

- demonstrate the development of listening, speaking, reading, and writing Italian with emphasis on the communicative skills, as well as the fundamentals of Italian pronunciation and grammar.
• communicate basic information, concepts, and ideas in written and spoken Italian.
• respond appropriately to written and spoken Italian on a variety of topics, such as discussing plans for the future, making comparisons, and talking about past events.
• compare and contrast the nuances of Italian culture with those of the English speaking in the United States.
• analyze and apply the grammatical rules of Italian and compare them with their own language.
• describe everyday aspects of life in Italian culture such as typical eating habits, celebrations of family gatherings, and the use of natural remedies.

ITAL 402 Elementary Italian

Units: 4
Hours: 72 hours LEC
Prerequisite: ITAL 401 with a grade of "C" or better; or 2 years of high school Italian.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 6
Catalog Date: June 1, 2020

This course provides continued development of the language and explores history and culture of Italian society. It includes further development of listening, speaking, reading, and writing Italian and emphasizes communicative skills, as well as the fundamentals of Italian pronunciation and grammar. Language acquisition is approached through a historical and cultural perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• communicate basic information, concepts, and ideas in written and spoken Italian.
• respond appropriately to written and spoken Italian on a variety of topics, such as discussing plans for the future, making comparisons, and talking about past events.
• compare and contrast the nuances of Italian culture with those of the English speaking in the United States.
• analyze and apply the grammatical rules of Italian and compare them with their own language.
• describe everyday aspects of life in Italian culture such as typical eating habits, celebrations of family gatherings, and the use of natural remedies.

ITAL 411 Intermediate Italian

Units: 4
Hours: 72 hours LEC
Prerequisite: ITAL 402 with a grade of "C" or better; or 3 years of high school Italian.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This is the third course in a series of four Italian courses. It continues to develop proficiency in speaking, listening, reading and writing Italian. It reviews Italian grammar and offers readings of varied texts, many of which explore the historic, artistic and cultural backgrounds of Italy. It also explores the culture of Italy and affords opportunities to make cross-linguistic and cross-cultural comparisons.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• communicate information, concepts, and ideas in written and spoken Italian.
• apply/recognize similarities and differences between Italian and one's native language.
• interpret written and spoken Italian on a variety of topics, such as discussing plans for the future, making comparisons, and talking about past events.
• describe some everyday aspects of Italian culture, such as travel, family traditions, fashion, health issues and social responsibility.
• recognize prominent examples of art, music, history, and literature from Italian culture.
• evaluate the Italian culture as it compares to one's own culture.
• incorporate Italian for personal enjoyment and enrichment beyond the school setting in one's community.
ITAL 412 Intermediate Italian

Units: 4  
Hours: 72 hours LEC  
Prerequisite: ITAL 411 with a grade of "C" or better; or 4 years of high school Italian.  
Transferable: CSU; UC  
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6  
Catalog Date: June 1, 2020

This course continues the development of the four basic skills: reading, writing, speaking and listening through reading and discussion of major types of Italian literature (short story, drama, poetry). Writing of paragraphs and short compositions is included. The course discusses the historical and cultural background of the Italian-speaking world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the major literary types of Italian.
- demonstrate the ability to use Italian in discussions and oral reports.
- write paragraphs and compositions in Italian.
- identify the people and culture of the Italian-speaking world.
- recognize famous stanzas of Dante's Divine Comedy.
- recognize important historic individuals and events of the Renaissance period.
- identify archeological sights from the Etruscan era.
- recognize major art works from the Renaissance period.
- conjugate and apply the present and past subjunctive mood and the preterite.
- apply possessive and relative pronouns in sentence construction.
- use cardinal numbers in conversation and writing.
- apply infinitive verbs in sentence construction.
- identify key musical periods in Italian history.

Japanese (JAPAN)

JAPAN 495 Independent Studies in Japanese

Units: 1 - 3  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

Mandarin (MAND)

MAND 495 Independent Studies in Mandarin
This course is an introduction to the Russian language and culture of Russia. It includes the development of listening, speaking, reading, and writing skills in Russian with emphasis on the communicative skills, as well as the fundamentals of Russian pronunciation and grammar.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate basic information, concepts, and ideas in written and spoken Russian.
- engage in short conversations and written correspondence in Russian to provide and obtain information, discuss daily activities, describe one's family, politely agree and disagree with somebody's opinion, and apologize for a mistake.
- interpret written and spoken Russian on a variety of topics, such as personal data, locations, daily schedules, activities, and emotions.
- compare presented aspects of the Russian-speaking culture to his/her own culture.
- analyze and apply the grammatical rules of Russian and compare them with his/her native language.
- describe some everyday aspects of the Russian-speaking world.
- incorporate Russian language for personal enjoyment and enrichment in becoming part of the global community.

This course provides continued development of the Russian language and culture. It includes further development of listening, speaking, reading, and writing skills in Russian with emphasis on communicative skills, as well as the fundamentals of Russian pronunciation and grammar. Cross-linguistic and cross-cultural comparisons are emphasized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- produce language that communicates basic information, concepts, and ideas in Russian to an audience of listeners and readers.
- engage in basic conversations and written correspondence in Russian to provide and obtain information, express feelings and emotions, and exchange opinions.
- respond appropriately to written and spoken Russian on a variety of topics, such as discussing his/her tastes, ordering food in restaurants, describing his/her habits, and expressing ability or intention to do something.
- analyze and apply the grammatical rules of Russian and compare them with his/her own language.
- compare various aspects of the Russian-speaking cultures to his/her own culture.
- describe some everyday aspects of the Russian-speaking world.
- incorporate Russian language for personal enjoyment and enrichment in becoming part of the global community.
RUSS 411 Intermediate Russian

Units: 4
Hours: 72 hours LEC
Prerequisite: RUSS 402 with a grade of "C" or better, or three years of high school Russian.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This intermediate-level Russian course provides continued development of the language and culture of the Russian-speaking world. It includes further development of listening, speaking, reading, and writing skills in Russian with emphasis on communicative skills.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate information, concepts, and ideas in written and spoken Russian at the intermediate level.
- apply and recognize similarities and differences between Russian and his/her own language.
- interpret written and spoken Russian on a variety of topics, such as talking about past and future events, expressing feelings and emotions, and agreeing and disagreeing with others.
- describe some everyday aspects of Russian-speaking cultures, such as weather, travel, telephone conversations, making hotel arrangements, and dealing with common travel problems.
- recognize presented examples of literature, art, and music from Russian-speaking cultures.
- compare and contrast Russian-speaking cultures as they relate to his/her own culture.

RUSS 413 Russian for Heritage Speakers I

Units: 4
Hours: 72 hours LEC
Prerequisite: RUSS 411 or Russian heritage speaker proficiency as assessed by an oral interview with the instructor in Russian.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
Catalog Date: June 1, 2020

This course offers the fundamentals of spoken and written Russian for heritage speakers with different levels of Russian who want to gain literacy and improve their Russian skills. It covers the structure of the language, oral communication, spelling, and fundamentals of grammar and composition. In addition, the course introduces the student to the geography and culture of the Russian-speaking world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in the five skills as mandated by the competency guidelines of the American Council on the Teaching of Foreign Languages (ACTFL): comprehension, speaking, reading, writing, and an understanding of the people and culture of Russian-speaking countries
- demonstrate critical thinking through contrastive and inductive analysis and techniques to develop logical and coherent thought and expression in written and oral language
- read Russian proficiently as found, for example, in Russian language newspapers, magazines, short stories, essays, and selections of poetry written by Russian authors
- speak Russian with precision using varied grammatical patterns of enriched vocabulary
- compose sentences and paragraphs in Russian using correct spelling, punctuation, and capitalization
- analyze and critique, from a student's own experience and knowledge, aspects of the Russian-speaking culture that differ significantly from contemporary United States culture
- research and identify names of some major landmarks and regions in Russian-speaking nations, and names of persons and events of historical and cultural importance
Spanish (SPAN)

SPAN 131 Elementary Spanish Lab I

This laboratory course enables Spanish language learners to develop, expand, and reinforce multiple Spanish language skills while working independently and/or in small groups. Coursework includes integrated study topics related to vocabulary, grammar, reading, writing, listening, and oral skills covered in first semester Spanish courses. Students may register until the sixth week of the semester. This course may be taken up to 2 times, for a total of 1.0 unit, using different topics. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze basic grammatical structures at the sentence and paragraph level.
- demonstrate comprehension of basic reading passages and aural communication.
- synthesize vocabulary, grammar, and syntax in basic written and oral production.
- compare various aspects of the Spanish-speaking cultures to his/her own culture.
- practice basic vocabulary and grammar in Spanish on a variety of topics, such as personal data; likes and dislikes; classes, schedules, and plans for the future; daily routine; shopping and activities; and emotions.
- describe some everyday aspects of Spanish-speaking cultures, such as greetings, the common use of two last names, typical family customs, and typical eating habits.

SPAN 132 Elementary Spanish Lab II

This laboratory course enables Spanish language learners to continue developing, expanding, and reinforcing multiple Spanish language skills while working independently and/or in small groups. Coursework includes integrated study topics related to vocabulary, grammar, reading, writing, listening, and oral skills covered in second semester Spanish courses. Students may register until the sixth week of the semester. This course may be taken up to two times for a total of 1.0 unit, using different topics. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze elementary grammatical structures at the sentence and paragraph level.
- demonstrate comprehension of elementary reading passages and aural communication.
- synthesize vocabulary, grammar, and syntax in elementary written and oral production.
- compare various aspects of Spanish-speaking cultures to his/her own culture.
- practice vocabulary and grammar in Spanish on a variety of topics, such as daily routine, past activities, and family gatherings.
- describe aspects of Spanish-speaking cultures such as foods, typical shopping habits, and celebrations.
SPAN 133 Intermediate Spanish Lab I

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None.
Advisory: SPAN 132 or concurrent enrollment in SPAN 411.
Catalog Date: June 1, 2020

This laboratory course enables Spanish learners to develop, expand, and reinforce multiple Spanish language skills while working independently and/or in small groups. Coursework includes integrated study topics related to vocabulary, grammar, reading, writing, listening, and oral skills covered in third semester Spanish courses. Students may register until the sixth week of the semester. This course may be taken up to 2 times, for a total of 1.0 unit, using different topics. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze intermediate grammatical structures at the sentence and paragraph level.
- demonstrate comprehension of intermediate reading passages and aural communication.
- practice intermediate vocabulary and grammar in Spanish on a variety of topics, such as telling stories, giving formal and informal commands, predicting the future, giving advice, and influencing the decisions of others.

SPAN 351 Conversational Spanish, Elementary

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the language and culture of the Spanish-speaking world. It includes the development of listening, speaking, reading, and writing Spanish with emphasis on communicative skills. Class discussions and group interaction, both controlled and spontaneous, are used to develop basic conversational skills in Spanish.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use basic conversational skills in everyday Spanish.
- apply critical thinking language skills to cultural and social situations.
- produce language that communicates information, concepts, and ideas about and in Spanish to an audience of listeners and readers.
- engage in conversations in Spanish to provide and obtain information, express feelings and emotions, and exchange opinions.
- collect, analyze, evaluate, and apply information about the cultures and peoples of the Spanish-speaking world.

SPAN 352 Conversational Spanish, Elementary

Units: 3
Hours: 54 hours LEC
Prerequisite: SPAN 351 OR SPAN 401 with a grade of "C" or better or two years of high school Spanish.
Transferable: CSU
Catalog Date: June 1, 2020

This course is for students at the second-semester level in Spanish. It includes the development of listening, speaking, reading, and writing Spanish with emphasis on communicative skills. Class discussions and group interaction, both controlled and spontaneous, are used to develop basic conversational skills in Spanish. Emphasis includes oral proficiency and development of Hispanic cultural awareness.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use basic conversational skills in everyday Spanish.
• apply critical thinking language skills to cultural and social situations.
• produce language that communicates information, concepts, and ideas about and in Spanish to an audience of listeners and readers.
• engage in conversations in Spanish to provide and obtain information on a variety of topics such as professions and professional plans; dates and weather; past activities; residence, chores, and leisure activities; likes, dislikes, and interests; and special occasions.
• collect, analyze, evaluate, and apply information about the cultures and peoples of the Spanish-speaking world.

SPAN 361 Conversational Spanish, Intermediate

Units: 3
Hours: 54 hours LEC
Prerequisite: SPAN 352 OR SPAN 402 with a grade of "C" or better, or three years of high school Spanish.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for students at the third-semester level in Spanish. It includes the development of listening, speaking, reading, and writing Spanish with emphasis on communicative skills. Discussions and group interaction, both controlled and spontaneous, are used to develop basic conversational skills in Spanish. Emphasis includes oral proficiency and development of Hispanic cultural awareness.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• use intermediate conversational skills in everyday Spanish.
• apply critical thinking language skills to cultural and social situations.
• produce language that communicates information, concepts, and ideas about and in Spanish to an audience of listeners and readers.
• engage in conversations in Spanish to provide and obtain information on a variety of topics such as body parts and health, road-related vocabulary, childhood memories and activities, and future plans.
• compare various aspects of the Spanish-speaking cultures as they compare to his/her own culture.
• collect, analyze, evaluate, and apply information about cultures and peoples of the Spanish-speaking world.

SPAN 362 Conversational Spanish, Intermediate

Units: 3
Hours: 54 hours LEC
Prerequisite: SPAN 361 OR Spanish 411 with a grade of "C" or better or 4 years high school Spanish
Transferable: CSU
Catalog Date: June 1, 2020

This fourth-semester course covers language and culture of the Spanish-speaking world. It continues the development of listening, speaking, reading, and writing Spanish with emphasis on communicative skills. Class discussions and group interaction, both controlled and spontaneous, are used to develop conversational skills in Spanish.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate conversational skills in everyday Spanish.
• demonstrate awareness of linguistic differences and similarities.
• engage in conversations in Spanish to provide and obtain information on a variety of topics such as travel, accidents, hospitals, important decisions, and controversial issues.
• apply critical thinking language skills to cultural and social situations.
• produce language that communicates information, concepts, and ideas about and in Spanish to an audience of listeners and readers.

SPAN 401 Elementary Spanish
This course introduces the language and culture of the Spanish-speaking world. It includes the development of listening, speaking, reading, and writing Spanish with emphasis on the communicative skills, as well as the fundamentals of Spanish pronunciation and grammar.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate basic information, concepts, and ideas in written and spoken Spanish.
- respond appropriately to written and spoken Spanish on a variety of topics, such as personal data; likes and dislikes; classes, schedules, and plans for the future; and activities and emotions.
- compare various aspects of the Spanish-speaking cultures to their own culture.
- analyze and apply the grammatical rules of Spanish and compare them to their own language.
- describe some everyday aspects of Spanish-speaking cultures, such as greetings, the common use of two family names (surnames), and typical family customs.

SPAN 402 Elementary Spanish

This course provides continued development of the language and explores history and culture of the Spanish-speaking world. It includes further development of listening, speaking, reading, and writing Spanish with emphasis on communicative skills, as well as the fundamentals of Spanish pronunciation and grammar. Language acquisition is approached through a historical and cultural perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate basic information, concepts, and ideas in written and spoken Spanish.
- respond appropriately to written and spoken Spanish on a variety of topics, such as discussing plans for the future, making comparisons, and talking about past events.
- compare and contrast the nuances of Spanish speaking cultures with those of the English speaking in the United States.
- analyze and apply the grammatical rules of Spanish and compare them with his/her own language.
- describe everyday aspects of life in Spanish-speaking cultures such as typical eating habits, celebrations and family gatherings, and the use of natural remedies.

SPAN 411 Intermediate Spanish

This intermediate-level Spanish course provides continued development of the language and culture of the Spanish-speaking world. It includes further development of listening, speaking, reading, and writing skills in Spanish with emphasis on communicative skills. Additionally, it covers more complex grammar topics and provides further study of the cultural and historical background of Spanish-speaking countries.
Upon completion of this course, the student will be able to:

- communicate information, concepts, and ideas in written and spoken Spanish.
- apply/recognize similarities and differences between Spanish and his/her own language.
- interpret written and spoken Spanish on a variety of topics, such as talking about past events, predicting the future, giving advice, and influencing the decisions of others.
- describe some everyday aspects of Spanish-speaking cultures, such as travel, family traditions, fashion, health issues, and social responsibility.
- recognize prominent examples of art, music, history, and literature from Spanish-speaking cultures.
- compare and contrast Spanish-speaking cultures as they relate to his/her own culture.

SPAN 412 Intermediate Spanish

Units: 4
Hours: 72 hours LEC
Prerequisite: SPAN 411 with a grade of "C" or better or 4 years of high school Spanish
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B; IGETC Area 6
C-ID: C-ID SPAN 210
Catalog Date: June 1, 2020

This intermediate-level Spanish course provides continued development of the language and culture of the Spanish-speaking world. It includes further development of listening, speaking, reading, and writing skills in Spanish with emphasis on communicative skills. Additionally, it reviews and provides further study and complex grammar topics of the cultural and historical background of Spanish-speaking countries as well as their major literary types and works.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use Spanish in discussing various topics such as current events, politics, eco-tourism, traditions, technology, and pop-culture related to the Spanish-speaking world.
- apply and analyze grammatical structures at an intermediate level, such as present, preterit, and imperfect tenses; present and past subjunctive; object pronouns; commands; reflexive verbs; the future and conditional forms; relative pronouns; and comparatives and superlatives.
- produce paragraphs and compositions in Spanish.
- identify, analyze, and discuss the major literary types and works of famous authors in Spanish such as Pablo Neruda, José Emilio Pacheco, and Augusto Monterroso.
- discuss and review current short films in Spanish from Argentina, Mexico, Spain, and Venezuela.
- recognize major art works from famous artists such as Frida Kahlo, Diego Rivera, and Mauricio Puente.

SPAN 413 Spanish for Native Speakers I

Units: 4
Hours: 72 hours LEC
Prerequisite: Spanish native speaker proficiency or the equivalent intermediate level as assessed by the Foreign Language Department Assessment Process at American River College.
Catalog Date: June 1, 2020

This course offers the fundamentals of spoken and written Spanish for the native speaker of Spanish. It covers the structure of the language, oral communication, fundamentals of grammar and composition. It focuses primarily on tenses in the indicative mode. This course also covers diacritical marks, like the accent mark, and their uses. In addition, it introduces the student to the geography and culture of the Spanish speaking world. This course is conducted entirely in Spanish.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in the skills as mandated by the competency guidelines of the American Council on the Teaching of Foreign Languages (ACTFL): comprehension, speaking, reading, and writing.
- utilize correct grammatical structures of standard Spanish, including verb tenses, direct object, indirect object, and reflexive pronouns.
write sentences in Spanish using correct punctuation, capitalization, and diacritical marks.

demonstrate critical thinking in written and oral language in Spanish.

read Spanish proficiently as found, for example, in Spanish language newspapers, magazines, short stories, essays, and selections of poetry written by Spanish, Spanish-American, and Chicano authors.

demonstrate an awareness of cultural events, traditions, geography, and history in Spanish speaking nations and among the Spanish speaking population of the United States.

identify which verb forms and vocabulary words belong to standard Spanish, colloquial Spanish, and local colloquial Spanish, influenced in lexicon and syntax by the English language and common to heritage Spanish learners.

demonstrate proficiency in the understanding of the people and culture of the Spanish-speaking countries as mandated by the American Council on the Teaching of Foreign Languages (ACTFL).

SPAN 427 Introduction to Spanish American Literature

Units: 3
Hours: 54 hours LEC
Prerequisite: SPAN 411 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course introduces students to Spanish and Latin American Literature. It covers the analysis of a variety of literary formats that include short stories, poems, plays, and novel excerpts from the established literary canon. Films are integrated to develop auditory skills and to engage students in discussions. It emphasizes critical thinking, interpretation, speaking, and writing skills, and is conducted entirely in Spanish.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and analyze a variety of literary genres through the writings of representative Spanish and Latin American authors such as Pablo Neruda, Julio Cortázar, Benito Pérez Galdós, and Federico García Lorca.

- write analytically and critically about assigned readings in poetry, drama, and narrative and essay, demonstrating level-appropriate writing and composition skills.

- review and debate a variety of films based on different literary works, and discuss their relationship to Spanish and Latin American culture and society.

- use Spanish to discuss and critique 1) literary works within their historical context 2) the relationship between society and Spanish and Latin American literature.

- demonstrate knowledge and understanding of the culture, geography, literature, and history of Spanish-speaking countries.

- utilize a complex and varied vocabulary appropriate for an intermediate Spanish course to participate in full conversations on general topics.

SPAN 495 Independent Studies in Spanish

Units: 1 - 3
Prerequisite: None.
Transferable: CSU

## Associate Degree

### A.S. in Funeral Service Education

This degree prepares students for entry-level positions in funeral service. It is designed to meet the prerequisites for licensure and employment in the field of funeral service as funeral directors or embalmers.

The central objective of an ABFSE-accredited program must be to educate students in every phase of funeral service so that program graduates are prepared for entry-level employment in funeral service. In support of this objective, a program must adopt at least the following Program Learning Outcomes:

1. Explain the importance of funeral service professionals in developing relationships with the families and communities they serve.
2. Identify standards of ethical conduct in funeral service practice.
3. Interpret how federal, state, and local laws apply to funeral service in order to ensure compliance.
4. Apply principles of public health and safety in the handling and preparation of human remains.
5. Demonstrate technical skills in embalming and restorative art that are necessary for the preparation and handling of human remains.
6. Demonstrate skills required for conducting arrangement conferences, visitations, services, and ceremonies.
7. Describe the requirements and procedures for burial, cremation, and other accepted forms of final disposition of human remains.
8. Describe methods to address the grief-related needs of the bereaved.
9. Explain management skills associated with operating a funeral establishment.
10. Demonstrate verbal and written communication skills and research skills needed for funeral service practice.

The Funeral Service Education Program at American River College is accredited by the American Board of Funeral Service Education (ABFSE) 992 Mantua Pike, Suite 108, Woodbury Heights, NJ 08097 (816) 233-3747. Web: www.abfse.org

**NOTE:** All courses, including general education, require a grade of "C" or better, and the National Board Examination must be completed before graduation.

The annual passage rate of first-time takers on the National Board Examination (NBE) for the most recent three-year period for this institution and all ABFSE accredited funeral service education programs is posted on the ABFSE web site (www.abfse.org).

National Board Examination scores, graduation rates, and employment rates for this and other ABFSE-accredited programs are available at www.abfse.org. To request a printed copy of this program’s scores and rates, go to Health and Education 770 or by email at rosev@arc.losrios.edu or by telephone at (916) 484-8145.

Catalog Date: June 1, 2020

The Funeral Service Education Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

### Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Graduation from an accredited high school (graduates from outside the United States must have transcripts evaluated by an approved independent agency), or successful completion of General Educational Development (GED) Test or California High School Proficiency Examination (CHSPE).
- BIOL 102 or BIOL 103, BUS 310 or ENGWR 300 or ENGWR 480 or ESLW 340, FSE 300, MATH 110 or 120 or higher with a grade of "C" or better.
- Minimum cumulative college GPA of 2.0.
- A Curriculum Planning Summary Sheet completed by an ARC counselor and dated within the semester the enrollment packet is submitted.
- A completed pre-enrollment application.

### Enrollment Process

Eligible students are selected for the program according to the following steps:

- Pre-enrollment applications to the program may be obtained from the Health and Education Division Office, the Coordinator of the Funeral Service Education program, or at www.arc.losrios.edu/fse. The Funeral Service Education program currently accepts students once per year for the Spring semester which begins in January. Deadline to submit the application is by the second Friday in November.
- Only students who meet the pre-enrollment requirements and follow the pre-enrollment procedures will be considered for the program.
- Selection is based on a random selection process among eligible applicants should the number of applicants exceed available space in the program.
- Students admitted to the Funeral Service Education program are required to have a physical examination, laboratory and licensing agencies inoculations, drug screen, and background check by the completion of the first semester of the program. Students are responsible for any costs incurred related to meeting the health requirements.
- If a minimum number of qualified applicants are not received, enrollment will be delayed until the following semester, at which time applicants will be required to reapply.
Funeral Service Education (FSE)

FSE 295 Independent Studies in Funeral Service Education

Units: 1 - 3
Prerequisite: None.
Catalog Date: June 1, 2020

FSE 297 Internship in Funeral Service Education

Units: 5
Hours: 18 hours LEC; 216 hours LAB
Prerequisite: BUS 340, FSE 350, and FSE 360 with grades of "C" or better
Corequisite: FSE 365 and 370
Enrollment Limitation: Students must show proof they have completed all general education and competency requirements for graduation.
Catalog Date: June 1, 2020

This course provides an opportunity to apply classroom instruction in funeral service education to real-world practice in the community. Interns participate in an off-site lab experience program and approved off-campus preceptor sites. A portion of this course may be offered in a TBA component of 27-54 hours which may include embalming, preparation, or documentation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- correctly embalm a dead human body
- arrange and direct funeral services
- properly perform transfer of remains
- prepare pertinent documents including death certificates, disposition permits, newspaper notices, government benefits forms
- demonstrate health and safety measures in the preparation room
- identify and wear business attire relevant for the funeral home setting
- demonstrate professionalism in a funeral home setting

Career Information

The student is eligible to take the National Board Exam and state board examination to become a licensed funeral director in California. The student also meets the criteria to take the state embalmers' examination. As an accredited mortuary college, our program goals and objectives are as follows:· To prepare students to be members of a human services profession · To prepare students to be members of the community in which they serve · To be participants in the relationship between bereaved families and those engaged in the funeral service profession · To offer professional knowledge of and compliance with federal, state, provincial/territorial, and local regulatory guidelines · To be sensitive to the responsibility for public health, safety, and welfare in caring for human remains

Funeral Service Education (FSE)
FSE 300 Introduction to Funeral Service

This course is a survey of the history of the funeral service industry and a comprehensive overview of the field of funeral service. It emphasizes the role and skills of the funeral service practitioner. This course provides insight into the funeral service industry and the career opportunities available. Field trips or phone interviews may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between historical funeral practices and contemporary funeral service
- explain the development of the funeral service profession
- describe inter-professional relationships and responsibilities in funeral service
- evaluate the basic role of the funeral service practitioner in society
- compose a list of various career opportunities related to funeral service

FSE 310 Funeral Directing I

This course introduces the general practices of funeral directing. It focuses on the sociological phenomena that affect all the elements of funeral service including cultural differences, family structures, and factors of change that relate to funeralization. It also includes notification of death, transfer and disposition of bodies, arrangement conferences, pre-planned funerals, and post-arrangement follow-up. Field trips may be required. A portion of this course may be offered in a TBA component of 27-54 hours which may include embalming, preparation, or documentation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the application and purpose of sociology in funeral service
- explain the role of the funeral director in adapting funeral services to a culturally diverse population
- recognize the family governing systems found in American society
- compare the different types of family structure
- investigate the changing social factors that affect American funeral rites and the families that are being served
- prioritize the responsibilities of the funeral director
- calculate the time frames in which the services of a funeral director are typically provided (i.e. pre-need, at-need, and post arrangement follow-up)
- demonstrate proper telephone etiquette and protocol
- appraise and demonstrate the correct procedures and equipment needed for human body transportation in home, institutional, and field locations
- apply communication skills necessary to meet with a family in the arrangement conference
- collect the data necessary to complete a death certificate, disposition permit, social security forms and veterans benefit forms
- distinguish between pre-planned and pre-funded funerals
- identify federal, state, and local regulations used for disposition of human bodies and specific forms
- integrate vocabulary associated with funeral service into day-to-day practices in the funeral home
FSE 312 Funeral Directing II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: FSE 310 and 320 with grades of "C" or better
Corequisite: BIOL 130 and FSE 330
Enrollment Limitation: Student must be enrolled in the Funeral Service Education program to enroll in this course
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the basic philosophies of a cross-section of religious and ethnic funeral practices and the role of the funeral practitioner in directing each type. It also includes procedures for fraternal, military, and celebrity funerals. A portion of this course may be offered in a TBA component of 27-54 hours which may include embalming, preparation, or documentation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast a cross-section of American religious customs
- identify characteristics of adaptive and humanistic ceremonies
- distinguish characteristics of funeral preferences of different ethnic groups
- arrange fraternal and military funeral services
- describe procedures for celebrity funerals
- apply vocabulary used in funeral service
- set up and conduct various funeral services
- compare and contrast the disposition options of human remains

FSE 320 Funeral Service Law and Ethics

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Corequisite: CHEM 130 and FSE 310
Enrollment Limitation: Acceptance into the Funeral Service Education Program.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces law and the judicial system as they pertain to the funeral industry. Topics include sources of law, the legal status of a dead human body, the duty of burial, rights to control funeral arrangements and final disposition, liability for funeral expenses, torts involving the dead human body and the funeral director, wills, estates, probate, cemeteries, crematories, and state and federal laws and regulations. Personal and professional ethics that guide decisions and actions in the proper treatment of the dead are also included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish among a tort, crime, and breach of contract pertaining to the funeral business
- confirm the characteristics of a valid and enforceable funeral contract, negotiable instruments, bailment, and agency relationships
- explain the Uniform Commercial Code (UCC) regarding the sale of goods (i.e. caskets, outer burial containers)
- compare the basic forms of funeral business organizations
- evaluate the legal relationships, rights, duties, and liabilities among the funeral director, the dead body, and the consumer
- explain laws and regulations pertaining to funeral service
- assess legal issues in funeral service in order to avoid liability
- complete the documents that are required in the funeral service process
- predict situations when professional services are required for death planning and estate administration
• critique ethics relating to funeral service
• explain the difference between legal and ethical issues within the funeral business
• recommend a standard of ethical behavior with examples of personal and professional conduct
• integrate vocabulary terms associated with ethical issues and practices in the funeral service industry

FSE 330 Merchandising in the Funeral Service Industry

Units: 3
Hours: 54 hours LEC
Prerequisite: FSE 310 and 320 with grades of "C" or better
Corequisite: BIOL 130 and FSE 312
Enrollment Limitation: Acceptance into the Funeral Service Education Program.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces merchandising as it applies to the funeral service profession. The curriculum is divided into two main sections. The first covers construction and features of caskets, outer burial containers, and other funeral-related products. The second section examines methods of pricing, display, presentation, and control of funeral merchandise. Field trips in person or via video may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply knowledge of merchandising to communicate with colleagues, sales representatives, and the public
• describe the component parts of funeral merchandise, including materials used, styles, finishes, dimension, and functions of products
• assess new products and potential innovations for their appropriateness for actual practice
• compare and contrast historical pricing methods
• calculate prices for professional service and merchandise
• evaluate the services and merchandise provided by the funeral director
• prepare to plan and present product information to the public
• assess the various methods of merchandise display
• identify the components of funeral merchandise

FSE 335 Funeral Service Management

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Enrollment Limitation: Acceptance into the Funeral Service Education Program.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the basic principles of management as they apply to the practice of the funeral profession. It explores the role and function of an effective manager, emphasizing the functions of planning, organizing, motivating, directing, and controlling. Specific areas of funeral service practice and managerial guidelines for those areas are covered. Topics also include management theory as it relates to funeral service practice. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the goals and objectives of funeral service management
• describe management functions as they relate to funeral service practice
• recommend contemporary concepts of funeral service management as they relate to client families and community, staff members, and professional associates
• differentiate the five areas of management and discuss the significant aspects of each
• prepare a set of operational procedures specific to funeral service
- create a set of procedures related to disaster management
- analyze future trends in the funeral service business and in funeral service practice
- define and discuss the role of funeral service businesses in the economy
- assess the risks involved with operating a small funeral service business
- identify ways in which odds for success in small funeral service businesses can be improved
- evaluate human resource requirements for success in funeral service businesses
- explain the factors involved in buying a funeral service business
- explain how credit and collections programs are managed in funeral service businesses
- assess methods of estimating capital needs and types of financing available for funeral service businesses
- describe areas of risk management areas in funeral service and types of insurance
- design a set of marketing tools for a funeral service business
- identify and use the components of computer hardware and software
- use and assess funeral management software

FSE 340 Pathology for Funeral Service

Units: 2
Hours: 36 hours LEC
Prerequisite: CHEM 130 with a grade of “C” or better
Enrollment Limitation: Acceptance into the Funeral Service Education program.
Transferable: CSU
Catalog Date: June 1, 2020

This course offers a study of pathological disease conditions and how they affect various parts of the body. It emphasizes particular conditions that relate to or affect the embalming or restorative art process.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and prioritize pathological conditions that require special procedures in the transfer, handling, preparation, and disposition of dead human bodies
- identify and prioritize etiological factors that require special procedures in the transfer, handling, preparation, and disposition of dead human bodies
- describe diseases and related terminology and how they affect systems of the human body
- choose the correct terminology when communicating with members of the medical community, allied professionals, and survivors
- explain the benefits derived from postmortem examination

FSE 350 Restorative Art

Units: 3.5
Hours: 54 hours LEC; 27 hours LAB
Prerequisite: None.
Corequisite: FSE 360
Enrollment Limitation: Acceptance into the Funeral Service Education program.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the techniques of creating an acceptable physical appearance of the deceased for the benefit of the survivors. Topics include the study of facial features, cosmetics, and restorative treatment for a variety of situations faced by the practitioner.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
describe procedures to obtain written permission to perform any restorative procedure
relate specified types of restoration to the correct embalming procedure
name and locate the major bony structures of the skull and the major muscles of the face
explain how bone structures and muscles influence surface form and expression
compare and contrast the different forms of the head and face from direct and profile views
describe and explain facial proportions and relate them to natural form of the facial features and facial restoration
identify and describe the various cosmetic, restorative treatments, materials, and equipment
select the correct colorants to achieve a natural appearance under various conditions
demonstrate basic hair styling
classify and explain the principles of color theory to natural appearance
classify and explain the principles of pigmentary mixtures, and relate the principles of pigmentary mixtures to cosmetic compounds
demonstrate cosmetic application on a model
identify and describe the natural and acquired facial markings on the face and neck
demonstrate wax or clay modeling of facial features

FSE 360 Embalming I
Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: CHEM 130 with a grade of "C" or better
Corequisite: FSE 350
Enrollment Limitation: Acceptance into the Funeral Service Education program.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the phenomenon of death in the human body. It includes the processes of preservation, restoration, and sanitation in treating the dead human body. Field trips may be required. A portion of this course may be offered in a TBA component of 27-54 hours which may include embalming, preparation, or documentation.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• define the concepts of sanitation, disinfection, temporary preservation, and restoration pertaining to embalming
• identify personal and environmental protective measures used in embalming
• explain the proper disposal of blood, body fluids, and contaminated materials
• compare the use of embalming instruments, equipment, and sundries
• describe embalming techniques and procedures
• list those conditions whereby notification of death to public officials is required
• demonstrate the handling, treatment, and disposition of the dead human body
• explain how the disposition of the dead human body meets the needs of the survivors

FSE 365 Embalming II
Units: 2
Hours: 36 hours LEC
Prerequisite: FSE 350 and 360 with grades of "C" or better
Corequisite: FSE 297 and 370
Transferable: CSU
Catalog Date: June 1, 2020

This course is a continuation of FSE 360. It is the study of vascular anatomy, case analysis, the selection and injection of embalming fluids, and treatment of specific conditions requiring special attention.
Upon completion of this course, the student will be able to:

- compare the different embalming processes related to different causes of death
- use funeral service terminology to communicate with members of the allied health professions and the public
- describe the correct procedures for raising and incising vessels
- identify and demonstrate with a suture kit, the various sutures used in closing incisions
- analyze and document embalming techniques and procedures with written reports
- compare embalming treatments cases involving infectious disease, trauma, and pathological conditions
- relate embalming procedures to disaster situations
- choose the proper chemicals for use in creating an embalming solution
- describe the proper procedures for embalming an autopsied case

FSE 370 Funeral Service Counseling

Units: 3
Hours: 54 hours LEC
Prerequisite: FSE 335, 350, and 360 with grades of "C" or better
Corequisite: FSE 297 and 365
Enrollment Limitation: Student must be enrolled in the Funeral Service Education program to enroll in this course.
Transferable: CSU
Catalog Date: June 1, 2020

This course examines communication skills and the role of the funeral director as facilitator, counselor, and caregiver. Topics include specific communication and counseling techniques as they are applied in funeral service practice as well as normal and abnormal grief reactions, children and death, crisis intervention counseling, and dealing with stress and burnout. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the elements of verbal and non-verbal communication used in funeral service
- demonstrate the importance of listening skills within the funeral profession
- explain the significance of group dynamics in the funeral process
- discuss the values and purposes of the funeral rite for survivors
- describe the typical reaction and responses during the emotion of grief
- compare the theories of grief
- explain issues relating to children and death
- analyze how grief affects the functioning of the family
- distinguish the difference between grief counseling and grief therapy
- manage the limitations of the funeral director in grief counseling and grief therapy
- describe the types and styles of counseling
- prioritize the major goals of counseling as well as the functions of the counselor
- practice the basic skills and techniques utilized in counseling and their application to funeral service
- compose a list of the pre-need, at-need, and post-funeral counseling opportunities in the community
- appraise resources for coping with loss
- analyze how grief affects the funeral director
- choose when to make referrals to the appropriate community resources
Associate Degrees for Transfer

A.A.-T. in Geography

The Associate in Arts in Geography for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts in Geography for Transfer (AA-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

In addition to fulfilling transfer requirements, this degree exposes students to the core principles and practices of Geography. Students interested in transferring to a CSU campus to pursue a bachelor’s degree in geography should meet with a counselor to confirm the courses required for lower division preparation in the major. Although additional preparatory courses are not required for this degree, a careful review of the requirements at your chosen CSU will increase the likelihood that your transfer experience is smooth and successful.

Catalog Date: June 1, 2020

Students may also substitute any course from the previous list not already taken to fulfill degree requirements.

The Associate in Arts in Geography for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the general content and scope of baccalaureate-level geography studies.
- compare and contrast the general biophysical and sociocultural differences and similarities among world regions.
- interpret maps and mapped data utilizing basic map elements, including scales, common coordinate systems, and map symbols.
- compare and contrast common geospatial technologies such as Geographic Information Systems (GIS), Global Positioning System (GPS), and remote sensing.
- evaluate and analyze common geographic problems and their solutions.
- list and describe at least three career options for geographers.

Career Information

The opportunities for geographers are as varied as the scope of geography itself. Geographers are found throughout the public and private sector, though rarely in positions with the title of Geographer. When combined with appropriate internships and/or other work experience, a baccalaureate degree in geography is excellent preparation for careers in natural resource management, environmental consulting, urban and regional planning, and elementary and secondary teaching. Geographic skills and knowledge are also quite valuable in diverse fields such as real estate, marketing, and demography.

Associate Degrees

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Total Units: 18

1 must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.

### A.S. in Geographic Information Systems (GIS)

Geographic Information Systems (GIS) are collections of computers, software applications, and personnel used to capture, store, transform, manage, analyze, and display spatial information. This powerful technology has a wide range of applications in planning and management by government agencies, business, and industry. The A.S. Degree provides a solid technical background in GIS concepts and applications including database design, the Global Positioning System (GPS), cartography, GIS programming, spatial analysis, and interdisciplinary applications of the technology. The degree also includes ARC General Education and elective courses, which are required for graduation. Completion of the degree requires practical work experience in GIS.

Catalog Date: June 1, 2020

The Geographic Information Systems (GIS) Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess and describe fundamental aspects of geographic information and scale, with specific reference to raster and vector digital spatial data models used to represent such information.
- evaluate and compile various types of spatial data, with specific attention to geospatial metadata, data quality, and identification of the most appropriate data type for use in a specific GIS application.
- compare and contrast the variety of available coordinate systems, map projections, and datums, and choose the appropriate variety for a specific GIS application.
- originate, classify, edit, and manage digital spatial data using various techniques (e.g., manual, scan, and on-screen digitizing, computer-assisted drafting, GPS, etc.).
- design, synthesize, validate, optimize, and manage spatial attribute tables and databases.
- apply appropriate data normalization and classification schemes to attribute data.
- formulate geoprocessing and analysis functions that are appropriate for specific applications, and be able to perform and evaluate the results of such processes (such as buffering, overlay, reclassification, address matching, and statistical analysis).
- compare and contrast the effectiveness of various GIS output products, including maps, tables, charts, and other digital output for specific applications.
- describe, assess, and compare common map elements and the cartographic design process.
- synthesize, design, apply, and manage a GIS project, including estimates of time and labor requirements.
- propose at least three examples of GIS applications that document spatial distributions or solve spatial problems.
- list and describe at least three career options for GIS professionals.
- design, create, and disseminate high-quality maps in both hard-copy (paper) and digital (on-screen) forms.
- compare and contrast the effectiveness of hard-copy and digital maps.
- analyze problems encountered in the study of other disciplines, and formulate appropriate GIS solutions.

### Career Information

According to an Environmental Systems Research Institute survey, over 80 percent of the data used for decision-making in government and industry has a spatial component. New areas of rapid growth are in criminal justice, homeland security, marketing, retail site location, resource allocation, banking, health-care planning, disease control, insurance, real estate, and disaster preparedness, management, and response. Most local, state, and federal government agencies use GIS and maintain a staff of GIS technicians, analysts, and professionals. GIS is also commonly used in the private sector by businesses, planners, architects, foresters, geologists, environmental scientists, archaeologists, real estate professionals, marketers, sociologists, and bankers. The growth in application areas of GIS and of GIS as a specialized discipline
represents a new way for individuals, agencies, and businesses to view the world. The expansion of jobs in GIS is anticipated to continue for many years to come. It is likely that all students, regardless of their particular field of interest, will at least be exposed to and probably use a GIS in some capacity in the years ahead. The purpose of American River College's GIS program is to prepare students for careers in this expanding technological field.

A.S. in Geography

This degree provides students with a solid foundation in Geography as well as the standard prerequisites for upper-division coursework leading to a baccalaureate degree. The required and elective coursework covers a broad spectrum of Physical Geography, Human Geography, and GIS.

This is not an official transfer degree, such as the Geography AA-T, which guarantees admission to any California State University. However, this degree has been designed with an emphasis on University of California (UC) transferability. With two exceptions, all courses satisfy the Intersegmental General Education Transfer Curriculum (IGETC) that meets freshman/sophomore level general education requirements at a UC. This degree can also be used to prepare students for transfer to geography programs at private institutions, but in all cases students are strongly encouraged to research the lower division requirements at all programs they might be interested in.

1GEOG 331 is recommended for students who plan to transfer to a California State University.

The Geography Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the general content and scope of collegiate level geography studies.
- compare and contrast the general biophysical and sociocultural differences and similarities among world regions.
- interpret maps and mapped data utilizing basic map elements including scales, coordinate systems, and symbols.
- compare and contrast common geographic information technologies such as Geographic Information Systems (GIS), Global Positioning System (GPS), and Remote Sensing.
- evaluate and analyze geographic problems and their solutions.
- list and describe at least three career options for geographers.

Career Information

The opportunities for geographers are as varied as the scope of geography itself. Geographers are found throughout the public and private sector, though rarely in positions with the title of Geographer. When combined with appropriate internships and/or other work experience, a baccalaureate degree in geography is excellent preparation for careers in natural resource management, environmental consulting, urban and regional planning, and elementary and secondary teaching. Geographic skills and knowledge are also quite valuable in diverse fields such as real estate, marketing, and demography.

Certificate of Achievement

Geographic Information Systems (GIS) Certificate

Geographic Information Systems (GIS) are collections of computers, software applications, and personnel used to capture, store, transform, manage, analyze, and display spatial information. This powerful technology has a wide range of applications in planning and management by government agencies, business, and industry. The certificate provides a solid technical background in GIS concepts and applications including database design, the Global Positioning System (GPS), cartography, GIS programming, spatial analysis, and interdisciplinary applications of the technology. Completion of the certificate requires practical work experience in GIS.

Total Units: 28 - 31

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess and describe fundamental aspects of geographic information and scale, with specific reference to raster and vector digital spatial data models used to represent such information.
Geography (GEOG)

GEOG 300 Physical Geography: Exploring Earth's Environmental Systems

This course explores the processes and interrelationships which shape Earth's natural landscapes. Key topics include solar energy balance, weather and climate, water resources, landforms, natural hazards, soil, and vegetation. Relevant application of these concepts is used to explain the evolving relationship between humans and Earth's natural systems. Field trips may be required to relate course content to the real world.

Upon completion of this course, the student will be able to:

- list the basic components and describe the structure of each of Earth's major environmental systems: the atmosphere, hydrosphere, lithosphere, and biosphere.
- describe the basic processes and interrelationships occurring within and between the atmosphere, hydrosphere, lithosphere, and biosphere.
- identify and assess the impacts that the atmosphere, hydrosphere, lithosphere, and biosphere have on human environments.
- identify and assess the impact that human populations have on the atmosphere, hydrosphere, lithosphere, and biosphere.

Career Information

According to an Environmental Systems Research Institute survey, over 80 percent of the data used for decision-making in government and industry has a spatial component. New areas of rapid growth are in criminal justice, homeland security, marketing, retail site location, resource allocation, banking, health-care planning, disease control, insurance, real estate, and disaster preparedness, management, and response. Most local, state, and federal government agencies use GIS and maintain a staff of GIS technicians, analysts, and professionals. GIS is also commonly used in the private sector by businesses, planners, architects, foresters, geologists, environmental scientists, archaeologists, real estate professionals, marketers, sociologists, and bankers. The growth in application areas of GIS and of GIS as a specialized discipline represents a new way for individuals, agencies, and businesses to view the world. The expansion of jobs in GIS is anticipated to continue for many years to come. It is likely that all students, regardless of their particular field of interest, will at least be exposed to and probably use a GIS in some capacity in the years ahead. The purpose of American River College's GIS program is to prepare students for careers in this expanding technological field.

Geography (GEOG)

GEOG 300 Physical Geography: Exploring Earth's Environmental Systems

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 32 or MATH 42, AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
C-ID: C-ID GEOG 110
Catalog Date: June 1, 2020

This course explores the processes and interrelationships which shape Earth's natural landscapes. Key topics include solar energy balance, weather and climate, water resources, landforms, natural hazards, soil, and vegetation. Relevant application of these concepts is used to explain the evolving relationship between humans and Earth's natural systems. Field trips may be required to relate course content to the real world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the basic components and describe the structure of each of Earth's major environmental systems: the atmosphere, hydrosphere, lithosphere, and biosphere.
- describe the basic processes and interrelationships occurring within and between the atmosphere, hydrosphere, lithosphere, and biosphere.
- identify and assess the impacts that the atmosphere, hydrosphere, lithosphere, and biosphere have on human environments.
- identify and assess the impact that human populations have on the atmosphere, hydrosphere, lithosphere, and biosphere.
• identify the basic natural processes which have shaped Earth over time, using local Sacramento Region examples.

• utilize maps, charts, and graphs to understand the core concepts, patterns, and processes covered in this course.

GEOG 301 Physical Geography Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: GEOG 300
Advisory: MATH 32 or 42 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: CSU Area B3; IGETC Area 5C
C-ID: C-ID GEOG 111
Catalog Date: June 1, 2020

This course is a laboratory study of basic principles and concepts involved in understanding Earth's environmental systems. Labs feature observation, collection, analysis, and display of data related to the study of energy, weather and climate, vegetation, soils, landforms, and environmental hazards. Additionally, units feature geographic methods and technology, including interpretation of maps and other geographic imagery, weather instrumentation, the global positioning system (GPS), and relevant computer and Internet applications. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• read, analyze, and interpret topographic maps and other geographic imagery.

• collect and analyze basic geographic data using common instruments.

• analyze and interpret tabular and graphic data related to basic geographic phenomena.

• compare and contrast local geographic data with other locations, both regional and global.

• apply basic physical geographic principles to contemporary environmental situations.

GEOG 305 Global Climate Change

Same As: GEOL 320
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course explores the history and mechanisms of climate change in Earth’s past, as well as the methods that scientists use to investigate climate change. It also focuses on climate change in Earth’s recent history (the past few million years) and the role that humans have had in climate change, especially since the industrial revolution. Additionally, it investigates the effects of climate change in today’s world and discusses possible technological and political solutions to this vast and increasingly important problem, and how societies may adapt to the changes. Field trips may be required. This course is not open to students who have completed GEOL 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the scientific tools used to study global climate change in the past and present.

• explain the components, processes, and dynamics of the global heat budget, as they pertain to the ocean/atmosphere system.

• describe the various lines of evidence that scientists use to investigate climate change in Earth’s deep past.

• explain the conditions that led to extensive climate change over the past 2.5 million years.

• evaluate the human causes of climate change, the evidence surrounding that, and the possible consequences of anthropogenically driven climate change.

• discriminate between and evaluate mechanisms of climate mitigation and adaptation at international, national, state, and local levels.
GEOG 306 Weather and Climate

This course introduces atmospheric processes including energy and moisture exchanges; atmospheric pressure; global circulation; precipitation processes; weather systems; severe weather; and world, regional, and local climate systems. It also includes observation and analysis of atmospheric data using charts, weather maps, and radar and satellite imagery from the Internet and other sources. Field trips may be required to reinforce course content.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret, analyze, display, and map atmospheric and climate data.
- detail the processes of energy exchange involving the Earth/atmosphere system.
- describe the primary forces that influence global, regional, and local wind circulation.
- compare the dynamics of severe weather systems; including thunderstorms, tornadoes, and tropical cyclones.
- examine atmospheric and climate data to categorize and interpret variations in climate over Earth's surface.
- discuss and evaluate the mechanisms of climate change (both natural and anthropogenic), the impacts of climate change, and the efforts to adapt to and/or mitigate the challenges posed by the impacts.

GEOG 307 Environmental Hazards and Natural Disasters

Same As: GEOL 325
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100, 104, or 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course covers the environmental effects and applications of Earth-related processes. It focuses on earthquakes, volcanic eruptions, landslides, flooding, hurricanes, as well as covering related current events. Topics also include the availability and exploitation of natural resources, waste disposal, and global climate change. Humans as a force in environmental change are emphasized. This course addresses geology, engineering, environmental studies, natural resources, geography, and science education. One field trip is required. This course is not open to students who have completed GEOL 325.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and describe potential environmental hazards associated with different geomorphologic settings.
- describe short- and long-term consequences of environmental hazards on human activities.
- compare and contrast renewable and non-renewable natural resources.
- analyze the impact of human activity on natural resources.
- distinguish between short- and long-term global climate trends.
- evaluate current environmental issues that involve Earth system processes.

GEOG 308 Introduction to Oceanography

Same As: GEOL 330
Units: 3
Hours: 54 hours LEC
This course is an integrated study of the world's oceans, including the physical, chemical, biological and human-made processes that affect the oceans. Topics include plate tectonics, ocean basins and sediments, water chemistry, waves, tides, shoreline processes, ocean currents and its biosystems. Humans have impacted nearly all aspects of the oceans, which are critical to our species. Regional oceanographic features are emphasized and a field trip to gain familiarity with regional physical shoreline features is required. This course is not open to students who have completed GEOL 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and evaluate the relationships between marine processes and plate tectonics
- assess the impact of human activities on ocean chemistry, biosystems and global climate
- examine common coastal features and processes
- evaluate the impacts of shoreline processes on human activities and structures
- analyze the relationships between weather patterns and oceanic circulation
- assess and interpret the gross chemical composition of the ocean
- evaluate and measure the impacts of resource extraction on marine environmental concerns
- describe the distribution of sediment in the oceans and the processes that move sediment

GEOG 309 Introduction to Oceanography Lab

Same As: GEOL 331
Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: GEOG 308 or GEOL 330
Advisory: GEOG 301 and GEOL 301
Transferable: CSU; UC
General Education: CSU Area B3; IGETC Area 5C
Catalog Date: June 1, 2020

This course is a laboratory investigation of Earth's oceans, emphasizing coastal processes of California. Most laboratory exercises are incorporated into field studies of California's coast, which involves visiting and comparing several distinct coastal environments. Camping is required, and a small fee is to be paid by the student. This course is not open to students who have completed GEOL 331.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the physical and chemical similarities and differences of distinct coastal environments
- analyze the changing physical and chemical conditions on biological patterns
- analyze the relationships between sea floor morphology and plate tectonics

GEOG 310 Human Geography: Exploring Earth's Cultural Landscapes

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 32 or 42 with a grade of "C" or better or placement through the assessment process; AND eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D5; IGETC Area 4E
C-ID: C-ID GEOG 120
Catalog Date: June 1, 2020

This course investigates the diverse patterns of human settlement, development, and movement on earth, which evolved as a result of cultural and environmental factors.
Emphasis is placed on understanding global population and migration patterns, language, religion, ethnicity, political and economic systems, development issues, agriculture, and urbanization.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze humans' role in transforming Earth's surface into a series of distinctive cultural landscapes.
- evaluate explanations for the geographic origin and global diffusion of key aspects of culture (e.g. ethnocentrism, racism, language, religion, ethnicity, development, agriculture, urbanization).
- describe patterns of cultural diversity in California, the U.S., and the world.
- create maps from various types of socioeconomic data (e.g. ethnicity, religion, AIDS incidence, etc.).
- describe broad historical and modern global socioeconomic processes such as migration, colonization, and globalization.
- explain the spatial patterns of key geographic concepts, such as distribution of population, religion, and language.

GEOG 320 World Regional Geography

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 32 or 42; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D5; IGETC Area 4E
C-ID: C-ID GEOG 125
Catalog Date: June 1, 2020

This course is a global survey of the world's major geographic regions. Basic geographic concepts and ideas are used to study and compare cultures, resources, landscapes, economies, and political structures across all geographic regions. The interaction of countries and regions, their global roles, and the conflicting pressures of cultural diversity and globalization are presented. The widening gap between more developed and less developed countries and regions is integrated throughout the course, with a particular focus on comparing and contrasting conditions in North America and the United States with those in the rest of the world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- generalize and describe the unique combination of cultural, physical, historical, economical, and organizational qualities that characterize each of Earth's major geographic regions.
- identify and discuss the major socioeconomic, political, and/or environmental issues currently affecting each of Earth's major geographic regions.
- define and investigate major geographic concepts such as region, migration, diffusion, globalization, demography, race, ethnicity, nationalism, and development.
- compare and contrast the factors which make North America and the United States particularly unique among Earth's major geographic regions.
- recognize and identify Earth's major geographic regions, as well as all countries located within them, on a blank outline map.

GEOG 322 Geography of California

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 32 or 42 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D5; IGETC Area 4E
C-ID: C-ID GEOG 140
Catalog Date: June 1, 2020

This course is a study of the various natural and cultural environments of California, with special emphasis on the interaction of people with landforms, climate, natural vegetation, soils and resources. Historical, political, and economic development within this diverse environment is presented. The diversity of cultures which make up the state's expanding population is studied and compared. Analysis of current relevant issues, including those based on ethnic and cultural differences, forms an integral part of this course.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- analyze the physical and cultural environments existing within the state of California
- examine and analyze people-people and people-land interrelationships that have contributed to the historical, political, and economic development of the state
- compare and contrast the contributions made by the various ethnic and cultural groups which comprise the state’s population
- evaluate patterns of social problems within the state which are based on economic inequalities and ethnic and cultural differences

GEOG 330 Introduction to Geographic Information Systems

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: CISC 300  
Transferable: CSU; UC  
General Education: AA/AS Area II(b)  
Catalog Date: June 1, 2020

This course provides an introduction to the concepts, methods, and applications of Geographic Information Systems (GIS). It emphasizes the techniques used to capture, store, query, analyze, and display spatial data. Specific topics include applications of GIS, geographic information and scale, coordinate systems, geospatial data models, data classification and symbolization, query and selection, cartographic design, data acquisition, data quality, geoprocessing, relational databases, metadata, spatial analysis, and GIS software.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define GIS and provide examples of how it can be applied to solve real-world problems.
- describe coordinate systems.
- assess various geospatial data models.
- classify, query, and symbolize spatial data.
- apply geoprocessing tools.
- produce maps using GIS.

GEOG 331 Exploring Maps and Geographic Technologies

Units: 3  
Hours: 50 hours LEC; 12 hours LAB  
Prerequisite: None.  
Advisory: CISC 300 and GEOG 300  
Transferable: CSU; UC  
General Education: AA/AS Area IV  
C-ID: C-ID GEOG 150  
Catalog Date: June 1, 2020

This course introduces students to the world of maps (both hard-copy and digital) and the geographic techniques and technologies that are utilized in the creation of modern cartographic documents. Examination of cartographic design, basic statistics, the Global Positioning System (GPS), Internet mapping, remote sensing, and Geographic Information Systems (GIS) are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- determine basic geographic information (e.g. location, distance, and direction) using various map scales, coordinate systems, and map projections.
- create, analyze, critique, and interpret data using maps, aerial photographs, and satellite imagery.
- demonstrate basic proficiency in traditional and modern cartography.
- collect, import, and display geospatial data within a GIS.
- evaluate common mapping applications and technologies.
organize, manipulate, analyze, and display tabular data.

use a GPS unit for basic navigation and data collection purposes.

GEOG 334 Introduction to GIS Software Applications

Units: 3
Hours: 50 hours LEC; 12 hours LAB
Prerequisite: None.
Advisory: CISC 300 and GEOG 330
Transferable: CSU
C-ID: C-ID GEOG 155
Catalog Date: June 1, 2020

This course provides the conceptual and practical foundations for using Geographic Information Systems (GIS) software. It emphasizes basic GIS software functionality including map display, attribute and spatial query, address geocoding, spatial database management, spatial analysis, cartographic presentation, and spatial data management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the components of the GIS graphical user interface
- perform attribute and spatial queries
- create and modify spatial databases
- analyze spatial relationships between map features
- design and produce maps
- choose between "join," "relate," and "spatial join" methods to associate values in separate tables
- utilize basic geoprocessing tools

GEOG 340 Cartographic Design for GIS

Units: 3
Hours: 54 hours LEC
Prerequisite: GEOG 330 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an introduction to map design and production in the context of Geographic Information Systems (GIS). It emphasizes the concepts and methods associated with designing and producing thematic maps. Specific topics include data standardization and classification, symbolization, map projections, map elements, typography, cartographic design, thematic mapping techniques (choropleth, proportional symbol, dot, isarithmic, and multivariate), color in cartography, history of cartography, and map reproduction. Map critique sessions are also held.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- enumerate and describe the components of a map (map elements).
- perform the cartographic design process using GIS.
- produce professional quality maps using GIS.
- categorize and describe various thematic map types.
- identify and compare various map projections.
- evaluate and systematically critique thematic maps.

GEOG 342 Introduction to Remote Sensing and Digital Image Processing

3
Units: 50 hours LEC; 12 hours LAB
Hours: None.
Prerequisite: CISC 300 and GEOG 330
Advisory: CSU
Transferable: CSU GEOG 155
C-ID: June 1, 2020
Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- organize, manipulate, analyze, and display tabular data.
- use a GPS unit for basic navigation and data collection purposes.
This course introduces the principles and concepts of remote sensing and digital image processing as they relate to Geographic Information Systems (GIS). Topics include the fundamentals of remote sensing, aerial photography, satellite imagery, and unmanned aerial vehicle (UAV) imaging systems. It covers a variety of digital image processing techniques to analyze data from various remote sensing platforms.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- synthesize the fundamentals and principles of remote sensing and digital image processing.
- analyze a variety of digital image processing techniques as they are applied to remotely sensed imagery.
- apply image processing software, remote sensing principles, and digital image processing techniques to a variety of remotely sensed imagery.
- analyze, evaluate, and interpret a number of different remote sensing platforms (that may include aerial photography, satellite imagery, LIDAR, and unmanned aerial vehicles (UAV)).
- evaluate a number of different remote sensing principles and digital image processing techniques for a variety of real-world scenarios.

**GEOG 344 Spatial Analysis and Modeling in GIS**

This course provides a survey of the various concepts, approaches, and tools involved in the analysis and modeling of spatial data using Geographic Information Systems (GIS). It emphasizes the use of spatial and statistical analysis, geoprocessing, and spatial modeling in order to investigate spatial distributions and relationships, answer spatial questions, and solve spatial problems. Specific topics include distance and density surfaces, cluster analysis, network analysis, map algebra, surface interpolation and resampling, hydrologic analysis, 3D display/animation, and regression analysis.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify various spatial analysis techniques.
- apply statistical measures to characterize geospatial data.
- analyze geospatial distributions and relationships.
- assess various approaches to spatial modeling.
- build spatial models.

**GEOG 350 Data Acquisition in GIS**

This course introduces the techniques, theory, and practical experience necessary to acquire, convert, and create digital spatial data. Topics include acquisition of existing Geographic Information Systems (GIS) data, metadata, formatting and conversion of GIS data, creation of data utilizing digital cameras and scanners, utilization of remotely sensed data, and use of the Global Positioning System (GPS). Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify sources of existing spatial data.
evaluate the quality and reliability of existing data sets.

distinguish between various geospatial data models and assess their suitabilities for specific applications.

acquire primary data using GPS.

convert digital data from one format to another.

assemble GIS data sets into logical groups appropriate for specific applications.

utilize the Internet as a tool in data acquisition.

compile and categorize remote sensing data.

prioritize the importance of data sets required for a particular project in order to streamline the acquisition process.

GEOG 360 Database Design and Management in GIS

Units: 3
Hours: 54 hours LEC
Prerequisite: GEOG 330 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course examines principles of Geographic Information Systems (GIS) database management and design including conversion fundamentals, modeling techniques, and strategic planning. Topics include the needs, alternatives, and pitfalls of spatial database development and conversion. It examines various types of spatial and tabular data applicable to GIS, as well as relevant issues such as hardware and software requirements. Particular attention is paid to determining an appropriate methodology, conversion plan, and data quality assurance procedure.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the components of a spatial database system.
- critique the various types of geospatial input data.
- apply skills in building a spatial database for vector, raster, and tabular data.
- analyze the structure of existing spatial databases.
- compare the advantages of alternative spatial database structures.

GEOG 362 Advanced Database Design and Management in GIS

Units: 3
Hours: 54 hours LEC
Prerequisite: GEOG 360 with a grade of "C" or better
Advisory: CISA 320 and CISC 300
Transferable: CSU
Catalog Date: June 1, 2020

This course extends the concepts presented in GEOG 360, Database Design and Management in GIS. Topics include the advanced applications of organizing, inputting, and editing spatial data, including spatial data engine service management, spatial functions, multi-user editing, replication, and data organization. It involves the rigorous examination of traditional spatial database topics in a GIS context including data integration, warehousing, complex Structured Query Language (SQL) spatial coding, and system integration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- design simple data models.
- use SQL to analyze and summarize database objects.
- design and evaluate the efficiency of a complex spatial database system suitable for use in a GIS application.
- categorize spatial, tabular, imagery, and document data for inclusion in a GIS database.
- produce an enterprise-oriented spatial database system.
synthesize edits from a multiple-user GIS spatial database.
revise an existing spatial database system designed for single or multiple GIS users.
formulate an ongoing GIS database management strategy.
determine the applicability of concepts learned to the independent design, creation, and use of a spatial database system.
critique spatial database designs presented for evaluation.

GEOG 375 Introduction to GIS Programming

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: GEOG 330 with a grade of "C" or better
Advisory: GEOG 334
Transferable: CSU
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course provides the concepts and skills necessary to become a proficient Geographic Information Systems (GIS) applications developer using the Python scripting language to develop commonly used GIS procedures and functions. Topics include GIS methods for querying and selecting geographic features, working with selection sets, editing tables, creating automated map sets, and performing geoprocessing operations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop solutions to computer geoprocessing problems using a variety of research methods and by investigating data and programming sources.
- develop solutions to automate geoprocessing functions using a variety of programming methods, structures, and data sources.
- evaluate how the Python scripting language fits into the ArcGIS geoprocessing framework.
- apply GIS concepts, operations, and data sources to the process of conceiving common applications of GIS programming.
- assemble computer code in a logical, well-structured, and easy-to-read manner, including concise commenting.
- analyze, diagnose, and resolve "bugs" and typical problems in computer code through the combined processes of analysis and testing.
- compile Python and ArcGIS functions to create geoprocessing scripts.
- solve geospatial problems and streamline GIS workflows through the design and development of custom GIS applications.

GEOG 385 Introduction to Web Based GIS Application Development

Units: 3
Hours: 50 hours LEC; 12 hours LAB
Prerequisite: GEOG 330 with a grade of "C" or better
Advisory: CISW 300
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the development of Web-based Geographic Information Systems (GIS) solutions. Map authoring and Web service management tools are used to teach the techniques of creating, managing, maintaining, and deploying Web map services. It also introduces several options for using published Web map services for Web-based and mobile mapping applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create maps for use on the Web.
- design, configure, optimize, and maintain Web map services.
- publish geospatial resources to a Web service.
- create and modify a basic interactive Web-based geospatial user interface.
• build a basic Web-based geospatial application.
• assess and critique appropriate map data for Web-based GIS.
• evaluate, create, test, troubleshoot, and problem solve geoprocessing functionality for Web map services.

GEOG 391 Field Studies in Geography: Mountain Landscapes

Units: 1 - 4
Hours: 6 - 24 hours LEC; 36 - 144 hours LAB
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID GEOG 160
Catalog Date: June 1, 2020

This course covers geographic principles and processes in mountain environments. Course content varies by destination and may include topics in physical geography (e.g., plant and animal communities, climate and weather, geology and geomorphology, natural hazards, environmental impacts) and human geography (e.g., cultural landscapes, economic activities, transportation issues, land use patterns). It also introduces tools and techniques used for geographic field research (e.g., map and compass use, the Global Positioning System (GPS), Geographic Information Systems (GIS)). Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply concepts and processes discussed in lecture to experiences in the field.
• compose field notes and collect and analyze field data.
• explain and describe physical and/or cultural phenomena of a specific region.
• integrate geographic information from various disciplines (geology, biology, ecology, urban studies, anthropology, history, economics, cultural studies, and others) in order to explain landscape patterns and processes.

GEOG 392 Field Studies in Geography: Coastal Landscapes

Units: 1 - 4
Hours: 6 - 24 hours LEC; 36 - 144 hours LAB
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID GEOG 160
Catalog Date: June 1, 2020

This course involves the study of geographic principles and processes in coastal environments. Course content varies by destination and may include topics in physical geography (e.g., plant and animal communities, climate and weather, geology and geomorphology, natural hazards, environmental impacts) and human geography (e.g., cultural landscapes, economic activities, transportation issues, land use patterns). It also introduces tools and techniques used for geographic field research (e.g., map and compass use, the Global Positioning System (GPS), Geographic Information Systems (GIS)). Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply concepts and processes discussed in lecture to experiences in the field.
• compose field notes and collect and analyze field data.
• describe and explain geographic phenomena related to the particular physical and/or human environments under study.
• integrate geographic information from various disciplines (geology, biology, ecology, urban studies, anthropology, history, economics, cultural studies, and others) in order to explain landscape patterns and processes.

GEOG 393 Field Studies in Geography: Arid Landscapes

Units: 1 - 4
Hours: 6 - 24 hours LEC; 36 - 144 hours LAB
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID GEOG 160
This course involves the study of geographic principles and processes in arid environments. Course content varies by destination and may include topics in physical geography (e.g., plant and animal communities, climate and weather, geology and geomorphology, natural hazards, environmental impacts) and human geography (e.g., cultural landscapes, economic activities, transportation issues, land use patterns). It also introduces tools and techniques used for geographic field research (e.g., map and compass use, the Global Positioning System (GPS), Geographic Information Systems (GIS)). Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply concepts and processes discussed in lecture to experiences in the field.
- compose field notes and collect and analyze field data.
- describe and explain geographic phenomena related to the particular physical and/or human environments under study.
- integrate geographic information from various disciplines (geology, biology, ecology, urban studies, anthropology, history, economics, cultural studies, and others) in order to explain landscape patterns and processes.

GEOG 394 Field Studies in Geography: Volcanic Landscapes

Units: 1 - 4
Hours: 6 - 24 hours LEC; 36 - 144 hours LAB
Prerequisite: None.
Transferable: CSU; UC
C-ID: C-ID GEOG 160
Catalog Date: June 1, 2020

This course involves the study of geographic principles and processes in volcanic environments. Course content varies by destination and may include topics in physical geography (e.g., plant and animal communities, climate and weather, geology and geomorphology, natural hazards, environmental impacts) and human geography (e.g., cultural landscapes, economic activities, transportation issues, land use patterns). It also introduces tools and techniques used for geographic field research (e.g., map and compass use, the Global Positioning System (GPS), Geographic Information Systems (GIS)). Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply concepts and processes discussed in lecture to experiences in the field.
- compose field notes and collect and analyze field data.
- describe and explain geographic phenomena related to the particular physical and/or human environments under study.
- integrate geographic information from various disciplines (geology, biology, ecology, urban studies, anthropology, history, economics, cultural studies, and others) in order to explain landscape patterns and processes.

GEOG 495 Independent Studies in Geography

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

GEOG 498 Work Experience in Geography

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to geography or geographic information systems (GIS) with a cooperating site supervisor. Students are advised to consult with the Geography Department faculty to review specific certificate and degree
This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of geography or geographic information systems (GIS). It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of geography or geographic information systems (GIS) related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Geology is the study of the origin and evolution of the Earth, using the principles of mathematics, chemistry, physics, and biology. Geologists study rocks, minerals, and fossils in an effort to draw conclusions about the Earth's observable surface processes, as well as those processes taking place inside the Earth. They attempt to determine how the Earth was formed and how it is being changed by natural and man-made activities. Geologists are often involved in remediating environmental problems caused by mining, construction, and manufacturing.

Division Dean | Dr. Rina Roy
Department Chairs | Hugh Howard

Associate Degrees for Transfer

A.S.-T. in Geology

Geology is an interdisciplinary science that combines geological observations and concepts with those of biology, chemistry, physics, and mathematics. Its goals are to study rocks, minerals, fossils, energy and water resources, and to understand geologic principles and processes that shape Earth and its environments.

The Associate in Science in Geology for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Science in Geology for Transfer (A.S.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

Catalog Date: June 1, 2020

The Associate in Science in Geology for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using testable methodology.
articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.

sort, arrange, and quantify objects using the international system of measurement (metric) as the standard.

analyze a wide variety of natural phenomena using basic definitions and fundamental theories of natural science.

compare the scales at which geologic processes work.

apply knowledge of current geologic processes to the understanding of Earth's past geologic history.

Career Information
The Geology transfer degree is designed to facilitate students' successful transfer to four-year colleges that prepare them for advanced study in a variety of graduate programs as well as a variety of career opportunities in the fields of environmental monitoring, protection and remediation, energy and mineral exploration, paleontology, vulcanology, seismology, climatology, teaching, and research.

Associate Degrees

A.S. in General Science
This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Catalog Date: June 1, 2020

Total Units: 18

\[^1\]must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science

*The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.*

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.

**Geology (GEOL)**

**GEOL 300 Physical Geology**

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Advisory:** MATH 100, 104 or 132; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area IV; CSU Area B1; IGETC Area 5A
- **C-ID:** C-ID GEOL 100
- **Catalog Date:** June 1, 2020

This course provides an understanding of the dynamic nature of the Earth through the study of Earth processes. Topics include global plate tectonics and related processes such as seismic and volcanic activity. It also covers mineral and rock formation, and those processes related to the development of fluvial, glacial, desert, and coastal environments. The occurrence, use, and abuse of renewable and non-renewable resources such as air, ground and surface water, and fossil fuels are also covered. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the origins and characteristics of igneous, sedimentary, and metamorphic rock types.
- compare divergent, convergent, and transform plate tectonic boundaries in terms of the geologic processes and landforms found at each.
- recognize the dynamic nature of geologic processes and their rates as they relate to Earth's great age.
- analyze problems affecting daily life such as earthquake risks, volcanic hazards, mass wasting problems, rising sea levels, global warming, and use/abuse of natural resources.
GEOL 301 Physical Geology Laboratory

This course is a laboratory study of the basic principles of geology and their applications to everyday life. It encompasses the study and identification of common rocks and minerals, the interpretation and recognition of geologic structures and landforms, interpretation of maps, aerial photographs, remote sensing images, seismic information, and analysis of geologic hazards. Field trips may be required.

Upon completion of this course, the student will be able to:

- identify and classify minerals by their physical properties.
- evaluate rock samples and differentiate between igneous, sedimentary, and metamorphic rocks.
- appraise major types of aerial photographs, remote sensing imagery, and topographic and geologic maps and interpret geologic information from them.
- interpret ancient geologic, geographic, and environmental settings by using sedimentary rocks.
- formulate views of Earth’s interior based on analyzing seismic information.
- explain major Earth features to demonstrate understanding of plate tectonic processes.

GEOL 305 Earth Science

This is an introductory science course covering major topics in geology, oceanography, meteorology, and astronomy. It focuses on Earth as a dynamic and continually evolving planet and emphasizes the relationships between human-Earth interactions. Field trips may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the Big Bang origin theory of the universe and explain the importance of stellar fusion to the formation of elements that make up the known universe.
- classify the planets in our solar system as terrestrial and Jovian and list the characteristics of each category.
- outline the processes and features associated with running water, groundwater, glaciers, wind, and waves that impact Earth's surface.
- cite the factors/processes that are responsible for producing Earth's seasons, weather, and climate.
- describe divergent, convergent, and transform plate tectonic boundaries in terms of the geologic processes (seismic activity, subduction, volcanism) and landforms found at each.
- illustrate, with real world examples, issues affecting daily life, such as earthquake risks, volcanic hazards, mass wasting, rising sea levels, climate change, and use-abuse of natural resources.
- classify rocks by their visible characteristics as igneous, sedimentary, and metamorphic rock types.

GEOL 306 Earth Science Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None
Corequisite: GEOL 305
Advisory: MATH 32 and 42; Eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: No credit if taken after GEOL 300 or 301)
General Education: CSU Area B3; IGETC Area 5C
C-ID: C-ID GEOL 120L
Catalog Date: June 1, 2020

This course emphasizes scientific methods, critical thinking skills, and systematic Earth science laboratory procedures. Topics include weather analysis, rock and mineral identification, study of topographic and geologic maps, and exercises in astronomy and oceanography.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the scientific method to evaluate Earth science processes.
- distinguish between specimens of rocks and minerals and their modes of formation.
- differentiate between various geological processes that work to shape the topography of Earth.
- analyze atmospheric observations (temperature, pressure, humidity, cloud cover) to make basic weather forecasts.
- examine astronomical patterns and phenomena including planetary motion, solar and lunar eclipses, lunar phases, sun angle, and constellations.
- survey Earth's basic marine processes and describe seafloor topography.
- interpret and analyze various types of maps and satellite imagery used in the Earth sciences.

GEOL 310 Historical Geology

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: GEOL 300, GEOL 305, MATH 100, or MATH 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
C-ID: C-ID GEOL 110
Catalog Date: June 1, 2020

This course covers geologic history of the Earth as shown by the rock record and by the succession of fauna and flora through the processes of evolution and extinction. Plate tectonics and its driving mechanisms are used to understand the assembly and breakup of supercontinents, growth and erosion of mountains and changing sea levels. The evolution of species, ecosystems, climates, and landscapes is placed in a plate tectonics context. Stratigraphic, mineralogic, geochemical, and petrographical techniques for interpreting the sequence of past geological events are studied. Field trips may be required.
Upon completion of this course, the student will be able to:

- evaluate the history of the Earth in its 4.6 billion-year history in the context of the geological timescale, and the relative and numerical methods used to construct the timescale.
- describe the mechanisms of evolution and extinction and how they have shaped the history of life and affected geological processes in the past.
- describe how the rock cycle has changed over geological time in terms of minerals, igneous, metamorphic and sedimentary rocks.
- explain the mechanisms and features of plate tectonics and geological change and how they have shaped the Earth’s history.
- analyze the assembly, movement, and growth of the continents, and formation and breakup of supercontinents, with special regard for the North American continent.
- analyze the factors that have determined the state of Earth’s climate system in the past.

GEOL 311 Historical Geology Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: GEOL 310
Advisory: GEOL 300 and 301
Transferable: CSU; UC
General Education: CSU Area B3; IGETC Area 5C
C-ID: C-ID GEO 110 L
Catalog Date: June 1, 2020

This course is a laboratory study in historical geology. It applies principles of physical geology and paleontology in the reconstruction of the history of the earth. Exercises in stratigraphy, paleontology, and interpretation of geologic maps are utilized. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the evolution of major fossil phyla.
- analyze examples of stratigraphic sequences to determine depositional environments.
- analyze rock specimens to infer the processes involved in their origins.
- analyze fossil assemblages to infer geologic ages.

GEOL 320 Global Climate Change

Same As: GEOG 305
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 100 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course explores the history and mechanisms of climate change in Earth’s past, as well as the methods that scientists use to investigate climate change. It also focuses on climate change in Earth’s recent history (the past few million years) and the role that humans have had in climate change, especially since the industrial revolution. Additionally, it investigates the effects of climate change in today’s world and discusses possible technological and political solutions to this vast and increasingly important problem, and how societies may adapt to the changes. Field trips may be required. This course is not open to students who have completed GEOG 305.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the scientific tools used to study global climate change in the past and present.
- explain the components, processes, and dynamics of the global heat budget, as they pertain to the ocean/atmosphere system.
- describe the various lines of evidence that scientists use to investigate climate change in Earth’s deep past.
explain the conditions that led to extensive climate change over the past 2.5 million years.

evaluate the human causes of climate change, the evidence surrounding that, and the possible consequences of anthropogenically driven climate change.

discriminate between and evaluate mechanisms of climate mitigation and adaptation at international, national, state, and local levels.

GEOL 325 Environmental Hazards and Natural Disasters

Same As: GEOG 307
Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: MATH 100, 104, or 132; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course covers the environmental effects and applications of Earth-related processes. It focuses on earthquakes, volcanic eruptions, landslides, flooding, hurricanes, as well as covering related current events. Topics also include the availability and exploitation of natural resources, waste disposal, and global climate change. Humans as a force in environmental change are emphasized. This course addresses geology, engineering, environmental studies, natural resources, geography, and science education. One field trip is required. This course is not open to students who have completed GEOG 307.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and describe potential environmental hazards associated with different geomorphologic settings.
- describe short- and long-term consequences of environmental hazards on human activities.
- compare and contrast renewable and non-renewable natural resources.
- analyze the impact of human activity on natural resources.
- distinguish between short- and long-term global climate trends.
- evaluate current environmental issues that involve Earth system processes.

GEOL 330 Introduction to Oceanography

Same As: GEOG 308
Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: GEOG 300 or GEOL 300
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B1; IGETC Area 5A
Catalog Date: June 1, 2020

This course is an integrated study of the world’s oceans, including the physical, chemical, biological and human-made processes that affect the oceans. Topics include plate tectonics, ocean basins and sediments, water chemistry, waves, tides, shoreline processes, ocean currents and its biosystems. Humans have impacted nearly all aspects of the oceans, which are critical to our species. Regional oceanographic features are emphasized and a field trip to gain familiarity with regional physical shoreline features is required. This course is not open to students who have completed GEOG 308.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and evaluate the relationships between marine processes and plate tectonics
- assess the impact of human activities on ocean chemistry, biosystems and global climate
- examine common coastal features and processes
- evaluate the impacts of shoreline processes on human activities and structures
- analyze the relationships between weather patterns and oceanic circulation
- assess and interpret the gross chemical composition of the ocean
• evaluate and measure the impacts of resource extraction on marine environmental concerns
• describe the distribution of sediment in the oceans and the processes that move sediment

**GEOL 331 Introduction to Oceanography Lab**

This course is a laboratory investigation of Earth’s oceans, emphasizing coastal processes of California. Most laboratory exercises are incorporated into field studies of California's coast, which involves visiting and comparing several distinct coastal environments. Camping is required, and a small fee is to be paid by the student. This course is not open to students who have completed GEOG 309.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• assess the physical and chemical similarities and differences of distinct coastal environments
• analyze the changing physical and chemical conditions on biological patterns
• analyze the relationships between sea floor morphology and plate tectonics

**GEOL 345 Geology of California**

This course provides a survey of the physical and historical aspects of California geology, emphasizing the linkage of geology and people through economic and social impacts. It is recommended for non-majors and majors in geology and is of particular value to science, engineering, environmental studies, education, and economics majors. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• interpret the formation of California’s geologic provinces within the framework of plate tectonics.
• describe California's geologic resources, their distribution, use, and conservation.
• analyze California's geologic hazards and assess their prediction, prevention, and mitigation.
• evaluate the continuing interaction between geology and humans in California.
• locate California’s geologic provinces on a map.

This course involves field study of selected locations of geologic interest. Course content varies according to field trip destination but may include topics in physical geology, environmental geology, economic geology, and/or introduction to tools and techniques used for geosciences field research (e.g. map and compass, the Global Positioning System (GPS), Geographic Information Systems (GIS), etc.). Field excursions are required and field trip expense fees may be required. A portion of this course may be offered in a TBA component of 18-144 hours which may include composing field notes, making field sketches, collecting various forms of field data, analysis of field data, and use of maps, compass, and/or the Global Positioning System.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate geologic concepts and processes to actual locations and situations.
- compose field notes.
- describe and explain geologic phenomena related to the specific examples under study.
- integrate student-observed geologic information to interpret and explain patterns and processes.
- analyze collected field data.

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Gerontology | American River College

Gerontology is the study of human growth and development during adulthood. It includes the psychological and physiological changes that touch each individual, as well as, the social implications that flow from these changes.

The Gerontology program at American River College offers continuing education credit for specific courses for RNs, LVNs, CNAs, RCFE Administrators, LMFTs, LCSWs, and Nursing Home Administrators.

ARC has gained a reputation as a leader in gerontology studies and has been awarded National Program of Merit Status by the Association for Gerontology in Higher Education. The program co-sponsors events with AARP and California Council on Gerontology and Geriatrics. This leadership has enriched its offerings and enhanced the career value of an ARC gerontology degree or certificate.

Associate Degrees

A.A. in Gerontology: Business

This degree provides a broad overview of the biological, psychological, and social aspects of aging along with introductory business courses emphasizing the impact of an aging population on business. It focuses on preparation for entry-level positions with private industry, government, and non-profit agencies providing goods and services to senior adults and/or preparation for further gerontology/business study at a four-year college or university.

Catalog Date: June 1, 2020

The Gerontology: Business Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess social and cultural attitudes on aging and how they impact social policy regarding the senior population
- evaluate the biological, psychological, and social aging changes in terms of optimal aging and the impact of lifestyle choices
- analyze legal and ethical issues relating to aging and end-of-life decisions
- demonstrate skill, ease, confidence, rapport, and listening skills when interacting with seniors at different cognitive levels
- evaluate cognitive levels of seniors and utilize appropriate interactional activities and techniques for communication
- examine the physiological effects of chemical dependency and substance abuse on the elderly population
- evaluate care for the dying in different environments
- assess common mental health issues of aging and evaluate interventions and resources
- survey services for seniors available within a community and define eligibility requirements
- apply knowledge of gerontology to real-life business situations

Social Policy Concentration Units: 9

Total Units: 36

The Gerontology: Social Policy/Advocacy Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess social and cultural attitudes on aging and how they impact social policy regarding the senior population
- evaluate the biological, psychological and social aging changes in terms of optimal aging and the impact of lifestyle choices
- analyze legal and ethical issues relating to aging and end-of-life decisions
- demonstrate skill, ease, confidence, rapport, and listening skills when interacting with seniors at different cognitive levels
- evaluate cognitive levels of seniors and utilize appropriate interactional activities and techniques for communication
- examine the physiological effects of chemical dependency and substance abuse on the elderly population
- evaluate care for the dying in different environments
- assess common mental health issues of aging and evaluate interventions and resources
- survey services for seniors available within a community and define eligibility requirements
- apply knowledge of gerontology to real-life social policy/advocacy situations

Career Information

Entry-level positions with private industry, government, and non-profit agencies providing input to social policy and advocacy for senior adults
Certificates of Achievement

Gerontology: Business Certificate

This certificate provides a broad overview of the biological, psychological, and social aspects of aging, along with introductory business courses emphasizing the impact of an aging population on business. It focuses on preparation for entry-level positions with private industry, government, and non-profit agencies providing goods and services to senior adults.

¹One unit of work experience is required in one of the following environments: recreation center, senior center, senior community, assisted living facility, or another site for seniors.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recommend beneficial exercises for seniors and individuals with disabilities or medical conditions.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- create an individualized fitness plan to promote functional independence throughout the remainder of life.
- analyze how nutrition plays a part in overall health and aging.
- compare and contrast different self and group motivational techniques for staying active.
- identify and respond to life-threatening conditions (including breathing emergencies, cardiac emergencies, and severe bleeding).
- evaluate physical activities relative to risk factors.
- design and lead a group exercise activity, and provide modifications and variations to exercises when necessary.
- identify basic principles of body mechanics and posture.
- design an individualized exercise prescription program that includes muscular strength and muscular endurance development.
- explain normal aging-related changes and analyze how lifestyle choices influence the aging process.
• demonstrate techniques for validating and encouraging older adults during fitness activities.

Career Information
The Senior Fitness Specialist program is ideal for anyone seeking an entry-level position as a fitness leader in community, recreation, and senior centers, health clubs, retirement and assisted living communities, and other sites that cater to seniors.

Certificates

Activity Leader Certificate
This program prepares students for the duties, roles, and responsibilities of an activity leader, a person who plans and leads activities for residents in a skilled nursing facility as described in and required by California Title 22 Division 5. This program also meets or exceeds training requirements for similar positions as described in Title 22 Division 6 for non-medical residential care facilities for the elderly and adult day programs, as well as similar positions in senior centers, recreation, and community centers serving older people.
The course offered through this program is reviewed by the California Department of Public Health (CDPH) for approval each semester to confirm it includes all the required curriculum and to confirm it includes all the current state and federal laws and regulations. Upon successful completion of this course, students receive a certificate of completion from the Gerontology department that confirms the course was reviewed and approved by the CDPH. To maintain compliance with the Centers for Medicare & Medicaid Services, State Operations Manual (Appendix PP) skilled nursing facilities are required to keep a copy of their activity leader’s certificate of completion from a CDHP approved course on file.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• articulate the role and responsibilities of the activity leader in a long-term care facility
• demonstrate effective communication skills in interviewing long-term care residents
• analyze normal and disease process changes in hearing and speech and develop strategies for effective communication
• generate required documentation to comply with State and Federal regulations
• create activities which meet physical and emotional needs of residents in long-term care
• assess effects of institutionalization and possible impact on mental health and family relationships
• identify types of dementia and appropriate communication and behavior management strategies
• demonstrate effective problem solving, motivation, and communication skills involved in leadership of an activity program
• compare and contrast community services available and their relevance to an activity program
• develop appropriate activities and a monthly activity calendar to meet the needs of individual residents in long-term care

Career Information
This program is specifically designed to meet the rigorous state requirements for preparing activity leaders to work in a skilled nursing facility, as described in and required by California Title 22 Division 5. It also meets or exceeds training requirements for similar positions as described in Title 22 Division 6 for non-medical residential care facilities for the elderly and adult day programs. The program enhances qualifications for other unregulated positions planning and leading activities for older adults with titles such as activity leader activity director, and activity leader. These positions are becoming more common in senior centers, community and recreation centers, and health clubs. See the program description for details about the course approval by the California Department of Public Health.

Dementia Care Certificate
This certificate provides a comprehensive overview of dementias, behavior management, and communication. It expands the knowledge of students to enter the workforce.
where they will be dealing with seniors diagnosed with a form of dementia.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- differentiate between reversible and irreversible dementias
- develop strategies for care for those with dementia
- create a safe environment for those with dementia
- evaluate a specific problem to decide if the problem is the patient's or the caregiver's
- assess specific dementia behavior problems and select appropriate responses
- demonstrate appropriate responses to dementia behaviors
- analyze various types of dementia and their characteristics
- identify communication strategies for enhanced understanding by the dementia patient
- identify principles of behavior management
- define caregiver issues
- assess elements of communication that relate to Validation theory
- analyze the theory behind Validation and describe the benefits of using Validation techniques
- demonstrate Validation techniques
- analyze dementia stages and select appropriate Validation techniques

Career Information

Direct care of dementia patients. Supervision and inservice for dementia patients' caregivers

Elder Care Certificate

This Certificate provides a comprehensive overview of the caregiving experience. It expands the knowledge of students to enter the workforce where they will be dealing with seniors and their caregivers.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design caregiving strategies based on the elders' needs and available resources
- explain the concept of "Caring for the Caregiver"
- describe effective procedures for caring for elderly people with memory impairments
- analyze role reversal and sources of guilt within families
- define what constitutes elder abuse, including different types of abuse
- assess causes of elder abuse
- evaluate prevention approaches and resources to intervene before abuse occurs
- identify elder abuse reporting steps and forms
- evaluate the different causes of stress in caregiving situations
- analyze aspects of belief systems which enhance stress in caregiving
- apply new talking and listening skills for reducing stress in self and others
- assess elements of communication that relate to Validation theory
- analyze theory of Validation
- demonstrate Validation techniques
- analyze dementia stages and select appropriate Validation techniques

### Career Information

Direct care or seniors. Supervision and inservice for caregivers

### Ethnicity and Aging Certificate

This Certificate provides a comprehensive overview of how ethnicity affects the aging experience. It expands the knowledge of students to enter the workforce where they will be dealing with seniors from different cultures and ethnic groups.

**Catalog Date:** June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:
- synthesize and discuss the importance of cultural sensitivity as it relates to working with older people
- evaluate and discuss differences among ethnic groups in life expectancy, mortality, mobility, family dynamics, work/retirements, mental health, views on death, and use of senior services
- define and discuss ways of overcoming barriers to understanding and using senior services
- evaluate the impact of culture and society on the aging process
- compare and contrast values and beliefs of Asian, Hispanic, African-American cultures and the dominant Western culture
- develop strategies for assessing and assisting aging Asians, Hispanics, and African-Americans and their families
- describe historical events or institutions that have influenced African-American elderly
- describe the economic, educational, and social groups found among the African-American elderly
- discuss the health conditions found most frequently among the Asian, Hispanic, and African-American elderly

Career Information

Direct care of seniors from diverse backgrounds. Supervision and inservice for caregivers.

Leadership in Assisted Living Communities Certificate

This certificate provides a comprehensive overview of leadership, communication, and professionalism and ethics required for effective leadership and supervision in assisted living communities.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze three categories of leadership
- compare and apply four facets of problem solving in regards to long-term care facilities
- analyze the essential elements in team building and being a part of the team in long-term care facilities
- identify and exhibit effective communication techniques
- demonstrate effective motivational practices
- differentiate between ethics and morals as related to working with seniors
- evaluate professional conduct in long-term care facilities
- demonstrate listening skills when working with the elderly
- describe the parameters of confidentiality
- describe professional boundaries
- analyze patterns of communication
- demonstrate validation of feelings and viewpoints
- evaluate adaptive behaviors in long-term care settings
Gerontology (GERON)

GERON 201 Leadership and Team Building in Long-term Care Facilities

This course is an overview of the fundamentals of leadership, focusing on team building, communication, motivation, and problem solving in long-term care facilities.

Pass/No Pass only.

Upon completion of this course, the student will be able to:

- analyze three categories of leadership
- compare different types of staff support systems

Administrative positions in long-term care communities, such as staff coordinator, marketing specialist, resident coordinator, facility administrator.

Social Service Designee Certificate

The Social Services Designee certificate provides a comprehensive overview of the role and duties of a social services designee in a long-term care facility.

Catalog Date: June 1, 2020

Certificate Requirements

Upon completion of this program, the student will be able to:

- Articulate the role and responsibilities of the social services designee in a long-term care facility
- Analyze normal age changes and their impact on residents
- Incorporate resident rights and responsibilities into daily practice
- Apply Omnibus Budget Reconciliation Act (OBRA)/Title 22 (State of California Department of Social Services) regulations to work environment
- Evaluate legal and ethical issues relating to powers of attorney, long-term care financing, and end-of-life decisions
- Evaluate long-term care facility environments
- Interview and assess long-term care residents to assure needs are being met

Career Information

Social Services Designee in long-term care, assisted living, and retirement facilities

Gerontology (GERON)

GERON 201 Leadership and Team Building in Long-term Care Facilities

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is an overview of the fundamentals of leadership, focusing on team building, communication, motivation, and problem solving in long-term care facilities. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze three categories of leadership
• compare and apply four facets of problem solving in regards to long-term care facilities
• analyze the essential elements in team building and being a part of the team in long-term care facilities
• identify and exhibit effective communication techniques
• demonstrate effective motivational practices

GERON 202 Professionalism and Ethics in Long-term Care

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores professionalism and ethical conduct for those working with seniors in long-term care facilities. Topics include ethics, morals, professional conduct, confidentiality, boundaries, and listening skills. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• differentiate between ethics and morals as related to working with seniors.
• evaluate professional conduct in long-term care facilities.
• demonstrate listening skills.
• describe the parameters of confidentiality.
• describe professional boundaries.

GERON 203 Communication for Supervision in Long-term Care

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores effective communication skills for supervisors in long-term care facilities. Topics include emotions, validation of staff and residents, adaptive behavior, and staff support systems. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate the art of listening
• analyze patterns of communication
• demonstrate validation of feelings and viewpoints
• evaluate adaptive behaviors in long-term care settings
• compare different types of staff support systems

GERON 204 Alzheimer's Disease and Other Dementias

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to dementia, including Alzheimer's Disease. Topics include types of dementia, patient care, environmental issues, and strategies for understanding and responding to associated behaviors. Pass/No Pass only.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between reversible and irreversible dementias
- develop strategies for care for those with dementia
- create a safe environment for those with dementia
- evaluate appropriate Validation techniques for communicating with those with dementia

GERON 205 Validation: Theory and Practice

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course presents Validation theory as a communication technique used with individuals with differing levels of cognitive ability. Criteria for evaluating stages of dementia and the selection of appropriate techniques are covered. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess elements of communication that relate to Validation theory
- analyze theory of Validation
- demonstrate Validation techniques
- analyze dementia stages and select appropriate Validation techniques

GERON 206 Dementia: Behavior Management

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the many facets of behavior management as they apply to those diagnosed with a form of dementia. Topics include defining the problem, determining whose problem it is, problem-solving principles, environmental triggers, caregiver response, and techniques (such as timing, validation, noise regulation) for specific problem behaviors. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate a specific problem to decide if the problem is the patient's or the caregiver's
- assess specific dementia behavior problems and select appropriate responses
- demonstrate appropriate responses to dementia behaviors

GERON 207 Elder Abuse

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is an overview of elder abuse. It focuses on occurrence, prevention strategies, and resources to prevent elder abuse. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- define what constitutes elder abuse, including different types of abuse
- assess causes of elder abuse
- evaluate prevention approaches and resources to intervene before abuse occurs
- identify elder abuse reporting steps and forms

**GERON 208 Stress Management: New Approaches**

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course examines stress from a communication perspective, focusing specifically on caregivers. The concept of high-risk messages is introduced focusing on how stress reactions affect behavior and morale in residential care facilities and other systems of care for the elderly. Emphasis is on how a message is translated and how this translation affects stress, overload, and spill-over effects. Stress management skills are demonstrated. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the different causes of stress in caregiving situations
- analyze aspects of belief systems which enhance stress in caregiving
- apply new talking and listening skills for reducing stress in self and others

**GERON 209 Strategies for Caregivers: Effectively Caring for the Elderly in the Community**

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course covers strategies for providing effective care for the elderly, including how it is complicated by dementia, role reversal, and guilt. Common sense strategies for caregiving that not only meet the needs of the elderly but also lessen the caregiving burden are explained. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- design caregiving strategies based on the elders' needs and available resources
- explain the concept of "Caring for the Caregiver"
- describe effective procedures for caring for elderly people with memory impairments
- analyze role reversal and sources of guilt within families

**GERON 210 Aging Experience in Asian Families**

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course examines the aging experience characteristic to Asian families. The impact of culture, societal expectations and their effect on family roles, values and beliefs and how these affect caregiving on that aging experience are discussed. Focus is on strategies for dealing with stress and social support services for Asian families. Pass/No Pass only.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate impact of culture and society on aging process
- compare and contrast values and beliefs of Asian cultures and the dominant Western culture
- develop strategies for assessing and assisting aging Asians and their families

GERON 211 Aging Experience in Hispanic Families

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course examines the aging experience characteristics to Hispanics and the impact of culture, societal expectations, family roles, values, beliefs, and caregiving on that aging experience. Focus is on social support systems and strategies for assisting aging Hispanics and their families. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate impact of culture and society on the aging process
- compare and contrast values and beliefs of Hispanic cultures and the dominant Western culture
- develop strategies for assessing and assisting aging Hispanics and their families

GERON 212 Aging Experience in African-American Families

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course examines the economic, social, and health status of elderly African-Americans. It focuses on their unique relationship to the dominant American culture, their vulnerability to specific diseases, and their history with the health care system. It also covers family structures in the African-American community and their implications for family relationships and caregiving. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe historical events or institutions that have influenced African-American elderly
- describe the economic, educational, and social groups found among the African-American elderly
- discuss the health conditions found most frequently among the African-American elderly
- evaluate dietary patterns among African-American in terms of their implications for health and well being
- evaluate the types of household arrangements found most frequently among African-American elders
- develop strategies for assessing and assisting African-American elders and their families

GERON 213 Aging Experience in Native American Families

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course examines the economic, social, and health status of elderly Native Americans. It focuses on their unique relationship to the dominant American culture, being
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the "Sovereign Nation" status of America's tribes
- evaluate the social status of elders in traditional culture
- analyze a local Native American population in terms of its tribal affiliations and history
- evaluate dietary patterns among Native Americans in terms of their implications for health and well being
- describe the health care delivery system unique to Native Americans, such as the Indian Health Service and the services provided by tribal governments
- compare the long-term care arrangements most frequently found among local Native American elders with those used by the dominant culture
- develop strategies for assessing and assisting Native American elders and their families

GERON 220 RCFE Administrator Training

Units: 4.5
Hours: 81 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course meets the educational requirements necessary to take for state licensure as an administrator of a residential care facility for the elderly (RCFE). Topics include philosophy, mission, and operations of a RCFE; regulations, rights and responsibilities of licensees; fingerprinting and criminal record clearances; psychosocial needs of residents; physical plant requirements; resident assessment, retention, and eviction; resident records and services; food service regulations; admission agreement; special diets; medications; abuse reporting; residents' rights; and community resources. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain residential care and mission of licensing
- analyze the function of a RCFE facility license from three perspectives
- discuss the rights and responsibilities of a licensee
- explain the need and process for fingerprinting and criminal record clearance
- compare licensing requirements and deficiencies in a RCFE
- evaluate medical conditions and diseases associated with aging and relate to residents' requirements
- evaluate the need for waivers to cover residents with special needs
- evaluate a facility plan to meet California requirements for fire, safety, storage, and emergency preparedness
- evaluate a resident for functional capacities and appropriateness of RCFE placement
- document in-patient records, changes in condition, medication record, and physician orders
- evaluate menus and preparation of food to meet California requirements
- define regulatory requirements covering RCFE personal accommodations and services
- explain health conditions that are prohibited in a RCFE
- evaluate resident records for compliance with regulations
- evaluate RCFE menus for compliance with dietary regulations and special diets
- explain the regulations covering centrally stored resident medications
- assess under what conditions and by whom elder abuse must be reported
- compare advance directives and "do not resuscitate" orders
- describe the requirements for safeguarding resident resources in a RCFE
• compare community resources for applicability to RCFE residents

GERON 230 Motivating Older Adults to Stay Active

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on how to motivate healthy older adults to stay independent, active, and mobile. Topics include wellness, aerobic fitness, nutrition, stress, self- and group-motivation techniques, and cognition as they affect seniors. Credit/No Credit only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess normal aging and effects of unhealthy lifestyle choices
• describe healthful lifestyle choices and their effects on aging
• evaluate factors in cognitive wellness as people age
• compare and contrast different self- and group-motivational techniques for staying active

GERON 271 Dementia: Behaviors and Activity

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is an overview of dementia and memory loss. Topics focus on types, characteristics, communications, behavior management, and caregiving of dementia patients. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze various types of dementia and their characteristics
• identify communication strategies for enhanced understanding by the dementia patient
• identify principles of behavior management
• define caregiver issues

GERON 280 Home Adaptations for Safety and Independence

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores adaptations to the home environment to promote safety and independence for those with disabilities. Topics include assessment, durable equipment, home modifications and resources. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess the functional ability of a home resident
• evaluate safety issues within the home
• evaluate durable equipment to facilitate safety in the home

GERON 300 Sociology of Aging

Same As: SOC 335
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 and ENGRD 116 with a grade of “C” or better; OR ESLR 320 and ESLW 320 with a grade of “C” or better.
Transferable: CSU; UC (UC credit limitation: GERON 300, 302, PSYC 374, & SOC 335 combined: maximum credit, one course)
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course examines the aged and aging process with emphasis on social factors affecting and affected by an aging population. It includes an analysis of demographics, history of aging in America, social conditions, resources and support systems, employment, retirement, and social class/cultural differences. This course is not open to students who have completed SOC 335.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• chart the demographic shift in America as it relates to older adults and evaluate the concept of generational equity

• explain at least five of the major implications and challenges of increased longevity as they relate to end-of-life issues, advocacy, adult abuse, filial responsibility, generational equity, and entitlements

• compare the major biological theories with the major social theories of aging

• explain the major social issues as related to aging in America and their possible solutions

• analyze the overall economic position of older Americans, including retirement plans, health care, job outlook, and entitlements

• calculate the cost of the average funeral and construct cost-saving measures

GERON 302 Psychology of Aging: Adult Development and Aging

Same As: PSYC 374
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC (UC credit limitation: GERON 300, 302, PSYC 374, & SOC 335 combined: maximum credit, one course)
General Education: AA/AS Area V(b); CSU Area D; CSU Area E1; IGETC Area 4
Catalog Date: June 1, 2020

This course covers the physical, psychological, and social aspects of the aging process including the interactions between the elderly and the rest of society. Topics include an analysis of stereotypes, social bonds, environmental factors, sexuality, physical health, mental health, death, and bereavement. This course is not open to students who have completed PSYC 374.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and explain the differences between gerontology and geriatrics and explain the changing age demographics both in the United States and globally.

• describe at least four commonly held myths, stereotypes, or ageist attitudes regarding older adults and explain the impact these attitudes have on the image of aging.

• analyze and predict three ways race, gender, and ethnicity might influence the aging process.

• analyze the concepts of successful aging and optimal aging and recognize the differences between at least three normal and three abnormal age changes.

• describe at least three biological and three social theories used to predict how an individual might respond to the aging process or to old age.

• discuss and incorporate the concept of family and intimate relationships in later life and the importance of convoys or networks in the individual process of aging.

• explain at least three of the financial costs associated with aging.

• describe the concept of "aging in place" using at least three local and national resources, two entitlements, and three healthcare options.

• identify an elder who is aging optimally and describe at least three lifestyle choices, based on gerontological theory, that the student feels altered his/her aging
GERON 303 Introduction to Social Gerontology: Aging in Contemporary Society

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 and ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course is an introduction to older people and the aging process in the context of contemporary society through the perspective of social gerontology. It focuses the biopsychosocial lens on the social forces that contribute to the development of individuality across the lifespan and lead to differences in how people age. Using this lens, students gain perspective on how opportunities, choices, and experiences throughout life are driven by gender, race, and class, and how they culminate during aging and impact aging outcomes. The aging experience in the United States is also compared to aging in other countries. Gerontology majors are encouraged to take this course in their first semester of study.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the influence of historical events, technological advancements, and cultural shifts on aging cohorts based on decade of birth.
- deconstruct how social factors such as gender, race, and class contribute to opportunities and experiences throughout life and during aging.
- examine the ability of federal and state agencies to respond to the challenges of population aging.
- utilize the theories of aging to explain current societal beliefs about aging in the United States.
- explain the importance of family, friends, and other informal supports during aging.

GERON 304 Ethical Issues and Client's Rights

Same As: HSER 310
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Corequisite: HSER 300
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a comprehensive exploration of the basic ethical issues involving human services delivery. Topics include professional ethics, confidentiality, counselor and clients' rights, and other areas involving ethical controversies. This course is not open to students who have completed HSER 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the state and federal laws most often violated in human services delivery
- analyze existing California Professional Codes of Ethics
- describe the application of clients' rights in human services agencies and institutions
- describe appropriate professional behavior in human services agencies and institutions
- examine one's own values and attitudes as they apply to ethical decision making

GERON 310 Social Service Designee: Role and Responsibility

Units: 2.5
Hours: 45 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
This course covers the role of the Social Services Designee in long-term care. The focus is on family, patient adjustment, and dementia. It also covers documentation for the Social Services Designee working in long-term care.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the role of a social service designee
- explain Omnibus Budget Reconciliation Act (OBRA)/Title 22 regulations
- analyze normal aging changes and how these affect the resident
- identify resident rights and responsibilities

GERON 311 Social Services Designee: Legal Issues and End-of-Life Decisions

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None  
Advisory: ENGWR 102 and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course covers legal issues involved with long-term care. The focus is on probate, conservatorships, wills, trusts, power of attorney for financial management, and the California Advanced Health Care Directives, and right-to-die issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and discuss probate, wills, trusts, powers of attorney, advanced health care directives, long-term care and the financing of long-term care
- define and discuss informed consent and conservatorships
- define and discuss right-to-die issues
- analyze ethical end-of-life decisions

GERON 312 Social Services Designee: Fieldwork

Units: 1  
Hours: 18 hours LEC  
Prerequisite: GERON 310 and 311 with grades of "C" or better  
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course provides an opportunity to explore the social services designee role in a long-term care facility and to apply knowledge gained to long-term care experience in the area of social services.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the role of a social services designee
- analyze and evaluate long-term care facility environments
- interview and assess residents in long-term care facilities

GERON 330 Communicating with and Validating Older Adults
This course introduces the basic theory, techniques, and experiences for communication with, validation of, and stimulation of the elderly at different cognitive levels in long-term care. After the first class session, this course is held off campus in a long-term care setting. Supervision by a professor in a long-term care setting is required. This course is not open to students who have completed PSYC 378.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate basic communication needs of seniors and utilize appropriate level of validation theory and techniques
- demonstrate skill, ease, confidence, rapport, and listening skills when communicating with the elderly at different cognitive levels
- assemble and use a kit of materials to facilitate sensory stimulation, validation, and reminiscence therapies

GERON 334 Reminiscence Therapy

This course introduces the basic theory and techniques of reminiscence therapy and provides experience in planning, facilitating, and evaluating reminiscence groups with the elderly in an institutional setting. After the first class session, this course is held off campus in a long-term care setting. This course is not open to students who have completed PSYC 379.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze basic group counseling theories and apply to reminiscence techniques used with the elderly
- analyze the effects of reminiscence therapy on the aging process
- evaluate participants' cognitive levels and interests and choose the appropriate subject for reminiscence
- detect and respond to individual needs within the group
- demonstrate skill, ease, confidence, rapport, and listening skills in facilitating reminiscence groups
- explain the basic process of memory construction
- analyze the staff-development benefits from engaging in reminiscence with older adults
- demonstrate social inclusion using reminiscence therapy
- demonstrate techniques used to encourage reminiscence with people who have dementia and live in a facility
- examine his/her individual boundaries and explain why they are important to maintain in reminiscence groups

GERON 335 Wellness for Older Adults

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
This course explores positive lifestyle choices throughout life which have a positive effect on health and well-being. Topics include exercise, nutrition, stress management, chronic disease, and adaptations for disability.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze exercise programs and their effect on aging
- assess individual diets and make adjustments to maximize health and optimal aging
- identify how stress management can improve health
- evaluate exercise programs to meet individual needs
- examine chronic conditions of aging in relation to stress

GERON 340 Nutrition for Healthy Aging

This course focuses on the nutrition of older adults. Topics include the effects of nutrition on health and well-being and the physiologic changes in aging, the effects of smell and taste on nutritional status, age-related changes in the gastrointestinal tract, risk factors for cardiovascular disease, and cancer and nutrition. This course is not open to students who have completed NUTRI 324.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the role of nutrition in the health and well-being of older adults.
- discuss strategies for the prevention of disease and chronic conditions in older adults.
- describe the physiological changes to the body that may occur as a result of the aging process.
- list and describe the major food-assistance programs for older adults.
- discuss the purpose and objectives of nutrition screening methods.
- outline the benefits, list the necessary components, and list the nutritional considerations of an exercise regimen for an older adult.
- illustrate how cultural values influence food choices made by older adults.
- discuss the nutrient needs of older adults as a result of physiological changes.

This course is an overview of ethnicity and culture as factors in the aging process. It focuses on values, beliefs, and culture, and their impact on the design and delivery of senior services with an emphasis on health and residential care services. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• synthesize and discuss the role of cultural sensitivity as it relates to working with older people
• evaluate and discuss differences among ethnic groups in terms of their beliefs about health, mental health, death, family obligations and the use of senior services
• define and discuss ways of overcoming barriers to understanding and using senior services

GERON 362 Biology of Aging

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is an overview of the biology of aging and health of the older adult. The focus is on chronic and acute illnesses, normal aging changes, sexuality, nutrition, and strategies for good health. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• define normal and abnormal aging processes and their relationships to lifestyles
• evaluate health status and problems of older adults and relate them to lifestyles and environments
• evaluate health care strategies appropriate for older adults and community resources and programs to promote wellness

GERON 366 Coping with Death and Related Bereavement

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course explores our societal/cultural and personal views of death, dying, and bereavement. Topics include the processes of dying and grieving from the perspectives of the patient, family, friends, and caregivers; the dynamics of loss, grief, and bereavement; and the needs of the bereaved. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify several theories of dying as well as ego coping mechanisms
• analyze some of the common differences between dying in an institutional setting and dying with hospice care
• describe the range of healthy grief responses
• identify support needs and community resources for support
• assess personal feelings, attitudes, and values about dying and how they are influenced by society

GERON 368 Mental Health and Aging

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Transferable: CSU  
Catalog Date: June 1, 2020

This course is an overview of mental health as it is impacted by the aging process. Emphasis is on correlates of mental health, incidence of mental illness, depression, dementia, substance abuse, intervention, and mental health resources for seniors. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- apply the concept of mental health to the aging process
- describe common mental health issues of depression, dementia, substance abuse, intervention, and resources as they affect the aging population
- evaluate interventions and resources available to seniors

**GERON 378 Body Mechanics and Safety**

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** None  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an overview of body mechanics, emphasizing a problem-solving approach. The focus is on basic methods and techniques of positioning, transfer, and ambulation, as well as personal safety, adaptive exercise, and assistive devices. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the basic anatomy of the spine
- describe the diagnosis, detection, and treatment of back injuries
- identify basic principles of body mechanics and posture
- demonstrate proper transfer techniques
- cite three consequences of immobility and weight gain
- list three fall prevention strategies for the elderly
- demonstrate strengthening and stretching exercises for the back

**GERON 380 Nutrition and Aging**

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** None.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course concentrates on the practical aspects of nutrition and aging. Cost-effective directions for meeting nutritional needs are included. Information regarding environmental factors implicated in the aging process is discussed. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze how nutrition plays a part in overall health and aging
- explain how cultural attitudes toward lifestyle, stress and environmental factors influence nutrition
- evaluate information in residential care, assisted living, and skilled nursing facilities to design meals that are cost effective and nutritionally sound
- name the sources and functions of the essential nutrients
- analyze the interactions between nutrition and medications
- evaluate the relationship between nutrition and chronic illness

**GERON 430 Activity Leader**

**Units:** 6.5
This course covers the roles and responsibilities of an Activity Leader in long-term care facilities. Topics include interviewing and counseling techniques, hearing and speech changes, social and psychological forces of aging, effective leadership skills, dementia behaviors, etiology of illness, community agencies and resources, needs-based programming, documentation at state and federal levels, and creating an activity program.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the role of the Activity Leader as it relates to the needs of the resident
- compare and contrast two therapeutic outcomes of using reminiscence therapy
- develop strategies for effective communications with seniors with speech and/or hearing deficits
- complete the required Title XXII documentation
- prepare paperwork required for the Omnibus Budget Reconciliation Act (OBRA) compliance
- assess activities which meet physical and emotional needs of long-term care residents
- identify at least five symptoms of depression and evaluate appropriate intervention
- identify principles of behavior management when working with residents with dementia
- compare and illustrate how to apply four facets of problem solving in senior programs
- compare and contrast the variety of community services available for the aging population
- develop an appropriate activity to meet a specific need of a long-term care resident
- compare and contrast the development of activities for different cultural groups in long-term care
- analyze various aspects of activity coordination

**GERON 490 Aging Policy and Practice**

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course provides an overview of the social issues faced by Older Americans and the social policies and programs provided to address those issues, including the Older Americans Act, Social Security, Medicare, and the Elder Justice Act. It investigates how social policies and programs are put into practice by exploring career options in the agencies, businesses, and organizations that provide services and support to older adults living in California.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- generate an Internet resource list with URLs and brief descriptions of the government websites for major programs and services for Older Americans.
- outline the flow of funding for services to Older Americans from its legislative origins to the local providers in the Aging Network, including local organizations/businesses.
- summarize theories of help-seeking behavior.
- differentiate between 1) Social Security and Entitlement Programs; 2) Medicare Options (Part A, B, etc.) and 3) Medicare and MediCal Benefits.
- identify social issues that impact cultural/ethnic subgroups of older adults.
- deconstruct social issues that impact cultural/ethnic subgroups of Older Americans.
- determine the relevance of federal and state Elder Justice regulations to real/hypothetical case studies of elder abuse, exploitation, and neglect.
- utilize a public resource provided to enrich/improve quality of life during aging.
• assess the obstacles Older Americans may have to overcome when accessing government programs and services during aging.

• reflect on policies that contribute to ageism and their impact on the previous, current, and future generations of your family.

GERON 495 Independent Studies in Gerontology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

GERON 498 Work Experience in Gerontology

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to gerontology with a cooperating site supervisor. Students are advised to consult with the Gerontology Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of gerontology. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate application of industry knowledge and theoretical concepts in the field of gerontology related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course

• make effective decisions, use workforce information, and manage his/her personal career plans.

• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

• locate, organize, evaluate, and reference information at work.

• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

GERON 1065 Movement Matters

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
This course introduces the importance of movement for seniors and provides examples adapted to specific chronic conditions. Topics include movement related to Parkinson’s, multiple sclerosis, osteoarthritis, osteoporosis, and Alzheimer’s and other dementias. Credit/No Credit only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify causes, signs, and symptoms of common chronic conditions of age
- explain the effects of various medications on movement
- evaluate different movement programs offered in long-term care facilities for appropriateness
Health Education | American River College

The college program in health education is designed to provide students the essential information for the evaluation and maintenance of individual health.

Division Dean (Interim)  Kathy "Kat" Sullivan-Torrez  (916) 484-8201

Health Education (HEED)

HEED 300 Health Science

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area III(b); CSU Area E1
- **Catalog Date:** June 1, 2020

This course focuses on factors which influence the health status of both the individual and the community. Topics include personal fitness, nutrition, sexuality, sexually transmitted disease, drug dependence including alcohol and tobacco, as well as diseases related to lifestyle.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the principles of healthy living.
- analyze the relationship between lifestyle and a variety of diseases.
- describe the process of making healthy lifestyle changes.
- distinguish between myths and facts related to health and wellness.
- evaluate personal health behaviors.

HEED 308 Environmental Health Science

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
- **Transferable:** CSU; UC
- **General Education:** AA/AS Area IV; CSU Area B2; IGETC Area 5B
- **Catalog Date:** June 1, 2020

This course covers society's interaction with the environment, current environmental factors, and the influence of these on human health. Topics include the scientific method, ecology, population dynamics, poverty, atmospheric pollution including climate change, the water cycle, water resources, water pollution, toxic substances, and environmental disease. It covers sustainable solutions to current environmental issues and environmentally related disease. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and explain the scientific method and apply the scientific method to research involving human health and environmental factors.
• examine and discuss various environmental issues and related environmental diseases.
• analyze and integrate solutions to current environmental issues and environmental health problems.
• evaluate and critique current solutions for creating a sustainable society and formulate new possible solutions.

HEED 310 Community CPR and Adult AED

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: HEED 310, 311, 316 & ECE 414 combined: maximum credit - one course)
Catalog Date: June 1, 2020

This course provides knowledge and skills for emergency life-saving techniques involving infants, children, and adults. Respiratory and cardiovascular distress, non-breathing, unconsciousness, choking, and cardiac arrest are addressed. The infant and child and the adult cardiopulmonary resuscitation (CPR)/Automatic External Defibrillator (AED) certification examinations are included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and respond to life-threatening conditions (including breathing emergencies, cardiac emergencies, and severe bleeding)
• implement triage techniques
• demonstrate infant, child, and adult CPR skills
• appraise disease transmission prevention techniques as they relate to CPR and first aid procedures
• demonstrate the use of an AED on children and adult patients
• demonstrate conscious and unconscious choke rescue techniques on infants, children, and adult patients

HEED 311 CPR and Pediatric First Aid

Same As: ECE 414
Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: HEED 310, 311, 316 & ECE 414 combined: maximum credit - one course)
Catalog Date: June 1, 2020

This course meets the requirements for American Red Cross certification in California Child Care Health & Safety Training which includes adult, child, and infant CPR and pediatric first aid. It also includes legal considerations, avoiding disease transmission, responding to sudden illnesses and injuries, and recognition of common childhood diseases. This course is not open to students who have completed ECE 414.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze and implement triage techniques
• assess the emergency care of life-threatening conditions
• evaluate and formulate emergency first aid techniques for common childhood injuries and illnesses
• demonstrate infant, child, and adult CPR skills
• appraise disease transmission prevention techniques as they relate to CPR and first aid procedures
• plan and design a functional first aid kit

HEED 315 First Aid
This course provides guidelines that enable the citizen responder to give appropriate care to a victim who is injured or becomes suddenly ill. Topics include controlling bleeding, splinting, and treating seizures and heart attacks.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize that an emergency has occurred
- analyze and prioritize the injury, implementing triage techniques
- evaluate and apply emergency procedures for sudden illness
- evaluate and formulate emergency first aid techniques for injuries
- appraise disease transmission prevention techniques as they relate to first aid procedures

HEED 323 Cardio Pulmonary Resuscitation (CPR)/Automated External Defibrillators (AED) for the Professional Rescuer

This course meets the requirements for Red Cross certification as a professional rescuer. It includes legal considerations, avoiding disease transmission, controlling severe bleeding, and moving victims, as well as professional rescuer situation practice sessions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and plan care for life-threatening conditions
- assess scenarios regarding legal considerations
- properly use Automated External Defibrillators (AED) and Bag Valve Mask (BVM) resuscitators
- appraise disease transmission prevention techniques for the professional rescuer
- evaluate and demonstrate proper technique of two-person CPR and jaw thrust
- assess an emergency scenario utilizing techniques of triage

HEED 494 Topics in Health Education

This course provides opportunities to study contemporary topics in health which are not included in current offerings or which require emphasis beyond existing courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• Explain basic health concepts pertaining to contemporary issues in health
• Apply basic health concepts to examine and analyze contemporary issues in health
• Examine, compare, and contrast various philosophies related to health
• Discriminate between scientific fact and myth pertaining to various issues in health
• Analyze health issues from various perspectives
• Propose solutions to current issues in contemporary health

HEED 495 Independent Studies in Health Education

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Healthcare Interpreting | American River College

The Healthcare Interpreter certificate program is designed to prepare bilingual individuals for effective language interpretation and cultural brokering in the healthcare setting. It emphasizes roles and responsibilities of the healthcare interpreter; the development of cultural competence in the community and workplace; insight into language and cultural nuances for specific communities; standards and legal requirements for culturally and linguistically appropriate services; ethical decision-making, advocacy and power dynamics in healthcare settings; and career preparation to become an integral member of the health care team. Coursework covers modes and models of interpretation; development of the technical aspects of interpretation; techniques for facilitating and managing the flow of communication; medical terminology and related vocabulary development in language of service; and common medical conditions and associated treatments/procedures in both basic and specialized health care service areas. Language coaches are provided to facilitate skills acquisition, and precepted fieldwork experiences are required.

Healthcare Interpreting (HCI)

HCI 300 Introduction to Healthcare Interpreting

This course is designed for bilingual/bicultural individuals interested in exploring the career choice of healthcare interpreter by developing an awareness of the roles and responsibilities of the interpreter in healthcare settings. It addresses required skills related to both language interpretation and cultural brokering and allows consideration of personal interests and aptitudes.

Upon completion of this course, the student will be able to:

- identify barriers that may limit access to healthcare services for clients with limited English-language proficiency.
- examine the healthcare interpreter's role, responsibilities, and required skills related to both language access and cultural brokering.
- discuss professionalism, standards and ethics, and the complexities of the working environment for healthcare interpreters.
- explain the coursework outline, prerequisites, student responsibilities, costs, and requirements of the healthcare interpreter program.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Complete required introductory course, HCI 300, with grade of C or better.
- Demonstrate bilingual proficiency or competence in English and language of service (hearing/speaking and reading/writing) as certified by accepted state or proprietary bilingual exam, or as documented by a standardized interview/essay rubric with program staff, as designated in current application materials.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Receive application materials through participation in HCI 300.
- Submit completed application by deadline, including HCI 300 transcript or proof of completion and documentation of language competency as designated.
- Applicant selection in any given semester is contingent upon a minimum number of students in the cohort for a given language, and community need for the given language, as well as individual applicant qualifications.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- manage all facets of the interpreter role including the flow of the session, cross-cultural communication, conflict management, and the technical aspects of interpretation while conducting patient-provider encounters and pre and post sessions.
- incorporate and apply the profession’s codified ethical behaviors related to confidentiality and privacy, completeness and accuracy, professional integrity and professional distance, professional development and cultural competence, and the role of advocacy when patient wellbeing or dignity is at risk.
- integrate culturally sensitive strategies and approaches in working with diverse cultures, subcultures, and special populations.
- analyze career opportunities in health care interpreting, the interpreter’s role and scope of practice relative to other healthcare professionals, and the value of ongoing professional development

Career Information

Healthcare interpreting job opportunities are available through in-house hospital interpreter services, private vendors who contract with healthcare agencies, or small-business entrepreneurialism and self-employment, both full time or per diem. Venues may include face-to-face, video conferencing, or language phone services with local or at-a-distance connection and contracts.

Healthcare Interpreting (HCI)

HCl 300 Introduction to Healthcare Interpreting

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for bilingual/bicultural individuals interested in exploring the career choice of healthcare interpreter by developing an awareness of the roles and responsibilities of the interpreter in healthcare settings. It addresses required skills related to both language interpretation and cultural brokering and allows consideration of personal interests and aptitudes.

Upon completion of this course, the student will be able to:

- identify barriers that may limit access to healthcare services for clients with limited English-language proficiency.
- examine the healthcare interpreter's role, responsibilities, and required skills related to both language access and cultural brokering.
- discuss professionalism, standards and ethics, and the complexities of the working environment for healthcare interpreters.
- explain the coursework outline, prerequisites, student responsibilities, costs, and requirements of the healthcare interpreter program.
survey personal skills, interests, and aptitudes in relation to the activities and demands of the healthcare interpreter program and profession.

HCI 310 Healthcare Interpreting I

Units: 3
Hours: 48 hours LEC; 18 hours LAB
Prerequisite: HCI 300 with a grade of "C" or better
Corequisite: AH 110 and BIOL 102; or BIOL 115 & 116 or BIOL 430 & 431
Advisory: SPEECH 301
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for bilingual individuals interested in developing the awareness, knowledge, and skills necessary for effective language interpretation in healthcare settings. It emphasizes the roles and responsibilities of a healthcare interpreter and basic knowledge of common medical conditions, treatments, and procedures in the areas of diagnostics, cardiovascular, renal, ophthalmic, and gastrointestinal specialties. It focuses on insight into language and cultural nuances for specific communities necessary in the art of interpretation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the different ways interpreter services are delivered in healthcare settings.
- differentiate various ways that providers and interpreters can work together to enhance communication with patients.
- explain the interpreter's role in ensuring the patient's rights to confidentiality and informed consent.
- demonstrate beginning skills in modes of interpretation including consecutive, simultaneous, summarization, and sight translation.
- examine how differences in cultural beliefs, cultural practices, or culturally defined roles may arise in the triadic relationship.
- employ appropriate healthcare terminology in English and language of service within clinical scenarios and situations.

HCI 320 Healthcare Interpreting II

Units: 3
Hours: 48 hours LEC; 18 hours LAB
Prerequisite: HCI 310 with a grade of "C" or better
Advisory: SPEECH 301
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for bilingual individuals. It further develops the awareness, knowledge, and skills necessary for effective language interpretation in healthcare settings covered in HCI 310. It emphasizes the roles and responsibilities of a healthcare interpreter and basic knowledge of common medical conditions, treatments, and procedures in musculoskeletal, respiratory, immunologic, and obstetric specialties. It focuses on insight into language and cultural nuances for specific communities necessary in the art of interpretation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate increasing skills in modes of interpretation including consecutive, sight translation, simultaneous, and summarization.
- apply skills for managing the flow of the interpreting session.
- correlate action and response strategies with at least three difficult problem types that can arise in interpretation.
- identify effective ways that differences in communication style may be handled in the triadic relationship.
- examine in growing depth how differences in cultural beliefs, cultural practices, or culturally defined roles may arise in the triadic relationship.
- generate an expanding vocabulary of appropriate health care terminology in English and language of service for use within clinical scenarios and situations.
- analyze and compare the different healthcare systems in the United States and in other countries.
This course is designed for bilingual individuals preparing to become an integral member of the health care team, bridging the language and cultural gap between clients and providers. It further develops interpreting skills covered in HCI 320. Topics include specialized health care service areas, such as genetics, pediatrics, and endocrinology. It also emphasizes the development of cultural competency in the community and workplace.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- exhibit progressive skills in the technical aspects of interpretation.
- demonstrate the ability to manage the flow of the interpreting session.
- employ the ethical decision-making method.
- examine traditional health systems, practices, beliefs, and key health issues of specific ethnic communities.
- incorporate culturally sensitive strategies and approaches in working with diverse cultures.
- employ knowledge and skills of effective communication with special emphasis on cross-cultural communication.
- build an increasingly complex vocabulary of health care related concepts and terminology specific to the different health care service areas.
- discover basic referral resources available in the community.

**HCI 340 Healthcare Interpreting IV**

This course is designed for bilingual individuals completing their preparation to become an integral member of the healthcare team, bridging the language and cultural gap between clients and providers. It further enhances interpreting skills covered in HCI 330. Topics include specialized health care service areas such as men's and women's health, mental health, neonatal intensive care, and death and dying. The course also focuses on careers in interpreting and career preparation.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- incorporate advancing skills in the technical aspects of interpretation.
- demonstrate proficiency in skills for managing the flow of the interpreting session.
- integrate culturally sensitive strategies and approaches in working with diverse cultures, subcultures, and special populations.
- build an increasingly complex vocabulary of health care related concepts and terminology specific to the different health care service areas.
- compile resources available in the community for specialized needs and groups.
- practice self care management strategies to avoid burnout with reference to the range of psychological, social, and emotional issues that may arise for interpreters in the health care setting.
- examine career opportunities in health care interpreting including community, public health, and acute care settings, and assess personal career goals.
- create an effective professional resume.

**HCI 350 Healthcare Interpreting Fieldwork**

This course is designed for bilingual individuals preparing to become an integral member of the health care team, bridging the language and cultural gap between clients and providers. It further develops interpreting skills covered in HCI 320. Topics include specialized health care service areas, such as genetics, pediatrics, and endocrinology. It also emphasizes the development of cultural competency in the community and workplace.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- exhibit progressive skills in the technical aspects of interpretation.
- demonstrate the ability to manage the flow of the interpreting session.
- employ the ethical decision-making method.
- examine traditional health systems, practices, beliefs, and key health issues of specific ethnic communities.
- incorporate culturally sensitive strategies and approaches in working with diverse cultures.
- employ knowledge and skills of effective communication with special emphasis on cross-cultural communication.
- build an increasingly complex vocabulary of health care related concepts and terminology specific to the different health care service areas.
- discover basic referral resources available in the community.
This course is designed for interpreters-in-training to facilitate linguistic and cultural communication between healthcare clients and providers. It provides fieldwork experience applying technical interpreting skills covered in HCI 310, 320, 330, and 340. A portion of this course may be offered in a TBA component of 50 - 60 hours which may include directed practice in precepted clinical settings and fieldwork or workplace experience.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the interpreter’s role and scope of practice relative to other healthcare professionals in the assigned agency and describe the role and scope of practice of these other health team members.
- demonstrate competence in elements of workplace culture and professionalism including work attitude, time management, reporting and documentation, accountability, and maintaining personal and professional boundaries.
- demonstrate basic public speaking abilities in healthcare settings.
- incorporate into practice the profession’s codified ethical behaviors related to confidentiality and privacy, completeness and accuracy, professional integrity and professional distance, professional development and cultural competence, and role of advocacy when patient wellbeing or dignity is at risk.
- manage all facets of the interpreter role in the fieldwork setting including cross-cultural communication, conflict management, and the technical aspects of interpretation while conducting patient-provider encounters and the pre and post sessions.
- evaluate and address specific areas of improvement needed for competent interpreting in healthcare settings through application of reflective practice based on professional standards.
History | American River College

The study of history equips the student with cultural literacy and promotes critical thinking and well-informed perspectives on today’s world. ([academics/arc-program-read-maps](academics/arc-program-read-maps))

Associate Degree for Transfer

A.A.-T. in History

The Associate in Arts degree in History for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of history. Additionally, this degree exposes students to the core principles and practices of the study of history in order to build a foundation for their future personal, academic, and professional paths.

The degree is designed to facilitate students’ successful transfer to certain CSU four-year programs that prepare them for advanced study in graduate and professional programs, as well as a variety of careers including teaching, archival research, public history, government service, journalism, business, and the law. History graduates are well suited to many fields of endeavor that require effective reading, writing, and critical thinking skills, as well historically informed perspectives on today’s global societies.

The Associate in Arts degree in History for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts degree in History for Transfer (A.A.-T) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Catalog Date: June 1, 2020

1Student may choose any course from this last list if not previously used.

The Associate in Arts in History for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence.
- analyze multiple causes for an historical event, and properly evaluate why that event happened.
- identify various interpretations used by historians to explain history.
- identify the major time periods and relevant geography of history.
- analyze and evaluate the major economic, social, political, and cultural developments in history.
- analyze and evaluate the experiences and conflicts of diverse groups of people, including "common people" in history.
- make historical generalizations based on a study and understanding of historical evidence.
History (HIST)

HIST 300 History of Western Civilization

This survey course reviews western civilization from its origins in the Ancient Middle East until the Renaissance. It emphasizes the social, political, economic, cultural, and intellectual forces that have served to define western civilization. The focus is on the cultural legacies and contributions of the Ancient Middle East, Greece, Rome, and Medieval Europe to the development of western civilization.

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- identify various interpretations used by historians to explain the development of western civilization prior to the Renaissance.
- explain why there may be multiple causes of a historical event.
- identify the major eras and relevant geography of western civilization prior to the Renaissance.
- identify and evaluate major economic, social, political, and cultural developments in western civilization prior to the Renaissance.
- identify and evaluate the experiences, conflicts, and connections of diverse groups of people in western civilization prior to the Renaissance.
- make historical generalizations about western civilization prior to the Renaissance based on personal understanding of the historical evidence.
- identify and describe the cultural legacies and contributions of the Ancient Middle East, Greece, Rome, and Medieval Europe to the development of western civilization.

HIST 302 History of Western Civilization

This course is a survey of western civilization from the Renaissance to the present, emphasizing the interplay of social, political, economic, cultural, and intellectual forces in creating and shaping the modern world. The focus is on the process of modernization, stressing the secularization of western society and examining how war and revolution have served to create our world. This course is not open to students who have completed HIST 481.

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence.
- compare and evaluate various interpretations used by historians to explain the development of western civilization since the Renaissance.
- evaluate multiple causes and analyze why a historical event happened
- identify the major eras and relevant geography of western civilization since the Renaissance
- evaluate major economic, social, political, and cultural developments in western civilization since the Renaissance
- evaluate the experiences, conflicts, and connections of diverse groups of people in western civilization since the Renaissance
- draw historical generalizations about western civilization since the Renaissance based on understanding of the historical evidence
- describe and evaluate the major movements and historical forces that have contributed to the development of western civilization

HIST 305 Women in Western Civilization

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area I; CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
Catalog Date: June 1, 2020

This course is a survey of women’s contributions to the major ideas, institutions, and events of Western Civilization. It emphasizes women’s diversified roles from antiquity to the present. This course focuses on the interaction between men and women within a socially and culturally constructed framework. It also examines the effects of the patriarchal family structure on society and the pervasive impact of patriarchy on all institutions of western culture.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the contributions of women in the evolution of western social, cultural, political, and economic institutions within the context of socially- and culturally-imposed limits inherent in the patriarchal system of domination.
- analyze and evaluate the impact of western social, religious, economic, political, and cultural institutions on women’s lives and experiences.
- discuss the role of patriarchy, social stratification, and social construction of gender as historically- and socially-constructed systems of male dominance.
- utilize basic historical and gender-studies concepts and terminology to examine and analyze patriarchy as a system of domination that has defined the nature of gender relations in western society and institutions.
- evaluate the symbiotic relationship between private property, religious ideology, and the creation of the legal system that legitimized the preservation of male dominance in western society.
- comprehend how, to this date, gender relations are strongly influenced by a long history of patriarchal institutions and structures.

HIST 307 History of World Civilizations to 1500

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGRD 116 with a grade of “C” or better. OR ESLR 320 and ESLW 320 with a grade of “C” or better.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area I; AA/AS Area VI; CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
C-ID: C-ID HIST 150
Catalog Date: June 1, 2020

This course surveys world civilizations from antiquity to the 1500s, with a particular emphasis on the dynamic interaction and comparison of diverse peoples, ethnicities, and cultures. Special attention is given to the social, political, economic, cultural, and religious influences that shaped major world civilizations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- correctly use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- identify various interpretations used by historians to explain world history to 1500 C.E.
- analyze multiple causes for and properly evaluate why a historical event happened.
describe the major eras of world history to 1500 C.E.

evaluate major economic, social, political, and cultural developments in world history to 1500 C.E.

assess the experiences, conflicts, and connections of diverse ethnicities and cultures in world history to 1500 C.E.

use historical evidence to formulate historical generalizations about world history to 1500 C.E.

identify the relevant geography of world history to 1500 C.E.

HIST 308 History of World Civilizations, 1500 to Present

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ETSW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area I; AA/AS Area VI; CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
C-ID: C-ID HIST 160
Catalog Date: June 1, 2020

This course is a survey of world history from the 16th century to the present, with particular emphasis on the increased integration of peoples and cultures as the result of the continuing process of globalization. The focus is on the revolutionary transformations of human society and human social relations caused by such new ideas as scientific racism, nationalism, imperialism, and constitutional government. It also covers important trends of the past five-hundred years including the increasing prevalence of migration, the changing nature of warfare, the harnessing of fossil fuels, the growing integration of global economies, and the scientific and technological breakthroughs that are continuing to revolutionize humanity’s understanding of and relationship with the natural world. Through this focus it is possible to better understand the forces that have shaped world society over the past five-hundred years and that continue to shape the world today. These analyses are set within the context of such historical concepts as cause and effect, multiple causation, multiple frames of reference, and historical interpretation from evidence.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- identify various interpretations used by historians to explain world history since 1500 C.E.
- investigate multiple causes for and properly evaluate why a historical event happened and to discuss past events through multiple frames of reference.
- describe the major eras and relevant geography of world history since 1500 C.E.
- evaluate major economic, social, political, cultural, intellectual, and religious developments in world history since 1500 C.E.
- assess the experiences, conflicts, and connections of diverse groups of people in world history since 1500 C.E.
- use historical evidence to formulate generalizations about world history since 1500 C.E.

HIST 310 History of the United States

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ETSW 340.
Transferable: CSU; UC (Credit Limitation: HIST 310 & 483: maximum credit one course)
General Education: AA/AS Area V(a); CSU Area D6; CSU Area F1; IGETC Area 4F
C-ID: C-ID HIST 130
Catalog Date: June 1, 2020

This course is a survey of United States history from its European, African, and Native American backgrounds to 1865. It examines the origin and development of many of this nation's political, social, economic, and intellectual institutions including their influences upon contemporary American life. It also emphasizes such historical concepts as cause and effect, multiple causation, historical context, and historical interpretation. This course is not open to students who have completed HIST 483.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence.
• analyze multiple causes for an historical event, and properly evaluate why that event happened.
• identify various interpretations used by historians to explain United States history up to the Civil War.
• identify the major time periods and relevant geography of United States history up to the Civil War.
• analyze and evaluate the major economic, social, political, and cultural developments in United States history up to the Civil War.
• analyze and evaluate the experiences and conflicts of diverse groups of people, including "common people," in United States history up to the Civil War.
• analyze, describe, and explain the motives, settlement, and organization of European colonies in North America, and the impact on the Native American environment and cultures.
• trace the development of racial slavery in America, explain the reasons for its institutionalization, and analyze the influence of Africans and African culture on American society and institutions.
• analyze the events of the American Revolution and the creation of the United States, including state and national Constitutions, and explain the rationale behind these developments.
• analyze the philosophical, intellectual, and cultural influences on the development of American political and social institutions.

HIST 311 History of the United States

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better.
Transferable: CSU; UC (Credit Limitation: HIST 311 & 484: maximum credit one course)
General Education: AA/AS Area V(a); CSU Area D6; CSU Area F1; IGETC Area 4F
C-ID: C-ID HIST 140
Catalog Date: June 1, 2020

This course is a survey of United States History from 1865 to the present. It also analyzes many of America's political, social, economic, and intellectual institutions, including their influences upon contemporary life. This course also examines this nation's increasing involvement in world affairs. These analyses are set within the context of such historical concepts as cause and effect, multiple causation, and historical interpretation.

This course is not open to students who have completed Hist 484.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence.
• identify various interpretations used by historians to explain United States History since the Civil War.
• analyze multiple causes for and properly evaluate why a historical event happened.
• identify the major time periods and relevant geography of United States history since the Civil War.
• analyze and evaluate the major economic, social, political, and cultural developments in United States history since the Civil War.
• analyze and evaluate the experiences and conflicts of diverse groups of people, including "common people," in United States history since the Civil War.
• make historical generalizations about United States history since the Civil War based on historical evidence.
• analyze and evaluate the increasing role of the United States in a global context since the Civil War.

HIST 318 American Intellectual and Cultural History

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116; OR ESLR 320 and ESLW 320
Transferable: CSU; UC
General Education: AA/AS Area V(a); CSU Area D6; CSU Area F1; IGETC Area 4F
Catalog Date: June 1, 2020

This course is a survey of major themes and developments in American culture and ideas from the colonial to the contemporary period. Special emphasis is given to religious, scientific, literary, artistic, philosophical, and political thought to explore the sources, expressions, and transformation of cultural and intellectual values in the history of the United States.
Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence.
- identify and apply various interpretations used by historians to explain intellectual and cultural developments in the history of the United States.
- analyze the intellectual sources and expressions of core American values such as individualism, liberty, democracy, citizenship, and equality.
- identify, evaluate, and analyze the contributions of specific individuals to public and private discussions of American values.
- analyze the impact of religion, politics, science, philosophy, literature, and art on the formation of American cultural and intellectual values.
- analyze how the definitions of social categories such as race, ethnicity, gender, sexuality, and class have changed in cultural and intellectual expression through time.
- evaluate how social categories such as race, ethnicity, gender, sexuality, and class have influenced the formation of political, economic, cultural, and social ideas in the United States.

**HIST 320 History of the United States: African-American Emphasis**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 and ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(a); AA/AS Area VI; CSU Area D6; CSU Area F1; IGETC Area 4F  
**Catalog Date:** June 1, 2020

This course covers U.S. history from the founding of Jamestown in 1607 through the Civil War. This course begins with a brief overview of the Black American's African heritage. It continues with the role played by African-Americans, their relationships to other groups, and their specific contributions in the growth and development of the nation.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the early history of the United States from an African American perspective  
- identify the origin and significance of American institutions such as slavery, U.S. Constitution, and role of the Federal Government  
- relate to the African American experience from African origins through the Civil War  
- identify the historical geography of the world and the United States including changes in the environment and migrations of populations to and within the territory of the United States  
- examine the contributions of African Americans to U.S. History  
- debate the effect of slavery, stereotyping, and prejudice on African Americans  
- evaluate African American relationships with other ethnic groups

**HIST 321 History of the United States: African-American Emphasis**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(a); AA/AS Area VI; CSU Area D6; CSU Area F1; IGETC Area 4F  
**Catalog Date:** June 1, 2020

This course covers U.S. history from 1865 to present, including coverage of state and local government with an emphasis on the role of African Americans, their relationships to other groups, and their specific contributions in the growth and development of the nation.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• examine U.S. history since the Civil War from an African American perspective
• evaluate the function and continued development of U.S. institutions
• assess the contributions of African Americans to U.S. history
• evaluate African American relationships with other ethnic groups
• analyze the struggle for civil rights from Reconstruction to the present
• debate the effect of segregation, stereotyping, and prejudice on African Americans

HIST 323 History of the United States: The American Indian Experience

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(a); AA/AS Area VI; CSU Area D6; CSU Area F1; IGETC Area 4F
Catalog Date: June 1, 2020

This course is a survey of the North American Indian Nations. It covers the effects of European contact, trade, and colonization. Topics include the effects of United States political, economic, and social policies on Indians throughout U.S. history. Also, it emphasizes American Indian people's attempts to protect their sovereignty and revitalize their societies across time.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and correctly use basic historical terminology.
• distinguish between primary and secondary sources as historical evidence.
• identify and discuss various interpretations used by historians to explain the history of the American Indian experiences in the United States.
• analyze multiple causes for and properly evaluate why specific historical events happened.
• analyze the economic, political, and social systems of a wide variety of Nations which inhabited the North American continent prior to European Contact.
• identify major eras of U.S. history.
• describe and analyze the effect of European colonization and trade upon the original inhabitants of North America.
• analyze the consequences of European wars in North America.
• trace the migration of Europeans and Americans across the continent and explain the rationale for and consequences of these movements.
• evaluate the effect of stereotyping and racism on American Indian Nations during specific periods in U.S. history.
• analyze the effect of U.S. government policies on American Indians, including American Indian attempts to protect sovereignty and cultural traditions.

HIST 325 History of Asian/Pacific Americans

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better
Advisory: CSU; UC
Transferable: AA/AS Area V(a); AA/AS Area VI; CSU Area D3; CSU Area D6; CSU Area F1; IGETC Area 4F
Catalog Date: June 1, 2020

This is a survey lecture course that examines the history of Asian immigrants and Asian Americans in the United States from 1850 to the present. It includes the process of migration and settlement in the United States by people from East Asia, Southeast Asia, South Asia, and the Pacific islands. It examines the historical experience of these groups from a social, political, economic, and cultural perspective, with an emphasis on the following themes: work, family, community formation, government policies, race relations, and ethnic identities. It also addresses the contributions of Asian Americans to the multicultural development of contemporary American society, including the interaction of Asian Americans with people of European, African, Hispanic, and Native descent.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, such as causality, chronology, and change over time.
- distinguish between primary and secondary sources as historical evidence.
- apply various interpretations used by historians to explain the history of Asian/Pacific Americans.
- identify the origins and sources of global Asian migration in the nineteenth and twentieth centuries, including persons from East Asia, Southeast Asia, South Asia, and the Pacific islands.
- explain the historical context of United States government policies toward Asian immigrants, including immigration restrictions and exclusion from citizenship.
- analyze the historical patterns of gender roles and family formation among Asian Americans.
- analyze the effect of racial and ethnic prejudice on Asian populations throughout American history, using appropriate terminology.
- compare and contrast the historical relationships of Asian American to other racial and ethnic groups in American society.
- analyze the efforts by Asians and Asian Americans to incorporate themselves into the social, political, economic, and cultural structure of the United States.

HIST 327 History of the Chicano/Mexican American

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This course is a study of the relationship between the development of American and Mexican civilization in the Western Hemisphere. This course focuses on the role of the Mexican American experience in the U.S. as it was affected by social, political, and economic events. Emphasis is placed on socio-cultural contributions of Mexican Americans to American institutions. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, as well as distinguish between primary and secondary sources as historical evidence
- describe multiple perspectives about an event in American/Chicano history
- analyze multiple causes for and properly evaluate why a historical event happened
- analyze and evaluate the major economic, social, political, and cultural developments in U.S. history since the Mexican American War
- analyze and explain the influence of Mexican Americans on U.S. history
- explain how the history of the U.S. from a Mexican American perspective enhances the overall understanding of U.S. history
- identify the major historical periods and relevant geography of the U.S. since the Mexican American War
- describe the complexity of relationships that Mexican Americans have with other ethnic groups within the U.S.

HIST 330 Women in American History

Units: 3  
Hours: 54 hours LEC  
Prerequisite: ENGWR 102 and ENGRD 116 with a "C" or better; OR ESLR 320 and ESLW 320, with a grade of "C" or better.  
Advisory: None.  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This course offers a survey of U.S. women's history, including the origin and development of the nation's political, social, economic, and intellectual institutions, from pre-contact indigenous societies to the modern era. The diverse roles and contributions of European American, Native American, African American, Mexican American, and Asian American women are emphasized throughout the course.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify and use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- provide multiple causes to explain why a historical event occurred.
- describe an event or controversy in U.S. women’s history from several historical perspectives including race, ethnicity, or social class.
- identify the major eras of U.S. women’s history.
- analyze the contributions of various groups of women to America’s political and economic systems.
- define racism and sexism.
- explain how women’s point of view fits into the overall narrative of U.S. History.

**HIST 340 History of California through 1879**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** ENGWR 102 and ENGRD 116 with a "C" or better; OR ESLR 320 and ESLW 320, with a grade of "C" or better.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(b); CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F  
**Catalog Date:** June 1, 2020

This course is a survey of the early history of California, starting with the original people of California, the discovery and settlement of California by the Spanish, the Mexican period, American conquest and occupation, the Gold Rush, and ending with events through the Constitution of 1879.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- use basic historical terminology.
- identify and distinguish between primary and secondary sources as historical evidence.
- critically evaluate various historical interpretations and perspectives of early California history.
- analyze and properly evaluate the multiple causes of an historical event that happened in California.
- organize California historical events into chronological order and analyze cause-and-effect relationships.
- analyze and describe the consequences of California’s mission, rancho, gold rush, and railroad eras.
- evaluate the place of California’s economy, politics, culture, and controversies within the context of U.S. and world history.
- evaluate the role of California’s geography and climate in shaping human institutions and experiences.

**HIST 341 History of California: 1879 to Present**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** ENGWR 102 and ENGRD 116 with a "C" or better; OR ESLR 320 and ESLW 320, with a grade of "C" or better.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area V(b); CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F  
**Catalog Date:** June 1, 2020

This course is a survey of California history from 1879 to the present. Topics include the economic, social, cultural, and political developments, including the impact of the Constitution of 1879, consequences of railroad expansion, and early twentieth-century urbanization. It also includes the impact of the Great Depression and World War II, water projects, protest and reform movements of the 1960s, the rise of conservatism, and recent political trends.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- correctly use basic historical terminology.
identify and distinguish between primary and secondary sources as historical evidence.
analyse and properly evaluate the multiple causes of an historical event that happened in California.
identify various interpretations used by historians to explain the history of California from 1879 to present.
identify and evaluate significant political, economic, social, and ethnic developments from this period of California history.
analyse California ideas, controversies, and events by placing them into a national and international context.
analyse the role of geography and climate in California in shaping human institutions and experiences.
evaluate various interpretations and analyses of California history from 1879 to the present.
critique political ideas, controversies, and institutions necessary for effective citizenship, especially for residents of California.
analyse primary sources from California history, 1879 to present.
support analytical conclusions with examples drawn from California history.

HIST 343 The California Mother Lode

Units: 0.5 - 3
Hours: 9 - 54 hours LEC
Prerequisite: None.
Advisory: ENGRD 116 with a grade of "C" or better. OR ESLR 320 and ESLW 320 with a grade of "C" or better.
Transferable: CSU
General Education: AA/AS Area V(b); CSU Area D6
Catalog Date: June 1, 2020

This course is a history of the Mother Lode with emphasis on the Gold Rush Era and its effects on the natural environment, human population of the region, and cultural and economic development of California within an international context. Lecture and guided visitations at selected locations in the Mother Lode region complement the classroom instruction. Each combination of classroom and on-site instruction constitutes one half unit of credit. Field trips are required and field trip expense fees may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use historical terminology related to the California Gold Rush.
- critically evaluate various historical interpretations and perspectives of the California Gold Rush.
- analyze and describe the economic, political, and social consequences of the California Gold Rush.
- describe various gold mining techniques and evaluate the long-term environmental consequences of those techniques.
- visit a museum, exhibition, or remnant of a Gold Rush town, evaluate the historical interpretations provided, and make recommendations about ways to improve public interpretive materials.
- organize Gold Rush era events in chronological order and analyze cause-and-effect relationships.
- identify and distinguish between primary and secondary sources as historical evidence.

HIST 364 Asian Civilization

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRD 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area I; CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
Catalog Date: June 1, 2020

This course covers the history of Asian Civilizations from the emergence of agriculture and complex societies to 1800 C.E., with particular focus on India, China, and Japan. Topics include the rise of complex societies across Asia; the relationship between agrarian civilizations and the herders of Inner Asia; state-building and imperial expansion; the emergence of the major Asian philosophies and religious faiths, including that of Islam; Asian technology and innovation; the Mongol conquests; and the entrance of Europeans into the Asian world beginning in the 15th century.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- explain the complexity of defining Asia as a region and the diversity of climates, peoples, geography, and historical experiences encompassed by the term Asia.
- identify various interpretations used by historians to explain Asian History to 1800 C.E.
- investigate multiple causes for and properly evaluate why a historical event happened and to discuss past events through multiple frames of reference.
- describe the major eras and relevant geography of Asian History to 1800 C.E.
- evaluate major economic, social, political, cultural, intellectual, and religious developments in Asian History to 1800 C.E.
- assess the experiences, conflicts, and connections of diverse groups of people in Asian History to 1800 C.E.
- use historical evidence to formulate generalizations about Asian History to 1800 C.E.

HIST 365 Asian Civilization

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area I; CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4
Catalog Date: June 1, 2020

This course is a survey of the political, social, economic, and cultural transformation of India, China, and Japan since 1800. It emphasizes how these countries responded to the challenges of modernity and western imperialism by embracing new ideas, new approaches to statecraft, and new social and cultural norms. Topics include the emergence of western dominance in Asia, the breakdown of states and empires in conjunction with, and partly as a result of, western imperialism, the development of Asian nationalisms and nationalist movements, and the growth of Japanese imperialism and the effects that this had on the rest of Asia.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- explain the complexity of defining Asia as a region and the diversity of climates, peoples, geography, and historical experiences encompassed by the term Asia.
- identify various interpretations used by historians to explain Asian History since 1800 C.E.
- investigate multiple causes for and properly evaluate why a historical event happened and to discuss past events through multiple frames of reference.
- identify the relevant geography of Asian History since 1800 C.E.
- evaluate major economic, social, political, cultural, intellectual, and religious developments in Asian History since 1800 C.E.
- assess the experiences, conflicts, and connections of diverse groups of people in Asian History since 1800 C.E.
- use historical evidence to formulate generalizations about Asian History since 1800 C.E.
- analyze the effects of and responses to colonialism, imperialism, nationalism, and modernity in a variety of Asian societies.
- describe the major eras of Asian History since 1800 C.E.

HIST 367 History of Russia

Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 102 or 103, and ENGRD 116
Advisory: CSU; UC
Transferable: AA/AS Area V(b); CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
General Education: June 1, 2020

Catalog Date:
This course is a survey of Russian history from 1861 to the present. It examines the major social, political, and economic developments that have shaped Russian society and culture. Special attention is given to Russian culture, politics, and protest during the 19th century, the revolutions of 1917 and the Bolshevik rise to power, the creation and expansion of the Soviet state under Stalin, and the decline and collapse of Soviet power.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence
- evaluate various interpretations used by historians to explain Russian history
- evaluate multiple causes and analyze why a historical event happened
- identify the major eras and relevant geography of Russian history
- evaluate major economic, social, political, and cultural developments in Russian history
- evaluate the experiences, conflicts, and connections of diverse groups of people in Russian history
- draw historical generalizations about Russian history based on the historical evidence
- evaluate the major causes and impact of the Revolutions of 1917
- evaluate the major features of the transformation of the Soviet Union under Stalin
- evaluate Gorbachev’s reforms and the causes of the collapse of the Soviet Union

HIST 373 History of Mexico

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area C2; CSU Area D6; IGETC Area 3B; IGETC Area 4F
Catalog Date: June 1, 2020

This course is a survey of the history of Mexico from the pre-classical period to the present. It examines the origins and development of Mexico’s political, economic, religious, and intellectual institutions, their influence on Mexican society and culture, and the resultant legacy that is modern Mexico.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- analyze the major time periods and relevant geography of the history of Mexico from its earliest civilizations to the present.
- prioritize among multiple causes for an historical event and properly evaluate why that event happened.
- assess and interpret Mexican history and contemporary Mexican issues by analyzing relevant historical evidence in appropriate contexts.
- construct and support historical narratives about the experiences and conflicts of indigenous, European, African, and multiracial populations in the development of Mexico.
- critique narratives about the history of Mexico based on appropriate understanding of relevant historical evidence found in primary and secondary source materials.

HIST 374 History of Latin America to 1830

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D6; IGETC Area 4F
Catalog Date: June 1, 2020
This course is a general historical survey of Latin American history from the pre-contact indigenous civilizations to the 19th-century nationalist movements in the region. The focus is on the influence of political, economic, cultural, and demographic factors that shaped Latin America.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- correctly use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- recognize Latin America as a complex region of enormous diversity in climates, peoples, geography, and historical experiences.
- identify various interpretations used by historians to explain Latin American history to 1830 C.E.
- investigate multiple causes for and properly evaluate why a historical event happened.
- describe the relevant geography of Latin American history to 1830 C.E.
- evaluate major economic, social, political, and cultural developments in Latin American history to 1830.
- assess the experiences, conflicts, and connections of diverse groups of people in Latin American history to 1830.
- use historical evidence to formulate historical generalizations about Latin American history to 1830.

HIST 375 The History of Modern Latin America and Caribbean

This course offers a general survey of Latin American history from the 19th century to the present, with focus on social, political, economic, and cultural developments. Issues include Latin America and the Caribbean in the global economy, dictators and democracy, African and indigenous cultures, feminism and gender, cultural politics, social movements and revolution, and relations with the United States and the world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- correctly use basic historical terminology.
- distinguish between primary and secondary sources as historical evidence.
- recognize Latin America as a complex region of enormous diversity in climates, peoples, geography, and historical experiences.
- identify various interpretations used by historians to explain Latin American history since 1830 CE.
- investigate multiple causes for and properly evaluate why a historical event happened.
- describe the relevant geography of Latin American history since 1830 CE.
- evaluate major economic, social, political, and cultural developments in Latin American history since 1830 CE.
- assess the experiences, conflicts, and connections of diverse groups of people in Latin American history since 1830 CE.
- use historical evidence to formulate historical generalizations about Latin American history since 1830 CE.

HIST 399 Studying in Italy: Italian History and Culture

This course offers an study of Italy and its historical development in the setting of the country's rich cultural heritage. The course covers the ancient civilizations of Etruscan and Roman to the age of the Risorgimento and the unification of Italy. The course explores the Italian cultural renaissance and the growth of modern Italy in the late 19th and early 20th centuries. The course is designed to provide students with a comprehensive understanding of Italy's cultural, historical, and political development.
This course, offered as a study abroad course in Italy, surveys Italian history to provide a background for exploring and appreciating Italian life and culture. The focus is on examining the historical context of Italian cultural and artistic expression, thereby informing and enriching our understanding and enjoyment of Italian art and culture. In Rome, this course focuses on the ancient and religious sources of Italian culture. In Florence, it explores and examines how human expression in art, literature, and philosophy served to create a new sense of the possible during the Renaissance. This course also studies how culture reflects human values and how those values can be transformed and at times ennobled by creative genius. A portion of this course may be offered in a TBA component of 25-35 hours which may include museum visits, historical monument and building visits, and Italian cultural and historical site visits.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- examine the subject matter and methodology of history
- understand such historical concepts as cause and effect and multiple causation as a means of developing appropriate historical generalizations
- explore and analyze the causes and impact of the Italian Renaissance
- analyze and evaluate the interrelatedness of art, culture, politics, society, economics, and history
- critically analyze and evaluate primary sources as evidence reflecting Italian culture and history
- evaluate and analyze historical documents and interpretations
- evaluate the historical context of the Italian Renaissance and assess various schools of historical interpretation
- analyze and describe how Renaissance artistic expression relates to Renaissance thought and writings

**HIST 480 History of Western Civilization - Honors**

| Units:   | 3 |
| Hours:   | 54 hours LEC |
| Prerequisite: | Placement into ENGWR 480 through the assessment process. |
| Transferable: | CSU; UC (Credit Limitation: HIST 300 & 480: maximum credit one course) |

This course is a survey of western civilization from its origins in the Ancient Middle East until the Renaissance. This seminar-style course confronts the major historical issues through class discussion. The class challenges students to interpret the past by critically analyzing both primary sources and relevant works by leading historians. Emphasis is on the social, political, economic, cultural and intellectual forces that have served to shape the modern world. This course is not open to students who have completed HIST 300.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence
- analyze various interpretations used by historians to explain the development of western civilization prior to the Renaissance
- evaluate multiple causes and analyze why a historical event happened
- identify the major eras and relevant geography of western civilization prior to the Renaissance
- analyze major economic, social, political, and cultural developments in western civilization prior to the Renaissance.
- evaluate the experiences, conflicts, and connections of diverse groups of people in western civilization prior to the Renaissance.
- draw historical generalizations about western civilization prior to the Renaissance based on the historical evidence.
- evaluate the cultural legacies and contributions of the Ancient Middle East, Greece, Rome and Medieval Europe to the development of western civilization.
- critically analyze primary sources and use them to support historical interpretations.

**HIST 481 History of Western Civilization - Honors**

| Units:   | 3 |
| Hours:   | 54 hours LEC |
| Prerequisite: | Placement into ENGWR 480 through the assessment process. |
| Transferable: | CSU; UC (Credit Limitation: HIST 302 & 481: maximum credit one course) |

This course is a survey of western civilization from its origins in the Ancient Middle East until the Renaissance. This seminar-style course confronts the major historical issues through class discussion. The class challenges students to interpret the past by critically analyzing both primary sources and relevant works by leading historians. Emphasis is on the social, political, economic, cultural and intellectual forces that have served to shape the modern world. This course is not open to students who have completed HIST 302.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify and correctly use basic historical terminology, and distinguish between primary and secondary sources as historical evidence
- analyze various interpretations used by historians to explain the development of western civilization prior to the Renaissance
- evaluate multiple causes and analyze why a historical event happened
- identify the major eras and relevant geography of western civilization prior to the Renaissance
- analyze major economic, social, political, and cultural developments in western civilization prior to the Renaissance.
- evaluate the experiences, conflicts, and connections of diverse groups of people in western civilization prior to the Renaissance.
- draw historical generalizations about western civilization prior to the Renaissance based on the historical evidence.
- evaluate the cultural legacies and contributions of the Ancient Middle East, Greece, Rome and Medieval Europe to the development of western civilization.
- critically analyze primary sources and use them to support historical interpretations.
This course is a survey of western civilization from the Renaissance to the present. This seminar-style course confronts the major historical issues through class discussion. - analyze various interpretations used by historians to explain the development of western civilization since the Renaissance
- evaluate multiple causes and analyze why a historical event happened
- identify the major eras and relevant geography of western civilization since the Renaissance
- evaluate the experiences, conflicts, and connections of diverse groups of people in western civilization since the Renaissance
- draw historical generalizations about western civilization since the Renaissance based on the historical evidence
- critically analyze primary sources and use them to support historical interpretations

### HIST 483 History of the United States - Honors

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** Placement into ENGWR 480 through the assessment process.  
**Transferable:** CSU; UC (Credit Limitation: HIST 310 & 483: maximum credit one course)  
**General Education:** AA/AS Area V(a); CSU Area D6; CSU Area F1; IGETC Area 4F  
**C-ID:** C-ID HIST 130  
**Catalog Date:** June 1, 2020

This course is an in-depth study of American history from the Colonial through the American Civil War eras. This seminar-style honors course utilizes class discussion based on the reading of selected monographs and primary documents. Particular emphasis is placed on the interrelationships of the developing American political, economic, social, and cultural institutions. Critical thinking skills are emphasized in responding to these issues. This course is not open to students who have completed HIST 310.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the major time periods, geographical settings, and human experiences of United States history from the colonial period to the Civil War
- differentiate between primary source material and secondary source material and their uses in historical study
- investigate and analyze multiple causes of historical events by applying relevant factual details from primary and secondary source materials
- synthesize multiple interpretations about historical change in the United States from its colonial origins to the Civil War period, with a focus on the diversity of racial, cultural, gender, and class identities that foster multiple interpretations
- evaluate the varieties of indigenous American historical experience before and after the arrival of European and African settlers in the American continents
- assess the motives, settlement, and organization of European colonies in North America, and evaluate their impact on existing environments and indigenous cultural practices
- analyze the development and institutionalization of racial slavery in North America and appraise the influence of African cultures and experiences on the development of American society and institutions, including the impact of racial slavery on family structure and gender roles
- assess the economic, scientific, technological, and ecological interactions on the human populations of the American continents from before the colonial period to the middle of the nineteenth century
- analyze the major events and experiences of the revolutionary and early national periods in United States history, including the history and function of the political institutions of the United States, the creation of state and national constitutions, and the participation of individuals from multiple racial, gender, cultural, and social backgrounds in these events
- formulate independent historical interpretations by applying valid and relevant factual information from source material
- integrate knowledge of historical research and interpretation to review critically publications and documents relating to the history of the United States from the colonial period to the Civil War
demonstrate an understanding of America's growth in a global context

HIST 484 History of the United States - Honors

Units: 3
Hours: 54 hours LEC
Prerequisite: Placement into ENGWR 480 through the assessment process.
Transferable: CSU, UC (Credit Limitation: HIST 311 & 484: maximum credit one course)
General Education: AA/AS Area V(a); CSU Area D6; CSU Area F1; IGETC Area 4F
C-ID: C-ID HIST 140
Catalog Date: June 1, 2020

This course is an introduction to the study of American history from 1865 to the present day. This seminar-style honors course utilizes class discussion based on the reading of selected monographs and primary documents. Particular emphasis will be placed on the interrelationships of American political, economic, social, and cultural developments. Critical thinking skills are emphasized in responding to these issues. This course is not open to students who have completed HIST 311.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discern and explain the implications of the interrelationships of major social, ethnic, cultural, political, and economic institutions
- analyze specific historic events and major historic trends by recognizing and evaluating options, making distinctions, recognizing implications, and applying prevailing data
- examine the basic elements of historical research and scholarship: evidence, historiography, and critical reviews of existing books and articles
- construct historical analysis from a combination of theory and applied knowledge
- differentiate between primary source material and secondary source material and their uses in historical study
- synthesize multiple interpretations about historical change in the United States from the Civil War through the modern Civil Rights era with a focus on the diversity of racial, cultural, and class identities that foster multiple interpretations
- integrate knowledge of historical research and interpretation to review important publications and documents relating to the history of the United States from the Civil War to the present

HIST 494 Topics in History

Units: 0.5 - 4
Hours: 9 - 72 hours LEC
Prerequisite: None.
Advisory: HIST 302
Transferable: CSU
General Education: AA/AS Area V(b)
Catalog Date: June 1, 2020

This course provides the opportunity for concentrated study on specialized topics in History. It covers topics from a wide range of academic disciplines including anthropology, economics, engineering, fine arts, history, law, life science, literature, mathematics, philosophy, political science, sociology, psychology and varies in content and scope with the interests and expertise of both the instructors and the students. This course may be taken four times on different topics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe how history is broad, multi-faceted, controversial, relevant for all disciplines, and is not necessarily restricted to the one discipline commonly referred to as "history"
- examine the discipline of history itself - its subject matter and methodology
- employ such historical concepts as cause and effect and multiple causation as a means of developing appropriate historical generalizations
- identify and critically analyze the interrelatedness of art, culture, politics, society, economics and history
- critically analyze and critique primary sources as evidence reflecting a culture and an era
- write essays and other writings that responds to, evaluates, and analyzes historical documents and interpretations
- assess various schools of historical interpretation

Independent Study is an opportunity for the student to extend classroom experience in the subject of history, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Humanities is the study of painting, sculpture, literature, music, theater, and philosophy with the goal of discovering important ideas about our human condition. Humanities courses examine key arts and ideas as found in ancient through modern Europe, Asia, the Middle East, and the Americas. The Humanities department also offers courses in the Hebrew Bible (Old Testament), the New Testament, world religions, and atheism.

Humanities is an interdisciplinary program committed to learning, reflection, and action predicated upon engagements between and across academic disciplines including religion, philosophy, literature, music, theater, painting, architecture, and sculpture. Our courses recognize and explore the dynamics of differences throughout human history, thought, experience, and expression by examining individual thinkers, artists, works, and ideas in their particular cultural and historical contexts. To pursue Humanities is to become a caring and critical co-investigator of how human beings encounter culture, community, place, time, consciousness, faith, meaning, representation, and change in a complex and globally interconnected world.

This course is a survey of Western culture that focuses on the human values expressed through painting, sculpture, architecture, music, literature, and philosophy. Emphasis is on the civilizations of Greece, Rome, and the Middle Ages. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the role of the arts in society.
- analyze major works of visual arts, music, and literature from each of the periods presented.
- evaluate and logically discuss in written and oral form key philosophical concepts developed in western culture from ancient times through the Middle Ages.
- compare thematic similarities across a broad range of artistic media, including oral and written literature, music, theatre, visual arts, and architecture.

This is a non-chronological course that introduces the humanities, primarily architecture, music, painting, poetry, sculpture, theatre, and film. Emphasis is on identifying, appreciating, analyzing, interpreting, and understanding various masterworks, primarily from Europe and America. Field trips may be required.
Upon completion of this course, the student will be able to:

- identify the key components of various genres of art (painting, sculpture, architecture, music, drama etc.)
- analyze a work of art, including its components, structure, message, meaning, and function
- compare and contrast two or more works of art of the same genre
- examine two or more works of art from different genres in order to understand their commonalities and differences of historical context, form, message, and meaning
- identify historically significant works of art (i.e. “great works” of Michelangelo, Beethoven, Frank Lloyd Wright, and others)

HUM 302 Global Humanities: Atheism in Creativity, Thought, and Inspiration Traditions

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate cultural literacy by interpreting the place and significance of humanities materials within a particular cultural context.
- contrast different approaches (personal, historical, contextual, formal, thematic) to evaluating a work (e.g. musical selection, poem, essay, painting, building, garden, constructed landscape, website).
- identify significant arts, artists, ideas, and religious and cultural perceptions of atheism as they have evolved over the course of the human cultural record globally.
- compare similarities and differences between atheism and ideas conflated inaccurately with atheism across different artistic media, including oral and written literature, music, theater, visual arts, and architecture.

HUM 310 Modern Humanities

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the role of the arts in society.
- analyze major works of visual arts, music, and literature from each of the periods presented.
- evaluate and logically discuss in written form key philosophical concepts developed in Western Culture from the Renaissance to the Modern Age.
- compare thematic similarities across a broad range of artistic media, including oral and written literature, music, theatre, visual arts, and architecture.
- identify significant arts, artists, ideas, and religious and cultural concepts as they have evolved in European and American cultures since the sixteenth century.
identify connections between earlier and later arts and ideas as they have developed in response to cultural and political changes in Europe and America.

HUM 320 Asian Humanities

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B  
Catalog Date: June 1, 2020

This course surveys traditions, cultures, literatures, art, music, and film of India, China, and Japan from ancient times to the present. Emphasis is on the inter-relationships of the arts, literatures, and philosophies in their historical contexts within each geographical area. Topics may include arts and cultures of other Asian countries such as Vietnam, Laos, Cambodia, Thailand, and Korea.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify significant arts, ideas, and personalities past and present from Indian, Chinese, and Japanese cultures
- compare and contrast major similarities and differences between Indian, Chinese, and Japanese cultural values
- analyze the core ideas and values in the religions and of Hinduism, Buddhism, Taoism, Confucianism, and Shintoism

HUM 324 Global Islam: Culture and Civilization

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C2; IGETC Area 3B  
Catalog Date: June 1, 2020

This course is a comprehensive introduction to Islamic cultures in a variety of geographic settings from the 7th century to the present, with emphasis on religious/philosophic concepts, and their expression in literature and the arts. It focuses on Arab, Persian, African, Asian, and American contributions. Topics include the origins and development of the religion in its formative period (the prophetic career of the Prophet Muhammad, the Qur’an, Islamic belief and ritual, Islamic law, early artistic expressions, and popular spirituality) as well as debates surrounding Islam in the contemporary world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the various social, political, and religious structures in place at the birth of Muhammad in the Pre-Islamic Middle East.
- identify and comprehend how Prophet Muhammad’s responses to the personal, social, political, and religious challenges of his time differed from pre-Islamic responses and became distinctly Islamic.
- comprehend the significance of the life and death of the Prophet Muhammad as it informs the life of Muslims both past and present in a variety of geographic locations.
- identify the origin, development, collection, and transmission of the Qur’an in Islam.
- identify and comprehend the role of the Qur’an as it informs the arts, architecture, literature, music, cultural, and personal lives of Muslims.
- identify and differentiate between the multiple and distinct Islamic voices arising as a result of Prophet Muhammad’s death and the subsequent struggle for succession and the construction of Islamic authority in the Muslim world including the including Sunni, Shi’a, Sufi, and Wahhabi paths.
- identify, examine, and explain the multiple and distinct Islamic methods and means by which the Qur’an is interpreted in both historical and contemporary contexts.
- assess and deconstruct popular misconceptions and mischaracterizations of Islam.
- identify, contextualize, and discern multiple and distinct Islamic responses to contemporary social issues including gender discourses, politics, power, peace, violence, global religious pluralism, and love.
- identify, examine, and explain the impacts of European colonialism on the Muslim world.
- identify, examine, and recognize the contributions of artists, poets, musicians, and writers from differing genders and cultures within the Islamic tradition.
develop the critical thinking skills necessary for formulating an analytical framework relevant to the study of global cultures, contemporary American religious pluralism, and the history of Islam.

HUM 326 Middle Eastern Humanities

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the roots of Middle Eastern societies as found in ancient texts and arts from Mesopotamia, Arabia, Israel, and Egypt
- compare and contrast the basic principles, texts, and social developments of major religions of the Middle East, including Judaism, Christianity, and Islam
- identify significant artforms of Persian, Ottoman, Jewish, and Arabic cultures
- analyze concepts and conflicts of the major culture groups in the region, such as the Sunni Muslims, Shi’ite Muslims, Wahhabis, Persians, Jews, and Palestinians
- analyze the current events in the Middle East as they relate to this region's cultural values and historic roots

HUM 330 Humanities of the Americas

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze major works of literature, music, and the visual arts from each of the periods, regions, and cultures presented
- compare thematic similarities across a broad range of artistic media, including oral and written literature, music, theater, visual arts, and architecture
- compare the arts and ideas of earlier and later cultures as they have developed in response to changing ethnic, racial, historical, and social forces in the Americas
- analyze the uniquely American characteristics of the arts of the various cultural traditions of the Western Hemisphere
- identify significant arts, artists, ideas, and cultural concepts as they have evolved in American culture
- appraise the role of the arts in American society

HUM 355 Introduction to World Religions
This course surveys selected major world religions. Emphasis is on the origins, development, beliefs, practices, social ethics, and ethnic/cultural issues of indigenous tribal religions, Hinduism, Sikhism, Jainism, Buddhism, Confucianism, Taoism, Shintoism, Judaism, Christianity, and Islam. This course focuses on the central beliefs and practices of these religions using selected material from each religion’s sacred texts and arts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define basic terms and concepts of the religions studied.
- explain the effects of key religious beliefs, practices, and cultural conflicts on the families and societies of regions studied.
- describe the historical developments of the religions studied.
- compare and contrast key beliefs and worldviews of the religions studied.
- evaluate the contributions of and tensions between several culturally diverse religious traditions in selected regions of the world.
- identify the influences of earlier religious traditions on later developing religions.

HUM 360 Introduction to the Old Testament (The Hebrew Bible)

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This academic and non-sectarian course provides a literary, theological, and historical approach to the Hebrew Bible (also called the Old Testament). Ancient Israelite society and beliefs prior to the Common Era are explored primarily through a study of this biblical text, supported by the study of Middle Eastern cultural artifacts, non-biblical texts, and scholarly theories and archaeological studies related to the Hebrew Bible.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify key Bible figures and their roles.
- describe the evolving beliefs and assumptions about the land and people of Israel, their God, and neighboring cultures.
- examine major academic theories about the Hebrew Bible’s structure, message, and audience.
- evaluate central themes developed by Hebrew Bible writers.
- compare differing points of view of several major Hebrew Bible book authors.
- summarize key attributes of God and the Israelites (Hebrews) as found in the Hebrew Bible.

HUM 365 Introduction to the New Testament

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This academic and non-sectarian course provides a literary, theological, and historical approach to the New Testament. These canonical texts of the early Christian community are analyzed in relation to both Judaism and the Greco-Roman world. Topics include contemporaneous religious ideas about the Messiah, the afterlife, the origin of the gospels, the nature of inspiration, transmission of documents and ideas, important Jewish groups, the politics of Palestine under the Romans, and the role of Paul.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze dating and authorship of New Testament (NT) documents using internal and external sources.
- analyze theories of origins such as the "Q" source and transmission of NT texts.
- identify Christian theological ideas as connected to and different from Judaism and other Greco-Roman religious influences.
- define and analyze ideas, symbols, and images in apocalyptic texts.
- compare and contrast the four gospels in terms of the authors' goals, themes, audiences, and kerygma (proclamations about Jesus).
- describe the early Christian community's experience and challenges as found in the gospels and Paul's epistles.
- identify the NT sources of ideas and images that have influenced subsequent Christian worship practices, arts, and music.

HUM 494 Topics in Humanities

Units: 0.5 - 4
Hours: 9 - 72 hours LEC
Prerequisite: None.
Advisory: ESLW 320, or placement through the assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides the opportunity for concentrated study on specialized topics in the Humanities. Each offering focuses on the integration of arts and ideas in the works of a particular time and place and/or illuminates a selected theme. Refer to class schedule for current topic. Individual field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the inter-relationship between specific works of art and the ideas that they express.
- analyze the role that a particular temporal and/ or geographic context or selected artistic or philosophical theme has/ had in forming and given body of visual and performance arts.
- compare and contrast key works from the time, place, or theme covered in the course.
- evaluate the contribution of the arts and ideas of the course selected time, place, or theme, to contemporary global culture.
- interpret the constraints and enhancements that the time, place or theme imposes/d on the human achievements studied.

HUM 495 Independent Studies in Humanities

Units: 1 - 3
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Horticulture | American River College

Associate Degrees

A.S. in Horticulture

This degree represents several areas of study in Horticulture: arboriculture, floriculture, landscape horticulture and landscape design, olericulture, pomology, and viticulture. Horticulture is the science, art and skill of plant cultivation and the focus of the program is to prepare horticulturalists to work and do research in the many disciplines the industry has to offer. The degree program concentrates on plant identification, landscape design, construction and maintenance, soils and plant nutrition, plant production and marketing, irrigation and water conservation, integrated pest management, and sustainable horticultural practices. Work experience is required.

Catalog Date: June 1, 2020

The Horticulture Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify and select plant materials that are used for landscapes in the northern California regions.
- analyze a landscape site and create a complete and appropriate landscape design for that site.
- analyze a landscape design and apply the sustainable installation procedures necessary to implement the design.
- assess a landscape and apply the sustainable landscape maintenance operation techniques required.
- assess a soil analysis and apply the appropriate steps to provide for plant health and soil sustainability.
- apply the plant production options to produce landscape nursery stock by sexual and asexual methods.
- diagnose plant pest signs and symptoms.
- formulate a pest management plan using the principles of integrated pest management and recognizing the requirements for licensing or certification.
- formulate a marketing plan for a retail nursery and apply the techniques for selling plants and related products.
- utilize the sustainable methods of plant growth and production for ornamental and edible plant materials.
- identify and then apply safe operating procedures and practices to all horticultural operations.
- safely and efficiently operate pesticide application equipment.

Career Information

Horticulturists find careers in landscape horticulture, which includes the production, marketing and maintenance of landscape plants, as well as the landscape design/build industry, which includes design, construction, and maintenance of outdoor and interior landscapes. Graduates can find careers in the nursery industry, which includes plant production and retail garden centers, and the landscape construction and maintenance industry. Opportunities are with industry, government, education and research, and self employment.

A.S. in Landscape Design Technology

This degree is a bi-disciplinary study of horticulture resources and design fundamentals. It includes an in-depth study of plant materials, irrigation, landscape design, and site planning. Topics such as landscape computer-aided design, surveying, and construction measurement techniques, are also covered.

Catalog Date: June 1, 2020

The Landscape Design Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- select plant materials that are used for landscapes.
- solve landscape design problems.
- analyze typical landscape design projects using the design process.
- communicate landscape design solutions effectively.

Career Information

Landscape architects and landscape architect technicians are responsible for the overall design and detailed drawings of a wide range of projects in outdoor spaces including commercial and residential developments, parks and recreation areas, as well as master plans for the management of forested lands. Employment of landscape architects and landscape architect technicians is expected to increase as a result of the increasing emphasis on sustainability land development and design.

Certificates of Achievement

Horticulture Certificate

This certificate represents several areas of study in Horticulture: arboriculture, floriculture, landscape horticulture and landscape design, olericulture, pomology, and viticulture. Horticulture is the science, art and skill of plant cultivation and the focus of the program is to prepare horticulturalists to work and do research in the many disciplines the industry has to offer. Student Learning Outcomes

Upon completion of this program, the student will be able to:

- select plant materials that are used for landscapes.
- solve landscape design problems.
- analyze typical landscape design projects using the design process.
- communicate landscape design solutions effectively.

Career Information

Landscape architects and landscape architect technicians are responsible for the overall design and detailed drawings of a wide range of projects in outdoor spaces including commercial and residential developments, parks and recreation areas, as well as master plans for the management of forested lands. Employment of landscape architects and landscape architect technicians is expected to increase as a result of the increasing emphasis on sustainability land development and design.

Certificates

Floristry Certificate

The Floristry certificate provides well-balanced training in the fundamentals of floral design, the identification of flowers and foliage, the care of fresh cut product and the sources of floral materials. Courses cover special event floral design such as weddings, funerals and holidays, and prepare students to participate in the varied floral enterprises.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- diagnose plant pest signs and symptoms
- formulate a pest management plan using the principles of Integrated Pest Management (IPM)
- recognize basic botanical structure and functions and how plants relate to the environment
- demonstrate the hands-on skills used in plant propagation including seed and vegetative techniques
- assess and implement hands-on skills of construction operations, such as using wood, pavers, irrigation components, and sustainable soil preparation and grading
- recognize and comply with the state water regulations that affect landscaping
Career Information

This certificate helps individuals, new to or already in the field, market themselves to both landscape and plant production horticulture fields.

Landscape Design Certificate

This certificate provides individuals with a basic horticulture background and a broad experience in landscape design, including landscape CADD.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize basic botanical structure and functions and how plants relate to the environment.
- develop construction drawings using the components included in a set of landscape plans.
- assess and apply the use of drafting equipment and techniques as they relate to landscape design and landscape architecture.
- assess, evaluate, and utilize supportive design techniques such as plant materials, space management, energy conservation, and elevation change and grading.
- demonstrate the various formats for design presentations.
- create a new landscape design project using the CADD software program.

Career Information

Career opportunities exist with design firms and landscape contractors.

Plant Production Certificate

This certificate provides individuals with a basic horticulture background and specific experience in landscape plant production, marketing and sales, facilities, Integrated Pest Management (IPM) skills, and license or certificates requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize basic botanical structure and functions and how plants relate to the environment
- propagate plants, including seed and vegetative techniques
- diagnose plant pest signs and symptoms
- apply the basic practices involved in commercial nursery operations
- identify the different display techniques and advertising practices used in the nursery industry
- recognize the basic principles of pest control and the requirements for licensing and/or certification

### Career Information

Career opportunities exist with plant researchers, wholesale nurseries, and retail nurseries.

### Sustainable Landscaping Certificate

This certificate provides students with a basic horticulture background and specific experience in sustainable landscape installation and maintenance, including the use of sustainable principles and practices.

**Catalog Date:** June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize basic botanical structure and functions and how plants relate to the environment
- assess and implement hands-on skills of construction operations, such as using wood, pavers, irrigation components, and sustainable soil preparation and grading
- recognize and comply with the state water regulations that affect landscaping
- assess and implement the hands-on skills of sustainable landscape management and their techniques
- utilize irrigation water auditing techniques and select equipment to correctly irrigate, schedule, and conserve water in the landscape
- compare and contrast conventional and sustainable landscape methods
- evaluate existing landscapes to enable maintenance with ecologically sustainable practices
- evaluate sustainable products and methods for use in the landscape
- demonstrate proper pruning of a plant
- demonstrate proper techniques of planting and transplanting
- select a proper plant for a given situation
- recognize and identify 150 plant species and/or varieties utilizing taxonomic plant key techniques
- employ the basic principles of irrigation design

Career Information
Career opportunities include positions with landscape construction and maintenance firms, municipalities, and the state.

Horticulture (HORT)

HORT 100 Integrated Pest Management in the Landscape

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None
Corequisite: HORT 300
Catalog Date: June 1, 2020

This course is a study of local plant pests including weeds, diseases, invertebrates, and vertebrates. It includes recognition of symptoms and causes, life cycle of the pests, host and habitat relationships, and methods of control. Field trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate the economic significance of plant pest problems in horticulture
- identify conventional pest control options and explain why they are no longer desirable
- diagnose plant pest signs and symptoms
- identify plant pests and beneficial organisms as evident from existing signs and symptoms
- formulate a pest management plan using the principles of integrated pest management
- calculate the accurate quantity of pest control substance to be used on a given area
- outline basic laws, regulations, and public agencies governing the use of pesticides
- explain the proper use of Personal Protective Equipment for pesticide application
- safely and efficiently operate pesticide application equipment

HORT 105 Pest Control Licensing or Certification

Units: 2
Hours: 36 hours LEC
Prerequisite: HORT 300 with a grade of "C" or better
Advisory: HORT 100
Catalog Date: June 1, 2020

This course introduces the safe and proper use of horticultural chemicals, laws and regulations, and the Integrated Pest Management (IPM) principles involved. It covers the laws and regulations for operators, applicators, and advisors, including the study of weeds, diseases, insects, and accepted standards for control.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize the basic principles of pest control and the requirements for licensing and/or certification.
- identify horticultural pests.
- safely use pest management equipment, materials, and supplies.
- demonstrate the skills required to pass California Department of Pesticide Regulation licensing exams.

HORT 110 Irrigation Design

Units: 2
Hours: 36 hours LEC
Prerequisite: HORT 300 with a grade of “C” or better
Catalog Date: June 1, 2020

This course is a study of water hydraulics and irrigation equipment including drip lines, heads, pipes, pumps, clocks, and valves. Irrigation design, which includes preparing plans, dealing with measurement, head layout, pipe sizing and specifications, is covered. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain and analyze California’s water storage and delivery system.
- assemble landscape irrigation piping and heads to effectively distribute irrigation water.
- employ the basic principles of irrigation design.
- demonstrate skills in the design and preparation of irrigation plans.
- assess the correct identification and application of irrigation system components.
- diagnose and correct issues affecting irrigation system efficiency.

HORT 140 Advanced Student Projects

Units: 2
Hours: 108 hours LAB
Prerequisite: HORT 300 with a grade of “C” or better
Catalog Date: June 1, 2020

This course provides the student with an opportunity to pursue advanced projects which are selected by the department.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Apply horticulture practices to an advanced project.
- Demonstrate the techniques of project development through research and planning.
- Employ skills in record keeping during a project and the final presentation of the project.

HORT 143 Horticulture Skills Development

Units: 1
Hours: 54 hours LAB
Prerequisite: None
Corequisite: Completion or current enrollment in a college level horticulture class.
Catalog Date: June 1, 2020

This course offers the opportunity to develop technical, creative, and business skills learned in other horticulture classes. Participation in assigned, supervised projects to
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper watering of plants
- identify plant pest problems and select proper methods of control
- demonstrate proper pruning of a plant
- demonstrate proper techniques of planting and transplanting
- outline and apply basic principles of container plant design
- select a proper plant for the situation
- formulate a fertilizer application plan for a given planting area
- research and apply the propagation technique correct for the plant and season
- evaluate irrigation system needs and problems and recommend a solution
- calculate the cost of plants, media, and containers used in production

HORT 200 Introduction to Retail Floristry

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course presents fundamentals of design techniques and skills practiced in the floral industry. Topics include design mechanics, guides to design, identification of flower and foliage shapes and their use, cut flower care, corsage practice, and containers and designers’ aids. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify floral specimens used in commercial floristry by scientific names and availability
- process and display cut flowers
- assess floral wholesale sources and procure floral materials for flower shop use
- assess and select appropriate mechanics for the type of vase and container arrangement
- assess and utilize floral materials to create a visually appealing and salable arrangement
- apply the principles of color theory to floral design
- demonstrate methods in merchandising floral materials

HORT 201 Floral Design

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course presents the theories and techniques of basic/intermediate floral design. Identification of wholesale sources, origin of product, and seasonal price fluctuations in the industry and market are discussed. This course emphasizes design techniques including line, shape, and form. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- produce floral arrangements using line, shape, and form
• discuss color theory and its use in floral design
• create symmetrical and asymmetrical floral designs
• incorporate negative space into floral arrangements to enhance designs
• effectively integrate textures into floral designs

HORT 202 Corsage and Wedding Floral Design

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course presents the history and uses of wedding and body flower designs. The principles, methods, and practices used to create wedding bouquets and arrangements are explored and practiced. The techniques for wiring, taping, and gluing corsages, and the tools and materials for creating them and other body flower designs, are taught and practiced. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• produce wedding pricing calculations
• describe the history of American wedding and body flowers
• demonstrate the proper handling of flowers and greens to preserve freshness and visual appeal
• identify the elements involved in performing a wedding consultation
• apply techniques for creating a variety of types of wedding bouquets and body flowers
• create displays for use in weddings, ceremonies, and receptions
• source and purchase flowers and accessory items for wedding designs

HORT 203 Sympathy Design and the Mass Market

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course presents the theories of sympathy and tribute floral design. Design applications for standing, flat sprays, set work, and casket covers are included, as well as their delivery and setup. The mass market place in floral design is explored. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• relate the history of sympathy floral design to a specific design.
• apply design theory to the design and creation of casket covers, standing sprays, flat sprays, and set pieces.
• properly prepare arrangements for their delivery.
• develop marketing skills for working with mortuaries and cemeteries while meeting the needs of the family.
• identify distinctions between mass and retail markets in the floral industry.

HORT 208 Interior Plants

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
This course examines the indoor plant maintenance business as well as interior plant care for retail use. It includes plant identification and selection, location and design practices, care and maintenance, as well as purchasing and sales aspects. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate basic knowledge of the history of interior plants and careers in the interiorscape industry.
- assess the impact of plants in the interiorscape on human quality of life.
- understand the environmental requirements of common interior plants.
- identify the major interiorscape plants used in retail floral and the interior plant industry.
- demonstrate how to market interior plants for sale by selecting appropriate plant materials and accessories for use in interior landscaping and for retail purposes.
- demonstrate positive customer service skills through role play of customer contact.
- find and interpret the usefulness of interior plantscaping resources including research articles and websites.
- identify and diagnose common pest problems with interior plants.

HORT 298 Work Experience in Horticulture

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to the field of horticulture with a cooperating site supervisor. Students are advised to consult with the Horticulture Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of horticulture. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the field of horticulture related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
HORT 300 Introduction to Horticulture

Designed to inform those seeking a career in horticulture, this course surveys sustainable principles and practices of horticulture. Emphasis is on plant growth, care and appearance, and how those are influenced by plant structure, function, and growing environment. Topics include plant naming, growing conditions and processes, cultural practices, propagation, pruning, careers in horticulture, pest problems and control, and use of references for future learning.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research horticultural occupations and associated employment requirements and opportunities
- explain how plants are classified and given their scientific names
- label plant parts and explain the function of each part
- identify the cultural requirements of plants
- list and define environmental conditions required for successful plant growth
- diagnose growing conditions that lead to plant pest problems
- distinguish between monocotyledonous and dicotyledonous plants and explain differences in their growth
- research and choose a plant that satisfies a given set of environmental and usability criteria
- differentiate between sexual and asexual propagation
- choose and sow seed that are appropriate for the current season
- describe differences between field soil and container medium and explain reasons for these differences
- predict how water will move from container soil to field soil and vice-versa
- formulate container medium appropriate for good plant growth, identify components in the medium, and explain the purpose of each component
- chart the observed growth of a plant

HORT 302 Soils, Soil Management, and Plant Nutrition

This course is a study of the nature and properties of soils and their relationship to plant needs. Topics include soil origins and importance, soil and water conservation, life in the soil, and soil fertility. Soil components, structure, and methods to sustain healthy soils and the populations of organisms within and on it are analyzed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the basic principles of soil management including structure, water, organic matter, pH, and salinity.
- evaluate the techniques needed to evaluate soil productivity and fertility including soil sampling and testing.
- demonstrate skills in problem solving in relationship to irrigation practices and erosion prevention.
- maintain or return soils to a healthy structure capable of supporting plant and microorganisms.
- identify the soil organisms that support soil health and plant life.
- describe the complex relationships between soils physical components, soil life and a soil's ability to support plant growth.
promote and employ soil and water conservation methods.

HORT 305 Plant Identification-Fall Selections

This course is a study of the identification, growth habits, culturally sustainable methods, and uses of ornamental woody and herbaceous plants in the California landscape. Emphasis is on those plants best observed in the fall and winter seasons and includes both native and non-native species as well as some plants with an edible use component. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize and utilize the binomial method of plant nomenclature and plant identification terminology.
- utilize a taxonomic plant key by identifying by leaf, flower, fruit, seed, bark and growth habit those plants best observed during California's fall and/or winter seasons.
- recognize and sight-identify 150 plant species and/or varieties utilizing taxonomic plant key techniques.
- identify the culturally sustainable requirements, including soils, sun exposures, water requirements, nutrients and temperature requirements of plants best observed and studied during California's fall and/or winter seasons.
- identify and select plants for specific landscape design uses for plants best observed and studied during California's fall and/or winter seasons.
- assemble a herbarium.
- recognize, evaluate, and utilize plant materials software and web sites.

HORT 306 Plant Identification-Spring Selections

This course is the study of the identification, growth habits, culturally sustainable methods, and uses of ornamental woody and herbaceous plants in the California landscape. Emphasis is on those plants best observed in the spring and summer seasons and includes both native and non-native species as well as some plants with an edible use component. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize and utilize the binomial method of plant nomenclature and plant identification terminology.
- utilize a taxonomic plant key by identifying by leaf, flower, fruit, seed bark and growth habit, those plants best observed during California's spring and/or summer seasons.
- recognize and sight-identify 150 plant species and/or varieties utilizing taxonomic plant key techniques.
- identify the culturally sustainable requirements, including soils, sun exposures, water requirements, nutrients and temperature requirements of plants best studied during California's spring and/or summer seasons.
- identify and select plants for specific landscape design uses for plants best observed and studied during California's spring and/or summer seasons.
- assemble a herbarium.
- recognize, evaluate, and utilize plant materials software and web sites.
HORT 308 Viticulture-Vineyard Establishment

This course is an introduction to grape crops for Sacramento and Placer counties. It covers the history and principles of the grape growing industry in California. Topics include site preparation, vine and rootstock selection, trellis and irrigation system selection, installation procedures, and vine training. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the importance and potential of the grape growing industry in the Sacramento and Placer county area and its relationship to the landscape industry
- evaluate how climate, soils, and vineyard practices affect vine selection, vine growth, and grape quality
- create a vineyard design that is based on a site evaluation and that meets a client's vineyard needs
- identify the botanical structures of a grapevine and their function, and relate them to the yearly growth cycle of grapevines
- design and implement appropriate irrigation and trellis systems for grape varieties
- analyze, recommend, and implement appropriate sustainable techniques for grape crops

HORT 309 Viticulture - Sustainable Vineyard Management

This course covers sustainable management of vineyards, large and small, to serve the needs of owners while maintaining the environment. Topics include vine growth, fruit development, irrigation, pruning systems and canopy management, grapes as a wildlife habitat, management of the vineyard floor, pest identification and control, and vineyard laws and ordinances. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the growth of a grapevine, including where fruit is formed
- apply knowledge of vine growth to successfully prune vines to sustain fruit development and vine spread
- evaluate the nutritional needs of the vines, and create a plan to sustainably maintain nutrition to the plants
- analyze symptoms seen on a vine, determine the presence of pests and beneficials on the vine, and suggest sustainable pest control methods
- design a system to efficiently manage soil beneath the vines to control weeds, sustain the soil, and benefit the vines
- list laws and ordinances, including those that apply to vineyard sustainability, applicable to local growth of grapevines, production of grapes, and the organizations that disseminate this information

HORT 312 Plant Propagation

This course is a study of the fundamental principles involved in propagating plants, with special emphasis on types of propagules and techniques utilized to make more plants. Topics include history of plant propagation, tools and facilities, seed and vegetative propagation, media selection, growing propagules on, and sales of plants produced. Field trips may be required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine the basic principles of plant production distinguishing between sexual and asexual methods
- demonstrate how to clean and sharpen pruning tools
- make propagation and container media and explain why each component is used or not used in each mix
- describe the physical environment needed to successfully propagate plants, including temperature, light, humidity, and root zone moisture
- label a plant properly, with a tag that correctly identifies the plant, date of propagation, and person doing the propagation
- assess the need to transplant previously rooted plants, and successfully do so
- test the germination rate of old seeds and describe how to use that information when planting those seeds
- enumerate steps of and reasons for scarifying plant seed
- employ correct techniques and processes to stratify plant seed and explain why it is done
- produce plants from seed
- prepare plant material as cuttings and use cuttings to make more plants
- define the different plant parts and plant tissue types used as clones to make more plants
- employ techniques of plant grafting
- propagate plants using layering techniques
- transplant plant plugs
- compare a plant that will benefit from division to one that will not and explain the differences

HORT 316 Plant Production, Facilities and Sales

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: HORT 300
Advisory: ENGWR 102 and ENGRD 116 with grades of "C" or better OR ESLR 320 and ESLW 320 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an overview of the practices and facilities used in production and sales of plants and related products and services. Topics include design and use of structures for horticultural production and sales, product selection and maintenance, marketing and sales of horticultural crops and services, employee management, vendor selection, sales area design and layout, advertising, merchandising, and customer service. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify horticultural occupations and evaluate how they function within the general horticultural market
- outline a basic business plan for a horticultural business
- analyze customers and suggest products and services they are most likely to purchase
- demonstrate proper care of plants in a retail and wholesale nursery
- create and maintain inventory of products for sale
- demonstrate customer service likely to lead to increased sales
- enumerate characteristics of employers likely to offer long term, satisfying employment in the horticultural industry
- evaluate characteristics of a desirable product supplier
- demonstrate marketing and merchandising techniques likely to increase sales
- identify components of a plant production facility and explain what they are used for
- design and construct an effective space for sales of horticultural services and products
• formulate realistic prices for horticultural products and services

HORT 320 Sustainable Landscape Construction

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HORT 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the theory and skills needed in the landscape construction industry. Landscape operations include carpentry, masonry, concrete pavers, water-conserving irrigation, watershed preservation and drainage, low-voltage lighting, sustainable soil preparation and drainage, plant materials/turf, plan reading, and estimating and bidding in the landscape trades. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• employ the basic principles of landscape construction and watershed preservation.

• assess and implement hands-on skills of construction operations, such as using wood, pavers, irrigation components, and sustainable soil preparation and grading.

• read landscape plans and translate plans into the bidding and estimating process.

• determine the correct tool or tools and equipment for various landscape operations.

• demonstrate the safe handling of tools and operation of equipment.

• recognize and comply with the state water regulations that affect landscaping.

HORT 321 Sustainable and Ecolandscape Practices

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the application of ecologically sustainable design, construction, and maintenance practices for urban landscapes. Topics present a holistic approach to landscaping including, but not limited to, water conservation, green waste reduction, reduced chemical and inorganic fertilizer use, and the enhancement of natural ecosystems. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare and contrast conventional and sustainable landscape methods

• evaluate existing landscapes to enable maintenance with ecologically sustainable practices

• apply ecologically sustainable principles and methods to the design and construction of landscapes

• evaluate sustainable products and methods for use in the landscape

• interface with other green building disciplines in an effort to create integrated buildings and landscapes

HORT 322 Landscape and Irrigation Graphics and Design

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HORT 300 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is the study of technical drafting skills and freehand graphics, including line quality, lettering, and organization of the design space as it relates to landscape and
irrigation design. It includes ‘hand drafting techniques’, plant database software, introduction to CADD for landscape, and the use of a variety of graphics skills and media. Irrigation design for landscapes studies water hydraulics, irrigation equipment, including irrigation heads, pipes, pumps, controllers and valves, and water conservation. The course includes preparing landscape and irrigation plans, plan presentation, and reprographics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess and apply the use of drafting equipment and techniques as they relate to landscape design and landscape architecture.
- develop the components included in a set of landscape plans and construction drawings.
- create an elevation view of a landscape design.
- assess and evaluate plant data software, plant materials web sites, and landscape CADD programs.
- employ the basic principles of irrigation design.
- identify and correctly apply sprinkler components for a landscape irrigation design.
- comply with water conservation regulations for our industry.
- create a full set of landscape drawings and present them to a client.
- create a portfolio of design work.

HORT 324 Sustainable Landscape Maintenance

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HORT 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is a study of sustainable landscape maintenance and management of exterior and interior residential and commercial landscapes, parks, highways, and public buildings. Topics include planting and transplanting, pruning, water conservation and use, sustainable plant nutrition and soils management, integrated pest management, and the safe operation and maintenance of power equipment for the trade. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the basic skills and principles of sustainable landscape maintenance.
- assess and implement the hands-on skills and techniques of sustainable landscape management.
- evaluate and demonstrate methods of safe and proper use and maintenance of related tools and equipment.
- recognize and evaluate exterior and interior plant maintenance needs.
- evaluate software and websites available for the commercial landscape maintenance industry.
- utilize irrigation water auditing techniques and select equipment to correctly irrigate, schedule, and conserve water in the landscape.
- recognize and comply with the state water regulations that affect landscaping.

HORT 326 Landscape Design

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HORT 322 with a grade of "C" or better
Advisory: HORT 110, 305, and 306
Transferable: CSU
Catalog Date: June 1, 2020

This course is a study of the basic principles and elements of landscape design related to the problem-solving process, design theory and composition, functional and design uses of landscape materials, and client and maintenance criteria.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- assess, evaluate, and implement the principles of landscape design.
- employ the hands-on skills utilized for the development of a residential landscape plan/design.
- assess, evaluate, and utilize supportive design techniques such as plant materials, space management, energy conservation, and elevation change and grading.
- demonstrate the various formats for design presentations.

**HORT 327 Advanced Landscape Design**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** HORT 322 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is the study of the advanced and in-depth principles of custom residential landscape design related to proposal writing, site analysis, design development and construction document preparation. Further exploration of design composition is studied as well as the development of spaces and the use of materials based upon a client's program desires.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Assess, evaluate and implement the principles of custom residential landscape design
- Prepare a design proposal using landscape principles of proposal writing
- Utilize the hands-on approach to successfully create a residential landscape design
- Employ the skills to take a project from site analysis through design development and into construction documentation
- Assess and utilize the materials available to the designer

**HORT 329 Landscape CAD Design**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** HORT 322 with a grade of "C" or better  
**Advisory:** DESGN 301  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is an introduction to computer assisted landscape design and drafting utilizing Computer Aided Drafting and Design (CADD) software to produce professional quality landscape designs for residential and commercial sites. It emphasizes site-plan development, landscape planting and irrigation plans, and the generation of materials lists based on the design created for the site. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- create a new landscape design project using CADD.
- employ the basic principles of CADD.
- survey and draft a base plan using CADD.
- draft a demolition plan, layout plan, irrigation plan, planting plan, plant schedule, and construction details using CADD.
- create conceptual and detailed designs using 3D modeling.
- develop renderings from 3D model.
- create a portfolio of design work and construction documents.
HORT 330 Small Gas Engines, Outdoor Power Equipment

This course covers the basic operational theory, servicing, adjusting, and maintenance of 2-cycle and 4-cycle small gas engines as they pertain to the automotive and horticulture industries. In addition, the small engine repair skill areas included in the regional, state, and national Skills USA competitions are covered. AT 301 and/or HORT 330 may be taken two times for credit for a maximum of 8 units, using different equipment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate accepted safety and work procedures, including Occupational Safety and Health Administration (OSHA) and proper hazardous materials disposal.
- identify the external and internal parts of 2-cycle and 4-cycle small engines.
- determine the proper lubrication and fuel requirements for 2-cycle and 4-cycle small engines using factory maintenance data.
- service and repair the cooling and oil systems of 2-cycle and 4-cycle small engines.
- service and repair the starter systems of 2-cycle and 4-cycle small engines.
- remove, rebuild, install, adjust, and tune 2-cycle and 4-cycle small engine fuel delivery and ignition system components.
- disassemble, inspect, repair, and assemble a single cylinder 2-cycle and 4-cycle engine.
- list the Skills USA competition requirements.
- list the Skills USA competition judging criteria.
- prepare to compete in Skills USA competition.

HORT 495 Independent Studies in Horticulture

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degree

A.A. in Hospitality Management: Culinary Arts/Restaurant Management

This degree focuses on basic and advanced culinary techniques, related to both hot food and baking. It emphasizes supervisory and management skills, marketing, and financial accountability. The Oak Cafe provides a management training lab for advanced students in the program.

Catalog Date: June 1, 2020

HM 315 is a prerequisite for all HM hot-food lab classes

HM 370 HM 370 has a co-requisite of HM 498, requiring a minimum of 8 hours per week in The Oak Café.

HM 380 HM 370 has a co-requisite of HM 498, requiring a minimum of 16 hours per week in The Oak Café.

HM 375 has a corequisite of HM 498, requiring a minimum of two days per week in The Oak Café Bakery.

The Hospitality Management: Culinary Arts/Restaurant Management Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze and design cost effective labor and production schedules.
- analyze and compare methods of internal cost control.
- assess contracts commonly used in the food service industry.
- choose and demonstrate optimal cooking procedures for all categories of foods to include, but not be limited to the following: vegetables, fruits, fats and oils, milk products, eggs, legumes, grains, baked products, poultry, meat, seafood, and soups.
- assess standards and procedures for delivery concepts into appropriate restaurant service.
- construct menus considering food, labor, production costs, and marketing.
- evaluate quality principles to management of the restaurant kitchen, including team building.

Career Information

The hospitality industry is one of the fastest growing market segments available for entry level and professional employees. Businesses including restaurants, hotels, theme parks, bakeries, cruise ships, caterers, and grocery stores are in search of line cooks, entry level and advanced managers, chefs, sous chefs, servers, and more.

Certificates of Achievement

Baking and Pastry Certificate

This certificate provides hands-on learning focused on job skills with an emphasis on baking and pastry. It includes production baking, candies, wedding and specialty cakes, plated desserts, and artisan breads.

Catalog Date: June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- assess and demonstrate basic mixing methods for yeast doughs, cakes, cookies, and pastries.
- analyze and critique professional, commercial bakeshop ingredients and supplies.
- analyze quality defects in baked products and specify possible errors in technique or ingredient selection.
- prepare and critique a variety of products including biscuits, artisan breads, Danish pastries, muffins, coffee cakes, pies, tarts, puff pastries, cakes, cookies, pastry cream, pate a choux, icings, souffles, ice creams, and meringues.

### Career Information

Opportunities for qualified people in the restaurant field are endless. The demand for trained bakers in all types of restaurants and food service organizations continue to grow.

### Culinary Arts/ Restaurant Management Certificate

This certificate focuses on basic and advanced culinary techniques, related to both hot food and baking. It emphasizes supervisory and management skills, marketing, and financial accountability. The Oak Cafe is a small, fine dining restaurant that provides a management training lab for advanced students in the program.

Catalog Date: June 1, 2020

Hospitality Management (HM)

HM 100 Calculations in Foodservice Occupations

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: MATH 25 or 41, or placement through the assessment process.  
Catalog Date: June 1, 2020

This course is a study of mathematical principles in the context of commercial food production. Topics include fractions, percentages, recipe conversions, yields, weights and measures, product yield tests, and recipe and food cost analysis.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply problem-solving strategies to theoretical foodservice problems.
- analyze production recipes in baking and foodservice.
- structure mathematical solutions and formulas to foodservice production equations.
- solve for recipe yields.
- calculate recipe and menu costs.

HM 101 Introductory Culinary Skills

Units: 1.5  
Hours: 27 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020

Career Information

The continued growth of the hospitality industry has resulted in an increased need for qualified managers, both entry level and advanced, in all levels of restaurants, hotels, bakeries and other food service and hospitality establishments.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze and design cost effective labor and production schedules.
- analyze and compare methods of internal cost control.
- assess standards and procedures for delivery concepts into appropriate restaurant service.
- construct menus considering food, labor, production costs, and marketing.
- evaluate quality principles to the management of a restaurant, including team building and motivation.
This course introduces the foundational skills required for all entry-level food preparation courses. Topics include the development of job skills, equipment utilization, weights, measurements, knife cut identification, speed and accuracy, as well as kitchen product identification and utilization.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and properly utilize all types of basic professional kitchen equipment, including knives.
- identify and describe proper uses of each category of fresh herbs.
- identify and demonstrate classic French knife cuts.
- organize mis en place.
- convert recipes using knowledge of weights and measures.
- maintain kitchen safety and sanitation.

HM 110 Management and Supervision in the Hospitality Industry

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; or ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course covers the effective management of human resources in the hospitality industry. It includes the study of the functions of both management and leadership, including planning, recruitment, selection, training, performance management, coaching, counseling, and discipline. It also emphasizes management and leadership theories and application.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate management/supervisor obligations to owners, customers, and employees.
- research and appraise different management and leadership theories.
- explain principles and potential barriers of good oral and written communication.
- assess the costs/benefits of a multicultural work environment.
- develop recruitment strategies for hospitality employees.
- analyze training theories and procedures.
- develop a training program for a selected industry segment.
- evaluate and discuss methods of motivation.
- analyze methods of discipline and common discipline problems of employees in the food service industry.
- assess the characteristics of leadership.

HM 115 Advertising and Sales in Food Service

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Catalog Date: June 1, 2020

This course introduces principles involved in advertising for food service establishments. Topics covered include menu planning, design, and pricing; marketing plans; market information systems; consumer behavior; and internal and external promotions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• describe the role of marketing a food service operation
• identify and describe the components of the marketing plan
• apply the principles of consumer behavior to the development of a promotional scheme for a restaurant operation
• plan and design a restaurant menu
• design a comprehensive marketing plan for a restaurant

**HM 120 Beverage Operation**

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course is a study of beverages, both alcoholic and non-alcoholic, used in the food service industry. Topics include non-alcoholic beverages, spirits, beer, and wine, including their production methods and regions, quality and characteristics. Beverage service, wine analysis, service and pairing with food are also covered, as are government regulations, licenses and product costing. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• identify and describe the types of beverages commonly sold in restaurant operations
• describe production methods, regions, and ingredient sources of each major category of spirits
• identify and describe styles of beer
• describe the process for tea and coffee production
• evaluate quality characteristics in different beverage categories
• categorize the major world wine regions and the types of wines produced in each region
• calculate beverage costs for mixed drinks, wine, and non-alcoholic beverages

**HM 150 Catering**

Units: 3
Hours: 18 hours LEC; 108 hours LAB
Prerequisite: HM 315 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course covers the business and culinary aspects of catering and large-scale food production. It includes the study of starting a catering business, laws, licenses, taxes, insurance and contracts, menu development, pricing, and staffing. It also emphasizes quality and quantity production. On- and off-campus catering events are required. A portion of this course may be offered in a TBA component of 6-20 hours which may include setting tables, preparing food, and serving food for catered events.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• evaluate basic types of catering services and needs.
• identify a potential target markets for a catering business.
• design and develop a catering image and company profile, menus, and pricing strategy.
• evaluate the kitchen and equipment requirements needed for various catered functions and business models.
• compose order lists and production schedules for catered events.
• analyze staff requirements for catered functions and prepare staffing schedules.
• interpret labor laws, tax laws, licensing, and contract requirements as prescribed by local and state government.
- design menus and cost recipes for suitability to multiple catered functions and markets.

HM 155 Mediterranean Cuisine

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HM 315 with a grade of "C" or better; AND HM 310 (Sanitation, Safety, and Equipment) with a grade of "C" or better OR a CA Foodhandler’s Card.
Advisory: HM 100
Catalog Date: June 1, 2020

This course provides an in-depth look at the ingredients and culinary techniques used in preparing foods from the Mediterranean including France, Italy, Sicily, Greece, Spain, and North Africa, and regional focuses within these areas. The laboratory component includes skills development, production, and the use of equipment specific to the preparation of Mediterranean foods.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between specific Mediterranean areas and foods related to these areas.
- appraise and properly handle ingredients used in Mediterranean cuisines.
- identify and safely use equipment in a commercial kitchen.
- analyze traditional and contemporary styles of food presentation, comparing Mediterranean techniques with modern American techniques.
- prepare starch-based dishes native to Mediterranean areas.
- create vegetable-based dishes native to Mediterranean areas.
- prepare protein-based dishes native to Mediterranean areas.
- define vocabulary used in Mediterranean ingredients and cooking techniques.

HM 165 Regional American Cuisine

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HM 315 with a grade of "C" or better; AND HM 310 (Sanitation, Safety and Equipment) with a grade of "C" or better OR a CA Foodhandler’s Card.
Advisory: HM 100
Catalog Date: June 1, 2020

This course presents the study of ingredients and culinary techniques used in the preparation of foods from a variety of North American cuisines, including New England, Floribbean, Cajun, Creole, Californian, Midwestern, Southern, and Pacific Northwestern. Topics include the foods indigenous to the regions and the influences of early settlers. The laboratory component includes skills development, production, and the use of equipment specific to those individual areas.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe basic United States geography and the foods indigenous to those areas.
- choose and properly prepare ingredients indigenous to each U.S. region.
- identify and safely use equipment in a commercial kitchen.
- prepare starch-based dishes native to different U.S. regions.
- create vegetable-based dishes native to different U.S. regions.
- compose protein-based dishes native to different U.S. regions.
- define vocabulary used in different regions for ingredients and cooking terms.

HM 180 Garde Manger
This course focuses on the art of the cold kitchen with emphasis on both modern and classical techniques. Topics include hors d’oeuvre, canape, salads, brining, pickling, curing, and smoking. This course also includes basic charcuterie with emphasis on forcemeats, mousselines, terrines, pate, galantines, and sausages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify kitchen tools and implements by name and describe their intended use
- measure and scale ingredients correctly
- prepare and evaluate sausages from various countries
- evaluate charcuterie and its place for buffet presentation
- create edible and non-edible display centerpieces
- effectively plan, prepare, and set up cold foods for hors d’oeuvre and buffets
- select and use forcemeats for preparation of pate, terrines, and galantines
- evaluate and demonstrate the functions of each ingredient in charcuterie production
- apply various methods of preservation for different meats and vegetables
- fabricate both edible and non-edible displays for centerpieces

HM 290 Competitive Culinary Training

Units: 2 - 4
Hours: 18 hours LEC; 54 - 162 hours LAB
Prerequisite: HM 315 with a grade of "C" or better
Catalog Date: June 1, 2020

This course is a cooperative effort between the college, The American Culinary Federation and The Capital Chefs’ Association. This course offers the skills necessary to compete in regional and national culinary competitions, using the American Culinary Federation format. 54 hours per unit of TBA practices include knife skills and hot food preparation. Field trips to local restaurants are required to work with local chefs. This course may be taken up to 4 times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proficiency in all classic knife skills
- demonstrate problem-solving abilities related to culinary crises
- prepare a team-directed four-course, sit-down meal in 75 minutes, from start to finish
- evaluate competitive standards for hot food dishes including seasonality and appropriate cooking methods
- analyze dessert presentations to maximize usage of all necessary components
- assemble mis en place under timed conditions
- judge results of team effort as noted in evaluation handbook
- plan and implement judge recommended improvements as required

HM 295 Independent Studies in Hospitality Management

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

HM 297 Internship in Hospitality Management

Units: 1 - 4
Hours: 6 hours LEC; 36 - 198 hours LAB
Prerequisite: None.
Enrollment Limitation: Must have completed 15 units in Hospitality Management with a grade of "C" or better.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course is a cooperative effort between the college and hospitality industries in the community to provide training through practical on-the-job experience. Internship sponsors/employers assist in the acquisition of skills and application of knowledge learned in the classroom. A portion of this course may be offered in a TBA component of 36 - 198 hours which may include setting tables, setting up food, and serving food.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply classroom experience and theory to employment in the hospitality industry.
- compare and contrast various job assignments within the hospitality industry.
- describe factors that lead to success in the workplace.

HM 300 Introduction to Hospitality - Becoming a Chef

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the history of the hospitality and culinary professions, explores the numerous avenues of opportunity, and studies the advantages of continuing education in the field. It also covers the backgrounds and approaches of successful chefs and restaurateurs. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess key business, professional, and career opportunities in the hospitality field.
- analyze important changes in industry products and trends.
- identify periodicals, websites, and professional organizations to assist in career and vocational research.
- describe the backgrounds, history, and philosophies of the most successful chefs, restaurateurs, and hospitality professionals.
- plan a personal career ladder based on individual professional goals.

HM 310 Sanitation, Safety and Equipment

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers all phases of food sanitation, including the causes, controls and investigation of illness related to food contamination. It covers sanitary practices in food preparation; proper dishwashing procedures, sanitation of kitchen, dining room, and all equipment; cleaning materials and procedures and garbage and refuse disposal. This course includes general safety precautions, maintenance and operation of appropriate food service equipment, along with elements of kitchen planning and types of equipment used. Successful completion of this course results in Servsafe certification.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the importance of sanitation and safety in the food service industry.
- interpret local, state, and federal laws relating to food safety.
- describe the three categories of food contamination.
- evaluate the conditions required for bacterial growth in food.
- evaluate a hand washing station and explain the requirements of good hand washing.
- choose and perform proper food storage techniques.
- operate and clean food service equipment.
- plan for the selection of physical spaces and equipment for a food service facility.

HM 315 Food Theory and Preparation

| Units: | 4 |
| Hours: | 36 hours LEC; 108 hours LAB |
| Prerequisite: | None. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course is a comprehensive study of basic principles of food science, theory, and techniques involved in food preparation. It includes a study of the factors that influence foods and the changes which occur in foods during preparation. It also emphasizes basic cooking skills, theory application, product, and quality identification.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply principles of food theory to choose and demonstrate optimal cooking procedures for all categories of foods to include, but not limited to: vegetables, fruits, fats and oils, milk products, eggs, cereal grains, legumes, starches, poultry, meat, seafood, and soups.
- classify, describe, and safely utilize kitchen tools and equipment based on their intended function.
- demonstrate basic cooking techniques including: poaching, seaming, frying, braising, grilling, roasting, and sautéing.
- measure and scale ingredients correctly.
- distinguish between different methods of heat transfer and choose cooking materials and techniques accordingly.
- evaluate standard quality characteristics in raw and cooked foods.
- analyze quality defects in cooked products and specify possible errors in technique or ingredient selection.
- assess sources of food contamination and practice good sanitary techniques in the laboratory.

HM 320 Breads and Yeast Doughs

| Units: | 2 |
| Hours: | 18 hours LEC; 54 hours LAB |
| Prerequisite: | HM 100 with a grade of "C" or better, or placement through the assessment process. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers theory and principles of doughs, yeast, and pastries with emphasis in bread production, sweet and savory doughs, and egg doughs. It includes the study of croissant dough, puff dough, pate-a-choux, traditional breakfast pastries, and American cookies and teacakes. All content is intended for students interested in commercial restaurants, bakeries, and other food service facilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate and identify ingredients and equipment of fine baking.
• scale and measure ingredients properly.
• assess leavening agents and gluten development.
• assess the purposes and effects of fats.
• demonstrate correct use of yeast and evaluate yeast doughs.
• observe the effect of sugar on yeast doughs.
• evaluate and identify uses for sweet and savory doughs.
• analyze proofing, resting, sponge, and starters.
• analyze the effects of eggs on doughs.
• operate and use equipment safely and properly.
• produce and evaluate bakery products.

This course covers the theory and principles of baking and pastry. It focuses on pies, galettes, tarts, pate a choux, cheesecakes, and custard based desserts. This course is intended for students interested in commercial application in restaurants, bakeries, and other food service facilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate quality characteristics of individual pastry components
• measure and scale ingredients properly
• assess characteristics and effects of fats and flours on baked goods
• evaluate and prepare individual pastries
• describe and demonstrate the method for pate a choux
• produce and evaluate a variety of cheesecake styles
• evaluate and demonstrate a variety of pies and galettes
• evaluate and convert baking formulas for professional use

This course covers the theory and principles of baking and pastry with an emphasis on products commonly found in retail bakeries. It focuses on rich doughs, cookies, chocolate and puff pastry applications. This course is intended for students interested in commercial applications in bakeries, restaurants, and other food service facilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate the quality characteristics of rich doughs including Danish and croissants
• describe and evaluate the different categories of cookies and bars
• demonstrate basic chocolate work and piping skills
• produce and evaluate puff pastry dough
• assess characteristics and effects of fats and flours on rich doughs and cookies
• evaluate and describe the characteristics of chocolate and the effects of sugar and fats to the final product

HM 328 Intermediate Baking American and European Cakes

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: HM 320 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the theory and principles of both American and European cake tradition. It focuses on baking methods, ingredient selection, filling, and finishing components and techniques. This course is intended for students interested in commercial bakery application.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe and demonstrate the mixing methods for various categories of cakes.
• identify the components and describe the quality characteristics of American cakes.
• identify the components and describe the quality characteristics of traditional European cakes.
• evaluate and produce cake fillings appropriate to a cake style.
• evaluate and produce cake frostings appropriate to a cake style.
• demonstrate professional level piping skills.

HM 330 Advanced Baking and Pastry

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: HM 310, 320, and 325 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on commercial production of baked products, pastries, candies, restaurant style desserts, and wedding cakes. It emphasizes advanced baking science and commercial production. Products include European style breads, restaurant style plate presentation, frozen desserts, tortes, cakes, sauces, tarts, pulled sugar, piping, and chocolate work. This course also emphasizes the production of high quality products and professional presentation. Field trips to professional bakeries are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• critique and select professional and commercial bakeshop ingredients and supplies.
• scale and measure baking ingredients accurately.
• examine the factors that control the development of gluten in baked products.
• explain the changes that take place in dough or batter as it bakes.
• assess and demonstrate basic mixing methods for yeast doughs, cakes, cookies, and pastries.
• describe the use and control of leavening agents.
• prepare and critique a variety of products to include biscuits, artisan breads, Danish pastry, muffins, coffee cakes, pies, tarts, puff pastry, cakes, cookies, pastry cream, pâté a choux, icings, soufflés, ice creams, and meringues.
• evaluate the quality of finished products.
• operate bakeshop equipment to include scale, ovens, mixers, processors, proof box, and others.
• decorate pastry items using the paper cone, pastry bag, and chocolate decorations.
• analyze quality defects in baked products and specify possible errors in technique or ingredient selection.
• temper chocolate and explain the procedures of tempering and melting.
• create and design wedding and specialty cakes.

**HM 340 Cost Control in the Food Service Industry**

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | HM 100 with a grade of "C" or better |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers accounting and cost control principles in the food service industry. It includes the use of accounting techniques to analyze food and labor cost control, business operations, budgeting, financing, and profit and loss statements.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• explain accounting principles and concepts as they relate to the food service industry
• calculate food and labor cost percentages
• evaluate a profit-and-loss statement to identify where cost savings might occur
• evaluate the relationship between food costs, labor costs, and overhead costs
• evaluate and calculate menu prices
• analyze a balance sheet, net income, gross income, and a profit and loss statement
• prepare and assess a break-even analysis
• compare and analyze methods of internal cost control

**HM 360 Professional Cooking**

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | HM 100 and 310 |
| Advisory: | HM 100 with a grade of "C" or better |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers intermediate and advanced culinary techniques. It includes production standards, recipe analysis, presentation, stocks, sauces, and major ingredients used in professional cooking. The laboratory component includes use of equipment, skills development, and time management in the commercial kitchen.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• define vocabulary used in professional cooking.
• evaluate quality characteristics of protein, vegetable, and starch dishes.
• create production recipes for commercial cooking to determine scheduling (mise en place), quantities, and characteristics of final product.
• apply principles of safety and sanitation to kitchen and lab production.
• evaluate and produce stocks and the full range of sauces used in the professional kitchen.
set up and use equipment safely, effectively, and efficiently.

evaluate and select techniques in the preparation of meat, poultry, seafood, vegetables, and starches at a professional level.

prioritize and demonstrate proper culinary techniques including knife skills, cooking methods, balancing flavor and selection of proper ingredients in the creating of complete plate.

identify and demonstrate modern styles of presentation and garnishing.

### HM 370 Dining Room Management

**Units:** 2  
**Hours:** 36 hours LEC  
**Prerequisite:** HM 100 and 310 with grades of "C" or better  
**Corequisite:** HM 498, to include a minimum of eight hours per week of work experience in the operation of the front of the house for The Oak Café at American River College  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course focuses on restaurant management with emphasis on service and the dining room. Topics include the historical view of service, quality, and exceeding guest expectations, methods of service, management of service operations and personnel, internal and external marketing, and daily reports and controls. The work experience component allows for hands-on experience running the dining room of the Oak Café two days a week.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare styles and techniques of service throughout history  
- assess characteristics of professional service and service personnel  
- define quality concepts, including exceeding expectations, constant improvement, and team building  
- evaluate service in the various segments of the hospitality industry and restaurants in particular  
- incorporate standards and procedures for delivery concepts into appropriate restaurant service  
- analyze the manager's role in the delivery of professional service  
- plan effective internal and external marketing relating to particular concepts and menus  
- analyze daily operations data

### HM 375 Bakery Management and Production

**Units:** 2  
**Hours:** 36 hours LEC  
**Prerequisite:** HM 310, 315, 320, and 325 with grades of "C" or better  
**Corequisite:** HM 498  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course focuses on bakery production, merchandising, and management for a professional bakery/cafe outlet. It includes production techniques, recipe development, customer service, advertising and promotion, menu planning, costing, production, and staff scheduling. Work experience takes place in the Oak Cafe Bakery two days a week.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply the basic principles of baking to production recipes.  
- design merchandising displays that encourage sales.  
- critique and prepare accurate and efficient production schedules.  
- evaluate quality characteristics of baked items, including quick breads, roll-in doughs, yeast breads, and patisserie items.  
- structure and execute menus that are seasonal and meet the needs of the client.
- generate purchase orders for food and supplies using inventories, menu analysis, and cost-effective principles.
- use formulas to construct and calculate profit-and-loss statements for bakery production.

HM 380 Restaurant Management and Production

Units: 3
Hours: 54 hours LEC
Prerequisite: HM 100, 310, 315, 320, 325, and 380 with grades of "C" or better, or placement through the assessment process.
Corequisite: Concurrent enrollment in HM 498 (to include a minimum of 16 hours per week of work experience in the commercial kitchen of The Oak Café American River).
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an in-depth look at restaurant management with emphasis on the kitchen. It includes the study of successful restaurant concepts, food styles and ethnic influences, production methods and standards, menu design (including specific purchasing and cost control), application of sanitation and safety standards, employee scheduling, motivation and supervision, and product marketing. These concepts are emphasized in the work experience corequisite. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the principles and techniques of cooking previously acquired to large-scale production.
- design and apply standards of safety and sanitation to daily food production.
- critique and prepare accurate and efficient production schedules.
- generate purchase orders for food and supplies using inventories, menu analyses, and cost effective principles.
- compare styles of successful chefs and restaurant concepts.
- construct and execute menus considering food, labor, production costs, and marketing.
- assess quality principles to the management of the restaurant kitchen, for both food and employees, including team building and evaluation.

HM 494 Topics in Hospitality Management

Units: 0.5 - 4
Hours: 18 - 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed to give students an opportunity to study topics in Hospitality which are job oriented and not included in current offerings. The course may be repeated for up to 6 units of credit provided there is no duplication of topics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply concepts acquired for the special topics
- demonstrate knowledge received in the class setting or on the job
- apply critical thinking skills to explain project outcomes as related to specific topic.

HM 495 Independent Studies in Hospitality Management

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

HM 498 Work Experience in Hospitality Management

| Units: | 1 - 4 |
| Hours: | 60 - 300 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position, or job related to hospitality management with a cooperating site supervisor. Students are advised to consult with the Hospitality Management Department faculty to review specific certificate and degree work experience requirements. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of hospitality management. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of hospitality management related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

1 - 4

American River College’s Human Career Development courses are designed to help students achieve success in college through a variety of classes, which include study skills, career exploration, college success, transferring to four year institutions, life skills, peer mentoring, and academic learning strategies for students with specific learning disabilities.

HCD 111 College Discovery Program

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course explores options and resources relevant to student success at American River College. It covers academic and personal goal setting, campus resources, academic requirements, basic study skill development, and strategies that are compatible with academic success.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and choose college options related to educational goals.
- explain campus policies and procedures that relate to academic success.
- locate and use varied campus resources.
- state academic and career goals based on assessments, values, and experiences.
- utilize skills and examine barriers that impact student success.
- evaluate achievement of goals and objectives based on performance in course work.

HCD 114 Human Potential Seminar

Units: 2  
Hours: 36 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.  
Catalog Date: June 1, 2020

This course provides an in-depth examination of techniques and strategies to be used in enhancing a student’s chance for academic success in college. It is designed for students who need assistance to achieve their goals in higher education. Topics include motivation, goal setting, communication skills, time management, exam preparation, note taking, reading college textbooks, and the use of technology as it relates to being a student.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess and evaluate a variety of skills, ideas, and techniques for academic success.
discover, locate, utilize, and describe a variety of campus support services.

differentiate and apply stress management strategies and techniques.

compare and adopt sound health practices.

discover and employ effective communication skills, in person and through the use of technology.

research, contrast, and practice planning and decision-making processes.

contrast, compare, discuss, and recognize academically successful and non-successful behaviors.

---

**HCD 115 Orientation to College**

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None  
Catalog Date: June 1, 2020

This course is an introduction to programs and services at American River College. Topics include procedures and college requirements, steps to success, and campus resources.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify academic and student service programs.
- list college academic requirements.
- describe academic regulations and performance expectations.
- identify educational goals.
- create a personal education plan with counselor.

---

**HCD 122 Study Skills**

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None  
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.  
Catalog Date: June 1, 2020

This course covers specific study skills strategies. It provides the opportunity to analyze attitudes toward studying and current study skills or habits. Topics include specific learning styles, strategies for time management, goal setting, note-taking, memory improvement, reading skills, and how to prepare for and take exams.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze their own attitudes toward studying and current study skills or habits.
- demonstrate appropriate time management.
- practice appropriate goal setting skills.
- apply note-taking methodology and incorporate these techniques into lecture notes.
- employ reading techniques such as systematically marking and taking study notes on a college level textbook.
- identify the components of memorization and practice memory and concentration techniques.
- demonstrate test-taking strategies, including how to prepare for and take exams.
- describe personal learning styles and how they impact study methods and life experience.
HCD 160 Applied Life and Success Skills

This course covers the skills and tools necessary for daily independent living and success as a college student. It focuses specifically on disability management, life skills, personal goals, and community and campus resources. It would also be appropriate for those students interested in a career with disability services.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify personal skills, attitudes, and techniques that support one's goals.
- identify campus and community resources to support one's goals and success.
- develop independent living skills, which include health and wellness, to support success on a college campus.
- acquire skills to address challenges that may impact student success, such as managing transportation, childcare, and medication.
- practice self-sufficient daily living skills to enhance punctuality, attendance, and assignments.
- utilize study skills techniques congruent with one's own personal learning style, such as flash cards, highlighters, or recorders.
- apply conflict resolution skills to interpersonal relationships.
- use technology such as computer, email, and the Internet.

HCD 310 College Success

This course covers the skills and knowledge necessary for college success, as well as personal issues that are commonly encountered by many college students. Topics include motivation, self-discipline, learning styles, memory development, time management, communication skills, goal-setting, career planning, study skills and techniques, and critical thinking skills. Campus resources, college regulations, and information competency are also addressed. This course is highly recommended for first time college students and/or continuing college students who would benefit. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess student success strategies and identify techniques and campus resources to build effective learning skills in areas such as: textbook reading, note taking, memory skills, exam preparation, and exam taking.
- distinguish among different learning styles (i.e. auditory, visual, kinesthetic, and/or read/write) in identifying personal learning preference(s).
- locate and identify campus programs and support services.
- incorporate campus rules and requirements for degree and transfer planning.
- analyze and choose effective communication skills that apply to the academic, career, and/or personal life issues.
- demonstrate measurable goal-setting and decision-making skills.
- recognize the various elements of diversity on our campus.
- demonstrate problem-solving and critical-thinking skills.
- demonstrate personal wellness skills such as stress reduction and health maintenance.
- discriminate between effective and non-effective goal and life planning skills.
- formulate and implement appropriate interpersonal skills and conflict resolution strategies.
HCD 318 Transfer: Making It Happen

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 116 AND ENGRD 101; OR ESLR 320 AND ESLW 320
Transferable: CSU; UC
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides a comprehensive study of the university transfer process as it relates to community college students. Topics include an overview of American higher education, student support services, major selection, college research, transfer admissions requirements, the college application process, transfer resources, transitional issues, and preparation for graduate and professional education. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the transfer process as it pertains to both lower and upper division transfer admissions.
- compare and contrast various four-year institutions to include the California State University, the University of California, private/independent colleges and universities, and public institutions outside of California.
- compose a statement of purpose for transfer admissions and/or scholarships.
- construct an educational plan that reflects admission, general education, and major requirements for a major of study offered at a four-year institution.
- discuss the differences and similarities between transfer general education patterns including CSU-GE Breadth, IGETC, and campus-specific general education requirements.
- evaluate how individual preferences, skills, interests, and values impact the choice of academic major and educational/career goals.
- research financial aid and other financial resources to help maximize the affordability of a college education.
- define and identify common student support services offered at community colleges and at four-year institutions.
- access and navigate online resources pertinent to student transfer including, but not limited to ASSIST, California Colleges, AICCU, UC Pathways, Cal State Apply, and Eureka.
- define and identify opportunities for student involvement to include participation in student organizations, internships/co-operatives, and other activities that supplement the undergraduate experience.

HCD 330 Life and Career Planning

Units: 1
Hours: 18 hours LEC
Prerequisite: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Advisory: CSU
Transferable: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course is a comprehensive approach to life and career planning based on extensive interests, personality type, values, and skills assessments. Personal and career goals are formulated using career research and decision-making strategies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret and appraise their own skills, interests, and personality characteristics.
- identify values and skills in relation to career opportunities.
- analyze and apply the principles of decision making.
- describe types of careers and associate skills and interests.
- research occupational information.
• develop a plan to achieve academic and career goals.

HCD 331 Career and Job Search Strategies

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: HCD 330
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course assists students preparing for the current job market. Topics include: researching career fields, developing specific career/educational goals, informational interviewing, internships, professional networking, resume writing, interviewing skills, and current job search strategies.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• research various career fields
• identify skills necessary to be competitive in today's job market
• identify present and future employment trends
• set specific educational and career goals
• define obstacles to decision making and develop strategies to overcome those obstacles
• examine effective job search and interviewing strategies
• develop and refine interviewing skills
• write a professional resume and cover letter
• research work experience and internship opportunities
• research and identify professional networks and associations

HCD 336 Exploring Health Careers

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course introduces a wide variety of healthcare and healthcare-related occupations, emphasizing educational programs and career opportunities. It includes the identification and analysis of career interests, skills, values, and personal traits, as well as occupational research, resulting in the development of educational and career plans.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explore healthcare and healthcare-related occupations.
• identify career interests, skills, values, and personal traits and their relationship to healthcare and healthcare-related occupations.
• describe the educational requirements and prerequisites needed for admission into various healthcare and healthcare-related occupations.
• investigate academic and licensure requirements for selected healthcare and healthcare-related occupations.
This course provides an opportunity to obtain information about a variety of health professions. This course explores the requirements to enter various health fields, including education, licensures, and volunteer experience. In addition, it offers opportunities to observe and gain knowledge in order to choose an appropriate health career goal.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- prepare a resume for a chosen health field.
- set realistic health career goals.
- describe the educational requirements of a chosen health career.
- create an educational plan to reflect chosen goal.

**HCD 364 Introduction to Peer Mentoring**

Units: 1.5 - 4  
Hours: 18 hours LEC; 27 - 162 hours LAB  
Prerequisite: HCD 111, 114, 115, 310, or 318 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020  

This course offers instruction on the role of the peer mentor at the community college level. Topics include skills and strategies associated with interpersonal communication, peer leadership, collaborative learning, problem solving, and assisting students in how to effectively and efficiently assist their peers in managing college and life experiences. This course is only open to students who have been selected to serve as peer mentors in an on-campus program, such as the First Year Experience, SAGES, Journey program, MESA, Puente, EOP&S, and Umoja.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe and demonstrate the role and purposes of peer mentors and the characteristics of effective peer-led sessions.
- assess mentee's personal strengths and weaknesses with college-level learning strategies and life skills.
- demonstrate effective problem-solving skills.
- demonstrate collaborative learning and facilitative strategies.
- describe policies, resources, and programs for referring students.

**HCD 382 Learning Strategies for College and Life**

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligibility for ENGRD 116 and ENGWR 101; OR ESLR 320 and ESLW 320  
Transferable: CSU; UC  
General Education: AA/AS Area III(b); CSU Area E1  
Catalog Date: June 1, 2020  

This course provides a universal learning environment that supports students with specific learning differences, through adaptive strategies and techniques essential for achieving academic and personal success. Topics include adaptive technology, organization, learning modalities, time management, memory development, motivation, note-taking, personal wellness, study skills, testing techniques, and critical thinking methods. Also covered are communication approaches, personal and academic barriers, and disability awareness. Additionally, campus/community resources, college regulations, and proficiency expectations are covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• describe the rationale behind specific learning strategies and accommodations.
• evaluate individual strengths and weaknesses for learning, and describe strategies and appropriate educational interventions to facilitate academic success.
• identify and apply strategies for academic and personal success: life planning skills, organization, time management, self-advocacy, general and adaptive technology, critical thinking, interpersonal communication, and personal wellness.
• locate and utilize applicable campus and community resources, online resources, and study groups.
• demonstrate knowledge of campus policies and procedures.
• analyze the psychology of motivation and goal setting to change motivation and set appropriate educational and lifelong goals.
• examine the human memory system and apply memory strategies compatible with personal learning style.
• recognize and utilize specific reading, writing, math, test-taking, and note-taking strategies and accommodations.

HCD 495 Independent Studies in Human Career Development

Units: 1 - 3
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Human Lactation | American River College

This program fulfills the criteria for staff education as set by the Baby Friendly Hospital Initiative. It focuses on the physiology of attachment, bonding, and breastfeeding and the short- and long-term impacts of perinatal care practices on the mother-baby dyad. It grapples with the challenges of applying best-practice guidelines and model hospital policies to alleviate barriers for mothers choosing exclusive breastfeeding and to create environments that support maternal-infant biology and the newborn’s natural capabilities, allowing improved outcomes with less time and effort.

Division Dean  Jan DeLapp
Department Chairs  Kathleen Fox

Certificates

Baby Friendly Hospital Staff Certificate

This program fulfills the criteria for staff education as set by the Baby Friendly Hospital Initiative. It focuses on the physiology of attachment, bonding, and breastfeeding and the short- and long-term impacts of perinatal care practices on the mother-baby dyad. It grapples with the challenges of applying best-practice guidelines and model hospital policies to alleviate barriers for mothers choosing exclusive breastfeeding and to create environments that support maternal-infant biology and the newborn's natural capabilities, allowing improved outcomes with less time and effort.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- examine and explain the rationale for professional, national, and international policies that promote, protect, and support breastfeeding as a public health goal.
- identify human species-specific norms for growth and development and disease resistance based on the exclusively breastfeeding mother-baby dyad and explain the risks to the mother and infant of early introduction of artificial milk.
- communicate effectively about infant feeding, identifying teaching points appropriate for prenatal and postpartum women regarding breastfeeding and when educating or counseling parents who are using bottles and/or formula.
- evaluate current hospital practices in terms of barriers to maintaining mother-baby connectedness.
- devise solutions to alleviate common barriers to exclusive breastfeeding in the hospital setting, integrating concepts of system change.
- create an environment that supports the newborn's natural capabilities.
- integrate concepts of the neurobiology of breastfeeding to address initiation and problem remediation and to support milk-supply maintenance issues.
- demonstrate techniques and skills to transition the newborn from one state of alertness to another and to help families perceive and understand the language and
patterns of the newborn.

- describe essential components of community support for mothers to sustain breastfeeding beyond the early weeks.
- discuss contraindications to breastfeeding in the United States and identify acceptable medical reasons for supplementation of breastfed babies based on national and international authorities.
- uncover and explore personal values and attitudes related to the birthing and breastfeeding experience.

Career Information

Hospital staff require upgraded education to meet Joint Commission accreditation standards for lactation competency and support services. SB 402, signed into law in 2013, requires all perinatal hospitals in California to implement all Ten Steps to Successful Breastfeeding as adopted by Baby Friendly USA, or an equivalent evidence-based process recognized by the California Department of Public Health, by January 1, 2025. An expanding number of local hospitals, including all those within Sacramento County, have signed letters of intent and are in the process of meeting, or have already met, Baby Friendly Hospital Initiative standards, requiring all staff to obtain this level of preparation. This means that registered nurses, particularly those in the perinatal field, will require this preparation to maintain their career. This preparation will be of significant benefit to the new nursing graduate when competing for jobs in this field.

Lactation Consultant Assistant Certificate

This program is designed for community workers responsible for promoting and protecting breastfeeding and charged with providing basic assessment, support, and appropriate referral for breastfeeding mothers in the community. It is also useful for students entering or preparing for professions in nursing, nutrition, health education, or early childhood development as well as for practicing professionals in these fields. Topics include an overview of factors impacting breastfeeding rates, anatomy and physiology of lactation, health effects and current recommendations, and the role of the lactation consultant assistant in facilitating breastfeeding, with a focus on counseling skills and cultural awareness.

Certificate Date: June 1, 2020

</table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the lactation consultant assistant's role, scope, and limits of practice.
- evaluate breastfeeding status and potential based on understanding of lactation anatomy/physiology and signs of adequate milk transfer.
- compare and contrast breastmilk and breastfeeding with artificial baby milks and artificial feeding in terms of composition and physiologic/developmental effects.
- employ effective counseling skills, establishing a therapeutic relationship with respect for individual and cultural differences.
- demonstrate the educational and technical skills required to provide basic assistance with successful breastfeeding initiation and maintenance.
- recommend appropriate interventions and referrals given a range of common early breastfeeding problems, questions, and challenging situations.
- examine barriers to breastfeeding, and investigate approaches to normalizing breastfeeding in the community and society.
- propose counseling options to address individual responses to barriers that are impacting breastfeeding success.
- recommend in-hospital practices to support breastfeeding in light of current research evidence.
- apply concepts of client confidentiality, professional etiquette, and appropriate documentation practices to the lactation consultant assistant's role.

Career Information

Lactation Consultant Assistants/Peer Counselors are utilized in the federal Women, Infants, and Children (WIC) program. Many service agencies require that their home visitors to families with young children be capable of providing basic lactation counseling and of recognizing when and where to refer an individual when lactation difficulties arise.
Lactation Educator/Counselor Certificate

This certificate provides the educational coursework to function as a lactation counselor or educator. Topics include an introduction to professionalism in the healthcare context; business models and opportunities for practice; limits of the lactation educator/counselor role and making appropriate referrals; evidence and rationale related to health initiatives to promote, protect, and support breastfeeding as a public health priority; systems change and acting as a change agent; physiologic basics of normal lactation; lactation-support preparation, addressing norms, barriers, and common problems; counseling essentials; and adult education principles to provide individual or group teaching. Opportunity is provided to practice these concepts in a supervised field/lab environment.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- practice within the lactation educator/counselor role, scope, and limits of practice, applying concepts of client confidentiality, professional etiquette, and appropriate documentation.
- evaluate physical, behavioral, cultural and social conditions predisposing mothers and babies to either a complex or an uncomplicated breastfeeding experience, integrating concepts of the neurobiology of breastfeeding and baby behavior, and assist in preventing or resolving common problems through counseling, education, and support, distinguishing possible need for and appropriate level of referral to other care providers as indicated.
- compare and contrast breastmilk and breastfeeding with artificial baby milks and artificial feeding in terms of composition and physiologic/developmental effects, identifying human species-specific norms for growth and development and disease resistance.
- choose and apply appropriate counseling skills and techniques in support of pregnant and breastfeeding mothers, their babies, and their partners and significant others, and develop an individualized teaching plan specific to the needs identified through assessment and counseling.
- plan and conduct lactation and related group health classes or programs and facilitate breastfeeding support groups.
- evaluate written and media materials for their suitability in lactation education and counseling, and recommend community resources for lactation support.
- defend and advocate for evidence-based breastfeeding management programs that facilitate optimal health outcomes and public health strategies to protect, promote, and support breastfeeding.

Career Information

Lactation educators and counselors are often employed by obstetric and pediatric offices and clinics, hospitals, public health and community perinatal programs, federal Women, Infants, and Children (WIC) programs, and private baby boutiques. Individuals may desire this credential to augment their birth or postpartum doula role and are capable of working in independent practice.

Human Lactation (HLACT)

HLACT 301 Supporting the Mother-Baby Connection: Evidence-Based Practices for Perinatal Care

Same As: NURSE 391
Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
This course is designed for practicing health care professionals as well as students preparing to enter the fields of nursing, nutrition, health education, or early childhood development. It focuses on the physiology of attachment, bonding, and breastfeeding and the short- and long-term impacts of perinatal care practices on the mother-baby dyad. It grapples with the challenges of applying best-practice guidelines and model hospital policies to alleviate barriers for mothers choosing exclusive breastfeeding and creating environments that support maternal-infant biology and the newborn’s natural capabilities, allowing improved outcomes with less time and effort. This course meets Board of Registered Nursing continuing education requirements and, when combined with requisite supervised clinical experience, fulfills all criteria for staff education as set by the Baby Friendly Hospital Initiative. This course is not open to students who have completed NURSE 391.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine and explain the rationale for professional, national, and international policies that promote, protect, and support breastfeeding as a public health goal.
- identify human species-specific norms for growth and development and disease resistance based on the exclusively breastfeeding mother-baby dyad and explain the risks to the mother and infant of early introduction of artificial milk.
- communicate effectively about infant feeding, identifying teaching points appropriate for prenatal and postpartum women regarding breastfeeding and when educating or counseling parents who are using bottles and/or formula.
- evaluate current hospital practices in terms of barriers to maintaining mother-baby connectedness.
- devise solutions to alleviate common barriers to exclusive breastfeeding in the hospital setting, integrating concepts of system change.
- create an environment that supports the newborn’s natural capabilities.
- integrate concepts of the neurobiology of breastfeeding to address initiation and problem remediation and to support milk-supply maintenance issues.
- demonstrate techniques and skills to transition the newborn from one state of alertness to another and to help families perceive and understand the language and patterns of the newborn.
- describe essential components of community support for mothers to sustain breastfeeding beyond the early weeks.
- discuss contraindications to breastfeeding in the United States and identify acceptable medical reasons for supplementation of breastfed babies based on national and international authorities.
- uncover and explore personal values and attitudes related to the birthing and breastfeeding experience.

HLACT 302 Fundamentals of Lactation Consultant Assisting

Units: 2.5
Hours: 45 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for community workers responsible for promoting and protecting breastfeeding and charged with providing basic assessment, support, and appropriate referral for breastfeeding mothers in the community. It is also an introductory course in human lactation for students entering or preparing for professions in nursing, nutrition, health education, or early childhood development as well as for practicing professionals in these fields. This course provides an overview of factors impacting breastfeeding rates, explores health effects and current recommendations, discusses the anatomy and physiology of lactation, and considers the role of the lactation consultant assistant in facilitating breastfeeding. It covers counseling skills, cultural awareness, and community resources for promoting, protecting, and supporting breastfeeding. This course is formerly known as NURSE 390.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the lactation consultant assistant's role, scope, and limits of practice.
- evaluate breastfeeding status and potential based on understanding of lactation anatomy/physiology and signs of adequate milk transfer.
- compare and contrast breastmilk and breastfeeding with artificial baby milks and artificial feeding in terms of composition and physiologic/developmental effects.
- employ effective counseling skills, establishing a therapeutic relationship with respect for individual and cultural differences.
- demonstrate the educational and technical skills required to provide basic assistance with successful breastfeeding initiation and maintenance.
- recommend appropriate interventions and referrals given a range of common early breastfeeding problems, questions, and challenging situations.
• examine barriers to breastfeeding and investigate approaches to normalizing breastfeeding in the community and society.
• propose counseling options to address individual responses to barriers that are impacting breastfeeding success.
• recommend in-hospital practices to support breastfeeding in light of current research evidence.
• apply concepts of client confidentiality, professional etiquette, and appropriate documentation practices to the lactation consultant assistant's role.

HLACT 311 Human Lactation for Lactation Counselors & Educators

Units: 2.5
Hours: 42 hours LEC; 9 hours LAB
Prerequisite: HLACT 302 with a grade of "C" or better
Corequisite: HLACT 301 or NURSE 391; AND HLACT 321.
Advisory: ECE 312, PSYC 300, PSYC 372, or SPEECH 361
Transferable: CSU
Catalog Date: June 1, 2020

This course prepares healthcare professionals, or other interested individuals who work with mothers and children, to provide evidence-based support to families, focusing on the normal processes of human lactation, the principles of adult education, and the art of counseling. It enables participants to provide accurate and consistent information about breastfeeding and lactation from birth through the process of weaning to improve breastfeeding outcomes.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate physical, behavioral, cultural, and social conditions predisposing mothers and babies to either a complex or an uncomplicated breastfeeding experience.
• construct and promote conditions that predispose mothers and babies to an uncomplicated breastfeeding experience or to resolution of common problems throughout the breastfeeding experience, through counseling, education, and support.
• recommend sound nutritional practices for both breastfed and non-breastfed children during the first two years of life.
• distinguish possible need for and appropriate level of referral to other care providers as indicated.
• choose and apply appropriate counseling skills and techniques in support of pregnant and breastfeeding mothers, their babies, and their partners or significant others.
• develop an individualized teaching plan specific to the needs identified through assessment and counseling.
• plan and conduct lactation and related group health classes or programs and facilitate breastfeeding support groups.
• evaluate written and media materials for their suitability in lactation education and counseling.
• catalogue and recommend community resources for lactation support.
• discuss issues of professionalism and practice.
• defend and advocate for evidence-based breastfeeding management programs that facilitate optimal health outcomes and public health strategies to protect, promote, and support breastfeeding.

HLACT 321 Interpreting Baby Behavior

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides expertise in cutting-edge, evidence-based messages about babies’ cues, crying, and sleep patterns and how to teach these to new parents. Parents with inaccurate expectations about infant behavior are less able to interact effectively with their infants. Infant crying and waking are common reasons for using supplemental formula or discontinuing breastfeeding. Helping parents better understand their infant’s behavior supports new mothers in providing appropriate interactions and responsiveness to their infant’s needs while meeting their breastfeeding goals, preventing overfeeding and the risk of obesity. This expertise is essential for lactation support professionals as well as for those in the child development and early childhood education professions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the rationale and evidence base for specified focused messages on infant cues, crying, and sleep when teaching parents and caregivers of infants.
explain infant states and state modulation, describe the six distinct infant states, and teach the key caregiver education messages associated with each state and with helping infants when changing states.

differentiate between engagement and disengagement cues, explain the relationship between states and cues, and interpret clustered cues in young infants.

discuss normal crying, explain persistent crying, assess parental perceptions of crying, and teach techniques for promoting self-soothing skills in infants and for calming crying babies.

discuss misconceptions and realities around infant sleep states and sleep-wake cycles, developmental changes through infancy, comparison to adult sleep cycles, and reasons for excessive waking.

demonstrate skills in teaching the simplified core messages about infant cues, infant crying, and infant sleep and supporting healthy caregiver-infant interactions.

describe abnormal baby behaviors that are possible signs of newborn illness or compromise.

HLACT 322 Nutrition and Biochemistry of Human Lactation

This course addresses dietary recommendations for lactating women and for infants and young children with an emphasis on breastfeeding as the evidence-based norm. It also covers cultural and physiologic weaning practices and appropriate complementary foods. Primary topics include comparison of human milk with milks of other mammals and with other products and artificial baby milks, the array of individual biochemical and biological components in human milk, and their multiple nutritional and bioactive functions with a focus on immunologic components. Toxicology and pharmacology related to human milk and lactation are addressed. This course is not open to students who have completed NUTRI 321.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recommend dietary choices for lactating women with consideration of health status and cultural or lifestyle preferences and evaluate the need for further lactational or nutritional services.
- evaluate infant and young child intake based on international standards for best practices with reference to caloric and volume requirements and adequacy of key nutrients and determine the need for further lactational or nutritional services.
- explain the rationale for current breastfeeding recommendations and the health and nutritional effects for both mother and child.
- correlate maternal dietary intake with the possible effects on milk volume and composition and describe the adaptive nature of human milk as well as the range of causes for variability.
- describe the detrimental effects of unclear definitions of breastfeeding on development of a sound evidence base for infant and young child feeding recommendations.
- compare human milk with milks of other mammals and with other products and artificial baby milks, discuss the array of individual components in human milk, and explain their multiple nutritional and bioactive functions.
- discuss principles of lactational pharmacology and toxicology as they relate to medications, vaccination, environmental chemicals, and drugs of abuse.

HLACT 331 Foundations of Lactation Consultant Practice

This course builds core competencies for lactation consultant practice. It is designed for individuals who will be working with mothers and young children in a variety of healthcare and other settings and is suitable for physicians; midwives; community, pediatric, and perinatal nurses; dietitians; speech, physical, and occupational therapists; social workers; and others with the requisite background in social and biological sciences and the field of human lactation. It provides preparation for conducting a systematic assessment of mother and child related to breastfeeding; selecting effective, evidence-based, individualized assistance for the breastfeeding dyad including triage and referral to other care providers as indicated; evaluating the outcomes; and revising the plan of care as required. Emphasis is placed on coordinating care of women and babies who are at risk of or currently experiencing lactation difficulties related to pregnancy, labor, birth, postpartum, and newborn interventions and
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply to lactation consultant practice the Code of Professional Conduct, Scope of Practice, and Clinical Competencies standards, legal mandates, and occupational safety principles of the profession.
- evaluate breastfeeding research critically and apply it to client education and practice and to the support of public policy that is evidence-based.
- recommend and structure a plan of care in the context of selected breastfeeding challenges based on the lactation consultant process.
- incorporate effective communication, documentation, and professional collaboration into lactation consultant practice.

HLACT 342 Managing Complex Problems in Lactation Consultant Practice

Units: 2
Hours: 36 hours LEC
Prerequisite: HLACT 331 with a grade of "C" or better
Corequisite: HLACT 322 or NUTRI 321; AND HLACT 352.
Transferable: CSU
Catalog Date: June 1, 2020

This course builds on the skills and knowledge base acquired through HLACT 331 and HLACT 351 to cover all areas of the International Board of Lactation Consultant Examiners certification examination blueprint. It applies the lactation consultant process to complex breastfeeding experiences, including those affected by mental or physical health alterations or physical disabilities in the mother; anatomical, neurological, gastrointestinal, or other serious health alterations in the child; and vulnerable, at-risk populations including those experiencing emergency events or disasters. It covers appropriate use of selected breastfeeding aids, techniques, and devices in specific clinical situations and integrates behaviors consistent with standards of professional ethics and the lactation consultant scope of practice. The systematic review and critical analysis of relevant research is developed to support evidence-based practice.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- synthesize a professional self-definition as lactation consultant that incorporates concepts of ethical practice, quality standards, cultural and professional competence with humility, mentoring the next generation, and engagement with the wider community from local to global levels as promoter, protector, and supporter of breastfeeding as the community norm.
- apply the lactation consultant process to complex breastfeeding experiences, including those impacted by mental or physical health alterations or physical disabilities in the mother or the need to induce lactation or to relactate.
- apply the lactation consultant process to complex breastfeeding experiences, including those impacted by twin or higher-order-multiple offspring, prematurity, or anatomical, neurological, gastrointestinal, or other serious health alterations in the child.
- apply the lactation consultant process to complex breastfeeding experiences, including those impacted by factors related to membership in vulnerable, at-risk populations including those experiencing emergency events or disasters.
- evaluate the appropriateness of selected breastfeeding aids, techniques, and devices when applied to specific clinical situations.
- integrate the systematic review and critical analysis of relevant research into evidence-based practice and accurate education of clients and the healthcare team.
- manage the basics of lactation consultant practice at entry level in relation to a variety of possible settings, including healthcare institutions, independent or collaborative practice, community outreach, milk banks, schools, and workplaces.

HLACT 351 Clinical Preceptorship in Lactation Consulting I

Units: 3.5
Hours: 189 hours LAB
Prerequisite: None.
Corequisite: HLACT 331
Transferable: CSU
Catalog Date: June 1, 2020

This course provides clinical opportunities to apply the cognitive knowledge and skills gained in HLACT 331 and its prerequisite courses. It serves as preparation for the more advanced clinical expectations in HLACT 352. Clinical experience is provided in regional hospitals and clinics under the direct supervision and evaluation of an International Board Certified Lactation Consultant (IBCLC) with over 5 years post-certification experience. Field trips are required. Students are responsible for costs
associated with meeting the health, background check, liability insurance, and CPR certification requirements for Allied Health Program clinical placement.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the IBLCE Code of Professional Conduct for IBCLCs, the IBLCE Scope of Practice for the IBCLC, and the IBLCE Clinical Competencies for the Practice of IBCLCs as the framework for professional practice and conduct.

- recognize and apply evidence-informed findings to practice within the laws and regulations of the given jurisdiction and setting, and provide evidence-informed education that is free of conflicts of interest to women, families, health professionals and the community about breastfeeding and human lactation.

- utilize appropriate counseling skills and techniques, respecting the mother’s race, creed, religion, sexual orientation, age, and national origin; obtain her permission to provide care to her and her child; ascertain her goals for breastfeeding; and offer support and encouragement to enable her to meet her goals.

- evaluate potential or existing challenges and factors that may impact on a mother or her child in meeting her breastfeeding goals; provide anticipatory guidance to reduce potential risks; and assist and support the mother to develop, implement, and evaluate an appropriate, acceptable, and achievable breastfeeding plan utilizing all resources available.

- perform a maternal, child, and feeding assessment related to lactation and provide services for mothers and families at a beginning level with guidance.

- gain the mother’s consent for obtaining and disclosing of information as needed with respect for the privacy, dignity, and confidentiality of individuals and families, except where the reporting of a danger to a mother or child is specifically required by law.

- produce written documentation of all client contacts, assessments, feeding plans, recommendations, and evaluations of care.

- practice collaboratively with the health care team and provide information on community resources for breastfeeding assistance.

HLACT 352 Clinical Preceptorship in Lactation Consulting II

Units: 3.5
Hours: 189 hours LAB
Prerequisite: HLACT 331 and 351 with grades of "C" or better
Corequisite: HLACT 342
Transferable: CSU
Catalog Date: June 1, 2020

This course provides clinical opportunities to apply the cognitive knowledge and skills gained in HLACT 342 and its prerequisite courses. It serves as the final clinical preparation course for Lactation Consultant preparation. Clinical experience is provided in regional hospitals and clinics under the direct supervision and evaluation of an International Board Certified Lactation Consultant (IBCLC) with over 5 years post-certification experience. Field trips are required. Students are responsible for costs associated with meeting the health, background check, liability insurance, and CPR certification requirements for Allied Health Program clinical placement.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- integrate into personal practice the International Board of Lactation Consultant Examiners (IBLCE) Code of Professional Conduct for International Board Certified Lactation Consultants (IBCLCs), the IBLCE Scope of Practice for the IBCLC, and the IBLCE Clinical Competencies for the Practice of IBCLCs as the framework for professional conduct.

- incorporate evidence-informed findings into practice within the laws and regulations of the given jurisdiction and setting, and formulate thorough evidence-informed education that is free of any conflicts of interest for women, families, health professionals and the community about breastfeeding and human lactation.

- integrate the appropriate counseling skills and techniques, respecting the mother’s race, creed, religion, sexual orientation, age, and national origin; applying the principles of family-centered care to maintain a collaborative, supportive relationship; obtain her permission to provide care to her and her child; ascertain her goals for breastfeeding; and offer support and encouragement to enable her to meet her goals.

- evaluate potential or existing challenges and factors that may impact on a mother or her child in meeting her breastfeeding goals; provide anticipatory guidance to reduce potential risks; and assist and support the mother to develop, implement, and evaluate an appropriate, acceptable, and achievable breastfeeding plan utilizing all resources available.

- manage all components of a comprehensive maternal, child, and feeding assessment related to lactation; prioritize and provide competent services for mothers and families; and choose techniques and devices appropriately to support initiation and/or continuation of breastfeeding when indicated.

- gain the mother’s consent for obtaining and disclosing of information as needed with respect for the privacy, dignity, and confidentiality of individuals and families, except where the reporting of a danger to a mother or child is specifically required by law.

- create complete written documentation of all client contacts, assessments, feeding plans, recommendations, and evaluations of care.

- practice collaboratively with the health care team to provide coordinated services to families, organize information on community resources for breastfeeding assistance, and make appropriate referrals to other health care providers and community support resources in a timely manner depending on the urgency of the situation.

The Chemical Dependency Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate the components of a quality chemical dependency counseling program
- demonstrate the twelve essential counseling skills as they apply to chemical dependency and recovery processes
- utilize counseling strategies based on examination of scientific theories of addiction
- identify the community resources used in assisting clients with addiction issues
- appraise and apply the knowledge of California Professional Codes of Ethics for Drug and Alcohol counselors
- evaluate one's own values and attitudes as they apply to ethical decision making
- demonstrate appropriate interpersonal and social skills in interactions with a diverse population using principles of equity, justice, and inclusion

Career Information

Upon completion of the A.A. degree a student possesses the coursework required for initial certification as a California drug and alcohol counselor (CDAC).

A.A. in Human Services

The A.A. degree program in Human Services centers around the broad array of entry level skills and abilities effectively used in social service delivery systems. Coursework includes the twelve helper core function applications in client screening, intake, assessment, orientation, counseling, consultation, client's rights, confidentiality, crisis intervention, client education, professional ethics, and reports and record keeping.

</tr>
</tbody>
</table>

This course is a comprehensive overview of the field of human services and an introduction to attitudes and methods that enhance communication skills in human relations and enable effective intervention in problem situations. It emphasizes the roles and skills of associate professionals, such as but not limited to drug and alcohol counselors, mental health workers, and activity directors with the elderly, and adolescent and child welfare assistants. It also emphasizes group techniques. An off-campus site visit is required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- distinguish between the different client populations most commonly served by human services workers
- compare and contrast the different functions of human service agencies in both the private and public sector
- compare and contrast the duties and responsibilities of workers in a variety of human services positions
- understand diverse client populations served by human services workers
- analyze public policy issues, controversies, and complexities affecting human service agencies or their clients
- compare different theoretical approaches for working with clients
- describe career opportunities in the field of human services
- demonstrate increased self-awareness (e.g., verbal fluency, voice tone, body language, feelings, attitudes, strengths)
- demonstrate clarity (concreteness), brevity, and objectivity in verbal communication
- demonstrate an awareness of others’ feelings, concerns, and ideas as expressed verbally and through body and tonal messages

#### HSER 310 Ethical Issues and Client's Rights

Two units are required.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- define the functions of social service delivery systems
- analyze public policy issues, complexities and controversies affecting social service agencies and their clients
- integrate different theoretical approaches in working with clients
- identify the community resources used in assisting clients
- appraise and apply the knowledge of existing California professional codes of ethics for the helping professions
- describe the application of clients’ rights in the social service delivery system
- evaluate one’s own values and attitudes as they apply to ethical decision making
- demonstrate appropriate interpersonal and social skills in interactions with a diverse population using principles of equity, justice, and inclusion
This course is a comprehensive exploration of the basic ethical issues involving human services delivery. Topics include professional ethics, confidentiality, counselor and clients' rights, and other areas involving ethical controversies. This course is not open to students who have completed GERON 304.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the state and federal laws most often violated in human services delivery
- analyze existing California Professional Codes of Ethics
- describe the application of clients' rights in human services agencies and institutions
- describe appropriate professional behavior in human services agencies and institutions
- examine one's own values and attitudes as they apply to ethical decision making

HSER 330 Issues of Diverse Populations

Same As: PSYC 365
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D; CSU Area E1
Catalog Date: June 1, 2020

This course is a study of the values, problems, issues, concerns and counseling needs of diverse populations by race, ethnicity, class, gender, sexual orientation, gender identity, physical/cognitive/emotional/developmental ability, and age. It also explores the cognitive and emotional aspects of prejudice as it relates to institutional and individual discrimination. This course is not open to students who have completed PSYC 365.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and examine specific values, beliefs, and practices of diverse populations by race, ethnicity, gender, sexual orientation, ability/disability, age, and socioeconomic class
- evaluate the impact of bias, stereotyped thinking, prejudice, and discrimination in working with diverse populations
- analyze the issues of racism, sexism, heterosexism, ableism, ageism, and classism as they relate to working with diverse populations
- develop culturally responsive prevention, intervention, and/or resolution to identified issues and problems affecting diverse populations
- assess one's personal attitudes regarding diverse populations

HSER 340 Introduction to Chemical Dependency

Same As: PSYC 400
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course examines the biopsychosocialcultural effects of chemical dependency on the individual and the family. It includes an analysis of drug use; misuse and abuse across age, gender, race, ethnicity, and economic conditions contributing to substance abuse; and a description of community efforts at prevention and treatment.
Course is not open to students who have completed PSYC 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the psychological, physiological, and sociocultural issues related to substance use, misuse, and abuse
- describe the psychological and physiological progression of substance abuse
- examine the dynamics of race, ethnicity, age, and gender inherent in substance use, misuse, and abuse situations including drug preferences and codependency
- compare and contrast the key components of assessment and recovery programs for alcoholism and drug abuse including Alcoholics Anonymous (AA), Narcotics Anonymous (NA), Al-Anon, American Counseling Association (ACA), private and public, inpatient and outpatient

HSER 341 Physiology and Pharmacology: Alcohol & Other Drugs

Same As: PSYC 401
Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 102 or ESLW 320 and HSER 340 or PSYC 400 with a grade of "C" or better.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a study of the chemical composition of alcohol and the mechanism of action of alcohol and other psychoactive drugs, including opiates, stimulants, depressants, psychotherapeutics, and psychedelics. It also includes the social and psychological implications of tolerance, habituation, and substance abuse of the user and abuser. This course is not open to students who have completed PSYC 401.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the effects of each class of psychoactive drugs upon the human body.
- define the biological, social, and psychological implications of psychoactive drug use, misuse, and abuse.
- describe the effects of psychoactive drugs on behavior.
- analyze treatment issues and challenges.
- compare intervention and treatment approaches.
- examine alternatives to drug use.

HSER 342 Alcoholism: Intervention, Treatment & Recovery

Same As: PSYC 402
Units: 3
Hours: 54 hours LEC
Prerequisite: HSER 341 or PSYC 401 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is a study and evaluation of techniques used in the treatment of chemical dependency. Topics include intervention, individual and group counseling, detoxification, twelve-step program, therapeutic communities, and aftercare programs. This course is not open to students who have completed PSYC 402.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze drug and alcohol use, misuse, abuse, and addiction
- compare various theories of drug and alcohol addiction
- differentiate treatment issues of drug and alcohol use, misuse, abuse, and addiction
- describe treatment methods and counseling approaches of drug and alcohol use, misuse, abuse, and addiction
HSER 360 Techniques of Interviewing and Counseling

Units: 3
Hours: 54 hours LEC
Prerequisite: HSER 300 with a grade of "C" or better
Corequisite: GERON 304 or HSER 310
Advisory: ENGW 102 and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; AND ESLL 310 or ESLL 320 with a grade of "C" or better.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a survey of interview and counseling techniques appropriate for paraprofessionals in mental health, corrections, and substance abuse counseling. It includes theories of family co-dependency and techniques for counseling the family and significant others of substance abusers.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate techniques for interviewing and counseling
- analyze and apply appropriate approaches in dealing with a variety of human problems
- demonstrate an awareness of one’s own reactions to clients, based on one’s own past experiences
- demonstrate the techniques of interviewing and counseling appropriate for associate level helpers in social service agency settings

HSER 362 Practices in Human Services

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Corequisite: HSER 365 and 498
Enrollment Limitation: Completion of the American River College Human Services Agency Placement Process.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides advanced study and applied integration of human services theory to prepare students for field experience. Techniques applying concepts, values, and skills acquired in other core courses to the process of helping others are covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the principles of the twelve core functions of counseling for successful employment in the fields of human services and/or chemical dependency
- evaluate ethical and legal issues related to interventions with individuals, groups, organizations and communities in generalist practices and chemical dependency
- demonstrate accurate client charting and documentation
- demonstrate cultural sensitivity in working with diverse client populations
- differentiate among the community resources used for referring clients.
- integrate personal growth and development goals with professional growth and development goals

HSER 365 Techniques of Group Counseling

Units: 3
Hours: 54 hours LEC
Prerequisite: HSER 360 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the basic elements of group counseling. Ethical issues are compared and analyzed. Emphasis is on the use of facilitating skills and group dynamics.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate the general goals of the group counseling experience
- analyze ethical and professional issues in group experiences
- describe rights of group participants and/or obligations of group leaders
- demonstrate multiple group techniques of counseling
- analyze the theoretical and practical approaches used by successful group leaders
- demonstrate growth in self-understanding and in communicating with others

HSER 495 Independent Studies in Human Services

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

HSER 498 Work Experience in Human Services

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: Students must be in a paid or unpaid internship, volunteer position, or job related to human services with a cooperating site supervisor. Students are advised to consult with the Human Services Department faculty to review specific certificate and degree work experience requirements.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of human services. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of human services related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Associate Degrees

A.A. in English Communication and Literature

This degree emphasizes verbal and written communication skills, and the study of literature. It offers a general background in communication skills which may be used in the workplace. In addition to earning the degree, students who work closely with their counselor may also fulfill significant lower-division requirements of four-year colleges/universities in English Composition, Literature and Communication.

Catalog Date: June 1, 2020

A minimum of 3 units from the following:

A minimum of 3 additional units chosen from either of the groups of courses listed above.

Total Units: 18

The English Communication and Literature Associate in Arts (A.A.) degree may be obtained by completion of 60 transferable, semester units, including (a) the major or area of emphasis described in the Required Program, and (b) one of the following: the ARC General Education, the Intersegmental General Education Transfer Curriculum (IGETC), or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- apply the elements of style in writing.
- evaluate premises, both explicitly stated and implied.
- maximize communication effectiveness by planning and adapting to specific audiences.
- write analytically about literature.
- examine fiction as a reflection of the authors' cultures and values.

**A.A. in History of the Creative Arts**

This degree provides an area of emphasis in the arts and humanities. It is intended for students who plan to transfer to a four-year college/university to earn a baccalaureate degree.

Catalog Date: June 1, 2020

The History of the Creative Arts Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize the role of the arts in society.
- analyze the influences of social, political, and ethnic issues on the arts.
- compare and contrast styles of artistic expressions.
- assess the historical, artistic, social, and philosophical environments in an artistic genre.
A.A. in Language Studies

This degree provides an area of emphasis in communication skills in both English and foreign languages. It is intended for students wishing to develop communication skills for the workplace. Students who work closely with their counselors can use this area of emphasis to prepare for majoring at a four-year college in foreign languages as well as any other majors which require proficiency in one or more foreign languages.

The Language Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- write expository and argumentative papers.
- synthesize ideas and develop conclusions.
- examine the connection between culture and communication.
- engage in conversation and written correspondence in a language other than English.

A.A. in The Individual and Society

This degree provides an area of emphasis in the effects of culture, religion, ethnicity, and gender on individuals living in a global society. It is designed for students wishing to work more effectively with others in the workplace. Students who work closely with their counselor can use this area of emphasis to prepare for majoring at a four-year college in Psychology, Sociology, Ethnic Studies, Women's Studies and Child Development.

Total Units: 18

The Individual and Society Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- examine human diversity in relation to psychological theory.
- identify the consequences of ethnocentrism and gender bias on social interactions.
- analyze the influence of culture, family, society, and environment on an individual's development.
- analyze patterns of social problems which are based on ethnic and cultural differences in the United States.

**Certificates of Achievement**
CSU General Education Certificate of Achievement Certificate

This certificate is designed for students planning to transfer to a California State University (CSU) campus. Completion of this certificate ensures that the student has met the lower division General Education requirements for all CSU campuses.

Catalog Date: June 1, 2020

Certificate Requirements

Students must complete a minimum of 39 units used to satisfy the CSU General Education requirements. See the CSU General Education patterns listed in the American River College (ARC) catalog or consult with an ARC counselor.

Total Units: 39

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain the values of a culture as expressed through its art or language.
- demonstrate effective expository and persuasive writing skills.
- develop a reasoned solution to a problem.
- evaluate new and accepted ideas about the natural universe using testable methodology.
- evaluate the methods of inquiry and evidence used in the behavioral and social sciences.

Intersegmental General Education Transfer (IGETC) Certificate of Achievement Certificate

This certificate is designed for students planning to transfer to a California State University (CSU) or University of California (UC) campus. It ensures that the student has met the lower division General Education/Breadth requirements for all CSU and UC campuses.

Catalog Date: June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- incorporate the appropriate finishes and materials for commercial and residential interiors.
- examine building types and occupancy classifications.
- create construction and presentation drawings that meet California building codes.
- assess client's needs and plans with the Americans with Disabilities Act (ADA), Life-Safety Codes and Universal/Barrier-Free Design.
- analyze interiors to reflect the needs of the end user.
- design spaces that are aesthetically pleasing and incorporate sound design principles.

### Career Information

The field of interior design offers a variety of career options, including residential design by itself, or with a specialty such as Universal Design, Green/Sustainable, smart-home, home office, and home theater design. It also offers commercial design, which can include ADA compliance, hospitality (restaurant, hotel, cruise ship) design, set design, and contract space planning. Additional career opportunities are available in product design, retailer, buyer/purchaser, manufacturers’ representative, and facilities management.

### Certificate of Achievement

**Para Professional Interior Planning and Design Certificate**

This certificate provides a foundation of education and skills in the expanding field of interior design. It focuses on the fundamentals of both residential and commercial design. A variety of topics taught for this certificate include space planning, building and Life-Safety codes, the Americans with Disabilities Act (ADA), and architectural and furniture history. This certificate includes an internship within the interior design industry.

**Catalog Date:** June 1, 2020

Total Units: 40 - 43

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- categorize building types and occupancy classifications.
- create construction and presentation drawings that meet California building codes.
- appraise the client's needs and plans with the Americans with Disabilities Act (ADA), Life-Safety codes and Universal/Barrier-Free Design.
- distinguish historical periods and styles of architecture and interior design.
- identify sales proposals.
- select textiles for the appropriate end use.

Career Information

This certificate offers a variety of career options, including residential design by itself or with a specialty of home office and home theater design. It also offers commercial design opportunities, which include space planning, hospitality (restaurant, hotel, cruise ship) design, set design, and historical and adaptive re-use design. Additional career opportunities are available as product designers, retailers, buyers, manufacturers' representatives, and facilities managers.

Certificates

Designed 4 Life Certificate

This certificate provides training in designing quality living environments. It includes various courses in Gerontology and Interior Design and covers how to successfully, safely, effectively, and aesthetically design interiors for all ages and abilities.

Catalog Date: June 1, 2020

Certificate Requirements

</table>
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate interior environments and design changes in their function.
- categorize specific expectations and desires in terms of the client's needs.
- design environments for all ages and abilities.
- design interiors that reflect the needs of the client.

Career Information

Our aging population is requiring more specialized design for long-term independence. This certificate offers opportunities in careers for both gerontology and interior design.

Green Building and Sustainable Design for Interiors Certificate

This certificate provides students with expertise in the requirements for designing green and sustainable interiors.

Catalog Date: June 1, 2020

Certificate Requirements

<table>

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- describe the history and development of the green movement as it applies to interior design
- choose appropriate materials and finishes to achieve a green and sustainable interior
- identify the skills that are required to apply for certification as a Leadership in Energy and Environmental Design (LEED) Accredited Professional and describe the process for receiving LEED certification for projects.
- assess the role of the interior designer as part of a team of professionals involved in creating green buildings and sustainable design

Career Information

This certificate offers additional opportunities for an interior designer specializing in green design. It helps students be more employable by demonstrating a more focused skill set.
Interior Retail Merchandising Certificate

This certificate provides a foundation of education and skills in the expanding field of interior design. Topics include the materials of interior design, architectural (global and regional) and furniture history, business practices, and event planning.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- select the appropriate finishes and materials for commercial and residential interiors.
- analyze interiors that reflect the needs of the end user.
- design spaces that are aesthetically pleasing and that incorporate sound design principles.

Career Information

This certificate offers a variety of career options in residential design. Additional career opportunities are available as product designers, retailers, buyers, manufacturers' representatives, and Sacramento architectural and interiors historians.

Universal Design Certificate

This certificate prepares students to work in the field of interior design with an emphasis on Universal Design. Multi-generational or universal design addresses the needs and abilities of people of all ages. Universal Design gives careful consideration to space planning, accessibility, security, and privacy issues, to create an environment that promotes independent living for every member of the household.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- assess the client's interior space planning needs.
- design residences that will successfully meet the needs of most people.
- analyze how Universal Design is used in a floor plan.

Career Information

Students who have completed this certificate may work in full residential design. They may also specialize in residential kitchen and/or bath design.

</table>

This course explores a variety of career options in the multi-faceted field of interior design. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the career offerings within the field of interior design.
- explore the need for different career offerings within the field of interior design.
- evaluate hiring trends, requirements, and salaries of careers within the field of interior design.

IDES 102 Working with Clients

<table>
<thead>

<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers methods for effectively working with clients. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose a client interview to best assess a project's needs.
- qualify a client's budget for best project outcome.
- discuss client needs.

IDES 103 Furniture Markets

<table>
<thead>

</tr>
</tbody>
</table>

This course provides an opportunity to attend seasonal markets, such as the San Francisco Design Center (SFDC), to tour showrooms, attend lectures, and see the upcoming interior design offerings. Trends, markets, budgets, and products are discussed. Field trips are required.
Upon completion of this course, the student will be able to:

- explain the value of seasonal markets in the interior design industry.
- differentiate product lines, manufacturers, materials, and styles.

### IDES 104 Home Staging

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course is a basic introduction to the process of staging homes for sale. Topics include model homes and resale. Field trips are required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess what elements are needed to stage a room.
- arrange furnishings for optimal use.
- analyze how to improve a space based on staging techniques.

### IDES 105 Color and Interior Design

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course is a basic introduction to color and how it relates to interior design. Topics include basic dynamics of color, its principles, fundamentals, psychology, and applications. Field trips are required. Pass/No Pass only.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze theories related to color psychology.
- discover effects of color use in interior design.

### IDES 108 Lighting For Better Health

**Units:** 0.5  
**Hours:** 9 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course introduces better lighting design that could improve your health. New research shows that properly designed lighting can enhance our human biology and overall good health. Field trips are required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the impact of natural light on the circadian system.
- examine the impact of artificial light on the circadian system.
- recommend lighting designs to improve the circadian system.
IDES 109 Interior Design Specifications

This is a basic introduction to the process of specifying interior fixtures, furniture, and equipment. Topics include selection, documentation, and industry standards for specification writing. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- organize the sequence client programming in interior projects.
- prepare and document finish and materials specifications.

IDES 110 Estimating and Calculating for Interior Design

This course includes techniques for accurately calculating yardage and materials of interior products for residential and commercial installations. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the differences between interior residential and commercial products.
- measure accurately for window, wall, and floor coverings.
- estimate yardage for window, wall, and floor coverings.
- write work orders for interior products.

IDES 120 Seasonal Decorating

This course introduces the basics for changing decor according to various seasons and holidays. Resourcing for props, elements and accessories is included. This course covers both commercial and residential applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze decorative finishes and accessories for seasonal display.
- assess the appropriate decor based upon seasonal or holiday needs.
This course is a basic introduction to event planning and how it relates to interior design. Topics include fund raisers, corporate events, and private events such as weddings and parties. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize the business of event planning.
- assemble the essential components of an event.
- calculate the budget for an event.

IDES 130 Sacramento Design History - Architectural Gems

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the rich architectural and interior design history in the Sacramento area. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research architectural gems and their interiors in the Sacramento area.
- analyze architectural gems and their interiors in the Sacramento area.

IDES 131 Sacramento Design History - Old Town

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the rich architectural and interior design history of Old Town Sacramento. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research Old Town Sacramento architecture and interiors.
- analyze Old Town Sacramento architecture and interiors.

IDES 132 Sacramento Design History - Victorian

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the styles of Victorian architectural and interior design history in the Sacramento area. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• research Victorian architecture and interiors in the Sacramento area.
• analyze Victorian architecture and interiors in the Sacramento area.

IDES 133 Sacramento Design History - Bungalows

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores the architectural and interior design history of bungalows in the Sacramento area. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• research bungalow architecture and interiors in the Sacramento area.
• analyze bungalow architecture and interiors in the Sacramento area.

IDES 134 Sacramento Design History - Fabulous Forties

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores architectural and interior design history of the Fabulous Forties area in Sacramento. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• research Fabulous Forties architecture and interiors in the Sacramento area.
• analyze Fabulous Forties architecture and interiors in the Sacramento area.

IDES 135 Sacramento Design History - Mid-Century Modern

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course explores mid-century modern architectural and interior design history in the Sacramento area. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• research mid-century modern architecture and interiors in the Sacramento area.
• analyze mid-century modern architecture and interiors in the Sacramento area.

IDES 136 Sacramento Design History - Modern and Contemporary

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020
This course explores the Modern and contemporary architectural and interior design history in the Sacramento areas. Field trips are required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research examples of Modern and contemporary architecture and interiors in the Sacramento area.
- analyze Modern and contemporary architecture and interiors in the Sacramento area.

IDES 300 Fundamentals of Interior Design

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This introductory survey course addresses various aspects of the interior design industry and profession. It includes the study and application of design principles and elements; influences of historical, cultural, and functional design factors; the selection and arrangement of interior furnishings and materials; and an overview of career options in interior design. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list various career options in the field of interior design.
- compare and contrast the principles and elements of design when used in interior design.
- arrange furniture and materials that are functional and aesthetically pleasing.

IDES 302 Introduction to Green Building and Sustainable Design in Interiors

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the basic principles of green building and sustainable design (GBSD) and focuses on applications in the practice of commercial or residential interior space planning and design. It includes a historic perspective and the appropriate application of these principles in the profession and also introduces the requirements for Leadership in Energy and Environmental Design (LEED) certification. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the basic requirements for planning green and sustainable interiors
- analyze interiors according to GBSD and/or LEED requirements
- research the process and basic requirements for LEED certification
- compile finishes, materials, and fixtures that fulfill the requirements of green design
- experiment with finishes, materials, and fixtures that meet LEED requirements

IDES 310 History of Interior Architecture and Furnishings I

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
This course covers the historical relationship between the decorative arts, period furniture, and interior architecture from antiquity through Victorian. Emphasis is placed on identification of specific furniture styles and architectural features. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate how architectural and furniture styles and designs originated, including how they are adapted to subsequent periods.
- differentiate between "classics", lasting, and short-lived styles.
- analyze social, historical, and geographical factors affecting the development of design styles.
- research contributions from historical periods that have influenced the decorative arts, furniture, and interior architecture.
- compare the decorative arts, period furniture, and interior architectural from Ancient Egypt through the English Regency Period.

### IDES 312 History of Interior Architecture and Furnishings II

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1  
**Catalog Date:** June 1, 2020

This course covers the historical relationship between the decorative arts, period furniture, and interior architecture from the American Colonial periods through Modern and Contemporary, Emphasis is on style development as it relates to socio-economic and political factors of the times, as well as identification of specific furniture styles and architectural features. Asian, African, Mid-Eastern, and other non-western styles are also included.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and describe furniture and architectural styles and characteristics of those styles from the late 19th century to present.
- distinguish contemporary designers and their major contributions.
- differentiate characteristics of Asian, Mid-Eastern, African, and other non-western styles.
- examine and evaluate current styles in relation to their historical origins.
- evaluate how social, historical, and geographical factors affect the development of design styles.
- categorize "classical" and lasting styles as well as short-lived or "trendy" styles.

### IDES 322 Materials of Interior Design

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU  
**General Education:** AA/AS Area I; CSU Area C1  
**Catalog Date:** June 1, 2020

This course covers the industry, technology, products, and specification issues of interior finish materials. Textiles, floor coverings, paint and wall coverings, window treatments, furnishings and surface materials, and lighting are included. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and specify interior finish materials and products for functional, aesthetic, maintenance, and budget considerations.
- research resources for interior finish materials and products.
- analyze construction characteristics of interior finish materials and products.
- describe installation criteria for interior finish materials and products.

IDES 324 Interior Design Business Practices

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the business and practical aspects of interior design. Topics include ethical practices, methods of compensation, establishing clients' budgets, estimating costs, purchasing, billing, marketing, and sales. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine purchase orders of interior design furnishings, finish materials, products, and their installation.
- review purchase orders, contracts, purchase agreements, and other documents required for client approval.
- identify and interpret various methods of compensation for interior design services.
- develop, compare, and contrast marketing plans and strategies.

IDES 326 Interior Design Sales

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers various aspects of selling proposed residential and commercial design projects. Included are personal presentation, selling techniques, making the sale, closing the deal, job completion, and follow up. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate interior design sales techniques.
- devise and practice sales techniques for client presentations.
- compare and contrast sales techniques targeted for interior design services, products, and materials.

IDES 330 Beginning Interior Design Studio

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 25 or 41 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers basic construction, layouts, products, and materials. Topics include floor plans, structural elements, and interior space planning. Presentation methods are explored. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• describe the various drawing standards and conventions used in interior design.

• identify the components of floor plans.

• measure using an architectural scale.

• calculate the measurements of a space and record the dimensions.

• create a floor plan to scale with dimensions and appropriate titles.

• create a floor plan to scale with functional furniture arrangements.

• measure and convert a room and furniture to 1/4” scale.

• draw simple interior elevations.

• examine and identify the components of a set of floor plans.

• select appropriate material to compile a color/materials board.

IDES 332 Portfolio and Presentation in Interior Design

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: IDES 330 with a grade of "C" or better  
Transferable: CSU  
Catalog Date: June 1, 2020

This course covers procedures for developing finished presentations in interior design. It includes methods of visually communicating with clients. It also covers both traditional and technology-based portfolio preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• list various methods of visually communicating with clients

• produce portfolio materials using both traditional and technology-based techniques

• create sketches using both traditional and computer-based tools

• demonstrate basic rendering techniques using color media

• prepare professional presentations for communication of design solutions

IDES 334 Interior Environment and Space Planning

Units: 3  
Hours: 36 hours LEC; 54 hours LAB  
Prerequisite: IDES 330 with a grade of "C" or better  
Corequisite: IDES 350  
Transferable: CSU  
Catalog Date: June 1, 2020

This course covers the analysis and application of design concepts and space planning techniques. It includes resources necessary to creatively solve problems relative to the function and quality of human environments. Topics include the integration of barrier-free design, the Americans with Disabilities Act (ADA), resource management, and environmental psychology design. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate user needs to develop appropriate interior design parameters.

• compile creative visual presentation techniques for the communication of design solutions.

• examine the use of Universal Design principles in planning of residential living space.

• integrate Barrier-Free design and Americans with Disabilities Act (ADA) requirements effectively into an interior space.
IDES 340 Beginning CADD for Interior Design

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: IDES 330 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course employs beginning computer-aided drafting and design (CADD) for interior design projects. Floor plans, space planning, elevations, and perspectives are created. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create flat plan and 3D drawings using CADD software.
- choose the necessary functions of CADD software to an architectural plan.
- plan and design structures utilizing CADD software.
- experiment with CADD software to design interiors.

IDES 341 Intermediate CADD for Interior Design

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: IDES 340 with a grade of "C" or better
Advisory: IDES 334
Transferable: CSU
Catalog Date: June 1, 2020

This course is a continuation of the computer-aided drafting and design (CADD) skills developed in IDES 340, utilizing a different CADD program. It also includes placing floor plans into view ports, adding attributes, and the creation of customized tool bars. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create symbol libraries with icons for interior projects.
- choose toolbars to aid in efficient use of the software.
- design floor plans utilizing the software.
- classify the various attributes of CADD (i.e. creating, extracting, databases).

IDES 350 Codes and Universal Access for Interior Design

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course explores local, state, and federal regulations concerning life-safety issues and barrier-free access (Americans with Disabilities Act and Universal Design requirements) relative to residential and contract design. It also covers codes and interior specifications. Special attention is given to performance, health-safety, and barrier-free design when estimating and preparing specifications for space planning, materials, and furnishings/products.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze barrier-free accessibility and Americans with Disabilities Act (ADA) requirements as they pertain to interior design.
evaluate performance criteria, Life-Safety standards, and Universal Design applications in preparing specifications for interior materials and furnishings & products.

research building codes and Life-Safety standards to interior design.

compare fire and smoke prevention, detection, and suppression systems.

evaluate the types of egress and occupancy classifications, and determine exit locations, arrangements, capacity, and travel distance.

collect recently published articles pertaining to ADA, Life-Safety codes, Universal Design and building codes.

IDES 351 Codes and Universal Access Lab

Units: 1
Hours: 54 hours LAB
Prerequisite: IDES 330 with a grade of "C" or better
Corequisite: IDES 350
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course applies the content and skills from IDES 350 to various design scenarios requiring Universal Design, Barrier-Free design and ADA (Americans with Disabilities Act) compliance. Projects are drafted following prescribed criteria.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• design using Barrier-Free standards.

• apply ADA requirements as they pertain to interior design.

• evaluate performance criteria, health-safety factors, and Universal Design principles in preparing specifications for interior materials, furnishings, and products.

• research and apply building codes and Life-Safety standards to interior design.

• draft specifications with clearly communicated format and content.

• compose egress, exit locations, arrangements, capacity, and travel distance.

IDES 355 Residences: Designed 4 Life

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the successful design of residences for a variety of users, regardless of their age, size, physical abilities, or limitations. It also encompasses specialty and adaptive appliances, plumbing fixtures, cabinetry, appropriate finish materials, space planning, and furnishings. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare and contrast efficient floor plans for people of various ages and abilities.

• synthesize design criteria allowances and tolerances of Universal Design, evidenced-based design, and aging-in-place principles.

• research and identify materials, products, space planning, and lighting that are appropriate to people of various ages and abilities.

• analyze residential materials, products, space plans, furnishings, and lighting that are appropriate to people of various ages and abilities.

• assess how other cultures design residences for special populations.

IDES 381 Lighting and Electrical for Green and Sustainable Interiors

Units: 3
This course introduces green and sustainable lighting design in both commercial and residential interiors. Topics include Leadership in Energy and Environmental Design (LEED) certification, photometrics, light sources, and effective lighting control. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- calculate effective lighting solutions for both residential and commercial interior design projects.
- integrate green or energy efficient light sources, distribution systems, and electric light programming into interior designs.
- plan for effective overall integration of lighting in commercial and residential interiors.
- evaluate the environmental impact of appropriate lighting solutions including fixtures and associated equipment.
- analyze the basic process of LEED certification.

**IDES 412 Specifications for Interior Design**

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the process of specifying interior fixtures, furniture, and equipment. Topics include selection, documentation, and industry standards for specification writing. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- research appropriate interior design sources and/or vendors
- organize the sequence and process of an interior project
- prepare and document finish specifications for successful application
- analyze specifications to meet industry standards and client approval

**IDES 494 Topics in Interior Design**

Units: 2 - 4
Hours: 36 - 72 hours LEC
Prerequisite: None.
Advisory: CISC 300; ENGWR 102 or 103, and ENGRD 116 with a grade of “C” or better; OR ESLR 320 and ESLW 320 with a grade of “C” or better; OR placement through assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed to provide an opportunity to study topics in Interior Design not included in current course offerings. Examples include kitchen & bath design; barrier-free design; in depth period style design.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- research resources of interior furnishings, finish materials and products
- research and evaluate historical implications that affect design today
- analyze variations of Interior Design through culture and period.
IDES 495 Independent Studies in Interior Design

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

IDES 498 Work Experience in Interior Design

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to interior design with a cooperating site supervisor. Students are advised to consult with the Interior Design Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of interior design. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of interior design related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
International Studies | American River College

This degree provides an understanding of international issues and the impact of globalization on developed and developing economies. It covers a number of issues, including trade, economic development, war and conflict, and foreign relations and diplomacy.

The International Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate his/her role as a member of a global network of interdependent societies.
- formulate a cohesive understanding of world issues and events and incorporate that knowledge into his/her daily life and career.
- analyze various social-scientific perspectives that explain the causes and consequences of globalization.
- apply various social-scientific perspectives to daily life and work environment.
- recognize people's socio-economic, political, and geographical background.
- analyze local and societal issues and problems within a global context.

Career Information

This degree provides career opportunities with local, state, federal agencies, and in the private sector. The core courses provide students with diverse knowledge to work in a variety of fields, including international business, law, government and non-governmental service, social services, natural sciences, health fields, and education.
IS 301 Introduction to Global Studies

This course introduces an interdisciplinary and multi-dimensional understanding of the process of globalization, including its history, socio-economic, political, and cultural causes and consequences. It focuses on how nation-states are increasingly becoming part of complex interconnected global economic, political, social, cultural, and ecological systems and structures. This course deals with how the actions of one nation state shapes trends and events in other nations. It also deals with how actions and events in one nation create a ripple effect across the globe and the extent to which nation-states are able to maintain a level of national autonomy and national identity within a global system. It utilizes globalization theories to provide a scientific framework for understanding various aspects of globalization including socio-economic, political, cultural, and ecological benefits and costs.

Upon completion of this course, the student will be able to:

- identify and describe various definitions and meanings of globalization
- identify and define concepts and terms pertaining to globalization
- analyze various historical, political, socio-economic, and cultural causes and forces involved in the process of globalization
- compare and contrast the impact and consequences of globalization on different regions and across continents
- apply theories of globalization to examples from different regions of the globe to understand varied intended and unintended outcomes of globalization
- discuss the extent to which nation-states are able to act autonomously and maintain their national identity within an increasingly interconnected global system

IS 302 Issues in Global Studies

This course introduces the origins, current status, and future trends of major transnational issues confronting the global community. Topics include economic development and inequality, environmental issues and challenges, human rights, human security (food, water, and health care), international conflict and security issues, migration, and population trends. This course also focuses on global governance, including the study of collective global responsibility.

Upon completion of this course, the student will be able to:

- identify major recurring and emerging global issues
- analyze one or more specific global problems of international or regional nature
- discuss approaches to global problems from an international perspective
- analyze the interconnections between and among global issues
- compare and evaluate the efficacy of national, regional, and international efforts to solve problems associated with global issues
- analyze the role of non-state actors and transnational organizations in causing, responding to, and resolving global issues
- evaluate the relationship between globalization and specific global issues
IS 305 Introduction to Middle East Studies

This course introduces the contemporary Middle East from global and interdisciplinary perspectives. It covers the major developments and events that have shaped the socio-economic and political institutions and structures within a distinct geopolitical area. This course examines processes of state formation, colonialism, independence movements, major power players in the region, and the modern challenges of globalization. It also covers the consequences for foreign policy. Countries may include but are not limited to: Algeria, Egypt, Iran, Iraq, Israel, Jordan, Lebanon, Libya, Palestine, Saudi Arabia, Syria, and Tunisia. This course provides a foundation in Middle East Studies in the context of a globally interconnected world system.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain current socio-economic and political dynamics in the Middle East in a global context.
- identify major economic and political actors/forces as well as political structures and systems in the Middle East.
- demonstrate knowledge of the region and the major ongoing domestic and global forces that shape Middle Eastern countries.
- analyze the significance of the Middle East in the context of United States, Western European, and other powers’ interests in the region.
- examine and critique existing social scientific perspectives on the Middle East.
- construct a critical understanding of the complex nature of Middle Eastern politics and culture within global and interdisciplinary perspective.
- formulate a scientific understanding of the region, free of stereotypes and anecdotes.

IS 310 Peace and Conflict

This course examines the political and socioeconomic causes and consequences of peace and conflict from different theoretical views. It includes an analysis of inter- and intra-state conflicts and wars, terrorism, ethnic and sectarian conflicts, and gender issues and conflicts. Additional topics include war theory, “negative peace,” post-conflict reconciliation, policy recommendations and proposed solutions for conflict resolution, and achieving peace through the engagement of the global community. This course is formerly known as SOCSC 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast various socio-economic, political, and cultural theories of the causes of conflict and war
- analyze the origins/causes, escalation, spread of conflict, violence, and war within various theoretical frameworks
- evaluate the termination, consequences, and future of both conventional and nonconventional wars
- analyze proposed conventional and nonconventional recommendations and solutions to conflict resolutions and attainment of sustainable peace including solutions such as arms control, alliances, economic development, and diplomacy
- apply problem-solving approaches to issues which include international law, international organizations, interdependence, global and regional integration, and prospects for world peace

IS 312 Current Global Development Issues

This course is designed to fulfill the requirements for...
This course covers current socio-economic and political issues in developing countries in a global context. It presents alternative theories pertaining to the causes and consequences of development, underdevelopment, and uneven development with a particular focus on the issues of globalization including political and social change. It also includes proposed solutions to various development problems from various scientific perspectives.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate, compare, and contrast various theories of development and social change in a global context.
- explain internal and external causes and consequences of development, underdevelopment, and uneven development within the various theoretical frameworks.
- explain the relative usefulness of proposed solutions provided by different theories of development and social change in the context of a globally interconnected world.
- relate theories of development and social change to proposed development policies that are dictated by the forces of globalization and are implemented in developing economies.
- compare and contrast the effects of various development policies on developing countries and their people.
- define the role of agencies of social change and development both domestic and international within a globally connected world.
- assess the impact of actions taken by one nation on the global community.

Associate Degrees for Transfer

A.A.-T. in Journalism and Mass Communications

The Associate in Arts in Journalism for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts in Journalism for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Students interested in transferring to a CSU campus to pursue a bachelor's degree in Journalism should meet with a counselor to confirm the courses required for lower division preparation in the major.

Catalog Date: June 1, 2020

The Associate in Arts in Journalism and Mass Communications for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze content of newspapers, magazines, and online media.
- demonstrate an understanding of basic news, feature writing, and reporting in print and on-line media.
- critique his or her own journalistic work and the work of others.
- apply knowledge of grammar and AP style to create mass media products that conform to journalistic conventions.
- produce news and feature articles and/or news and feature photographs for publication in a newspaper or on-line publication.
- apply principles of audience and journalistic ethics to writing and photography, especially as the student's journalistic work relates to gender, ethnicities, and culture.
- demonstrate understanding of the fundamentals of mass media theories, concepts, and practices as they relate to gender, ethnicity, and cultural constructs.

Career Information

The Journalism AA-T degree prepares students for careers in print, broadcast, and online news media.

Associate Degrees

A.A. in Journalism and Mass Communication

This program offers comprehensive training for careers in journalism and communications. Students learn how to create journalistic content for a variety of media platforms, including print, broadcast and online. The program covers news writing and reporting, public relations writing and techniques, photojournalism, and multimedia journalism. It also offers instruction in design and production for both print and online media products.

Catalog Date: June 1, 2020

Degree Requirements
COURSE CODE  | COURSE TITLE | UNITS
--- | --- | ---
JOUR 412  | College Media Production III | 3

A minimum of 2 units from the following:

JOUR 420  | College Media Production Lab I (0.5 - 3) | 2
JOUR 421  | College Media Production Lab II (0.5 - 3) | 2

Total Units: 29

The Journalism and Mass Communication Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- write and edit news, features, editorials, and press releases that adhere to professional journalistic standards for a variety of outlets.
- conduct research and evaluate information using appropriate methods.
- analyze and evaluate media materials for credibility, fairness, accuracy, appropriate style and grammatical correctness.
- apply journalism ethics and law appropriate to professional practice.
- complete journalistic assignments on deadline.
- create multimedia to accompany text news and feature stories in a variety of formats.
- design, develop and lay out pages for different types of publications using a variety of software programs and applying visual design principles.
- identify and explain the processes, elements, history, theory, and effects of journalism and modern mass media in society.

Career Information

This program is designed to train students for entry-level positions as reporters, writers, editors, producers, photographers, designers, copy editors, and fact checkers for newspapers, magazines, broadcast outlets, websites and other media platforms. It also trains them for entry-level communications/public relations positions that include writing, editing, photography, and/or page layout and design duties. Some career options may require more than two years of college study. This program prepares journalism/mass communications students who plan to transfer to four-year institutions.

Journalism (JOUR)

JOUR 300 Newswriting and Reporting

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area II(b)
C-ID: C-ID JOUR 110
Catalog Date: June 1, 2020

This course covers evaluating, gathering, and writing news in accepted journalistic style for different types of media under newsroom conditions. Topics include personal interviews, along with coverage of speeches, meetings, and other events. In addition, the role of the reporter and the legal and ethical issues related to reporting are examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the processes of news gathering.
- describe the traditional roles of journalists in society.
- analyze information related to observed events to determine its significance to particular audiences.
• demonstrate interpersonal communication skills by conducting informative interviews.
• compose text using grammar and style in accordance with Associated Press style (when using an AP Stylebook).
• compose a variety of news stories, including coverage of events and meetings, feature stories, and personality profiles.
• compose and revise a simple news story with a compelling lede, adequate sourcing and context, clear transitions, and a minimal number of technical writing errors.
• organize and write news stories in a timely manner for both print and website publications.
• discuss and apply broad libel, privacy, and ethical guidelines to common reporting situations.

JOUR 301 Advanced Newswriting and Reporting

Units: 3
Hours: 54 hours LEC
Prerequisite: JOUR 300 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID JOUR 210
Catalog Date: June 1, 2020

This course covers the development of advanced skills of reporting, interviewing, and writing in the range of work handled by a general assignment reporter. It emphasizes in-depth research, critical analysis, and story format. It also introduces feature and editorial writing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the major components of local and state government and describe their interrelationships.
• use public records as a newsgathering source.
• explain state and federal laws pertaining to information access.
• describe the essential processes of the judicial system.
• prepare and conduct interviews that produce substantive discussion.
• write news stories that explain complex process and/or relationships.
• write feature stories that explore personalities and explain conditions.
• utilize the Internet as a newsgathering source.
• collect and confirm information essential to substantive reporting.
• research and produce in-depth news and feature stories and news and feature packages that include sidebars, fact boxes, and statistical charts.

JOUR 310 Mass Media and Society

Units: 3
Hours: 54 hours LEC
Prerequisite: None
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D7; IGETC Area 4
C-ID: C-ID JOUR 100
Catalog Date: June 1, 2020

The course is a survey of the mass media. It covers the history, philosophy, structure, and trends of mass media, as well as the theories that help to explain its effects on social institutions. It includes an exploration of economics, technology, law, ethics, and social issues, including cultural and ethnic diversity.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the essential and structural processes of mass communication
• analyze theories that have been developed to understand the effects of mass communication on the behavior of individuals, groups, and on social change
• explain major terms and trends in media studies
• describe legal and ethical issues that affect the relationship of the media and society
• utilize his/her understanding of the history, economics, and structure of the media to analyze and appraise media products and current controversies
• explain how the media affect our culture, attitudes, and beliefs
• perform a simple content analysis of a media product
• describe the role, influence, and impact of new and emerging media formats and the practical, legal, and ethical issues associated with them

JOUR 320 Race and Gender in the Media

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D4; CSU Area D7; IGETC Area 4C
Catalog Date: June 1, 2020

This course examines the roles of gender, ethnicity, and social class as represented and documented in the mass media. These issues are analyzed within the context of media content, development, policy, and ownership, including stereotypes and the role of alternative and community media. Critical thinking is emphasized through the review of mass media, focusing on the contributions of diverse groups to mass media and mass communication as an agent and documenter of social change.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• differentiate among the various approaches of media.
• describe the structure of print, broadcast, and digital media.
• identify media’s role as documenter of history and perpetrator of mainstream culture.
• analyze key research and theory on attitudinal, behavioral, and social effects of mass media with emphases on literature that examines social groups and ethnic minorities.
• critically analyze the presentation of social groups and classes in various media.
• evaluate the bias and balance in each form of mass media.
• identify the role minority-owned and alternative media play in building communities and reaching audiences.
• discuss how minority groups can further social change using the education, enculturation, and social mobilization functions of the mass media.
• define how ethnocentrism, prejudice, and racism have shaped the American experience, media content, policy, ownership, and distribution.

JOUR 340 Writing for Publication

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Advisory: Eligibility for ENGWR 300 or ESLW 340
Catalog Date: June 1, 2020

This course introduces writing non-fiction for publication. Emphasis is on analyzing magazines; finding ideas; writing a query letter; developing a saleable magazine idea and article; researching and interviewing; as well as organizing, writing and marketing an article. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• propose, write, and edit saleable magazine articles.
• formulate and plan magazine article ideas and identify the most appropriate places to sell them.
• critically analyze and identify niche publications, readership, and demographics and propose freelance opportunities.
• plan story ideas and focus and target them to particular publications.
• collect research and successfully execute interviews.
• tailor a story for different markets and publications.
• apply First Amendment law and libel restrictions in professional practice.

JOUR 350 Writing for Broadcasting/Podcasting

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the theory and technique of writing for the broadcast media. It includes reporting for radio and television news, writing and storyboarding commercials and public service programming, and an introduction to production techniques. It is recommended for students as preparation for work in broadcasting, instructional media, and related fields.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• write, edit, and produce news and feature stories for television, radio, and web-based news sources.
• describe the basic structure of radio and television journalism.
• analyze audiences of electronic media.
• develop sources and conduct interviews for produced stories.

JOUR 351 Public Relations Writing and Media Techniques

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
C-ID: C-ID JOUR 150
Catalog Date: June 1, 2020

This course is a study of public relations (PR), including planning PR campaigns, preparing client messages for newspapers, magazines, radio, broadcast and online outlets, and working with reporters to position stories. It examines public relations techniques in business, education, entertainment, social service, and other fields. It also covers crisis PR.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate and assess the role of the PR practitioner in PR firms, corporations, and public information offices.
• research, plan, design, and generate a public relations campaign.
• analyze the use of mass media for PR.
• generate researched and targeted media messages for clients.
• produce researched and targeted press releases, brochures, newsletters, and press kits.
• analyze and apply the legal and ethical limits of PR.

JOUR 360 Photojournalism

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
C-ID: C-ID JOUR 160

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• collect research and successfully execute interviews.
• tailor a story for different markets and publications.
• apply First Amendment law and libel restrictions in professional practice.
This course is an introduction to the theory and technique of telling stories with pictures. The role of the photojournalist in the media, pertinent ethical and legal issues, and professional standards are emphasized. Topics include digital still camera operation, composition and lighting, digital image processing, news judgment, and accuracy. Also covered are environmental portraits, photo stories, and feature, sports, and breaking news photography.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- use digital still photography equipment
- explain terms and procedures typically used in photojournalism
- analyze ethical and legal issues pertinent to photojournalism
- explain the role of the photojournalist in the media
- capture, process, and caption digital still images
- select images appropriate for use with specific stories
- assemble a portfolio of digital still images that can be used to obtain career advancement in the professional world

JOUR 361 Multimedia Journalism

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: JOUR 360 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID JOUR 120
Catalog Date: June 1, 2020

This course is an introduction to the theory and technique of combining still images, audio, and video to create multimedia photojournalism content for distribution via the Internet. It provides practical experience in capturing and editing still images, audio, and video with software such as Adobe Photoshop, Audacity, Soundslides Pro, and Apple’s iMovie and Final Cut Pro. A digital, still or video camera is required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- use digital still photography, audio, and video equipment to create a multimedia project
- edit a multimedia project using digital still photography, audio, and video software
- explain terms and procedures typically used in multimedia production
- explain multimedia editing principles
- select images, audio, and video content appropriate for use with specific stories
- assemble a 3-minute multimedia project that can be used to obtain career advancement in the professional world

JOUR 404 Editing and Production

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: JOUR 300
Transferable: CSU
Catalog Date: June 1, 2020

This course provides instruction and practice in editing and design, including page makeup, copy editing, photo editing, legal/ethical issues and production methods for newspapers, magazines, and other publications. It also includes preparing, planning, and organizng publications.

Student Learning Outcomes
Upon completion of this course, the student will be able to:
• describe editing and production processes
• design and lay out a variety of publications
• demonstrate and coordinate the elements contained in each type of publication
• convey design principles
• compare and contrast techniques in photo editing
• assess the target audience
• develop a design to convey the correct message
• evaluate publications for their efficacy, strengths, and weaknesses
• analyze the legal and ethical issues journalists, photographers, and designers experience

JOUR 410 College Media Production I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: JOUR 300 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID JOUR 130
Catalog Date: June 1, 2020

This course offers hands-on experience in reporting, writing, photography, layout, and online production skills. This course provides preparation for transfer work in journalism or entry-level jobs in the field.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• produce beginner-level work suitable for publication in print and/or online.
• apply the basic principles of news judgment to assignments.
• explain the role of the student press as a member of the campus community.
• utilize production processes while working under deadline pressure in the college newsroom.
• apply the principles of the First Amendment and other laws appropriate to professional practice.
• apply basic ethical principles in pursuit of truth, accuracy, fairness, and diversity.
• evaluate work for accuracy, fairness, appropriate style, and grammatical correctness.
• develop an electronic portfolio of at least 10 writing, design, photo, or multimedia stories published in the student publications.
• write and report stories that are free of libel.
• publish photos that take into account copyright regulations.

JOUR 411 College Media Production II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: JOUR 410 with a grade of "C" or better
Transferable: CSU
C-ID: C-ID JOUR 131
Catalog Date: June 1, 2020

This course builds on experience gained in JOUR 410. It focuses on intermediate writing and production skills, using the school newspaper The American River Current and its online companion www.arcurrent.com, as a practical laboratory. The course provides the opportunity to work in at least two of the following areas: researching, writing, and editing articles for the two publications; taking photographs and creating graphic illustrations; developing multimedia stories; or designing pages. Ethical and legal aspects of communication are also covered.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- produce intermediate work suitable for publication in print and/or online.
- apply basic and advanced principles of news judgment to assignments.
- utilize the production processes while working under deadline pressure in the college newsroom.
- apply the principles of the First Amendment and other laws appropriate to professional practice.
- develop an intermediate electronic portfolio of 14 assignments that includes work in at least two of these areas: writing, editing, design, photo, or multimedia assignments published in student publications.
- write and report and/or edit stories that are free of libel.
- publish photos that take into account copyright regulations.
- apply basic and advanced ethical principles in pursuit of truth, accuracy, fairness and diversity.

JOUR 412 College Media Production III

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: JOUR 411 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds on the experience gained in JOUR 411. It focuses on advanced intermediate writing and production skills, using the school newspaper The American River Current and its online companion www.arcurrent.com, as a practical laboratory. The course provides the opportunity to work in at least three of the following areas: researching, writing, and editing articles for the two publications; taking photographs and creating graphic illustrations; developing multimedia stories; or designing pages. Ethical and legal aspects of communication are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- produce advanced intermediate work suitable for publication in print and/or online.
- evaluate the work of others for accuracy, fairness, appropriate style, grammatical correctness, and news judgment.
- plan and execute a production process while working under deadline pressure in the college newsroom.
- apply the principles of the First Amendment and other laws appropriate to professional practice.
- adhere to ethical principles and adhere to professional standards while pursuing assignments and editing the works of others.
- develop an advanced intermediate electronic portfolio of 18 assignments that includes work in at least two of these areas: writing, editing, design, photo, or multimedia assignments published in student publications.
- write, report, and/or edit stories that are free of libel.
- publish photos with respect to copyright regulations.
- play a basic role in the management of the newsroom.

JOUR 413 College Media Production IV

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: JOUR 412 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds on the experience gained in JOUR 412. It focuses on advanced writing and production skills, using the school newspaper The American River Current and its online companion www.arcurrent.com, as a practical laboratory. It provides the opportunity to produce work in each of the following areas: researching, writing, and editing advanced and in-depth articles for the two publications; taking photographs and creating graphic illustrations; developing multimedia stories; and designing pages. Ethical and legal aspects of communication and media leadership/management are also covered and students are expected to serve in leadership roles.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- produce advanced intermediate work suitable for publication in print and/or online.
- evaluate their own work and that of others for accuracy, fairness, appropriate style, grammatical correctness, and news judgment.
- plan and execute a production process while working under deadline pressure in the college newsroom.
- develop an advanced intermediate electronic portfolio of 18 assignments that includes work in at least three of these areas: writing, editing, design, photo, or multimedia assignments published in student publications.
- play an active role in leadership of the news organization, including making decisions based on the professional and ethical standards of journalism.
- manage a newsroom.
- mentor new journalists.

JOUR 420 College Media Production Lab I

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None.
Corequisite: JOUR 404 or 410
Transferable: CSU
Catalog Date: June 1, 2020

This lab course provides inexperienced journalism students with hands-on instruction in writing, editing, photography, design and computer-based publication. This includes one-on-one and small-group instruction in publication software, such as Adobe Creative Suite programs, and Web content management systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply journalistic principles to hands-on assignments.
- report and write stories for publication using multiple sources.
- assess and apply the basic skills of layout and design.
- take and prepare photographs for publication for print and online.
- write basic headlines for print and online editions.
- develop a basic digital portfolio of up to ten writing, photo, editing, and/or design pieces published in student publications.

JOUR 421 College Media Production Lab II

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: JOUR 404 or 411
Corequisite: JOUR 404 or 411
Transferable: CSU
Catalog Date: June 1, 2020

This lab course provides experienced journalism students with hands-on instruction in writing, editing, photography, design and computer-based publication, as well as instruction in newsroom management and leadership. This includes advanced lessons in publication software, such as Adobe Creative Suite programs, and Web content management systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply intermediate journalistic principles to hands-on assignments.
- report and write in-depth or enterprise stories for publication using multiple sources.
- apply the intermediate skills of layout and design.
- take and prepare photographs and photo essays for publication for print and online.
• write advanced/complex headlines for print publications.
• write online headlines under search engine optimization guidelines.
• develop an intermediate digital portfolio of up to ten writing, photo, editing, and/or design pieces published in student publications.

JOUR 495 Independent Studies in Journalism

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in journalism, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in journalism and secure approval. Only one independent study for each catalog course will be allowed.
Kinesiology & Athletics | American River College

The ARC Kinesiology and Athletics program offers a wide variety of courses that improve physical fitness, sport skills, and dance performance abilities.

All activity classes are open to both men and women unless noted. Students may enroll in more than one physical education class at the same time. They may not enroll in more than two sections of the activity during the same semester. DANCE, FITNS, PACT, and TMACT classes may be taken one time for credit. SPORT classes may be taken four times for credit. The prefixes “ADAPT, DANCE, FITNS, PACT, TMACT, and SPORT” refer to courses used to satisfy the one-unit physical education graduation requirement.

Courses which are designated with a KINES prefix are theory-oriented rather than activity-oriented and DO NOT satisfy the physical education activity requirement.

Division Dean Kathy “Kat” Sullivan-Torrez
Department Chairs Tim Finnecy

Associate Degrees for Transfer

A.A.-T. in Kinesiology

This Associate in Arts in Kinesiology for Transfer provides a path to students who wish to transfer to a CSU campus in Kinesiology and serves the diverse needs of students who wish to obtain a broad and an in-depth understanding of the field. Additionally, this degree allows students to learn the fundamental principles and practices of Kinesiology in order to create a solid foundation for their future personal and academic endeavors.

The Associate in Arts in Kinesiology for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts in Kinesiology for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Catalog Date: June 1, 2020

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recount the historical evolution of physical education/kinesiology.
- evaluate current theories, philosophies, and trends in the field of kinesiology.
- identify key aspects of personal fitness as it relates to physical fitness programs.
- construct a philosophy of kinesiology that includes goals for lifetime fitness.
- discuss how sociological, historical, and philosophical factors influence the field of kinesiology.
- outline the basic principles of current accepted nutritional standards for physically active individuals.
- describe the basic structure of the human body and how its various systems respond to exercise.

### Career Information

This degree is designed to prepare students for transfer to a four-year college or university in Kinesiology. Career opportunities include, but are not limited to, kinesiology instructor, exercise physiologist, athletic trainer, strength and conditioning coach, athletic coach, personal trainer, physical educator, and corporate fitness director.

### Associate Degrees

#### A.S. in Physical Education

This degree provides an educational and practical foundation for students interested in multiple professions in the area of physical education. It also provides coursework required for transfer in physical education majors. Topics include introduction to physical education, care and prevention of athletic injuries, CPR, psychology, nutrition, dance, fitness, recreation, and sport. Students who work closely with their counselor can use this degree to prepare for majoring in kinesiology at a four-year college.

Catalog Date: June 1, 2020

OR three units from any of the following: DANCE, FITNS, PACT, SPORT, or TMACT.

Total Units: 19 - 20.5

*If student has Community CPR certification through the American Red Cross, or Basic Life Support certification through the American Heart Association, the HEED 310 or HEED 311 requirement may be waived.

The Physical Education Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- list various occupations in the field of physical education
- identify basic bones, muscles, and ligaments of the human body
- compare key aspects of personal fitness as it relates to physical fitness programs
- construct a philosophy of physical education that includes goals for lifetime fitness
- evaluate current theories, philosophies, and trends in physical education
- recognize current job opportunities in the field of physical education
- summarize the education requirements for employment as a professional physical educator
- evaluate common athletically-related injuries in the field of physical education
- outline the basic principles of current accepted nutritional standards for physically active individuals
- discuss the role of physical and psychological health as it relates to physical education
- recount the historical evolution of physical education
- demonstrate skills needed to meet the minimal certification standards when performing first aid and CPR as required by a nationally recognized organization

Career Information

This degree is designed for those pursuing a career in coaching, health and fitness, personal training, and prepares students for transfer to four-year colleges and universities.

A.S. in Sports Medicine

This degree is designed to prepare students for transfer in the area of athletic training, exercise science, kinesiology, and other sports medicine related fields. Prevention, identification, evaluation, treatment, and rehabilitation of athletic injuries are emphasized.

Catalog Date: June 1, 2020

Degree Requirements
The Sports Medicine Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- list the minimum requirements to become a certified athletic trainer
- identify normal musculoskeletal anatomy
- evaluate common athletic-related injuries
- demonstrate proper wrapping and taping skills needed to protect commonly injured joints
- develop a diet for an active individual that is based on current accepted nutritional values
- create treatment protocols for common athletic-related injuries
- develop basic rehabilitation protocols for common athletic-related injuries
- manage the daily athletic training room set-up and break-down for fall and spring sports
- discuss how injuries affect the psychological health of the injured athlete

Certificates of Achievement

Fitness Specialist Certificate
This program prepares students for employment in the health and fitness industry and equips them with the knowledge and hands-on experience necessary to begin a career in the dynamic field of fitness. Upon completion of this certificate, the students are prepared to take national certification exams such as the National Academy of Sports Medicine (NASM), American College of Sports Medicine (ACSM), or the American Council of Exercise (ACE).

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- design, implement, and analyze fitness programs for a diverse population.
- critique and explore various health and fitness job opportunities.
- demonstrate knowledge and skills necessary to pass national certification exams such as NASM, ACSM, and ACE.

Career Information

The fitness certificate program is ideal for anyone desiring an entry-level position as a personal trainer, fitness center or health club employee, group exercise instructor, or strength and conditioning coach.

Senior Fitness Specialist Certificate

The Senior Fitness Specialist program prepares students for employment as a fitness leader in settings where people ages 50+ exercise with other age groups and in settings that cater to older adults. The program provides students with the knowledge and hands on experience necessary to begin a career in this growing field of fitness.

Catalog Date: June 1, 2020

\(^1\)One unit of work experience is required in one of the following environments: recreation center, senior center, senior community, assisted living facility, or another site for seniors.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recommend beneficial exercises for seniors and individuals with disabilities or medical conditions.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- create an individualized fitness plan to promote functional independence throughout the remainder of life.
- analyze how nutrition plays a part in overall health and aging.
- compare and contrast different self and group motivational techniques for staying active.
- identify and respond to life-threatening conditions (including breathing emergencies, cardiac emergencies, and severe bleeding).
- evaluate physical activities relative to risk factors.
- design and lead a group exercise activity, and provide modifications and variations to exercises when necessary.
- identify basic principles of body mechanics and posture.
- design an individualized exercise prescription program that includes muscular strength and muscular endurance development.
- explain normal aging-related changes and analyze how lifestyle choices influence the aging process.
- demonstrate techniques for validating and encouraging older adults during fitness activities.

Career Information

The Senior Fitness Specialist program is ideal for anyone seeking an entry-level position as a fitness leader in community, recreation, and senior centers, health clubs, retirement and assisted living communities, and other sites that cater to seniors.

Adapted Physical Education (ADAPT)

ADAPT 310 Adapted Lifetime Sports

Upon completion of this course, the student will be able to:

- create a plan to participate in recreational sports.
- demonstrate skills and knowledge of rules while playing a sport.
- identify strategies, rules, and etiquette needed to be successful in sport activities.

Student Learning Outcomes

This course introduces students with physical disabilities to a variety of sports. Modifications and assistive devices are used to enable students to safely participate in a variety of sports, such as archery, badminton, volleyball, tennis, soccer, softball, basketball, and golf.

Adapted Physical Education (ADAPT)

ADAPT 314 Wheelchair Sports and Games

Upon completion of this course, the student will be able to:

- create a plan to participate in recreational sports.
- demonstrate skills and knowledge of rules while playing a sport.
- identify strategies, rules, and etiquette needed to be successful in sport activities.
This course is designed for individuals with physical disabilities who use a wheelchair for mobility or who are ambulatory, but more successful in sports when using a wheelchair. Sports include, but are not limited to, basketball, quad rugby, volleyball, badminton, and tennis.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate increased strength, flexibility, and cardiovascular fitness
- apply the rules and strategies for the sports presented
- compile and relate appropriate drills and skills specific to each sport taught
- justify the importance of sports, health, and fitness as a lifelong pursuit

ADAPT 316 Adapted Personal Safety

Units: 1  
Hours: 54 hours LAB  
Prerequisite: None.  
Enrollment Limitation: A statement from a health care professional verifying the disability, contraindications, and recommended activities.  
Transferable: CSU; UC (Any or all PE activity courses combined: maximum credit, 4 units)  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course is designed for students who are unable to participate in a general personal safety course. It includes the skills, knowledge, and attitude which are important in avoiding or defending a physical attack. Topics include awareness and prevention of dangerous situations. Defensive strategies for protection while in the home, in the community, and on mass transit are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe a stranger in detail.
- assess different environments for safety.
- predict and plan ways to avoid dangerous situations.
- demonstrate skills needed to defend against an attack.
- revise and justify a personal safety plan.

ADAPT 324 Heart Healthy

Units: 1  
Hours: 54 hours LAB  
Prerequisite: None.  
Transferable: CSU; UC  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course is designed for individuals with disabilities. Individualized and/or group activities are used to increase cardiovascular fitness. Exercise principles are discussed to encourage a continued healthy and active lifestyle. Students must have a physician’s statement indicating (a) the disability, (b) specific restrictions, and (c) recommended activities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss cardiovascular fitness and how it relates to fitness and disability
- demonstrate increased cardiovascular endurance
- demonstrate ability to take resting, exercise, and recovery heart rates
ADAPT 330 Adapted Weight Training and Fitness

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Enrollment Limitation: A statement from a health care professional verifying the disability, contraindications, and recommended activities.
Transferable: CSU; UC (Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is designed for students who are unable to participate in a general physical education activity course. It includes individualized physical fitness programs including activities to develop muscular strength, flexibility, and cardiovascular endurance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze his/her own personal fitness level.
- develop and follow a plan to increase and maintain the highest possible level of fitness and efficiency to meet the demands of healthy living.
- analyze his/her own personal physical limitations and recognize a need to live as actively as possible.
- identify and practice skills and safety habits for participation in physical activities needed for work and recreation.

ADAPT 332 Adapted Aquatics

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Enrollment Limitation: A physician's statement verifying the disability, contraindications, and recommended activities
Transferable: CSU; UC (Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This is an individualized swimming, water safety, and fitness course designed for individuals with disabilities. It focuses on cardiovascular endurance, range of motion, mobility, muscular strength, and muscular endurance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and examine various methods of water exercise and perform them within individual limitations
- apply general fitness concepts and modify them to accomplish individualized aquatics goals
- identify and practice safety strategies to be used near and in a pool

ADAPT 335 Adapted Yoga

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is designed for students with a disabilities. It includes group and individual yoga activities that emphasize breathing, stretching, and relaxation techniques. Students must have a physician’s statement indicating (a) the disability, (b) specific restrictions, and (c) recommended activities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- practice safe breathing, stretching, and relaxation techniques.
- identify yoga activities and choose those to fit personal needs.
explain the differences in resting, exercise, and recovery heart rates and how they relate to relaxation.

participate in group yoga exercises.

create and practice an individual yoga exercise plan.

ADAPT 337 Adapted Walk and Wheel

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Enrollment Limitation: A statement from a health care professional verifying the disability, contraindications, and recommended activities.
Transferable: CSU; UC (Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is designed for students who are unable to participate in a general physical education activity course. Individualized walking or wheeling programs are designed to enhance cardiorespiratory endurance. The course also includes specific exercises for muscular strength, muscular endurance, and flexibility. Small group games and activities are included to promote fitness and fun.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply fitness concepts to personal workouts for meeting the demands of healthy living
- evaluate personal physical limitations and devise a plan to live as actively as possible
- analyze and develop coordinated locomotion within personal limits
- identify and practice skills and safety habits for participation in physical activities at work and during recreation

ADAPT 338 Adapted Aerobic Activity

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Enrollment Limitation: A physician's statement verifying the disability, contraindications and recommended activities.
Advisory: Eligible for ENGRD 310 or 312 AND ENGW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is designed for students with a disability who are unable to participate in a general physical education activity course. It includes group activities as well as individualized activities. Indoor and outdoor workouts are used to enhance cardiovascular endurance and affect body composition. Activities may include walking and jogging, aerobic dance, cardio-kickboxing, step aerobics, chair aerobics, circuit training and cardio equipment workouts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- practice safe stretching in preparation for aerobic activities.
- identify aerobic activities and choose those to fit personal needs.
- explain the differences in resting, exercise, and recovery heart rate and how they relate to the target heart rate.
- participate in a group aerobic exercise.
- create and practice an individualized aerobic exercise plan.

ADAPT 495 Independent Studies in Adapted Physical Education

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Fitness (FITNS)

FITNS 100 Utility Workforce Wellness

Units: 1
Hours: 9 hours LEC; 27 hours LAB
Prerequisite: None.
Corequisite: PREAP 122
General Education: AA/AS Area III(a)
Catalog Date: June 1, 2020

This course covers health and physical fitness related to utility worker occupations. Exercise programs are designed to improve specific muscle groups impacted in the occupational setting.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze components of health and fitness and how they aid in work/life balance.
- develop an effective personalized fitness program that is relevant to occupational work duties to assist in injury prevention and personal health.
- apply proper lifting/movement techniques applicable to utility worker occupations.
- implement a personal fitness plan using proper strength and cardiovascular training.

FITNS 101 Green Technology Workforce Wellness

Units: 1
Hours: 9 hours LEC; 27 hours LAB
Prerequisite: None.
Corequisite: PREAP 141
General Education: AA/AS Area III(a)
Catalog Date: June 1, 2020

This course covers health and physical fitness related to green technology workforce occupations. Exercise programs are designed to improve specific muscle groups impacted in the occupational setting.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the validity of fitness and health information using the scientific method and the relationship between scientific research and established knowledge as it applies to personal health and wellness.
- demonstrate an effective personalized health program to aid in occupational injury prevention relevant to green technology workforce practices.
- apply proper lifting/movement techniques applicable to green technology workforce occupations.
- identify motivational techniques that can result in lifestyle changes in fitness and health.
- assess behavioral modification procedures to ensure healthier choices and how they aid in work/life balance.

FITNS 102 Infrastructure Workforce Wellness

Units: 1
Hours: 9 hours LEC; 27 hours LAB
This course covers health and physical fitness related to general construction. Exercise programs are designed to improve specific muscle groups impacted in the occupational setting.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- determine the validity of fitness and health information using the scientific method and the relationship between scientific research and established knowledge.
- describe components of health and fitness.
- develop an effective personalized fitness program.
- use proper lifting techniques.
- implement a personal fitness plan using proper strength and cardiovascular training.
- identify motivational techniques that can result in lifestyle changes in fitness and health.
- assess behavioral modification procedures to ensure healthier choices.

**FITNS 302 Latin Aerobics**

This course combines a variety of rhythmic Latin-style dance movements into a form of cardiorespiratory training of low to moderate impact. It improves cardiorespiratory endurance, muscular strength and endurance, flexibility, and body composition.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate measurable improvement in aerobic fitness.
- discuss the relevance of aerobic fitness as part of a lifelong commitment to fitness.
- apply techniques for using a timed pulse rate, rating of perceived exertion (RPE), and the talk test to establish an overall target heart rate.
- identify the major muscle groups and their potential for moving the body.
- define six different elements of movement that raise the heart rate in any aerobic workout.
- describe and perform steps from several Latin styles of dance.

**FITNS 303 Dance Aerobics**

This course promotes cardiovascular fitness and endurance through aerobic dance movement. It encourages core strength and flexibility with strength and muscular development exercises. It also covers the importance of basic nutrition, health, and safety.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- demonstrate measurable improvement in aerobic fitness.
- discuss the significance of changes in pulse rate before, during, and after activity.
- describe the attributes of cardiovascular fitness, muscular endurance, muscular strength, and flexibility.
- analyze the basic relationship between exercise and a healthy lifestyle.
- identify areas of stress in life and list four ways to minimize the negative effects of living under stress.
- list safe and effective exercise techniques that protect the joints and lower back and show modifications for these exercises and movements.

FITNS 304 Cardio Circuit

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU; UC (UC credit limitation: Any or all PE activity courses: combined maximum credit 4 units.) |
| General Education: | AA/AS Area III(a) (effective Summer 2020) |
| Catalog Date: | June 1, 2020 |

This course is designed as a cardio circuit form of fitness training. It combines cardio and weight training equipment in a circuit format. Emphasis will be on timed intervals to train major muscle groups and the cardiovascular system. It will include flexibility and core strengthening.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- measure improvements in cardiovascular efficiency, muscular strength and endurance, flexibility, and body composition.
- safely operate cardiovascular and strength training equipment.
- discuss various workout strategies.
- set goals for cardiovascular improvement.
- design a fitness plan that promotes life-long health and fitness.

FITNS 306 Aerobics: Cardio-Kickboxing

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU; UC (Any or all PE Activity courses combined: maximum credit, 4 units.) |
| General Education: | AA/AS Area III(a); CSU Area E2 |
| Catalog Date: | June 1, 2020 |

This course promotes cardiovascular fitness and endurance through kickboxing. It emphasizes proper alignment, execution, and timing of faster-paced movements from kickboxing, boxing, and aerobic dance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate measurable improvement in aerobic fitness.
- discuss the relevance of aerobic fitness as part of a lifelong commitment to fitness.
- apply techniques for using a timed pulse rate, rating of perceived exertion (RPE), and the talk test to establish an overall target heart rate.
- identify proper cardio-kickboxing delivery technique.
- identify the major muscle groups and their potential for moving the body.
FITNS 307 Aerobic Mix

This course includes a variety of aerobic activities that provide a new approach to each workout. It emphasizes rotating aerobic forms such as aerobic dance, step, cardio-kickboxing, and aerobic circuit to keep the workouts challenging and interesting. It covers basic heart rate calculations, nutrition, and workout facts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- calculate a resting and a target heart rate
- evaluate and relate a perceived level of exertion
- calculate and use six-second, ten-second, and sixty-second heart rates as interchangeable measurements of exertion
- define six different elements of movement that raise the heart rate in any aerobic workout
- compare and contrast the elements of four different aerobic methods of workout

FITNS 308 Step Aerobics

This course is designed to improve cardiovascular fitness and encourage better endurance, flexibility, and strength through the use of step aerobics. It includes rhythmic and choreographed step routines, basic stretch and toning exercises, and provides information related to overall health and fitness.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply proper techniques to establish target heart rate
- demonstrate measurable improvement in fitness level
- discuss the immediate and lifelong benefits of aerobic exercise
- design a program to fulfill personal aerobic fitness goals
- describe the significance of changing heart rates that occur before, during, and after physical activity
- utilize aerobic exercise as a means of managing stress

FITNS 310 Aquatic Fitness I

This course focuses on using the resistance of water for low- or non-weight-bearing exercise for improvement in cardiovascular fitness, muscular endurance, flexibility, and strength. It includes exercises in deep and shallow water and provides information related to overall health and fitness. No swimming skills are needed.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe and demonstrate knowledge of physical fitness training principles and how they can be applied in a water environment.
- analyze cardiovascular activities and select those activities best suited for individual fitness goals.
- analyze fitness assessments, formulate individual fitness goals, and apply training principles toward acquisition of fitness goals.

FITNS 314 Aquatic Fitness III- Deep Water Jogging

Units: 1
Hours: 54 hours LAB
Course Family: Aerobic Water Fitness
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course uses the resistance of water for non-weight-bearing exercises. Emphasis is on cardiovascular fitness, muscular endurance, strength, and flexibility. Progress is monitored through appropriate fitness testing. No swimming skills are needed. An optional flotation belt is provided.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate and discuss fitness components of deep-water jogging.
- identify and utilize training methods for deep-water jogging.
- describe the relationship between resting and training heart rates.
- compute and measure target heart rate and resting heart rate.
- analyze workouts for proper techniques and mechanics.
- perform, measure, and discuss the intensity and duration of two deep-water jogging activities.

FITNS 316 Lap Swimming

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides a fitness based approach to swimming that emphasizes aerobic and anaerobic fitness through lap swimming. It utilizes interval training, cardiovascular conditioning, swimming technique, and aerobic training principles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate correct biomechanics in at least three different swimming strokes.
- demonstrate fitness training principles for lap swimming.
- evaluate measurable improvements in aerobic fitness levels.
- design individual lap swimming programs.
- utilize swim training equipment.

FITNS 321 Core Conditioning
This course incorporates a variety of activities including exercises with the stability ball, Bosu ball, and Pilates mat, and yoga styles of core work to enhance abdominal, lower back, gluteal, and hip strength with toning benefits to the entire body.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop better posture, body alignment, and balance
- demonstrate proper form and techniques when executing various skills
- increase and balance muscle strength, particularly of the abdominals, lower back, hips, and gluteals
- create a personalized exercise program for lifelong fitness

FITNS 324 Mat Pilates

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses: combined maximum credit 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course utilizes a systematic method of mindful and precise conditioning exercises designed to develop core strength, flexibility, and body awareness. Through the regular practice of theoretical and applied principles of the Mat Pilates method, students will see improved posture, control, balance, and concentration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate applied and cognitive understanding of Mat Pilates method theory.
- exhibit increased muscular awareness, core strength, and range of motion.
- perform Pilates matwork sequences with proper physical execution and controlled breathwork.
- design a personalized home exercise practice.

FITNS 325 Pilates

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC ("(maximum of 4 units of PE activity courses accepted")
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course focuses on precision alignment, flexibility, core strength, and building an awareness of the body. It involves a kinesthetic awareness that builds core strength and confidence in movement. Mat and wall stretches, exercises, and relaxations are used to encourage flexibility, balance, and coordination beginning with the deep postural muscles of the body.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate structured breathing techniques and discuss how they improve circulation and enable ease of movement.
- create a chart diagram of continuous focused motion for at least five mat exercises.
- identify and evaluate the six philosophies of Pilates form.
• discuss the history of Pilates.
• define the vocabulary of Pilates as it applies to any given Pilates exercise.
• analyze and compare the differences of each Pilate exercise and its modifications.
• create, diagram, and label a head-to-toe checklist for ten mat exercises.

FITNS 326 Mat Pilates II

Units: 1
Hours: 54 hours LAB
Prerequisite: FITNS 324 with a grade of “C” or better
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses: combined maximum credit 4 units.)
General Education: AA/AS Area III(a) (effective Summer 2020)
Catalog Date: June 1, 2020

This course will include the basic foundation of mat exercises with the addition of intermediate level exercises. Routines will include resistance methods of training with a focus on developing stronger core muscles and flexibility.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate applied and cognitive understanding of anatomical constructs with Mat Pilates method theory.
• understand methods for modifying exercises to adjust intensity levels.
• perform intermediate level Mat Pilates matwork sequences with proper physical execution, controlled breathwork technique, and utilizing resistance equipment.
• design a personalized home exercise practice that includes modifications.

FITNS 331 Boot Camp Fitness

Units: 1
Hours: 54 hours LAB
Prerequisite: None
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This is an intense boot camp fitness course conducted on and off campus using indoor and outdoor facilities. It includes aerobic and anaerobic conditioning, strength and endurance training, and individual and team fitness concepts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• develop and improve overall fitness
• identify and discuss changes in body composition
• design a consistent fitness program and apply this to everyday activities
• compare and contrast the elements of aerobic and anaerobic exercise
• demonstrate proper form when performing strengthening exercises

FITNS 332 Off Season Conditioning

Units: 0.5 - 1
Hours: 27 - 54 hours LAB
Prerequisite: None
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020
This course involves sport specific training, conditioning and movement techniques for the intercollegiate off-season athlete. There is a concentration of basic concepts with emphasis on conditioning. This course may be taken three times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate improvement of footwork techniques specific to the sport.
- increase cardiovascular endurance and muscular strength needed in order to be competitive in the sport.
- demonstrate proper form and techniques when executing various drills.

FITNS 339 Multi Sport Training for Fitness

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers multi-sport training, including swimming, biking (stationary and non-stationary), and running. Topics include transitional techniques for duathlons and triathlons. Some class sessions meet off-campus. Students must supply their own road or mountain bike and helmet.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply basic knowledge and skills learned to participate in cross training or triathlons.
- design progressive swimming, biking, and running workouts that will improve his/her cardiovascular fitness.
- evaluate his/her own fitness level and create a training program to prepare for cross training for fitness or triathlons.
- compare a pre- and post-test to assess his/her fitness level.
- understand and apply the safety rules, etiquette rules, and procedures within the sports of swimming, cycling, and running.

FITNS 343 Spin Bike

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is specifically designed for students to improve their cardiovascular and strength levels with low impact on the joints. It emphasizes basic cycling and fitness drills based on speed work, resistance, and recovery periods.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate increased aerobic capacity.
- assess heart rate.
- demonstrate proper technique while using the spin bike.
- discuss various workout strategies on the spin bike.

FITNS 344 Dynamic Fitness Training I
This course introduces constant varied functional movements performed at relatively high intensity. It emphasizes proper mechanics utilizing body weight resistance. The workouts are varied daily and designed to optimize fitness levels.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define fitness as increased work capacity across broad time and modal domains
- develop and improve overall fitness
- perform proper functional non-weight bearing movements
- perform various cardiovascular workouts of varied time increments

FITNS 345 Dynamic Fitness Training II

This course provides dynamic fitness training via Olympic weight lifting and varied cardio-vascular training and conditioning. It is recommended for athletes with some background in weight training.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define fitness as increased work capacity across broad time and modal domains
- develop and improve overall fitness
- perform proper functional non-weight bearing movements: heel squats, lunges, dead lift, push press, front squat, back squat
- perform various cardiovascular workouts of varied time increments

FITNS 346 Dynamic Cardio Training

This course improves cardiovascular conditioning through constant and varied training. Training consists of walking, running, jumping, spinning, and rowing with body weight strength training. Workouts are scaled to meet the level of each participant to train in the appropriate target heart rate zone.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- take his/her heart rate and understand the proper target heart rate training zone
- demonstrate improved cardiovascular conditioning
FITNS 347 Dynamic Aquatic Fitness Training

Units: 1
Hours: 54 hours LAB
Course Family: Dynamic Fitness
Prerequisite: None.
Transferable: CSU; UC (Any or all PE Activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides a fast moving, challenging aquatic workout, integrating traditional swim training with the addition of weight-bearing exercises in and out of the pool for complete body strength and cardiovascular conditioning.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop and improve overall fitness
- perform proper functional non-weight bearing movements
- perform various cardiovascular workouts of varied time increments
- read and understand a pace clock for interval training
- perform proper stroke drills for freestyle and backstroke
- compose a dryland and water workout utilizing target training zones

FITNS 348 High-Intensity Interval Training

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.)
General Education: AA/AS Area III(a) (effective Summer 2020)
Catalog Date: June 1, 2020

This course is designed to be a physically intense and total body workout. It includes workouts which incorporate running, obstacle courses, and a variety of calisthenics designed to enhance muscular strength and endurance used in high-intensity interval workouts.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate strength and personal fitness levels for high-intensity interval training using standard fitness testing.
- identify and apply exercises related to interval conditioning.
- design and implement a High-Intensity Interval Training (HIIT) program for personal use.
- understand and apply safety techniques, proper biomechanics, and training etiquette to interval training.

FITNS 350 Fitness And Weight Control

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course encourages a healthy attitude toward exercise, wellness, and weight management. Topics include assessing and improving fitness levels, as well as nutrition, healthy living, and active lifestyle strategies that are involved in attaining and maintaining appropriate levels of wellness. Field trips may be required.
Upon completion of this course, the student will be able to:

- identify the need for lifelong fitness
- maintain an exercise log including heart rate and exercise exertion
- explain the importance of physical activity and nutrition in devising an individualized wellness program
- explain the benefits of participating in a regular physical conditioning program
- develop a nutritional eating plan
- prepare nutritionally sound snacks and meals
- demonstrate improvement in the fitness components, such as muscular endurance and strength, flexibility, aerobic conditioning, and body composition

FITNS 351 Exercise, Balance and Mobility

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU; UC ((maximum of 4 units of PE activity courses accepted)) |
| General Education: | AA/AS Area III(a); CSU Area E2 |
| Catalog Date: | June 1, 2020 |

This course meets the needs of students who wish to start an individualized exercise program at a modified level. It focuses on improving flexibility through gentle range of motion exercises. It also focuses on increasing muscular strength through modified strength training exercises. Balance and coordination exercises are used to help reduce risk of falls and increase fitness levels and mobility. Individualized exercises are developed that can be carried out in a fitness center or at home.

Upon completion of this course, the student will be able to:

- analyze and practice safe and effective stretching utilizing gentle range of motion exercises
- calculate safe, individualized aerobic exercise training levels to construct personalized workout protocol
- practice and perform safe and effective balance exercises
- create an individualized fitness plan to promote functional independence throughout the remainder of life

FITNS 375 Introduction to Meditation

| Units: | 1 |
| Hours: | 54 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area III(a); CSU Area E2 |
| Catalog Date: | June 1, 2020 |

This course emphasizes the mind/body connection through techniques of visualization, affirmation, concentration, and body movements.

Upon completion of this course, the student will be able to:

- perform assessment of heart rate at the beginning and end of meditation
- analyze effects of diet and music on meditation practice
- evaluate the relationship of energy level and state of mind
- perform safe breathing, relaxation, and meditative body movements
FITNS 380 Circuit Weight Training

This course introduces a system of exercise using weights and cardiovascular activities to provide a balanced approach to physical fitness training. It emphasizes increasing muscular strength and endurance, cardiovascular endurance, and flexibility.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate the elements of circuit weight training to maintaining lifetime fitness
- demonstrate increased levels of muscular strength
- demonstrate improved cardiovascular fitness
- discuss the relationship between cardiovascular fitness, muscular strength, and body composition
- establish a target/training heart rate

FITNS 381 Weight Training

This course provides instruction in weight training to promote muscular strength and endurance. Safety, weight training principles, and program design are emphasized to reach personal fitness and strength goals. Components of fitness are addressed, including flexibility and body composition. Workout guidelines for general fitness, sport performance, and/or bodybuilding may be chosen for individual goals.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply correct and safe techniques for weight training.
- improve personal strength and fitness through weight training.
- develop personal goals of fitness/strength and critique progress.
- define principles and strategies for muscle strength, endurance, sculpting, and building.
- evaluate improved muscular strength, endurance, flexibility, and body composition.
- analyze fitness testing results.
- propose a personal workout plan.
- discuss and apply knowledge of proper nutrition for a healthy lifestyle.

FITNS 385 Weight Training for Competition

This course is a strength training program for students involved in advanced weight training. It is designed to develop strength, power, and muscle endurance appropriate to
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the importance of flexibility and range of motion
- demonstrate common strengthening techniques to improve general muscle strength and power
- identify strengthening techniques to improve muscular endurance
- execute four aspects of strength training for competition

FITNS 392 Yoga

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (maximum of 4 units of PE activity courses accepted)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course in Yoga emphasizes breathing, stretching, and relaxing techniques. Yoga positions and philosophies are examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and demonstrate 12 Yoga postures
- classify Yoga methods
- identify the major muscle groups, breathing patterns as well as duration and repetition guidelines associated with Yoga asanas
- evaluate the benefits of Yoga as a tool for stress reduction and improved range of motion
- relate the origins of Yoga to Indian culture, history, and philosophy
- compare and contrast the different types of Yoga

FITNS 393 Yoga II

Units: 1
Hours: 54 hours LAB
Prerequisite: FITNS 392 with a grade of "C" or better
Transferable: CSU; UC (UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.)
General Education: AA/AS Area III(a) (effective Summer 2020)
Catalog Date: June 1, 2020

This course is designed to strengthen and enhance muscle tone through the practice of asanas and pranayama techniques. Yoga practice with elements of meditation are examined to decrease stress, improve concentration, and increase spiritual connection.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize knowledge to design, develop, and implement a progressive personal yoga session.
- identify breath-control practices for calming the mind, balancing emotions, and relaxing the body.
- demonstrate a solid understanding of yoga principles, practices, history, and philosophy.
- evaluate ways to create lifestyle changes in fitness and overall health.
FITNS 395 Stretch

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course emphasizes stretching for better alignment, health, and increased range of motion. It provides an individualized approach to stretching and includes pre- and post-stretching techniques for specific activities such as sports, dance, or repetitive stress work-related movements.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the major muscle groups and demonstrate target area stretches pertaining to those muscles.
- describe the benefits of stretching and the basic components of a thirty-second stretch.
- identify correct alignment for three standing stretches.
- discuss the usefulness of pre- and post-exercise stretching.
- explain the basic mechanics of a muscle stretching.
- evaluate a stretching program with twelve target areas of stretch.

FITNS 400 Body Fitness (Walking or Jogging)

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course promotes physical well-being through physical activity, including but not limited to walking and jogging, to increase cardiovascular fitness, produce stress reduction, and encourage weight control. Attention is given to increasing cardiovascular efficiency, muscular strength, and endurance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- practice proper biomechanics techniques for walking and jogging for lifelong health and fitness
- calculate resting and training heart rates
- demonstrate measurable improvement in cardiovascular fitness
- identify and utilize safety procedures while walking and jogging
- create a personal fitness program for individual needs

FITNS 412 Taekwondo I

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC ("(maximum of 4 units of PE activity courses accepted)"
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is an introduction to basic Taekwondo skills which include stances, blocking, striking, kicking, poomsae, and self-defense techniques. Conditioning exercises are used to increase strength, flexibility, aerobic, and anaerobic fitness. Martial arts etiquette and traditions are taught and emphasized. Fields trips may be required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate proficiency in the basic stances, blocking, and kicking techniques.
- demonstrate beginning-level poomsae.
- apply basic self-defense techniques with a partner.
- utilize Taekwondo terminology and numerical counting.
- exhibit increased aerobic capacity.
- demonstrate four-directional footwork.
- exhibit an effective level of technique for beginning-level competition.

**FITNS 414 Tai Chi**

**Units:** 1  
**Hours:** 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU; UC (*maximum of 4 units of PE activity courses accepted*)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020  

This course explores the traditional Chinese fitness exercise of Tai Chi. It provides for the development of basic skills and techniques that lead toward an integration of the mind-body-spirit trilogy. Various Chinese fitness exercises in relation to health are explored. Principles of Confucianism and Taoism, including a basic review of Tai Chi history and philosophy are discussed. Overall, the physical discipline and structure of Tai Chi movements are emphasized.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate Tai Chi movements and attain proficiency sufficient to continue individual practice and improvement.
- demonstrate and apply basic exercises for maintenance of health and energy.
- demonstrate techniques of rolling forward and backward, change of direction, low bending stances and mental concentration leading to the development of strength, flexibility, and coordination.
- assess and practice martial arts etiquette in a classroom or social group environment.
- employ an improved sense of kinesthetic awareness and balance in everyday movements.
- appraise and explain how Tai Chi exercise promotes a healthy way of daily living and slows the aging process.

**FITNS 416 Taekwondo II**

**Units:** 1  
**Hours:** 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU; UC (*UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.*)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020  

This course provides instruction in intermediate level of Taekwondo. Aerobic, anaerobic, and plyometric training drills are employed to increase students strength, speed, and agility. More complex footwork, one-step sparring, paddle drills, and free sparring combinations are introduced. Intermediate level poomsae is practiced in addition to basic competition training in both sparring and poomsae. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate stances, blocking, and kicking techniques.
- demonstrate intermediate level poomsae.
- apply self-defense techniques with a partner.
- exhibit improved aerobic capacity and flexibility.
• demonstrate four-directional footwork with improved balance, agility, timing, and speed.

• exhibit a level of effective sparring that would enable competitiveness at an intermediate level.

FITNS 417 Taekwondo III

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC (UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides instruction in advanced level of Taekwondo. A higher level of aerobic, anaerobic, and plyometric training drills are employed to increase student’s strength, speed, agility, and competitiveness. It also introduces Kyupka (demonstration of power) and a higher level of poomsae. Sparring strategies, ring management, and other skills associated with being successful at this advanced level are taught. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• discuss the visualization of the “imaginary opponent.”

• demonstrate appropriate plyometric drills for high-level competition.

• demonstrate the proper use of hand-held training aids.

• develop fluid and dynamic floor drills.

• describe different training methods and strategies to become a high-level competitor.

FITNS 440 Swimming I

Units: 1
Hours: 54 hours LAB
Course Family: Swimming (http://arc.losrios.edu/course-families#id_100018)
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of “C” or better; OR ESLR 320 and ESLW 320 with a grade of “C” or better.
Transferable: CSU; UC ((maximum of 4 units of PE activity courses accepted))
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is offered as beginning, intermediate, or advanced swimming. Beginning swimming covers basic water acclimation, water safety, and introductory skills in freestyle and backstroke. Intermediate swimming covers refined freestyle and backstroke, and introduces breaststroke and butterfly. Advanced swimming further refines freestyle, backstroke, breaststroke and butterfly and also introduces individual medley, touch turns, flip turns, and starts. In addition, various aerobic and anaerobic training methods are taught. Endurance and stroke efficiency are emphasized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Beginning - demonstrate the ability to kick in streamline

• Beginning - demonstrate the freestyle for 25 yards

• Beginning - demonstrate proper bi-lateral breathing technique for freestyle for 25 yards

• Beginning - demonstrate backstroke for 25 yards

• Beginning - develop improved cardiovascular fitness during timed swims in class

• Intermediate - refine the stroke of freestyle with improved stroke efficiency to swim 200 yards

• Intermediate - refine the stroke of backstroke with improved stroke efficiency to swim 100 yards

• Intermediate - develop improved cardiovascular fitness during timed swims in class

• Intermediate - acquire fundamental skills in breaststroke for 50 yards

• Intermediate - acquire fundamental skills in butterfly for 50 yards
Advanced - refine the 4 strokes of the Individual Medley
Advanced - refine flip turns for speed and underwater efficiency
Advanced - develop race diving techniques for platform starts and backstroke starts

FITNS 441 Swimming II

Units: 1
Hours: 54 hours LAB
Course Family: Swimming (http://arc.losrios.edu/course-families#id_100018)
Prerequisite: None.
Advisory: Student must demonstrate comfort and confidence in the water and in their ability to demonstrate submersion, front float, and back float. This course is taught in deep water.
Transferable: CSU; UC (a maximum of 4 units of PE activity courses allowed.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course is designed for beginning swimmers with limited skills. Topics include mastery of basic water adjustment skills, floats, glides, streamline, freestyle, and backstroke techniques. This course is appropriate for those who are uncomfortable in deep water or those who need to refine their ability to swim 25 yards without stopping.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate mastery of proper posture, and streamline position.
- explain and demonstrate the fundamental techniques of freestyle and backstroke.
- demonstrate proper stroke mechanics and progression in freestyle and backstroke, kicking and sculling.
- demonstrate proper water safety techniques associated with maintaining personal water safety.
- differentiate, and demonstrate the proper use of the swimming equipment.
- develop and improve personal comfort level in and around shallow and deep water.

FITNS 442 Swimming III

Units: 1
Hours: 54 hours LAB
Course Family: Swimming (http://arc.losrios.edu/course-families#id_100018)
Prerequisite: FITNS 441
Advisory: CSU; UC (A maximum of 4 units of PE activity allowed for transfer )
Transferable: AA/AS Area III(a); CSU Area E2
General Education: None.
Catalog Date: June 1, 2020

This course covers skills for intermediate swimmers; water safety, and basic swimming skills, swim training protocols and technique, further refinement of stroke development, proper starts and turns technique, and development of cardiovascular capacity. It includes stroke technique in freestyle, backstroke, and breaststroke, as well as turns for freestyle, backstroke and breaststroke.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify and demonstrate proper form and technique in freestyle, backstroke, and breaststroke.
- demonstrate proper form and technique of sculling and treading water.
- demonstrate proper form and technique of freestyle, backstroke, and breaststroke turns and breakouts.
- demonstrate proper diving technique and practice progressions.
- analyze the stroke technique of others.
- design swim training programs.
FITNS 443 Swimming IV

This course for advanced swimmers (those who have mastered intermediate swimming skills) covers proper technique specific to the four competitive strokes, proper training protocols, and training design. It emphasizes proper stroke technique of freestyle, backstroke, breaststroke, and butterfly, as well as underwater efficiency in diving, turns, and breakouts for all competitive strokes. It also introduces more advanced swim training protocols, drills, and workout designs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and demonstrate proper form and technique in freestyle, backstroke, breaststroke, and butterfly.
- demonstrate proper form and technique of turns and breakouts in freestyle, backstroke, breaststroke, and butterfly.
- display technique of drilling, sculling, and treading water.
- create fitness-level appropriate swim workouts.
- demonstrate proper diving safety, technique, and practice progressions.
- analyze, critique, and give feedback to training partners on their stroke technique.

FITNS 450 Personal Safety

This course provides information and develops skills for an individual's personal safety in a variety of situations. Topics include awareness and prevention of dangerous situations along with physical and non-physical defensive strategies. Community resources for victims of assault are discussed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- integrate the principles of avoidance and awareness in one's daily life.
- analyze the potential for danger and determine the appropriate response.
- apply appropriate self-defense techniques (physical and non-physical).

FITNS 495 Independent Studies in Fitness

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Kinesiology (KINES)

KINES 300 Introduction to Kinesiology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC (UC credit limitations: All KINES courses combined: maximum credit, 8 units.)
General Education: AA/AS Area III(b)
C-ID: C-ID KIN 100
Catalog Date: June 1, 2020

This course provides an introduction to the interdisciplinary approach to the study of human movement. It provides an orientation to various educational pathways, requirements, and career opportunities in kinesiology in the areas of teaching, coaching, allied health, and fitness professions. Basic concepts of the kinesiology discipline and the importance of the sub-disciplines are discussed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the basic concepts of kinesiology.
- relate the history of kinesiology.
- identify the fundamental concepts of basic movement.
- evaluate the philosophical foundations of kinesiology.
- describe the allied fields of health, dance, and recreation.
- identify the sub-disciplines of kinesiology.
- identify the pathways and requirements for career opportunities in kinesiology.

KINES 307 Mental Skills for Sport Performance

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGW 102 or 103, and ENGRD 116 with a grade of “C” or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better.
Transferable: CSU
Catalog Date: June 1, 2020

This course provides a concentrated study of competition and motivation for sports. It also includes the study of the brain's impact on muscular activity in athletic performance. Stress management, goal setting, peak performance, adaptability, sport imagery training, and effective practice are covered. This course is formerly known as PET 307.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop motivational techniques
- discuss the psychological effects of stress as a result of negative self-talk
- compare and contrast goal-setting techniques and tools
- design an imagery and relaxation sequence
- formulate daily goal-setting strategies for reducing stress
- revise daily practice strategies into effective communication appropriate to the goals set for the day

KINES 330 Care and Prevention of Athletic Injuries

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
This course is an introduction to injury prevention, injury care, and rehabilitation of athletic injuries. It includes basic information regarding sports injuries, their causes, and treatments. This course is formerly known as PET 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify potentially dangerous situations on/around athletic fields/courts and practice/game situations
- identify basic medical terminology
- synthesize indication and contraindications for basic therapeutic modalities
- evaluate elementary athletic injuries and apply proper treatment
- demonstrate basic taping and wrapping skills of commonly injured joints
- apply basic first aid skills
- assess degrees of injury

KINES 334 Practical Applications in Athletic Training/Sports Medicine

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Corequisite: KINES 330
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is designed to provide an overall experience of the sports medicine/athletic training profession. Topics include common evaluation and rehabilitative techniques, modality usage, and advanced taping and wrapping methods. This course is formerly known as PET 334.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the role of an athletic trainer
- demonstrate athletic taping, wrapping, and padding skills
- demonstrate evaluation of the ankle, knee, and shoulder
- apply therapeutic modalities to common athletic injuries
- utilize effective writing skills for injury evaluations and rehabilitation documentation

KINES 340 Theory of Baseball

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: High school or college level baseball playing experience; ENGWR 102 and ENGRD 116 with a grade of “C” or better; OR ESLR 320 and ESLW 320 with a grade of “C” or better.
Transferable: CSU; UC (UC credit limitation: All KINES courses combined: maximum credit, 8 units.)
Catalog Date: June 1, 2020

This course develops a thorough understanding of baseball. The emphasis is on learning and understanding basic concepts of training, individual techniques, strategies, and systems of defense, offense, pitching, base running, and field maintenance. Philosophies and drills are included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze, and demonstrate the skills necessary for playing/coaching defense, offense, pitching, base running, teamwork.
relate the importance of participation and teamwork in baseball.

• compare and contrast strategies, drills, and game philosophies.
• identify, discuss, and execute basic concepts of field maintenance.

KINES 350 Theory of Football

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU; UC (UC credit limitations: All KINES courses combined: maximum credit, 8 units.)
Catalog Date: June 1, 2020

This course covers applications of different strategies when football teams face various schemes. This course is formerly known as PET 350.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze basic offensive, defensive, and kicking game concepts
• compare and contrast various football theories
• describe the physical and psychological characteristics needed to be a successful participant in football

KINES 356 Theory of Softball

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 and ENGRD 116 with a grade of "C" or better OR ESLR 320 and ESLW 320 with a grade of "C" or better.
Transferable: CSU; UC (UC credit limitations: All KINES courses combined: maximum credit, 8 units.)
Catalog Date: June 1, 2020

This course develops advanced analysis of softball. Focus is placed on analysis and instruction of individual skills and team concepts. Specific areas of emphasis include, but are not limited to, practice organization, individual fundamentals, team building fundamentals, as well as drills to develop these skills. The analysis of various coaching techniques, theories, and philosophy are included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify softball rules and applications
• recognize various strategies and philosophies of softball
• set up fitness programs for softball
• organize a softball practice routine

KINES 400 Applied Physiology of Exercise

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course examines how the body functions under conditions of exercise stress. It covers the practical applications of muscle function, cardiovascular and respiratory functions, training techniques, and the effect of environmental conditions on exercise. This course is formerly known as PET 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- identify the basic components of a muscle cell.
- describe the principles and components of an exercise program.
- explain how to calculate an individual's maximal oxygen uptake (VO2max).
- describe the positive effects exercise has on the body.
- formulate an individualized exercise training prescription.
- explain the positive effects of exercise on reducing obesity.

KINES 401 Applied Kinesiology

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course addresses movement as it relates to exercise. It includes analysis of movement in sport skills, stressing the contributions made by the muscular and skeletal systems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the structure and composition of bones and muscles.
- define the different types of muscular contractions.
- explain the body's physical structures in both normal and injury conditions.
- differentiate between the various types of joint movement and their respective planes of movement.
- formulate an individual exercise program for an individual with special needs.

KINES 402 Nutrition for Fitness

Same As: NUTRI 307
Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the basic principles of nutrition and the interactions between nutrition and fitness training. Topics include dietary practices and nutrient intake modifications that affect physical performance, including intake of energy nutrients, vitamins, water, electrolytes, and dietary supplements. It also covers the study of body weight and body composition, as well as factors that affect body weight and the effect of body composition on physical performance. This course is not open to students who have completed NUTRI 307.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the basic principles of nutrition, including classification of essential nutrients and identification of key nutrients of various foods.
- explain the role of nutrients for achieving optimal fuel and energy utilization for physical performance.
- critique dietary programs for weight control.
- evaluate the effectiveness and recognize the safety concerns of various nutritional supplements.
- explain how nutrient intake relates to health status and the development of chronic disease.
- incorporate current dietary recommendations into planning healthy diets for physically active persons.
- describe the importance of proper water and electrolyte regulation in terms of safety, health, and exercise performance.
- explain the causes and symptoms of nutrient deficiency and toxicity.
KINES 403 Fitness and Exercise Assessment

This course covers the assessment of cardiorespiratory endurance, body composition, muscular strength and endurance, flexibility, blood pressure, and evaluation of exercise test results. Additional topics include the factors influencing exercise programs, development of individual exercise programs, and the risk factors associated with exercise programs and fitness testing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the health components of fitness.
- administer physical fitness tests and health assessments.
- formulate an individual exercise program.
- evaluate physical activities relative to their risk factors.
- measure body composition and interpret results.
- list the safety factors related to exercise testing and prescription.
- utilize the results of graded exercise tests for the purpose of exercise program design.

KINES 404 Identification and Management of Fitness Injuries

This course addresses elementary human anatomy and the injuries that can occur to the musculoskeletal system as it relates to physical activity. The treatment and rehabilitation of these injuries and the use of protective equipment are presented.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- employ the use of basic medical terminology
- illustrate methods for preventing fitness related injuries
- recognize the causes of common fitness related injuries
- apply proper treatment techniques to common fitness related injuries
- provide emergency first aid for fitness related injuries
- demonstrate correct applications of common braces and protective devices used in the fitness industry

KINES 405 Effects of Exercise on Special Populations

This course covers the effects of exercise on special populations and provides information to modify exercise based on age, disability, and medical conditions. It includes
discussions of special groups including seniors, children with disabilities, adults with disabilities or chronic conditions, and individuals requiring exercise modifications due to physical impairments.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate the physiological and anatomical differences in healthy older adults and older adults with chronic medical conditions.
- analyze the physiological and anatomical characteristics of individuals with specific disabilities.
- recommend beneficial exercises for seniors and individuals with disabilities or medical conditions.
- detect contraindicated exercises for seniors and individuals with disabilities or medical conditions.
- describe warning signs of medical conditions.

KINES 406 Techniques of Strength Training Instruction

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | None |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers how to teach a variety of strength training techniques and activities to individuals. It studies strength training sequences, strength training equipment, safety factors, and anatomy and physiology as it applies to strength training. It includes the development of strength training exercises and routines. Field trips may be required. This course is formerly known as PET 406.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- cite the historical evolution of strength training.
- describe the physiological changes which occur with strength training.
- analyze the components of flexibility.
- compare and contrast different training programs.
- integrate the principles of strength training into an individualized training regimen.
- integrate appropriate flexibility protocol.
- design an individualized exercise prescription program that includes muscular strength and muscular endurance development.

KINES 407 Techniques of Group Fitness Instruction

| Units: | 2 |
| Hours: | 36 hours LEC |
| Prerequisite: | None |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers how to teach a variety of fitness activities to groups of individuals. Emphasis is on how to design a physiologically safe and effective group fitness exercise class. This course is formerly known as PET 407.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the evolution of fitness and group exercise.
- integrate the health-related fitness components into group exercise class design.
- identify and compare various types of exercise/fitness activities relevant to a group setting.
- design and lead a group exercise activity.
- participate in community based group exercise settings.
- provide modifications and variations to exercises when necessary.
- identify factors that may increase group exercise adherence.

KINES 408 Administration of Fitness Programs

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course serves as an introduction to the administration of fitness programs. It includes business operations, office procedures, facility design, and equipment considerations. Field trips may be required. This course is formerly known as PET 408.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain what equipment is essential to the successful operation of a sport/fitness facility.
- implement evaluation procedures for routine exercise testing programs.
- describe the legal concepts of contracts relating to consent, confidentiality, liability, and negligence.
- analyze the safety requirements of equipment and facilities.
- develop a basic budget for a sport/fitness facility.
- evaluate methods for attracting and retaining sport/fitness clients.

KINES 494 Topics in Physical Education Theory

Units: 0.5 - 4
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This umbrella course provides concentrated study of a variety of current fitness issues. Topics reflect contemporary concerns for physical fitness, performance in competitive sport, and wellness. This course is formerly known as PET 494.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze techniques applied during physical activity and physical education
- discuss the effects of physical activity on the human body
- compare and contrast physical fitness goal-setting techniques
- formulate a life-long plan to remain physically active
- identify basic kinesiology and physical education terminology

KINES 495 Independent Studies in Physical Education Theory

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**KINES 498 Work Experience in Physical Education**

**Units:** 1 - 4  
**Hours:** 60 - 300 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must be in a paid or unpaid internship, volunteer position, or job related to physical education with a cooperating site supervisor.  
Students are advised to consult with the Physical Education Department faculty to review specific certificate and degree work experience requirements.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU  
**General Education:** AA/AS Area III(a)  
**Catalog Date:** June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of physical education. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of physical education related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

**Personal Activity (PACT)**

**PACT 300 Archery I**

**Units:** 1  
**Hours:** 54 hours LAB  
**Course Family:** Archery (http://arc.losrios.edu/course-families#id_100020)  
**Prerequisite:** None.  
**Transferable:** CSU; UC (UC credit limitation: Any or all PE Activity courses combined: maximum credit, 4 units)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020

The course emphasizes safety, knowledge, and basic skill development in recurve archery. No compound or crossbows are allowed. It also covers basic techniques with an emphasis on knowledge and use of the bow and related equipment.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• demonstrate ability to select correct bow poundage and string a recurve bow safely.

• identify eye dominance for sighting a target.

• demonstrate improved upper body strength by increasing repetitions of ends on the practice range.

• demonstrate correct scoring using a beginning scoring criteria.

PACT 310 Badminton I

Units: 1
Hours: 54 hours LAB
Course Family: Badminton (http://arc.losrios.edu/course-families#id_100021)
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides instruction in basic fundamentals, techniques, and rules of badminton. The emphasis is on skill and technique development, as well as strategies for singles and doubles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the benefits of badminton as a lifetime fitness activity.

• execute effectively all shots used in badminton.

• analyze and apply fundamental rules and strategies of the game.

• evaluate the importance of sportsmanship in competitive situations.

PACT 311 Badminton II

Units: 1
Hours: 54 hours LAB
Course Family: Badminton (http://arc.losrios.edu/course-families#id_100021)
Prerequisite: None.
Enrollment Limitation: PACT 310 with a grade of "C" or better OR the ability to demonstrate skills beyond that of a beginning player - serve, smash, high clear, drop shot.
Transferable: CSU; UC (UC credit limitation: Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides instruction in intermediate skills, techniques, and rules of badminton. It emphasizes skill and technique development beyond that of a beginning player, as well as intermediate strategies for singles and doubles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the benefits of badminton as a lifetime fitness activity.

• effectively execute serves, drop shots, smashes, and backhand shots consistent with an intermediate-level badminton player.

• describe rules and intermediate-level strategies of the game.

• evaluate the importance of sportsmanship in competitive situations.

• execute intermediate-level playing strategies by playing to personal strengths, while taking advantage of an opponent's weaknesses.

PACT 350 Golf I

Units: 1
Hours: 54 hours LAB
This beginning golf course introduces the basic skills and knowledge necessary to play the game of golf. It focuses on the fundamental skills necessary to strike and putt the ball. It introduces the rules and etiquette necessary to play the game. Some sections of this course may be held on regulation golf courses to which students must bring their own golf clubs and pay for range and/or greens fees.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- perform the golf swing correctly.
- identify the various clubs and define their uses.
- demonstrate a level of skill that will allow continuation of the game as a means of lifetime physical activity.
- demonstrate the basic skills and etiquette to play golf on a course.
- Use appropriate golf terms.

**PACT 351 Golf II**

This course covers the intermediate skills and knowledge necessary to play the game of golf. It focuses on swing evaluation necessary to improve ball striking, the rules and etiquette necessary to play on a public course, and course management strategies in order to negotiate a golf course. Some sections of this course may be held on area regulation golf courses in which students must bring their own golf clubs and pay range costs and/or greens fees.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate approach shots for particular circumstances.
- analyze and diagnose the full golf swing.
- organize a practice session for the driving range, bunker practice, short game - pitching and chipping, putting.
- develop a course management plan based on course conditions.
- describe the variety of golf equipment currently on the market and the advantages of various types of clubs.
- analyze the putting stroke with regard to distance control and direction control.

This course covers advanced skills and knowledge necessary to excel at the game of golf. It focuses on improving the swing, special shot-making techniques, course management strategies for the advanced golfer, and clarification of rules and etiquette necessary to play the game at an advanced level. Different tournament formats are explored. This course is held on area regulation golf courses in which students must bring their own golf clubs, pay greens fees, and/or range costs.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagnose swing faults and make proper corrections.
- explain the essential elements of golf equipment.
- analyze the golf swing with regard to proper swing plane and faults which occur with improper swing plane.
- adapt personal game and playing style to various types of competition.

PACT 390 Tennis I

Units: 1
Hours: 54 hours LAB
Course Family: Tennis
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: Any or all PE Activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers basic technique of strokes, rules of play, simple strategies, and the etiquette of tennis.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- execute the basic tennis strokes including forehand, backhand, serve, volley, overhead, and serve return.
- apply the rules and etiquette of tennis.
- apply a basic strategy to competitive match-play situations.

PACT 391 Tennis II

Units: 1
Hours: 54 hours LAB
Course Family: Tennis
Prerequisite: PACT 390
Advisory: CSU; UC
Transferable: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course reviews basic fundamentals, techniques, rules, and social courtesies of tennis. It is intended for intermediate-level tennis players.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, implement, and demonstrate competency in tennis techniques and tactics at an intermediate level.
- attain an intermediate level of tennis fitness with a variety of conditioning drills designed to improve the specific physical skills needed for intermediate tennis players.
- understand and apply mental strategies to effectively compete at an intermediate ability level.
- understand and be aware of the etiquette and expectations of sportsmanship while competing in competitive tennis matches.

PACT 393 Tennis III

Units: 1
Hours: 54 hours LAB
Course Family: Tennis
Prerequisite: None.
Transferable: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020
This course focuses on improving and refining the physical and mental skills and techniques of tennis. Particular attention is given to strategic development of the player, while refining the racket skills that set up and finish points. Developing patterns, serving placement, and tactical court positioning are introduced and developed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, implement, and demonstrate competency in tennis techniques and tactics as they best apply to the respective skill level of the student.
- attain an elite level of tennis fitness with a variety of conditioning drills designed to improve the specific physical skills needed for advanced tennis players.
- apply mental strategies to effectively compete at an advanced tennis level.
- demonstrate proper etiquette and expectations of sportsmanship while competing in competitive tennis matches.

PACT 430 Pickleball I

Units: 1
Hours: 54 hours LAB
Course Family: Pickleball (http://arc.losrios.edu/course-families#id_100066)
Prerequisite: None.
Transferable: CSU: UC (UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers basic technique of strokes, rules of play, simple strategies, and the etiquette of pickleball.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- execute the basic pickleball strokes including forehand, backhand, serve, volley, dink, lob, overhead, and serve return.
- apply the rules and etiquette of pickleball.
- apply a basic strategy to competitive match-play situations.

PACT 431 Pickleball II

Units: 1
Hours: 54 hours LAB
Course Family: Pickleball (http://arc.losrios.edu/course-families#id_100066)
Prerequisite: None.
Transferable: CSU: UC (UC transfer credit limitation: Any or all PE activity courses combined: maximum credit 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course reviews basic fundamentals, techniques, rules, and social courtesies of pickleball. It emphasizes skill and technique development beyond that of a beginning player, as well as intermediate strategies for singles and doubles.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, implement, and demonstrate competency in pickleball techniques and tactics at an intermediate level.
- attain an intermediate level of pickleball fitness with a variety of conditioning drills designed to improve the specific physical skills needed for intermediate players.
- demonstrate and apply mental strategies to effectively compete at an intermediate ability level.
- demonstrate proper etiquette and expectations of sportsmanship while competing in competitive matches.
PACT 432 Pickleball III

This course focuses on improving and refining the physical and mental skills and techniques of pickleball. Particular attention is given to strategic development of the player, while refining the paddle skills that set up and finish points. Developing patterns, dink placement, and tactical court positioning are introduced and developed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify, implement, and demonstrate competency in pickleball techniques and tactics as they best apply to the respective skill level of the student.
- attain an advanced level of pickleball fitness with a variety of conditioning drills designed to improve the specific physical skills needed for advanced player.
- apply mental strategies to effectively compete at an advanced level.
- demonstrate proper etiquette and expectations of sportsmanship while competing in competitive matches.

PACT 495 Independent Studies in Personal Activity

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Sports (SPORT)

SPORT 300 Baseball, Intercollegiate-Men

This course provides opportunity for intercollegiate competition in men's baseball. It provides baseball related skills, fundamentals, and team strategy. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze one's personal level of fitness
- develop skills appropriate to intercollegiate level athletic competition
- apply proper etiquette and sportsmanship during the athletic experience
- synthesize the knowledge necessary to assess various contest situations and apply appropriate solutions
SPORT 301 Off Season Conditioning for Baseball

This course is designed to optimize sports performance and reduce risk of injury for the off-season intercollegiate athlete in the sport of baseball. Course content includes sport-specific skill development, sport-specific strength training, cardiovascular conditioning, agility work, plyometrics, speed training, and flexibility exercises. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper form and techniques when executing sport-specific drills for baseball.
- execute proper warm-up and cool-down procedures for injury prevention.
- demonstrate proper form in executing strength-training techniques, plyometrics, agility drills, and functional sport-specific drills.

SPORT 303 Pre-Season Conditioning for Baseball

This course is designed to optimize sports performance and reduce risk of injury for the pre-season intercollegiate athlete in the sport of baseball. Course content includes sport-specific skill development, sport-specific strength training, cardiovascular conditioning, agility work, plyometrics, speed training, and flexibility exercises. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret sign systems for offense and defense.
- demonstrate several defensive positions at a level to be competitive in intercollegiate baseball.
- hit the baseball at a level to be competitive in intercollegiate baseball.

SPORT 311 Basketball, Intercollegiate-Men, Fall

This course covers fundamentals, rules, individual and/or team strategy appropriate to intercollegiate athletic competition. May be taken three times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Demonstrate an improved level of physical fitness.
Develop and apply skills at the intercollegiate level of athletic competition.

Demonstrate proper etiquette and sportsmanship during the athletic experience.

Assess various contest situations and apply appropriate solutions.

**SPORT 312 Basketball, Intercollegiate-Men, Spring**

- **Units:** 1.5
- **Hours:** 87 hours LAB
- **Prerequisite:** None.
- **Enrollment Limitation:** Tryout
- **Advisory:** ENGR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process. (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
- **Transferable:** CSU: UC
- **General Education:** AA/AS Area III(a); CSU Area E2
- **Catalog Date:** June 1, 2020

This course covers fundamentals, rules, individual and/or team strategy appropriate to intercollegiate athletic competition. May be taken three times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate an improved level of physical fitness.
- Develop and apply skills at the intercollegiate level of athletic competition.
- Demonstrate proper etiquette and sportsmanship during the athletic experience.
- Assess various contest situations and apply appropriate solutions.

**SPORT 313 Off Season Conditioning for Basketball**

- **Units:** 0.5 - 3
- **Hours:** 27 - 162 hours LAB
- **Prerequisite:** None.
- **Enrollment Limitation:** Tryout.
- **Transferable:** CSU: UC
- **General Education:** AA/AS Area III(a); CSU Area E2
- **Catalog Date:** June 1, 2020

This course is designed to optimize sports performance and reduce risk of injury for the off-season intercollegiate athlete in the sport of basketball. Topics include college-level basketball-specific skill development, sport specific strength training, agility work, plyometrics, speed training, and flexibility exercises. This course may be taken up to four times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate proper form and techniques when executing various drills for basketball.
- Apply appropriate warm-up and cool-down procedures for injury prevention.
- Demonstrate proper form in strength training techniques.
- Demonstrate proper form in plyometrics.
- Demonstrate proper form in agility skills.
- Demonstrate proper form in functional sports-specific drills.

**SPORT 314 Pre-Season Conditioning for Basketball**

- **Units:** 0.5 - 3
- **Hours:** 27 - 162 hours LAB
- **Prerequisite:** None.
This course is designed to increase sport performance and overall understanding of intercollegiate basketball concepts and strategic philosophies. Topics include collegiate level basketball-specific skill development, collegiate level offensive and defensive concepts, team-specific basketball fundamentals, team-specific drills for individual improvement and sport-specific agility drills, plyometrics, and speed training. This course may be taken up to 4 times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- assess various practice situations and apply appropriate solutions
- demonstrate and apply intercollegiate basketball offensive and defensive philosophies
- demonstrate proper technique in basketball fundamentals
- demonstrate an improved level of agility and speed training

**SPORT 316 Basketball, Intercollegiate-Women, Fall**

| Units: | 1.5 |
| Hours: | 87 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Tryout |
| Advisory: | ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process. |
| Transferable: | CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.) |
| General Education: | AA/AS Area III(a); CSU Area E2 |
| Catalog Date: | June 1, 2020 |

This course covers fundamentals, rules, individual and/or team strategy appropriate to intercollegiate athletic competition. May be taken three times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate an improved level of physical fitness.
- Develop and apply skills at the intercollegiate level of athletic competition.
- Demonstrate proper etiquette and sportsmanship during the athletic experience.
- Assess various contest situations and apply appropriate solutions.

**SPORT 317 Basketball, Intercollegiate-Women, Spring**

| Units: | 1.5 |
| Hours: | 87 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Tryout |
| Advisory: | ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process. |
| Transferable: | CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.) |
| General Education: | AA/AS Area III(a); CSU Area E2 |
| Catalog Date: | June 1, 2020 |

This course covers fundamentals, rules, individual and/or team strategy appropriate to intercollegiate athletic competition. May be taken three times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate an improved level of physical fitness.
- Develop and apply skills at the intercollegiate level of athletic competition.
- Demonstrate proper etiquette and sportsmanship during the athletic experience.
SPORT 320 Cross Country, Intercollegiate-Men

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers fundamentals, rules, and individual and team strategies appropriate to intercollegiate athletic competition in men's cross country. It provides opportunities for student-athletes to compete at the intercollegiate level. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced cross country skills/tactics appropriate for intercollegiate level competition.
- apply proper track and field rules, etiquette, and sportsmanship during the athletic experience.
- achieve higher levels of fitness.
- assess various contest situations and apply appropriate solutions.
- demonstrate a sense of the importance of teamwork in cross country.
- improve in individual techniques for practice and competition.

SPORT 325 Cross Country, Intercollegiate-Women

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This is an advanced team activity for female students providing specialized training for competition. It covers fundamental and advanced techniques needed for specific events, along with the rules and strategies appropriate for intercollegiate competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced cross country skills, techniques, and tactics that are appropriate for intercollegiate-level competition.
- identify rules and display sportsmanship during the athletic experience.
- increase levels of fitness, along with improvements in techniques and performances in practice and competition settings.
- demonstrate an appreciation for teamwork.

SPORT 330 Football, Intercollegiate-Men

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020
This course is an intercollegiate sport providing opportunity for competition in men's football. It provides football fundamentals, skills, rules, and individual and team strategies appropriate for intercollegiate athletic competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop the basic core and advanced fundamentals utilized for intercollegiate football student-athletes.
- apply the development of basic core and advanced fundamentals into a competitive environment versus opposition.
- demonstrate proper safety, etiquette, and sportsmanship in all phases of the football program.
- describe and illustrate an understanding of the concepts for the offensive, defensive, and special teams playbook.
- demonstrate physical improvement through a strength and conditioning program to compete on the practice field and in games.

SPORT 331 Off Season Conditioning for Football

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course involves training and technical skill development specific to the sport of football for off-season student-athletes. Topics include skill development, strength training, speed development, agility training, plyometric drills, cardiovascular conditioning, and increased flexibility. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate basic core and advanced fundamentals in football that are specific to preparing for the season.
- exhibit an increase in speed, agility, and quickness as used in football.
- validate increased cardiovascular endurance, muscular strength, and anaerobic power needed to be competitive in football through testing during the term.
- demonstrate proper form executing the drills and exercises in strength training, cardiovascular training, anaerobic training, and flexibility.
- apply appropriate warmup and cooldown procedures for injury prevention.
- display the conceptual understanding of offensive, defensive, and special teams playbooks.
- demonstrate efficient practice routines used to prepare for the football season.

SPORT 332 Pre-Season Conditioning for Football

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers advanced offensive and defensive strategies for football at the college level. Blocking schemes, tackling techniques, as well as offensive and defensive formations are discussed. Strength and conditioning drills are included to enhance football skills. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the benefits of a lifetime fitness program as it relates to football.
- demonstrate the skills necessary to participate in game situations while playing various positions.
- evaluate team play concept in practice and game situations.
- interact with classmates as teammates in a collaborative and competitive environment.
- compare and contrast pre-season, in-season, and off-season training.

**SPORT 340 Golf, Intercollegiate-Men**

**Units:** 3  
**Hours:** 175 hours LAB  
**Prerequisite:** None  
**Enrollment Limitation:** Tryout  
**Transferable:** CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020

This course provides opportunity for competition in men's golf. It covers golf fundamentals and skills. It also includes rules and individual and team strategies appropriate for intercollegiate athletic competition. This course may be taken up to four times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate an improved level of physical fitness  
- apply skills appropriate to intercollegiate level golf competition  
- demonstrate proper etiquette and sportsmanship during golf matches  
- assess various golf situations and apply appropriate solutions

**SPORT 341 Off Season Conditioning for Golf**

**Units:** 0.5 - 3  
**Hours:** 27 - 162 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Tryout  
**Transferable:** CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020

This course involves a combination of fundamental skills and strategy with an emphasis on a fitness component for the sport of golf. It offers a mental training component for peak performance. This course is designed to prepare students for intercollegiate golf competition. This course may be taken up to four times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the ability to walk the golf course carrying or pulling golf bag.  
- choose the appropriate club for specific shots and distances.  
- analyze personal swing and make appropriate corrections.  
- develop strength, endurance and flexibility.  
- apply good course management skills when playing golf.

**SPORT 345 Golf, Intercollegiate-Women**

**Units:** 3  
**Hours:** 175 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Tryout  
**Transferable:** CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)  
**General Education:** AA/AS Area III(a); CSU Area E2  
**Catalog Date:** June 1, 2020
This course is an intercollegiate sport providing opportunities for competition in women's golf. It covers fundamentals and skills, rules, individual and/or team strategy appropriate to intercollegiate athletic competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate an improved level of physical fitness
- develop and apply skills appropriate to intercollegiate level competitive golf
- demonstrate proper etiquette and sportsmanship during the athletic experience
- assess various contest situations and apply appropriate solutions

SPORT 350 Soccer, Intercollegiate-Men

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides opportunity for intercollegiate competition in men's soccer. Soccer fundamentals and skills are covered. It also includes rules, and individual and team strategies appropriate for intercollegiate athletic competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate an improved level of physical fitness
- apply skills appropriate to intercollegiate level athletic competition
- describe proper etiquette and sportsmanship during the athletic experience
- assess various soccer contest situations and apply appropriate solutions

SPORT 351 Off-Season Conditioning for Men's Soccer

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout.
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers off-season training and conditioning skills and techniques specific for intercollegiate soccer. Topics include skill development, strength training, cardiovascular conditioning, and speed training. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper footwork techniques specific to soccer.
- demonstrate improved endurance and strength.
- demonstrate proper form and techniques when executing various drills for soccer.
- apply appropriate warm up and cool down procedures for injury prevention.
- demonstrate proper technique in agility training.
SPORT 355 Soccer, Intercollegiate-Women

This course is an intercollegiate sport providing opportunity for competition in women's soccer. It provides soccer fundamentals and skills, including rules as well as individual and team strategy appropriate for intercollegiate athletic competition. This course may be taken up to four times for credit.

Upon completion of this course, the student will be able to:

- demonstrate an improved level of physical fitness
- apply skills appropriate to intercollegiate-level soccer competition
- demonstrate proper etiquette and sportsmanship during the athletic experience
- assess various contest situations and apply appropriate solutions

SPORT 356 Off Season Conditioning for Women's Soccer

This physical education course covers training and conditioning skills and techniques specific for intercollegiate soccer. It focuses on basic concepts and skills with emphasis on conditioning. This course may be taken up to four times for credit.

Upon completion of this course, the student will be able to:

- demonstrate proper footwork techniques specific to soccer.
- show endurance and strength needed in order to be competitive in soccer.
- demonstrate proper form and techniques when executing various drills for soccer.
- apply appropriate warm up and cool down procedures for injury prevention.
- demonstrate proper technique in agility training.

SPORT 358 Pre-Season Conditioning for Men's Soccer

This course increases sport performance and the overall understanding of intercollegiate soccer concepts and strategic philosophies. Topics include collegiate-level soccer-specific skill development, collegiate-level offensive and defensive concepts, team-specific soccer fundamentals, team-specific drills for individual improvement and sport specific agility work, plyometrics, and speed training.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate proper footwork techniques specific to soccer.
- show endurance and strength needed in order to be competitive in soccer.
- demonstrate proper form and techniques when executing various drills for soccer.
- apply appropriate warm-up and cool-down procedures for injury prevention.
- demonstrate proper technique in agility training.

SPORT 365 Softball, Intercollegiate-Women

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This is an advanced softball activity that provides competition with other community college teams. Fundamentals, rules, team strategy, and softball skills appropriate to intercollegiate athletic competition are expected of the competitors. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced softball tactics/skills appropriate to intercollegiate level athletic competition
- exhibit proper etiquette and sportsmanship during the athletic experience
- exhibit the knowledge necessary to assess game situations and utilize appropriate solutions
- demonstrate team work

SPORT 366 Off Season Conditioning for Softball

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course covers basic fundamental skills and strategy tactics with an emphasis on a fitness component for intercollegiate athletics in the sport of softball. It offers a mental training component for peak performance. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper footwork techniques specific to softball
- demonstrate proper weight lifting techniques needed to improve muscular strength and power for softball
- demonstrate proper form and technique executing various defensive drills for softball
- demonstrate proper form and technique executing offensive drills, such as hitting, bunting, and slapping for softball
- demonstrate proper form and technique executing various drills for the pitching position
- demonstrate proper form and technique executing various drills for the catching position
SPORT 368 Pre-Season Conditioning for Softball

This course is designed to optimize sports performance and reduce the risk of injury for the pre-season intercollegiate athlete in the sport of softball. Course content includes softball fundamental skills development, strength training, cardiovascular conditioning, agility, plyometric, speed training, and flexibility exercises. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the proper basic fundamentals of offense, including baserunning, lead-offs, bunts, and proper hitting machines
- demonstrate the proper basic fundamentals of defense, including catching, throwing, and fielding
- understand and properly execute offensive situational play and strategies, including hit and run, bunt and run, steals, delay steals, tagging up, sacrifice bunt, squeeze play, and applying signs from the coach
- understand and properly execute defensive situational play and strategies including 1st and 3rd, bunt coverage, slap coverage, and runners on base

SPORT 370 Swimming and Diving, Intercollegiate-Men

This is an advanced swimming and diving activity course that provides competition with other community college teams. It provides swimmers and divers with fundamentals, rules, team strategies, and aquatic skills. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced aquatic skills appropriate for intercollegiate level athletic competition
- exhibit proper etiquette and sportsmanship during athletic experience
- demonstrate the knowledge necessary to assess various training and competing situations and utilize appropriate solutions to swim and dive
- demonstrate the concept of teamwork
- show an improved individual level of fitness

SPORT 375 Swimming and Diving, Intercollegiate-Women

This is an advanced swimming and diving activity course that provides competition with other community college teams. Fundamentals, rules, team strategy, and aquatic skills appropriate to intercollegiate athletic competition are expected of competitors. This course may be taken up to four times for credit.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate advanced aquatic skills appropriate to intercollegiate level athletic competition.
- exhibit proper etiquette and sportsmanship during the athletic experience.
- demonstrate the knowledge necessary to assess various content situations and apply appropriate solutions specific to swim and dive.
- demonstrate team work.
- show an improved individual level of fitness.

**SPORT 376 Off Season Swim & Dive**

Units: 0.5 - 3  
Hours: 27 - 162 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Try out. This course is designed for athletes on the swim and dive team.  
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course combines basic skills and stroke technique with an emphasis on a fitness component for the sport of swim and dive. It also offers a dry-land training component for peak performance. This course is designed to prepare students for intercollegiate swim and dive competition. This course may be taken up to four times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate proper strength and endurance specific to the sport of swimming and diving.
- perform weight lifting and/or body lifting techniques.
- perform the basic fundamentals of freestyle, backstroke, breaststroke and butterfly, including corresponding turns, flip turns and touch turns.
- apply and demonstrate speed, agility, and endurance training to the sport of swim and dive.
- properly execute dives in each of the 6 categories of diving: front, back, reverse, tuck, inward, and open.

**SPORT 377 Pre-Season Conditioning Swim & Dive**

Units: 0.5 - 3  
Hours: 27 - 162 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Try out  
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course combines basic skills and stroke technique with an emphasis on a fitness component for the sport of swim and dive. It also offers a dry-land training component for peak performance. This course is designed to prepare students for intercollegiate swim and dive competition. It may be taken up to four times for credit.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate improved cardiovascular endurance specific to the sport of swimming and diving.
- demonstrate proper strength and endurance specific to the sport of swimming and diving.
- perform weight lifting and/or body lifting techniques.
- perform the basic fundamentals of freestyle, backstroke, breaststroke, and butterfly, including corresponding turns, flip turns, and touch turns.
- apply and demonstrate speed, agility, and endurance training to the sport of swim and dive.
- properly execute dives in each of the 6 categories of diving: front, back, reverse, tuck, inward, and open.
SPORT 380 Tennis, Intercollegiate-Men

This course covers fundamentals, rules, and individual and/or team strategy appropriate to intercollegiate athletic competition in tennis. This course may be taken four times for credit.

Upon completion of this course, the student will be able to:

- show an improved individual level of fitness
- apply skills appropriate to intercollegiate level athletic competition
- learn proper etiquette and sportsmanship during the athletic experience
- demonstrate the knowledge necessary to assess various contest situations and apply appropriate solutions

SPORT 385 Tennis, Intercollegiate-Women

This course covers fundamentals, rules, and individual and/or team strategy appropriate to intercollegiate athletic competition in tennis. This course may be taken four times for credit.

Upon completion of this course, the student will be able to:

- demonstrate an improved individual level of fitness
- apply skills appropriate to intercollegiate level athletic competition
- learn proper etiquette and sportsmanship during the athletic experience
- assess various contest situations and apply appropriate solutions

SPORT 386 Off Season Conditioning for Tennis

This course prepares the intercollegiate tennis player for the competitive season and reduces risk of injury. Course content includes collegiate level tennis-specific skill development, a solid aerobic conditioning plan, sport-specific strength training, agility work, plyometrics, speed training, flexibility exercises and other activities designed to prepare the athlete both physically and mentally. This course may be taken up to four times for credit.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- assess fitness level for competition by applying the following fitness tests: body fat analysis, abdominal test, flexibility, and strength.
- demonstrate increased cardiovascular endurance, flexibility, and strength.
- perform and execute various baseline shots directed to specific targets on the court.
- explain and demonstrate tactics and strategies as they relate to both singles and doubles play.
- employ goal-setting techniques toward establishing a fitness program specific for tennis athletes.
- apply safety techniques and training/tennis etiquette to workouts.

This is an advanced track and field team activity for female students providing specialized training for competition. It covers the fundamental and advanced techniques needed for specific events, along with the rules and strategies appropriate for intercollegiate competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced track and field skills, techniques, and tactics that are appropriate for the intercollegiate-level athletic competition.
- identify rules and display sportsmanship during the athletic experience.
- increase levels of fitness, along with improvements in techniques and performances in practice and competition settings.
- demonstrate an appreciation for teamwork.

SPORT 396 Off Season Conditioning for Track and Field
This course includes sport-specific training, conditioning, and technical skill development specific to the sport of track and field for the off-season student athlete. Course content includes sport-specific skill development, event-specific strength training, cardiovascular conditioning, agility training, plyometric drills, anaerobic speed development, and enhancement of flexibility. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate skill-specific techniques that are characteristic to the event areas in track and field.
- develop an increase in cardiovascular endurance, muscular strength, and anaerobic power needed for competitive performances.
- analyze proper form executing the drills and exercises in strength training, cardiovascular training, anaerobic training, and flexibility work.
- choose appropriate warm-up and cool-down procedures for injury prevention.

SPORT 403 Pre-Season Conditioning for Volleyball

This course involves a combination of skill development and strategy tactics with an emphasis on a fitness component for the sport of volleyball. It offers a mental training component for peak performance. This course is designed to prepare students for intercollegiate volleyball competition. It may be taken up to 4 times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate improved anaerobic training in fitness tests and drills.
- execute speed, agility, and quickness drills correctly.
- demonstrate improvement in strength training exercises.
- implement appropriate offensive and defensive strategies in game-like situations.
- execute offensive and defensive skills correctly.

SPORT 405 Volleyball, Intercollegiate-Women

This course provides an opportunity for competition in intercollegiate women's volleyball. It provides volleyball fundamentals and skills. It also includes rules and individual and team strategies appropriate for intercollegiate athletic competition. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate an improved level of physical fitness
• apply skills appropriate to intercollegiate-level athletic competition
• demonstrate proper etiquette and sportsmanship during athletic competition
• assess various contest situations and apply appropriate solutions

SPORT 406 Off Season Conditioning for Volleyball

Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout.
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This course provides training and technical skill development specific to the sport of volleyball for off-season student-athletes. Topics include skill development, strength training, cardiovascular conditioning, agility work, plyometrics, speed training, and flexibility exercises. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate proper form and techniques when executing various drills for volleyball
• apply appropriate warm up and cool down procedures for injury prevention
• demonstrate proper form in strength training techniques
• demonstrate proper form in plyometric exercises
• demonstrate proper form in functional sport-specific drills
• demonstrate proper technique in agility training

SPORT 410 Water Polo, Intercollegiate-Men

Units: 3
Hours: 175 hours LAB
Prerequisite: None.
Enrollment Limitation: Tryout
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units.)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This advanced water polo team activity provides opportunities for competition with other community college teams. Fundamentals, rules, team strategy, and swimming skills appropriate to intercollegiate athletic competition are expected of the competitors. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate advanced water polo tactics/skills appropriate to intercollegiate level athletic competition.
• exhibit proper etiquette and sportsmanship during athletic practice and competition.
• assess various water polo situations and apply appropriate solutions.
• demonstrate team work.
• show an improved individual level of fitness.

SPORT 415 Water Polo, Intercollegiate-Women
This is an advanced water polo team activity that provides competition with other community college teams. Fundamentals, rules, team strategy, and swimming skills appropriate to intercollegiate athletic competition are expected of the competitors. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate advanced water polo tactics/skills appropriate to intercollegiate level athletic competition.
- exhibit proper etiquette and sportsmanship during athletic practice and competition.
- assess various water polo situations and apply appropriate solutions.
- demonstrate team work.
- show an improved individual level of fitness.

SPORT 416 Off Season Water Polo

This course combines basic skills and strategy tactics with an emphasis on a fitness component for the sport of water polo. It also offers a dry-land training component for peak performance. This course is designed to prepare students for intercollegiate water polo competition. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- increase proper strength and endurance specific to the sport of water polo.
- perform weight lifting and/or body lifting techniques specific to water polo training.
- demonstrate the basic fundamentals of offense formation and set up.
- demonstrate the basic fundamentals of defensive formation and set up.
- combine the basic water polo skills and distinguish which skills are most appropriate for specific game situations.
- develop ways to support, lead, and communicate amongst teammates.

SPORT 417 Pre-Season Conditioning for Water Polo

This course is designed for student athletes involved in or trying out for the collegiate water polo team. It combines basic skills and strategy tactics with an emphasis on a fitness component for the sport of water polo. It also offers a dry-land training component for peak performance. This course is designed to prepare students for intercollegiate water polo competition.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate strength and endurance needed in the sport of water polo.
- demonstrate the basic fundamentals of offense formation and set up.
- demonstrate the basic fundamentals of defensive formation and set up.
- combine the basic water polo skills and distinguish which skills are most appropriate for specific game situations.
- support, lead, and communicate with teammates.
- perform weight lifting and/or body lifting techniques specific to water polo training.

**SPORT 495 Independent Studies in Sport**

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None.  
Transferable: CSU  
General Education: AA/AS Area III(a)  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**Team Activity (TMACT)**

**TMACT 300 Soccer, Indoor**

Units: 1  
Hours: 54 hours LAB  
Course Family: Soccer (http://arc.losrios.edu/course-families#id_100023)  
Prerequisite: None.  
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course covers the beginning-level knowledge and skills needed to play indoor soccer. It also covers the differences between indoor and outdoor soccer as well as the history, techniques, rules, and strategies of the game with an emphasis on improvement of their physical fitness and skills.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate formations, tactics, and terminology associated with indoor soccer.
- explain and employ indoor soccer rules.
- execute basic soccer skills.
- demonstrate proper sequence of dynamic stretching.

**TMACT 301 Indoor Soccer II**

Units: 1  
Hours: 54 hours LAB  
Course Family: Soccer (http://arc.losrios.edu/course-families#id_100023)  
Prerequisite: TMACT 300 with a grade of "C" or better  
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)  
General Education: AA/AS Area III(a); CSU Area E2  
Catalog Date: June 1, 2020

This course covers the intermediate-level player knowledge and skills needed to play indoor soccer, with an emphasis in defending, attacking, and technical ability. It also
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate personal technical skills in soccer.
- apply intermediate technical and tactical game strategies for indoor soccer.
- employ offensive as well as defensive systems and formations for indoor soccer.
- explain and employ indoor soccer rules.

TMACT 302 Soccer - Outdoor

This course covers the beginning-level knowledge and skills needed to play outdoor soccer, emphasizing defense, offense, passing, ball control, heading, and shooting. It also covers the skills, strategy, and rules that govern the play of outdoor soccer.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate beginning-level skills of passing, dribbling, trapping, and striking a soccer ball.
- execute basic goalkeeping skills and offensive and defensive tactics.
- execute a basic game plan in match competition.
- demonstrate improved endurance and strength.

TMACT 303 Outdoor Soccer II

This course covers the intermediate-level player environment to challenge and improve the player's knowledge and skills needed to play outdoor soccer, emphasizing defending, attacking, and technical ability. It covers the skills, strategy, and rules that govern the play of outdoor soccer. This class is not designed for beginning soccer players.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate an intermediate level of skills and knowledge in playing soccer.
- demonstrate intermediate technical skills such as dribbling and passing skills.
- explain and demonstrate systematic and organized offensive patterns.
- demonstrate knowledge of formations and systems such as 1-4-4-2, 1-4-2-3-1, 1-4-3-3, and 1-3-5-2.
- demonstrate and show the physical fitness to play intermediate soccer.
- explain the the laws of the game.
TMACT 304 Outdoor Soccer III

This course covers an advanced level knowledge and skills needed to play outdoor soccer, emphasizing technical and conditioning drills, game preparations, match analysis, and tactical knowledge, as well as defensive and offensive drills of advanced level play. It also introduces basic coaching techniques.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply advanced and intermediate technical skills in game situations.
- demonstrate advanced tactical game awareness, strategies, and conditioning.
- prepare for games including mental factors, food, and nutrition in soccer.
- identify factors to analyze games in matches.
- demonstrate soccer coaching ability, method, and knowledge of soccer.

TMACT 310 Baseball

This course emphasizes defense, offense, pitching, base running, team strategy, and conditioning for college level, advanced baseball.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the skills necessary to participate in game situations at various playing positions
- evaluate team play concepts in practice and game situations
- define the benefits of a lifetime fitness program as it relates to baseball
- compare and contrast strategies for fielding and base running
- interact with classmates as teammates in a collaborative and competitive environment

TMACT 320 Basketball

This course features tournament scrimmage play to improve offensive, defensive, and team skills for basketball. It also covers individual fundamental skills including shooting, passing, ball handling, individual defense, and rebounding.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate and execute offensive and defensive skills through participation in game situations.
- demonstrate the importance of team play in game situations.
- explain the elements of basketball that may be applied to maintaining lifetime fitness.
- demonstrate basketball-related skills including shooting, passing, ball handling, rebounding, and defensive techniques.

TMACT 330 Volleyball

Units: 1
Hours: 54 hours LAB
Course Family: Volleyball (http://arc.losrios.edu/course-families#id_100025)
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This beginning volleyball course covers the basic techniques of passing, setting, serving, and attacking, as well as rules and simple strategies of play.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the rules and etiquette of volleyball
- apply sport-specific terminology in a game-like setting
- demonstrate proper defensive positions and serve receive
- demonstrate basic skills of passing, setting, attacking, and serving
- demonstrate improved endurance and strength
- apply sport-specific terminology in drills and games

TMACT 331 Volleyball II

Units: 1
Hours: 54 hours LAB
Course Family: Volleyball (http://arc.losrios.edu/course-families#id_100025)
Prerequisite: TMACT 330 with a grade of "C" or better
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)
General Education: AA/AS Area III(a); CSU Area E2
Catalog Date: June 1, 2020

This intermediate course focuses on refining basic skills of serving, passing, and setting as well as further developing skills in serve-receive, defense, spiking, blocking, and digging. It also covers challenging techniques and strategies that follow NCAA collegiate rules and etiquette.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate intermediate-level skills of passing, setting, serving, and blocking
- execute offensive and defensive systems
- execute a basic game plan in match competition
- demonstrate improved endurance and strength

TMACT 333 Volleyball III
This advanced volleyball class focuses on more complicated skills and techniques of the sport. Competitive play takes a higher priority. Topics include a variety of offensive and defensive systems, and how to apply them in a game-like setting.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply intermediate and advanced level knowledge and learned skills for the sport of volleyball in drills, games and tournament situations.
- demonstrate knowledge of offensive systems including but not limited to 5'1 and 6'2 serve receive.
- demonstrate knowledge of defensive systems including but not limited to perimeter defense and rotation defense.
- demonstrate advanced understanding of volleyball teamwork in game-like setting.
- execute all of the skills in volleyball including serving, passing, setting, spiking, blocking and digging.

**TMACT 340 Football**

Upon completion of this course, the student will be able to:

- define the benefits of a lifetime fitness program as it relates to football.
- demonstrate the skills necessary to participate in game situations while playing various positions.
- evaluate team play concept in practice and game situations.
- interact with classmates as teammates in a collaborative and competitive environment.

**TMACT 352 Softball, Slow Pitch**

Upon completion of this course, the student will be able to:

- develop and improve basic softball skills including catching, throwing, fielding, pitching, hitting, and base running.
- describe the rules of the game for participation in games and tournaments.
demonstrate the basic offensive and defensive strategies of softball

**TMACT 370 Water Polo**

Units: 1  
Hours: 54 hours LAB  
Prerequisite: Participants must be able to swim 300 yards freestyle without stopping and have sufficient egg beater and breast-stroke kicks to tread water for 5 minutes.  
Transferable: CSU; UC (UC credit limitation: Any or all PE activity courses combined: maximum credit, 4 units)  
General Education: CSU Area E2  
Catalog Date: June 1, 2020

This course features tournament-style scrimmage play to improve offensive, defensive, and team skills in water polo.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate and execute offensive and defensive skills through participation in game situations
- demonstrate the importance of team play in game situations
- explain the elements of water polo that may be applied to lifetime fitness

**TMACT 495 Independent Studies in Team Activity**

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None.  
Transferable: CSU  
General Education: AA/AS Area III(a)  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Learning Resource Center | American River College

The Learning Resource Center (LRC) is an instructional facility that provides classrooms, a quiet learning environment, and instructional support services. The LRC advances the vision and mission of American River College by offering supplemental instruction and academic support through individualized tutoring and other alternative modes of instruction to currently enrolled ARC students seeking to successfully achieve their educational goals.

### LRC 300 Introduction to Tutor Training

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None.  
**Enrollment Limitation:** A grade of B or better in the course to be tutored. Faculty recommendation and approval to be a tutor in the LRC Department.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Catalog Date:** June 1, 2020

This course is offered in coordination with the Learning Resource Center Tutorial Services Program. It introduces the role of a tutor and the methods of effective tutoring. It covers establishing goals and objectives, implementing a tutorial plan, applying effective learning skills, developing effective communication and listening skills, and fostering critical thinking. This course is formerly known as INDIS 320.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the necessary skills to become an effective tutor.
- analyze the tutoring needs of the students and implement a tutorial plan.
- recognize different learning styles and develop materials appropriate for each of those styles.
- display an awareness of cultural diversity.
- demonstrate effective communication and listening skills.
- assess and make recommendations to improve students' study skills.

### LRC 310 Introduction to Group Tutoring

**Units:** 1  
**Hours:** 18 hours LEC  
**Prerequisite:** None.  
**Enrollment Limitation:** A grade of B or better in the course to be tutored. Faculty recommendation to be a Beacon group tutor.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is offered in coordination with the Beacon Tutoring Program at American River College. It introduces the role of the tutor as a facilitator and presents the methods of effective group tutoring. This course emphasizes collaborative and interactive approaches to learning in a group setting. This course is formerly known as INDIS 321.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- develop the necessary skills to become an effective group tutor.
- provide for the students an environment that is conducive to learning.
- design collaborative, interactive activities and materials that encourage students to work together.
- recognize different learning styles and develop materials appropriate for each of those styles.
- help students identify learning styles or preferences.
- assess and make recommendations to improve students' study skills.

**LRC 1000 Supervised Tutoring**

This course offers individualized tutoring designed to assist students to increase their success in college courses. Content varies depending upon the adjunct course. Attention is given to essential study skills and utilization of campus learning resources. Students may enroll for support of more than one college course per semester. This course may be repeated in subsequent semesters. This noncredit supervised tutoring course allows for 1-500 hours per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate essential study skills.
- effectively utilize available campus learning resources.
- demonstrate a positive attitude toward continued learning in the subject area.
Legal Studies | American River College

The Legal Studies program at American River College is approved by the American Bar Association. ARC’s Legal Studies program has been preparing students for entry-level positions in this profession for over 30 years.

‘Legal assistant and ‘paralegal’ are synonymous terms according to California Business & Professions Code (B & P Code) sections 6450-6456. Section 6450 defines a legal assistant as “a person qualified by education, training, is employed by an attorney, or other entity, and who performs substantial legal work under the direction and supervision of an active member of the State Bar of California”. Legal assistants do not provide legal advice. It is unlawful for anyone not currently licensed to practice law in California to give legal advice.

Division Dean  Kathy Sorensen (Interim)
Department Chairs  Asha Wilkerson

(916) 484-8512
legalclinic@arc.losrios.edu

Associate Degree

A.A. in Paralegal Studies

This degree prepares students to work in the legal field as an entry-level paralegal. It covers basic substantive and procedural areas including civil litigation, legal research and legal writing, contracts, and torts. This degree is in full compliance with California Business and Professions Code section 6450 regarding preparation for work in this field.

The American Bar Association (ABA) has specific requirements for 18 units of additional non-paralegal coursework (ABA Breadth). Students are encouraged to consult a counselor or the department chair for courses that satisfy the ABA Breadth requirements.

Catalog Date: June 1, 2020

**ABA Breadth:** Courses from at least three different areas of Areas 1-5B of the Intersegmental General Education Transfer Curriculum (IGETC), excluding performance courses, activity courses, administration of justice courses, and the lab component of science courses.

| Total Units: | 48 |

The Paralegal Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- incorporate basic legal theories in various substantive areas of law as required by supervising attorney.
- define and use legal terminology accurately and appropriately.
- differentiate between relevant and irrelevant information and evidence.
- research relevant legal authority.
- verify the currency of relevant legal authority.
- draft correspondence to be sent to clients or opposing counsel and others.
- prepare basic legal documents for signature and submission to court by the supervising attorney.
- organize professional assignments efficiently.
- support the supervising attorney in all phases of legal practice.
- demonstrate ethical behavior in the legal setting.
- recognize acts that may constitute the unlicensed practice of law.
- express their thoughts effectively, both orally and in writing, with attorneys and clients.

**Career Information**

Career opportunities for paralegals have an excellent outlook. According to the US Department of Labor's Job Outlook, employment of paralegals is projected to grow 15 percent between 2016 and 2026, faster than the average for all occupations. Paralegals find employment in both the State and Federal government as well as private practice and corporate settings.

**Certificates of Achievement**

**Law Office Clerical Assistant Certificate**

This certificate provides the skills needed for entry-level clerical positions in law offices. The course work emphasizes workforce skills including an introduction to the use of terms particular to the legal field.

This Law Office Clerical Assistant certificate is not approved by the American Bar Association and does not prepare students to work as paralegals or legal assistants under California state law.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- demonstrate keyboarding competence in the legal workplace.
- solve common office problems using current business technology and software applications.
- practice effective communication with law office personnel and clients.
- apply appropriate ethical standards to the special situations encountered in a law office.
- produce written documents in appropriate formats using typical legal office technology.

### Career Information

Typical career opportunities are entry-level clerical positions in a law office. In order to earn an A.A. or a Certificate to become a Legal Assistant/Paralegal, see the Legal Studies Program requirements in the Behavior and Social Sciences Division.

### Paralegal Studies Certificate

Students must possess an A.A. degree or higher from a regionally accredited institution to be eligible for the certificate. The Paralegal Studies Certificate is a one-year course of study consisting of 30 units of legal specialty courses. Legal courses cover basic substantive and procedural areas including civil litigation, legal research and legal writing, contracts, and torts, in addition to electives within the program. This certificate is in full compliance with California Business and Professions Code section 6450 regarding preparation for work in this field.

Catalog Date: June 1, 2020

According to the US Department of Labor's Job Outlook, employment of paralegals is projected to grow 15 percent between 2016 and 2026, faster than the average for all occupations. Paralegals find employment in both the State and Federal government as well as private practice and corporate settings.

**Legal Assisting (LA)**
LA 300 Introduction to Law and the American Legal System

This course introduces the American legal system, its history, and function. It provides an overview of several important areas of law such as torts and crimes and the legal assistant's role in the system.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the role and functions of the legal assistant
- use basic legal terminology appropriately
- analyze a fact pattern
- research basic information in appropriate legal research sources
- integrate knowledge of ethical obligations into all aspects of practice

LA 310 Civil Procedures and Litigation

This course is an introduction to the California court system with emphasis on understanding the practical aspects of litigation and the proper procedures required by statutes and rules of court. It covers the phases of California court procedure, including state and Federal constitutional limitations, jurisdiction, venue, pleadings, and motions. It also includes the forms by which matters are submitted to the court system from pre-litigation through appeals.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the practical procedural aspects of litigation, such as proper parties, jurisdiction, venue, claims, pleading, defaults, statutes of limitations, and various other motions.
- compare and contrast the major duties and responsibilities of paralegals in various civil litigation practices.
- demonstrate the use of proper methods and forms to submit civil matters to the court system.
- identify ethical issues that arise in litigation.

LA 312 Torts and Personal Injury

This course is an overview of substantive tort law as it applies to personal injury (PI) cases. It introduces tort concepts, such as negligence, intent, and strict liability, including the elements required to prove liability and defenses available to litigants. This course covers pretrial procedures, such as discovery, settlement offers, and witness and trial preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- define the elements of common tort causes of action.
- identify the steps a typical personal injury (PI) case follows from identification of the client through trial preparation.
- evaluate the evidence available in light of a case.
- apply appropriate defenses to common tort causes of action.
- categorize the types of torts appropriately.
- manage information to assist the attorney in successful representation of a client.
- identify ethical issues that arise in a torts practice.

</table>

This course covers basic contract principles. Topics include formation, validity, defenses, rights of third parties, performance, breach, remedies, and damages.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze contractual disputes for the required elements of prosecution or defense.
- apply and interpret standard contract terms.
- prepare a draft of a valid and enforceable document meeting the client's needs.
- evaluate a contract as to sufficiency of required elements.
- draft effective contract clauses to meet client's objectives.
- describe common defenses to contract causes of action.
- identify ethical issues arising in a transactional law practice.

</table>

This course provides the paralegal with the basic tools of legal research in both federal and California law, with emphasis on California materials. It covers the location and use of primary and secondary sources, the elements of a court decision, and how to brief a case.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- classify the various legal research resources.
- identify appropriate resources for various legal research questions.
- synthesize the information provided in legal resources into a useful summary for the use by an attorney.
- plan a research approach to an issue.
- utilize a variety of computer resources to aid the research process.
- research California State Bar ethics opinions.
• analyze California State Bar ethics opinions.

LA 321 Legal Writing

This course is a continuation of LA 320: Legal Research. It includes the application of research methods to gather information which may be used in a variety of written products. It covers synthesizing information into various documents typically used in the law office. Documents created may include interoffice memoranda, court briefs, and letters to clients.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare points and authorities which accompany motions.
- compose interoffice memos, motions, points and authorities, and ancillary materials for filing with the court.
- produce documents which are intended to inform or persuade the recipient such as letters and memos.
- recognize the intended audience and purpose of a document.
- integrate computer research into the creation of appropriate documents such as legal research databases and electronic practice guides.

LA 322 Advanced Legal Research and Writing

This course builds on the research and writing skills covered in LA 320 and LA 321. It focuses on refining legal research, analytical, and writing skills with an emphasis on researching and applying most current codes, rules, and practices pertaining to e-discovery, meta data mining, and other technical issues; it also covers drafting various discovery requests/responses and discovery motions/oppositions and/or other documents filed in Law and Motion departments relative to electronically stored information. Extensive use of computers and the internet is required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a comprehensive and efficient approach to researching and applying current codes, rules, and practices pertaining to e-discovery, meta data mining and other topical technical issues.
- evaluate and identify facts and supporting evidence for use in drafting discovery requests and responses with a focus on e-discovery, meta data mining, and other topical technical issues.
- analyze and verify research to be used in drafting discovery motions and oppositions for filing with the court.
- draft correspondence, legal documents, and pleadings for use by attorney in Law and Motion practice.

LA 330 Family Law and Procedure

This course covers California Family Law relating to dissolution procedures, property issues, and non-marital relationships. Legal procedures, and preparation of necessary forms and their significance are emphasized.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the role of the paralegal in relation to the family law attorney in litigation of family law cases.
- apply knowledge of the process to work efficiently and effectively with counsel and court staff.
- identify the economic effects of dissolution.
- analyze the client's case to determine proper pleadings and procedures.
- analyze ethical issues that may arise in a family law practice.

LA 332 Administrative Law and Procedure

Units: 3
Hours: 54 hours LEC
Prerequisite: LA 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course covers administrative law and procedure. Topics include comparison of administrative law to civil and criminal law, and administrative due process.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define basic elements of administrative law and procedure.
- evaluate simple administrative cases.
- identify the necessary elements of complex administrative law case to assist the attorney.
- analyze ethical issues that may arise in an administrative law practice.
- present a simple administrative case.

LA 334 Criminal Law and Procedure

Units: 3
Hours: 54 hours LEC
Prerequisite: LA 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides background in both substantive crimes and criminal procedure. It includes a detailed study of the operation of the criminal justice system, from arrest and filing of charges through trial, conviction and appeal.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare pre-trial writs and motions, and post-trial writs.
- evaluate common situations in criminal law and the appropriate steps to be taken such as discovery requests, filing motions, etc.
- identify substantive crimes.
- recognize procedural rules.
- identify and analyze ethical issues which arise in a criminal law practice.

LA 336 Immigration Law

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the role of the paralegal in relation to the family law attorney in litigation of family law cases.
- apply knowledge of the process to work efficiently and effectively with counsel and court staff.
- identify the economic effects of dissolution.
- analyze the client's case to determine proper pleadings and procedures.
- analyze ethical issues that may arise in a family law practice.
This course is an elective in the Paralegal Studies program and is designed to prepare students for work in an immigration law setting. Students will learn about the Justice Department, the Labor Department, and the State Department, and how these agencies administer immigration and naturalization laws.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify various paths to immigration and naturalization in the United States.
- demonstrate requisite skills needed to interview alien clients effectively.
- identify agencies involved in the immigration and naturalization process in the United States.
- prepare legal forms and documents related to administrative proceedings.
- differentiate between criteria for deportation and exclusion.
- identify various alien and immigrant categories.

This course provides general background information about basic communication and relates this information to the skills used by a legal assistant in interviewing clients and witnesses.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify interview techniques appropriate to the type of information needed to assist the attorney handling the client's case
- apply the various interviewing techniques
- evaluate the source evidence
- classify evidence as to relevancy

This course covers the rules of evidence in federal and state courts. Topics include Hearsay Rule, Best Evidence Rule, and organizing deposition transcripts.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate and prepare evidence for trial under the supervision of an attorney.
- define admissibility of testimony, documents, and other evidence in federal and state courts.
- apply proper rules and forms to prepare objections and other responses to discovery requests.
LA 350 Law Office Management

This course covers aspects of the paralegal's role in a law office. Law office technology, accounting, time and records management, and communication skills are examined.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between the role of the law office manager and the legal assistant.
- apply basic principles of time and records management.
- assess ethical requirements in various law office situations.
- evaluate the various associations for professional development.
- identify appropriate methods of communication in the law office setting.
- demonstrate an understanding of computer technology applications used in the practice of law.

LA 360 Corporations Law

This course covers corporation terminology and legal requirements governing corporations. Topics include formation, dissolution and liquidation of a corporation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and apply the legal requirements for forming, operating, merging, and dissolving a corporation.
- identify the necessity for and write a board resolution.
- apply requirements to create corporate documents.
- maintain an orderly minute book.
- identify corporate equity, debt securities, and tax considerations.
- identify corporate distribution issues.
- identify the appropriate government agencies for filings.
- identify ethical issues that arise in a corporate law practice.

LA 362 Estate Planning and Probate Procedure

This course is not available for credit in the CSU system.
This course covers estate planning, including the manner in which property may be held and ways it can be transferred. Testate and intestate probate procedures are included.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze cases in order to assist the attorney in meeting the immediate needs of the client.
- prepare and file appropriate forms and documents to transfer property.
- identify the need for additional professional assistance in such areas as taxes and accounting.
- identify and analyze ethical issues that arise in an Estates and Probate practice.

**LA 364 Landlord Tenant Law**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** LA 300 with a grade of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course focuses on the most common types of landlord-tenant disputes. It covers litigation and non-litigation matters. Topics also include the different types of tenancy, what constitutes habitability, and tenant's rights and obligations.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the law that governs landlord-tenant relations.
- select and complete the appropriate forms required by California law.
- create a plan to accommodate the various stages of the landlord-tenant relationship.
- analyze the facts to determine an appropriate course of action.
- analyze ethical issues that arise in a landlord-tenant law practice.

**LA 365 Legal Clinic**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** LA 300, 310, 320, and 321 with grades of "C" or better  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course is a study of the activities of a legal clinic, including conducting client interviews, participating in legal consultations, performing legal research, and carrying out tasks needed in clinic operations, all under the direct supervision of clinic attorneys. This course also covers research, examinations, and conduct according to the Professional Rules of Responsibility and Ethics.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify, describe, and discuss the ethical rules of the American Bar Association (ABA) and the Rules of Professional Responsibility for lawyers in California.
- compare and contrast the authorized work of lawyers with the authorized work of non-lawyers.
- describe the Duty of Confidentiality, including its length and the way it is affected by technology.
- explain how conflicts of interest arise and how paralegals can avoid such conflicts when changing jobs.
- demonstrate a satisfactory level of expertise for interviewing legal clinic clients and meeting with attorneys during consultation.
- identify, analyze, and research legal issues presented by clients.
• demonstrate appropriate use of forms for interviewing clients, fact gathering, and reporting.
• demonstrate an understanding and knowledge of how paralegals are utilized in a professional setting.
• understand and demonstrate knowledge of a case lifecycle such as initial client contact, interview, representation, and case closure.
• draft appropriate documents needed to assist a clinic client with his or her legal matter.
• synthesize essential facts of a case and communicate findings to attorney supervisor.
• analyze legal issues and perform legal research accordingly.

LA 366 Basic Bankruptcy Law

Units: 3
Hours: 54 hours LEC
Prerequisite: LA 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the practical aspects of representing debtors or creditors within the bankruptcy system. Topics include voluntary and involuntary bankruptcy, preparation of statements, and schedules for filing.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify fundamental aspects of bankruptcy.
• define the role of the legal assistant in a bankruptcy practice.
• manage document production for a typical bankruptcy filing.
• evaluate research needs and appropriate litigation support for potential bankruptcy action.
• identify ethical issues which may arise in a bankruptcy practice.

LA 368 Workers' Compensation Law

Units: 3
Hours: 54 hours LEC
Prerequisite: LA 300 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course provides an overview of the Workers' Compensation Law in California. It focuses on the procedural aspects of handling a Workers' Compensation claim from both the applicant perspective and the defense perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the fundamentals of Workers' Compensation Law in relation to the legal assistant's role in the process.
• research California case law.
• formulate a discovery plan.
• analyze ethical considerations.
• prepare basic documents for a Workers' Compensation claim.

LA 495 Independent Studies in Legal Assisting

Units: 1 - 3
Hours: 54 - 162 hours LAB
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

LA 498 Work Experience in Legal Assisting

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to legal assisting with a cooperating site supervisor. Students are advised to consult with the Legal Assisting Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of legal assisting. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate application of industry knowledge and theoretical concepts in the field of legal assisting related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course

• make effective decisions, use workforce information, and manage his/her personal career plans.

• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

• locate, organize, evaluate, and reference information at work.

• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
The American River College Library courses teach vital research skills that enable students to achieve success in their college classes, their careers, and their day-to-day lives. Students will learn research skills to cope with the information rich environment in which they live. In particular, students will learn how to find and critically evaluate information from a wide variety of sources to meet their information needs.

**LIBR 102 Introduction to Library Resources**

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None  
Catalog Date: June 1, 2020

This course introduces basic library services and resources. It covers the services and functions of an academic library and includes the skills needed to retrieve information from print and electronic resources using the library catalog, online databases, and the Internet. Access to and use of an academic library are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the services and resources available in an academic library.
- develop basic search strategies.
- use a variety of research tools to locate, select, and retrieve information in various formats.
- explain the characteristics and uses of various types of information sources.
- explain the importance and basic principles of avoiding plagiarism and citing sources.

**LIBR 318 Library Research and Information Literacy**

Units: 1  
Hours: 18 hours LEC  
Prerequisite: None  
Advisory: CISC 300 with a grade of "C" or better; Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340

Transferable: CSU; UC

General Education: AA/AS Area III(b)

Catalog Date: June 1, 2020

This course introduces the information competency skills necessary to conduct academic, professional, and personal research. It provides a step-by-step guide to the research process that is applicable to course work, professional work, and life-long learning. It emphasizes effective search strategies, selecting information tools, locating and retrieving information sources, analyzing and critically evaluating information, and using the information in an ethical manner.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- assess the nature and extent of information needed to complete a research task.
- formulate a research strategy.
- locate needed information effectively and efficiently.
- evaluate information sources for information depth and accuracy, credibility, authority, point of view or bias, intended audience, relevance, and physical accessibility.
- describe the economic, legal, social, and ethical issues related to the use of information.

LIBR 320 Introduction to Internet Research

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the use of the Internet for academic research. It covers the scope of information available on the Web, presents various Web search tools, and provides strategies and techniques for locating and evaluating appropriate Web resources. This course also explores social and ethical issues concerning the Internet.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize when an academic information need can be fulfilled using Internet resources.
- utilize a variety of search tools and techniques to find appropriate Internet sources for academic use.
- evaluate Internet information and sources.
- recognize and discuss major social and ethical issues concerning the Internet.
- utilize Internet information sources to create an informed response to an information need.

LIBR 325 Internet Research Skills

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: CISC 300; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course surveys the content, use, and evaluation of electronic information sources. Emphasis is placed on the effective use of the Internet as a research tool. It covers Internet resources including the deep Web, Web portals, online databases, and library catalogs. Communication services such as email, newsgroups, listservs, blogs, and social networks are also studied as are Web 2.0 and other emerging technologies. Database search strategies, techniques, and critical evaluation of information are covered. Historical and social issues surrounding the Internet are also discussed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the historical and ongoing development of the Internet with emphasis on technical, social, economic, legal, and ethical issues.
- compare and contrast information retrieval systems, such as search engines, directories, and library databases in terms of content, reliability, ease of use, and consistency.
- identify online databases and other electronic sources to select the most appropriate, relevant information for a research need.
- formulate a research question and construct effective search strategies and techniques that address the nature of the question.
- critically evaluate online information for authority, relevance, scope, timeliness, and accuracy.
LIBR 494 Topics in Library Science

This course provides an opportunity to study current topics in library science that are not included in existing courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Analyze an information need and determine the extent of information needed
- Access information effectively and efficiently
- Evaluate information and its sources critically
- Use information effectively to accomplish a specific purpose
- Describe the economic, legal, and social issues surrounding the use of information

LIBR 495 Independent Studies in Library

This course provides an opportunity for independent study on issues related to library science.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Analyze an information need and determine the extent of information needed
- Access information effectively and efficiently
- Evaluate information and its sources critically
- Use information effectively to accomplish a specific purpose
- Describe the economic, legal, and social issues surrounding the use of information
Associate Degrees

A.A. in Leadership

This degree program centers around the leadership and management functions essential to building world class organizations. It focuses on the design of effective organizational systems and includes customer service, effective planning, statistical analysis, teamwork, and leadership. It also includes systems design, development, measurement, and improvement. Additionally, it examines the study of physics, statistics, ethics, business communications, and organizational psychology.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- incorporate leadership skills and abilities that are effective in managing a multicultural workforce.
- analyze practical business problems.
- apply current management philosophies to current management problems.
- integrate management principles in relationship to finance, personnel, products, services and information.
- communicate effectively verbally and in writing in various business settings.
- utilize critical thinking and research skills in the evaluation of alternative solutions.

Certificates of Achievement

Conflict Management Certificate

This certificate focuses on identifying and understanding the underlying causes of workplace conflict and strategies for managing conflict effectively. It explores the impact of conflict on workplace communication, decision-making, and leadership. It covers practical and strategic skills to prevent escalation of conflict and defuse disruptive behaviors.

</table>

Upon completion of this program, the student will be able to:

- Analyze the important aspects of group behavior and team process in relationship to individual psychological variance.
- Identify the organizational and social benefits of group and team formation and the four stages of their development: forming, storming, norming and performing.
- Measure the utilization and effectiveness of empowerment, teamwork and self-managed teams from a task and maintenance function perspective in teams as it relates to organizational success.
- Apply team empowerment concepts relative to organizational effectiveness.

Leadership in Action: Organizational Variation Certificate

This certificate centers on the importance of statistical knowledge of variation, variation patterns and the methodology and use of statistical tools to assist managers with the measurement and improvement of organizational processes. It emphasizes the practical application of statistical tools in the workplace.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Apply statistical tools to effect direct improvement to critical variances in organizational performance.
- Collect valid data on real-life organizational problems and perform statistical analysis.
- Evaluate the methods of the Taguchi Loss Function in the development and design of administrative and service processes.
- Compare and contrast the appropriate uses for Statistical Process Control (SPC) as an organizational tool to measure and improve overall systems effectiveness and customer satisfaction.

Management (MGMT)

MGMT 142 Project Management Techniques and Software

Same As: CISA 160
Units: 3
Hours: 54 hours LEC
This introductory course covers the responsibilities of a project manager. It includes the knowledge needed to manage a project, control costs, and schedule resources. It also introduces the use of project management software to track project resources, tasks, and milestones. This course is not open to students who have taken CISA 160.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- construct a basic plan of action utilizing project management software.
- compare and contrast various theories of leadership and motivation.
- explain the principles of project management with regard to case studies.
- demonstrate the ability to formulate a project plan, given specific scenarios.
- assess the inherent advantages and shortcomings in various software packages.

MGMT 230 Introduction to Purchasing Contracts

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces students to purchasing contract theory and practice. Topics include Uniform Commercial Code, contractual business and legal risk mitigation, contract development for goods and services purchases, scope of work and specification development, and contract breach.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the basics of purchasing contract theory (offer, acceptance, and consideration) and the utilization of contracts to mitigate business and legal risk.
- describe the importance of proper specifications and scope of work definition in contract development.
- analyze how the terms and conditions negotiated in a contract reflect components of total cost.

MGMT 231 Negotiation Planning

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces students to the concept of “total cost,” and covers the skills to perform cost analysis in support of supplier selection and effective supplier negotiations. It also includes participatory exercises in mock negotiations using the techniques learned in this course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the concept of “total cost,” and differentiate between acquisition cost and total cost.
- differentiate between data-based and behavioral-based negotiation techniques and how they are used.
- express the necessary post-negotiation steps to ensure effective documentation of the outcome of supplier negotiations.

MGMT 233 Purchasing Organization Management

Units: 3
Hours: 54 hours LEC
This course focuses on the management of a global or regional purchasing operation within a corporation. Concepts covered include organizational structure, hiring, success metrics, tactical and strategic purchasing focus areas, community and environmental obligations, purchasing code of ethics, purchasing policies and procedures, and eCommerce tools and applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize the purpose and role of the purchasing organization and its obligation to the company.
- explain the importance of purchasing success metrics and their role in assessing effective operations.
- express how purchasing policies and procedures are used to manage risk and improve results.
- articulate the role and importance of green purchasing initiatives.

MGMT 295 Independent Studies in Management

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the importance of organizational processes for the area of study.
- analyze the issues of the area of study.
- define the terms of the area of study.
- apply the theories of the area of study.

MGMT 300 Introduction to Leadership in Action

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course examines the underlying principles and practices of leadership and their implementation by both individuals and organizations. Topics include leadership traits, motivation, empowerment, communication, continuous process improvement, customer-focused management, and leading change.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the role of individual and organizational educational processes for implementing leadership principles.
- apply principles of effective leadership in managing people and processes.
- describe basic relationships required to establish, maintain, and lead effective teams.
- compare differences between personal and organizational requirements of leadership and management.
MGMT 304 Principles of Management

This survey course covers a multitude of management subject areas, such as planning, organization, staffing, leadership and control, team development, communication, business ethics, and global management perspectives. It is a core requirement for management majors. This course provides an overview that is helpful for selecting a specific career and/or major in the field of management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the concept that organizations are collections of people working together to achieve a common purpose.
- identify the duties managers accomplish to facilitate the achievement of organizational outcomes.
- define the five functions of management: planning, organizing, staffing, leading, and controlling in relationship to managerial situations.
- apply a variety of management philosophies to contemporary management problems.
- analyze the various process theories of motivation, such as Maslow, Alderfer, Hersberg, McGregor, and McClelland.

MGMT 308 Personnel and Human Resources Management

This course is an introduction to the study and analysis of personnel and human resource management. It covers essential topics, such as civil rights, labor law, and various management theories foundational to both public and private sector organizations. This course provides an overview that is helpful for selecting a specific career and/or major in the field of business or management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the key challenges to personnel and human resource management in developing the flexible and skilled workforce needed in governmental and private organizations.
- evaluate the impact of cost pressures on human resource policies.
- apply personnel recruitment and selection methods.
- describe performance appraisal techniques.
- analyze the dynamics and legal foundations of labor and management relations.

MGMT 320 Leadership in Action: Organizational Variation

This course covers basic managerial statistics, with a focus on understanding variation, variation patterns, and how statistical tools can be used to improve existing organizational processes. It also focuses on the support and use of Statistical Process Control (SPC). Emphasis is placed on the immediate application of the tools in the workplace.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
apply the principles of fact-based management to improve organizational process.

• predict outcomes from valid data collection activities.

• use the results of data collection activities for organizational improvement.

• describe the value of a systems approach to the improvement of organizational processes.

• develop statistically valid customer survey questionnaires for customer feedback.

• analyze data using computer software.

**MGMT 330 Leadership in Action: Organizational Teams**

This course covers basic knowledge of organizational team process with a focus on the practical application of teamwork, team leadership, and individual/group interactive skills. Emphasis is placed on the immediate application of the tools to the work place.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• apply the tools of teamwork to organizational process.

• demonstrate team visions and strategies to achieve organizational process excellence.

• construct training presentations, educational environments, and facilitation procedures.

• analyze team creativity and innovation leadership strategies for organizational change.

• describe conflict management approaches to resolve team problems, pressures, and conflicts.

</table>

This course covers basic knowledge of organizational systems with a focus on the practical application of vision, mission, support processes, and organizational improvement methodologies. Emphasis is placed on the immediate application of the tools to the work place.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• apply the tools of systems thinking to organizational design and delivery of quality service.

• compare critical process analysis tools and team facilitation skills to the design of organizational systems.

• describe systems dynamics in information processing, internal team relations, and technical communications.

• evaluate the level of fear and its elimination or reduction to assess organizational processes.

**MGMT 350 Leadership in Action: Organizational Learning**

</table>
This course covers basic knowledge of organizational learning with a focus on the practical application of the concepts of theory and prediction, creating learning environments for structured organizational cultures, and the importance of courage, faith, and justice. Emphasis is placed on the immediate application of the tools to the workplace.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define organizational integrity and how it is applied in organizations worldwide.
- demonstrate leadership strategies to provide integrity models for organizational learning.
- design a service model of quality for organizational learning.
- compare changes in leadership theory and practice between the classical industrial/bureaucratic leader and collaborative, team focused leaders.

MGMT 360 Management Communication

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; and SPEECH 301 or 302 with a grade of "C" or better; OR placement through assessment process.
Transferable: CSU
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course provides skill training in coping with communication problems in organizations. It includes the study of the communication process, the analysis of the barriers to effective oral and written communication, and the development of guidelines to improve interpersonal relations within organizations through the use of effective methods of communication.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the process of communication and how to engage in it effectively.
- apply the essential elements of clear and purposeful oral and written communications to effective organizational effectiveness.
- define the characteristics of multicultural communication and cultural difference in the communication process.
- evaluate the importance of effective communications in organizational performance, efficiency, and effectiveness.

MGMT 362 Techniques of Management

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better; OR placement through assessment process.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for supervisors and other entry level managers as well as those entering mid-management positions. It focuses on primary management functions of planning, organizing, controlling, and leading. Related skills, such as time management, cost control, performance evaluation, motivation, communication techniques, and the social responsibility of managers, are also emphasized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply principles of time management, cost control, and decision-making to managerial responsibilities.
- assess responsibilities of management both within the organization and to the local, state, federal, and global community.
- demonstrate leadership skills.
• organize activities to achieve organizational goals.

MGMT 372 Human Relations and Organizational Behavior

This course emphasizes the psychology of human relations management. It covers human interaction principles that build confidence, competence, and positive attitudes in work organizations. Topics include the basis for human behavior, perception, communication, motivation, performance improvement, group behavior, ethics, and social responsibility.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain major approaches to organizational behavior.
• analyze theories of human behavior at work.
• describe an effective philosophy of human behavior at work.
• demonstrate effective human interaction skills in the workplace.

MGMT 374 Social Responsibility and Ethics in Management

This course examines the ethical climate, management problems which need to be confronted and analyzed, the role integrity plays in the survival and productivity of American organizations, and social responsibility as it relates to management.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the importance of ethics in organizations.
• explain why ethics must be taught and nurtured in the workplace.
• analyze how current issues of quality, liability, and human relations, at the local, national, and international level are addressed in an ethical environment.
• describe the importance of integrity from all members of the organizations.
• evaluate traditional approaches, such as inspection and watchdog, for sound management.

MGMT 495 Independent Studies in Management

This course provides the opportunity for students and faculty to design a learning environment around an area of management study as defined in a proposal and approved by the Management department for each individual area of study.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe the importance of organizational processes for the area of study.
- analyze the issues of the area of study.
- define the terms of the area of study.
- apply the theories of the area of study.
- construct models for the area of study.
The Marketing degree provides an opportunity for students to acquire knowledge and training for careers in sales, advertising, and marketing. The competency-based curriculum is designed to prepare students for a variety of positions and to provide basic training for advancement to management positions and for transfer to four-year universities.

The Marketing Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Integrate the functions of the marketing mix.
- Apply principles of retailing such as business location, merchandising, inventory control, store management and vendor relationships.
- Plan, produce and select the appropriate media for advertising.
- Integrate management principles related to finance, personnel, products, services and information.
- Communicate effectively verbally and in writing in various business settings.
- Identify and examine consumer buyer behavior and evaluate which marketing communications medium will most effectively meet needs of the marketplace.
- Incorporate principles of product development, pricing, distribution strategies, promotion strategies and market research.
- Demonstrate professional sales skills by effectively interviewing and identifying the customers' needs.
- Evaluate practical business problems and utilize critical thinking in the determination of alternative solutions.
- Identify and explain the major functional areas of the business organizations including management, marketing, finance, and accounting.
- Apply the marketing mix to create and analyze various marketing strategies.

A.A. in Retail Management

The Retail Management program builds on the general business curriculum and prepares students for a leadership role in the retail industry. Depending upon the size of the retail company, retail managers are responsible for one or more parts of a retail operation including sales, marketing, buying, merchandising, operations, inventory control, human resources, and finance.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- become a more productive retail manager, employee, or entrepreneur.
- incorporate basic marketing skills into retail operations, such as target marketing, product development, pricing, distribution decisions, promotion strategies, and marketing research.
- evaluate and develop basic management skills involving human relations, organizational behavior, and human resources management.
- demonstrate basic computer skills in word processing, presentations, and Internet searches.
- analyze and employ various written and verbal communication techniques.
- critique and recommend various retail store layouts and designs.
- recognize and confirm the importance that retailing has upon the American society and economy.

### Career Information

Department manager, store director, merchandise buyer, customer service representative, or entrepreneur.

### Marketing (MKT)

#### MKT 295 Independent Studies in Marketing

<table>
<thead>
<tr>
<th>Units:</th>
<th>1 - 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

#### MKT 300 Principles of Marketing

<table>
<thead>
<tr>
<th>Units:</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>54 hours LEC</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Transferable:</td>
<td>CSU</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course provides a general overview of the principles of marketing. It focuses on the marketing concept and customer satisfaction. Topics include the controllable elements of the marketing mix (product, place or distribution, promotion, and price) as well as the uncontrollable elements of the marketing environment. This course also
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe how organizations apply the basic principles and concepts of marketing.
- explain the importance of customer satisfaction and the priorities of the marketing concept.
- evaluate how marketers plan and make decisions regarding the controllable factors of the marketing mix: product, place or distribution, promotion, and price.
- describe the elements of the marketing environment that are beyond the control of the marketer.
- illustrate how marketers segment their markets and design target markets.
- analyze and evaluate several companies and write about various concepts of marketing, such as target marketing, social responsibility, and product mix.

MKT 310 Selling Professionally

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course examines the personal selling philosophy and career opportunities in professional consumer and business selling. The development of a successful presentation strategy is examined, and techniques are illustrated for the steps of selling: approach, sales demonstration, overcoming objections, negotiation, closing, and servicing the sale. This course helps develop better selling and personal marketing techniques. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate professional appearance and create a plan to improve it.
- adapt his/her personal communication style to a prospect.
- identify and compare the career opportunities in professional consumer and business selling.
- analyze and demonstrate the steps of professional selling, including approach, needs assessment, presentation, overcoming objections and negotiating, closing, and servicing of the sale.
- give an effective sales presentation.

MKT 312 Retailing

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the field of retailing. It covers various aspects of retailing, including store location and layout, consumer behavior, human resource management, merchandise buying, pricing, and promotion. Multichannel retailing is discussed, which includes stores, websites, catalogs, and telemarketing. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- cite examples of various types of food, general merchandise, nonstore, and services retailers.
- explain how needs and social factors affect consumer buying decisions and how retailers segment their markets.
- compare and contrast various retail locations, including shopping centers and malls, central business districts, and nontraditional locations, such as airports and hospitals.
- evaluate specific retail site locations, based upon factors such as trade area, competition, natural and artificial barriers, traffic flow, parking, and leases.
• identify some of the special conditions or challenges of human resource management in retailing.
• illustrate how retailers use Customer Relationship Management (CRM) to identify their best customers and build customer loyalty.
• explain how retailers use merchandise management decisions to implement their retail strategy, including planning, buying, pricing, branding, and promoting their merchandise.
• evaluate a retail store's atmospherics, including layout, lighting, colors, scents, and music.

MKT 314 Advertising

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MKT 300
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to consumer advertising. It covers the advertising industry, including advertisers, agencies, media, and suppliers. Consumer behavior is also studied, to realize how advertisers attempt to understand their target audience. Advertising media are investigated in detail, including television, radio, newspapers, magazines, outdoor, Internet, social media, and direct mail. This course emphasizes group dynamics in the development of an advertising campaign. It is recommended for those interested in a career in advertising, as well as future entrepreneurs hoping to develop effective advertising for their businesses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify the major social and economic impacts of advertising in the United States.
• describe how the advertising industry operates and produces advertising through the work of advertisers, agencies, media, and suppliers.
• evaluate the various advertising media, including television, radio, magazines, newspapers, outdoor, Internet, direct mail, and other media.
• create and produce advertising examples for magazine ads, television and radio commercials, and billboards.
• work together in groups to create and present media advertising for an advertising campaign.

MKT 330 Internet Marketing

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course introduces the use of social media and other Internet technologies, with an emphasis on the theory and practice of marketing in an electronic environment. Topics include the personalization and interactivity of the Internet to build strong customer relationships. These concepts are applied to traditional brick and mortar as well as exclusively online businesses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• create effective Internet marketing strategies that enhance a business’ relationship with present and future customers.
• identify and evaluate decisions in the selection of Internet marketing strategies to make a business more effective.
• apply complex decision-making techniques to problems involving e-commerce practice and a company's role in this evolving business environment.

MKT 495 Independent Studies in Marketing

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

MKT 498 Work Experience in Marketing

Units: 1 - 4  
Hours: 60 - 300 hours LAB  
Prerequisite: None  
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to marketing with a cooperating site supervisor. Students are advised to consult with the Marketing Department faculty to review specific certificate and degree work experience requirements.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU  
General Education: AA/AS Area III(b)  
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of marketing. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in marketing related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.

- make effective decisions, use workforce information, and manage his/her personal career plans.

- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

- locate, organize, evaluate, and reference information at work.

- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Associate Degrees for Transfer

A.S.-T. in Mathematics

This degree is designed to meet common lower-division requirements for a major in Mathematics at a CSU campus. Satisfactory completion of the ARC Mathematics transfer degree provides a solid foundation and satisfies the standard prerequisites for upper division coursework for Mathematics majors. However, it is highly recommended that students meet with a counselor since major and general education requirements vary for each college/university.

The Mathematics Associate in Science for Transfer (AS-T) Degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

Degree Requirements

The Associate in Science in Mathematics for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate, describe, and apply single variable calculus including various forms of derivatives and integrals, to analyze and solve problems.
- evaluate, describe, and apply multivariate calculus, linear algebra, and differential equations to analyze and solve problems.
- prepare logical arguments and use them to prove basic mathematical theorems.
- solve real-world application problems using appropriate mathematical problem-solving skills.

Career Information
Mathematicians work as statisticians, analysts, computer programmers, actuaries, researchers, planners, and educators. This transfer degree is designed to meet the common lower-division requirements for most bachelor's degrees in Mathematics.

Associate Degrees

A.S. in Mathematics

The A.S. degree in mathematics provides a foundation of mathematics for students in preparation for transfer to a four-year program in mathematics or statistics. Course work includes a three-semester calculus series, differential equations, linear algebra, and statistics and/or symbolic logic.

Catalog Date: June 1, 2020

</tbody>
</table>

The Mathematics Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Identify, formulate, and solve applied problems (using calculus and linear algebra) in verbal, numeric, graphical, and symbolic form related to science, economics, or business.
- Recognize and construct valid arguments using deductive and inductive reasoning skills.
- Define and utilize terminology of mathematics with emphasis in calculus, linear algebra, and either statistics, logic or problem solving.
- Calculate derivatives and integrals using a variety of defined rules and strategies of calculus, algebraic properties and trigonometric identities.

A.S. in Physical Science/Mathematics

This degree provides a broad study in the fields of physical science and mathematics. It is a good foundation for transfer to a four-year program in science, technology, engineering, or mathematics (STEM).

The Physical Science/Mathematics Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize and correctly use the terminology of math, statistics, and/or science.
- analyze and interpret data, charts, and graphs using quantitative and qualitative methods.
- recognize and construct valid arguments using deductive and inductive reasoning.
- evaluate new and accepted ideas about the natural universe using testable methodology.

</tbody>
</table>

This course helps students recognize common misconceptions of mathematics, overcome math anxiety, and build confidence in math. Topics include relaxation techniques, study habits, and problem solving strategies. This course is also useful for tutors, counselors, and teachers interested in helping others overcome their math anxiety. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze causes of math anxiety
- examine myths about mathematics
- describe the experiences in mathematics which have influenced personal attitudes towards math
- compare personal learning experiences, as related to mathematics
- apply skills to overcome fear and achieve success in mathematics
- create a study plan for mathematics courses
- apply learning strategies to achieve success in mathematics

MATH 25 Computational Arithmetic

<table>

</tr>
</tbody>
</table>
This course introduces the fundamentals of arithmetic with an emphasis on computational skills. Topics include whole numbers, exponents, order of operations, factors, fractions, decimals, problem solving, and applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate problems using addition, subtraction, multiplication, and division of whole numbers, fractions, and decimals.
- use the order of operations to simplify expressions.
- read, write, and round whole numbers and decimals.
- identify and use factors and prime factorization of whole numbers.
- identify types of fractions.
- simplify fractions.
- demonstrate the relationships between fractions and decimals.
- set up and solve application problems using computational arithmetic.

MATH 32 Pre-Algebra

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 25 or 41 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course briefly reviews the fundamentals of arithmetic, including fractions, decimals, and order of operations. Course content includes signed numbers, ratios, proportions, percent, concepts of variables, area/perimeter/volume of geometric figures, and solving basic linear equations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate numerical expressions that contain integers, fractions, and decimals using the order of operations
- evaluate algebraic expressions for given value(s) of the variable(s)
- simplify variable expressions by using the distributive property and combining similar terms
- solve elementary linear equations
- set up and solve elementary application problems, including problems involving percents, ratios, and proportions
- convert between percents, decimals, and fractions
- convert units of measurement, including U.S. and metric systems
- evaluate numerical square root expressions
- calculate area, perimeter, and volume of geometric figures

MATH 41 Algebra Readiness - Part I

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: CISC 100, CISC 300, or CISC 305 with a grade of "C" or better, AND ENGRD 116 or ESLR 320 with a grade of "C" or better. Placement through the math assessment process.
Catalog Date: June 1, 2020

This course is the first of two parts covering algebra readiness in a mastery-based learning environment. The fundamentals of arithmetic are introduced, with an emphasis on problem solving and computational skills. Topics include whole numbers, exponents, order of operations, factors, fractions, decimals, proportion, ratios, rates, problem solving, and applications. The course is offered through the Multimedia Math Learning Center (MMLC), using an independent study approach under the direction of an instructor. Computer-based instruction via the Internet is an integral part of the course. Students are required to purchase a workbook that is bundled with the on-line video and math content system. One set of materials can be used for multiple MMLC courses, if completed in consecutive semesters. The content in the course is organized into various modules. Each module must be completed at a mastery level before the student moves on to the next. Students will demonstrate mastery by successfully
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate problems using addition, subtraction, multiplication, and division of whole numbers, fractions, and decimals.
- use the order of operations to simplify expressions.
- read, write, and round whole numbers and decimals.
- identify and use factors and prime factorizations of whole numbers.
- analyze and simplify fractions.
- demonstrate the relationships between fractions, decimals, and percents.
- analyze and estimate problems involving whole numbers, fractions, and decimals.
- set up and solve application problems using computational arithmetic.

MATH 42 Algebra Readiness - Part II

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 41 with a grade of "C" or better
Catalog Date: June 1, 2020

This course is the second of two parts covering algebra readiness in a mastery-based learning environment. The fundamentals of pre-algebra are introduced, with an emphasis on problem solving skills. Topics include order of operations, signed numbers, application problems, concepts of variables, exponents, operations on signed fractions, percent problems, solving algebraic equations, the rectangular coordinate system, introduction to graphing linear equations, applications of equations, and area/perimeter of geometric figures. The course is offered through the Multimedia Math Learning Center (MMLC), using an independent study approach under the direction of an instructor. Details about the program can be found in the catalog description for MATH 41. This course may be completed as quickly as possible but no later than the end of the semester. Students who complete this course during the first half of the semester may sign up immediately for MATH 131. For the most updated information, please visit the MMLC web page on the ARC website.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate expressions that contain addition, subtraction, multiplication, and division of real numbers.
- solve numerical and applied percent problems.
- simplify algebraic expressions using order of operations.
- evaluate and simplify exponential and square root expressions.
- solve linear equations, including those with signed numbers, fractions, and/or decimals.
- set up and solve elementary application problems using algebraic techniques.
- compute perimeter and area of geometric figures.
- translate words into symbols and equations.
- perform operations on signed fractions.
- graph linear equations.

MATH 100 Elementary Algebra

Units: 5
This course covers the fundamental concepts and operations of algebra and incorporates problem-solving skills. Topics include properties of real numbers, linear equations and inequalities, integer exponents, polynomials, and factoring polynomials. Other topics include rational and radical expressions, rational and radical equations, graphing and finding equations of lines, graphing and solving systems of linear equations, and graphing and solving quadratic equations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- simplify expressions using the basic operations and properties of real numbers.
- solve one-variable equations and inequalities.
- combine polynomials using the basic operations of polynomials.
- factor polynomials.
- simplify rational expressions.
- solve rational equations.
- solve linear equations.
- graph linear equations.
- find the equation of a line given (a) the slope and a point on the line, and (b) two points on the line.
- solve and graph systems of linear equations.
- simplify expressions containing integer exponents.
- simplify expressions containing second and third degree roots.
- solve quadratic equations.
- graph quadratic equations.
- develop an appropriate equation or system of equations and use the resulting equation(s) to solve application problems.

MATH 110 Elementary Geometry

Units: 5
Hours: 90 hours LEC
Prerequisite: MATH 100 or 132 with a grade of "C" or better, or placement through the assessment process.
Catalog Date: June 1, 2020

This course covers aspects of elementary geometry. Topics include geometric terms and definitions, properties of parallel lines and parallelograms, congruent and similar triangles, properties of triangles, right triangles, basic trigonometry, properties of circles, geometric constructions, areas, and volumes. The course also emphasizes problem-solving strategies, elementary logic, and writing proofs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compute lengths, areas, and volumes of geometric objects
- apply algebraic skills to geometric problems
- solve mathematical and logical problems which require geometric skills
- prove geometric theorems using direct proof structures
- construct geometric loci using a straightedge and compass
- select the appropriate trigonometric identity to find angles and sides of right triangles
- identify theorems that relate angles, arcs, intercepted arcs in circles and polygons
MATH 120 Intermediate Algebra

Units: 5
Hours: 90 hours LEC
Prerequisite: MATH 100 or 132 with a grade of "C" or better, or placement through the assessment process.
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This course extends and reviews the concepts of elementary algebra while incorporating applications and problem-solving skills. Reviewed and extended topics include linear and quadratic equations and their graphs, linear inequalities, systems of linear equations, exponents, factoring polynomials, rational expressions, and radicals. New topics include absolute value equations and inequalities, graphs of absolute value functions, equations of parallel and perpendicular lines, graphs of linear inequalities, graphs of systems of linear inequalities, functions, function notation, domain and range, inverse functions, exponential and logarithmic functions and their graphs, quadratic and polynomial functions and their graphs, an introduction to the complex number system, finding the real and complex solutions for a variety of equations, an introduction to conic sections, and nonlinear systems of equations and their graphs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- graph and solve linear inequalities.
- graph systems of linear inequalities.
- solve equations and inequalities containing absolute values.
- solve and graph linear equations and systems of linear equations.
- create linear equations that pass through a given point and are parallel to a given line.
- create linear equations that pass through a given point and are perpendicular to a given line.
- simplify polynomial expressions.
- choose and apply appropriate techniques to factor a variety of polynomials.
- state whether a mathematical relation is a function and find its domain and range.
- construct the inverse of a given function.
- sketch graphs of basic exponential functions.
- utilize the properties of exponents to simplify exponential expressions and to solve exponential equations.
- sketch graphs of basic logarithmic functions.
- utilize the properties of logarithms to simplify logarithmic expressions and to solve logarithmic equations.
- simplify expressions containing radicals, using complex numbers where appropriate.
- solve quadratic equations for real and complex solutions.
- solve equations containing radicals.
- simplify rational expressions and solve rational equations for real and complex solutions.
- sketch graphs of basic conic sections.
- solve and graph systems of non-linear equations.
- develop an appropriate equation or system of equations and use the resulting equation(s) to solve application problems.

MATH 125 Intermediate Algebra for Statistics and Liberal Arts

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 100 or 132 with a grade of "C" or better, or placement through the assessment process.
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020

This is an intermediate algebra course for non-STEM students. Topics include linear functions, models, systems, and graphs, as well as polynomial, exponential, logarithmic, and quadratic functions. The course emphasizes authentic applications and mathematical models using real-world data. This course does not meet the prerequisite for STEM-track math courses.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and solve various types of equations and systems of equations.
- factor a variety of polynomials.
- collect like terms in simplifying polynomial, exponential, and logarithmic functions.
- create graphs of lines, parabolas, exponential, and logarithmic functions.
- associate equations and information from tables or charts with their corresponding graphs.
- explain the concept of a mathematical function/relation and use functional notation appropriately to formulate solutions.
- construct and compare inverse functions with their original functions.
- explain what a logarithm is and solve logarithmic equations and applications.

MATH 129 Elementary and Intermediate Algebra

| Units: | 9 |
| Hours: | 162 hours LEC |
| Prerequisite: | MATH 32 or 42 with a grade of "C" or better, or placement through the assessment process. |
| General Education: | AA/AS Area II(b) |
| Catalog Date: | June 1, 2020 |

This course covers the concepts of elementary and intermediate algebra with an emphasis on problem solving. Topics include linear and quadratic equations, inequalities, factoring polynomials, rational expressions, exponents, radicals, graphing, and system of equations. Additional topics include graphs and their translations and reflections, functions, exponential and logarithmic functions, graphs of quadratic and polynomial functions, nonlinear systems of equations, polynomial and rational inequalities, and an introduction to conic sections.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize and solve various types of equations, inequalities, and systems of equations, and related applications.
- factor a variety of polynomials.
- collect like terms in simplifying polynomial, rational, exponential, and logarithmic expressions.
- sketch graphs of lines and conics and functions.
- associate equations and information from tables or charts with their corresponding graphs.
- recognize and explain the concept of a mathematical function/relation and use functional notation appropriately to formulate solutions.
- compare and contrast the properties of a mathematical function and its inverse function.
- analyze and solve applications related to linear, rational, and radical equations.
- define what a logarithm is and solve logarithmic equations and applications.
- define what an exponential function is and solve exponential equations and applications.

MATH 131 Combined Algebra - Part I

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | MATH 32 or 42 with a grade of "C" or better, or placement through the assessment process. |
| Advisory: | CISC 100, CISC 300, or CISC 305 with a grade of "C" or better, AND ENGRD 116 or ESLR 320 with a grade of "C" or better. |
| Catalog Date: | June 1, 2020 |

This course is the first of three parts covering combined algebra in a mastery-based learning environment. Problem-solving skills are emphasized throughout the course. Topics include linear equations and inequalities, integer exponents, polynomials, systems of linear equations, the rectangular coordinate system, graphs and equations of lines, and related applications. The course is offered through the Multimedia Math Learning Center (MMLC), using an independent study approach under the direction of an instructor. Computer-based instruction via the Internet is an integral part of the course. Students are required to purchase a workbook that is bundled with the on-line video and math content system. One set of materials can be used for multiple MMLC courses, if completed in consecutive semesters. The content in the course is organized into various modules. Each module must be completed at a mastery level before the student moves on to the next. Students will demonstrate mastery by successfully
completing assignments and then earning at least 80% on the module exam that is taken on-line in the MMLC. If necessary students will repeat the exam until mastery is achieved. All modules must be completed before the student takes the final exam, a comprehensive test on paper that is taken once and determines the majority of the course grade. Regular class attendance is required throughout the semester, including the mandatory orientation during the first class meeting. Students may also visit the MMLC during other hours of operation to receive tutoring, complete assignments, and take exams. This course may be completed as quickly as possible but no later than the end of the semester. Students who complete this course during the first half of the semester may sign up immediately for MATH 133. For the most updated information, please visit the MMLC web page on the ARC website. Completion of MATH 131 AND MATH 132 with grades of "C" or better meets the prerequisite for MATH 133, MATH 110, MATH 120, and MATH 125.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve linear equations and inequalities.
- graph linear equations and inequalities.
- apply appropriate solving techniques to solve systems of linear equations.
- demonstrate addition, subtraction, and multiplication of polynomials.
- apply properties of exponents.
- set up and solve application problems using appropriate algebraic methods.

MATH 132 Combined Algebra - Part II

This course is the second of three parts covering combined algebra in a mastery-based learning environment. Problem-solving skills are emphasized throughout the course. Topics include polynomial factorization, rational expressions and equations, radical expressions and equations, rational exponents, and related applications. The course is offered through the Multimedia Math Learning Center (MMLC), using an independent study approach under the direction of an instructor. Details about the program can be found in the catalog description for MATH 131. This course may be completed as quickly as possible but no later than the end of the semester. Students who complete this course during the first half of the semester may sign up immediately for MATH 133. For the most updated information, please visit the MMLC web page on the ARC website. Completion of MATH 131 AND MATH 132 with grades of "C" or better meets the prerequisite for MATH 133, MATH 110, MATH 120, and MATH 125.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply appropriate factoring techniques to polynomials.
- demonstrate factoring and algebraic techniques to solve quadratic equations.
- simplify rational expressions and solve equations with rational expressions.
- identify and solve variation applications.
- use roots, radicals, and exponents in simplifying expressions.
- solve equations with radical expressions.
- set up and solve application problems using appropriate algebraic methods.

This course is the third of three parts covering combined algebra in a mastery-based learning environment. Problem-solving skills are emphasized throughout the course. Topics include function evaluation and notation, inverse functions, solving quadratic equations, complex numbers, graphs of quadratic functions, exponential and logarithmic functions, properties of logarithms, conic sections, and related applications. The course is offered through the Multimedia Math Learning Center (MMLC), using an independent study approach under the direction of an instructor. Details about the program can be found in the catalog description for MATH 131. This course may be completed as quickly as possible but no later than the end of the semester. For the most updated information, please visit the MMLC web page on the ARC website. Completion of MATH 131, MATH 132, AND MATH 133 with grades of "C" or better is equivalent to the completion of MATH 120 or MATH 125 or MATH 129.
Upon completion of this course, the student will be able to:

- differentiate between a mathematical function and relation.
- evaluate functions using function notation.
- solve quadratic equations using a variety of algebraic methods.
- analyze and graph quadratic functions.
- analyze and graph exponential and logarithmic functions.
- solve exponential and logarithmic equations using algebraic properties.
- classify and construct graphs of conic sections.
- set up and solve application problems using appropriate algebraic methods.

MATH 145 Mathematics for the Trades

Units: 1.5
Hours: 23 hours LEC; 12 hours LAB
Prerequisite: None
Catalog Date: June 1, 2020

This course introduces mathematics applicable to technical programs of study. Topics include the use of mathematical operators on whole numbers, fractions, and decimals. Additional content includes fundamentals of algebra, basic geometry, and triangle trigonometry. This course is intended for those in Pre-Apprenticeship programs or other technical educational programs. Completion of this course does not fulfill any prerequisites for any course, including MATH courses, at American River College.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve application problems which require basic algebraic skills.
- evaluate problems using addition, subtraction, multiplication, and division of whole numbers.
- evaluate problems using addition, subtraction, multiplication, and division of fractions.
- evaluate problems using addition, subtraction, multiplication, and division of decimals.
- apply basic geometric formulas and properties to solve problems.
- apply and use trigonometric ratios of right triangles to solve application problems.
- apply dimensional analysis in performing technical calculations.
- use units and dimensions in measurement problems involving customary units and metric terms.
- demonstrate problem-solving techniques of applications using ratio and proportions.

MATH 294 Topics in Mathematics

Units: 0.5 - 4
Hours: 9 - 72 hours LEC
Prerequisite: None
Catalog Date: June 1, 2020

This course is designed to give students an opportunity to study topics in mathematics not included in current course offerings. Individualized topics are developed to foster, complement and build upon arithmetic, geometric and algebraic skills with an emphasis on critical thinking.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the vocabulary of a given mathematical topic.
- translate open-ended problems into the given mathematical topic.
- apply techniques (processes or algorithms) to manipulate, illustrate or compute the mathematical objects of the given mathematical topic.
- generalize the techniques (processes or algorithms) of the given mathematical topic to other settings.

MATH 295 Independent Studies in Mathematics

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

MATH 300 Introduction to Mathematical Ideas

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
Catalog Date: June 1, 2020

This course makes fundamental concepts and processes more meaningful for non-mathematics majors through a study of several mathematical topics, including the history of mathematics, numeration systems, logic, geometry, algebraic modeling, combinatorics, probability, statistics, sets, matrices, consumer mathematics, equations and inequalities, functions and graphs, problem solving, graph theory, voting and apportionment, and number theory. It is not recommended for students entering elementary school teaching or business administration majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss several branches of mathematics, including their history and uses beyond mathematics.
- identify appropriate procedures and solve exercises from selected mathematical topics.
- apply critical thinking skills to solve exercises in new settings.
- explain the process and results of several mathematical procedures.

MATH 310 Mathematical Discovery

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 110 with a grade of "C" or better or successful completion of high school geometry, AND MATH 120, 125, 129, or 133 with a "C" or better, or placement through the assessment process. Geometry is the only high school course that can be used to meet the prerequisite.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4
Catalog Date: June 1, 2020

This course explores mathematical patterns and relations as well as the formulation and proof of conjectures. Topics from number theory, probability and statistics, and geometry are investigated. This course is recommended for students interested in a degree in education.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explore and discover mathematical patterns and relations for a variety of problems from number theory, statistics, and geometry.
- formulate conjectures based on exploration in a variety of problems from number theory, geometry, and statistics.
- prove or find a counterexample for proposed conjectures.
- analyze statistical data.
MATH 311 Mathematical Concepts for Elementary School Teachers - Number Systems

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4
C-ID: C-ID MATH 120
Catalog Date: June 1, 2020

This course focuses on the development of quantitative reasoning skills through in-depth, integrated explorations of topics in mathematics, including history of real number systems and subsystems, basic number theory, sets and relations, logic, mathematical induction, and current national and state curriculum standards for mathematics. It emphasizes comprehension and critical analysis of mathematical concepts and applications of logical reasoning.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- summarize the historical development of numeration systems, including an examination of the base ten numeration system and an analysis of place value systems in general using exponent and place value notation
- perform calculations with place value systems
- evaluate the equivalence of numeric algorithms and explain the advantages and disadvantages of equivalent algorithms in different circumstances
- apply algorithms from number theory to determine divisibility in a variety of settings
- analyze least common multiples and greatest common divisors and their role in standard algorithms
- explain the concept of rational numbers, using both ratio and decimal representations; analyze the arithmetic algorithms for these two representations; and justify their equivalence
- analyze the structure and properties of whole, rational, and real number systems; define the concept of rational and irrational numbers, including their decimal representation; and illustrate the use of a number line representation
- develop and reinforce conceptual understanding of mathematical topics through the use of patterns, problem solving, communication, connections, modeling, reasoning, and representation
- apply basic tools such as sets, functions, and logic together with deductive or inductive reasoning to solve problems from an elementary to advanced level of math
- develop activities implementing curriculum standards

MATH 320 Symbolic Logic

Same As: PHIL 324
Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area II(b)
C-ID: C-ID PHIL 210
Catalog Date: June 1, 2020

This course is an introduction to symbolic logic. It includes a study of the logic of sentences (propositional logic) and the logic of classes and relations (predicate logic), together with an introduction to the nature of deductive systems. This course is not open to students who have completed PHIL 324.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- represent statements of English in well-formed sentences of predicate logic.
- prove the validity of statements and arguments in predicate logic using formal proof techniques.
- apply truth table or truth tree methods to determine semantic properties such as invalidity and consistency.
- construct interpretations that satisfy statements and sets of statements.
• distinguish classical first order logical systems from other logical systems.

MATH 325 Problem-Solving

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU
General Education: AA/AS Area ll(b); CSU Area B4
Catalog Date: June 1, 2020

This course focuses on the development of specific strategies and skills necessary to solve real-world and advanced mathematics problems. It emphasizes the development of logical, organizational, and divergent thinking, as well as written and oral communication skills, individual and group work, and clear presentation of mathematical work. Topics include drawing a diagram, eliminating possibilities, making a systematic list, looking for a pattern, guessing and checking, solving an easier related problem, working backwards, using algebraic representation, and applying the method of finite differences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify a collection of problem-solving strategies that would apply to a given mathematical situation, problem, or puzzle.
• generate suitable plans for solving a variety of mathematical problems.
• recognize similarities and differences in problems across various mathematical contexts.
• evaluate the appropriateness of a particular problem-solving strategy for a given mathematical problem.
• organize and present solutions to mathematics problems in a clear, coherent fashion in both written and oral forms.
• apply topics from mathematics, including functions, sequences, finite differences, counting methods, and factoring.

MATH 336 College Algebra

Units: 5
Hours: 90 hours LEC
Prerequisite: MATH 120, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area ll(b); CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 150
Catalog Date: June 1, 2020

This course reviews and covers topics beyond those studied in intermediate algebra, including functions, matrices, The Rational Root Theorem, partial fractions, sequences and series, mathematical induction, and The Binomial Theorem. It focuses on applications and graphing of polynomial, logarithmic, and exponential functions, as well as solving systems of linear and non-linear equations and inequalities. It also covers analytic geometry, including straight lines, conic sections, and curve sketching.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• apply the basic concepts of the complex and real number systems to solve equations and inequalities
• analyze various functions, including their properties, operations, difference quotients, and graphs
• solve equations involving various functions, including linear, polynomial, absolute value, rational, exponential, logarithmic, and radical
• apply the Remainder, Factor, Rational Root, and Binomial Theorems; Descartes' Rule of Signs; and the Fundamental Theorem of Algebra
• analyze the geometry of lines and conic sections
• solve word problems using methods from algebra and analytic geometry
• solve systems of linear and nonlinear equations and inequalities, including applications of matrices, determinants, and Cramer's Rule
• find the sum of a geometric series
• use arithmetic and geometric sequences to solve application problems
• use mathematical induction as a proof technique
• apply partial fraction decomposition techniques to rewrite a rational expression as a sum or difference of partial fractions

MATH 340 Calculus for Business and Economics

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC (UC credit limitation: MATH 340, 350 & 400 combined: maximum credit, one course)
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 140
Catalog Date: June 1, 2020

This course introduces how differential calculus and integral calculus are used in the fields of business, economics, social science, and biological science. Topics include finding limits, applying various rules to find derivatives of polynomial, rational, exponential, and logarithmic functions, as well as using derivatives to analyze marginal cost, revenue, and profit. It is not recommended for mathematics and physical science majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate and explore functions that represent quantities important in business, including profit, average cost, supply, and demand.

• compute limits graphically, numerically, and analytically.

• find derivatives of various functions, including polynomial, rational, exponential, and logarithmic functions using the Power, Product, Quotient, and Chain Rules.

• find the equation of the tangent line to a polynomial, rational, exponential, or logarithmic function, using derivatives.

• sketch the graph of functions using horizontal and vertical asymptotes, intercepts, first and second derivatives to determine intervals of increase and decrease, maximum and minimum values, intervals of concavity, and points of inflection.

• recognize and solve business applications that call for derivatives of single or multivariable functions including implicit differentiation, related rates, and optimization problems.

• find antiderivatives of various functions using substitution, integration by parts, and other methods.

• evaluate definite integrals using the Fundamental Theorem of Calculus.

• recognize and solve business applications that call for antiderivatives of single variable or multivariable functions.

MATH 342 Modern Business Mathematics

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
Catalog Date: June 1, 2020

This course is designed around applications of mathematics in economic and business contexts. Specific topics include functions and related business formulas, tables and graphs, finance (interest and exponential models in economics), rates of change, applications and optimization, and linear programming.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze formulas, tables, graphs, and data sets in order to form conclusions or make predictions.

• identify and graph linear, quadratic, rational, polynomial, exponential, and logarithmic functions.

• formulate and apply exponential growth or decay functions pertaining to business applications.

• calculate both present and future values involving simple interest, compound interest, and annuities.

• analyze applications of annuities involving loan amortization and sinking funds, applying necessary formulas.

• evaluate rates of change for a variety of elementary functions and apply them to marginal analysis.

• find and interpret optimum values related to business applications.
solve linear programming problems by the graphical approach.

MATH 355 Calculus for Biology and Medicine I

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 373 with a grade of "C" or better, or placement through the assessment process.
Advisory: MATH 370
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
Catalog Date: June 1, 2020

This course is an introduction to differential calculus and elementary differential equations via applications in biology and medicine. It covers limits, derivatives of polynomials, trigonometric and exponential functions, graphing, and applications of the derivative to biology and medicine. Topics include the Fundamental Theorem of Calculus and techniques of integration, including integral tables and numerical methods.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate polynomial, radical, trigonometric, logarithmic, and exponential functions.
- graph and analyze the curves of elementary functions.
- calculate maxima and minima of elementary functions.
- apply derivatives to applications in biology and medicine.
- integrate basic elementary functions.
- apply the Fundamental Theorem of Calculus to the evaluation of definite integrals.

MATH 356 Calculus for Biology and Medicine II

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 355 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
Catalog Date: June 1, 2020

This course covers matrix algebra with eigenvalues and eigenvectors, systems of linear equations, functions of several variables, partial derivatives, systems of differential equations, and applications to biology and medicine. This course is a superset of MATH 351, treating additional topics and covering them in more depth.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve systems of linear equations with matrix techniques.
- compute eigenvalues and eigenvectors for square matrices.
- solve systems of linear differential equations.
- apply systems of linear differential equations to problems in biology and medicine.
- compute partial derivatives of functions of several variables.
- compute double integrals.
- identify absolute and local extrema of functions of two variables.
- calculate equations of tangent planes to graphs of functions of two variables.

MATH 370 Pre-Calculus Mathematics

Units: 5
This course provides foundational mathematics and problems that require critical thinking in preparation for the calculus sequence for science, technology, engineering, and mathematics (STEM) majors. Topics include rigorous treatment of polynomial, rational, logarithmic, exponential, and trigonometric functions, including graphing and applications, as well as systems of linear and non-linear equations and inequalities. This course also covers analytic geometry, conic sections, vectors, parametric equations, and polar equations.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the basic concepts of the complex and real number systems to solve equations and inequalities
- perform operations of arithmetic and composition on various functions
- use analytic methods to determine roots, domain, and range, both with and without a graphing utility
- solve and apply equations involving linear, polynomial, rational, radical, exponential, logarithmic, trigonometric, and absolute value functions
- solve linear, nonlinear, and absolute value inequalities
- solve linear and nonlinear systems of equations and inequalities
- state and apply the Remainder Theorem, Factor Theorem, Rational Root Theorem, and the Fundamental Theorem of Algebra
- use analytic methods, including transformations, to graph polynomial, rational, exponential, logarithmic, and trigonometric functions, as well as relations without the aid of a graphing utility
- graph functions and relations in rectangular and polar coordinates
- recognize the relationship between functions and their inverses graphically and algebraically
- identify special triangles and their related angle and side measures
- evaluate the trigonometric function of an angle given in degree and radian measure
- graph the basic trigonometric functions and apply changes in period, phase, and amplitude to generate new graphs
- prove trigonometric identities
- state and appropriately apply the Law of Sines and the Law of Cosines to solve triangles in various applications
- analyze the geometry of lines and conic sections
- solve word problems using methods from algebra, analytical geometry, and trigonometry

### MATH 372 College Algebra for Calculus

**Units:** 4  
**Hours:** 90 hours LEC  
**Prerequisite:** MATH 373 with a grade of "C" or better, or placement through the assessment process.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area II(b); CSU Area B4; IGETC Area 2  
**Catalog Date:** June 1, 2020

This course provides a rigorous treatment of college-level algebra and its applications, with a particular focus on preparing students for the calculus sequence for Science, Technology, Engineering, and Mathematics (STEM) majors. Topics include polynomial, rational, radical, exponential, absolute value, and logarithmic functions, graphs, and equations; systems of equations; the theory of polynomial equations; analytic geometry including conics; and an introduction to sequences and series. Emphasis is given to analytical reasoning and problem-solving.

This course may be taken concurrently with MATH 373, Trigonometry for Calculus. Completion of both MATH 372 AND MATH 373 with grades of "C" or better meets the prerequisite for MATH 400, Calculus I.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and investigate properties of functions.
- synthesize connections between equations of functions and their graphs, including asymptotic behavior, intercepts, and vertices.
apply transformations to the graphs of functions, including quadratic, absolute value, radical, rational, logarithmic, and exponential functions.

recognize the relationship between a function and its inverse both graphically and algebraically.

solve equations and applications involving rational, linear, polynomial, radical, absolute value, exponential, and logarithmic equations.

solve systems of equations and inequalities.

apply techniques for determining zeros of polynomials and roots of equations.

apply functions and other algebraic techniques to model real world STEM applications.

analyze conics algebraically and graphically.

use formulas to find the sum of both finite and infinite series.

MATH 373 Trigonometry for Calculus

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 120, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Advisory: MATH 110; or completion of high school geometry
Transferable: CSU
General Education: AA/AS Area I(b); CSU Area B4
Catalog Date: June 1, 2020

This course provides a rigorous treatment of trigonometry and its applications, with a particular focus on preparing students for the calculus sequence for science, technology, engineering, and mathematics (STEM) majors. Emphasis is given to the study of trigonometric functions from numerical, graphical, and algebraic descriptions. Topics include functions and their graphs, transformations of functions, geometric properties of circles and triangles, degree and radian measurements of angles, right triangle trigonometry, reference angle trigonometry, unit circle trigonometry, graphs and transformations of trigonometric functions, verifying and applying trigonometric identities, inverse trigonometric functions, solving trigonometric equations, solving triangles using the Law of Sines and the Law of Cosines, vectors, the polar coordinate system, and roots and powers of complex numbers including De Moivre's Theorem. This course may be taken concurrently with MATH 372, College Algebra for Calculus. Completion of both MATH 372 AND MATH 373 with grades of "C" or better meets the prerequisite for MATH 400, Calculus I.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- convert between degree measure and radian measure of angles
- graph angles in the coordinate plane and identify the reference angle
- define the six trigonometric functions in terms of right triangles, the rectangular coordinate system, and the unit circle
- apply the right triangle definitions of the six trigonometric functions to solve right triangles
- evaluate trigonometric functions of angles in both degrees and radians
- evaluate trigonometric functions of special angles in both degrees and radians without a calculator
- recognize and create the graphs of the basic trigonometric functions
- graph transformations of the basic trigonometric functions by thinking about amplitude, period, phase shift, and vertical shift
- simplify expressions using trigonometric identities
- find function values by making use of identities
- prove a variety of identities
- evaluate and graph inverse trigonometric functions
- evaluate compositions of trigonometric and inverse trigonometric functions
- solve a variety of trigonometric equations
- use the Laws of Sines and Cosines to solve oblique triangles
- solve application problems that involve right and oblique triangles
- represent a vector both graphically and in ai+bj form
- perform basic vector operations: addition, subtraction, and scalar multiplication, as well as represent these operations graphically and algebraically
- calculate powers and roots of complex numbers using De Moivre's Theorem
convert between polar and rectangular coordinates and equations
graph polar equations

MATH 400 Calculus I

Units: 5
Hours: 90 hours LEC
Prerequisite: MATH 370 (Pre-Calculus Mathematics), OR MATH 372 (College Algebra for Calculus) AND MATH 373 (Trigonometry for Calculus) with grades of "C" or better, or placement through the assessment process.
Transferable: CSU; UC (UC credit limitation: MATH 340, 350 & 400 combined: maximum credit, one course)
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 210; Part of C-ID MATH 900S
Catalog Date: June 1, 2020

This course is an introduction to differential and integral calculus. It covers limits, continuity, differentiation and integration of algebraic, trigonometric, logarithmic, exponential, and other transcendental functions. Some applications are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate limits graphically, analytically, and by using L'Hopital's Rule.
- compute derivatives using the definition of derivative.
- apply differentiation rules to various types of functions.
- recognize and solve application problems that require use of derivatives.
- apply antiderivatives rules to various types of functions.
- compute definite integrals using the Fundamental Theorem of Calculus.
- recognize and solve application problems that require use of antiderivatives.

MATH 401 Calculus II

Units: 5
Hours: 90 hours LEC
Prerequisite: MATH 400 with a grade of "C" or better
Transferable: CSU; UC (UC credit limitation: MATH 351 & 401 combined: maximum credit, one course)
General Education: CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 220; Part of C-ID MATH 900S
Catalog Date: June 1, 2020

This course is a continuation of MATH 400. It builds on the methods of integration learned in MATH 400, and also covers improper integrals, sequences, infinite series, power series, polar coordinates, and parametric and polar equations. Many calculus applications are also included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and use properties of logarithmic, exponential, and inverse trigonometric functions to evaluate integrals.
- evaluate integrals using the techniques of integration by parts, trig substitution, partial fractions, and rationalizing substitutions.
- recognize and evaluate limits in indeterminate forms and improper integrals.
- determine the convergence or divergence of sequences and series, find power series representations for certain transcendental functions, and apply appropriate Calculus techniques to evaluate derivatives and integrals of power series.
- rewrite, analyze and graph equations in three forms: rectangular, parametric, and polar; using appropriate calculus techniques.
- use various integration techniques to solve applications, including area, volume, and arc length.
- solve separable differential equations to determine growth and decay functions.
MATH 402 Calculus III

This course is a continuation of MATH 401. It extends the concepts of limits, derivatives, and integrals to vector-valued functions and multivariate functions. The topics include multivariate functions, partial derivatives, extrema of multivariate functions, iterated integrals, development of vector calculus, line integrals, three-dimensional analytic geometry, and Green's, Gauss' (Divergence), and Stokes' Theorems. Many applications of calculus are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and graph two- and three-dimensional functions, vectors, vector-valued functions, and geometric surfaces and solids in order to solve for various geometric quantities and to represent motion in space.
- perform vector operations: addition, subtraction, scalar multiplication, dot products, and cross products.
- determine the equations of lines and planes in space, including tangent planes to a surface.
- find the limit of a multivariate function at a point and determine the differentiability of a multivariate function.
- evaluate partial derivatives and apply them to find local extrema and test for saddle points of multivariate functions.
- apply Lagrange multipliers to solve optimization problems with constraints.
- compute the arc length of a curve.
- set up and evaluate iterated integrals in rectangular, cylindrical, and spherical coordinates to calculate the area, volume, mass, and center of mass for a surface or solid.
- find the gradient of a scalar field and the divergence and curl of a vector field.
- set up and evaluate line and surface integrals using Green's, Gauss', and Stokes' Theorems and use results to solve application problems involving vector fields.

MATH 410 Introduction to Linear Algebra

This course provides an introduction to linear algebra including matrices, determinants, vector spaces, inner product spaces, linear transformations, and eigenvectors. It is intended for majors in mathematics, engineering, economics, science, and related fields. This course emphasizes cogent reasoning, mathematical proof, and problem solving.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- solve systems of linear equations by reducing an augmented matrix to row-echelon or reduced row-echelon form.
- determine whether a linear system is consistent or inconsistent; for consistent systems, characterize solutions as unique or infinitely many and write parametric solutions for systems with infinitely many solutions.
- evaluate matrix expressions using properties of matrix algebra.
- compute the transpose, determinant, adjoint, and inverse of matrices if defined for a given matrix.
- determine if a subset of a vector space is a vector space, and if so, prove that the subset is a subspace.
- determine if a given set of vectors is linearly independent, and if so, prove that this determination is correct.
determine if a given set of vectors is a basis for a vector space, and if so, prove that this determination is correct and find the basis and dimension of spaces such as those associated with matrices and linear transformations or the intersection of two subspaces.

calculate inner products, use properties of inner products to determine angle and orthogonality, and use an orthonormal basis to to find the projection of a vector on a space.

determine if a function that maps two vectors from a vector space to a scalar is an inner product on that vector space.

construct orthogonal and orthonormal bases using the Gram-Schmidt Process for a given basis.

construct the orthogonal diagonalization of a symmetric matrix.

determine the matrix for a linear transformation on Euclidean 2-space or 3-space, and for a given linear transformation, determine kernel, range, rank, nullity, and whether the linear transformation is an isomorphism.

compute the characteristic polynomial, eigenvalues, eigenvectors, and eigenspaces for both matrices and linear transformations.

use eigenvalues and eigenvectors in applications and diagonalization.

prove basic results in linear algebra using accepted proof-writing techniques including linear independence of vectors, properties of subspaces, linearity, injectivity, surjectivity, properties of eigenvectors, and properties of eigenvalues.

MATH 420 Differential Equations

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 401 with a grade of "C" or better
Advisory: MATH 402
Transferable: CSU; UC
General Education: CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 240; Part of C-ID MATH 910S
Catalog Date: June 1, 2020

This course is a study of ordinary differential equations, including linear equations, systems of equations, equations with variable coefficients, existence and uniqueness of solutions, series solutions, singular points, transform methods, boundary value problems, and applications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- formulate and analyze mathematical models using ordinary differential equations.
- categorize a given differential equation by type, order, and linearity.
- determine existence and uniqueness of solutions of an initial value problem for the first-order ordinary differential equation.
- solve elementary first-order and second-order ordinary differential equations (linear and nonlinear) using analytical methods.
- solve ordinary differential equations using power series.
- solve higher order ordinary differential equations with constant coefficients using analytical techniques.
- solve systems of linear ordinary differential equations with constant coefficients using analytical methods.
- assess situations in which a differential equation can be solved more efficiently with the Laplace Transform or the Inverse Laplace Transform and apply the transform to the equation when appropriate.

MATH 480 Honors Seminar in Mathematics

Units: 1
Hours: 18 hours LEC
Prerequisite: MATH 370 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

Honors Seminar in Mathematics is a one-unit intensive course. The course is taught in a seminar format where work is done independently in pursuit of solutions to challenging problems in mathematics in consultation with the instructor. Seminar participants will explore strategies and techniques for solving problems and present their solutions to the class.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- perform critical analysis and exploration when confronted with a nonstandard challenging mathematics problem by constructing models and developing cogent strategies to find a solution.
- demonstrate mastery and understanding of various mathematical topics from pre-calculus.
- present work in a seminar to a critical audience.
- explore and attack mathematics problems with depth and significance.

MATH 495 Independent Studies in Mathematics

| Units:     | 1 - 3 |
| Hours:     | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Mathematics Support (MATHS)

MATHS 45 Support for Business Mathematics

| Units:     | 2 |
| Hours:     | 36 hours LEC |
| Prerequisite: | None. |
| Corequisite: | MATH 340 or 342 |
| Catalog Date: | June 1, 2020 |

This course provides intensive instruction and practice in the core mathematical skills, competencies, and concepts necessary for success in Calculus for Business and Economics (MATH 340) and Modern Business Mathematics (MATH 342). Students taking this course must be concurrently enrolled in the corresponding section of MATH 340 or MATH 342. The content of this course is designed to provide arithmetic and algebraic support to students as they learn related concepts in their corequisite course. Topics and homework assignments are often connected to students’ assignments in the corequisite course. This course is graded Pass/No Pass.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply learning strategies to achieve success in Calculus for Business and Economics or Modern Business Mathematics.
- use real numbers to perform arithmetic operations in the evaluation of algebraic functions.
- simplify expressions and solve equations involving polynomial, rational, radical, exponential, and logarithmic functions.
- analyze the structure of multivariable equations utilizing graphs, tables, and algebraic methods.
- utilize algebraic techniques and problem solving strategies to solve application problems.

MATHS 72 Support for College Algebra for Calculus

| Units:     | 2 |
| Hours:     | 36 hours LEC |
| Prerequisite: | None. |
| Corequisite: | MATH 372 |
| Catalog Date: | June 1, 2020 |

This course provides intensive instruction and practice in the core mathematical skills, competencies, and concepts necessary for success in MATH 372 (College Algebra for Calculus). Students taking this course must be concurrently enrolled in the corresponding section of MATH 372. The content of this course is designed to provide arithmetic and algebraic support to students as they learn related concepts in their corequisite course. Topics and homework assignments are often connected to assignments in the corequisite course. This course is graded Pass/No Pass.
Upon completion of this course, the student will be able to:

- use mathematics support skills to solve equations and inequalities and manipulate expressions.
- use mathematics support skills to solve systems of equations and inequalities.
- use mathematics support skills to demonstrate a deep understanding of functions and their properties.
- apply learning strategies to achieve success in College Algebra for Calculus.

This course provides intensive instruction and practice in the core mathematical skills, competencies, and concepts necessary for success in Trigonometry for Calculus (MATH 373). Students taking this course must be concurrently enrolled in the corresponding section MATH 373. The course content is designed to provide arithmetic, algebra, geometry and learning skills support to students as they learn related concepts in their corequisite course. Topics and homework assignments are often connected to students’ assignments in the corequisite course. This course is graded Pass/No Pass.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- recall the methods from arithmetic necessary to be successful in Trigonometry for Calculus
- review the methods from algebra necessary to be successful in Trigonometry for Calculus
- demonstrate an understanding of the methods from geometry necessary to be successful in Trigonometry for Calculus
- apply learning strategies to achieve success in Trigonometry for Calculus

This course provides intensive instruction and practice in the core mathematical skills, competencies, and concepts necessary for success in MATH 300 (Introduction to Mathematical Ideas). Students taking this course must be concurrently enrolled in the corresponding section of MATH 300. The content of this course is designed to provide arithmetic and algebraic support to students as they learn related concepts in their corequisite course. Topics and homework assignments are often connected to assignments in the corequisite course. This course is graded Pass/No Pass.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply learning strategies to achieve success in Introduction to Mathematical Ideas (MATH 300).
- use support mathematics skills to identify appropriate procedures and solve exercises from selected mathematical topics.
- use support mathematics skills to apply critical thinking skills to solve exercises in new settings.
- use support mathematics skills to explain the process and results of several mathematical procedures.

**Statistics (STAT)***
STAT 10 Support for Introduction to Probability and Statistics

This course provides intensive instruction and practice in the core mathematical skills, competencies, and concepts necessary for success in STAT 300 (Introduction to Probability and Statistics). Students taking this course must be concurrently enrolled in the corresponding section of STAT 300. The content of this course is designed to help students develop effective learning strategies, and to provide arithmetic, algebraic, and geometric support as they learn concepts in the statistics course. Topics and homework assignments are often connected to assignments in the statistics course. Support using the required statistical technology package is also included. This course is graded Pass/No Pass.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply learning strategies to achieve success in statistics.
- use problem solving techniques in the context of data analysis and statistical methods.
- demonstrate relevant arithmetic, algebraic, and geometric skills in the context of statistics.
- apply mathematical and statistical skills in real-world settings and interpret the results in context.

STAT 105 Statway, Part I

This is the first semester of a two-semester course that introduces the concepts of probability and statistics with requisite arithmetic and algebraic topics integrated throughout. It is structured to serve students planning to transfer and continue studies in humanities or social sciences. Statistics topics emphasize data analysis and include methods for collecting data, graphical and numerical descriptive statistics, correlation, linear regression, simple exponential regression, and introduction to probability. Algebra topics include proportional relationships (including variation) with applications, expressions, linear equations and systems with applications, functions, quadratic and exponential equations, and linear and exponential models. Learning strategies for success with an emphasis on study skills, resource acquisition, and maintaining a positive perspective towards learning are also discussed and applied.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify methods of obtaining data and related advantages and disadvantages of each.
- organize and display data using appropriate tables and graphs.
- summarize a given data set using appropriate numerical summaries.
- analyze data by computing measures of central tendency, measures of dispersion, and measures of position.
- make meaningful and appropriate comparisons of distributions of data collected from two or more different groups.
- analyze bivariate data for linear trends using the least-squares regression model and the correlation coefficient.
- develop and apply the concept of numeracy to investigate and describe quantitative relationships and solve problems in a variety of contexts.
- solve problems that require the use of ratios, rates, proportions, and scaling.
- express real-world and quantitative situations with equations, inequalities, expressions, tables, verbal descriptions, symbols, and graphs.
- solve application problems involving equations, systems of equations, and inequalities and explain how results relate to the original context.
- apply functions as a way of modeling a correspondence between two variables in linear, quadratic, exponential, and logarithmic situations.
- solve problems involving exponential growth and decay in formulas, graphs, tables, and applications.
- calculate and interpret probabilities.
- estimate probabilities (including conditional probabilities) empirically and using simulation.
• use statistical software or graphing calculator to calculate single variable and analyze the results.
• apply learning strategies to achieve success in mathematics.

STAT 300 Introduction to Probability and Statistics

Units: 4
Hours: 72 hours LEC
Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.
Transferrable: CSU; UC (UC credit limitation: STAT 300, 305, and PSYC 330 combined: maximum credit, one course)
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 110
Catalog Date: June 1, 2020

This course is an introduction to probability and statistics. Topics include elementary principles and applications of descriptive statistics, counting principles, elementary probability principles, probability distributions, estimation of parameters, hypothesis testing, linear regression and correlation, and Analysis of Variance (ANOVA). Applications use data from various disciplines including business, social sciences, psychology, life and health sciences, and education. Statistical analysis using a computer statistics package or graphing calculator is required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify methods of obtaining data and related advantages and disadvantages of each.
• distinguish between types of data as well as their different scales of measurement and corresponding implications.
• organize and display data appropriately using tables and graphs.
• analyze data by computing measures of central tendency, measures of dispersion, and measures of position.
• analyze bivariate data for linear trends using the least-squares regression model and the correlation coefficient.
• distinguish between probability models appropriate to different chance events and calculate probability according to these methods.
• analyze both discrete and continuous probability distributions, including binomial probability, normal distributions, and t-distributions by examining and interpreting areas under the graph of a histogram or a normal curve.
• apply inferential statistical methods to compare population parameters, make predictions, and draw conclusions about hypotheses.
• select the appropriate hypothesis test, perform the necessary computations and comparisons for the test (including significance of p-values and type I/II errors), and explain the conclusion of the test.
• test the significance of correlation and make predictions based on linear trends using the least-squares regression model.
• create and interpret confidence interval estimates for population parameters based on appropriate probability models.
• analyze and interpret applications using data from various disciplines including business, social sciences, psychology, life sciences, health science, and education.

Student Learning Outcomes

STAT 305 Statway, Part II

Units: 6
Hours: 108 hours LEC
Prerequisite: STAT 105 with a grade of "C" or better
Transferrable: CSU; UC (UC credit limitation: STAT 300, 305, and PSYC 330 combined: maximum credit, one course; Maximum credit limitation: 4 semester/6 quarter units. STAT 105 and 305 must both be completed w/ "C" or better.)
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
Catalog Date: June 1, 2020

This is the second semester of a two-semester course that introduces the concepts of probability and statistics with requisite arithmetic and algebraic topics integrated throughout. It is structured to serve students planning to transfer and continue studies in humanities or social sciences. Statistics topics emphasize data analysis and include basic concepts of probability; confidence intervals; hypothesis tests for means, proportions, and variance; chi-squared tests; and ANOVA (Analysis of Variance). Algebra topics include proportional relationships (including variation) with applications, expressions, linear equations and systems with applications, functions, quadratic and exponential equations, and linear and exponential/logarithmic models. Learning strategies for success with an emphasis on study skills, resource acquisition, and maintaining a positive perspective towards learning are also discussed and applied. Both parts of Statway must be completed with a grade of "C" or better to receive credit for transfer-level statistics.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify methods of obtaining data and related advantages and disadvantages of each.
- distinguish between types of data as well as their different scales of measurement and corresponding implications.
- organize and display data appropriately using tables and graphs.
- analyze data by computing measures of central tendency, measures of dispersion, and measures of position.
- analyze bivariate data for linear trends using the least-squares regression model and the correlation coefficient.
- analyze both discrete and continuous probability distributions, including binomial probability and normal distribution, by examining and interpreting areas under the graph of a histogram or a normal curve.
- apply inferential statistical methods to compare population parameters, make predictions, and draw conclusions about hypothesis.
- apply the concept of numeracy to investigate and describe quantitative relationships and solve problems in a variety of contexts.
- select the appropriate hypothesis test, perform the necessary computations and comparisons for the test (including significance of p-values and type I/II errors), and explain the conclusion of the test.
- test the significance of correlation and make prediction based on linear trends using the least-squares regression model.
- create and interpret confidence interval estimates for population parameters based on appropriate probability models.
- analyze and interpret applications using data from various disciplines including business, social sciences, psychology, life sciences, health science, and education.
- use statistical software or graphing calculator to calculate single variable and two-variable statistics and analyze the results.
- make conjectures about the behavior of a function in a given context.
- apply learning strategies to achieve success in mathematics.

**STAT 480 Introduction to Probability and Statistics - Honors**

**Units:** 4  
**Hours:** 72 hours LEC  
**Prerequisite:** MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.  
**Advisory:** Placement into ENGWR 300.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I(b); CSU Area B4  
**C-ID:** C-ID MATH 110  
**Catalog Date:** June 1, 2020

This course is an introduction to probability and statistics designed for students in the honors program. Topics include elementary principles and applications of descriptive statistics, counting principles, elementary probability principles, probability distributions, estimation of parameters, hypothesis testing, linear regression and correlation, and Analysis of Variance (ANOVA). Applications use data from various disciplines including business, social sciences, psychology, life sciences, health science, and education. Statistical analysis using a computer statistics package is required. This honors section uses an intensive instructional methodology designed to challenge motivated students, and includes a capstone project. This course is not open to students who have completed STAT 300.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify methods of obtaining data and related advantages and disadvantages of each.
- distinguish between types of data as well as their different scales of measurement and corresponding implications.
- organize and display data appropriately using tables and graphs.
- analyze data by computing measures of central tendency, measures of dispersion, and measures of position.
- analyze bivariate data for linear trends using the least-squares regression model and the correlation coefficient.
- distinguish between probability models appropriate to different chance events and calculate probability according to these methods.
- analyze both discrete and continuous probability distributions, including binomial probability, normal distributions, and t-distributions by examining and interpreting areas under the graph of a histogram or a normal curve.
- apply inferential statistical methods to compare population parameters, make predictions, and draw conclusions about hypotheses.
- select the appropriate hypothesis test, perform the necessary computations and comparisons for the test (including significance of p-values and type I/II errors), and explain the conclusion of the test.
- test the significance of correlation and make predictions based on linear trends using the least-squares regression model.
- create and interpret confidence interval estimates for population parameters based on appropriate probability models.
- analyze and interpret applications using data from various disciplines including business, social sciences, psychology, life sciences, health science, and education.
- use statistical software or graphing calculator to calculate single-variable and two-variable statistics and analyze the results.

STAT 495 Independent Studies in Statistics

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Music | American River College

The Music Degree program is designed to provide students with a rich foundation and core curriculum for the development of the professional musician through music theory, history, performance, and production. Associate of Arts degrees are offered in both traditional and jazz studies with an emphasis in either instrumental or vocal performance.

The Commercial Music program is designed to serve as a springboard for a career in the music business. The program offers Associate of Arts degrees and certificates in audio recording or music business. Students study with industry professionals and learn in ARC’s state-of-the-art equipped recording studios and facilities. (/academics/arc-program-road-maps)

Division Dean  Angela Milano
Department Chairs  Dyne Eifertsen

Associate Degrees for Transfer

A.A.-T. in Music

Completion of this degree provides a foundation in music. Program offerings include course work in music theory and aural skills, applied composition, instrumental and vocal instruction, and ensemble performance.

The Associate in Arts in Music for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts in Music for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

Catalog Date: June 1, 2020

The Associate in Arts in Music for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze musical scores and compositions
- critique personal music performances and those of other musicians
- analyze and perform the elements of music (rhythm, melody, harmony, and form)
- create derivative or original music at a level appropriate to the area of specialization

### Career Information

Individuals with four-year degrees in music may be placed in the K-12 educational field as well as performers in professional music ensembles, directors for religious and community music groups, private music studio instructors, composers for media and publishing, music therapists, and administrative staff for music organizations. Advanced degrees in music may lead to careers as educators at the college or university level, performers, music directors, and music editors and journalists.

### Associate Degrees

#### A.A. in Commercial Music: Business

This degree explores the inner workings of the music industry in areas such as publishing, entertainment, distribution, and music law. Course work addresses industry-specific issues such as copyright, record contracts, publishing agreements, artist management, promotion, and marketing.

Catalog Date: June 1, 2020

Total Units: 33

The Commercial Music: Business Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- create a music business and marketing plan
- organize an artist tour, assemble a promotional packet, create a publicity campaign, and develop media, industry, and fan lists
- evaluate and implement recordkeeping systems for financial, employment, and tax records
- demonstrate a basic knowledge of music fundamentals, cross-cultural influences from diverse geographical regions, and song composition/arranging techniques
- analyze case problems and apply legal principles to interpret regulations, laws, and statutes related to the music industry
- compare the job descriptions and duties of attorneys, publishers, merchandisers, record company personnel, agents, managers, and producers
- assess record contract points, publisher-writer exclusive agreements, attorney-client contracts, as well as management and touring agreements

Career Information

Typical career options include booking agent, personal manager, business manager, concert promotion, studio owner/manager, music legal services, publicity writer/public relations, tour management, music retail, music publishing and distribution, and music licensing. The degree also prepares students for transfer to a four-year institution.

A.A. in Commercial Music: Recording

This degree provides students the core skills needed to enter a career in audio engineering. Foundational classes in the theory and art of recording are coupled with significant laboratory experiences in order to prepare the student for further study at a four-year institution or for an entry-level career position.

Catalog Date: June 1, 2020

The Commercial Music: Recording Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze the signal flow and understand the operation of electrical components found in a typical recording studio
- set up and employ the use of mixing consoles, multi-track recorders, Digital Audio Workstations (DAWs), and sound reinforcement systems
- select and set up outboard signal processing hardware and software plug-ins for audio enhancement
- explain music fundamentals, cross-cultural influences from diverse geographical regions, and song composition/arranging techniques
- create Musical Instrument Digital Interface (MIDI) sequencing and notation projects utilizing music keyboard input devices and various software packages
- design and equip a fully-functioning and acoustically-sound recording studio
- formulate and implement effective musical and technical recording session techniques

Career Information

Typical career paths include recording engineer, broadcast engineer, live sound reinforcement, post-production audio, sound effects editor, multi-media/internet audio, and audio/music education.

A.A. in Jazz Studies

The Jazz Studies degree provides a rigorous curriculum of jazz theory, history, performance groups, improvisation, piano, and individual applied instruction.

Catalog Date: June 1, 2020

The Jazz Studies Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze musical scores and compositions from the jazz idiom
- critique personal music performances and those of other musicians
- analyze and perform the basic elements of music (rhythm, melody, harmony, and form)
- create (compose and improvise) jazz music appropriate to the area of specialization
- compare and contrast the characteristics of various historical periods of jazz
- arrange compositions and assemble musicians for a performance

Career Information

This degree prepares a student for careers in performance (concert and studio), education, arranging/composing, and in the music industry. It also prepares students for transfer to a four-year institution.

A.A. in Music

The Music degree includes vocal and instrumental components, as well as courses in music, history, and theory. The general program is designed to provide students with a foundation in music theory and history. Performance opportunities in both vocal and instrumental music enhance a student's understanding and skill levels.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• analyze the signal flow and understand the operation of electrical components found in a typical recording studio
• set up and employ the use of mixing consoles, multi-track recorders, Digital Audio Workstations (DAWs), and sound reinforcement systems
• select and set up outboard signal processing hardware and software plug-ins for audio enhancement
• explain music fundamentals, cross-cultural influences from diverse geographical regions, and song composition/arranging techniques
• create Musical Instrument Digital Interface (MIDI) sequencing and notation projects utilizing music keyboard input devices and various software packages
• design and equip a fully-functioning and acoustically-sound recording studio
• formulate and implement effective musical and technical recording session techniques

Career Information
Typical career paths include recording engineer, broadcast engineer, live sound reinforcement, post-production audio, sound effects editor, multi-media/internet audio, and audio/music education.

**Digital Audio Production Certificate**

This certificate is intended to provide a practical foundation in audio production skills, provide suitable preparation to begin work in the recording and sound production industry, or to serve as a foundation for further study. It also enables people currently employed in the field of audio recording and other associated fields a means to upgrade and expand their skills.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- create, arrange, and notate music using standard Musical Instrument Digital Interface (MIDI) software
- produce audio recordings, music mixes, and audio post-production projects using a Digital Audio Workstation (DAW)
- evaluate various formats and platforms of digital audio recording hardware and software
- integrate outboard signal processing equipment and plug-ins into the audio signal path for audio enhancement
- formulate and implement effective recording session techniques
- analyze the fundamental process and sequence involved in the production of digital audio

**Career Information**

Typical career paths include post-production audio, broadcast engineer, sound effects editor, multimedia/Internet audio, professional recording studio engineer, and owner/engineer of a smaller demo production studio.

**Music Management and Promotion Certificate**

This certificate offers an overview of the core skills essential to enter the music industry in careers such as artist and music facility management, concert promotion, marketing, and publishing. It also assists those who wish to pursue a career as an independent artist, set up their own record label, or manage their own career.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- three years of experience in any band or choir

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- interpret a music score and play a melody with accompanying block chords (I, IV, V7)
- evaluate the playing of others
- recommend and demonstrate good practice habits
- formulate practice routines specific to an instrument
• create basic lesson plans for beginning instrumental or choral ensembles
• evaluate and critique performance ensembles
• select appropriate teaching materials for beginning band or choral ensembles
• compose for various instrumental and vocal combinations
• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity

Career Information
This certificate prepares a student for careers in music education, grades K-12, in paraprofessional roles such as a docent, tutor, or instructional assistant.

Studio Jazz/Pop Voice Instructor Certificate
This certificate offers an overview of the skills essential to enter the studio jazz/pop voice teaching profession as either a member of a retail studio or as an independent voice instructor, coach, consultant, or tutor.

Catalog Date: June 1, 2020

Total Units: 12 - 13

Student Learning Outcomes
Upon completion of this program, the student will be able to:

• diagnose poor vocal habits.
• formulate a pedagogical plan to resolve poor vocal habits.
• evaluate a voice student’s vocal skills.
• devise a pedagogical plan to develop or improve basic vocal skills.
• devise a pedagogical plan to develop or improve jazz/pop style.
• assess a vocalist’s ability to maintain independence in a harmonic setting.
• devise and implement a pedagogical plan to develop or improve a vocalist’s ability to maintain independence in a harmonic setting.
• demonstrate the basic skills necessary to sing with appropriate breath support and jazz/pop tone quality.
• demonstrate the basic skills necessary to expand the vocal range and flexibility.
Career Information

Typical career options include employment as owner or employee of a private voice studio and vocal consultant to local recording studios, bands, and music troupes.

Studio Music Instructor Certificate

This certificate focuses on studio music teaching and prepares students for employment as an owner or employee of a private or public music studio. It includes tutoring and coaching students/clients in basic instrumental/vocal technique with an emphasis on performance pedagogy.

Catalog Date: June 1, 2020

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- three years of experience in either band or choir.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity
- design and implement an effective practice routine
- interpret a music score and play a melody with accompanying block chords (I, IV, V7)
- compare and contrast music from different musical eras written for instrument/voice
- analyze music performance skills
- demonstrate the skills needed to play simultaneously with other pianists/musicians
- demonstrate individual musical skills commensurate with the Level I & II National Association of Schools of Music (NASM) guidelines
- analyze basic music form and structure
- construct scales, chords, harmonic progressions and rhythms

Career Information

This certificate offers an overview of the skills essential to enter the music teaching profession as either a member of a retail studio or as an independent music instructor, coach, consultant, or tutor.

Studio Voice Instructor Certificate

This certificate offers an overview of the skills essential to enter the studio voice teaching profession as either a member of a retail studio or as an independent voice instructor, coach, consultant, or tutor.

Catalog Date: June 1, 2020
Music - Fundamentals, History, and Literature (MUFHL)

MUFHL 300 Introduction to Music

This course is an introductory examination of how composers and songwriters apply the various elements of music to heighten the expressive impact of a composition. Aspects of melody, rhythm, harmony, tone, and structure are studied through focused listening of works from the Renaissance to contemporary styles of avant-garde and popular music. This course requires no previous musical study.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- diagnose poor vocal habits.
- formulate a pedagogical plan to resolve poor vocal habits.
- evaluate a voice student’s vocal skills.
- devise a pedagogical plan to develop or improve basic vocal skills.
- classify voice types based upon range.
- assess a vocalist’s ability to maintain independence in a harmonic setting.
- devise and implement a pedagogical plan to develop or improve a vocalist’s ability to maintain independence in a harmonic setting.
- demonstrate the basic skills necessary to sing with appropriate breath support and tone quality.
- demonstrate the basic skills necessary to expand the vocal range and flexibility.

Career Information

The Studio Voice Instructor will find employment as owner or employee of a private voice studio. This position will include coaching students/clients in basic vocal technique with an emphasis on traditional vocal pedagogy.

Music - Fundamentals, History, and Literature (MUFHL)
Upon completion of this course, the student will be able to:

- define terms regarding sound, music, notation and history of music
- compare and contrast various forms and styles of music
- critique musical performances utilizing course concepts
- compare styles and ensembles from the Renaissance to the present
- identify specific masterworks and composers

MUFHL 308 Introduction to Music: Rock & Roll

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This course examines social, political, cultural, and economic issues as they relate to the history of Rock & Roll music. It includes guided listening and video presentations to show the evolution of Rock from its roots to current stylistic trends. This course requires no previous musical study.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast substyles of the Rock & Roll genre.
- analyze the national and international historical events of past decades and the influence of these events on the Rock & Roll idiom.
- identify the influences of social, political, ethnic, and gender issues on Rock & Roll.
- describe the influence of world cultures (e.g. England, Africa, Ireland, Eastern India, South America, Mexico) on Rock & Roll.
- evaluate musical examples by applying techniques of analytical listening.

MUFHL 310 Survey of Music History and Literature (Greek Antiquity to 1750)

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MUFHL 321 and 400; AND eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This is part of a two-course series that offers a survey of the history of music, including the most significant composers and works from antiquity to 1750. It provides background on medieval, renaissance, and baroque music, thus increasing understanding of modern styles derived from these early periods of music.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess and describe various musical styles from Late Antiquity through the Baroque period.
- analyze and aurally identify significant music from the medieval era through the Baroque period.
- evaluate the contributions of important composers of various time periods.
- relate early music to its historical and social context.
- critique and differentiate musical instruments through the history of early music to 1750.
MUFHL 311 Survey of Music History and Literature (1750 to the present)

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MUFHL 321 and 400; Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This is part of a two-course series that offers a survey of the history of music including the most significant composers and works from the Classical period to the present. It provides background on Classical, Romantic, Impressionistic, and 20th century music, thus increasing understanding of modern styles derived from these periods of music.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate and describe the major eras and stylistic differences in music history since 1750.
- differentiate diverse musical examples by applying techniques of analytical listening skills.
- critique the various historical events that contributed to the evolution of music.
- compare various composers from the Classical, Romantic, and Modern periods of music.
- classify and catalogue instruments and instrumental music from 1750 to present.

MUFHL 315 Jazz History

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This course introduces the history of jazz. Topics include ethnicity, ethnocentrism, racism, ageism, class differences, and gender issues. Guided listening presentations show how African and early African American musical traditions have led to the development of various improvisational forms and styles including ragtime, swing, bebop, free jazz, fusion, and acid jazz.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast traditions of jazz music throughout the world
- recognize and distinguish between diverse musical styles and musical traditions
- identify and evaluate the historical and social content of the world's cultures through musical expression
- compare and contrast ethnicity, ethnocentrism, racism, ageism, class differences, and multicultural gender issues through the study of traditions of jazz music throughout the world
- evaluate stylistic and formulaic traits of jazz music through analytical listening

MUFHL 321 Basic Musicianship

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: No credit if taken after MUFHL 400)
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID MUS 110
Catalog Date: June 1, 2020

This course introduces the elements of music including scales, chords, aural skills, harmonic progression, form, notation, and composition. No previous musical study is required.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- play, sing, or identify major, minor, augmented, diminished, and dominant seventh chords.
- construct all key signatures in both treble and bass clef.
- construct all major scales in both treble and bass clef using accidentals.
- play, sing, or identify basic diatonic root motions.
- discuss the relationship between a major scale and its relative minor.
- demonstrate the intervallic relationship between the notes in the natural, harmonic, and melodic minor scales.

MUFHL 330 World Music

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C1; IGETC Area 3A  
Catalog Date: June 1, 2020

This course is an introduction to folk, dance, ceremonial, and popular music from around the world. Guided listening presentations show how traditional forms and styles have led to the urban, professional music popular in many countries today known as "World Beat." Concepts of ethnicity, ethnocentrism, racism, ageism, class differences, and gender issues are addressed. Music of the Americas, Africa, Asia, India, Europe, and the Middle East are compared. No previous musical experience is required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast traditions of music throughout the world.
- critique and differentiate diverse musical styles and musical instruments.
- describe the historical and social content of the world's cultures through musical expression.
- assess concepts of ethnicity, ethnocentrism, racism, ageism, class differences, and gender issues of various cultures through the study of traditions of music throughout the world.
- evaluate musical examples by applying techniques of analytical listening skills.

MUFHL 400 Music Theory and Musicianship I

Units: 4  
Hours: 54 hours LEC; 54 hours LAB  
Prerequisite: None.  
Advisory: MUIVI 340 (Beginning Piano) or knowledge of musical notation  
Transferable: CSU; UC  
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A  
C-ID: C-ID MUS 125; C-ID MUS 120  
Catalog Date: June 1, 2020

This course is a study of scales, intervals, triads, diatonic harmonies, part writing, rhythms, sight singing, ear training, dictation, history, and performance. Short creative assignments are included to provide experience in the application of materials learned in class. It includes analysis and composition and is required for music majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze major, minor, modal, chromatic, and whole tone scales and identify them when played or sung
- analyze components of melody and write a variety of melody types involving motive, phrase member, period, double period, and song forms
- distinguish voice ranges and instrumental ranges
- compose a four-part chorale primarily in root position and also in first- and second-inversions
- notate music for a variety of non-transposing and transposing instruments
- construct major, minor, augmented, and diminished triads and describe their function in tonal music
- assemble key signatures for all major and minor keys
- compose for various instrumental and vocal combinations

MUFHL 401 Music Theory and Musicianship II

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MUFHL 400 with a grade of "C" or better
Advisory: MUIVI 341
Transferable: CSU; UC
General Education: CSU Area C1; IGETC Area 3A
C-ID: C-ID MUS 130; C-ID MUS 135
Catalog Date: June 1, 2020

This course is a continuation of MUFHL 400. It provides a more in-depth study of scales, triads, diatonic harmonies, part writing, rhythms, sight singing, ear training, dictation, form, history, and performance. It also includes the study of harmonic progression, dominant and non-dominant seventh chords, modulation, secondary function chords, and binary and ternary form. It includes analysis and composition and is required for music majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and sing major, minor, modal, chromatic, and whole-tone scales and identify them when played or sung
- create and interpret components of melody through analysis and composition
- apply a variety of melody types to idiomatic chord progressions
- distinguish voice ranges and instrumental ranges of both non-transposing and transposing instruments
- compose music in four-part chorale style using primarily root-position chords with limited use of first- and second-inversion chords
- demonstrate an understanding of the use of functional harmony by analysis and composition of music which incorporates modulation to closely related key centers
- illustrate knowledge of the chord symbols used in classic Western music, American popular song, blues, boogie, and jazz
- write and analyze music in simple binary and ternary forms
- analyze and compose music which includes major-minor dominant seventh chords, leading-tone seventh chords, and non-dominant seventh chords
- analyze and compose music which utilizes secondary dominant chords and secondary leading-tone chords
- score music for various instrumental and vocal combinations

MUFHL 410 Music Theory and Musicianship III

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MUFHL 401 with a grade of "C" or better
Advisory: MUIVI 350
Transferable: CSU; UC
General Education: CSU Area C1; IGETC Area 3A
C-ID: C-ID MUS 140; C-ID MUS 145
Catalog Date: June 1, 2020

This course is a continuation of MUFHL 401. It includes the study of 16th- and 18th-century counterpoint, fugue, variation, altered chords, sonata allegro, and rondo forms, and late 19th-century writing techniques; practice in rhythmic, melodic, harmonic, and contrapuntal sight singing; ear training, and dictation. This course is required for music majors.

Student Learning Outcomes

 Upon completion of this course, the student will be able to:
analyze successful compositions from the 16th century through the 19th century

compose, critique, and discuss music using 16th- and 18th-century polyphony

recognize, analyze, and synthesize musical concepts through composition, performance, and arrangements of music using harmonic structures that include borrowed chords, Neapolitan 6th chords, and augmented 6th chords

evaluate, compose, and analyze music in theme and variation, sonata, and rondo forms

incorporate common practice period part-writing techniques and Roman numeral analysis symbols in music analysis and composition

recognize and analyze music using 9th, 11th, 13th, and altered dominant chords

demonstrate aural skills related to sight singing and musical dictation using increasingly complex melodies, rhythms, intervals, and harmonic structures

MUFHL 411 Music Theory and Musicianship IV

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MUFHL 410 with a grade of "C" or better
Advisory: MUIVI 351
Transferable: CSU; UC
General Education: CSU Area C1; IGETC Area 3A
C-ID: C-ID MUS 150; C-ID MUS 155
Catalog Date: June 1, 2020

This course is a continuation of MUFHL 410. It includes a more in-depth study of altered chords and late 19th- and 20th-century writing techniques including: 9th, 11th and 13th chords; altered dominants; chromatic harmony; dodecaphony; set theory; aleatory; minimalism; and analysis techniques. It includes practice in rhythmic, melodic, harmonic and contrapuntal sight-singing, ear-training and dictation. This course is required for music majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and evaluate compositions from the 19th to the 21st Century
- compose music using 19th-, 20th-, and 21st-century techniques such as whole-tone, synthetic, and pentatonic scales, 9th, 11th, and 13th chords, neomodality, pandiatonicism, polytonality, non-accidental rhythm, pitch sets, dodecaphony, and aleatory
- apply aural skills to dictate more complex melodies, harmonies and rhythms as implemented in 19th- through 21st-century compositions
- recognize, analyze, and employ harmonic circle progressions
- diagram and analyze dodecaphonic music using a pitch-set matrix

MUFHL 420 Beginning Jazz Theory

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Prerequisite: MUFHL 400 with a grade of "C" or better
Advisory: MUIVI 385 and 400
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course introduces the elements of jazz theory including harmonic, melodic, and form elements of the jazz idiom. It includes analysis and composition and is required for jazz majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- build the blues scale, the bebop scale, the diatonic modes, the pentatonic scale, all triads, 7th, 9th, 11th, and 13th chords, and II-V-I progressions in all keys
- apply chord symbol notation in written form
- apply melodic and harmonic techniques to an instrument or voice
- analyze melodic, harmonic, and formal elements of jazz compositions, including modulation, secondary function, modal interchange, and tonicization
- synthesize melodic, harmonic, and formal elements of jazz into original compositions
distinguish common formal, rhythmic, melodic, and harmonic techniques used in the jazz idiom through ear-training exercises

MUFHL 421 Advanced Jazz Theory

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Prerequisite: MUFHL 420 with a grade of "C" or better
Advisory: MUIVI 386 and 400
Transferable: CSU
Catalog Date: June 1, 2020

This course presents a continuation of jazz concepts presented in MUFHL 420. It emphasizes advanced elements of jazz theory including composition and arranging, as well as harmonic, melodic, and formal analysis in the jazz idiom.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply reharmonization concepts to jazz compositions
- apply melodic and harmonic techniques to an instrument
- analyze advanced melodic, harmonic, and formal elements of jazz compositions
- synthesize melodic, harmonic, and formal elements of jazz into original compositions and arrangements
- investigate advanced melodic and harmonic techniques used in the jazz idiom through ear-training exercises

MUFHL 495 Independent Studies in Music Fundamentals/History and Literature

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Music - Instrumental/Voice Instruction (MUIVI)

MUIVI 200 Introduction to Music Education

Units: 0.5
Hours: 9 hours LEC
Prerequisite: MUFHL 321 (Basic Musicianship) with a grade of "C" or better, or equivalent, AND three years of experience in either band or choir.
Catalog Date: June 1, 2020

This course is a survey of the resources used in the music education profession as a band or choir teacher. It introduces the basic skills necessary to teach beginning band or choir. Topics include creating lesson plans, classroom management, and basic conducting patterns.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- communicate with school administration to address scheduling, facility, and recruitment needs.
- create basic lesson plans for beginning instrumental or choral ensembles.
- select appropriate teaching materials for beginning band or choral ensembles.
- use basic instructional technology in the classroom.
• employ basic methods of classroom management.
• prepare basic methods of recruitment for ensembles.
• make basic repairs on band instruments.
• demonstrate basic conducting patterns.

MUIVI 298 Work Experience in Instrumental/Voice Instruction

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to the instrumental/voice instruction field with a cooperating site supervisor. Students are advised to consult with the Music Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the instrumental/voice instruction field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate mastery of specific job skills in the instrumental/voice instruction field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.

• make effective decisions, use workforce information, and manage his/her personal career plans.

• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

• develop effective leadership skills at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

• locate, organize, evaluate, and reference information at work.

• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

MUIVI 310 Voice Class I

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Traditional Voice Fundamentals (http://arc.losrios.edu/course-families#id_100049)
Prerequisite: MUFHL 321
Advisory: CSU; UC
Transferable: CSU Area C1
General Education: None.
Catalog Date: June 1, 2020

This course is the study of solo singing. Topics include basic vocal technique, breathing, mouth position, and solo repertoire.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• differentiate between and choose the mouth positions needed to create stylistically appropriate vowel timbre
- evaluate and demonstrate correct singing posture and breathing technique
- manage an even timbre throughout the vocal registers and across the passagio
- differentiate between syllabic and neumatic text setting and scalar and arpeggiated melodies
- perform songs in English, Italian, Spanish, and German
- demonstrate appropriate stage presence

This course is the continued study of solo singing. Topics include vocal technique, breathing, mouth positions and vowel formation, the International Phonetic Alphabet, and solo repertoire.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify melismatic text setting
- sing a melisma with consistent timbre, flexibility, and breath intensity
- diagnose basic vocal issues in others including incorrect register choice, improper placement, and poor breathing skills
- extend both the upper and lower range
- differentiate breath intensity from volume
- produce an intensified tone at all dynamic levels

This course is the continued study of solo singing. Topics include tone placement, register balance, vocal health, and solo repertoire.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the results of a laryngoscopy for evidence of poor vocal habits
- demonstrate healthy singing habits
- schedule and utilize efficient rehearsal habits
- choose a practice regimen consisting of various long tone, agility, and range exercises
- assemble a song set based upon range, tessitura, agility requirements, and phrase length

MUIVI 321 Voice Class IV
This course is the continued study of solo singing. Topics include bel canto technique, Italian and German solo repertoire, tone placement, register balance, and vocal health.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- integrate methods of non-verbal communication of tempi, tempo rubato, fermatas, and dynamics into a song performance
- demonstrate correct vocalization of Italian consonant combinations
- research historical, cultural, and stylistic considerations for song interpretation
- differentiate between portamento, sforzando, trill, and turn

### MUIVI 340 Beginning Piano

Units: 2  
Hours: 36 hours LEC; 18 hours LAB  
Course Family: [Traditional Piano Fundamentals](http://arc.losrios.edu/course-families#id_100051)  
Prerequisite: None.  
Transferable: CSU; UC  
General Education: CSU Area C1  
Catalog Date: June 1, 2020

This course introduces piano/keyboard skills. Beginning concepts of music theory, music notation, and harmonizing simple melodies are presented. This course is open to all students and is recommended for music majors who do not demonstrate equivalent piano proficiency.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and define a three-octave range of notes and the notation used to express them
- demonstrate coordination of the hands playing together
- interpret a music score and play a melody with accompanying block chords (I, IV, V7)
- demonstrate the skills needed to play simultaneously with other pianists/musicians
- analyze a simple melody and transpose to another key
- sightread an eight-measure composition with a single line in each hand
- evaluate the playing of others
- recommend and demonstrate good practice habits

### MUIVI 341 Piano II

Units: 2  
Hours: 36 hours LEC; 18 hours LAB  
Course Family: [Traditional Piano Fundamentals](http://arc.losrios.edu/course-families#id_100051)  
Prerequisite: MUIVI 340 with a grade of "C" or better  
Transferable: CSU; UC  
Catalog Date: June 1, 2020

This continuation of MUIVI 340 is designed for students interested in piano as a medium of expression and enjoyment, as well as for prospective preschool, kindergarten and elementary-school teachers. This course covers major and minor scales and chords, bass styles, chromatic scales, and literature with greater rhythmic and harmonic complexity. It is the second semester of a four-semester sequence for music majors who need to demonstrate piano proficiency.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and define a five-octave range of notes and the notation used to express them
- demonstrate coordination of the hands playing together
- interpret a music score and play a melody with varying accompaniment styles using I, IV, V7 chords and their minor variants
- demonstrate the skills needed to play in an ensemble setting
- sightread an eight-measure composition with a single line in each hand or a melody with accompanying chords
- evaluate the playing of others
- cite and demonstrate good practice habits

MUIVI 350 Intermediate Piano

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Traditional Piano Technique and Repertoire (http://arc.losrios.edu/course-families#id_100054)
Prerequisite: MUIVI 341 with a grade of "C" or better; or the ability to play major scales (one octave, hands together C, G, F, D, A, and E-major) and the ability to play a simple melody with basic chordal accompaniment in a major or minor key.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course expands on the foundations of piano playing studied in MUIVI 341 and includes further study of the harmonization of melodies, major and minor scales, and repertoire.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform numerous repertoire selections representing several style periods
- analyze and improvise simple melodies with chordal harmonizations
- identify, define, and play major and minor triads as well as their inversions
- interpret a music score and play a melody with varying accompaniment styles (i.e. Latin, Alberti Bass, Waltz, Boogie)
- identify and play major and minor scales (all major keys and harmonic minor in A, E, B, F, D, and G, 3 octaves, hands together)
- play in an ensemble setting
- transpose a simple melody in all keys
- sight read an eight-measure composition with a single line in each hand or a melody with accompanying chords
- perform pieces written in simple 4-part harmony (chorales, hymns)
- evaluate the piano playing of others
- employ good practice habits

MUIVI 351 Piano IV

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Prerequisite: MUIVI 350 with a grade of "C" or better, or the ability to play all major scales, hands together, two octaves and harmonic minor in A, E, B, F, D, and G.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is the second year of piano study. It is a continuation of MUIVI 350. The course includes the further development of insight into music as an artistic means of communication through the study of scales, chords, melodic harmonization and repertoire. The course also serves to develop the fundamental skills for the non-keyboard music major.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Perform numerous repertoire selections
- Analyze and improvise simple melodies with choral harmonizations
- Identify, define and play major and minor triads and their inversions
- Identify and play major and minor scales and arpeggios for two octaves
- Demonstrate transposition of a simple melody in all keys
- Demonstrate simple melodies with different styles of accompaniment (i.e., Latin, Alberti Bass, Waltz, Boogie)
- Employ sight reading skills
- Evaluate the playing of other pianists

MUIVI 370 Beginning Guitar

Upon completion of this course, the student will be able to:

- Incorporate and identify a 3-octave range of notes and the notation used to express them
- Demonstrate hand coordination while playing the guitar
- Analyze notated music at a beginning level
- Critique the guitar playing of others
- Structure good practice habits
- Demonstrate the basic skills of guitar playing

MUIVI 371 Intermediate Guitar

Upon completion of this course, the student will be able to:

- Analyze music for the guitar from a variety of historical eras
- Read melodic lines with conventional notation and guitar tablature
- Express a theoretical knowledge of guitar playing

This course is a continuation of MUIVI 370 with emphasis on increased skills in note reading, improvisation, accompanying, and development of personal style.
incorporate creative musical expression
demonstrate increased dexterity in strumming and chording
demonstrate finger picking abilities

MUIVI 385 Jazz Styles and Improvisation

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Jazz Instrumental (http://arc.losrios.edu/course-families#id_100056)
Prerequisite: None.
Enrollment Limitation: Ability to play a melodic instrument or ability to sight sing; ability to read music in the treble or bass clef.
Advisory: MUFHL 400
Transferable: CSU; UC
General Education: CSU Area C1
Catalog Date: June 1, 2020

This course is the study of instrumental and vocal applications of jazz improvisation. It includes analysis and composition and is required for jazz studies majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- build the blues scale, the bebop scale, the diatonic modes, the pentatonic scale, all triads, 7th, 9th, 11th, and 13th chords, and ii-V-I progressions in all keys
- identify and apply call and response, melodic embellishment, and neighbor tones in a jazz improvisation
- develop a motive in an improvised melody
- compose a jazz melody incorporating techniques such as the blues scale, the bebop scale, the diatonic modes, the pentatonic scale, call and response, melodic embellishment, and neighbor tones
- create a spontaneous jazz improvisation incorporating techniques such as the blues scale, the bebop scale, the diatonic modes, the pentatonic scale, 7th, 9th, 11th, and 13th chords, and ii-V-I progression, call and response, melodic embellishment, and neighbor tones

MUIVI 386 Jazz Styles and Improvisation

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Jazz Instrumental (http://arc.losrios.edu/course-families#id_100056)
Prerequisite: MUIVI 385 with a grade of "C" or better
Advisory: MUFHL 420
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is the study of advanced instrumental and vocal applications of jazz improvisation. It includes analysis and is a continuation of the concepts covered in MUIVI 385.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- build idiomatic jazz vocabulary on the Blues, Standard, Modal, Post-bop, ballad, and Funk compositions
- identify and apply idiomatic phrases such as ii-V-I, diatonic patterns, ballad patterns, sequences, neighboring tones, and Blues devices in a chord progression
- compose a jazz melody incorporating the techniques listed above
- create a spontaneous jazz improvisation incorporating the techniques listed above

MUIVI 390 Jazz and Popular Vocal Styles and Improvisation I

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Jazz Voice (http://arc.losrios.edu/course-families#id_100057)
Prerequisite: MUIVI 310 with a grade of "C" or better
This course is a study of popular and jazz solo singing styles and improvisation. Topics include jazz and pop styles, microphone technique, basic improvisation, and vocal technique.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- critique stylistic articulations, tone, and vibrato type relevant to specific jazz and popular vocal styles
- express appropriate stylistic articulations, tone, and vibrato type relevant to specific jazz and popular vocal styles
- analyze and evaluate various stylistic interpretations of lyrics
- express, through vocal nuance, an emotional response to lyrics
- create a comprehensive set of songs either within a specific style or including several styles
- build and sing the blues scale, the bebop scale, the diatonic modes, the pentatonic scale, triads, 7th, 9th, 11th and 13th chords, and II-V-I progressions in several keys
- create a spontaneous jazz improvisation incorporating techniques such as the blues, the bebop scale, the diatonic modes, the pentatonic scale, triads, 7th, 9th, 11th and 13th chords, and II-V-I progressions in several keys

This course is the continued study of popular and jazz singing styles and improvisation. Topics include rhythm section rehearsal techniques for singers, funk styles, pentatonic scales, Lydian dominant improvisation, and transposition.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze stylistic articulations, tone, and vibrato relevant to Latin jazz
- build the Lydian dominant scale and the pentatonic scale and utilize them in a Latin jazz ballad
- transpose a song several times then choose the appropriate key and write a lead sheet
- develop the skills to rehearse the jazz rhythm section
- create a comprehensive set of songs including several styles of jazz (blues, swing, bebop, Latin, funk) and popular music

This course is an introduction to the fundamentals of jazz piano. Topics include blues, left-hand voicings, two-hand voicings, and scale theory applications to the keyboard.

**Student Learning Outcomes**
Upon completion of this course, the student will be able to:

- build triads, seventh chords, shell voicings, and rootless voicings at the keyboard
- apply chord symbol notation to root position chords, shell voicings, four-note voicings for the left hand, and four-note voicings for both hands
- apply the blues scale and diatonic modes to chord symbols at the keyboard
- produce a simple jazz piano arrangement from a lead sheet
- evaluate the efforts of others to solve musical and technical problems

MUIVI 401 Intermediate Jazz Piano

Units: 2
Hours: 36 hours LEC; 18 hours LAB
Course Family: Jazz Piano
Prerequisite: MUIVI 400 with a grade of "C" or better
Advisory: MUFHL 420
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course covers intermediate studies in jazz piano. Topics include arranging jazz harmonies at the keyboard using techniques such as three- and four-note rootless voicings, five-note mixed-modal voicings, "Drop 2," Red Garland voicings, and the "So What" chord.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- build three- and four-note rootless voicings for the left hand at the keyboard
- apply chord symbol notation to "Drop 2," Red Garland style, five-note mixed-modal, and "So What" chord voicings for both hands at the keyboard
- produce an intermediate jazz piano arrangement from a lead sheet
- evaluate the efforts of others to solve musical and technical problems

MUIVI 411 Applied Music-Group

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Corequisite: Enrolled in one of the following: MUIVI 340, MUFHL 321, 400, 401, 410, 411, 420, or 421; AND Enrolled in one of the following: MUP 310, 320, 323, 330, 340, 350, 360, or 400.
Enrollment Limitation: Performance assessment
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course focuses on the development of individual performance skills and repertoire. It includes instrumental, composition, or vocal instruction in a group setting. It also includes solo performance, recital participation, masterclasses, and a final juried performance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice

MUIVI 420 Applied Music
This is the first course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire. It includes one-on-one instrumental, composition, or vocal instruction for a total of seven hours per semester. It also includes six hours per semester of solo performance, recital participation, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all traditional performance and jazz music majors. Students must be concurrently enrolled in a large performance ensemble appropriate for their concentration. Students should also be enrolled in or have completed MUFHL 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level I National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice

MUIVI 421 Applied Music II

This is the second course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire. It includes one-on-one or small-group instrumental, composition, or vocal instruction for a total of seven hours per semester. It also includes six hours per semester of solo performance, recital participation, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all traditional performance and jazz music majors. Students must be concurrently enrolled in a large performance ensemble appropriate for their concentration. Students should also be enrolled in or have completed MUFHL 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level II National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice

MUIVI 422 Applied Music III

This is the third course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire. It includes one-on-one or small-group instrumental, composition, or vocal instruction for a total of seven hours per semester. It also includes six hours per semester of solo performance, recital participation, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all traditional performance and jazz music majors. Students must be concurrently enrolled in a large performance ensemble appropriate for their concentration. Students should also be enrolled in or have completed MUFHL 400.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level III National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice
This is the third course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire. It includes one-on-one or small group instrumental, composition, or vocal instruction for a total of seven hours per semester. It also includes seven hours per semester of solo performance, recital attendance, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all traditional performance and composition majors. Students must be concurrently enrolled in a traditional large performance ensemble appropriate to their concentration. Students should also be enrolled in or have completed music theory course MUFHL 410.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level III National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice

MUIVI 423 Applied Music IV

Units: 1
Hours: 7 hours LEC; 33 hours LAB
Course Family: Traditional Applied Music Technique and Repertoire (http://arc.losrios.edu/course-families#id_100062)
Prerequisite: MUIVI 422 with a grade of "C" or better
Corequisite: MUFHL 411, AND one of the following: MUP 310, 330, 340, 350, or 360
Enrollment Limitation: Audition
Transferable: CSU; UC
C-ID: C-ID MUS 160
Catalog Date: June 1, 2020

This is the final course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire. It includes one-on-one instrumental, composition, or vocal instruction for a total of seven hours per semester. It also includes seven hours per semester of solo performance, recital attendance, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all traditional performance majors. Students must be concurrently enrolled in a large performance ensemble appropriate for their concentration. Students should also be enrolled in or have completed music theory course MUFHL 411.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level IV National Association of Schools of Music (NASM) guidelines
- interpret solo repertoire for an instrument/voice
- design and implement an effective practice routine
- analyze musical performance skills
- compare and contrast music from different musical eras written for an instrument/voice

MUIVI 425 Applied Music - Jazz I

Units: 1
Hours: 7 hours LEC; 33 hours LAB
Course Family: Jazz Applied Music (http://arc.losrios.edu/course-families#id_100063)
Prerequisite: MUIVI 421 with a grade of "C" or better
Corequisite: MUFHL 410 or 420; AND MUP 320 or 400.
Enrollment Limitation: Audition
Transferable: CSU; UC
C-ID: C-ID MUS 160
Catalog Date: June 1, 2020

This is the third course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire in the jazz idiom. It
includes one-on-one instrumental or vocal instruction for a total of seven hours per semester. It also includes seven hours per semester of solo performance, recital attendance, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all jazz studies majors. Students must be concurrently enrolled in a large performance jazz ensemble appropriate for their concentration. Students should also be enrolled in or have completed either music theory course MUFHL 410 or MUFHL 420.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level III National Association of Schools of Music (NASM) guidelines
- interpret solo jazz repertoire for an instrument/voice
- design and implement an effective practice routine
- evaluate musical performance skills
- compare and contrast jazz music from different stylistic periods for an instrument/voice
- incorporate improvisation concepts into a jazz ensemble

MUIVI 426 Applied Music - Jazz II

This is the final course in a four-part series which focuses on the development of individual performance skills and solo and ensemble repertoire in the jazz idiom. It includes one-on-one instrumental or vocal instruction for a total of seven hours per semester. It also includes seven hours per semester of solo performance, recital attendance, masterclasses, and a final juried performance. It also includes one-and-one-half hours documented practice time per week. This course is required for all jazz performance majors. Students must be concurrently enrolled in a large performance jazz ensemble appropriate for their concentration. Students should also be enrolled in or have completed music theory course MUFHL 410 or MUFHL 420.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate individual musical skills commensurate with the Level IV National Association of Schools of Music (NASM) guidelines
- interpret solo jazz repertoire for an instrument/voice
- design and implement an effective practice routine
- evaluate musical performance skills
- compare and contrast jazz music from different stylistic periods for an instrument/voice
- incorporate improvisation concepts into a jazz ensemble

MUIVI 495 Independent Studies in Music Instrumental/Voice Instruction

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
MUIVI 498 Work Experience in Instrumental/Voice Instruction

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the instrumental/voice instruction field. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies. During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit.

First-time participants are also required to attend a weekly orientation, the first class meeting, a mid-semester meeting and a final meeting. Returning participants are required to attend the first class meeting, a mid-semester meeting, and a final meeting and may meet individually with the instructor as needed to complete a work site observation and all program forms, receive updates, and assignments.

Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the instrumental/voice instruction field related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- develop effective leadership skills at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and multimedia formats in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

Music - Performance (MUP)

MUP 310 Orchestra

This course is the study and performance of orchestral repertoire. It is open to those who play an orchestral instrument. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform orchestral repertoire in various styles
- compare musical and aesthetic values of a wide variety of orchestral styles
demonstrate the interpersonal skills necessary to work within an ensemble
formulate practice routines specific to an instrument
evaluate and critique performance ensembles

MUP 311 Advanced Orchestra

Units: 1 - 2
Hours: 9 - 18 hours LEC; 27 - 54 hours LAB
Prerequisite: MUP 310 with a grade of "C" or better; or an audition.
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is the continuing study and performance of orchestral repertoire. Additional topics include experience in conducting, rehearsal techniques, and section leading. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- prepare and perform advanced orchestral repertoire in various styles
- analyze rehearsal techniques and apply those techniques to new sections of orchestral music
- demonstrate the interpersonal skills necessary to work within and lead an ensemble in rehearsal
- formulate and maintain practice routines specific to an instrument
- evaluate and critique performance ensembles

MUP 320 Jazz Band

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Ability to play at least one instrument commonly used in jazz ensemble; audition required.
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is the study and performance of jazz band repertoire encompassing a wide variety of music in the jazz style. Public performances and field trips are required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- prepare and perform jazz band repertoire in various jazz styles
- compare and contrast jazz band performance styles
- critique musicianship
- perform beginning analysis of jazz band repertoire
- evaluate and critique other performance ensembles
- incorporate jazz styles into performance practice

MUP 321 Advanced Jazz Band

Units: 1 - 2
Hours: 9 - 18 hours LEC; 27 - 54 hours LAB
Prerequisite: Completion of 8 units of MUP 320 with a grade of "C" or better
This course is the continuing study and performance of jazz band repertoire and techniques. Additional topics include improvising, conducting, rehearsal technique, and section leading. Public performances, recording sessions, and field trips may be required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze advanced jazz band repertoire
- organize and manage sectionals
- compare and contrast jazz band performance styles
- critique musicianship
- evaluate and critique other performance ensembles

MUP 323 Latin Jazz Ensemble

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Ability to play at least one instrument commonly used in jazz ensemble; audition required.
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is the study and performance of Latin jazz repertoire encompassing a wide variety of Latin American and Afro-Cuban jazz styles. Public performance and field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform Latin jazz repertoire in various styles
- compare and contrast Latin jazz performance styles
- critique musicianship
- analyze beginning Latin jazz repertoire
- evaluate and critique other performance ensembles
- incorporate Latin jazz into performance practice

MUP 324 Advanced Latin Jazz Ensemble

Units: 1 - 2
Hours: 9 - 18 hours LEC; 27 - 54 hours LAB
Prerequisite: Completion of 8 units of MUP 323 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is the further study and performance of Latin jazz repertoire encompassing a wide variety of Latin American and Afro-Cuban jazz styles. Public performance and field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze advanced Latin jazz repertoire
- organize and manage sectionals
• compare and contrast Latin jazz performance styles
• critique musicianship
• evaluate and critique other performance ensembles

MUP 327 Chamber Jazz Ensemble

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Ability to play at least one instrument commonly found in a jazz ensemble; audition required.
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course examines and evaluates techniques of chamber jazz group organization, jazz arranging, and jazz improvisation. Chamber jazz recording techniques are analyzed focusing on studio etiquette, microphone setup, headphone mix, and playback critique. Public performance and field trips are required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare jazz styles.
• compare and contrast rehearsal and performance components of small and large jazz ensembles.
• evaluate technical skills through ensemble practice and performance.
• construct and evaluate jazz improvisations.
• create and prepare a program of songs for performance.
• demonstrate professional demeanor in a chamber jazz ensemble.

MUP 328 Advanced Chamber Jazz Ensemble

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: Completion of 8 units of MUP 327 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course examines and evaluates advanced techniques of chamber jazz ensemble organization. Ensemble members select music, formulate rehearsal strategy, conduct rehearsals, and set up and evaluate group performances. Public performances and field trips are required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• examine modern jazz styles
• organize and assemble a contemporary small jazz ensemble
• evaluate advanced technical skills through ensemble practice and performance
• construct and evaluate jazz improvisations on advanced chord progressions
• arrange contemporary jazz songs for a small jazz ensemble
• create and prepare a program of songs for performance
• apply conducting and rehearsal techniques
MUP 330 Concert Band

This course is the study and performance of concert band repertoire. It is open to those who play a concert band instrument. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform concert band repertoire in various styles with artistic expression
- apply basic techniques (tone, projection, support, posture) and formulate specific practice routines
- identify balance, intonation, and tempo within the section and across the ensemble to produce an artistic performance
- evaluate and critique music performance ensembles
- demonstrate the interpersonal skills necessary to work within an ensemble

MUP 331 Advanced Concert Band

This course is the continuing study and performance of concert band literature. Additional topics include conducting, rehearsal techniques, and section leading. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform advanced concert band repertoire in various styles with artistic expression
- analyze rehearsal techniques and apply those techniques to new sections of concert band music
- organize and manage sectionals
- critique musicianship, including balance, intonation, and tempo within the section and across the ensemble
- evaluate and critique performance ensembles
- analyze and/or demonstrate basic conducting patterns and gestures
- demonstrate the interpersonal skills necessary to learn and work within an ensemble in rehearsal

MUP 340 Symphonic Band

This course is the study and performance of symphonic band repertoire. It is open to those who play a symphonic band instrument. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform symphonic band repertoire in various styles with artistic expression
- analyze and critique symphonic performance ensembles
- analyze and/or demonstrate basic conducting patterns and gestures
- demonstrate the interpersonal skills necessary to learn and work within an ensemble in rehearsal
This course is the study and performance of symphonic band repertoire. It is open to those who play a symphonic band instrument. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform symphonic band repertoire in various styles with artistic expression
- formulate specific practice routines and apply basic techniques (tone, projection, support, posture)
- critique musicianship, including balance, intonation, and tempo within the section and across the ensemble to produce an artistic performance
- evaluate and critique performance ensembles
- demonstrate the interpersonal skills necessary to work within an ensemble

MUP 341 Advanced Symphonic Band

Units: 1 - 2  
Hours: 9 - 18 hours LEC; 27 - 54 hours LAB  
Prerequisite: MUP 340 (Symphonic Band) with a grade of "C" or better; or audition.  
Transferable: CSU; UC  
C-ID: C-ID MUS 180  
Catalog Date: June 1, 2020

This course is the continuing study and performance of advanced symphonic band literature. Additional topics include conducting, rehearsal techniques, and section leading. Public performances and/or field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform advanced symphonic band repertoire in various styles with artistic expression
- analyze rehearsal techniques and apply those techniques to new sections of symphonic band music
- critique musicianship including balance, intonation, and tempo within the section and across the ensemble
- organize and manage sectionals
- evaluate and critique performance ensembles
- analyze and/or demonstrate conducting patterns and gestures
- demonstrate the interpersonal skills necessary to work within and lead an ensemble in rehearsal

MUP 350 Concert Choir I

Units: 2  
Hours: 18 hours LEC; 54 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Ability to match pitch and produce a good tone demonstrated in the audition  
Transferable: CSU; UC  
General Education: CSU Area C1  
C-ID: C-ID MUS 180  
Catalog Date: June 1, 2020

This course is the study and performance of choir literature including classical works, contemporary pieces, and music of many diverse cultures. Public performances, festivals, and field trips may be required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and perform choral pieces and masterworks of various styles and cultures
- demonstrate musical, historical and aesthetic understanding of various styles of choral music
• demonstrate the interpersonal skills necessary to work within an ensemble
• formulate appropriate practice habits
• evaluate and critique other performance ensembles
• incorporate appropriate facial expression to enhance the song's poetry/lyrics

MUP 352 Advanced Concert Choir

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: MUP 350 with a grade of "C" or better
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course provides continued study and performance of advanced choir literature including classical works, contemporary pieces, and music of many diverse cultures. Advanced ensemble members may conduct pieces and lead sectionals. Public performances, festivals, and field trips are required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate proper basic vocal technique (posture, breathing, diction, resonance, and stage deportment) for ensemble singing
• incorporate appropriate facial expression to enhance the song's poetry/lyrics
• formulate and maintain appropriate practice habits
• demonstrate the interpersonal skills necessary to work within an ensemble and lead an ensemble in rehearsal and sectional
• recognize various musical style periods
• evaluate and critique other performance ensembles
• describe the musical, historical and aesthetic elements of various style periods of choral music
• analyze rehearsal techniques and apply those techniques to new sections of music or new pieces

MUP 360 Chamber Singers

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Audition required. Auditions generally occur the first week of class. The audition includes sight singing, the preparation of a short musical excerpt, and an aural skills assessment.
Transferable: CSU; UC
General Education: CSU Area C1
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is an advanced choral ensemble of limited size performing a wide variety of music—classical, world music, folksong arrangements, and contemporary compositions. Audition required. Public performances, festivals, and field trips may be required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare and contrast various choral music styles
• analyze and perform choral pieces and masterworks of various styles and cultures appropriate for a chamber choir
• formulate and apply good rehearsal practice habits
• demonstrate the interpersonal skills necessary to work within an ensemble
• evaluate and constructively critique other performance ensembles
MUP 361 Advanced Chamber Singers

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: 8 units of MUP 360 with a grade of "C" or better
Enrollment Limitation: Audition required. Auditions generally occur the first week of class. The audition includes sight singing, the preparation of a short musical excerpt, and an aural skills assessment.
Transferable: CSU; UC
C-ID: C-ID MUS 180
Catalog Date: June 1, 2020

This course is an advanced choral ensemble of limited size performing a wide variety of music—classical, world music, folksong arrangements, and contemporary compositions. Advanced ensemble members may conduct pieces and lead sectionals. Public performances, festivals, and field trips are required. This course may be taken four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast various choral music styles
- analyze and perform choral pieces and masterworks of various styles and cultures appropriate for a chamber choir
- formulate and apply good rehearsal practice habits
- demonstrate the interpersonal skills necessary to work within an ensemble
- evaluate and critique other performance ensembles
- incorporate appropriate facial expression and interact with fellow singers during the performance
- apply conducting, rehearsal technique and section leading concepts as deemed appropriate by the instructor

MUP 370 Rehearsal and Performance - Musical Ensemble

Same As: TA 466
Units: 0.5 - 3
Hours: 27 - 162 hours LAB
Course Family: Musical Performance and Technical Production
Prerequisite: None.
Enrollment Limitation: Audition/Interview
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course provides a workshop training experience in the preparation and performance of musical theatre ensemble productions. A different production is presented each semester the course is offered. Students interested in singing/acting roles audition with the director. Students interested in instrumental positions audition with the musical director. Students interested in technical work interview with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 27-162 hours which may include acting, singing, dancing, musical, or technical rehearsals and preparation. It is not open to students who have completed TA 466.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- practice and perform a musical production.
- evaluate the professional responsibilities of an actor, singer, musician, or technician in a production as appropriate.
- analyze the evolution of a participant's role in a production from rehearsal to performance.
- integrate acting, singing, and/or dancing skills in an intensive rehearsal/performance environment (if participating as an actor/singer).
- integrate musical skills in an intensive rehearsal/performance environment (if participating as a musician).
- incorporate basic technical skills in the creation or manipulation of sets, props, costumes, lighting, or sound as appropriate (if participating as a technician).
- analyze and solve problems associated with the creation and presentation of acting, musical, and technical challenges.
- analyze the differences in producing musical theatre from other styles of theatre.
MUP 400 Vocal Jazz Ensemble

This course is a vocal jazz ensemble of limited size performing a wide variety of music in the jazz style. Public performance, festival and field trips are required. This course may be taken up to four times for credit.

Upon completion of this course, the student will be able to:

- prepare and perform vocal jazz repertoire in various jazz styles
- demonstrate musical, historical and aesthetic understanding of a wide variety of jazz styles
- demonstrate the interpersonal skills necessary to work within an ensemble
- demonstrate appropriate practice habits
- evaluate and critique other performance ensembles

MUP 401 Advanced Vocal Jazz Ensemble

This course is the continuing study of vocal jazz ensemble repertoire and techniques. Additional topics include experiences in scat singing, conducting, rehearsal technique and section leading. Public performance, festivals, recording sessions and field trips are required. This course may be taken up to four times for credit.

Upon completion of this course, the student will be able to:

- prepare and perform vocal jazz repertoire in various jazz styles including, but not limited to, singing one on a part in complex 4- to 5-part harmony
- demonstrate musical, historical and aesthetic understanding of a wide variety of jazz styles
- demonstrate the interpersonal skills necessary to work and lead an ensemble in rehearsal and sectional
- set up and maintain appropriate practice habits
- evaluate and critique other performance ensembles
- evaluate his/her own conducting abilities

MUP 420 Special Ensemble Participation

This course allows students to participate in various special music ensembles. There are no prerequisites or enrollment limitations. This course is transferable to CSU and UC. The course satisfies the CSU Area C1 and General Education C-ID MUS 180 requirements.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform vocal jazz repertoire in various jazz styles
- demonstrate musical, historical and aesthetic understanding of a wide variety of jazz styles
- demonstrate the interpersonal skills necessary to work within an ensemble
- demonstrate appropriate practice habits
- evaluate and critique other performance ensembles
This course is open to all students who sing or play musical instruments. Studies are designed for instrumental and vocal groups of various combinations. Students may explore chamber music, large ensemble, or solo repertoire. Public performances and field trips are required. This course may be taken up to four times for credit.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare and perform repertoire in various musical styles
- compare musical, historical, and aesthetic values of a wide variety of musical styles
- demonstrate the interpersonal skills necessary to work within an ensemble
- formulate and maintain practice routines specific to an instrument
- evaluate and critique other performance ensembles

MUP 495 Independent Studies in Music Performance

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Prerequisite: None  
Transferable: CSU  
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

Music - Specializations in Music (MUSM)

MUSM 110 The Business of Music

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None  
C-ID: CMUS 140X  
Catalog Date: June 1, 2020

This course gives an overview of the processes of the music industry. This includes record contracts as well as the duties and responsibilities of record producers, agents, managers, and performing artists.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critique key points of a recording agreement
- compare and contrast job descriptions of record company personnel, agents, managers, and producers
- evaluate the duties and responsibilities of a recording artist
- assess options of music licensing and artist royalties for new technologies
- design an artist career ladder

MUSM 111 The Business of Music

Units: 3  
Hours: 54 hours LEC  
Prerequisite: MUSM 110 with a grade of "C" or better  
Catalog Date: June 1, 2020

The course gives an in-depth view of the fundamentals and organization of the music business. This includes the duties of attorneys, publishers, and radio stations regarding musical and financial matters. The course also defines and analyzes publishing agreements, merchandising contracts, trademark, and service mark points.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the components needed to complete a service mark and trademark application
- assess and analyze a publisher/writer exclusive agreement and an attorney/client contract
- prioritize the duties of attorneys, publishers, merchandisers, and radio staff
- evaluate a merchandising agreement
- differentiate terrestrial, satellite, and Internet radio formats

MUSM 112 The Business of Music/Artist Management

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the definitions, duties, and agreements of artist management. Topics include the functions of a personal manager, guidelines to career planning, choosing managers and clients, record company negotiations, and selecting other team players. It also analyzes the personal manager agreement and how to organize an artist's tour.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critique management and touring agreements
- organize a two-week artist tour
- prioritize and classify management roles and duties
- recommend and evaluate an artist career plan
- assess strategies for networking in the entertainment industry

MUSM 113 The Business of Music/Promotion

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the process of music promotion. Topics include definitions of promotion, developing media/industry fan lists, and assembling a promotion packet. This course also discusses current Internet strategies and new technologies developed for promotion. In addition, a campaign for album release and distribution is discussed and planned. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- choose effective methods for creating a promotional packet for an artist
- recommend a five-week campaign plan for releasing and distributing an album
- critique strategies for developing media as well as industry and fan lists
- construct alternate avenues of distribution using various technologies
- produce an effective press release and artist bio

MUSM 120 Contemporary Songwriting
This course examines the processes of the songwriting industry in popular music today, including instrumental and vocal arrangements in jazz, pop, and rock musical styles. Other related topics such as lyrics, formation of melodies and harmonies, popular music form, and musical notation are covered.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate and create rhythm and chord patterns
- compose a lead sheet for a piece of music
- choose effective lyrics for pop music formats
- coordinate musical and lyrical elements
- evaluate melodic development in song sections

### MUSM 121 Contemporary Songwriting

Units: 3  
Hours: 54 hours LEC  
Prerequisite: MUSM 120 with a grade of "C" or better  
Catalog Date: June 1, 2020

This course covers the processes of writing popular songs, including lyric evaluation, song forms, and music styles. Production techniques, publishing, and marketing strategies are also included.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compose music in different popular music styles
- evaluate and critique lyrical content
- recommend production techniques to record and perform songs
- research and register original song material
- structure a song collaboration agreement

### MUSM 140 Concert Sound Reinforcement

Units: 2  
Hours: 36 hours LEC; 18 hours LAB  
Prerequisite: MUSM 342 with a grade of "C" or better  
C-ID: CMUS 120X  
Catalog Date: June 1, 2020

This course is an overview of live concert sound reinforcement. Topics include basic sound system theory and its application. It also covers individual sound system component operation, including microphones, mixers, effects, power amplifiers, and speaker systems. This course offers opportunities for hands-on experiences in troubleshooting, sound checking, and mixing sound for live performance and touring. Field trips may be required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- distinguish the principles of room acoustics that relate to speaker setup and calibration to achieve even coverage throughout the room
- assess basic concert sound system design principles, safety concepts, and procedures
- assemble and operate a basic concert sound system for various live audio applications
• operate and program digital audio consoles and their associated software applications
• diagnose, troubleshoot, and solve problems that commonly occur in sound reinforcement systems
• set up and program Digital Signal Processing (DSP) based speaker management hardware and software

MUSM 295 Independent Studies in Music Specializations in Music

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

MUSM 334 Introduction to Musical Instrument Digital Interface (MIDI)

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: MUFHL 321 or MUIVI 340
Transferable: CSU
C-ID: C-ID CMUS 100X
Catalog Date: June 1, 2020

This introductory course examines the terminology, hardware, software, techniques, and concepts related to using Musical Instrument Digital Interface (MIDI) and associated music technology. It surveys the principles and practices of sound, MIDI, synthesis, notation, and audio recording, as well as hardware and software platforms.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the history, terminology, and theoretical concepts associated with MIDI technology
• demonstrate a conceptual and practical understanding of MIDI hardware and software
• construct, edit, and output music using music sequencing software
• produce a score of music using music notation software
• describe the properties and components of an audio recording workstation
• integrate a fundamental knowledge of sound, including waveforms, frequency, amplitude, and harmonics into music projects
• differentiate between fundamental synthesis techniques such as subtractive, digital, additive, wavetable, and sampling

MUSM 335 Intermediate Musical Instrument Digital Interface (MIDI)

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: MUSM 334 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course builds on skills learned in MUSM 334 and introduces intermediate techniques in MIDI composition and arranging for various styles of music. Topics include integrating MIDI and digital audio, film and video scoring, and the use of sound editing software.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• produce music using intermediate MIDI workstation techniques
create recordings which incorporate both MIDI and digital audio
incorporate synchronized media within the computer workstation environment
compose and record audio and MIDI scores in varying styles for film and video
evaluate and propose appropriate compositional devices for specific musical styles

MUSM 342 Recording Studio Techniques I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU
General Education: CSU Area C1
C-ID: C-ID CMUS 130X
Catalog Date: June 1, 2020

This is the first course in a four-part series of Recording Studio Techniques. It covers entry-level techniques in audio/music production, microphone fundamentals and applications, studio equipment, recording console functions, and multitrack recording procedures. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate a basic understanding of the equipment used in audio recording
- create recordings on a multitrack recorder and mixing console
- evaluate proper signal flow connections between recording components
- analyze, select, and place microphones for various instrumental and vocal music applications
- research and plan the equipment for a multitrack recording studio

MUSM 344 Recording Studio Techniques II

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: MUSM 342 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This is the second course in a four-part series of Recording Studio Techniques. It covers intermediate techniques of audio and music production, and introduces mixdown session techniques, outboard gear application, remote recording, and studio design. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- plan and engineer a recording session with acoustic and electronic instruments
- choose and apply appropriate mixdown session techniques
- create recordings of live concerts
- assess and implement effective microphone techniques
- analyze signal flow block diagrams
- design and equip a complete recording facility

MUSM 350 Recording Studio Techniques III

Units: 3
Hours: 36 hours LEC; 54 hours LAB

36 hours LEC; 54 hours LAB
This is the third course in a four-part series of Recording Studio Techniques. Topics include studio design and management principles, managing and organizing sessions, and recording, editing, and mixing in a Digital Audio Workstation (DAW) environment. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- organize, manage, and create productive studio sessions that deliver a finished product
- utilize DAW and server-based file management protocols
- apply business and management principles associated with a recording studio
- choose specific advanced outboard processing to achieve artistic and musical goals
- set up, operate, and maintain a large-format, analog, multitrack recorder
- record, edit, and mix sessions within a DAW environment

MUSM 352 Recording Studio Techniques IV

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: MUSM 350 and 356 with grades of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This is the fourth course in a four-part series on Recording Studio Techniques. It covers advanced techniques of audio engineering and is designed for recording engineers seeking careers in audio and post production. It includes advanced concepts of analog and digital recording, mixdown, surround sound, synchronizing audio to video, and mastering. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- generate and integrate Foley, sound effects, and voice-overs that are synced to video
- organize and facilitate a multitrack recording of a live concert
- create a 5.1 music mix and create a Digital Theater System (DTS) encoded surround file
- perform audio restoration using advanced plug-in and editing techniques
- utilize final mastering techniques by creating a multi-song production master that conforms to industry specifications
- create a music mix using advanced automation and plug-ins, as well as utilizing digital and analog processing

MUSM 356 Pro Tools 101, Introduction to Pro Tools

Units: 1.5
Hours: 27 hours LEC
Prerequisite: MUSM 342 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to Avid’s Pro Tools digital audio workstation software application. Basic Pro Tools principles, including how to complete a Pro Tools project from initial set up to final mixdown are covered. Topics also include how to record, edit, and mix music and Musical Instrument Digital Interface (MIDI) tracks within the Pro Tools application. This course is the first in a series of courses leading to multiple Avid Pro Tools certifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- create a Pro Tools session capable of accomplishing common audio production tasks.
MUSM 357 Pro Tools 110 Intermediate Pro Tools

This is an intermediate-level course in Avid’s Pro Tools digital audio workstation hardware and software application. Concepts and skills needed to operate large sessions in a project studio environment are covered. Topics also include managing large track counts, multiple channels of simultaneous inputs and outputs, and the use of specialized plug-ins for specific music and post-production tasks. This course is the second in a series of courses leading to multiple Avid Pro Tools certifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- manage large track counts and multiple channels of simultaneous inputs and outputs during a session.
- create appropriate Pro Tools hardware settings.
- set up troubleshoot input/output (I/O) functions.
- assess and integrate virtual instruments and specialized plug-ins for specific music and post-production tasks.
- incorporate automated mixing techniques into the work flow.
- analyze Elastic Audio methods to select appropriate techniques yielding the desired tempo and/or rhythmic outcome.
- apply clip-based editing techniques to audio and Musical Instrument Digital Interface (MIDI) tracks.

MUSM 366 Pro Tools 201, Advanced Pro Tools

This is an advanced-level course in Avid’s Pro Tools digital audio workstation hardware and software application. Topics include the core concepts and skills needed to operate a Pro Tools HD system in a professional studio environment. Advanced recording, editing, and mixing techniques are presented. This course is the third in a series of courses leading to multiple Avid Pro Tools certifications.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the differences between a standard Pro Tools environment and Pro Tools HD systems.
- set up and operate the necessary hardware components of a Pro Tools HD system.
- structure and customize Pro Tools HD software to meet advanced session requirements.
- choose and implement advanced Pro Tools HD editing and mixing techniques.

MUSM 495 Independent Studies in Music Specializations

This course offers opportunities for students to explore music specializations in greater depth. Students can design a coursework program that aligns with their interests and career goals. This flexible course is ideal for students seeking personalized learning experiences within the field of music.

Student Learning Outcomes

- **1 - 3 Units:** Students can accumulate up to 162 hours of lab work to further develop their musical skills.
- **54 - 162 Hours LAB:** The course offers extensive hands-on learning experiences.
- **None.** The prerequisite for this course is set to accommodate students of varied backgrounds.
- **CSU Transferable:** Credits earned in this course are transferable to other institutions.
- **June 1, 2020 Catalog Date:** The course was cataloged on June 1, 2020.
Independent Study is an opportunity for students to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Environmental Conservation is an interdisciplinary program that advances understanding of ecological systems and their interrelationships, including those with human society. Core study involves plant and animal ecology and natural history, field methods and study design, and conservation and management of ecosystems and natural resources. Students are able to focus their studies in conservation and sustainability; plant ecology, conservation and management; and/or vertebrate ecology, conservation and management. This program covers a wide range of environmental studies, provides many unique opportunities for hands-on and real-world field experience, and prepares students for a variety of careers as well as transfer at the upper division level to academic programs involving environmental sciences.

Division Dean
Dr. Rina Roy

Associate Degrees

A.S. in Environmental Conservation

Environmental Conservation is an interdisciplinary program that advances the understanding of ecological systems and their interrelationships, including those with human society. Core study involves plant and animal ecology and natural history, field methods and study design, and conservation and management of ecosystems and natural resources. Students have the opportunity to choose among courses in the areas of conservation and sustainability; plant ecology, conservation, and management; and vertebrate ecology, conservation and management. This program covers a wide range of environmental studies, provides many unique opportunities for hands-on and real-world field experience, and prepares students for a variety of careers as well as transfer at the upper division level to academic programs involving environmental sciences.

The Environmental Conservation Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply scientific methodologies and critical analysis to environmental investigations
- evaluate natural resource systems, including their past and present use and management, and future sustainability
- analyze social, ethical, and biological implications of environmental management alternatives
- identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national, and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure, analyze, and monitor biological and physical components of the environment
- evaluate basic land survey, water quality, soils, vegetation, and wildlife data
- examine the significance of biodiversity conservation

Career Information

An increasing number of sectors of the labor market in California, the U.S., and beyond, require knowledge and skills emphasizing conservation and management of plant and animal populations and their habitats, sustainable resource use, and an enhanced understanding of the environment. This program prepares students for entry-level work in a variety of industries and settings, including private firms, nonprofit organizations, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences, but also unique hands-on training.

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

*must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science

*The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
Certificate of Achievement

Environmental Conservation Certificate

Environmental Conservation is an interdisciplinary program that advances the understanding of ecological systems and their interrelationships, including those with human society. Core study involves plant and animal ecology and natural history, field methods and study design, and conservation and management of ecosystems and natural resources. Students have the opportunity to choose among courses in the areas of conservation and sustainability; plant ecology, conservation, and management; and vertebrate ecology, conservation, and management. This program covers a wide range of environmental studies, provides many unique opportunities for hands-on and real-world field experience, and prepares students for a variety of entry-level positions in the area of environmental sciences and natural resources as well as transfer at the upper division level to academic programs involving environmental sciences.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.
- apply scientific methodologies and critical analysis to environmental investigations
- evaluate natural resource systems, including their past and present use and management, and future sustainability
- analyze social, ethical, and biological implications of environmental management alternatives
- identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure, analyze, and monitor biological and physical components of the environment
- evaluate basic land survey, water quality, soils, vegetation, and wildlife data
- examine the significance of biodiversity conservation
An increasing number of sectors of the labor market in California, the U.S., and beyond, require knowledge and skills emphasizing conservation and management of plant and animal populations and their habitats, sustainable resource use, and an enhanced understanding of the environment. This program prepares students for entry-level work in a variety of industries and settings, including private firms, nonprofit organizations, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences, but also unique hands-on training.

Certificates

Environmental Conservation Technician (Conservation/Restoration) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on environmental restoration theory and practice and global and emerging environmental and conservation issues. Topics include both the causes of ecological degradation and biodiversity loss, as well as the science of development, management, monitoring, and sustainability of restored environments. Conservation priorities and emerging environmental concerns are investigated, such as climate change, energy production, socioeconomic systems, human population, disease dynamics, species extinctions, invasive species, stresses on water resources and food-producing systems, and over-exploitation of natural resources. Emphasis is placed on development of strategies for the establishment of protected areas, monitoring and adaptive management, and conservation outside of protected areas, as well as an understanding of biodiversity at genetic, species, and community/ecosystem levels.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply the scientific method and critical analysis to environmental investigations
- evaluate natural resource systems, including their past and present use and management and future sustainability
- analyze social, ethical, and biological implications of environmental management alternatives
- identify ecological phenomena in one’s everyday experiences and apply ecological principles to understand local, national and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure and analyze the physical environment of plant and animal populations
- evaluate basic land survey, water quality, vegetation, and vertebrate wildlife data
- investigate restoration ecology theory and assess and apply restoration practices to real-world environmental restoration problems
- identify global and emerging environmental issues and evaluate potential impacts and possible solutions
- examine biodiversity in terms of biological structure, composition, and function at the genetic, species, ecosystem and landscape levels
- apply fundamental biological and ecological concepts to the examination of critical biological conservation issues

Career Information

This program prepares students for entry-level conservation/restoration aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences but also unique hands-on training in conservation and restoration. Potential job opportunities include work in the areas of...
Environmental Conservation Technician (Fisheries) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on fish evolution, ecology, conservation and management. Marine and freshwater fisheries, their impacts on society and the environment, and sustainability issues are investigated, including environmental, ecological, economic, and social aspects. Commercial and recreational fisheries management and aquaculture are also explored.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply the scientific method and critical analysis to environmental investigations
- evaluate natural resource systems, including their past and present use and management and future sustainability
- analyze social, ethical, and biological implications of environmental management alternatives
- identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure and analyze the physical environment of plant and animal populations
- evaluate basic land survey, water quality, vegetation, and wildlife data
- examine the significance of biodiversity conservation
- analyze aspects of fish evolution and ecology important to their management and synthesize basic parameters of fish population dynamics in terms of rate functions and limiting factors
- analyze function and dynamics of freshwater and marine communities, emphasizing those in temperate North America, and their associated fisheries management issues
- interpret fisheries management data, define management problems and stakeholders involved, and suggest appropriate strategies to reach management objectives

Career Information

This program prepares students for entry-level fisheries ecologist aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences but also unique hands-on training in fisheries ecology, conservation, and management. Students prepare for positions in areas such as fisheries conservation and management, basic fish biology research, and aquatic habitat restoration.

Environmental Conservation Technician (Forest/Rangeland) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on forests and rangelands. Basic biological and physical science concepts important to a general understanding of forest and rangeland/grassland ecology, forestry, and grazing by native herbivores and livestock are investigated. History of use and management, taxonomy and ecology of plant communities, soils, pests and diseases, and disturbance regimes of forested landscapes and rangelands are explored. Classes assess current policies, multiple-use management, and emerging threats related to forest and rangeland conservation.

- evaluate natural resource systems, including their past and present use and management and future sustainability
- analyze social, ethical, and biological implications of environmental management alternatives
- identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure and analyze the physical environment of plant and animal populations
- evaluate basic land survey, water quality, vegetation, and wildlife data
- examine the significance of biodiversity conservation
- analyze important characteristics, processes, and stressors of population, community, and ecosystem dynamics of forest/rangeland environments
- evaluate social, ethical, and biological implications of forest/rangeland conservation and management alternatives, including impacts of grazing and forestry

Career Information

This program prepares students for entry-level forest/rangeland ecologist aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences but also unique hands-on training in forest/rangeland ecology, conservation, and management. This program prepares students for work in forestry, conservation, land management, grassland and forest ecological research, and other fields.

Environmental Conservation Technician (Sustainability) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on sustainability. Theoretical and practical aspects of sustainability are explored including social, economic, and environmental dimensions. Sustainable principles and practices are examined in the context of energy production and consumption, transportation systems, food production, water resources, industry, and the built environment. Environmental as well as social and cultural impacts of industrialization, capitalism, and globalization are addressed at various scales, and potential solutions to current problems are discussed.

- identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national, and global environmental issues
- assess the relationships of plants and animals to their environment and to each other
- measure and analyze the physical environment of plant and animal populations
- evaluate basic land survey, water quality, vegetation, and wildlife data
- examine the significance of biodiversity conservation
- examine technological, geographic, socioeconomic, cultural, and environmental considerations of alternative forms of energy production
- investigate theoretical and practical aspects of sustainability in the context of energy consumption, transportation systems, food production, water resources, industry, the built environment, and socio-cultural institutions and practices

Career Information

This program prepares students for entry-level sustainability consultant/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Work opportunities for program graduates include positions in environmental economics, sustainable business practices, green building, as well as sustainable communities, food systems, energy, and transportation.

Environmental Conservation Technician (Vegetation) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on woody and herbaceous vegetation. Major topics include plant taxonomy, natural history and life cycle, physiology, evolution, human uses of—and threats to—California native plant communities and their component species.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- apply the scientific method and critical analysis to environmental investigations
- evaluate natural resource systems, including their past and present use and management and future sustainability
• analyze social, ethical, and biological implications of environmental management alternatives
• identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
• assess the relationships of plants and animals to their environment and to each other
• measure and analyze the physical environment of plant and animal populations
• evaluate basic land survey, water quality, vegetation, and wildlife data
• examine the significance of biodiversity conservation
• assess the structure and function of vegetative communities of California
• interpret plant keys and develop skills in their use in plant identification
• collect and prepare a plant collection of representative native California plants
• analyze plant adaptations and environmental gradients in a variety of ecosystems
• investigate the implications of plant conservation, restoration, and community management alternatives

Career Information
This program prepares students for entry-level plant ecologist aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences but also unique hands-on training in plant identification, ecology, conservation, and management. Skills developed support student preparation for positions related to plant taxonomy, dendrology, research and management (e.g., of California endemics, unique environments such as vernal pools, invasive species, etc.) and environmental restoration.

Environmental Conservation Technician (Water Resources) Certificate
This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on water resources. It provides a historical perspective on water development and explores current and projected water issues. Surface water and groundwater systems are considered, with an emphasis on the interdisciplinary nature of sustainable water resource management that balances urban, agricultural, industrial, and environmental water needs. The implications of water rights and key water policies are considered in evaluating how water is used and exploited.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

• apply the scientific method and critical analysis to environmental investigations
• evaluate natural resource systems, including their past and present use and management and future sustainability
• analyze social, ethical, and biological implications of environmental management alternatives
• identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
• assess the relationships of plants and animals to their environment and to each other
• measure and analyze the physical environment of plant and animal populations
• evaluate basic land survey, water quality, vegetation, and wildlife data
• examine the significance of biodiversity conservation
• describe the hydrologic cycle in both natural and urban environments, including key characteristics of surface water and groundwater resources and the interactions between these
• investigate the components of integrated water resources planning and management, including evaluation of water policy initiatives and determination of water rights
• analyze future water sustainability scenarios under uncertain conditions, including impacts of drought and climate change

Career Information

This program prepares students for entry-level water resources aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and application of environmental sciences but also unique hands-on training in water resources conservation and management, preparing them for positions in environmental consulting and planning, water conservation, hydrological research, and other fields.

Environmental Conservation Technician (Wildlife) Certificate

This certificate advances the understanding of ecological systems and their interrelationships, including those with human society. It focuses on ecology, field methods and study design, and conservation and management of ecosystems and natural resources, with an emphasis on vertebrate wildlife. Major topics include population ecology; community dynamics; wildlife habitat; management of game, invasive, and non-game species; conservation of threatened and endangered wildlife; and theoretical and practical tools and methods for studying wildlife, such as sampling techniques, population modeling, habitat assessment, radiotelemetry, and remote sensing.

• evaluate natural resource systems, including their past and present use and management and future sustainability
• analyze social, ethical, and biological implications of environmental management alternatives
• identify ecological phenomena in one's everyday experiences and apply ecological principles to understand local, national and global environmental issues
• assess the relationships of plants and animals to their environment and to each other
• measure and analyze the physical environment of plant and animal populations
• evaluate basic land survey, water quality, vegetation, and wildlife data
• examine the significance of biodiversity conservation
• apply and compare various wildlife habitat and population assessment techniques across a variety of environmental settings
• interpret wildlife population data and construct a population model, evaluating alternative wildlife management decisions based on computer-simulation results
• evaluate alternative wildlife management decisions in the context of ecosystem dynamics as well as and social/cultural and economic considerations

Career Information

This program prepares students for entry-level wildlife biologist aide/technician positions in a variety of industries and settings, including private firms, nonprofit organizations, educational institutions, and government agencies at the local, state, and federal levels. Students receive not only rigorous instruction in the theory and
Current topics in natural resources conservation and management not covered by regular catalog offerings are examined. Topics and field locations vary, including advanced subjects related to wildlife, fisheries, soil and water resources, conservation biology, forest resources and management, restoration ecology and aquatic ecology. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate current issues and management alternatives in natural resource systems
- apply hands-on experience using current techniques of natural resource management
- examine natural resource issues that affect daily lives

NATR 300 Introduction to Natural Resource Conservation and Policy

This course provides a survey of concepts, issues, laws and regulations relevant to natural resources, such as soils, water, wildlife, fisheries, rangelands, and forests, with a focus on their sustainable management and conservation. Overexploitation, pollution, land use, and waste issues are integrated throughout the course. Principles, problems, and solutions are explored in the context of economics, ethics, and past, present, and future natural resource issues. Critical thinking and ecological dynamics are stressed. Sustainability, global environmental problems, and energy are major themes. It also examines the environmental regulatory process in California. Federal and California environmental laws are studied and discussed. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate natural resource systems, including their past and present use and management
- analyze social, ethical, and biological implications of natural resource management alternatives
- examine natural resource issues that affect one's life
- investigate careers in natural resource conservation and management
- assess sustainability of natural resource systems under various scenarios
- explain the background, requirements, and implementation of environmental regulations
- evaluate the policies of various governmental agencies as they pertain to environmental laws enacted by Congress and by the State

NATR 302 Introduction to Wildlife Biology

This course provides an application of environmental sciences but also unique hands-on training in wildlife ecology, conservation, and management. Participants develop skills appropriate for positions dealing with aspects of wildlife such as population sampling and monitoring, data analysis, and management/conservation of threatened, endangered, and invasive species of wildlife.
This course is an introduction to the science of wildlife biology and the basic principles and techniques involved in wildlife research, conservation, and management. It emphasizes ecological aspects of wildlife populations and communities such as predator-prey relationships, population dynamics, diseases and parasites of wildlife, and wildlife habitat. Animal behavior, nutritional ecology, and other aspects of wildlife biology are also explored. Human dimensions of wildlife management including wildlife restoration and conservation, human-wildlife conflicts, hunting, invasive species, impacts of global climate change, and other relevant issues are examined. Social, economic, and ecological implications of management alternatives are investigated. Additionally, this course provides hands-on experience with habitat and population sampling, data analysis and interpretation; radio telemetry; wildlife capture and handling; and critical analysis of wildlife management policies and the development of a wildlife management plan. Field trips are required.

Upon completion of this course, the student will be able to:

- apply the scientific method to wildlife investigations
- assess the relationships of plants and animals to their environment and to one another
- analyze the physical environment and apply wildlife inventory techniques
- apply ecological principles to understand local, national, and global wildlife issues
- explain the significance of biodiversity to wildlife management and conservation
- interpret wildlife population data, use actual data to construct a population model, and evaluate alternative wildlife management decisions based on computer-simulated model results
- evaluate alternative wildlife resource management decisions in the context of ecosystem dynamics as well as social/cultural and economic considerations

NATR 303 Energy and Sustainability

Upon completion of this course, the student will be able to:

- examine the concept of sustainability as it relates to energy
- examine geographic, socioeconomic, cultural, and environmental considerations of energy production and consumption
- explain technologies involved in solar thermal, solar photovoltaic, hydroelectric (large and small scale), nuclear fission, wave/current/tidal, geothermal, biomass, and wind (onshore and offshore) energy systems
- compare conventional fossil-fuel based energy systems with current alternatives
- examine the relationships between energy production and consumption scenarios and their contributions to atmospheric greenhouse gas concentrations and air, water, and soil pollution
- evaluate alternative energy policies for North America, Europe, and the world
- interpret the results of a residential energy audit and recommend actions
- critically evaluate more sustainable approaches and practices in energy use for heating, lighting, food systems, the built environment/transportation/infrastructure, manufacturing, and public services
- examine strategies for dealing with production and consumption fluctuations and energy storage issues
understand considerations for energy systems related to temporal and spatial scale and connectivity, including potential for distributed energy systems, aging of the electrical grid, land use conflicts, and timelines for taking newer technologies to scale

evaluate the potential for emerging opportunities in nanotechnology and biomimicry with respect to energy systems

NATR 304 The Forest Environment

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: (1) MATH 120 or higher; (2) eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area IV
Catalog Date: June 1, 2020

This course covers basic biological and physical science concepts important to a general understanding of forest ecology and forestry. It investigates tree anatomy and basic physiology, forest types and distributions across the World, ecological processes and species adaptations, forests of the United States and the history of their use, California forests and major tree species, soils, fire ecology and natural selection, and pests and diseases of forest trees. Additional topics include the role of fire in forest management, the science of silviculture and forestry, forest management and harvest techniques, history of the forest conservation movement, and current issues and policies related to forest resource use. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze forest ecosystem structure, function, and management
- evaluate social, ethical, and biological implications of forest management alternatives
- examine forest resource issues that affect one's life
- explore careers in forestry and natural resources management
- identify commercial tree species in California

NATR 305 Fisheries Ecology and Management

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340; AND eligible for transfer-level math.
Transferable: CSU
General Education: AA/AS Area IV; CSU Area B2; CSU Area B3
Catalog Date: June 1, 2020

This course covers the fundamentals of marine and freshwater fisheries, ecosystems, and their impacts on society and the environment. Fish life history, ecology, habitats, and population dynamics are examined. Fisheries' sustainability issues are investigated, including environmental, ecological, economic, and social aspects. Commercial and recreational fisheries management and aquaculture are covered. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine basic aspects of fisheries management, including general objectives and limitations
- investigate basic aspects of fish biology, including taxonomy, anatomy, and ecology, as each relates to fisheries management
- investigate basic types of aquatic communities and their associated fisheries management problems
- analyze function and dynamics of freshwater and marine communities, emphasizing those in temperate North America
- assess principles of fisheries management as applied to historical and current recreational and commercial fisheries
- analyze fish population dynamics in terms of rate functions and limiting factors
- interpret fisheries management data, define management problems, and suggest appropriate strategies to reach management objectives
- evaluate basic principles of aquaculture practices
- synthesize and evaluate the economic, environmental, and social issues related to fisheries management and the stakeholders involved
NATR 306 Introduction to Rangeland Ecology and Management

This course introduces the science of range ecology and management. It covers ecological principles that apply to rangeland ecosystems and their conservation and management, as well as the history of rangelands and their management. This course focuses on the interactions among the different components of rangelands: soils, plants, non-human animals, and people. The effects of different management systems on ecosystem services provided by rangelands are studied, including food, fiber, fuel, water, habitat, and carbon sequestration. In addition, it explores current issues and research surrounding rangeland conservation, sustainability, restoration, and climate change. Field trips are required.

Upon completion of this course, the student will be able to:

- apply ecological principles to rangeland management decisions
- explain structure-function relationships of various rangeland ecosystems
- identify the different ecosystem services that rangelands provide
- analyze socio-economic and biological implications of range management alternatives
- evaluate various management strategies and their impact on rangelands
- describe current issues in rangeland conservation

NATR 307 Principles of Sustainability

Theoretical and practical aspects of sustainability are explored including social, economic, and environmental dimensions. Sustainable principles and practices are examined in the context of energy production and consumption, transportation systems, food production, water resources, industry, and the built environment. The environmental as well as social and cultural impact of industrialization is addressed, and solutions to current problems are discussed. Field trips may be required.

Upon completion of this course, the student will be able to:

- define and explain sustainability (including underlying ecological concepts) and sustainable development
- analyze current global food production systems and assess shortcomings and successes in meeting present and future global food demands
- evaluate the sustainability of current global energy consumption patterns and discuss proposed solutions
- investigate the causes and consequences of global climate change and loss of biodiversity and compare proposed technological and economic solutions
- critique the role of economic institutions and policies in promoting or hindering sustainable development practices
- explain the role of social, cultural, religious, economic, and gender issues in promoting sustainable development and stabilizing global population growth
- assess problems with current patterns of urban and suburban development and transportation systems and propose effective alternatives
- describe the cultural, social, and political history of the sustainability movement
- identify key issues related to sustainability and propose and communicate solutions
NATR 310 Study Design and Field Methods

This course addresses study design and field methods important to the field of natural resources. It covers basic statistical approaches and sampling designs, and introduces a variety of sampling and monitoring protocols and techniques. Field labs provide practice with a variety of hands-on methods for vertebrate study, vegetation assessment, land survey, and aquatic studies. Specific portions of the course focus on (1) survey skills including distance and direction measurement, topographic map reading, and Geographic Information Systems (GIS); (2) woody and herbaceous vegetation sampling strategies such as transect and quadrat, and habitat assessment; (3) methods used in terrestrial vertebrate wildlife studies, such as radio telemetry, remote cameras, and live-trapping; and (4) techniques specific to aquatic ecology and water quality measurements. It also includes applications of GIS and Global Positioning Systems (GPS). Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- investigate advantages and limitations of a variety of environmental study designs, including field (descriptive) study, field experiment, natural experiment, and laboratory experiment.
- gather basic land survey, water quality, vegetation, and vertebrate wildlife data.
- manage, analyze, and interpret field data using different methods.
- compare and contrast various population sampling techniques.
- apply techniques for sampling and monitoring vertebrate wildlife, including capture and marking methodologies, radiotelemetry, remote cameras, and tracks and scat ID and analysis.
- evaluate protocols for and issues surrounding animal handling and chemical restraint.
- sample a variety of vegetation types using circular plot, quadrat, and transect techniques.
- interpret habitat suitability data.
- collect and analyze water quality data and relate to stream health.
- compare, contrast, and apply standard protocols for field investigation of common as well as special status species of plants and animals.
- use and create paper and digital maps of study areas by measuring horizontal and vertical distances and georeferencing sampling locations.

NATR 320 Principles of Ecology

This course covers basic principles of ecology, including the physical and biological factors of different environments in relation to the distribution and abundance of plants and animals. Emphasis is on the management of ecosystems using ecological principles and the understanding of current ecological issues. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the relationship of plants and animals to their environment and to each other
- measure and analyze the physical environment of plants and animals
- integrate ecological principles with ecological issues that affect the human condition
- identify ecological phenomena in one's everyday experiences
NATR 322 Environmental Restoration

This course covers fundamental principles and practices of environmental restoration—the process in which a damaged resource is renewed biologically, structurally, and functionally. Topics include both the causes of ecological degradation and biodiversity loss, as well as the science of development, management, monitoring, and sustainability of restored environments. Ecological principles, ecosystem processes, and biological interactions are covered in the context of restoration of wildlands and more urbanized areas. The course emphasizes hands-on experience with a variety of restoration techniques and materials in diverse habitats. Previously restored habitats in the Sacramento region are explored and current restoration sites are evaluated. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze basic principles of ecology and ecosystem science in the context of restored environments
- assess methods and materials for restoration of plant and animal populations and habitats
- analyze the causes of ecological degradation and biodiversity loss
- propose the methodologies involved in the development of a restoration plan for the creation/enhancement of an ecosystem
- apply techniques and materials used in environmental remediation/restoration
- evaluate environmental policies, laws, and regulations related to environmental restoration
- describe the significant challenges and priorities for wetland, woodland, and grassland restoration
- assess soil and water characteristics relevant to environmental restoration

NATR 324 Field Studies: Birds and Plants of the High Sierra

This field study course focuses on identification, distribution, abundance, ecological relationships, and conservation of bird and plant communities of the High Sierra. Primary environments explored include montane chaparral, riparian woodland, coniferous forest, montane bog and fen, rocky outcrop, montane meadow, subalpine woodland, and alpine tundra. Emphasis is placed on the natural history and life history characteristics of common birds and plants, as well as rare and endangered species and their conservation challenges. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common species of birds and plants in High Sierra environments
- analyze species composition and community structure of High Sierra bird and plant communities
- demonstrate proficiency in the use of current identification and monitoring tools and techniques for bird and plant populations and communities
- critically analyze past, present, and future/predicted conservation and management issues for biological communities of the High Sierra

NATR 330 Native Trees and Shrubs of California

This course covers described trees and shrubs of California. Topics include identification, distribution, abundance, and ecological relationships. The course emphasizes the natural history and life history characteristics of common trees and shrubs, as well as rare and endangered species and their conservation challenges. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common species of trees and shrubs in California environments
- analyze species composition and community structure of California tree and shrub communities
- demonstrate proficiency in the use of current identification and monitoring tools and techniques for tree and shrub populations and communities
- critically analyze past, present, and future/predicted conservation and management issues for biological communities of California
This dendrology course covers classification and ecology of major natural plant communities of California and their component tree and shrub species. Emphasis is placed on biotic and abiotic factors of native woody plant distribution and abundance in northern California, focusing on characterization of the dominant vegetation types and identification of native woody species. Major topics include plant adaptation, evolution, and diversity in time and space; morphology and physiology; life history; soils, climate, and topography; endemism; interspecific and intraspecific interactions; invasive species; disease; anthropogenic and natural environmental change; human uses of native plants; and native plant restoration and conservation. This course involves the creation of a plant collection including at least 60 representative native woody species. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the structure and function of vegetative communities of California
- interpret plant keys and develop skills in their use in plant identification
- collect and prepare a plant collection of representative native California plants
- identify (to species level) over 75 common native woody plants by sight
- analyze plant adaptations and environmental gradients in a variety of ecosystems
- apply ecological principles to observed phenomena at the species, population, and community levels of organization
- examine the structure and function of various morphological and physiological characteristics of plants
- investigate the implications of plant conservation, restoration, and community management alternatives

NATR 332 Wildflowers of California

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: NATR 330
Transferable: CSU; UC
General Education: AA/AS Area IV
Catalog Date: June 1, 2020

This course investigates biology, ecology, conservation, and management in the context of California wildflowers. Field labs focus on the California Floristic Province. The identification, distribution, and interrelationships of herbaceous plants in their natural environment, physical and biological influences, ecological relationships, and representative plant communities are examined. Special emphasis is given to the study of plant families in our local grasslands, vernal pools, oak woodlands, and foothills. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply scientific approaches to the investigation of herbaceous terrestrial plants
- identify the common herbaceous flowering plants of our local grasslands, vernal pools, oak woodlands, and foothills
- investigate physical and biological factors that influence representative plant communities of California’s foothill, valley, coast, mountain, and desert domains
- analyze factors influencing the distribution and abundance of wildflower species
- assess the structure and function of basic vegetative and reproductive anatomy including leaves, stems, roots, flowers, and fruits
- evaluate, through comparative analysis, the distinguishing characteristics of dominant herbaceous plant families of the Greater Sacramento area
- recognize at least 20 flowering plant families by sight
- analyze the ecological significance of California’s diverse herbaceous plant communities

NATR 346 Water Resources and Conservation

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: MATH 120, 125, 129, 133 or higher; NATR 300, or an equivalent transferable life science course; and eligible for ENGRD 310 or ENGRD 312 AND ENGRD 390 AND ESLR 340 OR ESLR 340 AND ESLW 340.
Transferable: CSU
This course provides an introduction to water resource management with an emphasis on water issues in California. It provides a historical perspective on water development and explores current and projected water issues. Surface water and groundwater systems are considered, with an emphasis on the interdisciplinary nature of sustainable water resource management that balances urban, agricultural, industrial, and environmental water needs. The implications of water rights and key water policies are considered in evaluating how water is used and exploited. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the hydrologic cycle in both natural and urban environments
- describe the key characteristics of surface water and groundwater resources
- explain the interactions between surface water and groundwater resources
- describe the components of integrated water resources planning and management
- evaluate water policy initiatives and determination of water rights
- analyze future water sustainability scenarios under uncertain conditions, including climate change

**NATR 495 Independent Studies in Natural Resources**

| Units:  | 1 - 3 |
| Hours:  | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**NATR 498 Work Experience in Natural Resources**

| Units:  | 1 - 4 |
| Hours:  | 60 - 300 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position, or job related to natural resources with a cooperating site supervisor. Students are advised to consult with the Natural Resources Department faculty to review specific certificate and degree work experience requirements. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of natural resources. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of natural resources related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
• locate, organize, evaluate, and reference information at work.
• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Associate Degrees

A.S. in LVN to RN Career Mobility

Nursing is a health care profession that draws on nursing science, natural physical and biological sciences, as well as the social sciences and humanities. The Nursing Program consists of general education and nursing courses designed to prepare an entry-level registered nurse, who can function effectively in the rapidly changing healthcare environment. Simulated and actual patient centered learning experiences provide for application of concepts. Each semester of education builds upon previous learning.

This degree is designed for the California Licensed Vocational Nurse (LVN) who is admitted for advanced placement into the second year of the Registered Nursing (Associate Degree) Program. The graduate of the Associate Degree Nursing program at American River College demonstrates entry-level competencies and meets the educational requirements necessary to take the National Council Licensure Examination (NCLEX-RN) to become licensed as a Registered Nurse and eligible for employment.

A grade of "C" or better is required in each nursing course for progression in the program. Clinical experiences may change with limited notice and occur morning, afternoon, evening, and weekends. Students are responsible for their own transportation. Students are required to pay for uniforms, necessary equipment, malpractice insurance, background checks, drug testing, and health requirements.

Note: The California Board of Registered Nursing (BRN) protects the public by screening applicants for licensure in order to identify potentially unsafe practitioners. The law provides for denial of licensure for crimes or acts, which are substantially related to nursing qualifications, functions, or duties. At time of licensure application, all convictions must be reported except for minor traffic violation. (Business and Professions Code §480 and Nurse Practice Act ARTICLE 3 §2761)

Note: Providing a Social Security Number (SSN) OR Individual Taxpayer Identification Number (ITIN): Pursuant to Business and Professions Code §30(c) the BRN will not process any application for licensure unless the applicant provides a SSN or ITIN. The Nursing Practice Act provides for a unified examination and licensing application. Once an applicant passes the examination, a license is automatically issued. Under these circumstances the BRN cannot accept applications for the examination and licensure without a SSN/ITIN.

Catalog Date: June 1, 2020

Total Units: 76 - 77

¹BIOL 430, 440, and 442 have prerequisites. Please check catalog course descriptions.
²Credit for NURSE 400 will be given after evaluation of LVN program transcripts.
³Credit for NURSE 410 will be given after evaluation of LVN program transcripts.

The LVN to RN Career Mobility Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Possession of a current clear and active California Licensed Vocational Nurse (LVN) license at the time of application and through program completion.
- A grade of "C" or better and a cumulative G.P.A. of 3.0 in the following science prerequisites: BIOL 430, BIOL 431, and BIOL 440 or 442.
- A grade of "C" or better and a cumulative G.P.A. of 2.5 in the following prerequisite courses: ANTH 310, ANTH 481, SOC 300, or SOC 480; ENGWR 300 or ENGWR 480; NUTRI 300; PSYC 300 or PSYC 480; and SPEECH 301.
- Completion of the latest edition of the Test of Essential Academic Skills (TEAS), developed by the Assessment Technologies Institute, LLC (ATI). A minimum composite score is necessary to be eligible for application to the program. Additional information is available from the ARC Nursing website: http://www.arc.losrios.edu/~nursing/
- Note: In-progress grades are not accepted for prerequisite courses.
- Note: The Nursing Admissions Committee will determine acceptance of pre-nursing courses taken outside the Los Rios Community College District.
- Note: The American River College Nursing Program reserves the right to make changes in the enrollment criteria, academic requirements, grading standards and other processes without notice at any time.

**Enrollment Process**

Eligible students are selected for the program according to the following steps:

- Applicants must obtain a Los Rios Community College District student identification number in order to access the online application.
- Detailed information about program requirements, enrollment criteria, enrollment applications and deadlines are available on the ARC Nursing website at www.arc.losrios.edu/ARC_Majors/Health_And_Education/Nursing.htm.
- Applications for enrollment, transcripts, and all other supporting documents must be submitted by the posted due date for the candidate’s application to be reviewed, and potentially placed into the pool for random selection. Only students who meet the educational and pre-nursing requirements and follow the enrollment procedures will be considered for the program. Meeting all these requirements does not guarantee acceptance into the program.
Only students who meet the educational and pre-nursing requirements and follow the pre-enrollment procedures will be considered for the program. Meeting all these requirements does not guarantee acceptance into the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- use clinical reasoning and knowledge based on the nursing program of study, evidence-based practice outcomes, and research-based policies and procedures as the basis for decision-making and delivery of comprehensive, safe, patient-centered care.
- use information and technology to communicate, manage knowledge, and mitigate error.
- participate in quality improvement activities to measure patient outcomes, identify hazards and errors, and to improve care.
- coordinate, collaborate, and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care that promotes quality of life.
- demonstrate delegation, management, and leadership skills that integrate systems thinking, communication, and change processes.
- demonstrate behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, leadership, ethical comportment, effective communication, clinical judgment, and competence, and mentorship.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

Career Information

“Employment of registered nurses is projected to grow 16 percent from 2014 to 2024, much faster than the average for all occupations. Growth will occur for a number of reasons, including an increased emphasis on preventive care; growing rates of chronic conditions, such as diabetes and obesity; and demand for healthcare services from the baby-boom population, as they live longer and more active lives” (Bureau of Labor Statistics, Dec. 2015. Job Outlook Registered Nurse. Retrieved from www.bls.gov/ooh/healthcare/registered-nurses.htm).

A.S. in Registered Nursing

Nursing is a health care profession that draws on nursing science, natural physical and biological sciences, as well as the social sciences and humanities. The Nursing Program consists of general education and nursing courses designed to prepare an entry-level registered nurse, who can function effectively in the rapidly changing healthcare environment. Simulated and actual patient-centered learning experiences provide for application of concepts. Each semester of education builds upon previous learning. The graduate of the Associate Degree Nursing program at American River College demonstrates entry-level competencies and meets the educational requirements necessary to take the National Council Licensure Examination (NCLEX-RN) to become licensed as a Registered Nurse and eligible for employment.

A grade of "C" or better is required in each nursing course for progression in the program. Clinical experiences may change with limited notice and occur morning, afternoon, evening, and weekends. Students are responsible for their own transportation. Total Units: 71 - 72

1BIOL 430, 440, and 442 have prerequisites. Please check catalog course descriptions.

2SPEECH 301 must be taken either prior to or concurrently with NURSE 400.

3ANTH or SOC must be taken either prior to or concurrently with NURSE 410.

The Registered Nursing Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

### Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Graduation from an accredited high school or successful completion of General Education Development (GED) or California High School Proficiency Exam (CHSPE). Graduates from outside the United States must have transcripts evaluated by an approved independent agency. These requirements are defined by the Nurse Practice Act, California Code of Regulations, Title 16, Division 14, ARTICLE 1, §1412.

- A grade of "C" or better and a cumulative G.P.A. of 3.0 in the following science prerequisites: BIOL 430, BIOL 431, and BIOL 440 or BIOL 442.

- A grade of "C" or better and a cumulative college GPA of 2.5 in the following courses: ENGWR 300 or ENGWR 480, NUTRI 300, and PSYC 300 or PSYC 480.

- Completion of the latest edition of the Test of Essential Academic Skills (TEAS), developed by the Assessment Technologies Institute, LLC (ATI). A minimum composite score is necessary to be eligible for application to the program.

- Note: In-progress grades are not accepted for prerequisite courses.

- Note: The Nursing Admissions Committee will determine acceptance of pre-nursing courses taken outside the Los Rios Community College District.

- Note: The American River College Nursing Program reserves the right to make changes in the enrollment criteria, academic requirements, grading standards and other processes without notice at any time.

### Enrollment Process

Eligible students are selected for the program according to the following steps:

- The Associate in Science Degree Registered Nursing Program at American River College uses a multi-criteria enrollment process. Students must reapply each semester. There is no waiting list.

- Detailed information about program requirements, enrollment criteria, enrollment applications and deadlines are available on the ARC Nursing website at
Applicants must obtain a Los Rios Community College District student identification number in order to access the online application.

Applications for enrollment, OFFICIAL transcripts, and all other supporting documents must be submitted by the posted due date for the candidate’s application to be reviewed, and potentially placed into the pool for random selection. Only students who meet the educational and pre-nursing requirements and follow the enrollment procedures will be considered for the program. Meeting all these requirements does not guarantee acceptance into the program.

Students wishing to transfer into the second, third, or fourth semester of the nursing program must contact the department office at (916) 484-8254. The office will provide a transfer packet and current information on space availability.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- use clinical reasoning and knowledge based on the nursing program of study, evidence based practice outcomes, and research based policies and procedures as the basis for decision-making and delivery of comprehensive, safe, patient centered care.
- use information and technology to communicate, manage knowledge, and mitigate error.
- participate in quality improvement activities to measure patient outcomes, identify hazards and errors, and to improve care.
- coordinate, collaborate, and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care that promotes quality of life.
- demonstrate delegation, management, and leadership skills that integrate systems thinking, communication, and change processes.
- demonstrate behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, leadership, ethical comportment, effective communication, clinical judgment and competence, and mentorship.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

Career Information

“Employment of registered nurses is projected to grow 16 percent from 2014 to 2024, much faster than the average for all occupations. Growth will occur for a number of reasons, including an increased emphasis on preventive care; growing rates of chronic conditions, such as diabetes and obesity; and demand for healthcare services from the baby-boom population, as they live longer and more active lives” (Bureau of Labor Statistics, Dec. 2015. Job Outlook Registered Nurse. Retrieved from www.bls.gov/ooh/healthcare/registered-nurses.htm).

Certificate of Achievement

Licensed Vocational Nurse (LVN) 30-unit option Certificate

The LVN 30-unit option program, which is required by the Board of Registered Nursing (California Code of Regulations §1429), provides the Licensed Vocational Nurse (LVN) the opportunity to take the National Council Licensure Examination (NCLEX-RN) once the registered nursing course requirements have been met and without meeting the degree requirements for the Associate in Science Degree. This option does not satisfy American River College's Nursing Program requirements nor lead to an Associate of Science Degree in Nursing.

A grade of "C" or better is required in each nursing course for progression in the program. Clinical experiences may change with limited notice and occur morning, afternoon, evening, and weekends. Students are responsible for their own transportation. Students are required to pay for uniforms, necessary equipment, malpractice insurance, background checks, drug testing, and health requirements.

Note: The California Board of Registered Nursing (BRN) protects the public by screening applicants for licensure in order to identify potentially unsafe practitioners. The law provides for denial of licensure for crimes or acts, which are substantially related to nursing qualifications, functions, or duties. At time of licensure application, all convictions must be reported except for minor traffic violation. (Business and Professions Code §480 and Nurse Practice Act ARTICLE 3 §2761).

Note: Providing a Social Security Number (SSN) OR Individual Taxpayer Identification Number (ITIN): Pursuant to Business and Professions Code §30(c) the BRN will not process any application for licensure unless the applicant provides a SSN or ITIN. The Nursing Practice Act provides for a unified examination and licensing application. Once an applicant passes the examination, a license is automatically issued. Under these circumstances the BRN cannot accept applications for the examination and licensure without a SSN/ITIN.

Total Units: 30

1BIOL 430, 440, and 442 have prerequisites. Please check catalog course descriptions.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Possession of a current clear and active California Licensed Vocational Nurse (LVN) license at the time of application and through program completion.
- Completion of a minimum of six months recent LVN work experience.
- A grade of "C" or better and a cumulative G.P.A. of 3.0 in the following science prerequisites: BIOL 430, BIOL 431, and BIOL 440 or BIOL 442.
- Note: In-progress grades are not accepted for prerequisite courses.
- Note: The Nursing Admissions Committee will determine acceptance of pre-nursing courses taken outside the Los Rios Community College District.
- Note: The American River College Nursing Program reserves the right to make changes in the enrollment criteria, academic requirements, grading standards and other processes without notice at any time.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Contact the Nursing Department at 916-484-8254 for an appointment with the Program Director. Objective counseling of this option and individual evaluation will occur at the appointment.
- Provide unofficial transcripts and course descriptions of physiology, microbiology, and previous LVN program at the appointment.
- Meeting these requirements does not guarantee acceptance into the program. Entry is subject to space availability.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- use clinical reasoning and knowledge based on the nursing program of study, evidence based practice outcomes, and research based policies and procedures as the basis for decision-making and delivery of comprehensive, safe, patient centered care.
- use information and technology to communicate, manage knowledge, and mitigate error.
- participate in quality improvement activities to measure patient outcomes, identify hazards and errors, and to improve care.
- coordinate, collaborate, and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care that promotes quality of life.
- demonstrate delegation, management, and leadership skills that integrate systems thinking, communication, and change processes.
- demonstrate behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, leadership, ethical comportment, effective communication, clinical judgment and competence, and mentorship.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

Career Information

The State of California provides the LVN with an option to take the National Council Licensure Examination (NCLEX-RN) after completing 30 college semester units. The LVN seeking this path to RN licensure will not receive a degree and this may impact employment opportunities. Additionally, reciprocal RN licensure in other states may be affected. LVNs considering moving out-of-state are encouraged to consult with that state's board of nursing for RN licensure requirements before committing to the 30-unit option.

Certificates
Certified Nurse Assistant Certificate

The Certified Nurse Assistant (CNA) certificate program provides instruction in the holistic care and health needs of people over 65 years of age, who live in long-term care facilities. Students who successfully complete the program receive a certificate of course completion and become eligible to take the California state exam to become a certified nurse assistant.

Catalog Date: June 1, 2020

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- The program reserves the right to make changes in the enrollment criteria, academic requirements, grading standards, and other processes without notice at any time.
- Students must complete course AH 110 with a "C" or better.
- Student will be required to submit a negative TB skin test completed within 90 days prior to class entrance or a negative chest x-ray completed within 90 days prior to class entrance.
- Spring semester student must submit proof of having a current influenza vaccine to participate in clinical experiences. Fall semester student must obtain an influenza vaccine when the vaccine becomes available.
- Student must submit a completed health history and physical exam completed within 90-days prior to class entrance. Physical exam must clear student to fully participate in clinical labs. Student must use and submit the ARC Nurse Assistant Medical Form.
- Student must meet the California Department of Public Health (CDPH) regulation that requires the student be able to listen, comprehend, and respond appropriately, both verbally and in action, to the English language at a minimum sixth grade level.
- CNA student-applicants must obtain a criminal screening prior to acceptance into the course.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Read the application process located at the ARC Nursing Department website and follow the directions.
- Admission to the course is by department consent only and determined after review of the applications.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain the California Administrative Code, Title XXII, Section 72527, as it relates to the role and responsibilities of the Certified Nursing Assistant regarding professionalism, ethics, and confidentiality.
- discuss resident rights, appropriate interaction with residents, families, and other members of the health care team.
- describe and demonstrate rehabilitation and restorative care with proper and safe body mechanics.
- explain what constitutes an emergency and the basics of emergency care required of a Certified Nurse Assistant.
- discuss and practice basic restraint use and associated safety measures and alternatives to restraints.
- differentiate common therapeutic diets.
- discuss and demonstrate basic care procedures required of a Certified Nurse Assistant.
- state and demonstrate protective measures to prevent the spread of infection.
Career Information

Certified Nurse Assistants (CNA) have a wide variety of work opportunities. The most common work placement is in long-term care facilities. Additionally, CNA work may be found in acute care settings, assisted care facilities, and rehabilitation care centers.

Baby Friendly Hospital Staff Certificate

This program fulfills the criteria for staff education as set by the Baby Friendly Hospital Initiative. It focuses on the physiology of attachment, bonding, and breastfeeding and the short- and long-term impacts of perinatal care practices on the mother-baby dyad. It grapples with the challenges of applying best-practice guidelines and model hospital policies to alleviate barriers for mothers choosing exclusive breastfeeding and to create environments that support maternal-infant biology and the newborn’s natural capabilities, allowing improved outcomes with less time and effort.

Total Units: 1

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- examine and explain the rationale for professional, national, and international policies that promote, protect, and support breastfeeding as a public health goal.
- identify human species-specific norms for growth and development and disease resistance based on the exclusively breastfeeding mother-baby dyad and explain the risks to the mother and infant of early introduction of artificial milk.
- communicate effectively about infant feeding, identifying teaching points appropriate for prenatal and postpartum women regarding breastfeeding and when educating or counseling parents who are using bottles and/or formula.
- evaluate current hospital practices in terms of barriers to maintaining mother-baby connectedness.
- devise solutions to alleviate common barriers to exclusive breastfeeding in the hospital setting, integrating concepts of system change.
- create an environment that supports the newborn’s natural capabilities.
- integrate concepts of the neurobiology of breastfeeding to address initiation and problem remediation and to support milk-supply maintenance issues.
- demonstrate techniques and skills to transition the newborn from one state of alertness to another and to help families perceive and understand the language and patterns of the newborn.
- describe essential components of community support for mothers to sustain breastfeeding beyond the early weeks.
- discuss contraindications to breastfeeding in the United States and identify acceptable medical reasons for supplementation of breastfed babies based on national and international authorities.
- uncover and explore personal values and attitudes related to the birthing and breastfeeding experience.

Career Information

Hospital staff require upgraded education to meet Joint Commission accreditation standards for lactation competency and support services. SB 402, signed into law in 2013, requires all perinatal hospitals in California to implement all Ten Steps to Successful Breastfeeding as adopted by Baby Friendly USA, or an equivalent evidence-based process recognized by the California Department of Public Health, by January 1, 2025. An expanding number of local hospitals, including all those within Sacramento County, have signed letters of intent and are in the process of meeting, or have already met, Baby Friendly Hospital Initiative standards, requiring all staff to obtain this level of preparation. This means that registered nurses, particularly those in the perinatal field, will require this preparation to maintain their career. This preparation will be of significant benefit to the new nursing graduate when competing for jobs in this field.
Home Health Aide Certificate

This certificate expands on previously learned Certified Nurse Assistant (CNA) theory to incorporate the holistic care and health needs of the elderly homebound person. This program introduces the student to the roles and responsibilities of the home health aide. Students who successfully complete the course will receive a Certificate of Completion from the instructor. The State of California will certify the CNA as a Home Health Aide after successful course completion and without further testing.

Note: More information is available about NURSE 101 at the ARC nursing website in the NURSE 101 course information packet.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Student must submit one of the following items prior to the start of class: (A.) A copy of Certified Nurse Assistant (CNA) course completion certificate from a California Department of Public Health approved CNA program. Certificate must be signed and dated by the course instructor; OR (B.) A copy of unofficial program or college transcript denoting CNA course and date of completion; OR (C.) A copy of active status, California CNA certificate.

- Student must meet the English prerequisite: (A.) A student who received a CA state CNA certificate prior to 2005 must complete and submit the NURSE 101 English prerequisite. The English prerequisite is ESLW 50, ESLR 50, and ESLL 50; OR ENGWR 51 and ENGRD 15; OR evaluation through assessment at the ARC assessment center. Further information about the English prerequisite and the ARC assessment center can be found at the ARC Nursing website in the NURSE 101 course information packet; OR (B.) A student who received a CA state certified nurse assistant certificate in 2005, or after 2005, has already met the California state English requirement. It was required prior to entering a CNA program. Therefore, no English prerequisite submission is needed for NURSE 101.

- Student must submit completed health history and physical exam done within the last one year prior to the start of class. The health history and physical exam must be signed by the student and the health care provider. Physical exam must clear student to fully participate in clinical labs. Student must use the ARC Nurse Assistant Medical form provided in the NURSE 101 online information packet.

- Student must submit Tuberculin [TB] skin clearance test within the past six months prior to start of class. Or student must submit a TB clearance chest x-ray within one year prior to start of class.

- Student must submit proof of current influenza vaccine.

- Student must review the list of penal codes that determine automatic HHA certification denial. If student has been convicted of any crime on the list that student can not be enrolled in the NURSE 101 class. The California Department of Public Health (CDPH) automatic denial penal code list can be found at the ARC Nursing website in the NURSE 101 course information packet. If student has been convicted of any crime that is not listed on the automatic denial penal code list, the student must submit to CDPH the required forms for criminal clearance review. The student must have proof of criminal clearance before entering the NURSE 101 class. Information about conviction review and required review forms can be found at the ARC Nursing web site in the NURSE 101 information packet.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Student must submit completed, time-sensitive prerequisites. Student must refer to the the ARC Nursing website, NURSE 101 information packet, for complete information about course prerequisites and prerequisite submission deadline.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain and discuss the roles and responsibilities of the Home Health Aide (HHA).

- discuss and demonstrate documentation requirements of the HHA.

- describe how culture, religious/spiritual needs, lifestyle, and life experiences of the client and family can influence care provided by the HHA.

- describe and discuss the signs and symptoms of common diseases and disorders of the homebound client.

- provide basic personal care needs and a clean, safe, and healthy environment for the homebound client.
Allied Health (AH)

AH 110 Medical Language for Health-Care Providers

This course is an orientation to medical language. It covers the basic structure of medical terms and their components: prefixes, suffixes, roots, and combining forms with emphasis on meaning, spelling, and pronunciation. This course also builds a medical vocabulary applicable to the specialties of medicine, the systems of the body, names of major diseases, and terms used in physical examination, diagnosis, and treatment.

Upon completion of this course, the student will be able to:

- demonstrate a workable knowledge of medical terminology.
- analyze the structural design of medical terms.
- compare the meanings of terms with combinations of word elements.
- compose medical words with correct spelling and pronunciation.
- utilize medical terms as they apply to the systems of the body, including anatomy, physiology, disease, diagnosis, and treatment.
- compare and contrast the meanings of medical abbreviations and descriptive terms.
- translate health care reports/records accurately into clear, non-medical terms.

AH 112 Strategies for Student Success in Health Occupations

This course provides realistic and useful strategies to enhance success in reaching career goals associated with health occupations. It covers the necessary skills to determine a career path based on a realistic understanding of specific health occupations and associated aptitudes. Field trips may be required.

Upon completion of this course, the student will be able to:

- describe the evolution of health care beliefs and causes and treatments of disease from the inception of organized healthcare systems to care delivery models today.
- identify at least five current trends or projections related to the delivery of health care for the next several years.
- distinguish between the different types of health care facilities and insurance options available in the United States.
- identify the personal and professional characteristics, attitudes, and rules of appearance that apply to all health care professionals.
- compare and contrast the roles and responsibilities, scope of practice, educational requirements, personal characteristics, and employment opportunities for at least five different health care providers.
- research in depth at least one health care career that is of interest to him/her.
- identify and apply legal, ethical, and professional principles to common situations encountered in the health occupations.
- list the commonly recognized learning styles, assess his/her individual learning style, and develop strategies to maximize learning by utilizing that style.
- utilize professional verbal and non-verbal communication skills to establish and enhance the therapeutic/helping relationship inherent in health occupations.
- formulate a plan by identifying necessary resources to support college success including self-care, time management, peer and instructor support, study skills, and financial resources.
- investigate and apply the relationship between personal, cultural, and societal values with those of current and evolving trends in health care.
- accurately spell and pronounce common medical terms and abbreviations used in health occupations.
- apply basic math calculation to measures and calculations used in health care.

This course leads to the nurse assistant certification exam. It emphasizes the gerontological nursing assistant's role and responsibilities as a healthcare team member. It also covers principles of asepsis, infection control, resident care skills, and emotional, social, and spiritual needs of the resident.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and discuss Title 22 relative to the role and responsibilities of the Certified Nurse Assistant with regards to professionalism, ethics, and confidentiality.
- list and discuss patient rights.
- demonstrate medical asepsis for infection control.
- demonstrate emergency procedures and routine resident care skills.
- identify appropriate basic restraints and resident safety precautions.
- differentiate among common therapeutic diets.
- utilize proper body mechanics in resident moving, transfers, rehabilitation, and restorative care.
- effectively interact with clients, families, and other members of the healthcare team.
- integrate effective communication skills for the client with mental illness and decreased mental capacity.

This course focuses on home health nurse aide responsibilities: personal and rehabilitation nursing care in the home, skills of maintaining a safe home environment, meal planning and preparation, emotional care of the homebound, and home emergency procedures. NURSE 101 course information packet is available on-line at the ARC Nursing Program website.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe and discuss the expanded responsibilities of the certified nurse assistant in the role of home health aide.
- discuss and demonstrate documentation requirements of the home health aide.
- list body systems and their normal function.
- prioritize and describe changes in a client's function that would necessitate reporting to nurse supervisor.
- describe and discuss signs and symptoms of common diseases and disorders of the home client.
- describe how culture, lifestyle and life experience of the client and family can influence care provided.
- analyze the dietary requirements of the client and describe personal preferences and cultural and religious practices influencing nutritional status.
- discuss how the home health aide provides a clean, safe, and healthy environment for the home client.
- demonstrate sensitivity to the spiritual needs of the home client.

NURSE 305 Transition to Nursing, Patient, and Healthcare Concepts for the Associate Degree Nurse

**Units:** 5
**Hours:** 54 hours LEC; 108 hours LAB
**Prerequisite:** None.
**Enrollment Limitation:** Acceptance into the career mobility track of the Associate Degree Nursing Program.
**Transferable:** CSU
**Catalog Date:** June 1, 2020

This bridge course is designed for the California Licensed Vocational Nurse (LVN) who is admitted for advanced placement into the second year of the Associate Degree Nursing (Registered Nursing) Program. It introduces the concept based curriculum and the knowledge, skills, and attitudes essential to nursing. It focuses on nursing management of the patient's response to health alterations as well as health promotion through the application of nursing knowledge, nursing process, and evidence based practice. The clinical laboratory experience is designed to facilitate the development of the core competencies of clinical practice: communication, leadership, patient centered care, professionalism, safety, teamwork and collaboration, evidence based practice, informatics and technology, and quality improvement. Emphasis is placed on health assessment across the lifespan, family communication, patient education, teamwork and collaboration, role transition, clinical judgment, and management of care.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify best current evidence from scientific and other credible sources as a basis for nursing practice and clinical decision-making.
- use information technology in the provision of patient care.
- participate in the implementation of quality improvement strategies to improve patient care.
- collaborate and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care.
- use leadership skills in the provision of safe, quality patient care.
- participate in behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, ethical comportment, effective communication, and clinical judgment and competence.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

NURSE 310 Pharmacology and Implications for Health Care Practitioners

**Units:** 3
**Hours:** 54 hours LEC
**Prerequisite:** None.
**Transferable:** CSU
**Catalog Date:** June 1, 2020

This course presents the principles of drug therapy as they apply to treating disease and maintaining health. It covers the metabolism and action of drugs, absorption, duration of action, distribution in the body, and adverse drug reactions. Major drug classes are included, as well as their related implications for people receiving these drugs. How these drugs affect the body systems are also covered. Administration of the medications according to nursing professional standards and health care professionals are discussed.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- differentiate between pharmacokinetics, pharmacodynamics, and pharmacotherapeutics.
- utilize pharmacology concepts and their application to patient care in the treatment of disease and the promotion of health in the major body systems.
- integrate a knowledge of pharmacology and its application to patient care as it applies to fluid, electrolyte and nutritional imbalance, control of inflammation, allergy and organ rejection, prevention and treatment of infection, and treatment of malignant neoplasms.
- evaluate how client lifespan considerations and other factors affect drug absorption, distribution, metabolism, and excretion.
• analyze how drug forms affect drug absorption, distribution, metabolism, and excretion.

• assess how the major drug classifications affect the body and recognize the implications to the health care practitioner with each classification.

NURSE 320 Medical Dosage Calculations

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Advisory: MATH 25 and 41
Transferable: CSU
Catalog Date: June 1, 2020

This course prepares health professionals to calculate oral and parenteral drug dosages with a focus on safety and accuracy. Three systems of measurement and conversion are practiced. This course also provides experience in understanding drug orders and drug labels. Calculation accuracy is emphasized by clinical scenarios and case study assignments.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate problems using addition, subtraction, multiplication, and division of whole numbers, fractions, and decimals.

• assess drug label and package inserts accurately.

• calculate drug doses using conversion methods, which include: ratio/proportion, formula method, and dimensional analysis.

• verify appropriate equipment for medication administration.

• write and interpret a list of common abbreviations used in drug orders and dispensing.

• evaluate written drug orders and explain how to administer medication utilizing the three checks and the six patient rights.

NURSE 341 Introduction to the Childbirth Support Profession: A DONA-Approved Birth Doula Workshop

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course prepares individuals to become professional labor support providers (birth doulas) and meets the didactic requirements for certification as a birth doula through DONA (Doulas of North America) International. Course content is also beneficial for current healthcare providers and those preparing for professions in the perinatal field. This course provides a foundation in reproductive anatomy and physiology, fetal development, perinatal care practices, and clinical terminology. It covers professional standards and ethics, business practices, values clarification, and communication skills. It introduces techniques for providing comfort, examines methods for facilitating the labor process and supporting the mother-baby dyad, and focuses on the emotional and psychological aspects of the birth experience with its significance for women's future self-concept and self-efficacy.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain common terms, processes, and procedures related to reproductive anatomy and physiology, fetal development, and perinatal care.

• investigate the long-term effects of the birth experience on women's sense of self.

• evaluate the purposes and benefits of continuous labor support in relation to the sources of stress in labor and effects on outcomes.

• distinguish the role of the doula from that of other perinatal care providers and significant others.

• analyze life impacts and commitments inherent in the doula vocation.

• apply described methods for obtaining clients, adjusting fees, and maintaining business records.

• design a personalized plan for prenatal contact and postpartum closure that develops the tone of the supporting relationship.

• demonstrate reflective listening, therapeutic communication skills, and measures for establishing professional relationships, and describe the doula's role in care provider-client communications.
• assess criteria for responding to values differences with clients.
• apply appropriate supportive interventions based on the physiology and psychology in each stage and phase of labor including specific techniques for selected difficult labor situations.
• employ physiologic methods of support in the immediate postpartum-newborn period with recognition of maternal and newborn needs and the necessary and usual elements of medical and nursing care provision.
• evaluate the worth of professional organization membership for the practicing doula.
• support the importance of scope-of-practice and professional-ethics standards.

NURSE 370 Focused Learning in the First Year of the ARC Nursing Program

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Corequisite: NURSE 400 or 410
Transferable: CSU
Catalog Date: June 1, 2020

This course offers strategies to enhance student success in the first year of the Associate Degree Nursing (ADN) program. It provides an assessment of personal aptitudes, learning styles, strengths, and weaknesses in written and verbal communication, and potential barriers to successful completion of the nursing program. It also provides the development of personal and professional support systems and development of a purposeful analytic process that supports reasoned decisions and judgments as a health care professional. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• prioritize factors which promote and inhibit success in a nursing program.
• identify personal learning style and determine effective learning strategies.
• incorporate critical thinking skills into nursing clinical and theory practice appropriate to the semester of enrollment in the nursing program.
• utilize specific Assessment Technologies Institute (ATI) materials to strengthen understanding of course content.
• evaluate current level of clinical performance and compare with Registered Nurse standards of competent performance according to the Department of Consumer Affairs Business and Professions Code.
• utilize medical terminology and medical abbreviations to read medical documents.
• prioritize the qualities/behaviors of a successful registered nurse.
• apply strategies for utilizing the NURSE 400 or NURSE 410 worksheet to successfully manage a clinical workload.
• explain the rationale for clinical tips/tools/timesavers for clinical success.
• analyze common laboratory and diagnostic tests ordered in the hospital setting, including causes of increased and decreased values.
• utilize basic math skills to safely calculate drug dosages.

NURSE 372 Focused Learning in the Second Year of the ARC Nursing Program

Units: 1.5
Hours: 27 hours LEC
Prerequisite: None.
Corequisite: NURSE 420 or 430
Transferable: CSU
Catalog Date: June 1, 2020

This course offers strategies to enhance student success in the second year of the Associate Degree Nursing (ADN) program. This course reviews personal aptitudes, learning styles, strengths, and weaknesses in written and verbal communication as well as potential barriers to completion of the nursing program. Course content addresses the specific theory and clinical needs of NURSE 420 and NURSE 430 while focusing on the development of critical thinking skills used when managing a group of patients in the clinical setting. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• evaluate factors which promoted or inhibited success in prior Associate Degree Nursing courses.
• identify personal learning style and determine effective learning strategies.
• incorporate critical thinking skills into nursing theory and clinical practice appropriate to semester of enrollment in the nursing program.
• utilize specific Assessment Technologies Institute (ATI) and Elsevier/Evolve materials to strengthen understanding of specific semester enrollment course content.
• evaluate current level of clinical performance and compare with Registered Nurse standards of competent performance according to the Department of Consumer Affairs.
• evaluate potential for successful RN licensure.
• utilize advanced math skills to safely calculate intravenous infusion drug doses.

NURSE 391 Supporting the Mother-Baby Connection: Evidence-Based Practices for Perinatal Care

Same As: HLACT 301
Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is designed for practicing health care professionals as well as students preparing to enter the fields of nursing, nutrition, health education, or early childhood development. It focuses on the physiology of attachment, bonding, and breastfeeding and the short- and long-term impacts of perinatal care practices on the mother-baby dyad. It grapples with the challenges of applying best-practice guidelines and model hospital policies to alleviate barriers for mothers choosing exclusive breastfeeding and creating environments that support maternal-infant biology and the newborn’s natural capabilities, allowing improved outcomes with less time and effort. This course meets Board of Registered Nursing continuing education requirements and, when combined with requisite supervised clinical experience, fulfills all criteria for staff education as set by the Baby Friendly Hospital Initiative. This course is not open to students who have completed HLACT 301.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• examine and explain the rationale for professional, national, and international policies that promote, protect, and support breastfeeding as a public health goal.

• identify human species-specific norms for growth and development and disease resistance based on the exclusively breastfeeding mother-baby dyad and explain the risks to the mother and infant of early introduction of artificial milk.

• communicate effectively about infant feeding, identifying teaching points appropriate for prenatal and postpartum women regarding breastfeeding and when educating or counseling parents who are using bottles and/or formula.

• evaluate current hospital practices in terms of barriers to maintaining mother-baby connectedness.

• devise solutions to alleviate common barriers to exclusive breastfeeding in the hospital setting, integrating concepts of system change.

• create an environment that supports the newborn’s natural capabilities.

• integrate concepts of the neurobiology of breastfeeding to address initiation and problem remediation and to support milk-supply maintenance issues.

• demonstrate techniques and skills to transition the newborn from one state of alertness to another and to help families perceive and understand the language and patterns of the newborn.

• describe essential components of community support for mothers to sustain breastfeeding beyond the early weeks.

• discuss contraindications to breastfeeding in the United States and identify acceptable medical reasons for supplementation of breastfed babies based on national and international authorities.

• uncover and explore personal values and attitudes related to the birthing and breastfeeding experience.

NURSE 400 Nursing, Patient, and Healthcare Concepts I

Units: 10.5
Hours: 81 hours LEC; 324 hours LAB
This course introduces essential concepts of safe and effective nursing care for patients across the lifespan, utilizing the nursing process and evidence based practice. It focuses on the introduction of the wellness/illness continuum and the core competencies of clinical practice. The competencies include communication, leadership, patient centered care, professionalism, safety, teamwork and collaboration, evidence based practice, informatics and technology, and quality improvement. The clinical laboratory experience is designed to facilitate the fundamental acquisition of the core competencies of clinical practice. Emphasis is placed on health assessment across the lifespan, recognition of alterations from the norm, safety for patients and providers of care, interpersonal communication, patient centered care, ethics, and safe, evidence based technical skill interventions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify best current evidence from scientific and other credible sources as a basis for nursing practice and clinical decision-making.
- use information technology in the provision of patient care.
- participate in the implementation of quality improvement strategies to improve patient care.
- collaborate and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care.
- use leadership skills in the provision of safe, quality patient care.
- participate in behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, ethical comportment, effective communication, clinical judgment, and competence.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

NURSE 410 Nursing, Patient, and Healthcare Concepts II

This course applies concepts of safe and effective nursing care for children, adults, and families, concentrating on healthcare needs on the wellness/illness continuum across the lifespan. It focuses on nursing management of the patient's response to health alterations as well as health promotion for childbearing and childrearing families through the application of nursing knowledge, nursing process, and evidence based practice. The clinical laboratory experience is designed to facilitate the development of the core competencies of clinical practice: communication, leadership, patient centered care, professionalism, safety, teamwork and collaboration, evidence based practice, informatics and technology, and quality improvement. Emphasis is placed on family communication, patient education, teamwork and collaboration, clinical judgment, and management of care.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify best current evidence from scientific and other credible sources as a basis for nursing practice and clinical decision-making.
- use information technology in the provision of patient care.
- participate in the implementation of quality improvement strategies to improve patient care.
- collaborate and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care.
- use leadership skills in the provision of safe, quality patient care.
- participate in behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, ethical comportment, effective communication, and clinical judgment and competence.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

NURSE 420 Nursing, Patient, and Healthcare Concepts III

This course introduces essential concepts of safe and effective nursing care for patients across the lifespan, utilizing the nursing process and evidence based practice. It focuses on the introduction of the wellness/illness continuum and the core competencies of clinical practice. The competencies include communication, leadership, patient centered care, professionalism, safety, teamwork and collaboration, evidence based practice, informatics and technology, and quality improvement. The clinical laboratory experience is designed to facilitate the fundamental acquisition of the core competencies of clinical practice. Emphasis is placed on health assessment across the lifespan, recognition of alterations from the norm, safety for patients and providers of care, interpersonal communication, patient centered care, ethics, and safe, evidence based technical skill interventions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify best current evidence from scientific and other credible sources as a basis for nursing practice and clinical decision-making.
- use information technology in the provision of patient care.
- participate in the implementation of quality improvement strategies to improve patient care.
- collaborate and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care.
- use leadership skills in the provision of safe, quality patient care.
- participate in behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, ethical comportment, effective communication, and clinical judgment and competence.
- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.
This course adapts concepts of safe and effective nursing care for adults experiencing acute and chronic alterations across the wellness/illness continuum. It focuses on nursing management of the adult patient's response to physical and mental health alterations through the application of nursing knowledge, nursing process, and evidence-based practice. The clinical laboratory experience is designed to facilitate the development of the core competencies of clinical practice: communication, leadership, patient-centered care, professionalism, safety, teamwork and collaboration, evidence-based practice, informatics and technology, and quality improvement. Emphasis is placed on clinical judgment, inter-professional communication, patient-centered care, safety, and team collaboration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use clinical reasoning and knowledge based on the nursing program of study, evidence-based practice outcomes, and research-based policies and procedures as the basis for decision-making and delivery of comprehensive, safe, patient centered care.

- use information and technology to communicate, manage knowledge, and mitigate error.

- participate in quality improvement activities to measure patient outcomes, identify hazards and errors, and to improve care.

- coordinate, collaborate, and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care that promotes quality of life.

- demonstrate delegation, management, and leadership skills that integrate systems thinking, communication, and change processes.

- demonstrate behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, leadership, ethical comportment, effective communication, clinical judgment and competence, and mentorship.

- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

NURSE 430 Nursing, Patient, and Healthcare Concepts IV

Units: 10.5
Hours: 81 hours LEC; 324 hours LAB
Prerequisite: NURSE 420 with a grade of "C" or better
Transferable: CSU
Catalog Date: June 1, 2020

This course integrates concepts of safe and effective nursing care for individuals and groups of patients across the lifespan. It is designed to facilitate integration of knowledge, evidence based practice, and clinical judgment in the management of patients with complex healthcare needs, and to facilitate the student's transition into the profession of nursing. Clinical judgment skills are enhanced through advanced clinical experiences and role transition opportunities. The clinical laboratory experience is designed to facilitate the development and demonstration of the core competencies of clinical practice: communication, leadership, patient centered care, professionalism, safety, teamwork and collaboration, evidence based practice, informatics and technology, and quality improvement. Emphasis is placed on evidence based practice, quality improvement, team collaboration concepts, managing care for groups of patients, the role of the nurse in a systems based practice, inter-professional collaboration, legal precepts, and health policy.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- use clinical reasoning and knowledge based on the nursing program of study, evidence based practice outcomes, and research based policies and procedures as the basis for decision-making and delivery of comprehensive, safe, patient centered care.

- use information and technology to communicate, manage knowledge, and mitigate error.

- participate in quality improvement activities to measure patient outcomes, identify hazards and errors, and to improve care.

- coordinate, collaborate, and communicate with diverse patients, families, and the interdisciplinary healthcare team to plan, deliver, and evaluate care that promotes quality of life.

- demonstrate delegation, management, and leadership skills that integrate systems thinking, communication, and change processes.

- demonstrate behavior that reflects the values of the nursing profession including self-awareness, a spirit of inquiry, leadership, ethical comportment, effective communication, clinical judgment and competence, and mentorship.

- adhere to standards of practice within legal, ethical, and regulatory frameworks of the professional nurse.

Associate Degree for Transfer

A.S.-T. in Nutrition and Dietetics

The Associate in Science in Nutrition and Dietetics for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Science in Nutrition and Dietetics for Transfer (AS-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

The Associate in Science in Nutrition and Dietetics for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- explain the principles of nutrition and their effects on overall health status and chronic disease risk.
- analyze nutritional adequacy of a diet and recommend dietary changes to meet nutrition guidelines.
- demonstrate an understanding of the relationships between chemistry, biology, and nutrition.
- assess the validity of sources of nutrition information.
- interpret the findings of current nutrition research.

### Career Information

This degree is designed to facilitate students' successful transfer to four-year colleges that prepare them to become registered dietitians. Organizations or companies that employ registered dietitians include hospitals, nursing homes, school food services, other health related facilities, college food service departments, restaurants, public health agencies, nutrition programs, WIC programs, Meals on Wheels, health clubs, weight management clinics, community wellness centers, food companies, contract food management companies, and food distribution companies.

### Certificate of Achievement

#### Dietary Manager/Dietary Service Supervisor Certificate

The Dietary Manager/Dietary Service Supervisor Certificate provides certification for employment in nutritional care and dietary management within a health-care facility, such as a skilled nursing facility. This certificate program meets the California State Department of Health Service’s requirements for certification.

#### Catalog Date: June 1, 2020

Total Units: 20

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify the location of applicable laws and regulations and determine compliance to regulatory requirements (state and federal), and determine acceptable standards of care in dietary services.
This course provides an introduction to the profession of dietetics, with emphasis on a career as a dietary services supervisor (DSS). It examines current public policy and legislation related to the profession. It also includes the fundamentals of basic nutrition, individual's nutritional needs throughout the life cycle, health promotion, and disease prevention.

Upon completion of this course, the student will be able to:

- identify the role and limitations (no scope of practice) of the Dietary Service Supervisor under law (Title 22) for the Operation of Food Service.
- participate with the Registered Dietitian (RD) in the timely review and revision of the facility's policies and procedures to ensure that they are in compliance with regulations and standards of practice.
- assist in the development of Quality Assurance Programs to monitor staff practices for compliance, to determine training needs, and to evaluate resident/patient satisfaction.
- assist in the development of planned and disaster menus to meet the nutritional needs of resident/patient in accordance with the Recommended Dietary Allowances (RDAs).
- ensure that therapeutic menus and standardized recipes are followed, served and consumed in their appropriate form, as approved by RD.
- ensure that food is served by methods that conserve nutritive value, flavor and appearance. Ensure that food is prepared in a form designed to meet individual needs and substitutions are of similar nutritive value.
- maintain current profile cards, and provide assistive devices as needed.
- ensure that food is stored, prepared, distributed, and served under sanitary conditions to prevent food borne illness. This includes the sanitation oversight of equipment such as internal components of the ice machine, nurse pantry refrigerators and trash disposal systems.
- ensure that the food department runs smoothly, including food ordering and storage, according to applicable state requirements, staffing schedules, employee health, labor relations, safety programs and other duties as assigned by administration.

Career Information

Certified Dietary Manager in a Long Term Care Facility.

Nutrition (NUTRI)

NUTRI 130 Introduction to Dietary Management

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course provides an introduction to the profession of dietetics, with emphasis on a career as a dietary services supervisor (DSS). It examines current public policy and legislation related to the profession. It also includes the fundamentals of basic nutrition, individual's nutritional needs throughout the life cycle, health promotion, and disease prevention.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the roles that dietetic professionals play in the health care setting
- describe the role and limitations of the dietary service supervisor under law (Title 22 and Omnibus Budget Reconciliation Act (OBRA))
- determine acceptable standards of care in dietary services and evaluate compliance to regulatory requirements (county, state, and federal)
- describe the relationship of food service and nutrition care to the operation of the total facility
- categorize the known nutrients, their functions and food sources, and apply this knowledge to individual needs
- distinguish between the various requirements and recommendations of nutrients for individuals during various stages of the life cycle
- identify food patterns as related to religious practices, cultural customs, psychological and family structure, and health beliefs
- identify reliable sources of nutrition information

NUTRI 132 Management of the Dietary Department in Health Care Facilities

Units: 3
This course reviews the standards of management and food preparation as they apply to the quantity of food production in health care facilities. Topics include types and components of food production systems, work flow, menu implementation, emergency planning, maintenance of equipment, food production procedures, dietary staff schedules, and management.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the organization of the food service department, including management principles and responsibilities
- develop employee schedules according to menu needs, preparation work, and meal hours
- describe methods of effective verbal and written communication
- assist in the development of training techniques and evaluation of staff
- describe a total food production system, including a convenience food system and a combination of systems, and compare advantages and disadvantages of each
- develop production guides, complete production records, and requisition food according to menu needs
- formulate policies and procedures for buying, receiving, storing, and managing inventory with respect to budget
- develop standardized recipes, determine yields and costs, and apply appropriate terminology
- supervise quantity production of meals that meet nutrition guidelines, cost parameters, and consumer acceptance

---

### NUTRI 133 Clinical Experience in Health Care Facilities

This course offers clinical experience in health care facilities and is performed under professional supervision. Topics include residents’ rights in food service, disaster relief feeding programs, getting ready for state inspection, and injury and illness prevention programs. A portion of this course may be offered in a TBA component of 90 hours which will include professionally supervised clinical experience in dietary departments of acute care hospitals and long term care facilities.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- chart the flow of food from receiving to service in a health care facility
- write a clear, inclusive job description of each staff member within a facility
- assign duties for each staff member and schedule hours of work for one week
- implement an in-service training session for a specific task
- identify local markets and purveyors
- demonstrate ability to receive, weigh, count, store, locate, and inventory food and supplies received
- analyze cost of food through waste studies, convenience foods versus foods made from basic ingredients, avoiding repetition of leftovers
- develop standardized recipes to prepare food requisite for one day’s menu, including cost
- demonstrate the operation, care, and cleaning of standard commercial kitchen equipment to meet federal, state and local regulations
- prepare time sheets, payroll records, and other employee records
- demonstrate the procedure for handling accidents and complete an accident report form
- determine vulnerable aspects in terms of microbial or other contamination in a food service operation
- develop techniques for attractive presentation of food
plan menus and manage resources during emergencies and/or crisis situations

NUTRI 134 Nutritional Care Management

Units: 3
Hours: 54 hours LEC
Prerequisite: NUTRI 130 with a grade of "C" or better
Corequisite: NUTRI 135
Catalog Date: June 1, 2020

This course is a study of nutrition therapeutic diets used in health care facilities. It emphasizes the modification of diets for various dietary needs of the long-term care resident.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply appropriate nutrition care regulations for long-term care (LTC) residents
- assess food needs related to registered dietitians' (RD) assessment
- compare various therapeutic diets
- assist in the implementation of planned and disaster menus to meet the nutritional needs of residents/patients in accordance with recommended dietary allowances (RDA)
- accurately follow a physician's diet order
- maintain patient dietary files and complete minimum data set (MDS) forms
- choose nutritionally appropriate food substitutes in menus for residents representing diverse cultures and/or religious beliefs

NUTRI 135 Clinical Experience in Nutritional Care Management

Units: 2.5
Hours: 18 hours LEC; 90 hours LAB
Prerequisite: NUTRI 130 with a grade of "C" or better
Corequisite: NUTRI 134
Enrollment Limitation: Current TB clearance and other immunizations required by clinical facility.
Catalog Date: June 1, 2020

This course provides clinical experience in nutritional care management. Topics include disorders of the gastrointestinal tract, diabetes, wasting disorders, nutrition, and mental health. A portion of this course may be offered in a TBA component of 90 hours which will include professionally supervised clinical experience in dietary departments of acute care hospitals and long term care facilities.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assist registered dietitians (RD) in the development of regular and therapeutic diets according to the recommended dietary allowances (RDA)
- accurately follow a physician's diet order and provide appropriate support
- maintain patients dietary files, and complete minimum data set (MDS) forms
- develop effective interviewing skills to gather information on patients' food preferences
- recognize potential problems that need to be reported immediately to RD
- serve food by methods that conserve nutritive value, flavor, and appearance
- ensure that foods are consumed in the appropriate form as prescribed by a clinical professional
- select nutritionally appropriate food substitutes
- modify diet texture and consistency to meet resident/patients' needs and food preferences
- compare administrative policies and procedures from various health care facilities
- implement an in-service training session
NUTRI 294 Topics in Nutrition and Foods

This course provides opportunities to study current, controversial topics in nutrition which are either not included in current offerings or require emphasis beyond that offered in existing courses. A portion of this course may be offered in a TBA component of 4.5-27 hours which may include reading peer-reviewed research studies regarding a particular nutrition issue and formulating conclusions based upon study results and/or evaluating the scientific validity of a supplement claim.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Apply basic nutrition concepts to gain a greater understanding of contemporary nutrition issues
- Analyze nutrition topics from various perspectives
- Discriminate among various nutrition research findings
- Develop conclusions regarding particular nutrition issues

NUTRI 295 Independent Studies in Nutrition and Foods

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

NUTRI 300 Nutrition

This course is an in-depth study of the essential nutrients and their functions, and the chemical compositions of foods and their utilization in the body. It includes discussion of the nutritional values of foods, current topics in nutrition, and an individual's nutrition needs throughout the life cycle.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the physiological function of the gastrointestinal tract including how the digestive system breaks down food, absorbs and transports the nutrients, and excretes undigested material.
- describe the metabolic functions of the six classes of nutrients and the physiological complications resulting from dietary deficiencies or toxicities.
- identify nutrient-dense food sources for the six classes of nutrients.
- explain how nutrients and non-nutrients interact to influence digestion, absorption, metabolism, and excretion.
- distinguish between the changes in nutrient requirements and dietary recommendations from infancy through old age, including pregnancy and lactation.
- explain the components of an individual’s energy/calorie needs and the effects of energy/calorie imbalance on body weight.
- analyze nutritional adequacy of a diet and make changes to meet nutrition guidelines.
• utilize the claims, nutrition facts, and the ingredient list on food packages to make healthier food choices.

• apply scientific principles to analyze and evaluate nutrition information available in print and electronic media, the Internet, dietary supplements, and weight loss programs to distinguish between reliable and unreliable sources.

• discuss the relationship between food intake and nutrition, weight management, human physiology, athletic performance, overall health, and chronic disease risk.

NUTRI 302 Nutrition for Physical Performance

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
General Education: AA/AS Area III(b); AA/AS Area IV
Catalog Date: June 1, 2020

This course presents a comprehensive study of nutrition and fitness as they apply to fitness, sport skill training, and athletic performance. It includes an in-depth study of essential nutrients and functions, chemical compositions of foods and their use in the body as they relate to physical performance, muscle strength development, cardiovascular fitness, and body composition.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the interrelationship of nutrition, fitness, and the physiological effects of exercise.

• explain how progressive fitness training is influenced by nutritional intake and alters nutritional requirements.

• identify the known nutrients, their functions, and food sources.

• identify food sources of energy-yielding nutrients used as fuels by the human body and estimate the energy requirements for various sports and activities.

• explain how anaerobic and aerobic energy systems are utilized during exercise and affected by fitness training.

• explain the special nutritional requirements pre-exercise, during exercise, and post-exercise.

• analyze the importance of proper water intake, hydration status, and electrolyte balance in physical activities.

• analyze the diet in terms of nutrient and energy content, and using accepted scientific nutrition principles design a diet recommended for an individual’s optimal physical performance.

• evaluate sources of information for validity and reliability in relation to nutrition and exercise.

• evaluate the effectiveness and recognize the safety concerns of various nutritional supplements.

• apply nutrition knowledge to individual needs as they relate to both the recreational and competitive athlete.

NUTRI 305 Nutrition for Health

Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300: OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course presents a study of nutrition and fitness designed to increase an awareness of food, nutrition, and physical activity and their interrelationships. Topics include diet selection and food preparation. This course is designed for those interested in general wellness.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• list the six major nutrients and their relationship to the U.S.D.A. Dietary Guidelines for Americans.

• analyze individual dietary intake and identify areas of excess or deficiency.

• compare intake of specific nutrients with the current Dietary Reference Intakes (DRIs) and correlate dietary intake with recommendations for optimal health.
apply principles of food selection and preparation for planning healthy diets.

evaluate the relationships between nutrition and fitness.

NUTRI 307 Nutrition for Fitness

Same As: KINES 402
Units: 2
Hours: 36 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the basic principles of nutrition and the interactions between nutrition and fitness training. Topics include dietary practices and nutrient intake modifications that affect physical performance, including intake of energy nutrients, vitamins, water, electrolytes, and dietary supplements. It also covers the study of body weight and body composition, as well as factors that affect body weight and the effect of body composition on physical performance. This course is not open to students who have completed KINES 402.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the basic principles of nutrition, including classification of essential nutrients and identification of key nutrients of various foods.
- explain the role of nutrients for achieving optimal fuel and energy utilization for physical performance.
- critique dietary programs for weight control.
- evaluate the effectiveness and recognize the safety concerns of various dietary supplements.
- explain how nutrient intake relates to health status and the development of chronic disease.
- incorporate current dietary recommendations into planning healthy diets for physically active persons.
- describe the importance of proper water and electrolyte regulation in terms of safety, health, and exercise performance.
- explain the causes and symptoms of nutrient deficiency and toxicity.

NUTRI 310 Cultural Foods of the World

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D7; IGETC Area 4G
Catalog Date: June 1, 2020

This course offers an anthropological perspective of traditional and contemporary food customs and cultures. Western and non-western food customs are compared including their social, religious, economic, and aesthetic significance. Included are ethnocentrism, gender-related stereotypes, and racism as they relate to the availability, distribution, and preparation of food throughout the world. The nutritional status of various cultures as it relates to geographic, agricultural and socioeconomic factors is studied. This course is not open to students who have completed NUTRI 481.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the traditional food habits, common foods, meal patterns, special occasion foods, food taboos, and the role of food from various regions of the world.
- identify food species important to geographic areas of the world.
- compare traditional food habits with contemporary food habits of the major cultural groups in the United States.
- analyze similarities and differences in the nutritional contributions from comparative ethnic foods.
- identify food patterns as related to religious practices, cultural customs, and health beliefs.
- research other cultures' beliefs and food practices.
- compare regional food in the United States to migration routes and food from around the world.
analyze development of personal food habits and health beliefs derived from one's cultural background.

analyze nutritional contributions from comparative cultural foods and their relationships to health and disease.

examine food practices of various cultural groups and relate those to personal beliefs and practices.

NUTRI 320 Children's Health, Safety and Nutrition

Same As: ECE 415
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
C-ID: C-ID ECE 220
Catalog Date: June 1, 2020

This course examines basic nutrition, health, and safety needs of children from the prenatal period through school age. Topics include introduction to early childhood curriculum, laws, regulations, standards, policies, and procedures related to child health, safety, and nutrition. It emphasizes integrating and maintaining the optimal health, safety, and nutritional concepts in everyday planning and program development for all children, along with the importance of collaboration with families and health professionals. This course is not open to students who have taken ECE 415.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the interrelationship between health, safety, and nutrition as it relates to the well-being of children.
- develop various methods of collaboration with families and teachers that promote the health, safety, and nutrition of children.
- identify community resources that promote the health, safety, and nutrition of children.
- evaluate assessment tools and policies that protect the health, safety, and nutrition of children in child care settings.
- employ safe food handling techniques for preventing food-borne illnesses.
- assess the general symptoms and management of common infectious diseases that may occur in childhood.
- identify potential hazards in children's environments and describe how to make them safer.
- identify nutrient needs during fetal development, infancy, and childhood.
- identify and explain the major nutrients and their food sources.
- evaluate a child's nutrient intake by comparing it with current nutrition standards and recommendations.
- compare nutrition, health, and safety practices from the perspective of culturally diverse communities.

NUTRI 321 Nutrition and Biochemistry of Human Lactation

Same As: HLACT 322
Units: 1
Hours: 18 hours LEC
Prerequisite: NUTRI 300 with a grade of "C" or better
Advisory: BIOL 102
Transferable: CSU
Catalog Date: June 1, 2020

This course addresses dietary recommendations for lactating women and for infants and young children with an emphasis on breastfeeding as the evidence-based norm. It also covers cultural and physiologic weaning practices and appropriate complementary foods. Primary topics include comparison of human milk with milks of other mammals and with other products and artificial baby milks, the array of individual biochemical and biological components in human milk, and their multiple nutritional and bioactive functions with a focus on immunologic components. Toxicology and pharmacology related to human milk and lactation are addressed. This course is not open to students who have completed HLACT 322.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recommend dietary choices for lactating women with consideration of health status and cultural or lifestyle preferences and evaluate the need for further lactational or nutritional services.
• evaluate infant and young child intake based on international standards for best practices with reference to caloric and volume requirements and adequacy of key nutrients and determine the need for further lactational or nutritional services.

• explain the rationale for current breastfeeding recommendations and the health and nutritional effects for both mother and child.

• correlate maternal dietary intake with the possible effects on milk volume and composition and describe the adaptive nature of human milk as well as the range of causes for variability.

• describe the detrimental effects of unclear definitions of breastfeeding on development of a sound evidence base for infant and young child feeding recommendations.

• compare human milk with milks of other mammals and with other products and artificial baby milks, discuss the array of individual components in human milk, and explain their multiple nutritional and bioactive functions.

• discuss principles of lactational pharmacology and toxicology as they relate to medications, vaccination, environmental chemicals, and drugs of abuse.

NUTRI 324 Nutrition for Healthy Aging

Same As: GERON 340
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ELSLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course focuses on the nutrition of older adults. Topics include the effects of nutrition on health and well-being and the physiologic changes in aging, the effects of smell and taste on nutritional status, age-related changes in the gastrointestinal tract, risk factors for cardiovascular disease, and cancer and nutrition. This course is not open to students who have completed GERON 340.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the role of nutrition in the health and well-being of older adults.

• discuss strategies for the prevention of disease and chronic conditions in older adults.

• describe the physiological changes to the body that may occur as a result of the aging process.

• list and describe the major food-assistance programs for older adults.

• discuss the purpose and objectives of nutrition screening methods.

• outline the benefits, list the necessary components, and list the nutritional considerations of an exercise regimen for an older adult.

• illustrate how cultural values influence food choices made by older adults.

• discuss the nutrient needs of older adults as a result of physiological changes.

NUTRI 481 Honors - Cultural Foods of the World

Units: 3
Hours: 54 hours LEC
Prerequisite: Placement into ENGWR 480 through the assessment process.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D; IGETC Area 4
Catalog Date: June 1, 2020

This seminar-style course offers an in-depth anthropological perspective of traditional and contemporary food customs and cultures. Western and non-western food customs are compared including their social, religious, economic, and aesthetic significance. Included are ethnocentrism, gender-related stereotypes, and racism as they relate to the availability, distribution, and preparation of food throughout the world. The nutritional status of various cultures as it relates to geographic, agricultural, and socioeconomic factors is studied. The specific cultural groups included are driven by student interests. This course is not open to students who have completed NUTRI 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare the traditional food habits, common foods, meal patterns, special-occasion foods, food taboos, and the roles of food from various regions of the world.
NUTRI 495 Independent Studies in Nutrition and Foods

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Paramedicine is an allied health specialty whose practitioners respond to emergencies before a patient reaches a hospital, rendering basic and advanced medical treatment before and during transport to a medical facility. Classroom, clinical and field internship training prepares paramedics to assess and treat a wide variety of medical emergencies. The knowledge, skills and experience gained through the paramedic program allows students to meet the responsibilities outlined in the Department of Transportation’s Emergency Medical Services Education Standards.

The Paramedic Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Graduation from an accredited high school in the United States, or successful completion of General Education Development (GED) or the California High School Proficiency Exam (CHSPE).
- Students with a high school diploma from a school outside the United States must have transcripts evaluated by an approved independent agency. Such cases will be evaluated on an individual basis.
- A cumulative college GPA of 2.0 and a grade of "C" or better in BIOL 102, or BIOL 430 and BIOL 431, or other college human anatomy and physiology course with a lab which includes all human systems; a grade of "C" or better in NURSE 320 or PMED 105 or equivalent course covering basic pharmacology and drug calculations.
- Current curriculum planning summary sheet within the semester in which the pre-enrollment packet is being submitted.
- Completion of the program application (pre-enrollment packet) and submittal prior to the deadline.
• Current certification as an Emergency Medical Technician-Basic and approximately one year verified EMS experience or a minimum of 280 verifiable EMS patient encounters acting as a team lead. See program website for examples of commonly acceptable experience and a patient encounter tracking form.

Enrollment Process

Eligible students are selected for the program according to the following steps:

• Pre-enrollment applications to the program may be obtained from the Health and Education Division office or at http://arc.losrios.edu/edhealth/paramed.html. Applications for Spring admission will be available in September and must be submitted to the division office no later than the first Friday in December by 4:00 p.m. Please refer to the Paramedic Information Sheet for the most current information.

• Only students who meet the educational requirements and follow the pre-enrollment procedures will be considered for the program. Meeting all of these requirements does not guarantee enrollment in the program.

• Class size is limited. If the pre-enrollment pool is greater than the program can accept, students are chosen based on a computerized random selection process from among the qualified candidates.

• Students accepted into the Paramedic program are required to have a physical examination, approved immunizations, drug screen, background check, program uniform, required learning materials, and malpractice insurance prior to deadlines set by the program.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

• synthesize pre-arrival information and initial assessment findings to classify patient acuity.

• utilize support personnel and equipment to maximize scene and patient management.

• diagnose patient conditions using auditory, tactile and visual senses.

• correlate signs and symptoms of common diseases to emergency patients and their primary complaint.

• formulate competent treatment plans for medical or trauma patients.

• report assessment findings, diagnosis, and treatment plans to appropriate health professionals.

• develop and implement strategies to strengthen personal empathy and sympathy for prehospital patients.

• apply ethical practices during all phases of an emergency medical response.

• demonstrate advanced life support skills competency as set by the National Registry of Emergency Medical Technicians.

• assess scene and personal safety before, during and after each emergency response.

• compose accurate, timely and specific patient care reports in accordance with local, regional and state documentation standards.

Career Information

The ARC Paramedic program is designed to prepare the student for licensure as a paramedic, working for a fire department, rescue squad, private provider, industry, clinic or hospital.

Career Information
The ARC Paramedic program is designed to prepare students for licensure as a paramedic, working for a fire department, rescue squad, private provider, industry, clinic, or hospital.

Certificate

Emergency Medical Technician (EMT) Certificate

This program prepares students to function as certified Emergency Medical Technicians. Training topics include the skills necessary to provide emergency medical care at a basic life support level with a fire, ambulance, or other specialized service. This program is conducted in compliance with Title 22, Division 9, Chapter 2 of the California Code of Regulations and Emergency Medical Technician (EMT). A "C" or better is required to obtain a course completion certificate.

Catalog Date: June 1, 2020

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- Documentation of current American Heart Association CPR Basic Life Support certification. No other form of CPR certification is accepted. Students must be present and provide a copy of the AHA CPR certification on the first day of the course. Not open to students with current NREMT or California State certification or licensure as an EMT, EMT-Basic, Advanced EMT or paramedic.

Enrollment Process

Eligible students are selected for the program according to the following steps:

- Verification of current American Heart Association Basic Life Support CPR certification. No other form of CPR certification is accepted. Students must be present and provide a copy of the AHA CPR certification on the first day of the course. Not open to students with current NREMT or California State certification or licensure as an EMT, EMT-Basic, Advanced EMT or paramedic.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate the nature and seriousness of the patient's condition or extent of injuries.
- apply emergency medical care based on assessments and findings.
- demonstrate proper procedures in lifting, moving, and positioning a patient to minimize discomfort and prevent further injury.
- utilize communicating, transporting, and record keeping skills.

Career Information

Emergency Medical Technicians operate in a variety of settings from public emergency services, private industry and health care facilities. EMT employment varies from community to community and is considered a growing occupation within the Allied Health professions.
PMED 105 Prehospital Pharmacology

Units: 0.5  
Hours: 9 hours LEC  
Prerequisite: None.  
Advisory: MATH 32 or 42 with a grade of "C" or better AND ENGRD 116 or ESLR 320 with a grade of "C" or better.  
Catalog Date: June 1, 2020

This course provides basic instruction in prehospital pharmacology and calculating medication dosages.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify specific anatomy and physiology pertinent to medication administration.
- identify basic mathematical principles as they relate to drug dose calculations and administration.
- calculate drug dosages accurately using commonly accepted formulas and devices.
- identify drug classifications and their specific physiological effects.
- list various routes for drug administration in the prehospital setting.
- process drug orders using protocols.

PMED 106 Emergency Medical Technician Pre-hospital Practices and Internship

Units: 6.5  
Hours: 36 hours LEC; 243 hours LAB  
Prerequisite: Current California State Emergency Medical Technician certification.  
Corequisite: NURSE 320 or PMED 105  
Enrollment Limitation: A background check, drug screening, proof of current immunizations and malpractice insurance are required. Current California State Emergency Medical Technician (EMT) Certification and Professional BLS CPR certification from the American Heart Association. Only AHA BLS CPR certification will be accepted.  
Advisory: AH 110, BIOL 102, ENGRD 116, ENGWR 101, and MATH 32  
Catalog Date: June 1, 2020

This course provides expanded education in Emergency Medical Services (EMS) related topics, including assisting with Advanced Life Support (ALS) procedures as well as patient assessment and management training through patient simulation, clinical observation, and field experience. It can also serve as partial preparation for application to the American River College Paramedic Program.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize medical terminology necessary for therapeutic communications in pre-hospital care and with other healthcare providers.
- demonstrate the consistent ability to perform basic life support assessment and patient management skills.
- assist paramedics and other advanced life support providers during patient care.
- identify medications commonly prescribed to patients encountered in pre-hospital care.
- describe the roles and responsibilities of the various types of responders during patient resuscitation.
- differentiate between acutely and chronically ill patients.
- correlate medical history information, vital sign data, and subjective patient complaints with the appropriate differential diagnoses.

PMED 108 Emergency Medical Response

Units: 3  
Prerequisite: MATH 32 or 42 with a grade of "C" or better AND ENGRD 116 or ESLR 320 with a grade of "C" or better.  
Advisory: June 1, 2020  
Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify specific anatomy and physiology pertinent to medication administration.
- identify basic mathematical principles as they relate to drug dose calculations and administration.
- calculate drug dosages accurately using commonly accepted formulas and devices.
- identify drug classifications and their specific physiological effects.
- list various routes for drug administration in the prehospital setting.
- process drug orders using protocols.
This course is an introduction to the principles and practices of the Emergency Medical Services (EMS). It provides the knowledge and skills needed to integrate the care provided through the EMS system. A certificate of completion is available upon successful completion of this course.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the pathophysiology of human disease and trauma, given a patient scenario.
- demonstrate life support skills for patients with specific medical and trauma airway conditions.
- utilize effective communication techniques with patients, bystanders, and other emergency responders in the EMS setting.

**PMED 110 Introduction to Advanced Prehospital Care**

**Units:** 12  
**Hours:** 144 hours LEC; 216 hours LAB  
**Prerequisite:** BIOL 102 and PMED 105 with grades of "C" or better  
**Enrollment Limitation:** Acceptance into the Paramedic Program  
**Advisory:** AH 110, ENGRD 116, ENGWR 101, HCD 114, and MATH 32  
**Catalog Date:** June 1, 2020

This course covers the didactic material and the related skills necessary to establish a foundation for subsequent prehospital patient assessment and management. Topics include preparatory, human body and human systems, pharmacology, patient assessment, airway management, trauma management, and respiratory and cardiac emergencies.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the roles and responsibilities of Emergency Medical Services (EMS) personnel within the allied health system
- evaluate and interpret pathophysiological findings in prehospital patients
- appraise and identify patient criticality
- integrate legal and ethical concepts into patient management experiences
- identify principles of prehospital pharmacology including medication administration
- integrate prehospital emergency medications into patient care and management
- recognize, prioritize, and manage critical traumatic injuries
- properly diagnosis and manage patients with cardiac and respiratory chief complaints
- apply critical thinking and clinical decision making concepts during prehospital patient encounters
- integrate proper communication, documentation, and workplace safety methods during field practice
- recognize and apply local, state, and national treatment standards to sick or injured patients
- validate the importance of professionalism and continued medical education

**PMED 120 Clinical Internship**

**Units:** 7  
**Hours:** 54 hours LEC; 216 hours LAB  
**Prerequisite:** PMED 110 with a grade of "B" or better.  
**Enrollment Limitation:** Current Emergency Medical Technician certification. Current student enrolled in the Paramedic program.  
**Catalog Date:** June 1, 2020

This course provides an opportunity to apply the cognitive knowledge and psychomotor skills gained in PMED 110 to patient care in a hospital or other approved clinical setting. This course provides for increasing assessment techniques and advanced prehospital skills. Field trips may be required. A portion of this course may be offered in a TBA component of 216 hours which may include direct patient care in a clinical setting.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate use of verbal/non-verbal skills in clinical situations
- perform, complete, and organize patient assessment for both trauma and medical patients
- intervene and initiate appropriate action at an emergency site
- perform a physical exam relevant to the patient's complaints
- identify and report all pertinent information in a systematic, concise manner to the preceptor and or the receiving facility staff
- recall and perform all patient safety considerations before, during, and after patient management
- demonstrate the integration of appropriate affective skills during high-fidelity patient simulations
- perform and manage team leadership responsibilities during all phases of a clinical patient encounter
- analyze pathophysiological concerns while managing clinical patients
- recognize pertinent pathophysiologies in complicated medical patient encounters
- differentially diagnosis prehospital patients with common medical and traumatic complaints
- recognize, develop, and apply appropriate treatment plans for special patient populations

PMED 130 Prehospital Field Internship

Units: 14
Hours: 54 hours LEC; 600 hours LAB
Prerequisite: PMED 120 with a grade of "B" or better.
Enrollment Limitation: Current EMT certification. Current student enrolled in the Paramedic program.
Catalog Date: June 1, 2020

This course provides paramedic students with hands-on prehospital experiences and is the final course in the series preparing for a California paramedic license. Under the direct supervision and evaluation of a licensed paramedic or a mobile intensive care nurse, interns complete a prehospital field experience.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate use of established treatment protocols and procedures in providing prehospital emergency care
- apply minimum competency in evaluation and leadership of an emergency scene, extrication procedures, patient assessment, radio communications, and use of prehospital equipment and drugs
- interpret scientific findings and their operational impact on prehospital emergency medicine
- specify the legal and ethical responsibilities inherent in the emergency medical services (EMS) profession
- implement competent treatment plans during high-fidelity patient simulations
- generate patient care documentation accurately reflecting all aspects of an emergency response
- employ leadership skills appropriate for the patient condition, resources available on scene, and local EMS system constraints

PMED 140 Pediatric Advanced Life Support Certification

Units: 0.5
Hours: 6 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Current Provider C Basic Cardiac Life Support card or county-approved equivalent certificate. Current licensure as a paramedic, nurse, physician, or allied health professional, or current enrollment in the last semester of an allied health program.
Catalog Date: June 1, 2020

This course provides education modules specific to pediatric emergencies for health care professionals. Certification in Pediatric Advanced Life Support (PALS) is granted to students who successfully complete the course.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess ill and injured pediatric patients using medically acceptable standards
- evaluate and interpret pathophysiological findings in pediatric patients
- assess and identify patient criticality, as well as provide life-saving interventions according to PALS standards
- implement communication skills with patients, family, and allied health professionals
- complete the examination process required by PALS

PMED 142 Advanced Cardiac Life Support Certification

Units: 0.5
Hours: 6 hours LEC; 12 hours LAB
Prerequisite: None.
Enrollment Limitation: Current Provider C Basic Cardiac Life Support Card, equivalent licensure as a paramedic, nurse, physician, or allied health professional, or current enrollment in an allied health program.
Catalog Date: June 1, 2020

This course provides education modules specific to adult cardiac emergencies for health care professionals. Certification in Advanced Cardiac Life Support (ACLS) is granted to students who successfully complete the course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess ill and injured adult cardiac patients using the latest medically acceptable standards
- evaluate and interpret pathophysiological findings in adult cardiac patients
- assess and identify patient criticality and provide life-saving interventions according to the most recent ACLS standards
- implement communication skills with patients, family, and allied health professionals
- complete the examination process required by ACLS

PMED 160 Introductory Wilderness Medicine

Units: 2
Hours: 27 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides the didactic material and related skills necessary to establish a foundation of medical care in the wilderness setting. Topics include anatomy and physiology, care of traumatic injuries, patient assessment, environmental injuries, medical emergencies, common simple wilderness medical problems, basic wilderness survival for the initial responder, improvised bleeding control in the field setting, and selecting and caring for wilderness medical equipment and supplies. This course emphasizes improvised care options and long-term care in field settings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common wilderness medical problems
- assess patients in extreme environmental conditions, such as severe heat, cold, altitude, and rugged terrain
- identify resources for further learning in wilderness medicine
- demonstrate proper use of personal protective equipment
- correlate signs and symptoms of common diseases to patients and their primary complaint
- report assessment findings, diagnosis, and treatment plans to appropriate health professionals
PMED 161 Advanced Wilderness Medicine

This course provides the didactic material and related skills necessary to establish an advanced level of medical care in the wilderness setting. Topics include anatomy and physiology, improvised airway control, principles of musculoskeletal care, synthesis of wilderness medicine and urban care, and common simple wilderness medical problems. Additionally, basic wilderness survival for the wilderness responder, and selecting and caring for wilderness medical equipment and supplies are covered. This course emphasizes improvised care options and long-term care in remote field settings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common wilderness medical problems
- assess patients in extreme environmental conditions, such as severe heat, cold, altitude, and rugged terrain
- demonstrate use of personal protective equipment from biohazards and other objective hazards of wilderness medicine, such as extremes of heat and cold, lack of water, altitude, and other hazards
- demonstrate improvised treatments for common wilderness medical injuries, using minimal equipment
- identify and refine a lightweight survival and medical kit for specific bioregions, such as desert, snow, water, or high altitude
- differentiate between patients with mild, moderate, or severe disease in the wilderness setting
- identify resources for further learning in wilderness medicine

PMED 165 EMS Search and Technical Rescue

This course provides a foundation in several technical rescue disciplines. Practical applications of water rescue, low angle and high angle rescue, and urban search and rescue are covered. Additionally, basic survival skills in rescue environments for the Emergency Medical Technician-Paramedic (EMT-P), and selecting and caring for rescue equipment and supplies are covered. This course emphasizes scenario-based learning in safely assessing, managing, and pre-planning for the technical rescue environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify common environments and situations
- assess safety hazards in the covered rescue environment
- identify the rescue gear necessary for a given rescue environment
- improvise rescue gear and techniques as necessary
- complete a mock rescue

PMED 295 Independent Studies in Paramedic

Course description:
PMED 295 is an opportunity for the student to extend classroom experience in this subject area, while working independently of a formal classroom situation. PMED 295 is an extension of work offered in a specific class in the college catalog. To be eligible for PMED 295, students must have completed the basic regular catalog course at American River College. They must also discuss the study project with a professor in this subject area and secure prior approval. Only one independent study for each catalog course will be allowed.

Student Learning Outcomes

1 - 3

Units:
None.

Prerequisite:
None.

Catalog Date: June 1, 2020
PMED 298 Work Experience in Paramedic

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the paramedic field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the paramedic field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- develop effective leadership skills at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

PMED 1000 Emergency Medical Technician: Refresher

This course provides continuing education and skills verification modules for current Emergency Medical Technicians (EMTs) certified at the Basic Life Support (BLS) level. It satisfies most of the refresher requirements of local, state, and national Emergency Medical Services (EMS) certifying organizations. EMS-related topics include airway management and ventilation, cardiac care and resuscitation, patient assessment, injury management, legal and ethical issues, vital signs monitoring, and assisting with medication administration. This course does not provide preparation for the National Registry of Emergency Medical Technicians (NREMT) entry or recertification exam. Completion of this course provides currently certified EMTs, wanting to recertify with the NREMT, with the 24 hours of required course content as well as the verification of required skills competency.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess ill and injured patients using standards promulgated by regional and national certifying organizations.
- effectively obtain, evaluate, and interpret physiological data and assessment findings in the out-of-hospital setting.
- assess and identify the level of acuity of a patient's condition.
• provide interventions that preserve life and reduce suffering that are within the EMT current scope of practice.
• establish and maintain effective communication with patients, family members, rescuers and other health care professionals.
• recognize the indications and demonstrate the techniques for administering medications that are within the EMT scope of practice.
• demonstrate minimum competency in Professional Rescuer level CPR, patient assessment/management and ventilator management skills, and knowledge.
• demonstrate minimum competency in cardiac arrest management, hemorrhage control, and splinting procedures.
• demonstrate minimum competency in spinal immobilization, obstetrics and gynecological emergencies, radio communications, and report writing and documentation.
Philosophy is the critical, rational examination of fundamental questions that people have pondered for more than 2500 years. These include, but are not limited to, questions such as: What is reality? What is the nature of the self? Does God exist? What is good and just? What ought I to do? Philosophy courses are directed towards an understanding of these and other fundamental questions, often through reading and studying philosophers who have addressed these questions in the past, with appreciation of the historical and cultural contexts in which these questions are raised and answered. Philosophy courses help students to develop good logical and critical reasoning skills, expose hidden preconceptions, encourage open debate and independent thought, and provide opportunity to apply valuable insights gained to contemporary life.

Division Dean   Diana Hicks
Department Chairs   Dennis Holden
(916) 484-8653

Associate Degree for Transfer

A.A.-T. in Philosophy

This program provides lower-division preparation for students interested in transferring into baccalaureate philosophy programs.

The Associate in Arts degree in Philosophy for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Philosophy for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Inter-segmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

The Associate in Arts in Philosophy for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- identify and express arguments found in philosophical and non-philosophical sources.
- analyze arguments from philosophical and non-philosophical sources into their constituent premises and conclusions.
- evaluate the cogency of arguments from philosophical and non-philosophical sources with respect to structure and content.
- critically discuss and evaluate important concepts and theories in ethics, metaphysics, and epistemology.
- develop and defend personal views concerning important philosophical issues.

**Career Information**

Because of continuing social and technological changes, today's graduates are more likely to change their jobs/careers than ever before. Job skills learned today for a
Philosophy (PHIL)

PHIL 300 Introduction to Philosophy

This course examines some of the perennial questions that have been addressed in the history of philosophy. Some of these include: Do we have free will? Is there a God? What is knowledge? What is the fundamental nature of reality? What makes actions right or wrong? This examination includes a critical analysis of fundamental concepts involved in the issues addressed by these questions, as well as an evaluation of reasoning used to defend various answers to them.

Upon completion of this course, the student will be able to:

- critically evaluate views concerning free will, the existence of God, the fundamental nature of reality, or other ideas addressed in the course.
- compare and contrast differing theories concerning free will, the existence of God, the fundamental nature of reality, or other ideas addressed in the course.
- analyze and evaluate arguments from primary sources concerning free will, the existence of God, the fundamental nature of reality, or other ideas addressed in the course.
- assess presuppositions underlying various views concerning free will, the existence of God, the fundamental nature of reality, or other ideas addressed in the course.
- formulate reasons to justify one’s beliefs concerning free will, the existence of God, the fundamental nature of reality, or other ideas addressed in the course.

PHIL 310 Introduction to Ethics

This course is an introduction to ethics and moral philosophy. It includes a survey of various normative ethical theories including Aristotle’s Virtue Ethics, Utilitarianism, and Kant’s Deontological Ethics. It may also cover various meta-ethical issues such as ethical relativism vs. ethical objectivism, as well as questions of knowledge and justification of moral claims. It may also include the application of normative ethical theories to contemporary moral issues.

Upon completion of this course, the student will be able to:

- define and critically analyze arguments from primary sources in defense of various normative ethical theories such as Aristotle’s Virtue Ethics, Kant’s Deontological Ethics, and Utilitarianism.
- compare and contrast differing ethical theories concerning good, evil, right, and wrong.
- identify and analyze the reasoning underlying moral arguments and their components.
- determine and critically assess presuppositions underlying various views about moral right and wrong.
PHIL 315 Contemporary Moral Issues

This is an investigation into some of the moral issues our society presently faces. These issues may include abortion, euthanasia, genetic engineering, individual liberty and the collective good, sexuality/gender and society, war and terrorism, capital punishment, hunger/poverty and moral obligation, discrimination, and affirmative action.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critically evaluate views concerning abortion, euthanasia, capital punishment, or other topics addressed in the course.
- compare and contrast differing theories concerning abortion, euthanasia, capital punishment, or other topics addressed in the course.
- analyze and evaluate arguments from primary sources concerning abortion, euthanasia, capital punishment, or other topics addressed in the course.
- assess presuppositions underlying various views concerning abortion, euthanasia, capital punishment, or other topics addressed in the course.
- formulate reasons to justify one’s beliefs concerning abortion, euthanasia, capital punishment, or other topics addressed in the course.

PHIL 320 Logic and Critical Reasoning

This course introduces basic principles of good reasoning. It focuses on recognizing arguments and identifying their premises and conclusions. It examines the distinction between inductive and deductive standards of evaluation and includes an overview of types of inductive reasoning, deductive argument patterns, use and misuse of language, and fallacious reasoning. Practical application to everyday life is emphasized.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify arguments in everyday contexts.
- analyze arguments into their constituent premises and conclusions.
- distinguish between good and poor reasoning.
- identify and explain a minimum of six common fallacies in reasoning.
- explain the nature of deductive reasoning, including the difference between deductively valid and invalid arguments.
- explain common types of inductive reasoning, including the difference between inductively strong and weak arguments.
- identify various ways the use of language affects reasoning.

PHIL 324 Symbolic Logic

Same As: MATH 320

Units: 3

Hours: 54 hours LEC

Prerequisite: MATH 120, 125, 129, or 133 with a grade of "C" or better, or placement through the assessment process.

Transferable: CSU; UC

General Education: AA/AS Area II(b)

C-ID: C-ID PHIL 210
This course is an introduction to symbolic logic. It includes a study of the logic of sentences (propositional logic) and the logic of classes and relations (predicate logic), together with an introduction to the nature of deductive systems. This course is not open to students who have completed MATH 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- represent statements of English in well-formed sentences of predicate logic.
- prove the validity of statements and arguments in predicate logic using formal proof techniques.
- apply truth table or truth tree methods to determine semantic properties such as invalidity and consistency.
- construct interpretations that satisfy statements and sets of statements.
- distinguish classical first order logical systems from other logical systems.

PHIL 330 History of Classical Philosophy

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B  
C-ID: C-ID PHIL 130  
Catalog Date: June 1, 2020

This course is a survey of classical Greek philosophy. Through a careful examination of primary sources, it begins with an overview of Pre-Socratic thought and focuses primarily on the philosophical ideas of Socrates, Plato, and Aristotle. An overview of Hellenistic and Roman philosophy may be included.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast differing views expressed by ancient Greek philosophers—especially Plato and Aristotle—concerning the fundamental nature of reality, knowledge, and ethics.
- critically evaluate views expressed by ancient Greek philosophers concerning the fundamental nature of reality, knowledge, and ethics.
- analyze and evaluate arguments from ancient Greek primary sources concerning the fundamental nature of reality, knowledge, and ethics.
- formulate reasons to justify the student's beliefs about the theories expressed by Plato and Aristotle concerning the fundamental nature of reality, knowledge, and ethics.

PHIL 331 History of Modern Philosophy

Units: 3  
Hours: 54 hours LEC  
Prerequisite: None.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU; UC  
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B  
C-ID: C-ID PHIL 140  
Catalog Date: June 1, 2020

This course is an overview of important themes in the history of Western Philosophical thought from the Early Modern era to the turn of the nineteenth century. These themes may include the fundamental nature of reality, knowledge, values, society, God, and human nature.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critically evaluate views concerning the fundamental nature of reality, knowledge, mind, ethics, language and meaning, logic and mathematics, or other ideas addressed in the course.
- compare and contrast differing theories concerning the fundamental nature of reality, knowledge, mind, ethics, language and meaning, logic and mathematics, or
other ideas addressed in the course.

- analyze and evaluate arguments from primary sources concerning the fundamental nature of reality, knowledge, mind, ethics, language and meaning, logic and mathematics, or other ideas addressed in the course.
- assess presuppositions underlying various views concerning the fundamental nature of reality, knowledge, mind, ethics, language and meaning, logic and mathematics, or other ideas addressed in the course.
- formulate reasons to justify one’s beliefs concerning the fundamental nature of reality, knowledge, mind, ethics, language and meaning, logic and mathematics, or other ideas addressed in the course.

PHIL 350 Philosophy of Religion

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3B
Catalog Date: June 1, 2020

This course is an introduction to a philosophical examination of religion. This examination typically includes an analysis of basic religious concepts such as God, the afterlife, the soul, faith, karma, religious experience, good, and evil. The rationality of religious belief and the relation of religion to science may also be covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critically evaluate views concerning the existence of God, the afterlife, religious faith, or other ideas addressed in the course.
- compare and contrast differing theories concerning the existence of God, the afterlife, religious faith, or other ideas addressed in the course.
- analyze and evaluate arguments from primary sources concerning the existence of God, the afterlife, religious faith, or other ideas addressed in the course.
- assess presuppositions underlying various views concerning the existence of God, the afterlife, religious faith, or other ideas addressed in the course.
- formulate reasons to justify one’s beliefs concerning the existence of God, the afterlife, religious faith, or other ideas addressed in the course.

PHIL 360 Social/Political Philosophy

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; CSU Area D7; IGETC Area 4G
Catalog Date: June 1, 2020

This course is a historical and topical survey of significant themes of social/political philosophy from Plato to the present. Topics may include freedom, government, justice, law, rights, punishment, war, authority, and the state.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- critically examine personal views concerning justice, the nature of the state, or other ideas central to social/political thought.
- compare and contrast differing theories of freedom, justice, or other ideas central to social/political thought.
- distinguish between subjective certainty of a belief and justification for that belief.
- determine presuppositions underlying various views concerning society and politics.
- analyze and evaluate arguments from primary sources concerning social/political issues.

PHIL 495 Independent Studies in Philosophy
Units: 1 - 3
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020
Associate Degrees for Transfer

A.S.-T. in Physics

The Associate in Science in Physics for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Science in Physics for Transfer (A.S.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

Students interested in transferring to a CSU campus to pursue a bachelor’s degree in physics should meet with a counselor to confirm the courses required for lower division preparation in the major. Although additional preparatory courses are not required for this degree, students will be better prepared if they complete differential equations, linear algebra, general chemistry, and at least one computer programming course prior to transferring.

Catalog Date: June 1, 2020

The Associate in Science in Physics for Transfer (AS-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) the Intersegmental General Education Transfer Curriculum (IGETC).

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation.
- solve problems requiring the application of physics and mathematics up through calculus.
- interpret the results of physics calculations.
- define common physics terms and physical laws.
compose a well-organized and complete lab report.

Career Information

This degree is designed to facilitate students’ successful transfer to four-year programs that prepare them for advanced study in physics and other related fields, including biophysics, physical chemistry, geophysics, and astrophysics. Physicists with undergraduate and graduate degrees have a broad range of employment opportunities, including high technology, computer programming, research, and teaching.

Associate Degrees

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.

A.S. in Physical Science/Mathematics

This degree provides a broad study in the fields of physical science and mathematics. It is a good foundation for transfer to a four-year program in science, technology, engineering, or mathematics (STEM).

Total Units: 18

The Physical Science/Mathematics Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- recognize and correctly use the terminology of math, statistics, and/or science.
- analyze and interpret data, charts, and graphs using quantitative and qualitative methods.
Physics (PHYS)

PHYS 310 Conceptual Physics

This course covers selected topics in motion, gravity, heat, sound, electricity, magnetism, light, and atomic and nuclear physics. It is designed for non-science majors and students who have not taken a course in physics.

Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as Newton’s Laws, energy conservation, or momentum conservation).
- analyze conceptual problems that require the application of basic physics concepts.
- solve simple mathematical problems that require the application of basic physics concepts.
- define common physics terms and physical laws.
- evaluate the pros and cons of topics such as nuclear power, release of greenhouse gases, and humanity’s impact on the environment.

PHYS 311 Basic Physics

This survey course emphasizes problem solving in physics. Topics include motion in one and two dimensions, forces, energy, and momentum. It is designed for science majors who plan to continue with PHYS 350 or 410.

Upon completion of this course, the student will be able to:

- identify basic physical principles that apply in a particular situation (such as Newton’s laws, energy conservation, or momentum conservation).
- evaluate conceptual problems that require the application of basic physics.
- solve problems that require the application of basic physics and mathematics.
- interpret the results of physics calculations.
- define common physics terms and physical laws.

PHYS 312 Conceptual Physics Laboratory

- recognize and construct valid arguments using deductive and inductive reasoning.
- evaluate new and accepted ideas about the natural universe using testable methodology.
This laboratory course provides hands-on observation activities and interpretation of data in a variety of experimental situations. Topics include motion, sound, light, heat, electricity, and magnetism.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- collect, analyze, and present experimental data.
- tabulate, graph, and interpret various experimental measurements and calculated results.
- apply dimensions and units correctly for various physical quantities.
- use instruments such as a protractor, mass balance, timer, ammeter, and voltmeter.
- write a well organized and complete lab report.

PHYS 350 General Physics

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MATH 373 with a grade of "C" or better
Advisory: PHYS 311; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: PHYS 350, 360 & 410, 421, 431 combined: maximum credit, one series)
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID PHYS 105; Part of C-ID PHYS 100S
Catalog Date: June 1, 2020

This trigonometry-based physics course covers the mechanics of particles, rigid bodies, and fluids. It also covers mechanical waves, sound, heat, and thermodynamics. The PHYS 350/360 series is designed for biological science students, including those in pre-medical, pre-dental, agricultural, and forestry programs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as Newton’s laws, energy conservation, or momentum conservation).
- analyze conceptual problems that require the application of physics.
- solve problems that require the application of physics and mathematics up through trigonometry.
- interpret the results of physics calculations.
- define common physics terms and physical laws.
- compose a well-organized and complete lab report.

PHYS 360 General Physics

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: PHYS 350 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSW 340.
Transferable: CSU; UC (UC credit limitation: PHYS 350, 360 & 410, 421, 431 combined: maximum credit, one series)
General Education: CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID PHYS 110; Part of C-ID PHYS 100S
Catalog Date: June 1, 2020
This trigonometry-based physics course covers electricity, magnetism, basic electric circuit theory, optics, wave behavior, and modern physics. The PHYS 350/360 series is designed for biological science students, including those in pre-medical, pre-dental, agricultural, and forestry programs.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as Coulomb’s law, Ohm’s law, or charge conservation).
- analyze conceptual problems that require the application of physics.
- solve problems that require the application of physics and mathematics up through trigonometry.
- interpret the results of physics calculations.
- define common physics terms and physical laws.
- compose a well-organized and complete lab report.

PHYS 410 Mechanics of Solids and Fluids

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: MATH 400 with a grade of "C" or better
Corequisite: MATH 401
Advisory: PHYS 311; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSLW 340.
Transferable: CSU; UC (UC credit limitation: PHYS 350, 360 & 410, 421, 431 combined: maximum credit, one series)
General Education: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID PHYS 205; Part of C-ID PHYS 200S
Catalog Date: June 1, 2020

This calculus-based physics course covers the mechanics of particles, rigid bodies, and fluids. The PHYS 410, 421, 431 sequence is required for majors in physics, chemistry, or engineering.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as Newton’s laws, energy conservation and momentum conservation).
- evaluate conceptual problems requiring the application of mechanics.
- solve problems requiring the application of physics and mathematics up through calculus.
- interpret the results of physics calculations.
- define common physics terms and physical laws.
- compose a well-organized and complete lab report.

PHYS 421 Electricity and Magnetism

Units: 4
Hours: 54 hours LEC; 54 hours LAB
Prerequisite: MATH 401 and PHYS 410 with grades of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSLW 340.
Transferable: CSU; UC (UC credit limitation: PHYS 350, 360 & 410, 421, 431 combined: maximum credit, one series)
C-ID: C-ID PHYS 210; Part of C-ID PHYS 200S
Catalog Date: June 1, 2020

This calculus-based physics course is an in-depth treatment of electricity and magnetism. It involves problem solving with an emphasis on physics problems that require integral calculus.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as Coulomb's law, Ohm's law, and charge conservation).
- evaluate conceptual problems requiring the application of electricity and magnetism.
- solve problems requiring the application of physics and mathematics up through calculus.
- interpret the results of physics calculations.
- define basic physics terms and physical laws.
- compose a well-organized and complete lab report.

PHYS 431 Heat, Waves, Light and Modern Physics

| Units:  | 4 |
| Hours:  | 54 hours LEC; 54 hours LAB |
| Prerequisite: | MATH 401 and PHYS 410 with grades of "C" or better |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSW 340. |
| Transferable: | CSU; UC (UC credit limitation: PHYS 350, 360 & 410, 421, 431 combined: maximum credit, one series) |
| C-ID: | C-ID PHYS 215; Part of C-ID PHYS 200S |
| Catalog Date: | June 1, 2020 |

This calculus-based physics course explores the fundamental theories of thermodynamics, waves, optics, and modern physics. Topics include heat, temperature, kinetic theory, waves, sound, light reflection and refraction, optics, interference, diffraction, atomic theory, and nuclear physics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- test the validity of a hypothesis using the scientific method.
- identify the basic physical principles that apply in a particular situation (such as interference, diffraction, or energy conservation).
- analyze conceptual problems that require the application of thermodynamics, wave mechanics, optics, and modern physics.
- solve problems requiring the application of physics and mathematics up through calculus.
- interpret the results of physics calculations.
- define common physics terms and physical laws.
- compose a well-organized and complete lab report.

PHYS 495 Independent Studies in Physics

| Units: | 1 - 3 |
| Hours: | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degrees for Transfer

A.A.-T. in Political Science

The Associate in Arts degree in Political Science for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of Political Science. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The Associate in Arts degree in Political Science for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts degree in Political Science for Transfer (AA-T) may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Catalog Date: June 1, 2020

The Associate in Arts in Political Science for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- describe the fundamentals of political science and governance.
- compare and contrast contemporary comparative systems and governance.
- evaluate the relationship between the governing process and public policy.
- examine how citizen and interest group participation influence political systems.
- analyze the role of culture and its influence on politics.
- assess how the design of political institutions and processes affect policy and stability.
- analyze politics and diplomacy in the international system.
- apply basic research methods to political science.
- analyze political and public policy making processes, and relate these to current issues and problems, for evaluating political events and their role in the political system.
- compare and contrast various theories of justice and the just state.
- evaluate various theories of the purpose of government and apply to a critical analysis of current political events.

Career Information

Career opportunities in political science include, but are not limited to, advocate/organizer, campaign worker, diplomat, educator/teacher, events planner, foreign affairs specialist, lawyer, legislative aide (state and federal), lobbyist, political consultant, and public relations specialist.

Associate Degrees

A.A. in Political Science

This degree provides a comprehensive introduction to the field of political science. It stresses the systematic study of politics, political institutions and governmental processes, state and local government, public policy, foreign policy, international relations, comparative politics, and political theory.

This course analyzes the U.S. government's historic origins, philosophical and theoretical justification, federal structure, and constitutional structures. The course studies the rights and liberties of individuals as articulated in the U.S. Constitution and federal court decisions. Further, it examines and describes the procedural aspects of the U.S. and California political systems including amending the U.S. and California constitutions, holding elections, campaigning, legislating, executing and adjudicating law. The course examines individual and group political behavior in voting, interest groups, political parties, and the media. It provides an analysis of contemporary problems and issues and looks at factors that shape politics and policy-making including diversity, political culture, political socialization, political ideologies, and public opinion. Finally, it also describes California state and local governments’ constitutional base, structures and functions, political process, problems and issues, and federal-state relations. This course is not open to students who have completed POLS 481.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the nature of government and its theoretical foundations and functions.
- relate American political thought, the Constitution, and governing institutions to one another.
identify and explain the structures and functions of the United States and California governments prescribed by their respective constitutions.

compare and contrast the federal, state and local governments with respect to their political foundations, functions, and contemporary problems.

explain the civil liberties and civil rights of individuals as articulated in the United States Constitution and federal court decisions.

identify and evaluate political processes within the United States and California, including the development of political ideologies, voting behavior and other forms of political participation.

evaluate the relationship between the governing process and public policy at both the state and federal level.

discuss and analyze contemporary political issues and operations in the United States and California.

analyze the role of culture, diversity, and ideology in shaping public opinion and public policy in the United States and California.

POLS 302 Comparative Politics

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D8; IGETC Area 4H
C-ID: C-ID POLS 130
Catalog Date: June 1, 2020

This course is a comparative study and analysis of political systems, ideologies, institutions, policies, cultures, histories, and the development of government within various countries. It emphasizes the cultural and social dimensions of political behavior and attitudes in connection with governmental and political practices typical of particular geographical regions. It also covers an examination of selected developed and lesser developed nation-states from a global perspective.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare and contrast different political systems, regimes, and ideologies.
• evaluate patterns of political behavior and policy choice.
• assess how regime type and the design of political institutions and processes affect policy, economic development, and political stability.
• examine how citizen and interest group participation influence political systems.
• analyze the role of political culture and its influence on political institutions and political behavior.
• explain the origins of the modern state and evaluate characteristics necessary for state formation.
• identify different relationships between states and markets.
• construct questions, theories, and hypotheses of political behavior.
• assess the impact of the relationship between states and markets on economic development.

POLS 304 Introduction to Government: California

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(a); CSU Area D8; CSU Area F3; IGETC Area 4H
Catalog Date: June 1, 2020

This course covers the essential organization, institutions, and processes of California state and local government. It fulfills the California State University requirement for state and local government, but not the requirement for the U.S. Constitution.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess the relationship between citizens and the state of California with emphasis on the impacts of cultural, economic, political, and social diversity
• compare and contrast the structure of California government and the federal model

• describe the various institutions of California government and how each functions in the policymaking process

• analyze the effects of structural differences between the federal model and the structure of California government institutions on the policy making process and political behavior

• examine public financing in California and analyze the interconnectedness of federal, state, and local budgets

• compare and contrast the California and U.S. Constitutions and the effect of these differences on policy making, civil rights and liberties, and political behavior

• analyze public opinion and the political behavior of California citizens

POLS 310 Introduction to International Relations

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300, OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D8; IGETC Area 4H
C-ID: C-ID POLS 140
Catalog Date: June 1, 2020

This course introduces the academic field of International Relations. It surveys global issues as they relate to theories of international relations, the nation-state system, the role of state and nonstate actors, globalization, armed conflict and its causes, international law and conflict resolution, and international political economy. It emphasizes comparing global perspectives among developed and developing nations. This course is not open to students who have completed POLS 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the field of international relations and methods associated with research in the field.

• compare and contrast different theoretical approaches to the study of international relations and the roles they play in understanding the international system.

• analyze the evolution of the nation-state system and issues associated with nation-state actors in the international system.

• identify the global south, its experiences, challenges, and responses to world powers.

• analyze the causes and trends of armed conflicts, their resolution, and the causes of international conflict in the 20th Century and 21st Century.

• assess the potential for international law and its use for preservation of world peace and stability.

• critique contending international political economic theories in a changing global economy.

• define key terms used in the study of International Relations.

• research topics related to International Relations issues and principles while demonstrating critical thinking.

POLS 320 Introduction to Political Theory

Units: 3
Hours: 54 hours LEC
Prerequisite: Eligible for ENGRD 310 or ENGRD 312 AND ENGRW 300; OR ESLR 340 AND ESLW 340.
Advisory: CSU; UC
Transferable: AA/AS Area V(b); CSU Area D8; IGETC Area 4H
C-ID: C-ID POLS 120
Catalog Date: June 1, 2020

This course is a survey of the ideas that have shaped Western political development, covering important thinkers from the ancient, medieval, and modern periods. Topics include theories of just and unjust societies, social contract theory, justifications for government authority, and the rights of citizens versus the responsibilities of citizenship.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain arguments made by political philosophers from different periods of history
assess the historical development of ideas regarding just and unjust regimes, government authority, the ends of civil society and the rights and responsibilities of citizens

critique arguments made by political philosophers from different periods of history

compare and contrast various conceptions of just and unjust regimes, justifications for government authority, the ends of civil society, and the rights and responsibilities of citizens

POLS 330 Constitutional Rights

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D8
Catalog Date: June 1, 2020

This course is a survey of American constitutional rights and civil liberties. Emphasis is placed on analysis of U.S. Supreme Court decisions and related materials dealing with issues arising under the Bill of Rights and the 14th Amendment to the U.S. Constitution.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the philosophical bases for constitutional protection of certain human rights

• compare and contrast various approaches to judicial interpretation of the U.S. Constitution

• evaluate the current status of constitutional rights as reflected in United States Supreme Court decisions interpreting the Fourteenth Amendment and U.S. law

• evaluate the current status of constitutional liberties as reflected in U.S. Supreme Court decisions interpreting the Bill of Rights and U.S. law

POLS 342 Women and Politics from a Global Perspective

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D4; CSU Area D8; IGETC Area 4D; IGETC Area 4H
Catalog Date: June 1, 2020

This course examines the impact of politics on women's lives and women's impact on politics from a global perspective. It explores past and current influences on the political and legal status of women as well as women's participation in the political process throughout the world.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess the impact women have had on political institutions, social movements, interest groups, and revolutions.

• evaluate the impact that public policy has on women's lives.

• explain the importance of studying the roles of women in politics globally.

• identify similarities and differences in women's reasons for political organizing, as well as their choice of tactics and methods.

• construct questions, theories, and hypotheses related to the impact of women on politics.

• explain the rationale for state public policies regarding women.

• analyze the current status of women in the developing world.

• compare the different issues that impact women in the developing world to those in the advanced industrial world.
POLS 480 Introduction to International Relations - Honors

Units: 3
Hours: 54 hours LEC
Prerequisite: Placement into ENGWR 480 through the assessment process.
Advisory: ENGWR 300 or 480
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D; IGETC Area 4
C-ID: C-ID POLS 140
Catalog Date: June 1, 2020

This course examines global issues as they relate to theories of international relations, the nation-state system, the role of state and non-state actors, globalization, armed conflict and its causes, international law and conflict resolution, and international political economy. Emphasis is placed on the comparison of global perspectives among developed and developing nations. This seminar-style honors course approaches the topical material through class discussion which encourages problem-solving techniques focusing on current international relations issues. This course is not open to students who have completed POLS 310.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the field of international relations and methods associated with research in the field.
- compare and contrast different theoretical approaches to the study of international relations and the roles they play in understanding the international system.
- analyze the evolution of the nation-state system and issues associated with nation-state actors in the international system.
- identify the developing world, its experiences, and challenges.
- analyze the causes and trends of armed conflicts, their resolution, and the causes of international conflict in the 20th Century and 21st Century.
- assess the potential for international law and its use for preservation of world peace and stability.
- critique contending international political economic theories in a changing global economy.
- define and compare key terms used in the study of International Relations.
- analyze complex readings and processes as they apply to contemporary issues in International Relations.
- hypothesize the conditions under which various international relations outcomes are likely to occur and provide theoretical explanations for said outcomes.

POLS 481 Introduction to Government: United States - Honors

Units: 3
Hours: 54 hours LEC
Prerequisite: Placement into ENGWR 300.
Transferable: CSU; UC
General Education: AA/AS Area V(a); CSU Area D8; CSU Area F2; CSU Area F3; IGETC Area 4H
Catalog Date: June 1, 2020

This course analyzes the U.S. government's historic origins, philosophical and theoretical justification, constitutional structures and how these institutions work. It examines and describes the procedural aspects of the political system including holding elections, campaigning, voting, lobbying, legislating, executing and adjudicating law. It provides an analysis of contemporary problems and issues. It also describes California state and local governments' institutional base, structures and functions, political process, problems and issues. Conducted in a seminar format, this course emphasizes participatory classroom styles of learning and the material used is more substantial and sophisticated. In addition, there are extensive research projects on American institutions, political processes, and political behavior designed to challenge and motivate. This course is not open to students who have completed POLS 301.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the nature of government and its theoretical foundations and functions.
- relate American political thought, the Constitution, and governing institutions to one another.
- identify and explain the structures and functions of the United States and California governments prescribed by their respective constitutions.
- compare and contrast the federal, state and local governments with respect to their political foundations, functions, and contemporary problems.
- explain the civil liberties and civil rights of individuals as articulated in the United States Constitution and federal court decisions.
- identify and evaluate political processes within the United States and California, including the development of political ideologies, voting behavior and other forms of political participation.
- evaluate the relationship between the governing process and public policy at both the state and federal level.
- discuss and analyze contemporary political issues and operations in the United States and California.
- analyze the role of culture, diversity, and ideology in shaping public opinion and public policy in the United States and California.
- analyze complex readings and processes as they apply to contemporary issues in American Politics.
- hypothesize the conditions under which various political outcomes are likely to occur and provide theoretical explanations for said outcomes.

This course provides the opportunity for concentrated study of specialized topics in Political Science. Each offering focuses on a discrete aspect of the Political Science discipline. Refer to class schedule for class topic. Individual field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and explain key political processes covered in the course
- assess the relationship between individuals, governmental actors, and the topic covered
- evaluate the the relationship between the governing process and the topic covered
- analyze the impact of the topic covered on the political system under analysis

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degrees for Transfer

A.A.-T. in Psychology

The Associate in Arts degree in Psychology for Transfer provides a clearly articulated curricular track for students who wish to transfer to a CSU campus, while also serving the diverse needs of students interested in the breadth and depth of the field of psychology. Additionally, this degree exposes students to the core principles and practices of the field in order to build a foundation for their future personal, academic, or vocational paths.

The degree was designed to facilitate students’ successful transfer to four-year programs that prepare them for advanced study in a variety of graduate programs, as well as a variety of careers such as nursing, sales and marketing, teaching, and law enforcement. Psychologists with graduate degrees and professional certificates have a broad range of employment opportunities including, but not limited to, clinical practice, research, and teaching. Clinical psychologists work in a variety of settings and with a wide range of clients. Research psychologists work in a range of fields associated with the study of human behavior, including biomedical, sports psychology, and cognitive neuroscience.

The Associate in Arts degree in Psychology for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts degree in Psychology for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

1Or any course not used previously

The Associate in Arts in Psychology for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- differentiate between scientifically derived knowledge versus pseudoscience within the field of psychology.
- compare and contrast the major theoretical perspectives in psychology.
- define basic psychological terminology regarding behavior, cognition, and emotion, and be able to express it clearly when writing or speaking about psychology.
- evaluate psychological data, use the scientific method, draw reasonable conclusions, recognize the ethical implications of these conclusions, and apply these to personal, community, and scientific problems.
- employ psychological principles that lay the foundation for life-long personal growth and development of interpersonal and social skills.
- demonstrate appropriate interpersonal and social skills in interactions with a diverse population using principles of equity, justice, and inclusion.

**Career Information**

The Psychology degree is designed to facilitate students’ successful transfer to four-year programs that prepare them for advanced study in a variety of graduate programs, as well as a variety of careers such as nursing, sales and marketing, teaching, and law enforcement. Psychologists with graduate degrees and professional certificates have a broad range of employment opportunities including, but not limited to, clinical practice, research, and teaching. Clinical psychologists work in a variety of settings and with a wide range of clients. Research psychologists work in a range of fields associated with the study of human behavior, including biomedical, sports psychology, and cognitive neuroscience.

**Associate Degrees**

**A.S. in General Science**

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Catalog Date: June 1, 2020

Total Units: 18

*must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.
A.A. in Psychology

Psychology focuses on the study of behavior of humans and other animals. It involves both pure and practical application of science to matters of everyday life.

Catalog Date: June 1, 2020

1PSY 320, PSYC 370, and PSYC 373 may be used for this requirement if not used previously.

The Psychology Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes
Psychology (PSYC)

PSYC 300 General Principles

Upon completion of this program, the student will be able to:

• differentiate between scientifically derived knowledge versus myth and conjecture within the field of psychology.

• compare and contrast the major theoretical orientations in psychology.

• define basic psychological terminology regarding behavior, cognition, and emotion, and be able to express it clearly when writing or speaking about psychology.

• evaluate psychological data using the scientific method, draw reasonable conclusions, recognize the ethical implications of these conclusions, and apply these to personal, community, and scientific problems.

• employ psychological principles that lay the foundation for life-long personal growth and development of interpersonal and social skills.

• demonstrate appropriate interpersonal and social skills in interactions with a diverse population using principles of equity, justice, and inclusion.

Career Information

The Psychology degree is designed to facilitate students' successful transfer to four-year programs that prepare them for advanced study in a variety of graduate programs. Psychologists with graduate degrees and professional certificates have a broad range of employment opportunities including, but not limited to, clinical practice, research, and teaching. Clinical psychologists work in a variety of settings and with a wide range of clients. Research psychologists work in a range of fields associated with the study of human behavior, including biomedical, sports psychology, and cognitive neuroscience.

Psychology (PSYC)

PSYC 300 General Principles

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: PSYC 300, 305, & 480 combined: maximum credit, one course)
General Education: AA/AS Area V(b); CSU Area D9; IGETC Area 4I
C-ID: C-ID PSY 110
Catalog Date: June 1, 2020

This course provides a broad overview of general principles of psychology. Topics include the scientific method, statistics, biological determinants, as well as general processes of behavior, such as development, learning, language, intelligence, perception, motivation, emotion, personality, and mental health. This course is not open to students who have taken PSYC 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare the major theoretical perspectives in psychology (e.g., behavioral, biological, cognitive, evolutionary, humanistic, psychodynamic, socio-cultural)

• describe the general subject areas of psychology (e.g., biological, sensation and perception, learning and memory, cognition, consciousness, individual differences, psychometrics, personality, social processes, developmental/lifespan, emotion, motivation)

• describe the applied areas of psychology (e.g., clinical, counseling, forensic, community, organizational, school health)

• differentiate between commonly used research methods in psychology and their applications

• apply psychological concepts, theories, and research findings to personal, interpersonal, occupational, and social/community contexts

• incorporate systematic critical thinking in arriving at conclusions about behavior and mental processes

• describe the roles that culture and diversity play in various aspects of human behavior and mental processes

• distinguish between the ethical implications of psychological research and the responsibility to pursue and use knowledge wisely

PSYC 305 Psychology Applied to Modern Life

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC (UC credit limitation: PSYC 300, 305, & 480 combined: maximum credit, one course)
This course explores human behavior, emphasizing the practical aspects of psychology in everyday life utilizing both psychological theory and research. Topics include personality, stress and coping, self-understanding, communication, interpersonal relationships, gender, sexuality, psychological disorders and their treatment, personality, personal values, and positive psychology.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare the major theoretical perspectives in psychology
- analyze the dimensions of effective behavior in an increasingly complex and culturally diverse world
- define and use basic biological, physiological, and psychological terminology to describe adjustment and psychosocial development across the lifespan
- describe specific research methods and the general principles of research ethics for the study of human beings, including the safeguards and the peer-review process in science
- describe the physical and psychological effects of stress
- evaluate the effectiveness of various coping strategies
- distinguish between the most common psychological disorders and evaluate various treatment options
- describe the principles involved in attraction, relationship maintenance, and interpersonal conflict
- apply principles of effective communication in interpersonal relationships
- evaluate the effects of detrimental behaviors (e.g., smoking, drinking, overeating, poor nutrition) on physical and psychological health
- identify key aspects of the self-concept and the determinants of self-esteem
- evaluate the contributions of family, peers, schools, religion, and the media on the formations of sexual attitudes and behavior
- summarize the current research on the origins of sexual orientation and the adjustment of those with non-heterosexual orientations
- evaluate research on gender similarities and differences

PSYC 310 Biological Psychology

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300 or 480 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area IV; CSU Area B2; IGETC Area 5B
C-ID: C-ID PSY 150
Catalog Date: June 1, 2020

This course examines the physiological determinants of behavior and cognition. The role of genetics, neural development, neural communication and pathways, brain structures, neurotransmitters, drugs, endocrine system, and sensory systems in typical and atypical behavior and cognition are addressed. Current theories related to the role of neural and biological processes in the etiology and treatment of psychological disorders, motor disorders, and other central nervous pathologies are presented. Ethical standards for human and animal research are discussed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate behavior and mental processes to anatomical, biological, chemical, and genetic mechanisms
- describe processes of neural communication within a neuron and between neurons
- explain the endocrine system and the anatomy and physiology of the nervous system including their relationships to behavior
- evaluate current research findings related to neuroanatomical, biochemical, and genetic mechanisms of disorders
- compare and contrast proposed treatments for psychological disorders, motor disorders, and other central nervous system pathologies
- discriminate between the types of research methodologies which characterize the study of brain-behavior relationships and illustrate the scientific approach
- critique and evaluate current research in biological psychology
explain invasive vs. noninvasive research methods and the general principles of research ethics for the study of animals and human beings, including the research safeguards and the peer-review process in science

describe the brain-behavior relationships associated with motivation, addiction, sex, sleep, stress, learning, and memory

PSYC 311 Biological Psychology Laboratory

Units: 1
Hours: 54 hours LAB
Prerequisite: None.
Corequisite: PSYC 310
Transferable: CSU; UC
General Education: CSU Area B3; IGETC Area 5C
Catalog Date: June 1, 2020

This course involves the applied study of the nervous system focusing on its anatomy, physiology, biochemistry, and impact on behavioral and mental processes. It provides a foundation in the principles of the scientific method and practical experience in its application to the study of biological psychology. Specific topics include anatomy, physiology, and organization of the nervous system, with special emphasis on the brain; anatomy and physiology of the neuron; physiology of nerves and nerve conduction; the biochemistry of the synapse; anatomy and physiology of sensory systems; and psychophysical examination of sensation and perception. It utilizes brain dissection procedures, interactive computer simulations, and lab experiments with data collection and analysis.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the principles of the scientific method.
- plan and conduct basic dissection of neural tissue.
- discriminate the anatomical features of the central and peripheral nervous system, their functions, and connectivity.
- distinguish cortical from subcortical structures and discuss their connectivity.
- differentiate features of basic cellular anatomy.
- compare the primary features of neurons, glia, and synapses at the cellular level.
- compare the cellular structure, electrophysiology, and function of various types of neurons.
- demonstrate proficiency with primary equipment and techniques used to investigate both brain and neuronal structure and function.
- compare the basic processes of sensation and perception for the main sensory systems and the principles of psychophysics.
- conduct basic psychophysical data collection and analysis procedures and interpret results.
- compare various psychobiological research methods in terms of the type of information gained and their areas of application.

PSYC 320 Social Psychology

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300 with a grade of "C" or better
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D9; IGETC Area 4I
C-ID: C-ID PSY 170
Catalog Date: June 1, 2020

This course analyzes human behavior in relation to the social environment, including the power of the situation, other individuals, and the social group. Topics include aggression, prejudice, attraction, altruism, attitude change, conformity, gender roles, cultural norms, person perception, and social cognition.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the elements of a scientific approach to understanding human social behavior
- contrast the social influences with the biological or other influences on behavior
- explain the major scientific studies which form the basis for current theories of social psychology
PSYC 330 Introductory Statistics for the Behavioral Sciences

Units: 3
Hours: 54 hours LEC
Prerequisite: MATH 120, MATH 125, MATH 129, or MATH 133 with a grade of "C" or better.
Transferable: CSU; UC (UC credit limitation: STAT 300, 305, and PSYC 330 combined: maximum credit, one course)
General Education: AA/AS Area II(b); CSU Area B4; IGETC Area 2
C-ID: C-ID MATH 110
Catalog Date: June 1, 2020

This course focuses upon the concepts and applications of descriptive and inferential statistics in psychology and other behavioral sciences. Topics include descriptive statistics, probability and sampling distributions, parametric and nonparametric statistical methods, hypothesis testing, statistical inference and power, correlation and regression, chi-square, t-tests, and analysis of variance procedures. Application of both hand computation and statistical software to data in a social science context is emphasized to include the interpretation of the relevance of the statistical findings.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast statistical concepts relevant to research in the behavioral sciences.
- perform the following probability and statistical calculations by hand: sample spaces, factorial notation, counting rules, permutations and combinations, laws of probability, calculating probability of events using elementary, expected value probability principles; mean, median, mode, standard deviation – sample and best estimate, variance, range and interquartile ranges for discrete and continuous distributions; correlation, covariance, and regression analyses to test hypotheses of association; and, t-tests, ANOVAs, and other appropriate statistical analyses (Mann-Whitney U, Kruskal-Wallis H, Wilcoxon Signed-Ranks, and Friedman ANOVA) to test hypotheses of difference.
- calculate probabilities using t-distributions.
- use statistical software such as SPSS, Excel, Minitab or a graphing calculator to perform probability and statistical calculations.
- critique psychological literature that contains statistics.
- formulate a testable hypothesis; analyze data using an appropriate statistical procedure; determine and interpret the statistical significance and p value of results; reflect upon correctness of the hypothesis.
- analyze and appropriately interpret applications using data from various disciplines including business, social sciences, psychology, life sciences, health science, and education.
- examine research reported in the media.

PSYC 335 Research Methods in Psychology

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300 AND PSYC 330 or STAT 300 with a grade of "C" or better.
Advisory: ENGWR 300 or ESLW 340 with a grade of "C" or better.
Transferable: CSU; UC
C-ID: C-ID PSY 200
Catalog Date: June 1, 2020

This course introduces students to the various psychological research methods and to the critical evaluation of research. It emphasizes research design, experimental procedures, descriptive methods, instrumentation, and the collection, analysis, interpretation, and reporting of research data. Research design and methodology are investigated through a review of research in a variety of sub-disciplines in psychology. Students gain knowledge in scientific writing, including proficiency in APA style.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the basic principles of the scientific method.
- assess the purposes and limitations of the various research methods.
critically evaluate research reports in psychology.
synthesize a body of research findings.
develop and test hypotheses.
demonstrate knowledge of general research designs, experimental and non-experimental methods, and standard research practices.
select appropriate research designs to test hypotheses.
extplain the ethical treatment of humans and animal participants in research and the institutional requirements for conducting research.
evaluate the generalizability of study results.
demonstrate proficiency in APA style.

PSYC 340 Abnormal Behavior

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300, 305, or 480 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ELSR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: PSYC 340 & 481 combined: maximum credit, one course)
General Education: AA/AS Area III(b); CSU Area D9; CSU Area E1; IGETC Area 4I
C-ID: C-ID PSY 120
Catalog Date: June 1, 2020

This course explores the broad questions of normality and abnormality. Topics include the investigation of specific mental, emotional, and behavioral difficulties and current approaches to psychological intervention including present community mental health practices. It considers the contribution of social, biological, and psychological factors to the development and persistence of behavior disorders. This class is not open to students who have taken PSYC 481.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate advanced theoretical aspects of "normal" and "abnormal" behavior
- describe specific mental, emotional, and behavioral difficulties
- analyze the mystery and prejudice that surrounds people experiencing severe problems in adaptive behavior
- compare and contrast the approaches to psychological intervention including present community health practices
- identify the contribution of social, biological, and psychological factors to the development and persistence of behavioral disorders

PSYC 342 Introduction to Applied Behavior Analysis

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300 or 305 with a grade of "C" or better
Transferable: CSU
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course focuses on basic behavioral principles that describe relations between operant behavior and the social and physical environment. Behavior is examined as a part of the natural world and in everyday situations. The primary focus is on principles of operant conditioning, such as reinforcement, extinction, differential reinforcement, and punishment, as they are related to naturally occurring events. Additional topics include experimental and intervention procedures of applied behavioral analysis. It also covers practical applications including self management, institutional settings, schools, child behavior management, as well as treatment of developmental disorders such as Autism and Asperger’s disorders.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the basic terminology and methodology of applied behavioral analysis and operant conditioning principles
- choose the appropriate research method to answer a specific question in applied behavioral analysis
- distinguish between the ethical implications of behavioral analysis research and the ethical applications of applied behavioral analysis interventions.
demonstrate principles of applied behavior analysis, including the conceptualization of individual or group behavior in terms of environmental determinants, identification of target behavior in a behavior modification plan, and ways to support contingencies of positive reinforcement, negative reinforcement, extinction and punishment.

propose a specific behavior modification program utilizing the principles of applied behavioral analysis.

PSYC 354 The Psychology of Family Life and Intimate Relationships in a Diverse Society

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b); CSU Area E1
C-ID: C-ID SOCI 130
Catalog Date: June 1, 2020

This course is a study of family life and intimate relationships from historical, sociological, and psychological viewpoints. Topics include elements for building and maintaining intimate relationships, the structure and functions of the family, sexuality, parenting, gender roles, partner selection, conflict, crisis, divorce, and starting over.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare concepts from psychology, sociology, and related disciplines used to describe the establishment and maintenance of intimate relationships.
- evaluate research methods used to study intimate relationships, including marriage and the family.
- contrast various theoretical models used to understand intimate relationships and family dynamics.
- examine current research on courtship, cohabitation, mate selection, gender roles, marital stages, family planning, family diversity, child-rearing, conflict resolution, family disorganization, sexuality in intimate relationships, starting over, and trends shaping the family of the future.
- evaluate nonempirical conclusions about the present health of marriage and the family, particularly as represented in uncritical media accounts.
- apply key concepts to personal relationships and life experiences.

PSYC 356 Human Sexuality

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area III(b); AA/AS Area VI; CSU Area D4; CSU Area D9; CSU Area E1; IGETC Area 4D; IGETC Area 4I
C-ID: C-ID PSY 130
Catalog Date: June 1, 2020

This course offers a balanced scientific understanding of the biopsychosocial perspective on human sexual behavior from birth through adulthood. It provides factual, up-to-date, nonjudgmental information designed to dispel myths, and to facilitate problem identification and possible solutions. Sexuality is explored from historical, cultural, psychological, physiological, sociological, and legal viewpoints.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- examine sexual behavior from historical, cultural, religious, and legal points of view.
- demonstrate knowledge of the scientific method as it relates to key research findings pertaining to the diversity of human sexual behaviors.
- compare male and female anatomical structures and their functions.
- demonstrate awareness and skills to make healthy and responsible choices and decisions regarding relationships and sexuality.
- compare and contrast biological, psychological, and cultural similarities and diversity in human sexual behavior.
- examine, analyze, and compare the diverse experiences that influence human sexual behaviors with particular emphasis on historical and cultural practices of human sexual behaviors.
• examine, analyze, and contrast the factors that influence diverse human sexual behaviors including causes and the evaluation of possible solutions to multiple ethnocentric problems.

PSYC 358 Principles of Interpersonal Relations

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course introduces the principles involved in effective interpersonal relationships. Topics include interpersonal feedback, self-disclosure, listening, the role of emotions, conflict resolution, personal values, and self-awareness. Emphasis is on methods to enhance relationships at home, work, and school.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the relationship between self-awareness and interpersonal relationships, as well as demonstrate an increased self-awareness.
• examine components of effective communication and utilize effective communication skills (e.g., assertiveness, active listening, self-disclosure) in interpersonal relationships.
• compare and contrast features of health and unhealthy relationships.
• evaluate strengths and weaknesses of current relationships and apply skills for developing and enriching these relationships.
• compare and contrast the strengths and challenges faced by the different forms of the family.

PSYC 359 Stress Management and Health

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course examines the connection between stress, stress response, coping, and health. It covers various types of stressors, stress responses, and coping strategies, and the scientific research in these areas. Topics include the impact of stress on physical, cognitive, behavioral, and emotional health. This course focuses on developing healthy ways to cope with stress, including cognitive-behavioral techniques, mindfulness, and relaxation techniques.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• assess typical stressors and compile a list of the typical stressors that may be encountered, including both positive and negative stressors.
• compare and contrast different theories on the types of coping strategies for handling stressors and types of strategies for stress management.
• assess the types of coping and stress management strategies in terms of effectiveness and ineffectiveness.
• explain the physiological processes associated with stress and the potential health effects to physical, behavioral, cognitive, and emotional health of experiencing long-term chronic stress.
• evaluate media reports on suggestions to improve health and manage stress using current research based findings.

PSYC 361 Psychology of Women in a Multicultural Society

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D4; CSU Area D9; IGETC Area 4C; IGETC Area 4D; IGETC Area 4I

Student Learning Outcomes

3
Units:
54 hours LEC
Hours:
None.
Prerequisite:
None.
Transferable:
CSU; UC
General Education:
AA/AS Area V(b); AA/AS Area VI; CSU Area D3; CSU Area D4; CSU Area D9; IGETC Area 4C; IGETC Area 4D; IGETC Area 4I
This course is a study of the psychological effects of society upon women. It emphasizes the exploration of gender roles, sex roles, and stereotypes, as well as the sociocultural, intrapersonal, and interpersonal factors in the development of women.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast the psychological influences of the effect of gender in the use of language
- compare and contrast the psychological influences of gender in the world of work
- analyze the differences and influences of personality and behavior as they contribute to the ethnic experience of women of color
- analyze the biopsychosocial aspects of sexuality
- describe the behavioral similarities and/or differences between Euro-American women and women of color

This course is a study of the values, problems, issues, concerns and counseling needs of diverse populations by race, ethnicity, class, gender, sexual orientation, gender identity, physical/cognitive/emotional/developmental ability, and age. It also explores the cognitive and emotional aspects of prejudice as it relates to institutional and individual discrimination. This course is not open to students who have completed HSER 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and examine specific values, beliefs, and practices of diverse populations by race, ethnicity, gender, sexual orientation, ability/disability, age, and socioeconomic class
- evaluate the impact of bias, stereotyped thinking, prejudice, and discrimination in working with diverse populations
- analyze the issues of racism, sexism, heterosexism, ableism, ageism, and classism as they relate to working with diverse populations
- develop culturally responsive prevention, intervention, and/or resolution to identified issues and problems affecting diverse populations
- assess one’s personal attitudes regarding diverse populations

PSYC 370 Human Development: A Life Span

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area V(b); AA/AS Area III(b); CSU Area D0; CSU Area E1; IGETC Area 4I
C-ID: C-ID PSY 180
Catalog Date: June 1, 2020

This course examines human development across the lifespan, from conception through death, by focusing on the main domains in developmental psychology (physical, cognitive, and socio-emotional) as well as the interaction among these domains. It emphasizes development as an on-going process, with an effort to encourage the practical application of the knowledge acquired. This course is designed to provide a foundation for careers in educational, social, psychological, and medical fields as well as a better understanding of one’s own developmental process.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
examine how development evolves from conception through death
evaluate the various domains of development (cognitive, physical, socio-emotional) and the interconnection among them
examine how people are influenced by their genes, their families, and the world in which they live
compare and contrast different theoretical perspectives used in explaining human development and behavior
compare and contrast different scientific methods used to study human development and behavior
evaluate the concept of continuity of development throughout the lifespan by assessing how experiences at one time of life may affect future development
differentiate typical from atypical psychological development across the lifespan

PSYC 372 Child Development

This course is a study of the growth and development of children from the prenatal stage through adolescence. For each stage of development, the physical, cognitive, linguistic, social-moral, and emotional aspects of development, with attention to both typical as well as atypical development in each area, are discussed in reference to relevant research and theories. The course covers research methods and data collection approaches. The influences of culture, family, and the interaction of maturational and environmental factors are studied. The material in this course is designed as a foundation for early child care and education, teaching, and parenting. This course is not open to students who have completed ECE 312.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the main characteristics of physical, cognitive, and social emotional development from birth through adolescence
- identify the roles of genetic and environmental influence on development
- identify the characteristics that exemplify typical and atypical development from birth through adolescence
- describe current and prominent theories of child development
- compare and contrast diverse parenting approaches and educational experiences in reference to developmental outcomes throughout childhood and adolescence
- apply theories to teaching and child-rearing practices with a focus on current topics in education for children from diverse backgrounds
- identify typical behavior of children and their individual differences and special needs (physical, cognitive, emotional, and social development)
- analyze the influence of culture, race/ethnicity, socioeconomic status, family and society structure on a developing child from birth through adolescence

PSYC 373 Child Psychology

This course introduces the science of child psychology through the analysis of developmental theories and research. It examines key developmental events across the main domains in developmental psychology (physical, cognitive, socioemotional) are examined from conception through adolescence. Questions about development are investigated, with an emphasis on the role of the scientific method. It explores typical and atypical psychological development research is explored as well as the influences of culture, society, family, and physical environments on children’s behavior and mental processes. Additionally, this course provides a scientific foundation for future studies in social sciences, including psychology.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- evaluate key developmental events across the main domains in developmental psychology (physical, cognitive, socioemotional), from conception through adolescence.
- describe uses of the scientific method within developmental psychology.
- evaluate current and prominent developmental theories of child psychology.
- evaluate classic and current research in the area of child psychology.
- compare individual differences in typical behavior in children.
- differentiate typical from atypical psychological development in children.
- analyze the influences of culture, society, family, and physical environments on children’s behavior and mental processes.
- apply child psychology principles to one’s interactions with children (personal and/or professional).
- relate the connection between the study of child psychology to other disciplines.
- utilize critical thinking in arriving at conclusions about child psychology.

PSYC 374 Psychology of Aging: Adult Development and Aging

Same As: GERON 302
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC (UC credit limitation: PSYC 374, GERON 300, 302, & SOC 335 combined: maximum credit, one course)
General Education: AA/AS Area V(b); CSU Area D; CSU Area E1; IGETC Area 4
Catalog Date: June 1, 2020

This course covers the physical, psychological, and social aspects of the aging process including the interactions between the elderly and the rest of society. Topics include an analysis of stereotypes, social bonds, environmental factors, sexuality, physical health, mental health, death, and bereavement. This course is not open to students who have completed GERON 302.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and explain the differences between gerontology and geriatrics and explain the changing age demographics both in the United States and globally.
- describe at least four commonly held myths, stereotypes, or ageist attitudes regarding older adults and explain the impact these attitudes have on the image of aging.
- analyze and predict three ways race, gender, and ethnicity might influence the aging process.
- analyze the concepts of successful aging and optimal aging and recognize the differences between at least three normal and three abnormal age changes.
- describe at least three biological and three social theories used to predict how an individual might respond to the aging process or to old age.
- discuss and incorporate the concept of family and intimate relationships in later life and the importance of convoys or networks in the individual process of aging.
- explain at least three of the financial costs associated with aging.
- describe the concept of “aging in place” using at least three local and national resources, two entitlements, and three healthcare options.
- identify an elder who is aging optimally and describe at least three lifestyle choices, based on gerontological theory, that the student feels altered his/her aging process.

PSYC 378 Communicating with and Validating Older Adults

Same As: GERON 330
Units: 3
Hours: 54 hours LEC
Prerequisite: GERON 302 or PSYC 374 with a grade of "C" or better
Enrollment Limitation: Current tuberculosis clearance
Advisory: ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better;
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020
This course introduces the basic theory, techniques, and experiences for communication with, validation of, and stimulation of the elderly at different cognitive levels in long-term care. After the first class session, this course is held off campus in a long-term care setting. This course is not open to students who have completed GERON 330.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate basic communication needs of seniors and utilize appropriate level of validation theory and techniques
- demonstrate skill, ease, confidence, rapport, and listening skills when communicating with the elderly at different cognitive levels
- assemble and use a kit of materials to facilitate sensory stimulation, validation, and reminiscence therapies

PSYC 379 Reminiscence Therapy

Same As: GERON 334
Units: 3
Hours: 54 hours LEC
Prerequisite: GERON 302 or PSYC 374 with a grade of "C" or better
Enrollment Limitation: Current tuberculosis clearance
Advisory: ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course introduces the basic theory and techniques of reminiscence therapy and provides experience in planning, facilitating, and evaluating reminiscence groups with the elderly in an institutional setting. After the first class session, this course is held off campus in a long-term care setting. This class is not open to students who have completed GERON 334.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze basic group counseling theories and apply to reminiscence techniques used with the elderly
- analyze the effects of reminiscence therapy on the aging process
- evaluate participants' cognitive levels and interests and choose the appropriate subject for reminiscence
- detect and respond to individual needs within the group
- demonstrate skill, ease, confidence, rapport, and listening skills in facilitating reminiscence groups
- explain the basic process of memory construction
- analyze the staff-development benefits from engaging in reminiscence with older adults
- demonstrate social inclusion using reminiscence therapy
- demonstrate techniques used to encourage reminiscence with people who have dementia and live in a facility
- examine his/her individual boundaries and explain why they are important to maintain in reminiscence groups

PSYC 390 Psychology of Death and Dying

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area III(b); CSU Area D9; CSU Area E1; IGETC Area 4I
Catalog Date: June 1, 2020

This course investigates beliefs, attitudes, anxieties, and behaviors associated with dying and death. Information about suicide, life-threatening illnesses, bereavement, and euthanasia are presented.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe basic demographic information on death, grieving, and related experiences
- describe the psychological, social, philosophical, and legal issues related to death
- evaluate information regarding the practical, everyday procedures and practices involved in dealing with death in our own lives
- identify noted psychologists in the field of thanatology who address the stages and anxieties associated with death and dying
- compare and contrast the dynamics of grief, bereavement, and the tasks of adult's and children's mourning
- recognize the psychic pain of suicide, how one can help ameliorate the pain, and the various forms suicide can take, such as altruistic suicide and culturally-defined suicide
- assess personal attitudes and values concerning death

PSYC 400 Introduction to Chemical Dependency

Same As: HSER 340
Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b); CSU Area E1
Catalog Date: June 1, 2020

This course examines the biopsychosociocultural effects of chemical dependency on the individual and the family. It includes an analysis of drug use; misuse and abuse across age, gender, race, ethnicity, and economic conditions contributing to substance abuse; and a description of community efforts at prevention and treatment. This course is not open to students who have completed HSER 340.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the psychological, physiological, and sociocultural issues related to substance use, misuse, and abuse
- describe the psychological and physiological progression of substance abuse
- examine the dynamics of race, ethnicity, age, and gender inherent in substance use, misuse, and abuse situations including drug preferences and codependency
- compare and contrast the key components of assessment and recovery programs for alcoholism and drug abuse including Alcoholics Anonymous (AA), Narcotics Anonymous (NA), Al-Anon, American Counseling Association (ACA), private and public, inpatient and outpatient

PSYC 401 Physiology and Pharmacology: Alcohol & Other Drugs

Same As: HSER 341
Units: 3
Hours: 54 hours LEC
Prerequisite: ENGWR 102 or ESLW 320 and HSER 340 or PSYC 400 with a grade of "C" or better.
Transferable: CSU
Catalog Date: June 1, 2020

This course is a study of the chemical composition of alcohol and the mechanism of action of alcohol and other psychoactive drugs, including opiates, stimulants, depressants, psychotherapeutics, and psychedelics. It also includes the social and psychological implications of tolerance, habituation, and substance abuse of the user and abuser. This course is not open to students who have completed HSER 341.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the psychological, physiological, and sociological issues related to substance abuse
- compare the effects of each class of psychoactive drugs upon the human body.
- define the biological, social, and psychological implications of psychoactive drug use, misuse, and abuse.
- describe the effects of psychoactive drugs on behavior.
analyze treatment issues and challenges.
compare intervention and treatment approaches.
examine alternatives to drug use.

PSYC 402 Alcoholism: Intervention, Treatment & Recovery

This course is a study and evaluation of techniques used in the treatment of chemical dependency. Topics include intervention, individual and group counseling, detoxification, twelve-step program, therapeutic communities, and aftercare programs. This course is not open to students who have completed HSER 342.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- analyze drug and alcohol use, misuse, abuse, and addiction
- compare various theories of drug and alcohol addiction
- differentiate treatment issues of drug and alcohol use, misuse, abuse, and addiction
- describe treatment methods and counseling approaches of drug and alcohol use, misuse, abuse, and addiction

PSYC 415 Studying in London: Psychological Elements of British Life and Culture

This course, offered in a London study abroad program, surveys elements in British history and culture that have influenced the science of psychology. It emphasizes the influences of Sigmund Freud, Charles Darwin, Sir Francis Galton, and the events of World War II to current psychological theories. Additionally, the course examines the social norms in English culture in comparison to other cultures. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- describe the basic elements of psychology as a scientific discipline, including its subject matter and methodology
- evaluate the ideas and theories of various historical British contributors to current western psychological models
- interpret the psychological background and implications of the art and historical sites of England
- identify basic psychological principles in everyday English culture, people, and events
- compare and contrast English culture with one's own culture in terms of various psychological models
- analyze the effects of culture on human thinking and behavior

PSYC 480 Honors General Principles

This course is limited to CSU; UC (UC credit limitation: PSYC 300, 305, & 480 combined: maximum credit, one course) Transferable:
AA/AS Area V(b); CSU Area D9; IGETC Area 4I
This honors course is for psychology majors, behavioral science majors, and other students who desire a challenging, issues-oriented introduction to the general principles of psychology. Topics include the scientific method, statistics, biological determinants, and general processes of behavior, such as development, learning, language, intelligence, perception, motivation, emotion, personality, and mental health. In comparison to PSYC 300, this honors course uses an intensive instructional methodology designed to challenge motivated students and cultivate advanced critical thinking skills. Instruction emphasizes critical thinking in a seminar style, where the focus is on analysis and evaluation of psychological theories and research studies as they relate to practical, everyday issues. Honor students will also develop proficiency in library and internet-based research, make oral and written presentations, and participate in student-led group discussions. An APA style research paper is also required. This course is not open to students who have completed PSYC 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the major concepts, theoretical perspectives, empirical findings, and historical trends in psychology
- examine applications of psychological concepts, theories, and research findings to personal, interpersonal, occupational, and social/community contexts
- incorporate systematic critical thinking in arriving at conclusions about behavior and mental processes
- examine the role that culture and diversity play in the various aspects of human behavior and mental processes
- differentiate between the various psychological research methods and their applications
- distinguish between the ethical implications of psychological research and the responsibility to pursue and use knowledge appropriately

PSYC 481 Honors Abnormal Behavior

Units: 3
Hours: 54 hours LEC
Prerequisite: PSYC 300, 305, or 480 with a grade of "C" or better; Placement into ENGWR 480 through the assessment process.
Transferable: CSU; UC (UC credit limitation: PSYC 340 & 481 combined: maximum credit, one course))
General Education: AA/AS Area III(b); CSU Area D9; CSU Area E1; IGETC Area 4I
C-ID: C-ID PSY 120
Catalog Date: June 1, 2020

This course is for psychology majors, behavioral science majors, and others who desire a challenging, critical thinking, and issues-oriented exploration of normality and abnormality. It examines the origins, symptoms, and treatment of psychological disorders through first-person accounts, role of multicultural factors, and various theoretical stances. It focuses on thorough analysis and evaluation of biopsychosocial theories and research studies as they relate to the development and persistence of behavior disorders and treatment approaches. Field trips may be required. This course is not open to students who have taken PSYC 340.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- appraise various aspects of "normal" and "abnormal" behavior
- extrapolate theories of psychopathology from scientific data and critically analyze the implications of those theories
- differentiate specific psychological disorders
- evaluate current approaches to treatment of psychological disorders including psychosocial rehabilitation
- debate legal, ethical, and social issues in mental health
- develop researchable hypotheses regarding biological, psychological, and social factors to the development and persistence of behavioral disorders

PSYC 495 Independent Studies in Psychology

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degree

A.A. in Real Estate

This degree focuses on the practical application of concepts utilized in real estate markets and career fields. Course work includes real estate principles, legal aspects, practice, finance, economics, and appraisal.

Catalog Date: June 1, 2020

The Real Estate Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- Identify and explain the major functional areas of real estate, including legal aspects, finance, economics, real estate practice, and appraisal.
- Demonstrate effective leadership skills in a real estate environment.
- Analyze practical real estate problems.
- Integrate real estate principles related to finance, law, products, services and information.
- Assess current real estate market conditions.
- Recommend appropriate sales strategies, based on market conditions.
- Qualify for the California Real Estate Brokers and Salesperson license examinations.
- Utilize research and critical thinking to evaluate and recommend alternative solutions to real estate problems.

**Career Information**

Real estate salesperson; real estate broker; real estate appraiser; small business owner

**Certificate of Achievement**

**Real Estate Certificate**

This certificate introduces the basic concepts of the real estate career field. Topics include the principles of real estate, law, economics, finance, practice and appraisal.

RE 295 Independent Studies in Real Estate

| Units:     | 1 - 3  |
| Hours:     | 54 - 162 hours LAB |
| Prerequisite: | None. |
| Catalog Date: | June 1, 2020 |

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

RE 300 California Real Estate Principles

| Units:       | 3 |
| Hours:       | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers the basic laws and principles of California real estate. It provides the background and terminology necessary for advanced study in specialized courses. This course is required by the California Department of Real Estate prior to taking the real estate salesperson's examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the fundamental concepts and principles of real estate.
- apply the technical terminology involved in the real estate field.
- understand real estate transactions.
- describe the requirements for the “California Real Estate Salesperson's” License Examination.

RE 310 Real Estate Practice

| Units:       | 3 |
| Hours:       | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
| Catalog Date: | June 1, 2020 |

This course covers the daily operations in the role of real estate agent or broker. It includes listing, prospecting, advertising, financing, sales techniques, escrow, and ethics. This course also covers basic laws and practices of California real estate and provides background and terminology necessary for advanced study in more specialized courses. This course applies towards the educational requirements for the California State Broker's examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the responsibilities of a real estate professional.
• define the technical terminology involved in the real estate field.
• describe the requirements for the "California Real Estate Brokers and Salesperson" license examinations.
• analyze real estate situations and property, interpret the data, and properly complete deposit receipts.

RE 320 Real Estate Finance

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: RE 300; RE 300; ENGWR 102 or 103 and ENGRD 116 or ESLR 320 and ESLW 320; BUS 105
Transferable: CSU
Catalog Date: June 1, 2020

This course covers real estate financing, including lending policies and problems in financing transactions in residential apartments and commercial and special purpose properties. Methods of financing properties are emphasized. It meets one of the educational requirements to qualify for the California Department of Real Estate broker's examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• examine theoretical and practical applications of real estate financing.
• assess the process of financing various types of real estate.
• identify sources of funds and the various entities which affect qualifications and availability of funding.
• examine loan processes, appraisal for lenders, and foreclosures.
• evaluate secondary markets and construction loans.
• calculate real estate finance and alternative financing methods.

RE 330 Legal Aspects of Real Estate

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: RE 300; RE 300; ENGWR 102 or 103 and ENGRD 116 or ESLR 320 and ESLW 320; BUS 105
Transferable: CSU
Catalog Date: June 1, 2020

This course covers California real estate laws, including methods of ownership, estates, transfers, financing instruments, foreclosures, leasing, contracts, and agency. It meets one of the educational requirements to qualify for the California Department of Real Estate broker's examination.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the important legal aspects of real estate.
• apply real estate law principles.
• analyze real estate case law.
• diagram the organization and structure of the U.S. legal system and procedures.
• apply the ethical standards of the real estate profession.
• evaluate real estate legal issues before they arise.
• develop solutions to real estate legal issues.

RE 342 Real Estate Appraisal
This course covers entry-level education in the real estate appraisal field, concentrating on the appraisal of single-family residences (real property). It covers Basic Appraisal Principles (30 Hours) and Basic Appraisal Procedures (30 Hours) pursuant to the Appraiser Qualifications Board's (AQB) Real Property Appraiser Qualification Criteria (effective January 1, 2008). This course is designed to meet the California Bureau of Real Estate Appraisers (BREA) requirements for Basic Education (60 Hours). It also meets the California Bureau of Real Estate (BRE) college-level educational requirements (3 semester units) for the salesperson and broker examinations.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- define real property concepts, characteristics, and legal descriptions.
- distinguish between the different forms of ownership, types of leases, contracts, and public or private controls.
- describe the four influences on real estate values: government, economic, social, and physical.
- identify the different types of value: market value, insurable value, and salvage value.
- explain classical economic principles.
- analyze real estate market fundamentals and characteristics.
- interpret appraisal ethics and appraisal theory and practice.
- apply proper valuation procedures and techniques in developing a credible appraisal report.
- analyze real property descriptions, characteristics, and considerations for highest value and best use.
- evaluate and apply the market approach, cost approach, and basic income approach processes as appropriate.
- complete or review a residential appraisal (subject to practical experience and licensing) pursuant to current ethical standards and practices.

RE 350 Real Property Management

Upon completion of this course, the student will be able to:

- describe the major functions of property managers, including their legal and interpersonal concerns.
- detail specific practices and problems in management of various properties, such as retail property, office buildings, apartments, industrial property, and condominiums.
- define the technical terminology in the property management field.
- describe the requirements for the California Real Estate Broker's and Salesperson license examinations.
- demonstrate practical tools for property management.
- identify everyday issues regarding maintenance, accounting, administration, and other activities.

RE 360 Real Estate Economics
This course covers the nature and classification of real estate and real estate investments. Topics include economic development of real property, real estate cycles and market trends, and governmental and private sector influence on the economics of real estate. It is recommended that this course be taken last in the real estate series. This course meets one of the educational requirements to qualify for the California Bureau of Real Estate broker's examination.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the fundamental concepts and principles of real estate economics
- evaluate economic impacts of income and property taxation on market value
- analyze national, regional, and community trends in terms of their effects on real estate
- formulate income processing scenarios through the use of break-even analysis, cash equivalents, capitalization theory, and internal/fair rates of return
- define the economic principles that govern real estate markets and buyer/seller behavioral patterns
- describe sound real estate investment strategies through an analysis of real estate economic trends

**RE 495 Independent Studies in Real Estate**

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Recreation | American River College

This degree provides training for an entry-level career in the field of recreation and leisure services. It explores the many career fields in recreation, including public service, private recreation, outdoor recreation, and leadership positions.

The Recreation Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze community needs for parks and recreation programs.
- create recreation programs and supervise staff.
- demonstrate leadership skills in recreation programs.
• administer a wide variety of parks and community services.

Career Information

Careers in recreation include jobs in park facilities and services in federal, state, municipal, and voluntary nonprofit agencies. Commercial and private recreation also provide opportunities for employment. Travel and tourism, club management, resort recreation, food and beverage services, lodging, professional sports, entertainment, and cultural services are very much an integral part of the recreation and leisure services market.

Recreation (RECR)

RECR 300 Introduction to Recreation and Leisure Services

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an overview of recreation, park, and leisure services. It covers recreation as a form of community service, as well as the nature, scope, and significance of leisure and recreation as a social force in contemporary society. It emphasizes the role of the professional leader in organizing recreation programs and services, operations, facilities, and resources. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe philosophical foundations of leisure and recreation.
• explain the bases for growing interest in recreation and leisure activities.
• analyze recreation and leisure program components.
• identify the sociological, psychological, and economic implications of parks and recreation.
• define the functions and services of recreational agencies from local to federal levels.
• demonstrate face-to-face leadership skills in program planning and operations.
• identify the challenges, issues, programs, and trends in the recreation movement.

RECR 310 Outdoor Recreation

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 320 AND ESLW 320.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an orientation to job opportunities in the outdoor recreation field. It includes an overview of different types of outdoor recreation, socio-economic factors in outdoor recreation, the role of government, the role of the private sector, management, and issues and trends in outdoor recreation. Philosophies and operating purposes of outdoor recreation facilities run by federal, state, and local governments are discussed. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe and identify job opportunities with outdoor recreation agencies and suppliers.
• distinguish between the operation of local, state, and federal recreation agencies.
• analyze and describe solutions to problems and issues facing outdoor recreation agencies.
• design a plan for an outdoor recreation facility.
• create and lead an outdoor recreation activity.
• identify risk management in outdoor programming.
• analyze the purpose and quality of outdoor recreational activities.

RECR 320 Recreation Activity Leadership

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND EESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This is a basic course for recreation majors, involving a study of essential elements and basic principles of organization and leadership of various types of recreation programs. It covers the methods and materials used in planning and conducting organized recreation programs in public and private agencies. Special emphasis is placed on the role of the face-to-face leader in organizing recreational programs in a variety of settings. Field trips are required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• demonstrate a basic knowledge of program planning principles and activity leadership.
• plan, organize, promote, and lead organized recreation programs and special events.
• list, plan, and execute events for specific populations.
• interpret and apply the principles of planning and development of recreation programs.

RECR 498 Work Experience in Recreation

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to recreation with a cooperating site supervisor. Students are advised to consult with the Physical Education Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND EESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of recreation. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

• demonstrate application of industry knowledge and theoretical concepts in the field of recreation related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
• make effective decisions, use workforce information, and manage his/her personal career plans.
• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
• locate, organize, evaluate, and reference information at work.
• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
Respiratory Care | American River College

This degree is preparation for licensure as a Respiratory Care Practitioner in the state of California as a Respiratory Care Practitioner at the Advanced Registered Respiratory Therapist level. It focuses on diagnostic procedures, treatment, and management of patients with conditions affecting the cardiopulmonary system. Course work includes physical assessment, medical gas therapies, mechanical life support, airway care, pharmacology, neonatal/pediatric therapy, and specialized cardiopulmonary procedures. All degree major courses require a grade of "C" or better to remain in the program.

**Total Units:** 66 - 68

The Respiratory Care Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

**Enrollment Eligibility**

To be eligible for enrollment in the program, the student must meet the following criteria:

- Graduation from an accredited high school (graduates from outside the United States must have transcripts evaluated by an independent agency), or successful completion of the General Educational Development (GED) Test or California High School Proficiency Examination (CHSPE) as defined by the current requirements of the State of California and National Board for Respiratory Care.

- A GPA of 2.5 in all prerequisite courses.

- AH 110 with a grade of "C" or better.

- BIOL 430 and BIOL 431 with grades of "C" or better.

- BIOL 440 or BIOL 442 with a grade of "C" or better.

- PHYS 310 or PHYS 350 with a grade of "C" or better.

- Current college GPA of 2.0 or better.

- A Curriculum Planning Summary Sheet completed by an ARC counselor and dated within the year the enrollment application packet is submitted.

- A completed pre-enrollment application.

**Enrollment Process**

Eligible students are selected for the program according to the following steps:

- Applications to the program may be obtained online at http://www.arc.losrios.edu/Programs_of_Study/Health_and_Education/Respiratory_Care.htm. Please check the above website for application period and submission deadline.

- Only students who meet the pre-enrollment requirements and follow the pre-enrollment procedures will be considered for the program.

- Selection is based on a computerized random selection process from among the qualified applicants.
The student accepted into the Respiratory Care program is required to have a physical examination, inoculations, drug screen, background check, and malpractice insurance. The student is responsible for any cost incurred related to meeting the requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- discuss patient/client reports with members of the health care network.
- collect patient information relevant to the diagnosis and treatment of patients affected by pulmonary disease.
- recommend appropriate treatment plans based upon auditory, tactile, and visual feedback.
- record assessment findings, treatment plans, and recommendations for care in medical records.
- chart patient care in accordance with local, regional, and national standards.
- categorize patients affected by pulmonary disease as having acute or chronic conditions.
- define pulmonary disorders as restrictive or obstructive disease.
- comply with ethical standards of the profession.

Career Information

The Bureau of Labor Statistics states that faster than average employment growth is projected for respiratory therapists. The increasing demand will come from substantial increases in the middle aged and elderly populations. Greater demand will also result from the expanding role of respiratory therapist in case management, disease prevention, emergency care, and the early detection of pulmonary disorders. Career opportunities include positions in hospitals and other areas, especially in home health care services, physician’s offices, and medical equipment supply companies.

Respiratory Care (RC)

RC 110 Cardiopulmonary Pathologies for Respiratory Care

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Corequisite: RC 111
Enrollment Limitation: Acceptance into the Respiratory Care Program.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Catalog Date: June 1, 2020

This course introduces the common pathologies affecting the cardiopulmonary system and related pharmacological treatment. Topics include obstructive and restrictive airway diseases, early childhood respiratory diseases, infectious pulmonary diseases, and pulmonary vascular diseases.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and relate common developmental pathologies.
- catalog pulmonary diseases as obstructive or restrictive.
- recommend diagnostic procedures for identification and staging of cardiopulmonary disease.
- analyze data collected from various diagnostic procedures including x-ray, arterial blood gases, and pulmonary function tests.
- compile data for development of therapist driven protocols.
- analyze disease states and pharmatherapeutic strategies.
- define categories of drugs and apply appropriate category to various cardiopulmonary disease states.
- recommend appropriate pharmacological intervention for cardiopulmonary pathologies.
This course introduces critical thinking skills necessary for entry into clinical practice in respiratory care. It includes a comprehensive overview of the cardiopulmonary system with emphasis on applied physiology. Additionally, it covers ventilation, gas transport, gas exchange, and acid-base balance, including interpretation of data and the relationship of therapeutics to physiological principles. Respiratory care equipment, patient assessment skills, safe practices, such as the Health Insurance Portability and Accountability Act (HIPAA), human rights and privacy, personal health and hygiene, and hospital orientations are introduced. This course is preparation for general practice as a respiratory care practitioner. It covers laboratory skills and procedures with emphasis on the application of theories and techniques related to assessment, evaluation, and interpretation of patients with cardiopulmonary illness. Included are concepts of Basic Life Support. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate the difference between the mechanical and metabolic work involved in ventilation and perfusion and their significance in patient care.
- explain compensatory mechanisms of human physiology in the presence of disease.
- demonstrate patient assessment skills and related therapeutics.
- analyze information received from patients' records and tests.
- measure the mechanisms by which oxygen and carbon dioxide are transported in the blood and the factors affecting that transport to and from the tissues and apply the data to patient care situations.
- evaluate electrolyte and acid base regulation in relationship to kidney function.
- correlate acid-base regulation and the control of ventilation.
- analyze how the cardiovascular system coordinates its functions under normal and abnormal conditions.
- compare and contrast various respiratory care procedures and equipment.
- draft an appropriate plan for correction of various forms of cardiovascular disease.
- explain the role of HIPAA in the respiratory care field.
- identify two methods to ensure proper patient identification.
- explain the importance of the patient's right to privacy.
- recognize examples of inappropriate conversation topics.
- formulate an appropriate plan for safe practice and preventing spread of infection.
- demonstrate verbal, nonverbal, and written communications skills in patient interactions.
- recommend appropriate treatment modalities for patients affected by cardiopulmonary disease.
- create respiratory care treatment plans for patients affected by cardiopulmonary disease.
- identify and assemble respiratory care equipment for application in treating oxygen failure.
- assess patient responses to oxygen therapies.
- interpret cardiopulmonary diagnostic test results and recommend appropriate modifications to treatment plans.
- demonstrate appropriate blood gas draw procedure and knowledge to successfully obtain the blood gas certificate.
- cite drugs and preparation utilized in the management of respiratory disease.

---

**RC 121 Concepts of Airway Care & Mechanical Ventilation**

- **Units:** 4
- **Hours:** 72 hours LEC
- **Prerequisite:** RC 110 and 111 with grades of "C" or better
- **Corequisite:** RC 122, 123, and 124
- **Catalog Date:** June 1, 2020
This course expands on the principles of respiratory failure, airway protective techniques, and advanced life support. Topics include mechanical ventilator theories and modes, invasive and noninvasive airway care, and Advanced Cardiac Life Support (ACLS) procedures.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify signs and symptoms of respiratory failure.
- demonstrate appropriate treatment of respiratory failure.
- clear an obstructed airway.
- compile a list of equipment utilized in the intubation process.
- list modes of mechanical ventilation.
- assess patients for weaning readiness from mechanical ventilation.
- analyze mechanical ventilator data and modify therapy.
- troubleshoot various mechanical ventilator problems.
- cite the basic parameters of ventilation.
- construct a ventilator record or flow sheet.

### RC 122 Airway Care & Mechanical Ventilation Laboratory

**Units:** 1  
**Hours:** 54 hours LAB  
**Prerequisite:** RC 110 and 111 with grades of "C" or better  
**Corequisite:** RC 121, 123, and 124  
**Catalog Date:** June 1, 2020

This course introduces higher levels of clinical practice including critical care. It covers Advanced Cardiac Life Support (ACLS), airway protective procedures, and mechanical ventilation. Field trips may be required.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify adjunctive airway and intubation equipment.
- establish effective airway techniques and perform intubations.
- select mechanical ventilators and assess for proper function.
- troubleshoot mechanical ventilators.
- interpret mechanical ventilator and hemodynamic wave forms.
- collect mechanical ventilator data and construct flow sheets.
- diagnose respiratory failure.
- differentiate types of artificial airways and mechanical ventilators.

### RC 123 Clinical Externship I

**Units:** 3  
**Hours:** 162 hours LAB  
**Prerequisite:** RC 110 and 111 with grades of "C" or better  
**Corequisite:** RC 121, 122, and 124  
**Enrollment Limitation:** Students must meet the health requirements of the Los Rios Community College District for Allied Health Programs and certification in Basic Life Support for the Health Care Provider.  
**Catalog Date:** June 1, 2020

This course presents the principles of medical gas delivery devices; humidity, aerosol and hyperinflation therapies, and chest physiotherapy. It also covers the application,
Patient assessment, patient monitoring, and evaluation of the efficacy of medical gas, humidity, aerosol and hyperinflation therapies, and chest physiotherapy. A portion of this course may be offered with a TBA component which may include working in clinical sites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze information received from patients, records, and tests.
- select and recommend appropriate drugs and preparations utilized in the management of respiratory disease.
- adapt respiratory care equipment to meet a patient's oxygen therapy needs.
- apply evaluation skills to identification of various pathologies.
- explain the rationale for various respiratory care procedures.
- perform technical skills common to care of the critically ill.
- assess a patient's response to therapy.
- assemble appropriate equipment for therapeutic procedures.

RC 124 Respiratory Care Pharmacology

Units: 3
Hours: 54 hours LEC
Prerequisite: RC 110 and 111 with grades of "C" or better
Corequisite: RC 121, 122, and 123
Catalog Date: June 1, 2020

This course covers the concepts and principles of pharmacology required in the practice of respiratory care, including medications, actions, dosages, routes of administration, and adverse reactions. Topics include patient education of medication delivery devices, patient monitoring devices, utilization techniques, and the standards for therapeutic efficacy in relation to asthma, chronic obstructive pulmonary disease, and smoking cessation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe principles of drug actions
- explain the pharmaceutical theory of drug therapy
- cite preferred methods of administration of drugs
- identify drugs utilized for prevention of pulmonary disease
- analyze disease states and pharmatherapeutic strategies
- recommend appropriate pharmacological intervention for various cardiopulmonary pathologies
- interpret the appropriateness of drug intervention

RC 130 Respiratory Care in Neonatal and Pediatric Populations & Diagnostic Studies

Units: 3
Hours: 54 hours LEC
Prerequisite: RC 121, 122, 123, and 124 with grades of "C" or better
Corequisite: RC 131 and 132
Catalog Date: June 1, 2020

This course prepares students to work in laboratories and special care areas of a hospital. Topics include perinatal and pediatric diseases, labor and delivery, rehabilitation, and advanced diagnostic studies performed by respiratory therapists. Additional topics include bronchoscopy, advanced pulmonary function studies, bronchial provocation testing, polyslonography, exercise stress tests, metabolic studies, hemodynamic measurements, advanced modalities of mechanical ventilation, and cardiovascular testing.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- differentiate the methods of assessing the newborn infant, including maternal and fetal factors.
- describe the hazards and indications for special equipment, application, and techniques applied to infants and children.
- describe the etiology, pathophysiology, clinical manifestations, and treatment of selected neonatal and pediatric diseases.
- analyze the process of cardiopulmonary rehabilitation including program form, content, and outcome evaluation, patient assessment for selection into a program, exercise evaluation, and preparation of a respiratory care plan.
- analyze the modalities and equipment available for cardiopulmonary rehabilitation, exercise, reconditioning, breathing retraining, as well as long term oxygen and ventilation care.
- select and evaluate the delivery of respiratory care in the home setting including assessment of the home environment, patient comprehension of treatment modalities, equipment, and infection control.
- recommend appropriate reconditioning exercises and rehabilitation programs for the outpatient client.
- analyze and recommend appropriate advanced mechanical ventilation strategies.

**RC 131 Respiratory Care in Neonatal and Pediatric Populations & Diagnostic Studies Laboratory**

### Units: 1
### Hours: 54 hours LAB
### Prerequisite: RC 121, 122, 123, and 124 with grades of "C" or better
### Corequisite: RC 130 and 132
### Catalog Date: June 1, 2020

This course prepares students for general practice as respiratory care practitioners. It provides laboratory practice in medical gas, humidity/aerosol, hyperinflation and bronchial hygiene therapies, airway management, and non-invasive and invasive mechanical ventilatory support as applied to neonatal and pediatric patients in specialized critical care units. Additionally, it covers pulmonary rehabilitation techniques, cardiopulmonary stress testing, sleep studies, and respiratory care techniques in the home setting. Field trips may be required. Students must successfully complete the National Board for Respiratory Care Self Assessment Examinations to receive a passing grade in this course. Students are responsible for fees associated with this examination.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- monitor hemodynamic values of patients undergoing special procedures.
- assess performance of patients before during and after special procedures.
- troubleshoot equipment malfunctions.
- analyze results of tests performed.
- discuss abnormal findings from examinations performed.
- chart patient progress.
- assemble equipment to perform various procedures.
- select and recommend drugs, gases, and preparations utilized in respiratory and diagnostic laboratories.
- assemble pediatric ventilators.
- apply pediatric ventilators.
- assess health status of newborn infants.
- develop appropriate care plans.
- coordinate rehabilitation activities.

**RC 132 Clinical Externship II**

### Units: 6
### Hours: 324 hours LAB
This is a preparatory course for advanced practice as respiratory care practitioners. Topics include clinical practice in the application of airway management, including intubation, suctioning, and bronchoscopy, to adult patients in critical care units. Additionally it includes clinical practice in application of non-invasive and invasive mechanical ventilatory support, ventilator settings/adjustments, monitoring, adjusting ventilators to improve oxygenation and/or ventilation and discontinuance from mechanical ventilatory support. Clinical experience is provided in regional hospitals and clinics. A portion of this course may be offered with a TBA component which may include working in clinical sites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- monitor patient care in critical care units.
- evaluate patients in critical care units.
- assess ventilation disorders.
- troubleshoot mechanical ventilator problems.
- perform technical skills common to care of the critically ill.
- collect and analyze blood and tissue samples from critically ill patients.
- report on patient status to physicians and co-workers.
- record critical data in patient records.
- chart patient progress.
- collect and evaluate diagnostic data to include chest radiography, electrocardiography, pulmonary function testing, and laboratory studies.

RC 140 Professional Development in Respiratory Care

Units: 2
Hours: 36 hours LEC
Prerequisite: RC 130, 131, and 132 with grades of "C" or better
Corequisite: RC 142
Catalog Date: June 1, 2020

This course prepares students for transition into professional practice. Topics include ethical behaviors, resume writing, and professional attributes and dress for the respiratory care setting. Interviewing skills, professional test preparation for state and national licensing examinations, and practice examinations for the National Board of Respiratory Care's Therapist Multiple-Choice Examination and Clinical Simulation Self Assessment Examinations are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe appropriate business attire for respiratory care professionals working outside the hospital environment.
- write an effective resume for employment in respiratory care.
- compose a letter of introduction for future employment.
- schedule an interview with a potential employer.
- discuss interviewing principles in relation to employment in respiratory care.
- complete job and licensing applications for respiratory care practice.
- assess preparation for state and national testing standards.
- discuss appropriate business practices for respiratory care practitioners working in home care.
- explain the Respiratory Care Practice Act as it relates to delivery of respiratory home care.
- describe the advanced practice examination system for Registered Respiratory Therapist.
RC 142 Clinical Externship III

Units: 6
Hours: 324 hours LAB
Prerequisite: RC 130, 131, and 132 with grades of "C" or better
Corequisite: RC 140
Enrollment Limitation: Meet the health requirements of the Los Rios Community College District for Allied Health Programs and certification in Pediatric Advanced Life Support and Neonatal Resuscitation Program.
Catalog Date: June 1, 2020

This course prepares for advanced practice of respiratory care. Topics include labor and delivery, neonatal intensive care, cardiac and medical intensive care, medical trauma management, application of pulmonary rehabilitation techniques, cardiopulmonary stress testing, sleep studies, and respiratory care techniques in the home setting. Additional topics include case studies in medical management. Field trips are required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- monitor hemodynamic values of patients in critical care units.
- evaluate hemodynamic values of patients in critical care units.
- assess performance of mechanical ventilators.
- troubleshoot mechanical ventilation problems.
- perform technical skills common to care of the critically ill.
- collect blood and tissue samples from critically ill patients.
- analyze blood and tissue samples from critically ill patients.
- report on patient status to physicians and co-workers.
- record critical data in patient records.
- chart patient progress.
- demonstrate correct application of therapeutic procedures to neonatal and pediatric patients.
- evaluate, assess, and modify neonatal and pediatric airways and therapy.

RC 295 Independent Studies in Respiratory Care

Units: 1 - 3
Prerequisite: None.
Catalog Date: June 1, 2020
Associate Degrees for Transfer

A.A.-T. in Social Justice Studies: Race and Ethnicity

The Associate in Arts in Social Justice Studies: Race and Ethnicity for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts in Social Justice Studies: Race and Ethnicity for Transfer (AA-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

The Associate in Arts in Social Justice Studies: Race and Ethnicity for Transfer (AA-T) degree provides a curricular track for students who wish to transfer into a variety of CSU majors related to race and ethnicity, such as Ethnic Studies, Chicano Studies, or African American Studies. This Transfer Model Curriculum is an “Area of Emphasis” (AOE), which allows for students to transfer into more than one CSU major related to Race and Ethnicity. Students interested in transferring to a CSU campus to pursue a bachelor’s degree in an Area of Emphasis should meet with a counselor to confirm the courses required for lower division preparation in the major. This degree exposes students to the core principles and practices of the Social Justice Studies field in order to build a foundation for their future personal, academic, or vocational paths.

Catalog Date: June 1, 2020

The Associate in Arts in Social Justice Studies: Race and Ethnicity for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- research how theoretical perspectives and critical theories on social justice inform the social, political, economic, historical, and cultural circumstances surrounding justice as they relate to race and ethnicity as well as other intersectional aspects of life in society.
- define and analyze power and oppression to better understand how they operate at the individual, cultural, and institutional levels.
- explain how intersectional formations of social identity reflecting various levels of power and privilege impact social justice at the individual, cultural, and institutional levels.
- recognize the historical origins and similarities in struggles for social justice among different ethnic and racial groups.
- assess artistic works that examine oppression, power, and justice as they relate to race and ethnicity.

Career Information

The AA-T degree provides students with a solid foundation in Social Justice Studies as well as prerequisites for upper division coursework leading to the baccalaureate degree in a variety of Areas of Emphasis. The degree gives students a pathway to possibilities, options, and baccalaureate degrees focusing on social justice. In addition, a student can use the AA-T in Social Justice Studies to get into a CSU and then complete a graduate degree in a related field. Students with degrees in this field often assume careers as (or in) the following: activists, community organizers, political campaigners, human rights groups, religious organizations, international agencies, lobbyists, and mediators. This program is also an excellent starting point for students interested in a career in law, law enforcement, social work, clinical psychology, or any social science, politics, business, education, or public policy.

A.A.-T. in Social Justice Studies: Women, Gender, and LGBTQ Studies

The Associate in Arts in Social Justice Studies: Women, Gender, and LGBTQ Studies for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts in Social Justice Studies: Women, Gender, and LGBTQ Studies for Transfer (AA-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

The Associate in Arts in Social Justice Studies: Women, Gender, LGBTQ Studies for Transfer (AA-T) degree provides a curricular track for students who wish to transfer into a variety of CSU majors related to Women, Gender, LGBTQ Studies, such as Women’s Studies, Gender Studies, or Queer Studies. This Transfer Model Curriculum is an “Area of Emphasis” (AOE), which allows for students to transfer into more than one CSU major related to Women, Gender, LGBTQ Studies. Students interested in transferring to a CSU campus to pursue a bachelor’s degree in an Area of Emphasis should meet with a counselor to confirm the courses required for lower division preparation in the major. This degree exposes students to the core principles and practices of the Social Justice Studies field in order to build a foundation for their future personal, academic, or vocational paths.

Catalog Date: June 1, 2020
The Associate in Arts in Social Justice Studies: Women, Gender, and LGBTQ Studies for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- research how theoretical perspectives and critical theories on social justice inform the social, political, economic, historical, and cultural circumstances surrounding justice as they relate to gender, sexuality, and race as well as other intersectional aspects of life in society.
- define and analyze power and oppression to better understand how they operate at the individual, cultural, and institutional levels.
- explain how intersectional formations of social identity reflecting various levels of power and privilege impact social justice at the individual, cultural, and institutional levels.
- recognize the historical origins and similarities in struggles for social justice among diverse groups.
- assess artistic works and political achievements that expose oppression and injustice as they relate to women, gender, or the LGBTQ community.
Social Justice Studies (SJS)

SJS 300 Introduction to Social Justice Studies

This interdisciplinary course introduces students to the theoretical and practical foundations of social justice and the social processes that create and resist oppression. It covers the sociology, history, and psychology of oppressions based upon race, ethnicity, class, gender, sexuality, and other group identities in the United States and the corresponding social justice movements for liberation. It investigates how creating and undoing asymmetrical power relations are linked to social structures, institutional processes, and culture. Additionally, it provides a basis for a better understanding of socioeconomic, political, and cultural conditions of key social groups in the United States. Topics include theoretical foundations of social justice and oppression, history and politics of group identity, culture and ideologies, forms of oppression, privilege, and forms of resistance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the foundational theories within social justice studies.
- differentiate between oppression and other forms of mistreatment.
- explain power asymmetry as it is linked to social structure and institutional processes.
- analyze theories on how identity is created for groups in a society via power, economic, political, and cultural structures.
- summarize the modern histories and experiences of groups oppressed because of race, ethnicity, class, gender, and sexuality in the United States.
- compile contributions of oppressed groups to the development of American society.
- assess the complex intersections and relationships within and across race, ethnicity, socioeconomic class, gender, sexual orientation, and other identities.
- identify and analyze the role of culture in oppression and in empowerment, including art, film, literature, or music reflecting different groups.
- understand theories on how and why groups resist.
- identify struggles for social justice, liberation, and decolonization.
- apply how privilege and oppression operate in the major institutions of the United States, including education, health care, the economy, and the criminal justice system.

SJS 310 Introduction to LGBTQ Studies

This course introduces students to Lesbian, Gay, Bisexual, Transgender, and Queer (LGBTQ) studies. It explores how LGBTQ individuals and communities are impacted by various social, cultural, historical, and political factors. Topics include politics of sexuality and sexual identities; forms of oppression including heterosexism, homophobia,
and transphobia, as well as resistance to oppression, violence against LGBTQ individuals and communities, and queer activism. This course also includes contemporary issues in families, education, religion, and the law.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the various ways people identify their sexual orientation and/or their gender identity and expression.
- explore the intersections of homophobia, sexism, heterosexism, transphobia, racism, classism, ageism, ableism and other intersecting identities within the context of LGBTQ political struggles in the United States.
- assess theories about sexual orientation and gender identity and expression within the context of feminist theory, gender theory, and queer theory.
- examine the continuous evolution of legal policies and societal views of LGBTQ people on a global level.
- examine sexual orientation and gender identity within Native American, African American, Chicano/a and Latino/a, Asian American, Pacific Islander, and recent immigrant communities in the United States.
- identify key individuals and describe their roles and contributions to domestic and international LGBTQ struggles for full human rights.
- assess the impact of hate crimes on LGBTQ individuals, the LGBTQ community, the community at large, and public policy.
- research the history of public health policy in the United States as well as internationally to explore the ways that LGBTQ people have consistently suffered under homophobic, biphobic, and transphobic policies.
- examine the evolution of LGBTQ culture in literature, the media, and the arts.
- explore the impact of our education system on the ability of LGBTQ individuals and communities to achieve social justice and equity.

Associate Degree

A.A. in Social Science

The Social Science degree provides an interdisciplinary approach to academic studies. The purpose of the program is for students to gain an understanding of the interconnectedness of various scientific disciplines. The interdisciplinary approach enables students to understand how issues and events are shaped by diverse socio-economic, political, ecological, biological and geographical forces.

The Social Science Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Research and analyze topics from an interdisciplinary perspective.
- Integrate various social-scientific perspectives into the understanding of the subject matter.
- Compare and contrast the relative contribution of courses offered in various disciplines to an overall understanding of issues and events.
- Develop a personal interpretation about issues and matters under study.
- Identify and explain various forces that interact to shape events and social occurrences.
- Define and describe issues and events within an interdisciplinary perspective.

Social Science (SOCSC)

SOCSC 495 Independent Studies in Social Science

Units: 1 - 3
| **Prerequisite:** | None. |
| **Transferable:** | CSU |
| **Catalog Date:** | June 1, 2020 |
Sociology is the study of human society in all its manifestations. Its aim is to discover the process and structure of human interaction, to identify the main forces that sustain or weaken social groups, and to determine the conditions that transform social life. Sociology, like any science, is a disciplined, intellectual quest for knowledge about the fundamental nature of things.

Associate Degree for Transfer

A.A.-T. in Sociology

This Associate in Arts in Sociology for Transfer provides a path to students who wish to transfer to a CSU campus in Sociology and serves the diverse needs of students who wish to obtain a broad and an in-depth understanding of the field. Additionally, this degree allows students to learn the fundamental principles and practices of Sociology in order to create a solid foundation for their future personal and academic endeavors.

The Associate in Arts in Sociology for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts in Sociology for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

The Associate in Arts in Sociology for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- differentiate between scientifically-based sociological knowledge and hear-say, personal beliefs, and opinions.
- compare and contrast the major theoretical perspectives in sociology.
- define basic sociological terms and concepts regarding the nature of social life, social structures, socio-economic, political, and cultural institutions.
- analyze various sociological perspectives and their relevance to the understanding of social life in general and personal life in particular.
- construct and evaluate sociological data, utilize the scientific method, draw reasonable conclusions.
- identify and understand the ethical implications involved in research and their impact on social policy/public policies.
- apply sociological principles and theories to everyday life situations in regard to interaction with people from diverse backgrounds in a just, equitable, and inclusive manner.

Career Information

The Sociology degree is designed to facilitate students' successful transfer to four-year colleges that prepare them for advanced study in a variety of graduate programs as well as a variety of career opportunities in social work, law, criminology, law enforcement, teaching, health services, urban planning and development, and research.

Sociology (SOC)

SOC 300 Introductory Sociology

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
General Education: AA/AS Area V(b); CSU Area D0; IGETC Area 4J
C-ID: C-ID SOCI 110
Catalog Date: June 1, 2020

This course examines principles and basic concepts in sociology. It includes the study of institutions, culture, social organization, group interaction, social stratification, economy, politics, social movements, and urbanization. This course is not open to students who have completed SOC 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare various sociological perspectives and their relevance to the understanding of social life.
- synthesize various sociological theories to enhance one’s understanding of everyday life events and social experiences.
- identify and discuss major issues facing the world today from a sociological standpoint.
- relate sociological theories to the workings of various institutions and analyze social issues and events from a sociological standpoint.
- define the role of human agency in shaping institutions and structures in society.
- research and evaluate various economic, political, and social institutions in society.
- apply the micro-sociological and interpersonal level analysis to social behavior.
apply macro-sociological and institutional and systemic analysis to social behavior.

SOC 301 Social Problems

This course examines contemporary social problems in the US within a theoretical and global context. It examines the role and the structure of power and ideology in shaping our understanding and approach to social problems. It includes a critical analysis of their causes, consequences as well as an evaluation of proposed solutions and methods of treatment. Attention is directed to poverty and inequality, race and gender inequalities, problems of the environment, unequal access to education as well as problems in the economic and political systems and the impact of globalization on these problems.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate understanding of major social problems in the US using sociological perspectives and concepts.
- place local, regional, and national social problems in a global context.
- examine and explain causes and consequences of social problems within a national and global context.
- discuss how causes of social problems are structurally connected to their solutions.
- define the role of various institutions, the structure of power, the role of ideology, and global forces as they pertain to the social construction of social problems, their causes and solutions.
- analyze and interpret qualitative and quantitative information and evidence about social problems and how they are impacted by domestic and global socio-economic, political, and cultural processes.

SOC 309 Self and Society

This course introduces concepts, social theories, and methods used to analyze how the sense of self is created in everyday life. It explores various theories of the development of self, the nature of human behavior, the importance of language for perception and thought, and reality as a social construction. Additionally, it examines how the self emerges and is maintained through social interaction and our involvement in social relationships. It includes the study of social identity, roles, socialization, identity change, and emotions.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast various sociological and other perspectives and their relevance to the understanding of self
- explain the relationship between broad structural changes and strategies of self-management in everyday life
- differentiate between various agents of socialization and their impact on the formation of self-identity
- interpret the relationships between physical self, social/emotional self, and self-perception
- analyze how social roles (obligations and expectations) are constructed and maintained through social interaction in everyday life
- explain how gender, race/ethnicity, and social class intersect to shape the perception and presentation of self
- evaluate impression management and emotion management as they apply to various institutional settings
SOC 318 Introduction to Crime, Deviance, and Social Control

This course introduces various sociological perspectives regarding issues of crime, deviance, and social control. Particular attention is paid to the analysis of how laws and cultural norms shape the definition and meaning of crime and deviance. Topics covered include street crimes, corporate crimes, white-collar crimes, domestic violence, drugs and alcohol abuse, lifestyle crimes, prison systems, capital punishment, rehabilitation, and the trend towards privatization of prisons. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast various sociological perspectives and their relevance to the understanding of crime, deviance, and social control.
- define basic terms and concepts regarding crime, deviance, and social control.
- explain the nature and meaning of deviance as a function of cultural norms, politics, social status, and law.
- apply various sociological theories to explain the process by which actions and behaviors come to be defined as deviant and/or criminal.
- evaluate the strengths and weaknesses of sociological theories as they relate to deviance, crime, and social control.
- differentiate between roles of various institutions of social control.
- explain the complex structural nature of punishment, prisons, and rehabilitation.

SOC 320 Minorities in America

This course examines patterns of racial and ethnic group relations in the United States of America. It employs basic sociological approaches to the study of race and ethnicity, with an emphasis on a comparative analysis of historical, social, and economic factors affecting intergroup and intragroup dynamics. Topics include prejudice, discrimination, racism, racial and ethnic stratification, assimilation patterns among groups, demographic shifts, civil rights, and other related topics. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize basic sociological approaches to race and ethnicity
- define “minority status” and assess the attributes of minority groups within the broader U.S. society
- evaluate and critique factors affecting assimilation of minority groups
- compare and contrast the social construction and social experiences of major ethnic and racial groups in the U.S.
- examine the importance of social systems in shaping and maintaining the dynamic relationship between dominant and subordinant groups
- formulate macro level and micro level analyses of minority and dominant social issues
- analyze current complex racial and ethnic issues and evaluate solutions
- discuss the relationship among the individual, interpersonal, institutional, and systemic spheres
- assess the various definitions of diversity
SOC 325 Chicano Culture

This course is an introduction to fundamental concepts, social theories, and methods used to understand and critically analyze the production, adaptation, and construction of Chicano identity and Chicano culture within the United States. It includes micro and macro sociological analysis of Chicano culture and its relationship to Chicano social identity, social inequality, and social change.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain historical and cultural origins of Mexican-Americans in the United States
- compare and contrast sociological paradigms’ approaches to Chicano culture
- list and describe various elements of Chicano culture
- evaluate differences between individual experiences of Chicano culture and systemic functions of Chicano culture
- analyze connections between culture and the Chicano Movement
- interpret how culture can be used to empower and oppress
- differentiate between culture expression and stereotyping
- generate and evaluate potential solutions to at least three of the modern cultural dilemmas Chicanos face in the United States today
- describe and evaluate the demographic shift in the Chicano population in the United States
- differentiate between ethnocentric and culturally relative analyses of Chicano culture and the Chicano movement

SOC 335 Sociology of Aging

This course examines the aged and aging process with emphasis on social factors affecting and affected by an aging population. It includes an analysis of demographics, history of aging in America, social conditions, resources and support systems, employment, retirement, and social class/cultural differences.

This course is not open to students who have completed GERON 300.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- chart the demographic shift in America as it relates to older adults and evaluate the concept of generational equity
- explain at least five of the major implications and challenges of increased longevity as they relate to end-of-life issues, advocacy, adult abuse, filial responsibility, generational equity, and entitlements
- compare major biological theories with social theories of aging
- explain the major social issues as related to aging in America and their possible solutions
- analyze the overall economic position of older Americans, including retirement plans, health care, job outlook, and entitlements
- calculate the cost of the average funeral and construct cost-saving measures
SOC 342 Gender Relations in American Society

This course deals with gender relations in American society. It examines historical, social, economic, political, and cultural forces in shaping gender identity, gender roles, and gender expectations. This course utilizes sociological theories to explain gender experiences as socially constructed rather than biologically determined. Specifically, it examines the experiences of people of diverse economic, racial, and ethnic backgrounds within historical and cross-cultural perspectives. This course includes analysis and discussion of topics such as gender relations in the home, workplace, mass media, health care system, and politics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate various sociological perspectives relevant to gender socialization, gender identity formation, and gender inequalities.
- construct a sociological and theoretical understanding of gender socialization in terms of how men's and women's experiences diverge in regarding family life, workplace, media, politics, education, and science.
- compare men's and women's lives as historically and culturally created realities and experiences.
- explain historical and theoretical causes and consequences of gender inequality in American society.
- discuss the role of various social, economic, political, religious, and cultural institutions in creating, reinforcing, and perpetuating gender inequality.
- utilize theory, history, and quantitative information to remedy gender inequality in American society.

SOC 350 Sociology of Popular Culture

This course analyzes the historical development and emergence of American popular culture and the relationship between contemporary popular culture, social institutions and collective behavior. Further, it considers popular culture within the context of social, political, and economic changes in the United States and includes an analysis of theories of popular culture, hegemony, advertising, music, and film.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Compare and contrast the impact of differing popular culture products on different audiences through reception and consumption approaches.
- Evaluate American popular culture products by utilizing the sociological perspective.
- Define key terms relating the study of popular culture.
- Critique the works and perspectives of sociological and cultural studies theorists like Marx, Adorno, Benjamin, Weber, Veblin, Goffman, Gramsci, and Durkheim.
- Examine the effects of subcultural and counter-cultural practice and objects on American society.
- Apply core concepts within the study of popular culture to historically relevant events and examples.
- Compare and contrast the main differences among core sociological theories such as conflict theory, structural functionalism, symbolic interactionism, and feminist theory and their application to popular culture.
- Analyze the historical, cultural, economic, and political influences on representations relating to race, class, gender, sexual orientation, and nationality.
- Evaluate various arguments related to the debate on taste with special emphasis on high culture, low culture, and folk culture.
This course provides an in-depth examination of society and human behavior from various sociological perspectives. Sociological theories, both macro and micro, are applied to different aspects of life including culture, social stratification and inequality, conflict and social change, and politics and economy. The class is conducted as a seminar in which students will be responsible for developing in-depth analysis and understanding of issues based on classical and contemporary sociological theories. This course is designed for those from all academic disciplines who are motivated to learn sociological perspectives and how they apply to all aspects of human experience both at the individual and societal levels. The honors section utilizes a rigorous and an intensive instructional methodology designed to challenge motivated students.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and correctly use basic sociological terminology and concepts
- distinguish between primary and secondary sources as forms of scientific evidence
- analyze various theoretical perspectives used by sociologists to explain institutional patterns and social events
- identify the evidence that logically supports different sociological perspectives
- explain the causes and consequences of issues and events within a sociological framework
- critique the theoretical adequacy of different sociological perspectives
- assess the empirical validity of the premises argued by various classical and contemporary sociological theories
- synthesize alternative interpretations about social systems and human action with a focus on how social, economic, political, and historical forces intersect to shape social life
- evaluate the role of human agency in bringing about conflict and social change
- apply the pros and cons of various sociological perspectives to the socio-economic, political, and cultural topics at hand

SOC 495 Independent Studies in Sociology

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Speech Communication | American River College

The number-one skill identified by employers is the ability to communicate clearly in both oral and written form. The number-two skill identified by employers is the ability to work effectively as a member of a group or team. Speech courses are vital to developing the communication skills necessary for personal and professional success.

Associate Degree for Transfer

A.A.-T. in Communication Studies

This degree provides a foundation for students to transfer to a CSU campus with a major in Communication, Speech Communication, Communications, or Communication Studies.

The Associate in Arts degree in Communication Studies for Transfer provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system.

The Associate in Arts degree in Communication Studies for Transfer (A.A.-T.) may be obtained by the completion of 60 transferable, semester units with a minimum of a 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses), and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Catalog Date: June 1, 2020

Speech (SPEECH)

**SPEECH 301 Public Speaking**

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340 |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area II(b); CSU Area A1; IGETC Area 1C |
| C-ID: | C-ID COMM 110 |
| Catalog Date: | June 1, 2020 |

This course covers oral composition and delivery of messages in public speaking situations. It focuses on how to manage anxieties about speaking in public, organize ideas when speaking to inform and persuade, use supporting materials to increase the effectiveness of messages, appeal to different audiences, and critically evaluate messages. By the end of the course, students will be more confident and effective in oral communication situations. Audio/video recording equipment may be used as an aid to self-analysis and improvement.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- organize and deliver informative speeches.
- organize and deliver persuasive discourse designed to convince or actuate an audience.
- research and critically evaluate information to create informed responses to issues and problems.
- defend claims with appropriate evidence.
- manage personal communication apprehension in public speaking situations.
- analyze and identify factors that contribute to effective design, development, and delivery of speeches.
- design messages that adapt to target audiences in order to maximize communication effectiveness.

---

The Associate in Arts in Communication Studies for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- assess the factors which contribute to communication competency.
- generate strategies to communicate effectively with others in dyads, groups, and public situations.
- evaluate the role of communication in human interactions.
- analyze evidence, reasoning, and persuasive appeals for credibility, logic, and relevance.
- demonstrate skills and behaviors which contribute to open and respectful communication of diverse ideas and beliefs.

**Career Information**

A primary skill employers in all fields seek is effective communication. A degree in Communication Studies enriches personal development and enhances opportunities for employment and promotion in such diverse professional fields as education, law, law enforcement, health, science, management, organizational development, psychology, public service, sales, training, entertainment, and social services.
• produce messages extemporaneously.

SPEECH 302 Persuasive Speech

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: SPEECH 301 with a grade of "C" or better; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC (UC credit limitation: SPEECH 302 & 311 combined: maximum credit, one course)
General Education: CSU Area A3
C-ID: C-ID COMM 190
Catalog Date: June 1, 2020

This course is a detailed study of persuasive discourse through an understanding of basic communication principles. Emphasis is placed on the use of proofs, language, and logical thinking. Audio- and/or video-recording equipment may be used as an aid for self-analysis and improvement.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze persuasive appeals.

• design persuasive messages.

• produce effective oral persuasion responsibly and ethically.

• evaluate the ways language produces influence.

• demonstrate the skills necessary for open and respectful communication of diverse ideas and beliefs.

SPEECH 311 Argumentation and Debate

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: ENGRW 300, ENGRW 480, or SPEECH 301
Transferable: CSU; UC (UC credit limitation: SPEECH 302 & 311 combined: maximum credit, one course)
General Education: CSU Area A3
C-ID: C-ID COMM 120
Catalog Date: June 1, 2020

This course focuses on critical thinking with an emphasis on building and analyzing logical arguments. Rhetorical strategies are discussed and practiced. The course covers organization, supporting materials, delivery of effective arguments, and the use of questioning in critical thinking.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• critically evaluate reasoning and evidence.

• develop research questions for presentations.

• arrange and organize ideas.

• prioritize main points and distinguish these from subordinate ideas.

• support claims with logic and reasoning.

• identify fallacies of reasoning.

• debate convincingly with clarity and impact.

SPEECH 321 Interpersonal Communication

Units: 3
Hours: 54 hours LEC
This course focuses on communication between individuals, with emphasis on the acquisition of techniques and skills essential to self-actualization and to establishing authentic personal, social, and professional relationships. Effective communication strategies are discussed, practiced, and reflected upon both in and outside the classroom environment.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify key principles of ethical interpersonal communication.
- devise strategies for increasing interpersonal effectiveness.
- diagnose issues relating to the success or failure of interpersonal relationships.
- detect the impact of the self, others, and perception on interpersonal communication.
- produce and process competent verbal and nonverbal messages.
- evaluate the relative merits of various interpersonal communication strategies.

SPEECH 325 Intercultural Communication

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: None for ENGRD 310 or ENGRD 312; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area VI; CSU Area D; IGETC Area 4
C-ID: C-ID COMM 150
Catalog Date: June 1, 2020

This course is an introduction to the challenges and rewards of intercultural communication in everyday situations. It is designed to increase understanding of variations in communication patterns across cultures and prepares individuals for more effective communication. Emphasis is on both international culture variance and sub-cultural group-based experiential background variance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the major areas of cultural diversity and their impact on communication.
- analyze the effects of cultural variance on the selection and interpretation of verbal and nonverbal cues.
- formulate strategies for interacting successfully across intercultural communication barriers.
- distinguish between cultural practices and universal human communication behaviors.
- describe how culture affects perceptions, values, norms, and roles.
- resolve conflict arising from cultural differences.

SPEECH 331 Group Discussion

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area II(b); CSU Area A1; IGETC Area 1C
C-ID: C-ID COMM 140
Catalog Date: June 1, 2020

This course covers the dynamics of group communication and prepares individuals to function more effectively in groups. It focuses on oral communication in task and
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- operate as an effective member of small task-oriented groups.
- judge benefits of group work.
- generate and persuasively express critical thought which contributes positively to group decision making.
- devise solutions by using structured problem-solving techniques.
- evaluate benefits of conflict.
- assess the appropriateness of various conflict-management techniques.
- use effective conflict management techniques.
- choose productive approaches to leadership.
- examine the impact of group roles and norms.
- manage verbal and nonverbal behavior to increase communication effectiveness in the small group setting.
- prepare for, organize, and deliver presentations effectively within small group settings.
- discover, critically evaluate, and accurately report information.

SPEECH 361 The Communication Experience

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| Transferable: | CSU; UC |
| General Education: | AA/AS Area II(b); CSU Area A1; IGETC Area 1C |
| C-ID: | C-ID COMM 180 |
| Catalog Date: | June 1, 2020 |

This course provides an introduction to basic skills and concepts necessary for effective communication in a variety of contexts. Topics include effective listening, facilitation of interpersonal relationships, conflict resolution, media communication, practical group experience, and public speaking.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess and manage communication apprehension.
- design and employ effective listening strategies.
- generate effective verbal and nonverbal messages applicable to a variety of communication situations.
- manage group interactions productively.
- organize and orally present information using effective public speaking strategies.
- predict and recognize sources of conflict.
- demonstrate behaviors that contribute to respectful communication of diverse ideas.
- assess aspects of media communication.

SPEECH 362 Mediated Communication Experience

| Units: | 3 |
| Hours: | 54 hours LEC |
| Prerequisite: | None. |
| Transferable: | CSU |
This course focuses on the skills and concepts necessary to communicate effectively in the online environment. Topics include online group work and presentations, public speaking, interviewing, conference calls, and computer mediated interpersonal communication. Students will be expected to use their own video recording devices.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the basic concepts of the field of mediated communication.
- demonstrate active listening and effective feedback in online interactions.
- manage issues related to communication apprehension.
- use appropriate verbal and nonverbal communication techniques when delivering oral presentations through mediated channels.
- adapt messages to diverse audiences in a variety of contexts.
- exhibit productive behaviors as a member of a group.
- apply ethical standards to communication.
- utilize telecommunications applications to transmit messages through text, video, audio, and images.

SPEECH 495 Independent Studies in Speech

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.
Associate Degree

A.S. in Speech-Language Pathology Assistant Program

This degree prepares students to assist Speech-Language Pathologists in treating disorders of communication. Such disorders may be related to articulation and phonology, child and adult language, motor speech, voice, fluency, and hearing. Topics include an introduction to the field of communication disorders, articulation and phonology for the speech-language pathology assistant (SLPA), professional issues and practices in speech-language pathology, speech/language/hearing clinical strategies, clinical considerations in service delivery to clients with communication disorders, and fieldwork experience.

Catalog Date: June 1, 2020

The Speech-Language Pathology Assistant Program Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:
• describe various communication disorders, including etiology and some remedial techniques.
• explain the major areas of cultural diversity and the relationship between culture and communication.
• demonstrate skills needed to assist in the management of speech-language pathology programs and services.
• describe the therapeutic process especially in terms of how learning occurs and strategies for effective lesson delivery.
• implement a treatment protocol as prescribed by the supervising Speech-Language Pathologist.
• describe professional responsibilities and ethical behavior appropriate for the Speech-Language Pathology Assistant.

Career Information

Upon completion of the Associate in Science degree, a student possesses the course work and field work experience to work as a Speech-Language Pathology Assistant (SLPA) in both private and public agencies, such as hospitals, rehabilitation centers, and the public schools serving preschool through adult-age clients. Successful completion of the Speech-Language Pathology Assistant program qualifies the graduate for eligibility to apply to the Speech-Language Pathology and Audiology and Hearing Aid Dispensers Board for registration as a Speech-Language Pathology Assistant.

This course introduces principles and practices for management of individuals with articulation and/or phonologic disorders, with consideration for cultural and linguistic variations. Screening protocols as well as therapeutic practices and materials are discussed. Additionally, this course covers the study and application of the International Phonetic Alphabet (IPA), transcription from Standard American English to IPA, and transcription from IPA to Standard American English.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• differentiate between articulation disorders and phonologic disorders.
• identify anatomical structures and physiological functions related to normal speech production.
• transcribe Standard American English into the IPA and transcribe the IPA into Standard American English.
• collect a speech sample from a child and develop a phonetic inventory.
• accurately document performance of a sample client on an articulation screener.
• model therapeutic techniques for treating articulation and phonologic disorders.
• label oral motor tools and describe how to use them effectively with clients.

</table>

This course introduces principles and practices for management of individuals with communicative disorders, with consideration for cultural and linguistic variations. It includes legal and ethical considerations for the practicing Speech-Language Pathology Assistant (SLPA) as well as the practicing Speech-Language Pathologist (SLP). Requirements for employment in various work settings, including interdisciplinary and supervisory relationships, observational skills, mandated reporting, Code of Ethics, and scope of practice are covered. A total of six (6) hours of clinical observation at off-campus locations in the area are a part of the course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• demonstrate functional knowledge of professional responsibilities and ethical behavior appropriate for the Speech-Language Pathology Assistant (SLPA).

• describe the skills needed to assist in the management of speech-language pathology programs and services.

• evaluate the supervisory process, the clinical competencies expected, and the SLP/SLPA role in the process.

• describe a variety of recording and behavioral interpretation techniques for use in observation.

• identify the important skills in observation, including differentiating between fact, opinion, judgment, and speculation.

• list job professions that are considered mandated reporters and describe the process of reporting abuses (of the child or adult client).

• demonstrate functional knowledge of concepts and principles in the context of cultural and linguistic differences when serving the communicative needs of multilingual populations.

• analyze therapeutic processes and materials to address communication deficits from the review of live speech and language therapy sessions.

SLPA 115 Speech, Language, and Hearing Clinical Strategies

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: SLPA 105 with a grade of "C" or better
Catalog Date: June 1, 2020

This course explores specific materials and strategies regarding speech, language, and hearing therapeutic service delivery with a focus on screening and intervention. It covers speech, language and hearing screening procedures, forms of Augmentative and Alternative Communication (AAC), development of forms of AAC, and the collection and transcription of language samples. This course is designed as an additional opportunity to gain more experience in preparation for fieldwork as a Speech-Language Pathology Assistant (SLPA).

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify various forms of Augmentative and Alternative Communication (AAC).

• demonstrate high-tech, low-tech, and no-tech forms of AAC for use with children and/or adults.

• collect language samples in children and/or adults.

• transcribe language samples in children and/or adults.

• calculate and confirm Mean Length of Utterance (MLU).

• administer a speech and language screening and accurately document child/adult performance.

• administer a hearing screening and accurately document child/adult performance.

SLPA 120 Clinical Considerations in Service Delivery to Clients with Communication Disorders

Units: 3
Hours: 54 hours LEC
Prerequisite: SLPA 110 with a grade of "C" or better
Catalog Date: June 1, 2020

This course explores specific disorders of communication, and their causes and characteristics. Specific materials and strategies regarding service delivery are emphasized, with a focus on evidence-based practice. Similarities and differences with regard to therapeutic service provision by the Speech-Language Pathology Assistant (SLPA) and the Speech-Language Pathologist (SLP) are introduced. This course covers remediation techniques and rationales for commonly used therapeutic approaches as well as principles of learning, strategies for service delivery with groups of clients, data collection, clinical documentation, and record keeping. The scope of responsibilities and the role of the SLPA in intervention and behavior management strategies are also reviewed. A total of six (6) hours of clinical observation at off-campus locations in the area are a part of the course.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• formulate information related to the etiologies, variations, and disorders of human communication.

• critique common treatment strategies used in remediation of communication disorders.
investigate principles of evidence-based practice.

demonstrate functional knowledge of the therapeutic process.

observe and report clinical behavior in an objective manner, including techniques for accurate charting and graphing of client responses.

implement a treatment protocol as prescribed by the supervising SLP.

SLPA 121 Fieldwork Experience in Speech-Language Pathology

Units: 4
Hours: 18 hours LEC; 162 hours LAB
Prerequisite: SLPA 115 and 120 with grades of "C" or better

Enrollment Limitation: Prior to student orientation, the following requirements must be submitted for review: (1.) Proof of negative tuberculin (TB) skin test within three months prior to class. (2.) If TB skin test result is positive, proof of inactive TB chest x-ray within one year prior to class. (3.) Proof of completion of CPR/First Aid certification. (4.) Proof of malpractice insurance. Live Scan fingerprinting is determined through clinical placement protocol.

Catalog Date: June 1, 2020

This course provides supervised fieldwork experience assisting with the clinical management of persons with communicative disorders. It covers the job-related skills needed to be a speech-language pathology assistant (SLPA). It also provides opportunities to interact with clients/patients while implementing a prescribed treatment plan, and assisting with screening or evaluation under the direction of a speech-language pathologist. This course includes opportunities for record keeping and managing client data, setting up/preparing for sessions, and performing various clerical duties. A portion of this course may be offered in a TBA component of 162 hours which will include supervised fieldwork experience assisting with the clinical management of persons with communicative disorders. All fieldwork is done in specified off-campus locations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- manage speech and language screenings (without interpretation) following specified screening protocols developed by a supervising Speech-Language Pathologist (SLP).
- plan activities pertaining to documented treatment plans in order to provide services to clients/patients under the direction of a supervising SLP.
- manage intervention activities and assist in service delivery with clients identified by a supervising SLP.
- appraise client/patient progress toward meeting the established objectives as stated in the prescribed treatment plan and document changes made.
- detect and report client/patient progress and any other important information to the supervising SLP.
- create materials and assist with other clerical duties as directed by a supervising SLP.
- apply skills as necessary to assist the supervising SLP, such as scheduling and record keeping.
- explain Health Insurance Portability and Accountability Act (HIPAA) legislation and maintain the confidentiality of client information.
- perform all duties according to documented legal and ethical standards.
- complete the application process to become a registered speech-language pathology assistant.

SLPA 126 Neurogenic Communication Disorders for the SLPA

Units: 3
Hours: 54 hours LEC
Prerequisite: SLPA 300 with a grade of "C" or better

Catalog Date: June 1, 2020

This course explores neurogenic cognitive-communicative disorders in adults and is designed for the speech-language pathology assistant (SLPA). It covers basic neuroanatomy, cognitive-communicative disorders acquired in adulthood, as well as therapeutic approaches and strategies for service delivery. The scope of responsibilities and the role of the SLPA are reviewed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- label basic neuroanatomy structures and describe their function(s).
- formulate information related to etiologies, variations, and disorders of human communication as it relates to the adult client.
- critique common treatment strategies used in remediation of cognitive-communication disorders.
• investigate principles of evidence-based practice.
• demonstrate functional knowledge of the therapeutic processes addressing the adult with cognitive-communication disorders.

SLPA 300 Introduction to Communication Disorders

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 and ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course is an introduction to the field of communication disorders, including an overview and history of the profession of speech-language pathology. It includes an overview of various speech and language disorders, as well as guidelines for determining the development of typical and atypical speech and language, and a minimum of three hours of video observations.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• differentiate between typical and atypical speech and language development.
• identify major categories of communication disorders and their possible etiological factors.
• label diagrams of anatomical structures necessary for the production of speech.
• identify communication disorders in individuals of various ages with consideration of cultural and linguistic differences.
• identify various options for employment within the field, as well as professional organizations which support the field.
• analyze therapeutic processes and materials to address communication deficits from the review of multimedia sources.
Student Government (SGVT)

SGVT 300 Introduction to Student Government

- **Units:** 2
- **Hours:** 18 hours LEC; 54 hours LAB
- **Prerequisite:** None.
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This course provides a study of the legal, educational, and philosophical basis of student government and leadership studies. It may include travel to other campuses, area and state conferences, and it provides the opportunity to participate on faculty and administrative committees. Topics are designed to teach leadership skills and to give practical experience in the field of student government. This course is highly advised for those involved in student government. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- recommend appropriate advocacy strategies using acquired knowledge of Title 5, parliamentary procedure, committee structures, and campus resources.
- develop effective leadership skills which may include delegating, problem solving, critical thinking, effective meeting planning, time management, and budgeting.
- assess interpersonal skills which may include goal setting, stress management, motivation, oral and written communication skills, active listening, group participation, and diversity awareness.
- organize a variety of campus activities.
- create a budget for student organizations.
- analyze budgets for student organizations.

SGVT 310 Leadership Development

- **Units:** 3
- **Hours:** 54 hours LEC
- **Prerequisite:** None.
- **Transferable:** CSU
- **Catalog Date:** June 1, 2020

This course provides emerging and existing student leaders the opportunity to explore the concept of leadership and to develop and improve their leadership skills. It examines contemporary leadership models as well as personal values and beliefs that affect personal philosophy of leadership. This course provides opportunities to experience leadership in college and community settings. This course is highly advised for those involved in student government.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
• define fundamental elements of leadership.
• evaluate diverse leadership theories, styles and philosophies.
• evaluate personal leadership values and beliefs.
• describe leadership theories, styles, and approaches within the planning and conduct of organized events.
• develop organizational and situational acumen.
• demonstrate effective critical thinking and ethical decision-making skills.
• define values and self-knowledge of leadership skills and abilities.
• provide purposeful feedback to others.
• construct a personal philosophy of leadership that includes an understanding of self, others, and community.
• assess personal performance.
• define strategies to manage and effect change.

Associate Degrees for Transfer

A.A.-T. in Theatre Arts

This degree is designed to facilitate successful transfer to baccalaureate theatre or drama degree programs. It provides students with the lower division breadth and depth of the field of theatre arts and exposes students to the core principles and practices in the field. It covers the basics of acting, theatre technology and production, and the historical and modern development of theatre and dramatic literature in the world of entertainment.

The Associate in Arts in Theatre Arts for Transfer degree provides students with a major that fulfills the general requirements of the California State University for transfer. Students with this degree will receive priority admission with junior status to the California State University system. The Associate in Arts in Theatre Arts for Transfer (AA-T) degree may be obtained by the completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program outlined below (earning a C or better in these courses) and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education Breadth Requirements.

Catalog Date: June 1, 2020

Total Units: 18

The Associate in Arts in Theatre Arts for Transfer (AA-T) degree may be obtained by completion of 60 transferable, semester units with a minimum 2.0 GPA, including (a) the major or area of emphasis described in the Required Program, and (b) either the Intersegmental General Education Transfer Curriculum (IGETC) or the California State University General Education-Breadth Requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- critique and evaluate the role of the theatre arts and its relationship to other parts of society.
- evaluate the historical, artistic, social, and philosophical environments in which theatre exists.
- analyze and critique dramatic literature and performance.
- formulate alternative solutions to theatrical production situations.
- employ audition and performance skills in community, educational, and/or professional theatres.
- develop skills to work as a theatre technician in community, educational, and/or professional theatres.
- demonstrate the ability to work effectively as an ensemble member of a theatre company.
- demonstrate skills that will allow the student to thrive in a baccalaureate level theatre program.

## Associate Degrees

### A.A. in Theatre Arts: Acting

This degree provides training in the areas of acting, voice, movement, improvisation, and dramatic styles. The course work and theatrical production activities are arranged to provide opportunities for students to develop an appreciation for theatre, to improve in the knowledge and skills necessary for work in the theatrical arts professions, and to transfer to a four-year theatre program.

Catalog Date: June 1, 2020

Any TA or TAP course not used to fulfill other requirements of the major.

Total Units: 31

Not used to fulfill other requirements for the major.

The Theatre Arts: Acting Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- recognize standard practices of ensemble playing in a rehearsal/performance environment
- compare and analyze the theories and techniques of acting from a historical perspective
- analyze texts and scripts as they pertain to performance
- demonstrate skill for technical aspects of acting, including physical, vocal, imaginative, analytical, and emotional elements
- analyze theatre as a dynamic art form influencing society
- compare and contrast theatrical periods and styles in terms of acting, directing, playwriting, and technical elements
- analyze the components of a theatrical production
- apply imagination and character analysis to identify and describe the personality and motivations of a given character
- apply technical processes, including lighting, set, costume, and/or stage make-up design, as they pertain to a given dramatic script
A.A. in Theatre Arts: Technical Production

The Technical Theatre degree provides a broad overview of theatre with an emphasis on exploring the technical elements of theatre. Coursework includes stagecraft, lighting, costuming, makeup, sound, and puppetry, together with opportunities for practical participation in productions. The program is designed to prepare students for work as technicians and crew, or to transfer to four-year colleges in preparation to be designers.

Catalog Date: June 1, 2020

*The Theatre Arts: Technical Production Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.*

**Student Learning Outcomes**
Upon completion of this program, the student will be able to:

- assess the influence of theatre as a dynamic art form and a social and cultural force in our society.
- compare theatrical periods and styles in terms of acting, directing, playwriting, and technical elements.
- analyze the components of a theatrical production and the role of technical theatre in the production process.
- evaluate a script, assess production requirements, and develop practical and artistic solutions through scenic, lighting, costume, sound, or makeup designs.
- integrate practical information from construction plans.
- demonstrate proficiency in technical production skills.
- evaluate tools, materials, and processes used in technical theatre work.

Certificates of Achievement

Acting Certificate

This certificate provides training in the theories and techniques of acting. The training starts with the basic principles of acting and refines them through theoretic, rehearsal, and performance processes. This program is designed to introduce and develop the craft of acting.

Catalog Date: June 1, 2020

1Not used to fulfill other requirements.
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze children's literature for dramatic structure, characterization, and performance elements.
- demonstrate the basic skills of drama, acting, voice, movement, and improvisation.
- develop simple drama activities and games to promote child creativity.
- apply technical processes, including stagecraft, costume construction, and/or stage make-up, as they pertain to children's theatre.
- integrate dramatic techniques of acting, puppetry, storytelling, and movement into children's theatre productions.

Career Information

People with a Children's Theatre certificate may work as actors or directors in children's theatre, or utilize their skills to augment careers in elementary education, recreation, or arts programs.

Costuming Certificate

This certificate provides training in the skills needed to create theatrical costumes. Coursework includes costume construction, history of costume, patterning, and makeup.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- analyze the role of costumes and the costume shop staff in a theatrical production.
- organize a practical and artistic solution to the costume requirements of a dramatic work.
- evaluate the costumes of a dramatic production.
- analyze the techniques required to design and develop a period costume.
- analyze the components of major historical fashion periods and their relationship to society.
- demonstrate techniques in altering, constructing, patterning, dyeing, and painting costumes.

Career Information

A person with a costuming certificate may work creating and maintaining costumes for theatre, film, TV, advertising, and other entertainment fields.

Certificates

Musical Theatre Certificate

This certificate synthesizes the performance skills of movement, acting, and singing with the musical theatre script/song. The training starts with the basic principles of musical theatre techniques and refines them through the choreographic, theoretic, and performance processes. The curriculum is designed to introduce and develop the craft of musical theatre.

- TAP 380 Repertory/Touring Rehearsal and Performance I (1 - 3)

Total Units: 15

Not used to fulfill other requirements of the major.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- synthesize choreographed movement and blocking skills with optimum singing skills
- interpret a character through a musical theatre song/script/dance
- critique acting, singing, and movement skills in a musical theatre performance
- develop and perform an audition package consisting of a ballad and an up-tempo song
- identify historical eras in the development of American Musical Theatre

### Career Information

A person with a Musical Theatre certificate may go into acting or directing careers in musical theatre or may augment careers in education, recreation, and arts programs.

### Theatre Production Certificate

This certificate provides training in the skills needed to develop and maintain the technical aspects of productions in theatre, film, TV, and entertainment venues. Coursework includes scenery, lighting, props, stage management, sound, costuming, and puppetry.

Catalog Date: June 1, 2020

A minimum of 2.5 units from the following: 2.5

Any TA or TAP class not used to fulfill other requirements.

Total Units: 15.5

**Student Learning Outcomes**

Upon completion of this program, the student will be able to:

- analyze the role of technical theatre in the production process.
- analyze historical and artistic theatrical styles.
- analyze production requirements and develop practical and artistic solutions.
- evaluate a script and develop appropriate scenic, lighting, costume, sound, or makeup designs.
- analyze and apply information from scenic, lighting, and/or costuming plans.
- demonstrate proficiency in technical production skills.
- identify and evaluate tools, materials, and processes used in technical theatre areas.
Theatre Arts (TA)

TA 294 Topics in Theatre Arts

Units: 0.5 - 4
Hours: 27 - 162 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers topics in theatre which are not included in current course offerings. A portion of this course may be offered in a TBA component of 27-216 hours which may include theatrical studies, preparation or performance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the role of this specific theatre topic in society.
- analyze the steps needed toward accomplishing the goal of the topic.
- describe the methods used in this specific theatrical area.
- develop and evaluate the techniques used in this topic.

TA 300 Introduction to the Theatre

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID THTR 111
Catalog Date: June 1, 2020

This course provides a general introduction to live theatre as an artistic and social force. It surveys the literary, cultural, and historical aspects of theatre arts. This is an audience-oriented, non-performance course open to all students. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze and evaluate the nature of theatre and its role in society.
- assess the historical, artistic, social, and philosophical environments in which theatre exists.
- critically analyze dramatic performances.
- identify and examine theatrical components in production.
- propose alternative solutions to theatrical production situations.
- appreciate viewing theatre as an art form.

TA 302 History and Theory of the Theatre I

Units: 3
Hours: 54 hours LEC

Career Information

A person with a Theatre Production certificate may become a stagehand, set builder, lighting and sound technician, makeup artist, properties artisan, or stage manager in theatre, film, or TV.
This course is a survey of the history of world theatre from its origins through the 17th Century. The history and evolution of drama and theatre practice are studied in relationship to cultural, political, and social conditions of the time. Plays are read that exemplify major developments and significant artists. Field trips to attend live performances may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the historical development of theatre from its origins to the 17th Century.
- assess the relationship of theatre arts to other parts of society throughout history.
- analyze the artistic, social, and philosophical environments in which theatre evolved.
- evaluate significant work of playwrights from distinct periods of theatre history.

**TA 303 History and Theory of the Theatre II**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; CSU Area C2; IGETC Area 3A  
**Catalog Date:** June 1, 2020

This course is a survey of the history of world theatre from the 17th Century to the modern era. The history and evolution of drama and theatre practice are studied in relationship to cultural, political, and social conditions of the time. Plays are read that exemplify major developments and significant artists. Field trips to attend live performances may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the historical development of theatre from the 17th Century to the modern era.
- assess the relationship of theatre arts to other parts of society throughout history, including the present day.
- evaluate the artistic, social, and philosophical environments in which theatre evolved.
- evaluate significant work of playwrights from distinct periods of theatre history, including current writers.

**TA 306 Diversity in American Drama (1960 to Present)**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; AA/AS Area VI; CSU Area C1; IGETC Area 3A  
**Catalog Date:** June 1, 2020

This course surveys the theatrical expression of Native-American, African-American, Latino, and Asian-American theatre from 1960 to the present. It includes the social, political, cultural, and economic climate reflected in the text and production of the play. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast the ways that ritual, music, dance, and storytelling influence and shape the theatrical expressions of various cultures.
- analyze stereotypes and racism as expressed in the theatre of various cultures in society.
- describe the ramifications and contributions of the unique theatrical expression of America's diverse populations.
- identify the negative theatrical images of various cultures and their influence on society.
- describe the major historical, cultural, political, and economic forces at work within the various groups and in society at large.
- compare and contrast the theatrical expressions of various groups with mainstream theatrical expression in the same period.

TA 344 Improvisation and Theatre Games

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course explores theatre games and improvisational exercises designed to develop trust, cooperation, mental acuity, and physical and vocal range as an actor. Improvisation technique is built from the ground up, providing a strong foundation for advanced work in non-scripted performance as well as modern rehearsal techniques that involve extensive use of improvisation. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply techniques used in games and exercises to develop physical and vocal range as an actor.
- analyze character, setting, and objective without the use of a script.
- compare and contrast improvisational acting techniques with other acting methods.
- demonstrate an honest imaginative improvisational performance.
- evaluate the improvisational work of others in a constructive manner using the Viola Spolin technique.
- create a collaborative group performance using improvisational techniques.

TA 350 Theory and Techniques of Acting I

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 340 and ESLR 340.
Transferable: CSU; UC (UC credit limitation: TA 350 and 480 combined: maximum credit, one course)
General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
C-ID: C-ID THTR 151
Catalog Date: June 1, 2020

This course explores the major theories and techniques of acting, including improvisation, physical expressiveness, voice production, character portrayal, and scene work. Field trips may be required. This course is not open to students who have completed TA 480.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize standard practices of ensemble playing in a rehearsal/performance environment.
- demonstrate basic skills of acting, including physical, vocal, imaginative, analytical, and emotional elements.
- compose a character analysis based on the text and subtext of a given script.
- identify the elements of the performance space.
- assess emotional, behavioral, sensory, and cognitive resources for character development.
- utilize body and voice as the primary instrument of dramatic expression.
- analyze dramatic textual components as they pertain to performance.
- critique a scene from an observer's point of view, identifying the strengths and weaknesses of that presentation.
TA 351 Theory and Techniques of Acting II

Units: 3
Hours: 54 hours LEC
Prerequisite: TA 350 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340
Transferable: CSU; UC
C-ID: C-ID THTR 152
Catalog Date: June 1, 2020

This course covers the application of advanced acting theories and techniques. It includes analyzing and performing scripts from realistic and stylized drama, audition monologues, and complex acting exercises. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate complex techniques dealing with the craft of acting.
- identify and explain principles of voice production and body movement.
- evaluate scene work developed from published plays.
- describe fundamental concepts that comprise effective acting techniques.
- illustrate an awareness of the importance of discipline, exactness, persistence, diligence, imagination, and teamwork in the craft of acting.
- analyze the personality and motivations of a given character.
- synthesize appropriate attributes and techniques to create a character which is believable and appropriate to the style and genre of the play from which a scene is taken.
- employ imagination to simulate the dramatic experiences of a given character.
- apply elements of effective acting techniques as a personal standard.

TA 356 Acting for the Camera I

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: TA 350 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course introduces the theory and technique of acting for film and video, focusing on the differences between stage acting and acting for the camera. It provides opportunities to apply acting theory and technique in a video studio setting. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the basic fundamentals of the craft of acting for the camera.
- differentiate the technical and stylistic differences between stage acting and acting for the camera.
- apply acting skills and talents in a video studio setting.
- analyze a scene from an observer's point of view using a fundamental technique point of view to identify strengths and weaknesses.
- demonstrate performance technique for talk show interviews, work in professional commercials, and work in professional industrial films and theatrical films.
- describe the steps involved in entering the business of acting for films and video.

TA 357 Acting for the Camera - II
This course develops advanced skills of acting for film and television. It provides opportunities in a studio setting to practice monologues, commercials using a teleprompter, and scene work. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze the principles of dramatic structure.
- assess the objectives of a character in a scene.
- evaluate fundamental concepts of good acting techniques.
- diagnose the strengths and weaknesses of scene work.
- evaluate the various methods of creating character through choices in voice, movement, and style.
- synthesize a methodology for developing a role incorporating skills and character study.
- analyze advanced skills in the craft of acting for the camera in a video studio setting.
- demonstrate performance techniques for work in auditions, industrial films and commercials, television, and film scenes.
- design a film career portfolio.
- demonstrate performance techniques for work in auditions, individual films and commercial, television, and film scenes.

**TA 362 Styles of Acting: Classical**

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | TA 356 with a grade of "C" or better |
| Transferable: | CSU; UC (UC credit limitation: 362 and 366 combined: maximum credit, 6 units) |
| Catalog Date: | June 1, 2020 |

This course explores the styles of acting used in Classic Theatre from the Greeks through Restoration. It examines the actor's approach to the text as well as the voice and movement needs of classic styles. Styles include Greek, Commedia dell'Arte, Shakespeare, and Restoration. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the concept of style as it relates to art and to the theatre.
- analyze and compare personal style to classical styles utilized in dramatic literature.
- integrate dramatic works within their historical/societal context and develop characterizations appropriate to the dramatic genre.
- demonstrate versatility of movement and voice that conforms to the classical style of different periods of theatre.
- apply physical and vocal techniques to public performance of three classic styles of acting.

**TA 366 Styles of Acting: Modern**

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | TA 350 with a grade of "C" or better |
| Transferable: | CSU; UC (UC credit limitation: 362 and 366 combined: maximum credit, 6 units) |
| Catalog Date: | June 1, 2020 |

This course explores the styles of acting required for modern theatre from 1875 to the present. It examines the actor's approach to modern texts as well as the voice and
movement needs of modern styles. Topics include Realism, Epic Theatre, Theatre of the Absurd, and contemporary solo performance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the concept of artistic style as it relates to art and society.
- analyze personal style and compare and contrast this with the styles of other historical periods.
- integrate dramatic works within their historical/societal context and develop characterizations appropriate to the dramatic genres.
- demonstrate a versatility of movement and voice that conforms to the modern style of different genres of theatre.
- synthesize study of modern acting styles with techniques learned in general acting classes and theatre productions.
- critique acting performances for their style appropriateness.

TA 370 Theatre Movement

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: None.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course is an active participation and performance experience designed to provide opportunities in discovery and to solve movement tasks of the actor. It incorporates exercises to expand the individual’s movement for characters and scenes, as well as training in specific movement areas, such as combat, mime, period style, and dance. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate practical techniques of stage combat, dance, mime, and period style
- compare body movements as they relate to acting problems
- analyze the manners, dress, and dance forms of historical periods relevant to the stage
- demonstrate increased physical flexibility, strength, and balance with stage movement
- generate collaborative ensemble movement
- develop characters through theatrical movement techniques
- critique movement techniques of a dramatic performance

TA 375 Voice, Diction and Dialects

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course focuses on the overall improvement of vocal quality, explores monologue and dialogue performances, and develops confidence in speaking and voice production. It emphasizes self-improvement drills involving breath control, resonance, pitch, inflection, and articulation, and introduces a study of the vocal anatomy, its parts, and their functions. Additionally, this course covers the study and application of the International Phonetic Alphabet (IPA), and includes a special study and application of stage dialects and/or accent reduction.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the elements of proper vocal production.
- locate and describe basic parts of the anatomy that affect and support vocal production.
- integrate knowledge of proper vocal technique into performances of narration, poetry, and/or dramatic monologues.
- assess personal strengths and weaknesses in the areas of correct breathing, phonation, resonation, and articulation.
- identify the International Phonetic Alphabet (IPA) sounds and their respective symbols and be able to apply them to speech.
- identify, define, and describe basic areas of IPA sound placement in the mouth.
- compare and contrast the differences in vowel and consonant formation between standard American speech and select dialects.
- integrate the fundamental sounds of select dialects into performances of narration, poetry, and/or dramatic monologue.
- practice and perform narration, poetry, and/or dramatic monologues demonstrating the sounds unique to select dialects and/or standard American speech.
- assess and enumerate the vocal challenges, successes, and issues of other speakers and identify remedies for noted issues.

**TA 377 Musical Theatre Techniques**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This is a performance-oriented course integrating acting and singing skills through the creation of a unified character. It is both an introduction for students with little or no previous musical theatre experience and a continuing performance forum for those with previous training. Primary emphasis is placed on the three core areas of musical theatre performance: acting, singing, and movement. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- synthesize choreographed movement and blocking skills with optimum singing skills.
- define the various categories of musical theatre songs and dance styles.
- identify the various types of lyrics of musical theatre songs.
- analyze the components of musical theatre songs and dance styles.
- interpret a character through a musical theatre song/script.
- critique acting, singing, and movement skills in a musical theatre performance.
- develop and perform an audition package consisting of a ballad and an up-tempo solo.
- identify historical eras in the development of American musical theatre.

**TA 390 Directing and Play Production**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** TA 350 with a grade of "C" or better  
**Advisory:** TA 300, 351, and 420; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course is an introduction to directing and the elements of play production. It includes the process of preparing and analyzing a script for production, auditioning and casting a play, blocking and rehearsing actors, and dealing with technical and promotion needs of a production. It also requires directing scenes and/or short plays and preparing a prompt book. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze and interpret a script to translate the written word into stage language that is behavioral, visual, and aural.
- analyze the genre and style of a specific play to develop appropriate staging.
- identify the organizational and administrative responsibilities of a stage director from script selection through final performance.
- define and appraise fundamental guidelines of composition in combining the actor with the stage and scenic elements.
- analyze the structure and progression of a scene in a given play in terms of "motivational units."
- demonstrate communication skills dealing with actors and technicians relative to both rehearsal problems and concepts.
- identify and evaluate basic organizational procedures of casting and script interpretation.
- analyze plays for their production and performance possibilities.
- prepare a prompt book for production of the selected play.
- select, cast, and rehearse a play to be presented at a public performance.
- evaluate the technical support that is provided for a play production.

**TA 395 Playwriting**

This course is an introduction to the fundamentals of the craft of dramatic writing. It emphasizes elements of plot construction and character development through writing exercises, study of superior models of drama, and drafting and revision of an original play script. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define the fundamental elements of drama
- identify the practical relationship between written elements of a play script and their application in the live theatre
- create an original dramatic work through an applied process of story and character development
- revise a play script based on self-assessment and the input of others
- analyze existing plays for their structural and dramatic effectiveness
- evaluate the work of others in a collaborative environment

**TA 400 Creative Drama for Children**

<table>

This course explores theatrical forms and activities to help drama leaders guide children in developing their academic, social, and performance skills. It includes strategies for infusing drama, pantomime, improvisation, puppetry, and creative role-playing into school curriculum and recreational programs. It is designed for anyone who interacts with pre-school and elementary-age children. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- list the benefits of using drama as a teaching tool for young children.
- analyze and explore the nature of working in groups and setting classroom limits.
- develop simple drama activities and games.
- distinguish and contrast the various creative drama techniques including imaginative play, creative movement, pantomime, story dramatization, improvisation, theatre games, puppetry, and storytelling.
• research, compile, and organize a collection of creative drama games and activities based on children’s ages, stages of development, and curriculum needs.

• plan drama activities which are integrated with classroom curriculum.

• select and lead creative drama activities and then evaluate and analyze their effectiveness.

**TA 404 Techniques of Puppetry**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESLW 320.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course explores puppetry as a dramatic medium. It covers the history and development of puppetry, puppet design and creation, puppet manipulation and improvisation, and puppet play production techniques and applications.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• create original material for puppetry using standard dramatic structure  
• dramatize a story with appropriate puppet movement and dialog (using improvisation and/or rehearsal)  
• incorporate voice and puppet movement to develop character and motivation  
• design puppets representing the basic puppet classifications  
• construct puppets using basic craft skills (clay and foam modeling, casting, sewing, woodworking, painting)  
• plan and execute productions using constructed puppets

**TA 406 Children’s Theatre**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Audition/Interview  
**Transferable:** CSU  
**General Education:** AA/AS Area I; CSU Area C1  
**Catalog Date:** June 1, 2020

This course explores children’s literature in performance through dramatic presentations of fiction, drama, and poetry for an audience of children or young people. It provides the opportunity to analyze and experience the production process from script to stage. It includes the development of a touring children’s production. No prior theatrical experience is required. This course is recommended for theatre, education, early childhood education, and recreation majors. Public performances and regular field trips are required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• analyze children’s literature for theme, structure, characterization, and performance elements.  
• devise and present a theatrical script from children’s literature.  
• create a character analysis.  
• demonstrate acting skills in intensive play production rehearsal and performance environments.  
• evaluate an actor’s responsibilities to the ensemble.  
• demonstrate commitment to the demands of a touring production through participation in the production process.

**TA 420 Stagecraft**
This course is an introduction to technical theatre and the creation of scenic elements for theatre, film or television. It covers design styles, painting, set construction, set movement techniques, properties construction, backstage and rehearsal organization and management, and career possibilities. The course combines lectures, reading and projects with practical experience gained from working on department productions. A portion of this course may be offered in a TBA component of 18 hours which may include scenery construction, props, and painting.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate scenic production skills
- incorporate scenic tools, materials, and processes in the creation of scenery and props
- analyze scenic production problems, evaluate alternatives and recommend solutions
- evaluate the role of the theatre technician
- examine the production process in technical theatre

### TA 422 Stage Lighting

<table>

</table>

This course introduces the basic concepts of lighting for stage, film or television. Topics include the basic elements of lamps and fixtures, electricity, dimmers and control consoles. It also covers the design elements of color, distribution, and space to produce a lighting design. Practical lighting skills are gained from work on department productions. A portion of this course may be offered in a TBA component of 18 hours which may include hanging, circuiting, and focusing lights.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate practical stage lighting and rigging techniques
- analyze and apply the basic components of stage lighting such as optics, electricity, and instrumentation
- analyze artistic lighting components such as color, angle, and style
- evaluate a script and setting, and design an appropriate light plot
- analyze a script, and design and produce a basic sound plot

### TA 424 Advanced Technical Theatre

<table>
<thead>

</tr>
</tbody>
</table>

This is an advanced study course dealing with technical theatre design and production techniques in the areas of scenery, props, lighting, sound, scenic painting, rigging or stage management through individual projects and participation in major productions. A portion of this course may be offered in a TBA component of 18-72 hours which may include practical work in lighting, scenic construction or design, sound design, rigging, or stage managing techniques.
Upon completion of this course, the student will be able to:

- analyze and evaluate theatrical designs and projects
- demonstrate advanced technical theatre skills
- integrate specialized technical processes in the solution of production problems
- evaluate production requirements and create appropriate designs and/or projects for the production

**TA 430 Costume Construction**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None  
**Advisory:** Eligible for ENGRD 116 AND ENGWR 102; OR ESLR 320 AND EISLW 320  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course explores the basic areas of costume construction and offers experience in constructing costumes for theatrical productions. Topics include fabrics, color, patterns, sewing techniques, costume pieces, and accessories. Period styles, costume analysis, and basic elements of costume design are also covered. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the role of theatre and costuming in society at large.
- describe the role of the costume designer and the costume shop staff in a theatre production.
- analyze the historical, artistic, and social environments of various periods and their resultant styles.
- demonstrate basic design skills and basic patterning, construction, and alteration techniques using various sewing machines and hand sewing tools.
- explain the composition, properties, and construction of fabric and demonstrate textile manipulation techniques.
- organize an artistic and practical solution to the costume requirements of a dramatic work.
- evaluate the costumes in a live theatrical presentation.

**TA 433 Costume Production**

**Units:** 0.5 - 3  
**Hours:** 27 - 162 hours LAB  
**Prerequisite:** FASHN 374 or TA 430 with a grade of "C" or better  
**Advisory:** Eligible for ENGRD 116 AND ENGWR 102; OR ESLR 320 AND EISLW 320  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This lab course explores the process of developing costumes for theatrical productions through the set-up, creation, and assembly of costumes for mainstage productions. Projects focus on developing sewing, craft, and patterning skills, clothing alteration methods and working with fabrics, hats and accessories, dyes and textile paints as utilized in each production. Field trips may be required. A portion of this course may be offered in a TBA component of hours which may include pattern making, sewing, alteration, and maintenance of costumes.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply patterning, construction, and alteration skills while demonstrating proficiency in the operation of various sewing machines and tools.
- examine period styles as they relate to a specific costume situation.
- formulate an artistic and practical solution to the costume requirements of a dramatic work.
- evaluate and enact a viable approach to constructing theatrical costumes.
• demonstrate basic skills that alter existing fabric such as dying, distressing, and painting.

• organize and maintain a costume shop and its storage units.

**TA 434 Vintage Costuming**

**Same As:** FASHN 334  
**Units:** 0.5 - 2  
**Hours:** 4.5 - 18 hours LEC; 13.5 - 54 hours LAB  
**Prerequisite:** None.  
**Advisory:** FASHN 357 or TA 430; and eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300, OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**Catalog Date:** June 1, 2020

This course covers the principles and techniques involved in developing and constructing period costumes and/or accessories through individual fabrication of costume pieces. The historical period or topic changes each semester. This course is open to all skill levels, with basic knowledge of sewing recommended. It is not open to students who have completed FASHN 334. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• research and identify historical costume pieces as covered in the specific semester's topic.

• compare and contrast the costume pieces of different historical periods.

• analyze the design and construction techniques necessary to create a period costume as specified in the specific semester's topic.

• construct period costume pieces as covered in the specific semester's topic.

**TA 435 History and Theory of Costuming**

**Units:** 3  
**Hours:** 54 hours LEC  
**Prerequisite:** None.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU; UC  
**General Education:** AA/AS Area I; CSU Area C1; IGETC Area 3A  
**Catalog Date:** June 1, 2020

This is a survey course of historical periods as portrayed through fashion and costumes from ancient through modern times. The impact of social, political, cultural, and economic issues on costuming is explored and analyzed, as is the effect of costumes on society. This course integrates design elements with historical styles to develop designs for theatrical costumes. Field trips may be required.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

• evaluate the roles of fashion and theatre and their relationship to society.

• analyze the major historical eras and their impact on fashion style.

• recognize the clothing components of different historical styles.

• demonstrate basic design skills.

• integrate historical knowledge with design elements to develop designs for historical theatrical costumes.

**TA 437 Stage Make-up I**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Transferable:** CSU; UC  
**C-ID:** C-ID THTR 175  
**Catalog Date:** June 1, 2020
This course covers the basic techniques of theatrical makeup. It explores makeup materials, color and light, modeling techniques, and design elements in the development of makeup designs for corrective, old age, historical, stylized faces, clowns, animals, and fantasy makeup.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the basic techniques of theatrical makeup.
- research and design makeup for straight, corrective, age, character, and fantasy situations.
- analyze design elements and application techniques to achieve makeup designs for a variety of characters.
- compile and organize a pictorial research notebook of photographs of people's faces.
- analyze the interaction of heredity, environment, temperament, health, and age as they are manifested in facial characteristics.
- assess the creative use of makeup design to interpret a production and create visual characterization.
- demonstrate proper knowledge of skin preparation, products, and safety procedures in application and removal of makeup.

TA 440 Arts Management

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This general survey course in arts management emphasizes organization, marketing, audience development, and financial management. It includes promotion and publicity, house management, box office operations, and public relations. It also includes field work projects with an existing arts organization.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the role of arts management in the entertainment industry.
- analyze the organizational structure of an arts organization.
- evaluate marketing and audience development strategies.
- evaluate business, box office, and public relations methods.
- examine operations and apply practical experience to the solving of management problems.

TA 452 One-Act Play Workshop

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Enrollment Limitation: Audition/Interview
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course explores the play production process. It provides experience as an active participant in the analysis, preparation, and production of one-act plays through participation as either directors, writers, actors, or technicians. This course culminates in public performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the professional responsibilities of an actor and/or technician associated with the preparation and performance of a theatrical production
- analyze the evolution of a character in production from script to performance
- analyze and solve technical challenges associated with the creation and presentation of a theatrical production
TA 466 Rehearsal and Performance - Musical Ensemble

This course provides a workshop training experience in the preparation and performance of musical theatre ensemble productions. A different production is presented each semester the course is offered. Students interested in singing/acting roles audition with the director. Students interested in instrumental positions audition with the musical director. Students interested in technical work interview with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 27-162 hours which may include acting, singing, dancing, musical, or technical rehearsals and preparation. It is not open to students who have completed MUP 370.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- practice and perform a musical production.
- evaluate the professional responsibilities of an actor, singer, musician, or technician in a production as appropriate.
- analyze the evolution of a participant’s role in a production from rehearsal to performance.
- integrate acting, singing, and/or dancing skills in an intensive rehearsal/performance environment (if participating as an actor/singer).
- integrate musical skills in an intensive rehearsal/performance environment (if participating as a musician).
- incorporate basic technical skills in the creation or manipulation of sets, props, costumes, lighting, or sound as appropriate (if participating as a technician).
- analyze and solve problems associated with the creation and presentation of acting, musical, and technical challenges.
- analyze the differences in producing musical theatre from other styles of theatre.

TA 481 Honors Seminar in History of Film

This honors course (a supplement to TA 312, 314, and 315) provides a seminar for advanced students to view and analyze additional films important to the development of cinematic art to analyze and criticize those films in terms of acting, directing, writing, editing, cinematography, and genre. May be taken twice with different co requisites.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate writing skills for film criticism.
- analyze film acting, directing, writing, cinematography, editing, sound, music, and genre.
- assess film form and content.
- compare and contrast analysis and evaluation of films with peers.
- research individual artists and their work.
This course covers topics in theatre which are not included in current course offerings. May require field trips. A portion of this course may be offered in a TBA component of 27-216 hours which may include theatrical studies, preparation or performance.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Analyze background and current status of special topic.
- Evaluate concepts acquired from the special topic in practical applications.
- Compare and contrast special topic information to regular curriculum information.
- Develop and evaluate the techniques used in this topic.
- Transfer knowledge learned in special topic research to practical application in other courses and endeavors.
- Devise materials required for special topic and put them to practical use in other courses and endeavors.

TA 495 Independent Studies in Theatre Arts

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU
Catalog Date: June 1, 2020

Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

TA 498 Work Experience in Theatre Arts

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to theatre arts with a cooperating site supervisor. Students are advised to consult with the Theatre Arts Department faculty to review specific certificate and degree work experience requirements.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the field of theatre arts. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in the field of theatre arts related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course
- make effective decisions, use workforce information, and manage his/her personal career plans.
• behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.

• behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.

• apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.

• communicate in oral, written, and other formats, as needed, in a variety of contexts at work.

• locate, organize, evaluate, and reference information at work.

• demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
## Associate Degree

### A.A. in Film

This degree provides a broad overview of film history, theory, and practice. It combines the critical study of film as an art form and societal influence, including studies in diversity and genres, with opportunities for practical experience in film acting, writing, production, and post-production. It provides students with a foundation for further study in cinematic arts, as well as preparation for career opportunities which employ those arts.

Catalog Date: June 1, 2020

The Film Associate in Arts (A.A.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- analyze the historical development of film art.
- assess the influence of film as a dynamic art form, and as a social and cultural force in our society.
- evaluate the components of a film production, including acting, directing, writing, and technical elements.
- compare and contrast different styles and genres of film.
- integrate theoretical knowledge with practical production experience.

Certificate of Achievement

Film Certificate

This certificate concentrates on the critical study of film as an art form and societal influence, with additional opportunities for practical experience in film acting, production, and post-production.

Catalog Date: June 1, 2020

This course explores the artistic, business, and social elements of film. It examines components of film making, such as acting, directing, cinematography, writing, and editing. Films are analyzed to evaluate film making techniques and the impact of cinematic art and entertainment on society. Field trips may be required. This course is formerly known as TA 310.

### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze film as a mode of artistic expression and communication.
- synthesize information concerning film making techniques and the impact of film on society.
- evaluate the work of individual film artists in the development of the art of cinema.
- demonstrate communication skills for film critique.

This course is an historical and critical survey of film as an art form. It emphasizes the evaluation of films which are landmarks in the art of moviemaking from around the world, from the invention of film to the present day. This course is formerly known as TA 312.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the development of film and the art of film making.
- categorize landmark films in a time period and genre.
- compare and contrast different cinematic styles and structures.
- assess the contribution of prominent filmmakers to world cinema.

**TAFILM 303 History of Film: 1880's through 1950's**

- Units: 3
- Hours: 54 hours LEC
- Prerequisite: None.
- Advisory: Eligible for ENGRD 116 AND ENGWR 101; OR ESLR 320 AND ESlW 320.
- Transferable: CSU; UC (Transfer Credit Limitation: TA 312/TAFILM 302, TA 314/TAFILM 303, TA 315/TAFILM 304, TA 481 - any combination, maximum credit 6 units)
- General Education: AA/AS Area I; CSU Area C1; IGETC Area 3A
- Catalog Date: June 1, 2020

This course is an historical and critical survey of film as an art form. It emphasizes the evolution of artistic and technical facets of production in features, documentaries, and experimental films, concentrating on films from the 1880s through the 1950s. Field trips may be required. This course is formerly known as TA 314.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the development of film and the art of film making.
- distinguish some of the major historical, cultural, political, and economic forces that shaped world cinema of the 1800s through the 1950s.
- compare and contrast different cinematic styles and structures.
- analyze selected films for their effective use of visual techniques.
- evaluate prominent directors' works and their contribution to world cinema.
- formulate an independent and critical aesthetic perspective on the cinema.

**TAFILM 304 History of Film: 1950's to Present**

- Units: 3
- Hours: 54 hours LEC
- Prerequisite: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
- Advisory: CSU; UC (Transfer Credit Limitation: TA 312/TAFILM 302, TA 314/TAFILM 303, TA 315/TAFILM 304, TA 481 - any combination, maximum credit 6 units)
- Transferable: AA/AS Area I; CSU Area C1; IGETC Area 3A
- General Education: None.
- Catalog Date: June 1, 2020

This course is an historical and critical survey of film as an art form. It emphasizes the evolution of artistic and technical facets of production in features, documentaries, and experimental films, concentrating on films from 1950 to the present. Field trips may be required. This course is formerly known as TA 315.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
explain the development of film and the art of film making.

distinguish some of the major historical, cultural, political, and economic forces that have shaped world cinema from the 1950s to the present.

compare and contrast different cinematic styles and structures.

analyze selected films for their effective use of visual techniques.

evaluate prominent directors’ works and their contribution to world cinema.

formulate an independent and critical aesthetic perspective on the cinema.

TAFILM 307 Diversity in American Film

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; AA/AS Area VI; CSU Area C1; IGETC Area 3A
Catalog Date: June 1, 2020

This course surveys the cinematic expression of artists often underrepresented in the mainstream media, such as women, Native-Americans, African-Americans, Hispanics/Latinos, Asian-Americans, and gays, lesbians, bi-sexuals, and transgenders. Media stereotypes and the social, political, and cultural climates that created them are covered. Field trips may be required. This course is formerly known as TA 318.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe stereotypes, bias, and racism as expressed in the cinema.
- analyze the ramifications and contributions of the unique cinematic expression of America’s minority communities.
- identify the negative images of the groups being studied in the American cinema.
- assess the major historical, cultural, political, and economic forces at work within the groups and in society at large.
- compare and contrast the cinematic expressions of the groups with each other and with mainstream cinematic expression in the same period.

TAFILM 320 Cinema Genres

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGW 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU; UC
General Education: AA/AS Area I; CSU Area C2; IGETC Area 3A
Catalog Date: June 1, 2020

This course examines one or more film genres such as Western, horror, film noir, and science fiction. It explores specific types of film in depth, concentrating on historical and technical developments in a specific genre, and examines the work of actors, directors, writers, cinematographers, producers, and studios for that genre. Field trips may be required. This course is formerly known as TA 320.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and describe various film genres.
- evaluate and analyze films of a genre.
- compare one genre's components and style with that of other genres.
- classify the primitive, classic, revisionist, and parodic stages of a genre.
- evaluate the work of directors, actors, writers, cinematographers, and producers in a genre.
Theatre Arts Performance | American River College

TAP 300 Modern Rehearsal and Performance I

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Course Family: Modern Performance and Technical Production (http://arc.losrios.edu/course-families#id_100003)  
Prerequisite: None.  
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.  
Advisory: TA 350  
Transferable: CSU; UC  
C-ID: C-ID THTR 191  
Catalog Date: June 1, 2020

This course is the first in a series of four courses that provide workshop training in the rehearsal and performance of Modern theatre. It is designed for students with little or no prior theatre experience. Students audition or interview with the director for participation in a Modern drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare, audition, rehearse, and perform Modern theatre in community, educational, and/or professional theatres.
- employ methods for presentation of Modern realism, anti-realism, and/or Post Modern theatre.
- list and demonstrate the requirements of performing in a Modern theatre production including the audition, rehearsal, and production processes.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate basic understanding of Modern script analysis and the techniques of character analysis.
- detail and demonstrate an understanding of the basic skills, work ethic, and rehearsal methods necessary to performing a Modern role on stage to create the world of a chosen play.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate the basic collaborative responsibilities with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Modern theatre production.
- analyze the development of an actor's or production team member's role in a production from script to performance.

TAP 301 Modern Rehearsal and Performance II

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Course Family: Modern Performance and Technical Production (http://arc.losrios.edu/course-families#id_100003)  
Prerequisite: TAP 300 with a grade of "C" or better  
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
This course is the second in a series of four courses that provide workshop training in the rehearsal and performance of Modern theatre. It is designed for students with basic/minimal theatre experience. Students audition or interview with the director for participation in a Modern drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate basic proficiency in the skills, work ethic, and rehearsal methods necessary to performing a Modern role on stage to create the world of a chosen play.
- prepare, audition, rehearse, and perform Modern theatre in community, educational, and/or professional theatres.
- explore methods for presentation of Modern realism, anti-realism, and/or Post Modern theatre.
- list and demonstrate basic proficiency in the requirements of performing in a Modern theatre production including the audition, rehearsal, and production processes.
- analyze a Modern drama script and character.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate the basic collaborative responsibilities with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Modern theatre production.
- analyze the development of an actor’s or production team member’s role in a production from script to performance.

TAP 302 Modern Rehearsal and Performance III

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Modern Performance and Technical Production (http://arc.losrios.edu/course-families#id_100003)
Prerequisite: TAP 301 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 366
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the third in a series of four courses that provide workshop training in the rehearsal and performance of Modern theatre. It is designed for students with beginning/moderate theatre experience. Students audition or interview with the director for participation in a Modern drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- utilize the varying systems of rehearsal and performance of Modern realism, anti-realism, and/or Post Modern theatre.
- demonstrate an intermediate proficiency in the skills, work ethic, and rehearsal methods necessary to performing a Modern role on stage to create the world of a chosen play.
- research, prepare, audition, rehearse, and perform Modern theatre in community, educational, and/or professional theatres.
- list and demonstrate intermediate proficiency in the requirements of performing in a Modern theatre production including the audition, rehearsal, and production processes.
- analyze a Modern drama script and character.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate an intermediate proficiency in collaborating with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Modern theatre production.
- analyze the development of an actor’s or technician’s role in a production from script to performance.
- evaluate the professional responsibilities of an actor or production team member’s role in a Modern theatre production.
TAP 303 Modern Rehearsal and Performance IV

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Modern Performance and Technical Production
Prerequisite: TAP 302 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 366
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of Modern theatre. It is designed for students with intermediate/significant theatre experience. Students audition or interview with the director for participation in a Modern drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of the methods of rehearsing and performing Modern theatre art.
- demonstrate leadership and an exemplary work ethic while assisting the director and other actors in Modern script analysis, character analysis, staging, and the rehearsal process.
- research, prepare, audition, rehearse, and perform Modern theatre in community, educational, and/or professional theatres.
- utilize the varying systems of rehearsal and performance of Modern realism, anti-realism, and/or Post Modern theatre.
- analyze and solve problems associated with the creation and presentation of Modern theatre, including acting, staging, and technical challenges.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- list and demonstrate mastery in the requirements of performing in a Modern theatre production including the audition, rehearsal, and production processes.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate mastery and leadership in collaborating with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Modern theatre production.
- analyze the development of an actor's or technician's role in a production from script to performance.
- evaluate the professional responsibilities of an actor or technician in a Modern theatre production.
- lead and mentor beginning actors in the methods of preparing and presenting Modern theatre art.

TAP 310 Modern Technical Production I

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Modern Performance and Technical Production
Prerequisite: None
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the first in a series of four courses that provide workshop training in the technical production of modern theatre. It provides practical experience, in the modern theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students who want an introductory experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate the basic skills of a beginning crew member or technician
• describe basic shop and crew procedures, equipment, materials, and safety procedures
• perform basic planning for specific technical elements of a production in the modern theatre style
• assess the importance of teamwork in carrying out a group project in technical theatre
• develop a basic proficiency in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 311 Modern Technical Production II

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Course Family: Modern Performance and Technical Production (http://arc.losrios.edu/course-families#id_100003)  
Prerequisite: TAP 310 with a grade of "C" or better  
Enrollment Limitation: Interview  
Transferable: CSU; UC  
C-ID: C-ID THTR 192  
Catalog Date: June 1, 2020

This course is the second in a series of four courses that provide workshop training in the technical production of modern theatre. It provides practical experience, in the modern theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with basic/minimal experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate the skills of a beginning crew member or technician
• analyze shop and crew procedures, equipment, materials, and safety procedures with a second level expertise
• perform second level planning for specific technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to technical problems
• demonstrate beginning proficiencies in two of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the second level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• develop a second level proficiency in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 312 Modern Technical Production III

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Course Family: Modern Performance and Technical Production (http://arc.losrios.edu/course-families#id_100003)  
Prerequisite: TAP 311 with a grade of "C" or better  
Enrollment Limitation: Interview  
Transferable: CSU; UC  
C-ID: C-ID THTR 192  
Catalog Date: June 1, 2020

This course is the third in a series of four courses that provide workshop training in the technical production of modern theatre. It provides practical experience, in the modern theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with beginning/moderate experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• analyze the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate the intermediate skills of a crew member or technician
• analyze shop and crew procedures, equipment, materials, and safety procedures with a third level expertise
• perform intermediate level planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to technical problems
• demonstrate beginning proficiencies in three of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the third level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• develop an intermediate proficiency in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 313 Modern Technical Production IV

This course is the fourth in a series of four courses that provide workshop training in the technical production of modern theatre. It provides practical experience, in the modern theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate skill mastery by performing duties of a lead crew member or technician
• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
• perform significant planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to complex technical problems
• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 320 Classical Rehearsal and Performance I

This course is the first in a series of four courses that provide workshop training in the technical production of classical theatre. It provides practical experience, in the classical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate skill mastery by performing duties of a lead crew member or technician
• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
• perform significant planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to complex technical problems
• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 312 Classical Technical Production IV

This course is the fourth in a series of four courses that provide workshop training in the technical production of classical theatre. It provides practical experience, in the classical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate skill mastery by performing duties of a lead crew member or technician
• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
• perform significant planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to complex technical problems
• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 330 Classical Technical Production V

This course is the fifth in a series of four courses that provide workshop training in the technical production of classical theatre. It provides practical experience, in the classical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate skill mastery by performing duties of a lead crew member or technician
• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
• perform significant planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to complex technical problems
• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a modern theatre production

TAP 340 Classical Technical Production VI

This course is the sixth in a series of four courses that provide workshop training in the technical production of classical theatre. It provides practical experience, in the classical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the modern theatre style
• demonstrate skill mastery by performing duties of a lead crew member or technician
• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
• perform significant planning of technical aspects of a production in the modern theatre style
• integrate planning and skills instruction to create solutions to complex technical problems
• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a modern theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a modern theatre production
This course is the first in a series of four courses that provide workshop training in the rehearsal and performance of Classical theatre. It is designed for students with little or no prior theatre experience. Students audition or interview with the director for participation in a Classical drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- employ vocal, physical, and analytical skills necessary to present a play written between approximately 500 BCE and 1850 CE.
- prepare, audition, rehearse, and perform Classical theatre in community, educational, and/or professional theatres.
- list and demonstrate the requirements of being an actor in a Classical theatre production including the audition, rehearsal, and production processes.
- demonstrate basic understanding of Classical script analysis and the techniques of character analysis.
- describe and demonstrate a basic understanding of the skills and rehearsal methods necessary to performing a Classical role on stage to create the world of a chosen play.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate the basic collaborative responsibilities with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Classical theatre production.
- analyze the development of an actor's or technician's role in a production from script to performance.
- create and dramatize the behavioral life of a character in rehearsal and performance.

TAP 321 Classical Rehearsal and Performance II

Units: 1 - 3  
Hours: 54 - 162 hours LAB  
Course Family: Classical Performance and Technical Production (http://arc.losrios.edu/course-families#id_100004)  
Prerequisite: TAP 320 with a grade of "C" or better  
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.  
Advisory: TA 362  
Transferable: CSU; UC  
C-ID: C-ID THTR 191  
Catalog Date: June 1, 2020

This course is the second in a series of four courses that provide workshop training in the rehearsal and performance of Classical theatre. It is designed for students with basic/minimal theatre experience. Students audition or interview with the director for participation in a Classical drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate basic proficiency in the skills and rehearsal methods necessary to performing a Classical role on stage to create the world of a chosen play.
- prepare, audition, rehearse and perform Classical theatre in community, educational, and/or professional theatres.
- describe and utilize special techniques necessary to present plays written between approximately 550 BCE and 1850 CE.
- list and demonstrate basic proficiency in the requirements of being an actor in a Classical theatre production including the audition, rehearsal, and production processes.
- analyze a Classical script and character.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- fit in effectively as an ensemble member of a theatre company.
- demonstrate the basic collaborative responsibilities with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Classical theatre production.
- analyze the development of an actor's or technician's role in a production from script to performance.

TAP 322 Classical Rehearsal and Performance III
TAP 323 Classical Rehearsal and Performance IV

This course is the third in a series of four courses that provide workshop training in the rehearsal and performance of Classical theatre. It is designed for students with beginning/moderate theatre experience. Students audition or interview with the director for participation in a Classical drama or comedy. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate an intermediate proficiency in the elevated speech and period movement necessary to present plays written approximately between 550 BCE and 1850 CE.
- demonstrate an understanding of the social context of Classical plays.
- research, prepare, audition, rehearse, and perform Classical theatre in community, educational, and/or professional theatres.
- list and demonstrate intermediate proficiency in the requirements of being an actor in a Classical theatrical production including the audition, rehearsal, and production processes.
- analyze a Classical drama script and character.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- fit in effectively as an ensemble member of a theatre company.
- demonstrate an intermediate proficiency in collaborating with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a Classical theatre production.
- analyze the development of an actor's or technician's role in a production from script to performance.
- evaluate the professional responsibilities of an actor or technician in a Classical theatre production.

TAP 323 Classical Rehearsal and Performance IV

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of and serve as an example of the elevated speech and period movement necessary to present plays written approximately between 550 BCE and 1850 CE.
- demonstrate leadership in a cast by assisting the director and other actors in Classical script analysis and the techniques of character analysis.
- research, prepare, audition, rehearse, and perform Classical theatre in community, educational, and/or professional theatres.
- analyze and solve problems associated with the creation and presentation of Classical theatre, including acting, staging, and technical challenges.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- list and demonstrate mastery in the requirements of being an actor in a Classical theatre production including the audition, rehearsal, and production processes.
- integrate effectively as an ensemble member of a theatre company.
- demonstrate mastery and leadership in collaborating with the director, actors, crew members, and designers in a classical theatre production.
- analyze the evolution of an actor's or technician's role in a production from script to performance.
- evaluate the professional responsibilities of an actor or technician in a Classical theatre production.
- lead and mentor beginning actors in the methods of preparing and presenting Classical theatre art.

Student Learning Outcomes
TAP 340 Musical Rehearsal and Performance I

Upon completion of this course, the student will be able to:

- evaluate the responsibilities of crew members, technicians, and designers in development of a production in the classical theatre style
- demonstrate skill mastery by performing duties of a lead crew member or technician
- evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
- perform significant planning of technical aspects of a classical theatre production
- integrate planning and skills instruction to create solutions to complex technical problems
- develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
- demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a classical theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a classical theatre production

This course is the first in a series of four courses that provide workshop training in the rehearsal and performance of musical theatre. It is designed for students with little or no prior theatre experience. Students audition or interview with the director for participation in a musical. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare, audition, rehearse, and perform musical theatre in community, educational, and/or professional theatres.
- employ the skills in singing, dancing, acting, and/or musicianship necessary for a musical theatre production.
- list and demonstrate the steps necessary to take a musical theatre production from script to performance.
- demonstrate basic understanding of musical theatre script analysis and the techniques of character analysis.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate the basic collaborative responsibilities with the director, conductor, vocal director, choreographer, musicians, actors, crew members, and designers in rehearsal and in performance in the creation of a musical theatre production.
- analyze the development of a performer's role from audition to opening.

TAP 341 Musical Rehearsal and Performance II

Upon completion of this course, the student will be able to:

- evaluate the responsibilities of crew members, technicians, and designers in development of a production in the classical theatre style
- demonstrate skill mastery by performing duties of a lead crew member or technician
- evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
- perform significant planning of technical aspects of a classical theatre production
- integrate planning and skills instruction to create solutions to complex technical problems
- develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
- demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a classical theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a classical theatre production

This course is the second in a series of four courses that provide workshop training in the rehearsal and performance of musical theatre. It is designed for students with
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate basic proficiency in the skills necessary for a musical theatre production, including singing, dancing, acting, and/or musicianship.
- prepare, audition, rehearse, and perform musical theatre in community, educational, and/or professional theatres.
- list and demonstrate with basic proficiency the steps necessary to take a musical theatre production from script to stage.
- analyze a musical theatre script and character.
- fit in effectively as an ensemble member of a theatre company.
- analyze the differences in producing musical theatre from other styles of theatre.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate the basic collaborative responsibilities with the director, choreographer, vocal director, musicians, actors, crew members, and designers in rehearsal and in performance in the creation of a musical theatre production.
- analyze the evolution of an actor's or technician's role in a production from audition to opening night.

TAP 342 Musical Rehearsal and Performance III

This course is the third in a series of four courses that provide workshop training in the rehearsal and performance of musical theatre. It is designed for students with beginning/moderate theatre experience. Students audition or interview with the director for participation in a musical. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research, prepare, audition, rehearse and perform musical theatre in community, educational, and/or professional theatres.
- demonstrate an intermediate proficiency in the skills necessary for musical theatre production, including acting, singing, dancing, and/or musicianship.
- analyze a musical theatre script and character.
- identify and demonstrate an intermediate proficiency in the skills necessary to take a musical from script to stage.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- fit in effectively as an ensemble member of a theatre company.
- demonstrate an intermediate proficiency in collaborating with the director, conductor, choreographer, vocal director, musicians, actors, crew members, and designers in rehearsal and in performance in the creation of a musical theatre production.
- analyze the evolution of a performer's role from auditions to opening night.
- evaluate the professional responsibilities of an actor or technician in a musical theatre production.

TAP 343 Musical Rehearsal and Performance IV

This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of musical theatre. It is designed for students with moderate/proficiency theatre experience. Students audition or interview with the director for participation in a musical. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research, prepare, audition, rehearse and perform musical theatre in community, educational, and/or professional theatres.
- demonstrate an intermediate proficiency in the skills necessary for musical theatre production, including acting, singing, dancing, and/or musicianship.
- analyze a musical theatre script and character.
- identify and demonstrate an intermediate proficiency in the skills necessary to take a musical from script to stage.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- fit in effectively as an ensemble member of a theatre company.
- demonstrate an intermediate proficiency in collaborating with the director, conductor, choreographer, vocal director, musicians, actors, crew members, and designers in rehearsal and in performance in the creation of a musical theatre production.
- analyze the evolution of a performer's role from auditions to opening night.
- evaluate the professional responsibilities of an actor or technician in a musical theatre production.
This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of musical theatre. It is designed for students with intermediate/significant theatre experience. Students audition or interview with the director for participation in a musical. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of the methods of rehearsing and performing musical theatre.
- demonstrate leadership in a cast by assisting the director and other actors in musical theatre script analysis and the techniques of character analysis.
- research, prepare, audition, rehearse, and perform musical theatre in community, educational, and/or professional theatres.
- utilize varying technique 'systems' to prepare physically and vocally for a musical theatre role.
- analyze and solve problems associated with the creation and presentation of musical theatre, including acting, staging, musical, and technical challenges.
- integrate effectively as an ensemble member of a theatre company.
- demonstrate mastery and leadership in collaborating with the director, conductor, choreographer, vocal director, musicians, actors, crew members, and designers in rehearsal and in performance in the creation of a musical theatre production.
- analyze the evolution of an actor's role in a musical theatre production from audition to opening.
- evaluate the professional responsibilities of a performer in a musical theatre production.
- lead and mentor beginning actors in the methods of preparing and presenting musical theatre.
- create and dramatize the behavioral life of a character in rehearsal and performance.

TAP 350 Musical Technical Production I

This course is the first in a series of four courses that provide workshop training in the technical production of musical theatre. It provides practical experience, in the musical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students who want an introductory experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the musical theatre style
- demonstrate the basic skills of a beginning crew member or technician
- describe basic shop and crew procedures, equipment, materials, and safety procedures
- perform basic planning of technical aspects of a production in the musical theatre style
- assess the importance of teamwork in carrying out a group project in technical theatre
- develop a basic proficiency in working and collaborating with the director, designers, and performers in a musical theatre production
TAP 351 Musical Technical Production II

This course is the second in a series of four courses that provide workshop training in the technical production of musical theatre. It provides practical experience, in the musical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with basic/minimal theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the musical theatre style
- demonstrate the skills of a beginning crew member or technician
- analyze shop and crew procedures, equipment, materials, and safety procedures with a second level expertise
- perform second level planning for specific technical aspects of a production in the musical theatre style
- integrate planning and skills instruction to create solutions to technical problems
- demonstrate beginning proficiencies in two of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a musical theatre production increased proficiency performing the technical tasks of the second level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- develop a second level proficiency in working and collaborating with the director, designers, and performers in a musical theatre production

TAP 352 Musical Technical Production III

This course is the third in a series of four courses that provide workshop training in the technical production of musical theatre. It provides practical experience, in the musical theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with beginning/moderate theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the musical theatre style
- demonstrate the intermediate skills of a crew member or technician
- analyze shop and crew procedures, equipment, materials, and safety procedures with a third level expertise
- perform intermediate level planning of technical aspects of a musical theatre production
- integrate planning and skills instruction to create solutions to technical problems
- demonstrate beginning proficiencies in three of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
• demonstrate in a musical theatre production increased proficiency performing the technical tasks of the third level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)

• develop an intermediate proficiency in working and collaborating with the director, designers, and performers in a musical theatre production

TAP 353 Musical Technical Production IV

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Musical Performance and Technical Production
Prerequisite: TAP 352 with a grade of "C" or better
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• evaluate the responsibilities of crew members, technicians, and designers in development of a production in the musical theatre style

• demonstrate skill mastery by performing duties of a lead crew member or technician

• evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials

• perform significant planning of technical aspects of a musical theatre production

• integrate planning and skills instruction to create solutions to complex technical problems

• develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members

• demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)

• demonstrate in a musical theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)

• demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a musical theatre production

TAP 360 Children's Theatre Rehearsal and Performance I

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Children's Theatre Performance and Technical Production
Prerequisite: None.
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the first in a series of four courses that provide workshop training in the rehearsal and performance of children's theatre. It is designed for students with little or no prior theatre experience. Students audition or interview with the director for participation in a children's show. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• prepare, audition, rehearse, and perform children's theatre in community, educational, and/or professional theatres.

• employ methods for the presentation of children's theatre.
- differentiate the style of acting required of children's theatre performers from other basic styles of acting.
- list and demonstrate the basic skills of being an actor in a children's theatre production including the audition, rehearsal, and production processes.
- demonstrate basic understanding of children's theatre script analysis and the techniques of character analysis.
- demonstrate the basic skills and rehearsal methods necessary to performing a role on stage to create the world of a chosen play.
- demonstrate ensemble acting techniques in collaborative theatre.
- create and dramatize the behavioral life of a character in rehearsal and performance.

TAP 361 Children's Theatre Rehearsal and Performance II

This course is the second in a series of four courses that provide workshop training in the rehearsal and performance of children's theatre. It is designed for students with basic/minimal theatre experience. Students audition or interview with the director for participation in a children's show. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate moderate proficiency in the skills and rehearsal methods necessary to performing a role on stage to create the world of a chosen children's play.
- prepare, audition, rehearse, and perform children's theatre in community, educational, and/or professional theatres.
- explore methods for the presentation of children's theatre.
- list and demonstrate moderate proficiency in the requirements of being an actor in a children's theatre production including the audition, rehearsal, and production processes.
- analyze a children's play script and character.
- demonstrate ensemble acting techniques in collaborative theatre.
- differentiate the style of acting required of children's theatre performers from other basic styles of acting.
- analyze the development of an actor's or production team member's role in a production from script to performance.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- collaborate, at a basic proficiency, with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a children's show.

TAP 362 Children's Theatre Rehearsal and Performance III

This course is the third in a series of four courses that provide workshop training in the rehearsal and performance of children's theatre. It is designed for students with beginning/moderate theatre experience. Students audition or interview with the director for participation in a children's show. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate an intermediate proficiency in the skills and rehearsal methods necessary to performing a children's theatre role on stage to create the world of a chosen play.
- research, prepare, audition, rehearse, and perform children's theatre in community, educational, and/or professional theatres.
- list and demonstrate intermediate proficiency in the requirements of being an actor in a children's production including the audition, rehearsal, and production processes.
- analyze a children's theatre script and character.
- differentiate the style of acting required of children's theatre performers from other basic styles of acting.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate ensemble acting techniques in collaborative theatre.
- collaborate, at an intermediate proficiency, with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a production.
- analyze the development of an actor's or technician's role in a production from script to performance.
- evaluate the professional responsibilities of an actor's, crew member's, or production team member's role in a children's theatre production.

TAP 363 Children's Theatre Rehearsal and Performance IV

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Children's Theatre Performance and Technical Production
Prerequisite: TAP 362 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of children's theatre. It is designed for students with intermediate/significant theatre experience. Students audition or interview with the director for participation in a children's show. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of the methods of rehearsing and performing children's theatre.
- demonstrate leadership in a cast by assisting the director and other actors in children's theatre script analysis and the techniques of character analysis.
- research, prepare, audition, rehearse, and perform children's theatre in community, educational, and/or professional theatres.
- analyze and solve problems associated with the creation and presentation of children's theatre, including acting, staging, and technical challenges.
- list and demonstrate mastery in the requirements of being an actor in a children's theatre production including the audition, rehearsal, and production processes.
- demonstrate ensemble acting techniques in collaborative theatre.
- differentiate the style of acting required of children's theatre performers from other basic styles of acting.
- analyze the development of an actor's, production team member's, and crew member's role in a children's theatre production from script to performance.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- lead and mentor beginning actors in the methods of preparing and presenting children's theatre.
- demonstrate mastery and leadership in collaborating with the director, actors, crew members and designers in rehearsal and in performance in the creation of a children's theatre production.

TAP 370 Children's Theatre Technical Production I

Units: 1 - 3
Hours: 54 - 162 hours LAB
This course is the first in a series of four courses that provide workshop training in the technical production of children's theatre. It provides practical experience, in the children's theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students who want an introductory experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the children's theatre style
- demonstrate the basic skills of a beginning crew member or technician
- describe basic shop and crew procedures, equipment, materials, and safety procedures
- perform basic planning of technical aspects of a production in the children's theatre style
- assess the importance of teamwork in carrying out a group project in technical theatre
- develop a basic proficiency in working and collaborating with the director, designers, and performers in a children's theatre production

TAP 371 Children's Theatre Technical Production II

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Children's Theatre Performance and Technical Production
Prerequisite: TAP 370 with a grade of "C" or better
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the second in a series of four courses that provide workshop training in the technical production of children's theatre. It provides practical experience, in the children's theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with basic/minimal theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the children's theatre style
- demonstrate the skills of a beginning crew member or technician
- analyze shop and crew procedures, equipment, materials, and safety procedures with a second level expertise
- perform second level planning for specific technical aspects of a production in the children's theatre style
- integrate planning and skills instruction to create solutions to technical problems
- demonstrate beginning proficiencies in two of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a children's theatre production increased proficiency performing the technical tasks of the second level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- develop a second level proficiency in working and collaborating with the director, designers, and performers in a children's theatre production

TAP 372 Children's Theatre Technical Production III
This course is the third in a series of four courses that provide workshop training in the technical production of children's theatre. It provides practical experience, in the children's theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with beginning/moderate theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the children's theatre style
- demonstrate the intermediate skills of a crew member or technician
- analyze shop and crew procedures, equipment, materials, and safety procedures with a third level expertise
- perform intermediate level planning of technical aspects of a children's theatre production
- integrate planning and skills instruction to create solutions to technical problems
- demonstrate beginning proficiencies in three of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a musical theatre production increased proficiency performing the technical tasks of the third level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- develop an intermediate proficiency in working and collaborating with the director, designers, and performers in a children's theatre production

TAP 373 Children's Theatre Technical Production IV

This course is the fourth in a series of four courses that provide workshop training in the technical production of children's theatre. It provides practical experience, in the children's theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the responsibilities of crew members, technicians, and designers in development of a production in the children's theatre style
- demonstrate skill mastery by performing duties of a lead crew member or technician
- evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
- perform significant planning of technical aspects of a children's theatre production
- integrate planning and skills instruction to create solutions to complex technical problems
- develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
- demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a children's theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area
TAP 380 Repertory/Touring Rehearsal and Performance I

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: None.
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the first in a series of four courses that provide workshop training in the rehearsal and performance of repertory and/or touring theatre. It is designed for students with little or no prior theatre experience. Students audition or interview with the director for participation in a repertory and/or touring theatre production. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- prepare, audition, rehearse and perform repertory and/or touring theatre in community, educational, and/or professional theatres.
- employ methods for presentation of a repertory and/or touring theatre production.
- list and demonstrate the requirements of being an actor in a repertory and/or touring theatre production including the audition, rehearsal, and production processes.
- demonstrate the basic skills and rehearsal methods necessary for performing a repertory and/or touring theatre role on stage to create the world of a chosen play.
- analyze a script and a character at a basic level.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- demonstrate the physical and vocal skills necessary in the physically demanding and intensive performance environment of a repertory and/or touring theatre production.
- demonstrate ensemble acting techniques in collaborative theatre.
- collaborate, at a basic proficiency, with the director, actors, crew members and designers in rehearsal and in performance in the creation of a repertory and/or touring theatre production.
- analyze the evolution of an actor's or production team member's role in a production from script to performance.

TAP 381 Repertory/Touring Rehearsal and Performance II

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: TAP 380 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Transferable: CSU; UC
C-ID: C-ID THTR 191
Catalog Date: June 1, 2020

This course is the second in a series of four courses that provide workshop training in the rehearsal and performance of repertory and/or touring theatre. It is designed for students with basic/minimal theatre experience. Students audition or interview with the director for participation in a repertory and/or touring theatre production. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate moderate proficiency in the skills and rehearsal methods necessary to performing a repertory and/or touring theatre role on stage to create the world of a chosen play.
• prepare, audition, rehearse, and perform repertory and/or touring theatre in community, educational, and/or professional theatres.

• list and demonstrate moderate proficiency in the requirements of performing in a repertory and/or touring theatre production including the audition, rehearsal, and production processes.

• analyze a script and character.

• create and dramatize the behavioral life of a character in rehearsal and performance.

• demonstrate ensemble acting techniques in collaborative theatre.

• define and demonstrate the collaborative responsibilities of the director, actors, crew members and designers in rehearsal and in performance in the creation of a repertory and/or touring theatre production.

• analyze the evolution of an actor's, crew member's, or production team member's role in a production from script to performance.

• demonstrate with moderate skill the physical and vocal skills necessary in the physically demanding and intensive performance environment of a repertory and/or touring theatre production.

TAP 382 Repertory/Touring Rehearsal and Performance III

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: TAP 381 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Catalog Date: June 1, 2020

This course is the third in a series of four courses that provide workshop training in the rehearsal and performance of repertory and/or touring theatre. It is designed for students with beginning/moderate theatre experience. Students audition or interview with the director for participation in a repertory and/or touring theatre production. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• utilize the varying systems of rehearsal and performance of repertory and/or touring theatre production.

• demonstrate an intermediate proficiency in the skills and rehearsal methods necessary to performing a repertory and/or touring role on stage to create the world of a chosen play.

• research, prepare, audition, rehearse, and perform repertory and/or touring in community, educational, and/or professional theatres.

• list and demonstrate intermediate proficiency in the requirements of performing in a repertory and/or touring production including the audition, rehearsal, and production processes.

• analyze a script and character.

• create and dramatize the behavioral life of a character in rehearsal and performance.

• demonstrate ensemble acting techniques in collaborative theatre.

• demonstrate an intermediate proficiency in collaborating with the director, actors, crew members and designers in rehearsal and in performance in the creation of a repertory and/or touring production.

• analyze the evolution of an actor's, production team member's, and crew member's role in a repertory and/or touring production from script to performance.

• demonstrate with intermediate skill the physical and vocal skills necessary in the physically demanding and intensive performance environment of a repertory and/or touring theatre production.

• evaluate the professional responsibilities of an actor or production team member's role in a repertory and/or touring theatre production.

TAP 383 Repertory/Touring Rehearsal and Performance IV

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: TAP 381 with a grade of "C" or better
Enrollment Limitation: Students must audition and/or interview with the director to participate in this course.
Advisory: TA 350
Catalog Date: June 1, 2020

This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of repertory and/or touring theatre. It is designed for students with intermediate expertise in theatre. Students audition or interview with the director for participation in a repertory and/or touring theatre production. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.
This course is the fourth in a series of four courses that provide workshop training in the rehearsal and performance of repertory and/or touring theatre. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include acting, singing, dancing, and/or technical rehearsals and preparation.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of the methods of rehearsing and performing repertory and/or touring theatre.
- demonstrate leadership in a cast by assisting the director and other actors in modern script analysis and the techniques of character analysis.
- research, prepare, audition, rehearse, and perform repertory and/or touring theatre in community, educational, and/or professional theatres.
- utilize the varying systems of rehearsal and performance of repertory and/or touring theatre.
- analyze and solve problems associated with the creation and presentation of repertory and/or touring theatre, including acting, staging, and technical challenges.
- create and dramatize the behavioral life of a character in rehearsal and performance.
- list and demonstrate mastery in the requirements of being an actor in a repertory and/or touring theatre production including the audition, rehearsal, and production processes.
- demonstrate ensemble acting techniques in collaborative theatre.
- demonstrate mastery and leadership in collaborating with the director, actors, crew members, and designers in rehearsal and in performance in the creation of a repertory and/or touring theatre production.
- analyze the evolution of an actor's, production team member's, and crew member's role in a production from script to performance.
- evaluate the professional responsibilities of an actor or technician in a repertory and/or touring theatre production.
- lead and mentor beginning actors in the methods of preparing and presenting repertory and/or touring theatre art.
- demonstrate with advanced skill the physical and vocal skills necessary in the physically demanding and intensive performance environment of a repertory and/or touring theatre production.

TAP 390 Repertory and Touring Technical Production I

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: None.
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the first in a series of four courses that provide workshop training in the technical production of repertory and touring theatre. It provides practical experience, in the repertory and touring theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students who want an introductory experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- analyze the responsibilities of crew members, technicians, and designers in development of a production in the repertory or touring theatre style
- demonstrate the basic skills of a beginning crew member or technician
- describe basic shop and crew procedures, equipment, materials, and safety procedures
- perform basic planning of technical aspects of a repertory or touring theatre production
• assess the importance of teamwork in carrying out a group project in technical theatre

• develop a basic proficiency in working and collaborating with the director, designers, and performers in a repertory or touring theatre production

TAP 391 Repertory and Touring Technical Production II

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production (http://arc.losrios.edu/course-families#id_100045)
Prerequisite: TAP 390 with a grade of "C" or better
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the second in a series of four courses that provide workshop training in the technical production of repertory and touring theatre. It provides practical experience, in the repertory and touring theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with basic/minimal theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the responsibilities of crew members, technicians, and designers in development of a production in the repertory or touring theatre style

• demonstrate the skills of a beginning crew member or technician

• analyze shop and crew procedures, equipment, materials, and safety procedures with a second level expertise

• perform second level planning for specific technical aspects of a production in the repertory or touring theatre style

• integrate planning and skills instruction to create solutions to technical problems

• demonstrate beginning proficiencies in two of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)

• demonstrate beginning proficiencies in a children’s theatre production increased proficiency performing the technical tasks of the second level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)

• develop a second level proficiency in working and collaborating with the director, designers, and performers in a repertory or touring theatre production

TAP 392 Repertory and Touring Technical Production III

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production (http://arc.losrios.edu/course-families#id_100045)
Prerequisite: TAP 391 with a grade of "C" or better
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the third in a series of four courses in repertory and touring theatre. It provides practical experience, in the repertory and touring theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with beginning/moderate theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• analyze the responsibilities of crew members, technicians, and designers in development of a production in the repertory or touring theatre style

• demonstrate the intermediate skills of a crew member or technician

• analyze shop and crew procedures, equipment, materials, and safety procedures with a third level expertise
TAP 393 Repertory and Touring Technical Production IV

Units: 1 - 3
Hours: 54 - 162 hours LAB
Course Family: Repertory/Touring Performance and Technical Production
Prerequisite: TAP 392 with a grade of "C" or better
Enrollment Limitation: Interview
Transferable: CSU; UC
C-ID: C-ID THTR 192
Catalog Date: June 1, 2020

This course is the fourth in a series of four courses that repertory and touring theatre. It provides practical experience, in the repertory and touring theatre style, in one of the following areas: scenery, scenic painting, properties, costumes, lighting, sound, video, projections, stage management, house management, box office, publicity, and running crews. It is designed for students with intermediate/significant theatre experience. Students interested in technical work interview for positions with the technical director. Field trips may be required. A portion of this course may be offered in a TBA component of 54-162 hours which may include technical preparation, activities, rehearsals, and performances.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate the responsibilities of crew members, technicians, and designers in development of a production in the repertory or touring theatre style
- demonstrate skill mastery by performing duties of a lead crew member or technician
- evaluate and design shop, crew and safety procedures; evaluate and choose equipment and materials
- perform significant planning of technical aspects of a repertory or touring theatre production
- integrate planning and skills instruction to create solutions to complex technical problems
- develop the importance of teamwork in a group project in technical theatre by mentoring beginning crew members
- demonstrate beginning proficiencies in four of the technical areas (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate in a repertory or touring theatre production increased proficiency performing the technical tasks of the fourth mastery level of a specific technical production area (scenery, costumes, makeup, lighting, sound, projections, operations crew, stage management, house management, box office/publicity)
- demonstrate mastery and leadership in working and collaborating with the director, designers, and performers in a repertory or touring theatre production
Welding Technology | American River College

Division Dean Gary Aguilar
Department Chairs Chris Messier

(916) 484-8354

Associate Degree

A.S. in Welding Technology

The Welding Technology degree provides skills and knowledge in manual and semi-automatic welding processes used in the metal fabrication and construction industries. Instruction covers materials, equipment, procedures, testing techniques as well as safety and blueprint reading. Competencies include techniques of joining ferrous and non-ferrous metals by the use of Shielded Metal Arc Welding (SMAW), Gas Metal Arc Welding (GMAW), Flux Cored Arc Welding (FCAW), and Gas Tungsten Arc Welding (GTAW), and welding procedures.

The Welding Technology Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- select the correct electrode classification and parameters for various thickness of material and welding positions on ferrous and nonferrous metals.
- define principles of gas metal arc welding.
- interpret GMA electrode and classification and specification.
• describe gas metal arc (GMA) welding operations of various joint designs using selected electrodes on different positions.
• describe shielded metal arc welding operations of various positions using selected electrodes on different joint designs.
• define principles of arc welding.
• select correct electrode amperage settings for the job application.
• identify gas tungsten arc (GTA) welding principles and safe welding practices.
• define GTA applications and limitations.
• explain the reason for the formation of each discontinuity type, and distinguish different discontinuities.
• interpret fabrication blueprints using a systematic process.
• interpret graphic welding symbols.
• relate the requirements for welding ferrous and nonferrous metals.
• select the appropriate setting and application methods.
• list the methods used for discontinuity prevention and identify surface defects in welds.

Career Information
Welding certification is recognized by the welding industry as an important step in the profession. The American Welding Society (AWS) nationally accredits American River College's welding program. The ARC welding program has met all the requirements of the AWS QC4 standards for Accreditation of Test Facilities for their Certified Welder Program. Graduating students may find positions in oil refineries, nuclear power plants, aerospace, structural buildings, bridge construction, auto industry, and small commercial fabricating shops.

Certificates of Achievement

Shielded Metal Arc Plate and Pipe Certificate
This certificate promotes competence in plate and pipe welding. Emphasis is on power sources, electrode selection on various joint designs, techniques, and positions in welding. Instruction includes safety and proper procedures in making fillet and groove welds that are in compliance with structural and pipe welding codes.

Catalog Date: June 1, 2020

Student Learning Outcomes
Upon completion of this program, the student will be able to:

• interpret electrode classification and specification
• select correct amperage setting for the job application
• define principles of arc welding
• certify and perform SMA operations in various positions using selected electrodes on different joint designs

Welding Metallurgy and Inspection (270 hours) Certificate
The Welding Metallurgy and Inspection certificate provides the science of metallurgy and weld inspection. Emphasis is on the identification and selection of irons and steel,
Student Learning Outcomes

Upon completion of this program, the student will be able to:

- Describe the mechanical properties of different types of metals
- Interpret and explain the Nondestructive Testing (NDT) procedures of codes and specifications relating to welding
- Evaluate and explain in simple terms the reason for the formation of discontinuity in each of the welding processes
- Explain different methods used for the prevention of weld discontinuities
- Describe the crystalline structures of metals and explain how grain forms in metal
- Explain the problems hydrogen causes when welding steel
- Analyze phase diagrams of carbon and stainless steels

Welding Technology Certificate

This certificate provides skills and knowledge in manual and semi-automatic welding processes used in the metal fabrication and construction industries. Instruction covers materials, equipment, welding procedures, testing techniques, inspection, welding metallurgy, blueprint reading, and welding safety. Competencies include techniques of joining ferrous and non-ferrous metals by the use of Shielded Metal Arc Welding (SMAW), Gas Metal Arc Welding (GMAW), Flux Cored Arc Welding (FCAW), and Gas Tungsten Arc Welding (GTAW). Oxyacetylene welding, oxyacetylene cutting and plasma arc cutting, are also covered.

### Student Learning Outcomes

Upon completion of this program, the student will be able to:

- list the factors that must be considered before a welding process is selected
- evaluate a weld according to a given standard or code
- compare the three types of welding current used for Gas Tungsten Arc Welding
- define voltage, electrical potential, amperage, and electrical current as related to Gas Metal Arc Welding
- discuss how the Gas Metal Arc Welding molten weld pool can be controlled by varying the shielding gas, power settings, weave pattern, travel speed, electrode extension, and gun angle
- explain what each of the digits in a standard Flux Cored Arc Welding electrode identification number mean
- list and define the three units used to measure a welding current
- give the characteristics of the three filler metal groups E6010 and E6011, E6012 and E6013, and E7016 and E7018
- discuss three general categories of pipe welds including how they are used and what type of weld root penetration and strength they require
- make a single V-groove butt welded joint on a pipe in any position to code specifications
- list the crystalline structures of metals and explain how grains form
- describe practical applications of metallurgy
- solve basic welding fabrication math problems
- read a set of welding blueprint drawings and explain each item shown and its dimensioning

### Career Information

Graduates may find employment in a number of industries including: pipe line construction, oil refining, aerospace, structural building, bridge construction, automotive, and small commercial fabricating. They may also work as welding shop supervisors and welding sales persons, and they can also become welding shop owners.

### Certificates

**Gas Metal Arc and Flux Core Arc Welding Plate (252 hours) Certificate**

The Gas Metal Arc Welding certificate promotes competence in welding with different types of metal transfer, constant voltage power sources, different types of shielding gases, and electrode selection on various joint designs. Instruction is provided in gas metal and flux cored arc welding on fillet and groove welds to specific structural and pipe standards.

Catalog Date: June 1, 2020

- interpret electrode classification and specification
- analyze gas metal arc welding operations on various joint designs using selected electrodes for different welding positions

Gas Tungsten Arc Plate and Pipe Welding (180 hours) Certificate

The Gas Tungsten Arc Welding certificate promotes competence in welding ferrous and nonferrous materials. Emphasis is on proper use of gas tungsten arc welding (GTA) equipment setup requirements, process variables, material requirements, and welding procedures that are in compliance with industry standards.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- identify GTA principles and safe practices.
- define GTA applications and limitations.
- weld mild steel, stainless steel, and aluminum alloys using GTA procedures in all positions.
- evaluate and demonstrate procedures for a given welding project or application.
- relate the requirements of welding ferrous and nonferrous materials.
- select the appropriate settings and applications methods of GTA process.

Pipe Welding Certificate

This certificate promotes competence in pipe welding with emphasis on power sources, electrode/filler metal selection on various joint designs, techniques, and positions for welding. Instruction includes safety, math, and proper procedures in making fillet and groove welds that are in compliance with structural and pipe welding codes.

Catalog Date: June 1, 2020

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- interpret electrode and filler metal classifications and specifications.
- select correct amperage setting for the job application.
- define principles of arc welding.
- perform Shielded Metal Arc Welding and Gas Tungsten Arc Welding operations in various positions using selected electrodes on different joint designs.
- use math in welding applications.

Career Information

Certificate completers may find employment in a number of industries, including PG&E pipeline construction, oil refining, power generation, structural building, bridge construction, and small commercial fabricating shops.

Welding Equipment Maintenance and Blueprint Interpretation (234 hours) Certificate

This certificate promotes competence in solving equipment, mathematical and manufacturing problems that apply to the welding trade. It emphasizes metal placement, measurement, and layout of tools used in construction, as well as the fundamentals of blueprint reading and welding equipment repair.

Catalog Date: June 1, 2020

Certificate Requirements

Student Learning Outcomes

Upon completion of this program, the student will be able to:

- evaluate algebraic expressions by substituting given numbers for letter values
- solve formulas by substituting numbers for letters, analyzing word statements and diagram values
- compute the area, radius, and diameter of a circle
- compute area, radius, and central angles of a sector
- measure angles in degrees, minutes, and seconds
- identify and demonstrate the proper use of common power tools and accessories used in the welding trade
- interpret fabrication blueprints using a systematic process
- interpret graphic welding symbols
- interpret electrical and electronically controlled circuits
- evaluate testing equipment used for welding maintenance repair
WELD 105 Introduction to Metal Sculpture

Units: 1.5
Hours: 18 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers metal sculpture techniques, design principles, and materials used for sculpture for functional and nonfunctional art forms, on ferrous and non-ferrous metals. Techniques on the major welding processes such as Shielded Metal Arc, Gas Metal Arc, Gas Tungsten Arc, and Oxy-Acetylene are an integral part of the course, as well as related safety issues.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply safety standards to each welding process and other related metal working equipment.
- apply traditional and non-traditional metal working techniques to design and execute 3-dimensional functional and nonfunctional art forms.
- utilize welding and cutting processes to construct art projects.
- inspect welding for projects and make corrective changes to create structurally sound connections.

WELD 107 Welding Equipment Maintenance

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the basics of welding equipment maintenance, troubleshooting, and repair. Electrical and electronically controlled circuits are discussed and tested. Overall theory of operation and safety are presented, as well as maintenance scheduling and the use of electronic test equipment and other measuring devices. Field trips may be required.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the electronic components of a welding power supply
- evaluate the operating characteristics of various types of welding equipment
- conduct research on the operation and purchase of welding equipment components that require replacement or repair
- apply critical thinking analysis towards the troubleshooting and repair of welding equipment
- properly use test equipment needed in the problem solving and repair of nonoperational equipment
- apply the required knowledge of the electrical components and their connection to welding power supplies to produce satisfactory welds
- determine the proper way of connecting welding equipment to the correct power source during the installation process
- apply the required safety procedures when maintaining or repairing any type of welding equipment

WELD 115 Code Welding

Units: 2
Hours: 18 hours LEC; 54 hours LAB
Prerequisite: WELD 300 with a "C" grade or better, or a minimum of one year of welding experience.
Catalog Date: June 1, 2020

This course provides individualized training for welder performance qualification. Code and test requirements are presented. Welders select the code, metal, process, and positions to be used. Preparation for competing in the SkillsUSA regional, state, and national competition is also covered. This course may be taken up to four times for credit with different competitions. A field trip and participation at the site of the SkillsUSA regional competition are required.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- perform arc welding that meet SkillsUSA standards.
- analyze welding projects and make corrective changes to meet SkillsUSA standards.
- understand the parameters of a specified welding procedure.
- apply safety rules and regulations for welding and metal cutting.
- explain the variables for each chosen process.
- explain the requirements for the SkillsUSA competitions.

WELD 117 Ultrasonic Testing Level One

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the theory, technique, application, and evaluation used in the material processing, welding, and inspection industries. Ultrasonic testing as applied to industry practices, such as building construction, aeronautics, shipbuilding, materials fabrication, and others, is covered. Successful completion of this course certifies that the requirements of the American Society of Nondestructive Testing (ASNT) TC-1A for UT level I are met.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform basic material testing.
- explain the basic physical principles of ultrasonic testing.
- describe basic ultrasonic machine functions.
- perform basic machine and testing calibrations.

WELD 118 Ultrasonic Testing Level Two

Units: 3
Hours: 45 hours LEC; 27 hours LAB
Prerequisite: WELD 117 with a "C" or better, or evidence of completion of UT Level I certification.
Catalog Date: June 1, 2020

This course covers advanced theory, technique application, and evaluation techniques used in the material processing, welding, and inspection industries. It covers advanced ultrasonic testing as applied to industry practices such as building construction, aeronautics, shipbuilding, and materials fabrication. Successful completion of this course meets the requirements of the American Society of Nondestructive Testing (ASNT) TC1-A for Ultrasonic Testing Level II.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- calibrate an ultrasonic testing machine to the proper standards.
- demonstrate proper techniques when examining materials and/or welds.
- evaluate ultrasonic test results to ensure they meet code requirements.
- perform inspections that meet industry standards.

WELD 140 Mathematics for Welding Technicians

Units: 3
Hours: 54 hours LEC
Prerequisite: None.
General Education: AA/AS Area II(b)
Catalog Date: June 1, 2020
This course covers the application of mathematics principles in technical and trade work. Areas covered are fundamentals of general mathematics, common fractions, decimal fractions, percent, signed numbers, measurements, customary measurement units, metric measurement units, steel rules and vernier calipers, fundamentals of algebra, basic algebraic operations, fundamentals of plane geometry, triangles, polygons, circles, areas, volumes, and fundamentals of trigonometry.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- interpret and apply common welding formulas
- demonstrate problem-solving skills for technical and trade work
- analyze problems that are encountered in metal fabrication
- solve equations needed in the welding field

### WELD 150 Employability Skills for Technical Careers

**Same As:** AT 107 and ET 250  
**Units:** 2  
**Hours:** 36 hours LEC  
**Prerequisite:** None.  
**Advisory:** ENGWR 102 or 103, and ENGRD 116 with a grade of "C" or better; OR ESLR 320, ESLL 320, and ESLW 320 with a grade of "C" or better.  
**General Education:** AA/AS Area III(b)  
**Catalog Date:** June 1, 2020

This course provides the opportunity to explore technical careers while developing valuable work and life skills. It is an introduction to a variety of technically-related occupations, emphasizing technical careers in the Sacramento area. Activities are designed to enhance personal development, employability skills, and self esteem through leadership, citizenship, and character development. This course is not open to students who have completed AT 107 or ET 250.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify personal interests.
- demonstrate effective communication skills.
- demonstrate personal qualities that are desirable in the workplace.
- create long-term and short-term goals.

### WELD 155 Industry Training

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course covers welding processes, knowledge, and skills specific to employers' needs. Workplace safety and etiquette are included. Metal fabrication skills for specific employment needs and welding certification testing are covered if requested by employers.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- select welding process and fabrication variables.
- prepare metal fabrications to basic prints.
- produce welds to code standards.
- demonstrate proper workplace etiquette.

### WELD 294 Topics in Welding
This course provides an opportunity to study current topics in welding technology that are not included in existing courses.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- research the specialized needs of a manufacturer
- formulate tasks related to the specific needs of the company
- access information effectively and efficiently for welding standards used in manufacturing
- evaluate welding procedure information to specific standards

WELD 295 Independent Studies in Welding

Units: 0.5 - 5
Hours: 9 hours LEC; 27 - 270 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

WELD 298 Work Experience in Welding

Units: 1 - 4
Hours: 60 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to the welding field with a cooperating site supervisor.
Advisory: Students are advised to consult with the Welding Department faculty to review specific certificate and degree work experience requirements.
General Education: AA/AS Area III(b)
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment or advancement within the welding field. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in the welding field related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- develop effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
This course is an introduction to welding processes, including shielded metal arc, gas metal arc, flux-cored gas shield and self shield, gas tungsten arc, oxyacetylene cutting and welding on joint designs, and positions used in industry. Safety in arc welding, oxyacetylene, and plasma cutting is also covered. Field trips may be required.

Upon completion of this course, the student will be able to:

- apply safety standards to each welding process.
- demonstrate proper welding techniques for each welding process.
- evaluate welding projects in accordance with D1.1 Structural Welding Code-Steel Welding Procedures and Specifications.
- analyze welding projects and make corrective changes to meet industry standards.
- perform skills in arc welding that meet industry standards.

This course provides a general overview of basic metallurgy of ferrous and non-ferrous metals. Topics include various steel making processes, different types of furnaces, identifying types of steels, and their mechanical, physical, chemical, and electrical properties. Crystal structures of metals, the iron equilibrium diagram, the periodic table of elements emphasizing those elements associated with steels, metallurgical failure of welds, steel deformation, and heat treatment of steels are also covered. In addition, material hardness using different hardness testing methods, calculation of different steel strengths and stresses, and impact tests using the Charpy and Izod methods are covered. Field trips may be required.

Upon completion of this course, the student will be able to:

- describe practical applications of metallurgy
- classify various steel making processes
- evaluate how steel is formed into various shapes and products
- evaluate the different types of iron and steel alloy
- describe the mechanical and physical properties of metal
- describe the basic metallurgical concept of iron, steel, and cast iron
- use the iron carbon equilibrium diagram to explain phase changes of iron and steel
- explain the micro structural analyses of steel
- explain heat treating and quenching
- explain annealing and normalizing
- explain isothermal transformation diagrams
- explain tempering
- explain metallurgical and chemical terminology
- explain how temperature affects distortion
• evaluate different types of material strengths
• compare steel hardness using different hardness testing methods
• explain surface hardening
• analyze Charpy Vee and Izod tests

WELD 316 Welding Inspection

Units: 2
Hours: 36 hours LEC
Prerequisite: WELD 300 with a grade of "C" or better; OR at least one year of welding experience.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers the welding requirements for any type of welded structure made from commonly used carbon and low-alloy steel construction. Topics include welding construction industry, rules, regulations, and the principles, requirements, and methods of inspection. It covers weld measurements and discontinuities for evaluation acceptance using a variety of tools. It also emphasizes the lines of communication between the plant managers, welders, welding engineers, design/project engineers, welding foreman/supervisors, shop or field superintendents, and reporting supervisors. This course offers preparation for the Certified Welding Inspector Examination given by the American Welding Society.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• explain the scope and limitations of the Structural Welding Code (D1.1).
• explain safe practices for welding inspectors.
• analyze the requirements for a pre-qualified welding procedure.
• describe the qualification requirements of welding procedures and welding personnel, such as welders, welding operators, and tack welders, necessary to perform code work.
• explain the requirements for the preparation, assembly, and workmanship of welded steel structures to personnel.
• examine the qualification and responsibilities of inspectors, acceptance criteria for production welds, and standard procedures for performing visual inspection.
• explain the metal joining and cutting processes used in manufacturing.
• evaluate weld and base metal discontinuities.
• explain the mechanical and chemical properties of metals.
• interpret the requirements for the design of welded connections.
• interpret weld-joint geometry and weld-symbol dimensioning.
• explain the welding metallurgy of commonly used materials.
• demonstrate effective communication skills in the work place.

WELD 320 Shielded Metal Arc Welding – Structural

Units: 3
Hours: 36 hours LEC; 54 hours LAB
Prerequisite: WELD 300 with a grade of "C" or better; OR at least one year of welding experience.
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.
Transferable: CSU
Catalog Date: June 1, 2020

This course covers employment training for welding technicians. It emphasizes developing manipulative proficiency in the use of Shielded Metal Arc Welding (SMAW) in the horizontal (2F-2G), vertical (3F-3G), and overhead (4F-4G) positions on steel. It also covers filler metal classifications, welding power supplies, and welding safety. Welding test plates in accordance with the requirements to AWS D1.1 Structural Welding Code and AWS D1.5 Bridge Code are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
demonstrate welding skills on joint designs and positions used in industry.

explain arc blow, what causes it, and how to control it.

explain the characteristics of the four filler metal groups for steel.

define arc length, and describe the effects of using an improper arc length.

explain and define the three units used to measure welding current.

define open circuit voltage and operating voltage.

analyze a welding machine duty cycle chart and explain its significance.

describe the effects of the welding essential variables by comparing the bead's shape for weld width, reinforcement height, and appearance.

evaluate a weld according to a given standard or code.

analyze welding procedures used in manufacturing for production welding.

describe the use of destructive and nondestructive testing for weld testing.

**WELD 322 Shielded Metal Arc Welding (Pipe)**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** WELD 320 with a grade of "C" or better; OR a minimum of 2 years of welding experience.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers the applications of shielded metal arc welding used to join low-pressure piping systems that carry water and residential natural gas. Topics include: welding required for high pressure critical piping systems such as steam pipe, fuel transportation pipe lines, boilers, offshore oil-rigs, and other critical heavy-duty piping systems.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the code used for structural, refinery, and fuel transport piping systems.

- describe the system for depicting welding on a pipe print.

- distinguish between pipe and tubing.

- distinguish the different weld passes on pipe and explain the purpose of each one.

- inspect and evaluate welds on pipe according code standards.

- describe the four pipe positions.

- identify the pipe positions to qualify welders for all positions of pipe welding.

**WELD 330 Gas Tungsten Arc Welding (Plate)**

**Units:** 3  
**Hours:** 36 hours LEC; 54 hours LAB  
**Prerequisite:** WELD 300 with a grade of "C" or better; OR at least one year of welding experience.  
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

This course covers Gas Tungsten Arc Welding (GTAW) of aluminum, stainless steel, carbon steel, and other metals used in industry. This course content is relevant to code welding in accordance to the American Society of Mechanical Engineers Section 1X (ASME), the Structural welding Code D1.1 (AWS), and the American Petroleum Institute 1104 (API). It also covers filler metal selection, both specifications and classifications, shielding gases, welding power supplies, and welding safety. Certification and procedure qualification to code specifications are also covered.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
identify the variables that must be considered when setting up the components of the GTAW system.

demonstrate safety precautions regarding electrical current, inert gases, the welding environment, and other areas of concern, such as hot work and ventilation.

explain equipment components and accessories.

analyze the factors of current type, amperage ranges, duty cycle, and adequate control during the welding operation to determine the selection of a power supply for welding.

identify and explain functions of shielding gases in the GTAW system.

design a welding procedure using GTAW for the root pass, fill passes, and cover passes.

interpret the factors that determine the selection of filler materials.

evaluate each weld by using the visual inspection method for defects according to the ASME, the AWS, and the API 1104 standards.

WELD 332 Gas Tungsten Arc Welding (Pipe)

WELD 333 Gas Metal Arc Welding, Steel

This course covers the application of low-pressure and high-pressure critical piping systems used in oil, gas, nuclear, and chemical industries. It covers Gas Tungsten Arc Welding (GTAW) of aluminum pipe, stainless steel pipe, and carbon steel pipe. It explores code welding in accordance to the American Society of Mechanical Engineers Section 1X (ASME), Structural Welding Code D1.1 (AWS), and American Petroleum Institute 1104 (API). Certification and procedure qualification to ASME Section 1X, AWS D1.1, API 1104 code specifications are also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe joint design and joint preparation
- analyze and interpret the most common root defects and the causes for each one
- evaluate the use of a hot pass
- explain reasons for purging pipe weld areas and describe the criteria for selecting gases used for purging
- describe the different types of purging dams
- explain root purging operation and oxygen level test
- perform tack welding procedures
- perform torch manipulation and welding techniques used for welding pipe
- examine and evaluate welded pipe according to AWS, ASME and API standards.
- explain how to make a single V-groove weld on pipe in any position
- identify areas to be inspected when performing GTAW pipe operations
- identify and describe types of weld integrity test performed on a welded pipe

This course is the study of welding using the Gas Metal Arc Welding (GMAW) process on carbon steels in accordance with the American Welding Society (AWS), Structural welding Code D1.1, and Sheet Steel Code D1.3. It covers semi-automatic wire-feed welding with micro wires on steel plates of varying thicknesses. It also covers joint design and all welding positions, welding power supplies, types of metal transfer (spray, globular, pulsed-arc, and short circuit), filler metal selection, both specifications and classifications, shielding gases used for each type of transfer, and welding safety.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe how to use Gas Metal Arc Welding (GMAW) safely
- analyze and interpret the defects that may be caused when welding with the GMAW process
- explain the various types of metal transfer
- analyze problems that may occur when welding with the constant voltage welding machine
- describe the five essential variables that can be used to control the molten weld pool
- list shielding gases used for short-circuiting, spray, and pulse-spray transfer
- interpret how the molten weld pool can be controlled by varying the shielding gas, power setting, and weave pattern
- explain voltage, amperage, and electrical current as related to GMA welding
- evaluate completed welds to code specifications

WELD 334 Gas Metal Arc Welding: Ferrous and Non-Ferrous Metals

| Units: | 2 |
| Hours: | 18 hours LEC; 54 hours LAB |
| Prerequisite: | WELD 333 with a grade of "C" or better |
| Advisory: | ENGWR 102 and ENGRD 116 with a grade of "C" or better; OR ESLR 320 and ESLW 320 with a grade of "C" or better. |
| Transferable: | CSU |

This course covers semiautomatic wire feed welding using micro wires on aluminum and stainless steel plate of varying thickness. Joint design, gas variations and all welding positions are covered. The emphasis of this course is on code welding aluminum and stainless steels. The content of this course is relevant to code welding in accordance to the American Welding Society (AWS), Structural Aluminum Welding Code D1.2 and Structural Welding Stainless Steel Code D1.6. It also covers welding power supplies, types of metal transfer (spray, globular, pulsed-arc, and short circuit). This course also covers filler metal selection, both specifications and classifications, and shielding gases used for each type of transfer. Welding safety is also covered.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe safe procedures when using Gas Metal Arc Welding (GMAW) equipment
- explain the procedure in setting up constant potential or constant voltage power supplies when welding aluminum and stainless steel
- describe the shielding gases and electrode classifications when welding aluminum and stainless steel
- demonstrate welding techniques made on groove and fillet welds using various modes of metal transfer
- explain the significance of the filler metal prefixes
- interpret the standard filler metal numbering system for aluminum and stainless steel
- analyze the cause of corrosion in stainless steel welds
- explain the types of weld heat-affected zones
- describe the effects of preheating and post heating on stainless steel and aluminum
- explain the precautions that must be taken when welding stainless steel and aluminum alloys
- evaluate welds beads made with various shielding gas mixtures

WELD 335 Flux Core Arc Welding

| Units: | 3 |
| Hours: | 36 hours LEC; 54 hours LAB |
| Prerequisite: | WELD 300 with a grade of "C" or better, or a minimum of one year of welding experience. |
| Transferable: | CSU |

Catalog Date: June 1, 2020
This course provides training to develop semi-automatic welding skills on carbon steels. Topics include small and large diameter flux cored electrodes, with and without external shielding gas, in all positions on fillet and groove welds. It also provides a thorough technical understanding of the Flux Core Arc Welding process and arc welding safety.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the semi-automatic Flux Core Arc Welding (FCAW) process.
- analyze and interpret the most common weld defects and the causes for each one.
- recognize basic welding symbols and the different weld types and proper placement.
- determine when and why a backing bar and or back gouging is used in structural steel welding.
- examine and evaluate welds for certification and fabrication requirements in accordance to the American Welding Society (AWS) D1.1 Structural Steel Code.

WELD 342 Symbol Reading, Layout and Fabrication

This course covers blueprint and welding symbol interpretation. It includes metal layout, measurement, marking, and layout tools used in construction, and techniques of fabrication and assembly methods. It also covers fundamentals of blueprint reading, including basic lines and views, dimensions, notes and specifications, structural shapes, sections, detail, and assembly.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- interpret working sketches and prints common to metal fabrication
- analyze concepts and sketching techniques on structural shapes commonly used by welders
- examine and interpret weld symbols that are represented on drawings
- locate notes and specifications concerning important details on drawings
- interpret views on drawings with conventional breaks
- draw oblique and isometric sketches from orthographic views
- convert measurements from metric to standard

WELD 495 Independent Studies in Welding

| Units:           | 1 - 3 |
| Prerequisite:    | None. |
| Transferable:    | CSU |
| Catalog Date:    | June 1, 2020 |

| Units:           | 1 - 3 |
| Prerequisite:    | None. |
| Transferable:    | CSU |
| Catalog Date:    | June 1, 2020 |
Cooperative Work Experience (WEXP) is an experiential academic program where students apply what they have learned in the classroom to a work environment.

The program offers students the opportunity to develop technical skills, explore possible career choices, build confidence, network with people in the field, and transition into the world of work.

Division Dean  Dr. Frank Kobayashi
Department Chairs  Vivian Dillon

| Units: | 1 - 3 |
| Hours: | 60 - 225 hours LAB |
| Prerequisite: | None. |
| Enrollment Limitation: | Students must be in a paid or unpaid internship, volunteer position, or job with a cooperating site supervisor. |
| Advisory: | Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340. |
| General Education: | AA/AS Area III(b) |
| Catalog Date: | June 1, 2020 |

This course provides students with opportunities to acquire desirable work habits, attitudes and career awareness. It is designed for students interested in exploring various career options. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student's progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate competencies for effective and competitive workforce performance as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
WEXP 298 Work Experience in (Subject)

Units: 1 - 4  
Hours: 60 - 300 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to career goals with a cooperating site supervisor.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
General Education: AA/AS Area III(b)  
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in associate degree level or certificate occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate mastery of specific job skills in a field of study related to an associate degree or certificate occupational program level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.

WEXP 498 Work Experience in (Subject)

Units: 1 - 4  
Hours: 60 - 300 hours LAB  
Prerequisite: None.  
Enrollment Limitation: Students must be in a paid or unpaid internship, volunteer position, or job related to career goals with a cooperating site supervisor.  
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ESLW 340.  
Transferable: CSU  
General Education: AA/AS Area III(b)  
Catalog Date: June 1, 2020

This course provides students with opportunities to develop marketable skills in preparation for employment in their major field of study or advancement within their career. It is designed for students interested in work experience and/or internships in transfer-level degree occupational programs. Course content includes understanding the application of education to the workforce, completion of Title 5 required forms which document the student’s progress and hours spent at the work site, and developing workplace skills and competencies.

During the semester, the student is required to complete 75 hours of related paid work experience, or 60 hours of related unpaid work experience for one unit. An additional 75 or 60 hours of related work experience is required for each additional unit. All students are required to attend the first class meeting, a mid-semester meeting, and a final meeting. Additionally, students who have not already successfully completed a Work Experience course will be required to attend weekly orientations while returning participants may meet individually with the instructor as needed. Students may take up to 16 units total across all Work Experience course offerings. This course may be taken up to four times when there are new or expanded learning objectives. Only one Work Experience course may be taken per semester.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate application of industry knowledge and theoretical concepts in a field of study related to a transfer degree level career as written in the minimum three (3) learning objectives created by the student and his/her employer or work site supervisor at the start of the course.
- make effective decisions, use workforce information, and manage his/her personal career plans.
- behave professionally, ethically, and legally at work, consistent with applicable laws, regulations, and organizational norms.
- behave responsibly at work, exhibiting initiative and self-management in situations where it is needed.
- apply effective leadership styles at work, with consideration to group dynamics, team and individual decision making, and workforce diversity.
- communicate in oral, written, and other formats, as needed, in a variety of contexts at work.
- locate, organize, evaluate, and reference information at work.
- demonstrate originality and inventiveness at work by combining ideas or information in new ways, making connections between seemingly unrelated ideas, and reshaping goals in ways that reveal new possibilities using critical and creative thinking skills such as logical reasoning, analytical thinking, and problem-solving.
The Sacramento Regional Public Safety Training Center (SRPSTC), operated by American River College, is dedicated to providing high quality training and educational programs for public safety personnel. The center offers entry-level and advanced in-service instruction in areas that meet the needs of individuals as well as public and private agencies.

All courses meet the academic standards of the Los Rios Community College District. These courses may be certified by the California Commission on Peace Officer Standards and Training (POST), California Standards and Training for Corrections (STC), and the California State Fire Marshal's Office. Most courses presented at the SRPSTC are offered in an intensive, concentrated, short-term format.

Graduates from the basic core courses may be eligible for employment in county and city law enforcement agencies specializing in police, corrections and/or probation.

Certificate of Achievement

POST Basic Law Enforcement Academy- Modular Format Certificate

This certificate meets or exceeds the California Peace Officer Standards and Training (POST) minimum standards for the Level I reserve or full-time regular peace officer training. Upon completion of the program the student will be eligible to seek employment as a Level I reserve or full time peace officer in California.

Catalog Date: June 1, 2020

Enrollment Eligibility

To be eligible for enrollment in the program, the student must meet the following criteria:

- be a minimum of 18 years of age.
- be a U.S. high school graduate, pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university.
- possess a valid California Driver's License.
- undergo a fingerprint and criminal history check.
- complete a medical suitability examination.

Student Learning Outcomes
Upon completion of this program, the student will be able to:

- demonstrate the ability to safely drive and control a law enforcement vehicle while operating under emergency and pursuit conditions.
- distinguish and apply reasonable force options in a given circumstance.
- demonstrate the ability to deliver strikes with an impact weapon or facsimile, as directed.
- demonstrate proficiency in victimology and crisis intervention.
- demonstrate proficiency in contacting people with simulated disabilities.
- demonstrate proficiency in responding to and investigating a simulated suspicious person/circumstance.
- perform the tasks of an officer conducting a preliminary homicide investigation.
- demonstrate proficiency in responding to and investigating a simulated domestic violence incident.
- demonstrate proficiency in conducting a preliminary investigation of a simulated felonious assault.
- demonstrate proficiency in responding to and investigating a simulated pedestrian stop.
- demonstrate proficiency in conducting a simulated vehicle pullover during low light/night time conditions.
- demonstrate proficiency in conducting a simulated high risk vehicle stop.
- demonstrate proficiency in responding to and investigating a simulated incident involving one or more suspects concealed in a building.
- demonstrate proficiency in reacting to a simulated ambush.

Career Information

With the POST Basic Law Enforcement Academy- Modular Format certificate the student will be eligible for employment as a Level I reserve peace officer or a full-time regular peace officer in California.

Firefighting Training Center (FIRE)

FIRE 1084 Wildfire Powersaws Refresher (S-212)

Units: 0.5
Hours: 8 hours LEC; 8 hours LAB
Prerequisite: FIRE 1080
Catalog Date: June 1, 2020

This course is designed to refresh and re-certify chain saw operators in the job performance requirements of the wildfire power saw operator position in the Incident Command System and on the fire ground. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate chain saw maintenance procedures and use of tool repair kit.
- describe proper tree felling and bucking procedures.
- demonstrate proper tree bucking and felling procedures.
- assess a standing tree with limbs near the ground in a closed stand of timber and properly size-up, clear work area, and limb the tree.
- assess a brush field and properly size-up, cut, and remove a strip of brush to near ground level, 6 feet wide (1.8 m) and 20 feet long (6.1m).
- demonstrate the use of all personal protective equipment.

FIRE 1100 Fire Control 3A (Structural Fire Fighting in Acquired Structures)

Units: 0.25
Hours: 1 hours LEC; 15 hours LAB
This course is designed to develop fundamental skills in combating structure fires by providing the students with a thorough understanding of structural fire attack, utilizing an acquired structure. Topics include fire behavior, ventilation, interior attack, and exterior attack. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- employ hands-on fire fighting experience in fire behavior.
- employ hands-on fire fighting experience in ventilation techniques.
- employ hands-on fire fighting experience in interior fire attack methods.
- employ hands-on fire fighting experience in exterior fire attack methods.
FIRE 1130 Company Officer 2A (Human Resource Management for Company Officers)

This course provides information on the use of human resources to accomplish assignments, evaluate member performance, supervise personnel, and integrate health and safety plans, policies, and procedures into daily activities as well as the emergency scene. Topics include human resource management, and health and safety. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply and follow human resource policies and procedures, given an administrative situation requiring action.
- create a professional development plan for a member of the organization, providing the individual with the necessary knowledge, skills, and abilities to maintain or advance professional development, given the requirements for promotion and opportunities for a member’s professional development.

FIRE 1131 Company Officer 2B (General Administration Functions for Company Officers)

This course provides information on general administrative functions and the implementation of department policies and procedures and addresses conveying the fire department's role, image, and mission to the public. Topics include administration, and community and government relations. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the impact of state and federal laws and regulations as they apply to the company officer to reduce the risk and civil and criminal liability, given a list of state and federal laws and regulations pertaining to fire service supervisors.
- explain the benefits to the organization and the purpose for establishing cooperative external agency relationships, given a specific problem or issue in the community and a list of local, statewide, and national resources.

FIRE 1132 Company Officer 2C (Fire Inspections and Investigation for Company Officers)

This course provides information on conducting inspections, identifying hazards and addressing violations, performing a fire investigation to determine preliminary cause, and securing the incident scene and preserving evidence. Topics include orientation, fire and life safety inspections, and fire investigation. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the procedures for conducting fire inspections, identifying all hazards, including hazardous materials; completing approved forms; and initiating approved follow up action, given the policies of the agency.
- employ measures to secure and incident scene with recognizable perimeters, which keep unauthorized persons from restricted areas, and which protect all evidence or potential evidence from damage or destruction.
FIRE 1133 Company Officer 2D (All-Risk Operations for Company Officers)

Units: 1.25  
Hours: 20 hours LEC; 20 hours LAB  
Prerequisite: FIRE 1507 and 1602 with grades of "C" or better  
Enrollment Limitation: Completion of Incident Command System (I-200), which is an online course offered by Federal Emergency Management Agency (FEMA).  
Catalog Date: June 1, 2020

This course provides information on conducting incident size-up, developing and implementing an initial plan of action involving single and multiunit operations for various types of emergency incidents to mitigate the situation following agency safety procedures, conducting preincident planning, and develop and conduct a post-incident analysis. Topics include initial Incident Action Plan (IAP), postincident analysis, operational planning, and service demands. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- develop an initial plan of action, identifying the resources required to control the emergency.
- implement a plan of action at a simulated emergency operation, deploying resources to mitigate the situation.
- develop and conduct a post incident analysis, identifying and communicating all required critical elements and completing and processing the approved forms in accordance with policies and procedures.
- identify elements of operational plans, obtaining required resources and their assignments, mitigating the incident.
- write a report identifying the major causes for service demands for various planning areas within the organization's service area.

FIRE 1134 Company Officer 2E (Wildland Incident Operations for Company Officers)

Units: 1.75  
Hours: 28 hours LEC; 12 hours LAB  
Prerequisite: FFS 1541, FIRE 1133, and FIRE 1507 with grades of "C" or better  
Catalog Date: June 1, 2020

This course provides information on evaluating and reporting incident conditions, analyzing incident needs, developing and implementing a plan of action to deploy incident resources completing all operations to suppress a wildland fire, establishing an incident command post, creating and incident action plan, and completing incident records and reports. Topics include report on conditions, ongoing incident conditions, establishing an incident command post, deploying resources, incident needs, suppression operations, personnel needs and issues, and incident records and reports. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- employ information regarding travel route, assignment, time needed, and point of contact from dispatch.
- develop an initial report on conditions that communicates required incident information.
- demonstrate the ability to size up an incident to formulate an incident action plan that sets incident objectives and applies strategies and tactics according to agency policy, using an Incident Command System (ICS) 201 Incident Briefing form.
- evaluate incident conditions, identify progress, changes in fuels, topography, weather, fire behavior, personnel safety, and other significant events, and communicate these conditions to the supervisor and to assigned and adjoining personnel.
- determine a incident command post.
- describe proper emergency medical procedures.
- deploy resources to suppress a wildland fire, taking appropriate suppression actions and ensuring personnel safety.
- describe ways to update supervisors, crew members, and adjoining personnel.
- analyze incident needs.
- describe how to provide for assigned resources' needs.
- describe information needed for the transfer of command and complete this process.
- describe wildland fire suppression operations.
- describe the needs of personnel.
- demonstrate how to maintain wildland incident records.
FIRE 1140 Chief Fire Officer 3A: Human Resources Management

Units: 1
Hours: 16.25 hours LEC; 9.75 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet the educational requirements for Company Officer, or seeking Fire Marshal Certification.
Catalog Date: June 1, 2020

This course provides students with a basic knowledge of the human resources requirements related to the roles and responsibilities of a chief fire officer. Topics include developing plans for providing employee accommodation, developing hiring procedures, establishing personnel assignments, describing methods of facilitating and encouraging professional development, developing an ongoing education training program, developing promotion procedures, developing proposals for improving employee benefits, and developing a measurable accident and injury prevention program. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the certification task book and testing process for chief fire officer.
- identify the prerequisite qualifications, and the human resource management, community and government relations, administrative, inspection and investigation, emergency service delivery, health and safety, and emergency management duties of a chief fire officer.
- identify the prerequisite knowledge and mobilization and suppression duties of a wildland fire officer II.
- develop a plan for providing an employee accommodation, including adequate information to justify the requested change(s).
- develop procedures for hiring members, ensuring a valid and reliable process.
- establish personnel assignments, maximizing efficiency in accordance with policies and procedures.
- define the requirements of the California Firefighters Procedural Bill of Rights Act as they apply to the roles and responsibilities of the chief fire officer.
- describe methods of facilitating and encouraging members to participate in professional development to achieve their personal and professional goals.
- develop an ongoing education training program, giving members of the organization appropriate training to meet the mission of the organization.
- develop procedures and programs for promoting members, ensuring a valid, reliable, job-related, and nondiscriminatory process.
- develop a proposal for improving an employee benefit, including adequate information to justify the requested benefit improvement.
- develop a measurable accident and injury prevention program, evaluating results to determine program effectiveness.

FIRE 1141 Chief Fire Officer 3B: Budget and Fiscal Responsibilities

Units: 0.5
Hours: 9.5 hours LEC; 8.5 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet the educational requirements for Company Officer.
Catalog Date: June 1, 2020

This course provides students with a basic knowledge of the budgeting requirements related to the roles and responsibilities of a Chief Fire Officer. Topics include developing a budget management system, developing a division or departmental budget, and describing the process for ensuring competitive bidding. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the certification task book and testing process for chief fire officer.
- develop a budget management system to keep the division or department within the budgetary authority.
- develop a divisional or departmental budget, determining and justifying capital, operating, and personnel costs.
- describe the agency's process for ensuring competitive bidding, including developing requests for proposal (RFPs) and soliciting and awarding bids.
FIRE 1142 Chief Fire Officer 3C: General Administration Functions for Chief Fire Officers

Units: 0.75
Hours: 14 hours LEC; 10 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet the educational requirements for Company Officer.
Catalog Date: June 1, 2020

This course provides a basic knowledge of the administration requirements related to the roles and responsibilities of a Chief Fire Officer. Topics include directing a department record management system, analyzing and interpreting records and data, developing a model plan for continuous organizational improvement, developing a plan to facilitate approval, preparing community awareness programs, and evaluating the inspection program of the Agency Having Jurisdiction (AHJ). Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different levels in the Executive Chief Officer certification track, the courses and requirements for Chief Fire Officer certification, and be able to describe the certification task book and testing process.
- direct the development, maintenance, and evaluation of a department record management system, ensuring the achievement of completeness and accuracy.
- analyze and interpret records and data to determine validity and recommend improvements.
- develop a model plan for continuous organizational improvement, maximizing resource utilization.
- develop a plan to facilitate approval for a new program, piece of legislation, form of public education, or fire safety code.
- develop a community risk reduction program to meet desired program outcomes.
- evaluate the inspection program of the AHJ, assessing results to determine effectiveness.

FIRE 1143 Chief Fire Officer 3D: Emergency Service Delivery Responsibilities

Units: 0.75
Hours: 12.5 hours LEC; 11.5 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet the educational requirements for Company Officer.
Catalog Date: June 1, 2020

This course provides basic knowledge of the emergency service requirements related to the roles and responsibilities of a Chief Fire Officer. Topics include developing a plan for the integration of fire services resources, developing an agency resource contingency plan, evaluating incident facilities, supervising multiple resources, developing and utilizing an incident action plan, obtaining incident information to facilitate transfer of command, developing and conducting a post-incident analysis, and maintaining incident records. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the certification task book and testing process for chief fire officer.
- develop a plan for integrating fire services resources in the community’s emergency management plan, ensuring that the role of the fire service complies with local, state/provincial, and national requirements.
- develop a plan for the agency to ensure the mission of the organization is performed in times of extraordinary need.
- evaluate the need for and location of incident facilities, so that the location is correctly sited, clearly identified, and communicated to personnel.
- employ multiple resources and deploy them in accordance with the incident action plan and agency policies and procedures.
- prepare, review, validate, modify, and document an incident action plan for each operational period, determining, assigning, and placing the required resources to mitigate the incident, and applying strategies and tactics according to agency policies and procedures and incident objectives.
- obtain incident information from the outgoing incident commander to ensure the new incident commander has the information necessary to operate and complete the transfer of command.
- develop and conduct a post-incident analysis in order to identify and communicate all required critical elements, and complete and process appropriate forms in accordance with policies and procedures.
- maintain incident records to document required information.
FIRE 1150 Executive Chief Fire Officer: Human Resource Management

Units: 1
Hours: 19 hours LEC; 9 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet educational requirements for Chief Fire Officer
Catalog Date: June 1, 2020

This course provides the skills and knowledge needed to perform his/her duties safely, effectively, and competently. Topics include selection and placement of human resources, development of a positive and participative member/management program, establishment and evaluation of a list of education and in-service training goals, appraisal of a member assistance program, and the evaluation of an incentive program to determine if the desired results are achieved. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the different levels of Company Officer certification, the courses and requirements for Executive Chief Fire Officer certification, and be able to describe the capstone task book and testing process.
- identify administrate job performance requirements and evaluate and improve the department, according to the specified job performance requirements.
- determine effective recruitment, selection, and placement of human resources according to the law and consistent with current best practices.
- initiate the development of a positive and participative member/management program.
- establish and evaluate a list of education and inservice training goals so that all members can achieve and maintain required proficiencies.
- appraise a member assistance program to determine if the program produces the desired results and benefits.
- evaluate an incentive program to determine if the desired results are achieved.

FIRE 1151 Executive Chief Fire Officer: Community and Government Relations

Units: 0.25
Hours: 6.5 hours LEC; 4 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet educational requirements for Chief Fire Officer
Catalog Date: June 1, 2020

This course introduces the skills and knowledge needed to perform his/her duties safely, effectively, and competently. Topics include assuming a leadership role in community events. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the different levels of Company Officer certification, the courses and requirements for Executive Chief Fire Officer certification, and be able to describe the capstone task book and testing process.
- identify how to project a positive image of the fire department to the community, per the specified job performance requirements.
- identify a leadership role in community events in order to understand and respond to community needs and enhance the image of the organization.

FIRE 1152 Executive Chief Fire Officer: Administration

Units: 1.25
Hours: 21.5 hours LEC; 9 hours LAB
Prerequisite: None.
Enrollment Limitation: Meet educational requirements for Chief Fire Officer
Catalog Date: June 1, 2020

This course introduces the skills and knowledge needed to perform one's duties safely, effectively, and competently. Topics include developing a comprehensive, long-range plan, evaluating and projecting training requirements, assessing facility and building needs, completing a written comprehensive risk, hazard, and value analysis, and developing a plan for a capital improvement project or program. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify the different levels of Company Officer certification, the courses and requirements for Executive Chief Fire Officer certification, and be able to describe the capstone task book and testing process.
- develop a comprehensive, long-range plan to meet the projected needs of the community.
- compile a written comprehensive risk, hazard, and value analysis of the community so that an accurate evaluation is made for service delivery decision making.
- develop a plan for a capital improvement project or program to educate citizens about organization needs.

FIRE 1153 Executive Chief Fire Officer: Emergency Services Delivery

This course provides the skills and knowledge needed to perform his/her duties safely, effectively, and competently. Topics include developing a comprehensive disaster plan and a comprehensive plan for the organization to operate at a civil disturbance. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the different levels of Company Officer certification, the courses and requirements for Executive Chief Fire Officer certification, and be able to describe the capstone task book and testing process.
- develop a comprehensive disaster plan that integrates other organizations' resources in order to rapidly and effectively mitigate the impacts on a community.
- develop a comprehensive plan for the organization to operate at a civil disturbance, integrate with other organizations' actions, and provide for the safety and protection of members.

FIRE 1154 Executive Chief Fire Officer: Health and Safety

This course introduces the skills and knowledge needed to perform his/her duties safely, effectively, and competently. Topic include maintaining, developing, and providing leadership for a risk management program. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the different levels of Company Officer certification, the courses and requirements for Executive Chief Fire Officer certification, and be able to describe the capstone task book and testing process.
- identify, maintain, develop, and provide leadership for a risk management program to reduce injuries and property damage accidents.

FIRE 1160 Incident Management of Major Fires

</table>

This course covers the knowledge, skills, and abilities for those who are responsible for command and control of dynamic and complex fireground emergencies. Topics include assuming command, situational awareness and risk assessment process, Incident Action Plan (IAP), incident organization, accountability and command worksheets, continuing, transferring, and terminating command, and simulations. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- identify the components of the process of assuming command of an incident.
- employ improved situational awareness, and identify the risk assessment process.
- identify an effective communications plan.
- develop and implement an Incident Action Plan (IAP).
- develop an effective incident organization to assemble, coordinate, and control tactical resources, allowing for expansion based on complexity of the incident.
- initiate and maintain accountability throughout the event at all levels and initiate a command worksheet.
- demonstrate how to continue, transfer, and terminate command.

FIRE 1161 Incident Management of High-Rise Fires

Units: 1.5
Hours: 20.5 hours LEC; 19.5 hours LAB
Prerequisite: FIRE 1133 and 1160 with grades of "C" or better
Catalog Date: June 1, 2020

This course provides knowledge, skills, and abilities required for those managing incidents occurring in large, multistory buildings. These incidents may present significant management, logistical, and safety challenges to emergency personnel. The size and complexity of the interior spaces; limited, sometimes arduous access; extended travel and response times; and the concentrated occupant load with egress challenges, all contribute to the problems faced by emergency responders. Additionally, most high-rise structures are equipped with various environmental, fire protection, and life-safety systems that require support and control. Successful emergency operations in these types of buildings also require preplanning and technical competence on the part of the emergency responders. Topics include identifying critical factors and hazards, identifying construction and fire-protection features, response roles and responsibilities, development and multi-division/group response roles and responsibilities, development and multi-branch response roles and responsibilities, and assessing and using fire and life-safety systems. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the construction and fire-protection features based upon the age and occupancy type of a high-rise building.
- describe the elements of the incident command system’s modular development and the roles and responsibilities for initial response.
- describe the elements of the incident command system’s modular development and the roles and responsibilities for multi-division/group (reinforced) response.
- describe the elements of the incident command system’s modular development and the roles and responsibilities for multi-branch (extended) response.
- describe the fire and life-safety systems based upon the age and occupancy type of the building.

FIRE 1162 Incident Management of the Fire Fighter Emergency

Units: 0.75
Hours: 9 hours LEC; 15 hours LAB
Prerequisite: FIRE 1133 with a grade of "C" or better
Enrollment Limitation: Completion of Incident Command System (I-200), which is an online course offered by Federal Emergency Management Agency (FEMA).
Catalog Date: June 1, 2020

This course provides incident management terminology and methodology that is employed during a fire fighter emergency. Topics include functions of command, critical incident factors, warning signs of a Rapid Intervention Crew (RIC) deployment, duties of the RIC, command procedures of the emergency, and post deployment considerations. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the eight functions/standards of command.
- identify critical incident factors.
- identify the warning signs of a pending RIC deployment.
- identify the duties of the RIC.
• employ the incident command procedures to address the fire fighter emergency.
• employ the RIC division/group/division's procedures to address the fire fighter emergency.
• describe the post-deployment considerations.

### FIRE 1221 Fire Prevention 1B

**Units:** 2  
**Hours:** 40 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course focuses on specific codes, ordinances and statutes that pertain to fire prevention practices in California. Topics include building construction, occupancy requirements, evacuation procedures, fire hazards, safety devices, inspection reports, fire detection and alarm systems. Credit/No Credit Only.

#### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Identify the relationships of fire protection and life safety to building construction and furnishings
- Analyze and compute occupancy loads and egress requirements
- Assess and compare the operation readiness of two different types of sprinkler systems and list the common problems
- Assess and compare the operational readiness of a wet and dry standpipe system and list the common problems
- Validate the readiness of detection and alarm systems
- Classify fire hazards and safety devices

### FIRE 1222 Fire Prevention 1C

**Units:** 2  
**Hours:** 40 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course focuses on the special hazards associated with flammable and combustible liquids and gases. Topics of discussion include bulk flammable liquid and gas storage, extinguishing flammable liquid and gas fires, and transportation of flammable liquids and gases. Credit/No Credit Only.

#### Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Classify the physical properties of flammable liquids and gases, combustible liquids and compressed gases
- Generate guidelines on the storage and handling of flammable liquids and gases
- Assess the installation of storage tanks and containers for flammable liquids and gases
- Implement the techniques for fire extinguishing of flammable liquids and gases
- Evaluate information relative to the Department of Transportation (DOT), labeling and placarding system
- Identify those regulations governing the transportation of flammable liquids and gases
- Define the procedures for controlling compressed and liquefied gas leaks
- Question procedures relative to the transfer of compressed and liquefied gases

### FIRE 1500 Firefighter Academy

**Units:** 14 - 15  
**Hours:** 137 - 140 hours LEC; 363 - 419 hours LAB
This course provides the knowledge necessary to assume the role of firefighter with the ability to work effectively and safely within a fire agency. Topics include indoctrination into the fire service, firefighter health and safety, self-contained breathing apparatus (SCBA), emergency scene operations, ropes and knots, hand and power tools, building construction and related hazards, fire behavior, fire hose use and maintenance, ground ladder operations, forcible entry, structural search and rescue operations, structural firefighting operations, ventilation techniques, overhaul, firefighter survival, wildland firefighting techniques, tools and equipment, hazardous materials, and weapons of mass destruction.

This course was formerly listed as FIRE 1090 prior to September 2010. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the role of a firefighter in a fire department, identify the mission of the fire service, follow standard operating procedures and rules and regulations of the fire department, and access the department’s member assistance program
- identify common types of accidents and injuries, maintain a healthy and physically fit lifestyle, and follow life safety initiatives in the line of duty
- demonstrate use of a self-contained breathing apparatus (SCBA) during emergency operations, correctly don SCBA within 60 seconds, demonstrate emergency techniques and procedures if the self-contained breathing apparatus fails, recognize low-air warnings, and exit hazardous areas prior to air depletion
- set up operations in work areas at emergency scenes, follow procedures, wear protective equipment, establish safe protected work areas as directed and perform assigned tasks in protected work areas
- demonstrate the following knots; Overhand, Half Hitch, Clove Hitch, Beckett Bend, Bowline, Figure 8, Water, and Handcuff
- specify the maintenance, operations and use of a variety of hand and power tools. Describe the differences between two-and four-stroke engines and how they are identified
- describe common building materials, various construction types, and identify dangerous building conditions created by fire
- identify dangerous fire behavior conditions and describe mitigation needed to ensure firefighter safety
- arrange fire hose on a fire engine according to its use and type, place nozzles on attack lines, and inspect, maintain, and place hose in or out of service after evaluating its condition
- deploy ground ladders, assess hazards, ensure ladders are stable and their angles are correct for climbing, extend extension ladders and lock in place, position the tip of the ladder against reliable structural components
- demonstrate safe use of forcible entry tools and techniques to remove barriers and produce an opening that is safe and provides appropriate access into a structure
- employ search and rescue techniques in a structure while maintaining safety and team integrity, search all assigned areas, locate and remove all victims
- operate a hose line in an interior structure fire, maintain crew integrity, deploy the attack line for advancement, gain access into the fire area, effectively apply water, correctly approach the fire using standard attack techniques, locate and control hidden fires, and bring the fire under control
- perform vertical and horizontal ventilation on a structure, free ventilation openings of obstructions, use tools as designed, place ladders and ventilation devices correctly, and clear structure of smoke, as a part of a team
- analyze tools and equipment needed to conserve property, demonstrate standardized salvage techniques
- apply personal protective equipment and following standard operating procedures, activate an emergency call for assistance and exit a hazardous area without endangering others
- demonstrate proper use of wildland personal protective clothing and shelter according to the manufacturers’ guidelines within 60 seconds
- describe basic wildland fire behavior and recognize hazards and unsafe situations, promptly communicate hazard(s) to a supervisor, and take appropriate action
- recognize the presence of hazardous materials and the indicators of a hazardous materials incident, correctly identify the materials involved, take personal protective actions, initiate the appropriate notification process, and secure the area
- perform basic control, containment, and confinement techniques in a simulated hazardous materials incident; protect citizens, emergency responders and the environment from contamination

FIRE 1503 Firefighter Intern Recruit Academy

Units: 12 - 12.5
Hours: 130 hours LEC; 270 - 290 hours LAB
Prerequisite: None.
Enrollment Limitation: Completion of a firefighter intern certificate.
Catalog Date: June 1, 2020

This course is a continuation of the firefighter intern program. It provides the techniques and skills to work effectively and safely within the fire environment as well as the fire...
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Describe the history, development, structure, organization, and responsibility of the fire service.
- Apply the components and principles of the Incident Command System.
- Explain the core values of the fire service and the duty to provide service to the public.
- Perform preventative maintenance to fire station, apparatus, and equipment.
- Use fire department apparatus and tools within the scope of assignment.
- Explain and apply the basic concept of fire control, fire and arson investigation, and fire communication systems.
- Demonstrate basic skills in public education procedures and instruction.
- Apply workplace rules and laws regarding harassment/discrimination policies and mandated reporting procedures.
- Identify and demonstrate first responder responsibilities for handling medical emergencies.
- Identify first responder responsibilities for mitigation of hazardous material incidents.
- Demonstrate safe driving procedures for emergency response vehicles.
- Demonstrate fire suppression tactics and strategies.
- Explain wildland fire behavior, suppression techniques, and safety measures.
- Demonstrate firefighter rescue and survival skills.

FIRE 1504 CDF Firefighter 1 Basic

Units: 3
Hours: 48 hours LEC, 18 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides basic knowledge, skills, and demonstrated abilities as required to perform as a California Department of Forestry (CDF) Firefighter 1 Basic. Topics include fire physics and vegetation terminology, personal protective gear, self-contained breathing apparatus, ground ladders, firefighting equipment, fire shelters, wildland hose-lays, structural firefighting, and safety procedures. This course was formerly listed as FIRE 1096 prior to October 2010. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- exhibit the proper fit, care, and use of self-contained breathing apparatus.
- describe the proper care and use of ground ladders.
- illustrate the ability to properly inspect and maintain firefighting equipment per CDF’s 67 hour firefighter manual.
- demonstrate proper fire shelter deployment techniques.
- setup wildland hose-lays in a field environment.
- assess building construction for proper strategy and tactics related to structural operations.
- demonstrate the knowledge, skills and abilities to safely perform the many firefighting tasks required of a CDF Firefighter 1.
- create realistic wildland fire scenarios using a sand table.
- compare strategies and tactics from past wildland fire incidents.
- predict outcomes from decisions made on the fireline.
FIRE 1506 Transitional Fire Academy

Units: 11.5 - 13.5
Hours: 140 hours LEC; 205 - 300 hours LAB
Prerequisite: None.
Enrollment Limitation: Acceptance into the transitional firefighter academy AND successful completion of a California State Fire Training accredited fire academy or lateral transfer from a full-time career fire department
Catalog Date: June 1, 2020

This course provides the knowledge necessary to assume the role of firefighter with the ability to work effectively and safely with the fire environment as well as within a company in the fire department in all functions of that urban fire agency. Topics include indoctrination into a particular fire department, general maintenance, apparatus and equipment operations, fire control, wildland firefighting, emergency vehicle operations, salvage, fire prevention and public education, fire and arson investigation, rapid intervention crew tactics, vehicle extrication, physical fitness/wellness, emergency care, and forcible entry. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and describe the history, development, structure, organization and responsibility of the fire service as it relates to his/her particular fire department
- define, identify and apply the components and principles of the incident command system
- explain the core values of the fire service and its duty to providing service delivery to the public
- perform preventative maintenance on the fire station, apparatus, and equipment
- demonstrate the use of fire service apparatus and tools within the scope of his/her assignment
- explain and apply the basic concepts of fire control, fire and arson investigation and the fire communication system
- identify and demonstrate the basic skills in public education procedures and instruction
- demonstrate an understanding of work place rules and laws regarding harassment/discrimination policies and mandated reporting procedures
- describe the importance of the wellness programs, stress management and approved academy physical fitness programs
- identify and demonstrate first responders responsibilities for handling hazardous materials incidents
- demonstrate safe driving procedures for emergency response vehicles

FIRE 1507 Firefighter II Academy

Units: 3.5
Hours: 42 hours LEC; 70 hours LAB
Prerequisite: None.
Enrollment Limitation: To enroll in this course (FIRE 1507) the student must be an employee of a state or local fire agency and a Certified Fire Fighter I.
Catalog Date: June 1, 2020

This course provides the skills and knowledge needed for the entry-level professional fire fighter to perform one's duties safely, effectively, and competently. Topics include fire department communications, fireground operations, rescue operations, and prevention, preparedness, and maintenance. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different levels in the Fire Fighter certification track, the courses and requirements for Fire Fighter II certification, and be able to describe the certification task book process.
- identify and describe the role and responsibilities of a Fire Fighter II within the organization, determine the need for command, and organize and coordinate activities using the incident management system until command is transferred.
- complete a basic incident report that completely and accurately records all pertinent information.
- communicate the need for team assistance in a manner that consistently informs the supervisor, follows department standard operating procedures, and safely accomplishes the assignment.
- operate as a member of a team, extinguish an ignitable liquid fire, select the correct type of foam concentrate for the given fuel and conditions, apply a properly proportioned foam stream to the surface of the fuel to create and maintain a foam blanket, extinguish the fire, prevent reignition, maintain team protection, and face hazards until the team successfully retreats to a safe haven.
- operate as a member of a team, control a flammable gas cylinder fire, maintain crew integrity, identify contents, identify safe havens prior to advancing, close any open valves, and extinguish flames only when leaking gas is eliminated, the cylinder is cooled, cylinder integrity is evaluated, hazardous conditions are recognized...
and acted upon, and the cylinder is faced during approach and retreat.

- coordinate an interior attack line for a team’s accomplishment of an assignment at a structure fire, establish crew integrity, select attack techniques for the given level of the fire (e.g., attic, grade level, upper levels, or basement), communicate attack techniques to the attack teams, maintain constant team coordination, continuously evaluate fire growth and development, communicate or manage search, rescue, and ventilation requirements, report hazards to the attack teams, and apprise incident command of changing conditions.

- note and protect evidence of fire cause and origin from further disturbance until investigators arrive on the scene.

- extricate a victim entrapped in a motor vehicle, stabilize the vehicle, disentangle the victim without further injury, and manage hazards, as a member of a team.

- assist rescue operation teams, follow procedures, recognize and retrieve rescue items in the time prescribed by the Agency Having Jurisdiction (AHJ), and complete the assignment.

- perform a fire safety survey in a private dwelling, identify fire and life safety hazards, recommend hazard corrections to the occupant, and refer unresolved issues to the proper authority.

- present accurate fire safety information to station visitors or small groups and answer or refer questions.

- prepare a pre-incident survey that records required occupancy information, note items of concern, and include accurate sketches or diagrams.

- maintain power plants, power tools, and lighting equipment, keep equipment clean and maintained according to manufacturer and departmental guidelines, record maintenance, and place equipment in a ready state or report it otherwise.

- perform an annual service test on fire hose, follow procedures, evaluate the condition of the hose, remove any damaged hose from service, and record the results.

FIRE 1520 Fire Apparatus Driver/Operator 1A - Pumping Apparatus

**Units:** 1.25  
**Hours:** 19.5 hours LEC; 20.5 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Valid Class C California Drivers License.  
**Catalog Date:** June 1, 2020

This course provides information on fire apparatus preventive maintenance and driving/operating. Topics include routine tests, inspections, and servicing functions, operate, reverse, maneuver, and turn a fire apparatus in a variety of conditions, and operate all fixed systems and equipment on a fire apparatus. This course was formerly listed as FIRE 1260 prior to October 2010. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe the certification task book and testing process.

- perform routine tests, inspections, and servicing functions on the systems and components of a fire apparatus to verify its operational status.

- document routine tests, inspections, and servicing functions by checking all items for proper operation and report any deficiencies.

- operate a fire apparatus following a predetermined route on a public way in compliance with all applicable state and local laws and policies and procedures of the jurisdiction.

- operate a fire apparatus during emergency and nonemergency responses using defensive driving techniques while maintaining control of the apparatus.

- operate all fixed systems and equipment on a fire apparatus not specifically addressed elsewhere in this standard in accordance with the applicable instructions and policies.

- demonstrate driving skills necessary to operate an emergency vehicle including off-road driving.

FIRE 1521 Fire Apparatus Driver/Operator 1B - Pumping Apparatus Operations

**Units:** 1.25  
**Hours:** 18 hours LEC; 22 hours LAB  
**Prerequisite:** FIRE 1520  
**Enrollment Limitation:** Hold a valid Class C Firefighter Endorsed driver’s license (minimum).  
**Catalog Date:** June 1, 2020

This course provides information on pumping apparatus preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions, producing hand, master, and foam fire streams, relay pump operations, and supplying water to fire sprinkler and standpipe systems. This course was formerly listed as FIRE 1261 prior to October 2010. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- describe the certification task book and testing process.
- perform and document routine tests, inspections, and servicing functions on the systems and components unique to a pumping apparatus to verify their operational status.
- produce an effective hand or master stream by engaging the pump, setting all pressure control and apparatus safety devices, achieving and maintaining the rate flow of the nozzle, while continuously monitoring the apparatus for potential problems.
- demonstrate how to pump a 2½” or larger supply line to provide the correct pressure and flow to the next pumping apparatus in the relay.
- demonstrate how to produce a foam fire stream to provide properly proportioned foam.
- demonstrate how to supply water to fire sprinkler and standpipe systems at the correct volume and pressure.

**FIRE 1522 Fire Apparatus Engineer Refresher**

**Units:** 1.5  
**Hours:** 20 hours LEC; 21 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Must be in the position of Fire Engineer or above.  
**Catalog Date:** June 1, 2020

This course provides updates, enhancements, and refreshes the skills required by the fire apparatus engineer. Topics include wildland firefighting, arson identification, structural firefighting, incident command, strategy and tactics on initial attack incidents, supervision, management and company officer skills. This course was formerly listed as FIRE 1010 prior to October 2010. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the ability to operate fire engine pumps and water moving systems.
- demonstrate the ability to deploy wildland hoselays.
- investigate arson fires set in the wildland environment.
- assess leadership skills among various leadership styles.
- operate within the incident command system.
- compare incident management systems used to organize emergency incidents.

**FIRE 1523 Emergency Vehicle Operator - Phase I**

**Units:** 0.25  
**Hours:** 2 hours LEC; 7 hours LAB  
**Prerequisite:** Completion of a State of California Fire Marshal approved Firefighter 1 academy.  
**Catalog Date:** June 1, 2020

This course is the first phase of operating the emergency vehicle for fire personnel. The course includes skid pan exercises and vehicle driving exercises. This course was formerly listed as SMFD & SFD 1041 prior to October 2010. Pass/No Pass Only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate ability to control a vehicle through a skid.
- Evaluate traffic obstacles and apply roadway position.

**FIRE 1524 Emergency Vehicle Operator - Phase II**
This course is a continuation of Driver Emergency Vehicle Operator Phase I training techniques. It includes vehicle placement, steering basics, acceleration, and braking. This course was formerly listed as SMFD & SFD 1042 prior to October 2010. Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Judge the traffic environment and select the appropriate driving procedure.
- Compare courses of action while driving and select appropriate course.

FIRE 1525 Emergency Vehicle Operator: Fire

This course is a continuation of Emergency Vehicle Operator - Phase II training techniques. It includes apparatus inspection, safety, code 3 driving, and special considerations. This course was formerly listed as SMFD & SFD 1043 prior to October 2010. Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Identify the primary points of apparatus inspection.
- Describe the procedure involving driving with lights and sirens.
- Select the responses in various traffic situations.

FIRE 1526 Fire Apparatus Driver/Operator - Aerial Apparatus

This course provides information on aerial apparatus preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions on the systems and components unique to an aerial apparatus; maneuvering, positioning, and stabilizing an aerial apparatus; maneuvering, positioning, and lowering the aerial device; and deploying and operating an elevated master stream. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Identify the courses and requirements for the Fire Apparatus Driver/Operator – Aerial Apparatus certification, and be able to describe the certification task book and testing process.
- Perform and document routine tests, inspections, and servicing functions on the systems and components unique to an aerial apparatus to verify their operational status.
- Demonstrate how to maneuver and position an aerial apparatus for correct aerial device deployment.
- Demonstrate how to stabilize an aerial apparatus and transfer power to the aerial device hydraulic system in order to deploy the aerial device.
- Demonstrate how to maneuver and position the aerial device from each control station to accomplish the assignment.
- Demonstrate how to lower an aerial device using the emergency operating system to its bedded position.
- Demonstrate how to deploy and operate an elevated master stream so the stream is effective and the aerial and master stream devices are operated correctly.
FIRE 1527 Fire Apparatus Driver/Operator - Tillered Apparatus

This course provides information on operating a fire department aerial apparatus equipped with a tiller. Topics include practical driving exercises, and operating, positioning and stabilizing the apparatus from both the tractor and tiller positions. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the courses and requirements for the Fire Apparatus Driver/Operator – Tillered Apparatus certification, and be able to describe the certification task book and testing process.
- perform the practical driving exercises specified in National Fire Protection Association (NFPA) 1002 paragraphs 4.3.2 through 4.3.5 (Practical driving exercises) without striking the apparatus or obstructions.
- operate an aerial apparatus equipped with a tiller over a predetermined route on a public way using the maneuvers specified in NFPA 1002 paragraph 4.3.1 while in compliance with all applicable state and local laws, and policies and procedures of the jurisdiction.

FIRE 1528 Fire Apparatus Driver/Operator - Water Tender

This course provides information on water tender preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions unique to a water tender, maneuvering and positioning a water tender at a water shuttle fill site and establishing, maneuvering, and positioning at a water shuttle dumpsite. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the certification task book and testing process.
- perform and document routine tests, inspections, and servicing functions unique to a water tender, to verify their operational status.
- operate a water tender in compliance with all applicable jurisdictional rules and regulations and operational limitations of the apparatus.
- maneuver and position a water tender at a water shuttle fill site, without striking any objects or stretching additional hose, and attach supply hose to the intake connections.
- establish a water shuttle dumpsite by keeping the draft tank full at all times, emptying the dump tank, and transferring the water from one tank to the next.
- maneuver and position a water tender at an established water shuttle dumpsite and discharge all of the water from the water tender into the portable tank without striking any object at the dumpsite.

FIRE 1529 Fire Apparatus Driver/Operator - Wildland Fire Apparatus

This course provides information on preventive maintenance and operation of a wildland fire apparatus. Topics include routine tests, inspections, and servicing functions on the systems and components unique to wildland fire apparatus, and operating a wildland fire apparatus and producing an effective fire stream. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- describe the certification task book and testing process.
- perform and document routine tests, inspections, and servicing functions on the systems and components unique to wildland fire apparatus.
- operate a wildland fire apparatus in compliance with all applicable jurisdictional rules and regulations and operational limitations of the apparatus.
- produce an effective fire stream by engaging the pump, setting all pressure-control and vehicle safety devices, and achieving the rated flow of the nozzle while monitoring the apparatus for potential problems.

**FIRE 1554 Communicable Disease Awareness**

<table>
<thead>

<tr>
<td>Enrollment Limitation:</td>
<td>Currently certified as a California EMT-1</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course provides emergency responders with communicable disease awareness. Topics include identification, recognition, communicability, prevention, and the operation of communicable diseases. This course was formerly listed as FIRE 1116 prior to November 2010. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define most common communicable diseases.
- identify signs and symptoms of communicable diseases.
- describe communicability of diseases.
- differentiate between communicable and non-communicable diseases.
- identify standardized safety control methods, plans, and purposes.
- apply safety methods to operate in the presence of blood or other bodily fluids.
- identify medical/legal and ethical issues related to the intervention and response to communicable diseases.

**FIRE 1600 Hazmat First Responder Operational**

<table>
<thead>
<tr>
<th>Units:</th>
<th>0.5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>14 hours LEC; 2 hours LAB</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>None.</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course covers the basic strategies involving potential exposure to hazardous materials. This course also covers how to detect hazmat substances, consult references for information, and implement operational procedures. This course was formerly listed as FIRE 1068, CDF 1068, SFD 1068, and SMFD 1068 prior to April 2011. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the typical agencies from all levels of government that are likely to respond to a hazmat event and identify their roles, responsibilities and capabilities
- identify hazardous materials using the DOT Emergency Response Guidebook (ERG)
- describe the value, methods and limitations of stabilizing the hazmat incident through safe containment; and, describe protective action options available to first responders
- cite the health effects that hazardous materials present to the first responder's life, health, and safety
FIRE 1601 Hazardous Materials First Responder Operational Refresher

Units: 0.25
Hours: 6 hours LEC; 3 hours LAB
Prerequisite: FIRE 1600
Catalog Date: June 1, 2020

This course is a refresher covering the basic strategies involving potential exposure to hazardous materials. Topics include detecting hazardous material substances, consulting references for information, and implementing operational procedures. May be taken one time for credit. This course was formerly listed as CDF 1085 prior to April 2011. Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the basic hazard and risk assessment techniques.
- define and demonstrate selection and use of personal protective equipment provided to the First Response Operational (FRO) level.
- explain basic hazardous materials terminology.
- apply basic control, containment, and/or confinement operations within the capabilities of the resources and personal protective equipment available in assigned jurisdiction.
- implement basic decontamination procedures.
- explain relevant standard operating procedures and termination procedures.

FIRE 1602 Hazardous Materials Incident Commander

Units: 0.5
Hours: 10 hours LEC; 6 hours LAB
Prerequisite: FIRE 1600; Proof of completion of FEMA Incident Command System (ICS) 100
Catalog Date: June 1, 2020

This course provides the content related to the role of an Incident Commander (IC), during a hazardous material (hazmat) event, with the emphasis on personnel safety and management. Topics include hazmat laws and regulations, command and scene management, operational risk management, and protective actions. This course was formerly listed as CDF, FJPA, SFD, SMFD, and USDA 1091 prior to April 2011. Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the most dangerous types of hazardous materials.
- identify laws, regulations, and plans that govern an emergency response to a hazardous materials incident.
- demonstrate how to estimate potential outcomes when given a simulated hazardous materials leak.
- identify hazardous material disposal requirements.
- identify potential action response options (defensive, offensive and non-intervention) available.
- identify legal roles and rights of the media in a hazardous material event.
- identify common "real-world" problems likely to occur in a hazardous material event.
- demonstrate the ability to approve an appropriate level of personal protective equipment commonly used in a hazardous materials incident.

FIRE 1610 Hazardous Materials Technician: Module 1A: Basic Chemistry

Units: 2
Hours: 40 hours LEC
Prerequisite: FIRE 1600
Catalog Date: June 1, 2020

This course provides the student with the most essential and basic aspects of chemistry and physics as they relate to successful hazardous materials incident management. Topics include basic terminology and theory of chemistry, overview of the identification and hazards of salts, hydrocarbons, and other non-salts and, most importantly, provides the student with the skills required to recognize the hazard and behavior of a material given only its chemical identification or formula. It meets standards prescribed by the CA State Fire Marshal and Office of Emergency Services. Pass/No Pass only.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize chemical compounds in terms of general categories and classifications.
- identify symbols, names of elements, and atomic numbers on a periodic table.
- name the four families and their outer shell electron configuration, explain the octet/duet rule and predict the type of ion formed by each family.
- identify the hazard of each family including reactivity and oxidation ability.
- identify the six types of salt and predict the hazards, recognize the general physical, chemical, health and environmental properties of salts and non-salts.
- identify alkane, alkene, alkyne and aromatic hydrocarbons.
- define the physical parameters of vapor pressure, vapor content, vapor density, specific gravity, boiling point, flash point, polarity, and standard and normal temperature and pressure; and correctly identify the relative ranking of chemicals with respect to these physical parameters when compared to other chemicals.
- define the concepts: fire, oxidation, the fire tetrahedron, heat transfer, ignition temperature, flammable limits, and standard temperature and pressure.
- describe the importance of chemical compatibility to responders, recognize the 4 types of chemical reactions, list the rules of solubility and use an incompatibility chart to determine the potential reaction(s) between two materials.
- determine the logical systematic order of elements,
- list the features of reducing agents and oxidizing agents.
- identify the structures of hydrocarbons including isomers or aromatics.
- explain the difference between slow and fast oxidation, the effects of oxygen on the combustion process, and the factors to consider when assessing an incident for the potential of fire.

FIRE 1611 Hazardous Materials Technician: Module 1B: Applied Chemistry

Units: 1.25
Hours: 20.25 hours LEC; 19.75 hours LAB
Prerequisite: FIRE 1610
Catalog Date: June 1, 2020

This course provides the student with basic terminology and theory of chemistry as it relates to hazardous materials. Topics include chemical aspects of the hazard classes, toxicology, including hazard and risk assessment, function and use of detection instruments, monitoring hazardous atmospheres, and use of a field identification kit to identify unknown solids and liquids. It meets standards prescribed by the CA State Fire Marshal and Office of Emergency Services. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the different exposure levels and the terms needed to describe them, identify which are legal requirements and which are recommended and describe what actions (if any) must be taken in a variety of situations when given sample exposures.
- describe the differences between and the unique benefits of using printed and electronic reference sources.
- perform research on a named chemical using textbooks, computer based and internet based resources.
- describe the process of looking for contaminants in air, list the major components of a normal atmosphere, and list the types of contaminants that make an atmosphere hazardous.
- describe the process of looking for contaminants in air, list the major components of a normal atmosphere, and list the types of contaminants that make an atmosphere hazardous.
- identify classifications of chemicals and incidents which require detection capabilities beyond the Oxygen/PID/CGI/Colorimetric Tube range and discuss and compare the capabilities of five different advanced types of instruments.
- describe the principles of operation of Radiation Monitoring devices and demonstrate their use with sample sources of radioactive material.
- describe the difference between strategic and tactical air monitoring and describe the elements that can affect the accuracy of tactical air monitoring.
- define and demonstrate the process and technique(s) of the Field Identification of Unknown Solids and Liquids, as it applies to Hazmat Emergency Response.
- describe how safety procedures serve as a reminder of the real hazards of chemicals and to demonstrate that these materials can be handled and used in a completely safe way.
FIRE 1612 Hazardous Materials Technician: Module 1C: Incident Considerations

Units: 1.25
Hours: 18.5 hours LEC; 21.5 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides the student with on-scene incident considerations. Topics include data research, meteorological considerations, protective actions, personal protective equipment, incident command aspects, site safety concepts, legislative and regulatory measures influencing emergency response, and contingency planning. It meets standards prescribed by the CA State Fire Marshal and Office of Emergency Services. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define toxicology, list 2 subdivisions of toxicology, and identify dose as a key concept in toxicology.
- identify how various meteorological factors may influence a hazardous materials incident.
- recognize general protective action concepts associated with hazardous materials response, with specific emphasis on evacuation and shelter-in-place options.
- identify the three types of vapor-protective, splash-protective and support-function clothing and describe the advantages and disadvantages of each.
- explain the significance of degradation, penetration, and permeation as they relate to suit selection.
- identify the factors to be considered and the process involved in selecting the proper chemical protective clothing, at least three indications of material degradation of chemical protective clothing, and the relative advantages and disadvantages of various cooling methods/devices.
- list the primary differences between a Drug Lab, an Explosives Lab and a Biological Lab, and list the response priorities.
- describe the duties of a member of the Command Staff within the Incident Command System at a hazardous materials incident.
- describe the concept of dose-response relationships, list the factors that affect dose response values and define the terms “lethal dose (LD),” “lethal concentration (LC),” “no observed effect level (NOEL),” “threshold limit value (TLV),” “permissible exposure limit (PEL),” “short term exposure limit (STEL),” “immediately dangerous to life and health (IDLH),” “maximum allowable concentration (MAC),” “level of concern (LOC)” and emergency response planning guide (ERPG).
- recognize the importance of establishing control zones and identify the three control zones to be established at a hazardous materials incident.
- identify various environmental, mechanical, physiologic and psychological stresses that personnel working in chemical protective clothing are subjected to.
- identify some of the problems and resources which must be evaluated in order to triage hazardous materials incidents.
- describe the various decontamination methods, the types of decontamination, factors that can affect the decontamination process and resources needed to set up a Contamination Reduction Corridor.
- demonstrate the use of plugging and patching equipment for drums.
- demonstrate the use of transfer pumps for product transfer between drums.
- demonstrate the safe use of chemical sampling equipment for solids and liquids.
- demonstrate the safe use of absorbent materials for containing a liquid spill.
- demonstrate the collection of evidence at a hazardous materials incident, including the use of chain of custody forms, evidence seals, scene mapping and photography.
- identify and discuss the basic concept of levels of chemical protective clothing.
- identify and use the accepted standard operating procedures for hazardous materials incidents.

FIRE 1613 Hazardous Materials Technician: Module 1D: Tactical Field Operations

Units: 1.25
Hours: 20 hours LEC; 20 hours LAB
Prerequisite: FIRE 1612
Catalog Date: June 1, 2020

This course provides the student with experience in hazardous materials tactical field operations. Topics include confinement, control, hazmat triage and sabotage, performing in chemical protective clothing, preservation of evidence, decontamination, and emergency medical system considerations. It meets standards prescribed by the CA State Fire Marshal and Office of Emergency Services. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- describe the components of a site safety plan for a hazardous materials incident and identify key points that should be made in a safety briefing prior to working on the scene.
- describe the duties of the Assistant Safety Officer - Hazmat within the Incident Command System at a hazardous materials incident.
- identify various non-bulk and intermediate bulk packaging, the types of materials they contain, basic design and construction features, and some of the marking requirements for the various packages.
- identify the following regarding intermodal tank containers: tank construction features, tank markings, general classes of tanks, tank fittings and how to handle hazardous materials in tank containers.
- describe the type of carrier and material most commonly involved in highway hazardous materials incidents.
- identify some of the ways in which chemicals could be used for terrorism.
- identify the types of shipping papers that may be found on rail cars, as well as the types of information they contain.
- identify various tank cars by type, capacity and contents they typically transport. The student shall also identify various tank markings and construction features.
- identify various tank car fittings that may be found on the different types of tank cars.
- identify how a liquid pipeline may carry different products, the types of information which may be found on a pipeline marker, basic guidelines to follow for mitigating pipeline incidents and some of the regulations pertaining to pipeline construction and safety.
- identify various offensive control options that may be utilized at a hazardous materials incident including repositioning leaking drums, overpacking, using absorbents, plugging, patching and catching.
- identify basic design and construction features of storage tanks found at fixed facilities, the types of materials they may contain, and the types of damage that they could incur.
- identify some of the metals used in aircraft construction, and the advantages and disadvantages of each, as well as the fuels and fluids generally found aboard aircraft and their associated hazards.
- demonstrate the use of emergency hand signals.
- demonstrate the use of grounding and bonding equipment for product transfer.
- demonstrate the use of plugging and patching equipment for drums.
- demonstrate the use of transfer pumps for product transfer between drums.
- demonstrate overpacking of a 55 gallon drum by the “V- Roll” and “End Over” Techniques.
- demonstrate the safe use of chemical sampling equipment for solids and liquids.
- demonstrate the safe application of a "Chlorine Institute A Kit."
- demonstrate the safe application of a "Chlorine Institute B Kit."
- identify and use accepted Standard Operating Procedures for hazardous materials incidents.
- identify and use the selected method for field identification of the released hazardous material.
- identify components of the three phases of an effective incident termination: debriefing, post-incident analysis and critique.

FIRE 1614 Hazardous Materials Specialist Module 1F: Special Mitigation Techniques

<table>
<thead>
<tr>
<th>Units:</th>
<th>1.75</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours:</td>
<td>28 hours LEC; 12 hours LAB</td>
</tr>
<tr>
<td>Prerequisite:</td>
<td>FIRE 1613</td>
</tr>
<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This course is an introduction to mitigation techniques. Topics include plugging, patching and repairing methods, advanced chemical field identification testing procedures, and fixed facility repair considerations. It is part one of a two part series (including FIRE 1615) leading to certification as a Hazardous Materials Specialist. It meets requirements of CA Code of Regulations Title 8, Section 519(q). Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- determine the range of skills necessary to function as a Hazardous Materials Specialist working on a Hazmat Team.
• determine the safety hazards inherent in this advanced course and procedures to follow in case of accident or injury.
• initiate and complete the identification of hazardous materials using the HazCat or 5-Step identification system.
• identify rail tank cars by construction features and markings.
• identify damage to tank cars that may result in tank car failure and understand how to repair damaged or malfunctioning fittings.
• determine the magnitude of damage to rail tank cars involved in derailments and rail accidents.
• determine features of MC 306/DOT 406 cargo tanks, materials transported, and methods of proper removal.

FIRE 1615 Hazardous Materials Specialist Module 1G: Advanced Field Operations

<table>

</tr>
</tbody>
</table>

This course covers material presented in Hazardous Materials Courses 1A-1F in an environment of scenario based full scale exercises. Students are evaluated on their ability to perform and be certified as a member of a Hazardous Materials Team. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• practice operational guidelines at simulated hazardous materials incidents.
• utilize chemical protective clothing and perform simulated hazardous materials mitigation skills.
• utilize methods and procedures to mitigate leaking containers.
• utilize methods and procedures to transfer hazardous materials between containers.
• classify known and unknown chemicals.
• utilize methods and procedures to participate as a member of a Hazmat Team in simulated hazardous materials incidents.
• practice safe methods and procedures while operating at hazardous materials incidents.

FIRE 1621 Incident Command System (I-200)

<table>
<thead>
<tr>
<th>Units:</th>
<th>0.5</th>

<tr>
<td>Catalog Date:</td>
<td>June 1, 2020</td>
</tr>
</tbody>
</table>

This class introduces the basic components of the Incident Command System (ICS) used to manage all types of emergency incidents. This management system includes common structure, responsibilities and terminology used on incidents at the local, state, and federal levels. This course was formerly listed as FIRE 1052 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe the principal features that constitute the ICS
• identify the ICS organizational structure and how it is used
• identify the ICS incident facilities and their use
• describe the kinds of resources often used in incidents and events
• define common responsibilities associated with ICS assignments

FIRE 1628 High Rise Incident Management - Basic Organization
This course provides the content related to management of major high rise fire incidents. The content is based on curricula established at the National Fire Academy and Firefighting Resources of Southern California Organized for Potential Emergencies (FIRESCOPE), program. This course was formerly listed as FIRE 1078 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify the critical elements of successful high rise incident management
- identify roles and responsibilities for command and control procedures for major high-rise operations
- explain functions of incident command/operations (IC/Ops), fire attack, base, lobby control, staging, rapid intervention crew (RIC), firefighter accountability tracking system (FATS), communications, and systems
- identify first-alarm capabilities and incident command system (ICS) organization

FIRE 1631 Incident Management

This course provides an in-depth look into the various areas of commanding an initial attack. Topics include command presence, transfer of command, tactics and strategy, and size-up. This course was formerly listed as CDF, FJPA, SFD, and SMFD 1092 prior to April 2011. Pass/No Pass Only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Identify the history and behavior to predict and recognize the strategies employed in the initial attack.
- Analyze the initial attack dispatch resources to be sure adequate resources are responding to implement the initial attack incident action plan.
- Describe the communication and interaction with the fire organization, public, and media.
- Prepare a company officer to utilize the ICS during an initial attack emergency operation.

FIRE 1653 Instructor I: Instructional Methodology

This course introduces the skills and knowledge needed for the entry-level professional instructor to perform his or her duties safely, effectively, and competently. At the end of this course, candidates for certification will be able to teach and deliver instruction from a prepared lesson plan utilizing instructional aids and evaluation instruments. The Instructor will also be able to adapt a lesson plan and complete the reporting requirements to the local jurisdiction. Topics include instructional development, instructional delivery, evaluation and testing, and program management. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate the ability to review instructional materials and determine which elements of the lesson plan, learning environment, and resources need adaptation.
- demonstrate how to adapt a prepared lesson plan to meet the needs of the student and the objectives of the lesson plan.
- present prepared lessons using the cognitive and psychomotor methods indicated by the lesson plans to achieve stated objectives and enable students to achieve learning outcomes, following applicable safety standards and practices, and addressing risks.
- demonstrate the ability to adjust to differences in learning styles, abilities, cultures, and behaviors, in order to accomplish lesson objectives, address disruptive
behavior, and maintain a safe and positive learning environment.

- demonstrate the ability to operate audiovisual equipment and demonstration devices so that the equipment functions properly.
- demonstrate the ability to administer oral, written, and performance tests in a manner that eliminates bias and discrimination, conduct tests following correct procedures, and maintain the security of test materials.
- demonstrate the ability to grade student oral, written, or performance tests accurately and secure student examinations, and grades properly.
- demonstrate the ability to report test results by recording them accurately, forwarding test result forms according to procedure, and reporting any unusual circumstances in testing or test results.
- demonstrate the ability to provide student evaluation feedback that is timely, objective, clear, relevant, and specific enough for the student to make efforts to modify behavior, and will include suggestions for additional study or behavior modification based on the data.
- demonstrate the ability to evaluate other student instructor presentations to provide constructive feedback that identifies strengths and weaknesses of the teaching demonstration.
- demonstrate the ability to assemble course materials by obtaining the lesson plan and all resources and equipment needed to deliver the lesson.
- demonstrate the ability to schedule instructional sessions to deliver specified lessons.

FIRE 1654 Instructor II: Instructional Development

Units: 1.25
Hours: 14.25 hours LEC; 25.75 hours LAB
Prerequisite: FIRE 1653 with a grade of "C" or better
Catalog Date: June 1, 2020

This course introduces the skills and knowledge needed for the intermediate level professional instructor to perform his or her duties safely, effectively, and competently. Topics include developing lesson plans and evaluation instruments, teaching and delivering instruction, evaluating and coaching other instructors, analyzing resources, and formulating a program budget. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify different levels in the Instructor certification track, the courses and requirements for Instructor II certification, and be able to describe the certification task book and testing process.
- define the role of the Instructor II with regard to program management, instructional development, instructional delivery, and evaluation and testing.
- demonstrate the ability to create a lesson plan that addresses Job Performance Requirements (JPRs) or learning objectives for the topic and includes learning objectives, a lesson outline, course materials, instructional aids, and an evaluation plan.
- demonstrate the ability to modify an existing lesson plan to address the JPRs or learning objectives for the topic; and include learning objectives, the lesson outline, course materials, instructional aids, and an evaluation plan.
- demonstrate the ability to conduct a class using a lesson plan that the instructor has prepared, using multiple teaching methods and techniques to achieve lesson objectives.
- demonstrate the ability to supervise other instructors and students during training to ensure that all participants follow applicable safety standards and practices and meet instructional goals.
- demonstrate the ability to develop student evaluation instruments that determine whether the student has achieved the learning objectives; evaluate relevant performance in an objective, reliable, and verifiable manner; and are bias-free to any audience or group.
- demonstrate the ability to develop a class evaluation instrument that gives students the ability to provide feedback to the instructor about instructional methods, communication techniques, learning environment, course content, and student materials.
- demonstrate the ability to schedule instructional sessions to ensure delivery of specified sessions according to departmental policy.
- demonstrate the ability to formulate budget needs by identifying and documenting the resources required to meet training goals.
- demonstrate the ability to acquire and obtain training resources within established timelines and budget constraints, and according to agency policy.
- demonstrate the ability to coordinate training record-keeping in a way that meets all agency and legal requirements.
- demonstrate the ability to evaluate instructors to identify areas of strengths and weaknesses and recommend changes in instructional style and communication methods, providing opportunity for instructor feedback to the evaluator.

FIRE 1655 Instructor III: Instructional Program Management
This course introduces information on planning, developing, and implementing comprehensive programs and curricula. Topics include instructional development, program management, program and instructor evaluation, and test reliability and validity. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify course objectives, events, requirements, assignments, activities, resources, evaluation methods, and participation requirements in the course syllabus.
- identify different levels in the Instructor III certification track, the courses and requirements for Instructor III certification, and be able to describe the certification task book and testing process.
- identify the duties of an Instructor III.
- demonstrate the ability to conduct an agency needs assessment/analysis that identifies instructional needs and recommends solutions.
- demonstrate the ability to utilize adult learning principles to design a performance-based training program or curriculum that includes job-related knowledge and skills, meets time and budget constraints, and supports agency goals.
- demonstrate the ability to modify an existing curriculum to meet agency requirements and achieve the learning objectives.
- demonstrate the ability to write clear, concise, and measurable program and course goals to correlate with agency goals.
- demonstrate the ability to write clear, concise, and measurable course objectives that reflect specific tasks.
- demonstrate the ability to construct a course content outline that supports the agency structure and reflects current acceptable practices.
- demonstrate the ability to create a program evaluation plan that evaluates instructors, course components, facilities, and obtains student input for course improvement.
- demonstrate the ability to develop a course evaluation plan that measures objectives and follows agency policies and procedures.
- demonstrate the ability to construct a performance-based instructor evaluation plan that evaluates instructors at regular intervals.
- demonstrate the ability to analyze student test instruments to determine validity and make necessary changes.
- demonstrate the ability to develop a system for the acquisition, storage, and dissemination of test results consistent with agency policies and federal, state, and local laws and provides feedback to those affected by the information.
- demonstrate the ability to administer a readily accessible training record system that captures concise information and meets all agency and legal requirements.
- demonstrate the ability to develop recommendations for training program policies that achieve training and agency goals.
- demonstrate the ability to select instructional staff who can achieve agency and instructional goals.
- demonstrate the ability to write equipment-purchasing specifications that support curriculum needs.
- demonstrate the ability to present evaluation findings, conclusions, and recommendations to agency administrator that are unbiased, supported, and reflect agency goals, policies, and procedures.

**FIRE 1670 Fire Investigation 1A, Fire Cause and Origin Determination**

This course provides participants with an introduction and basic overview of fire scene investigation. The focus of this course is to provide information in determining the area of fire origin in fires involving vehicles, structures, and wildland. Accidental and criminal fire causes are discussed in detail. This course was formerly listed as FIRE 1240 prior to September 2010. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- distinguish the four different methods of heat transfer and compare their effects during a fire's progression
- choose the correct California Arson Law section when applying it to a factual situation
recognize the elements necessary for the ignition and the sustained combustion of fuel and heat
explain the elements required for an electrically caused fire to occur
identify common scene indicators of arson and apply it to a factual situation
describe the methodology required for a proper and thorough investigation of a structure, vehicle, and wildland fire
differentiate between the different types of explosions and their unique effects

FIRE 1671 Fire Investigation 1B, Techniques of Fire Investigation

Units: 2
Hours: 40 hours LEC
Prerequisite: FIRE 1670
Catalog Date: June 1, 2020

This course expands on specific topics encountered by the fire investigator. These topics include detailed information on motives of fire setters; conducting a post blast scene; the investigation of a fire death; the recognition, collection, and preservation of evidence; interviewing and interrogation of witnesses and suspects; and the effect of a building's construction on the spread of fire. This course was formerly listed as FIRE 1241 prior to September 2010. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate between the six common motives associated with fire setters
- examine a fire scene appraising the different safety hazardous associated with an investigation
- compare a fire scene investigation versus a post blast scene investigation
- examine a fire scene to determine the appropriate evidence to support a fire cause
- compare factures associated with an interview and an interrogation
- appraise a fire death scene to determine if a criminal act has occurred
- organize their case investigations utilizing proper case reports, resources, and insurance information

FIRE 1672 Fire Investigation 2A

Units: 2
Hours: 40 hours LEC
Prerequisite: FIRE 1671
Catalog Date: June 1, 2020

This course provides information on how to investigate, apprehend, and convict arsonists. It focuses heavily on legal case preparation. Topics include interviewing and interrogating suspects, search and seizure, warrants, courtroom demeanor, and working with the district attorney’s office. This course was formerly listed as FIRE 1242 prior to September 2010. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- differentiate among the three effects of an explosion
- validate an arson corpus after examining a practical fire scene
- examine a fire scene to gather evidence in supporting a fire cause
- appraise an explosion scene to determine if a criminal act has occurred
- organize a fire investigation utilizing case reports, court exhibits, and testimony
- differentiate between the U.S. Supreme Court's finding and California's Supreme Court's requirements in preparing a search warrant
- recognize the elements necessary for the ignition and the sustained combustion of fuel and heat in a practical situation
- describe the methodology and procedure required for a proper surveillance operation
**FIRE 1673 Fire Investigation 2B**

Units: 2  
Hours: 40 hours LEC  
Prerequisite: FIRE 1672  
Catalog Date: June 1, 2020

This course provides advanced instruction in fire scene investigation, case preparation, and courtroom presentation. Topics include reviewing fire scene photography, sketching, evidence collection, interviewing and interrogation, and extensive use of simulations for developing and presenting an arson case in court. This course was formerly listed as FIRE 1243 prior to September 2010. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate the proper procedure of qualifying as an expert witness in fire origin and cause
- structure interview questions with witnesses and suspects in accordance with federal and state law requirements
- identify common scene indicators of arson and apply it to a practical situation
- examine a fire scene to determine the appropriate evidence needed to support a criminal fire cause
- verify an arson corpus after examining a criminal fire scene

---

**FIRE 1674 Fire Investigator 1A: Basic Fire Investigation**

Units: 1.75  
Hours: 29 hours LEC; 11 hours LAB  
Prerequisite: FT 304 with a grade of "C" or better  
Enrollment Limitation: On-line courses: Basic Electricity (CFITrainer.net), and Ethics and the Fire Investigator (CFITrainer.net)  
Catalog Date: June 1, 2020

This course provides information on securing the fire scene and determining the origin and cause of the fire. Topics include responsibilities of a fire investigator, securing the fire ground, conducting an exterior and interior survey, analyzing fire patterns, interpreting individual fire patterns, discriminating the effects of explosions, examining and removing fire debris, reconstructing the area of origin, inspecting the performance of building systems. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the courses and requirements for Fire Investigator certification, and be able to describe the certification task book and testing processes.
- employ the all aspects of the scientific method as the operating analytical process throughout the investigation.
- secure the fire ground to protect all evidence or potential evidence from damage or destruction and ensure unauthorized persons recognize the perimeters of the investigative scene and are kept from the restricted areas.
- conduct an exterior survey to identify and preserve evidence, interpret fire damage, identify hazards to avoid injuries, determine accessibility to the property, and discover all potential means of ingress and egress.
- conduct an interior survey to identify and preserve areas of potential evidentiary value requiring further examination, determine the evidentiary value of contents, and identify hazards to avoid injuries.
- analyze fire patterns to determine fire development, evaluate methods and effects of suppression, recognize false origin area patterns, and identify all areas of origin.
- interpret individual fire patterns and the burning characteristics of the material involved in relationship with all patterns observed and the mechanisms of heat transfer that led to the formation of the pattern.
- discriminate the effects of explosions from other types of damage to identify an explosion and preserve its evidence.
- examine and remove fire debris to check for fire cause evidence, identify potential ignition source(s), and preserve evidence without investigator-inflicted damage or contamination.
- reconstruct the area of origin to identify and correlate all protected areas and fire patterns related to contents or structural remains, return items potentially critical to cause determination and photo documentation to their prefire location, and discover the area(s) or point(s) of origin.
- inspect the performance of building systems, including detection, suppression, HVAC, utilities, and building compartmentation to determine the need for expert resources, consider an operating system’s impact on fire growth and spread in identifying origin areas, identify defeated and/or failed systems, and recognize the system’s potential as a fire cause.
FIRE 1675 Fire Investigator 1B: Evidence and Documentation

Units: 1.5  
Hours: 24 hours LEC; 10 hours LAB  
Prerequisite: FIRE 1674  
Enrollment Limitation: On-line course: Introduction to Evidence (CFITrainer.net)  
Catalog Date: June 1, 2020

This course provides information on scene documentation and evidence collection/preservation. Topics include photographing the scene, diagramming the scene, constructing investigative notes, processing evidence and establishing chain of custody, processing victims and fatalities, selecting evidence for analysis, maintaining a chain of custody, preparing a fire investigation report, and disposing of evidence. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the courses and requirements for Fire Investigator certification, and be able to describe the certification task book and testing process.
- assemble photographs of the scene to accurately document and support scene findings.
- diagram the scene and identify evidence, pertinent contents, significant patterns, and area(s) or point(s) of origin.
- construct investigative notes that provide accurate documentation of the scene and represent complete scene findings.
- locate, document, collect, label, package, and store evidence to properly identify and preserve for use in testing, legal, or other proceedings and examinations, establish the chain of custody, and avoid cross-contamination and investigator-inflicted damage to evidentiary items.
- process victims and fatalities to discover and preserve all evidence while utilizing proper procedures and following protocol.
- select evidence for analysis so the items support specific investigation needs.
- maintain a chain of custody with written documentation for each piece of evidence.
- prepare a written report that accurately reflects the investigative findings, is concise, expresses the investigator’s opinion, contains facts and data that the investigator relies on in rendering an opinion, contains the reasoning of the investigator to reach each opinion, and meets the needs or requirements of the intended audience(s).
- dispose of evidence safely in compliance with jurisdictional or agency requirements.

FIRE 1676 Fire Investigator 1C: Preparation for Legal Proceedings

Units: 1.25  
Hours: 19 hours LEC; 21 hours LAB  
Prerequisite: FIRE 1674, FIRE 1675, and PSTC 1501  
Enrollment Limitation: On-line course: Motive, Means, and Opportunity: Determining Responsibility in an Arson Case (CFITrainer.net)  
Catalog Date: June 1, 2020

This course provides information on legal considerations for a court proceeding. Topics include coordinating expert resources, formulating an opinion, presenting investigative findings, and testifying during legal proceedings. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the courses and requirements for Fire Investigator certification, and be able to describe the certification task book and testing process.
- gather reports and records for a legal proceeding that are authentic, complete, and applicable to the investigation while maintaining the chain of custody to ensure the material is admissible.
- evaluate the investigative file to identify areas for further investigation, interpret the relationship between gathered documents and information, and discover corroborative evidence and information discrepancies.
- coordinate expert resources to match experts competencies to the specific investigation needs, justify financial expenditures, and further the investigative goals of determining cause and responsibility.
- formulate an opinion concerning origin, cause, and responsibility for the fire supported by data, facts, records, reports, documents, and evidence.
- present investigative findings that are accurate and include only need-to-know information for the intended audience.
- testify during legal proceedings to present all pertinent investigative information and evidence clearly and accurately while adhering to the appropriate demeanor and attire.
FIRE 1682 Interagency Incident Business Management (S-260)

This course provides the foundation of incident business management practices. Topics include property management, recruitment, acquisition, and accident investigation. This course was formerly listed as FIRE 1093 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- illustrate rules of conduct for incident assignments
- describe the recruitment of casual employees
- organize pay provisions, commissary, and travel times
- assess compensation for injury
- describe the acquisition of equipment, supplies, and services
- examine property management
- analyze cooperative agreements
- describe investigating and documenting accidents and claims

FIRE 1703 Basic Wildland Fire Prevention

This course provides the basic methods and practices used in wildland fire prevention. Topics include fire prevention history, campfire safety, powerline safety and fire investigation. This course was formerly listed as USDA 1107 prior to April 2011. Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Describe the history of wildland fire prevention.
- List primary points of fire prevention.
- Describe department policy on fire prevention.
- Describe the five important areas in railroad fire prevention.

FIRE 1722 Division/Group Supervisor (S-339)

This course provides the knowledge and skills to perform specific responsibilities as a Division/Group Supervisor within the Incident Command System. Topics include pre-incident responsibilities, incident arrival and check-in, assigned and available status, and out-of service status and demobilization. This course was formerly listed as CDF,EGFD,FJPA,SMFD,and USDA 1086 prior to April 2011. Pass/No Pass Only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Identify and define concepts of divisions and groups within the Incident Command System.
- Describe pre-incident responsibilities.
- Describe responsibilities assigned at an incident.
- Describe responsibilities while in available or out-of-service status.
- Describe the demobilization process and explain responsibilities.
- Describe Incident Command System documentation procedures specific to Divisions, Groups, and subordinate functions.

**FIRE 1723 Professional Training for Fire Service Personnel**

**Units:** 7.5 - 9.75  
**Hours:** 84 - 114 hours LEC; 156 - 186 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Completion of a State of California Fire Marshal approved Firefighter 1 academy  
**Catalog Date:** June 1, 2020

This course provides current knowledge and techniques needed to maintain and improve fire service skills. It meets mandatory state and local training requirements. Topics may include fire service administration, suppression, emergency medical services, fire prevention, wellness and fitness, rescue, leadership/management, and command and control. This course was formerly listed as SFD and SMFD 1104 prior to April 2011. Pass/No Pass Only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Describe and discuss the various policies and procedure within the fire agency organization.
- Operate fire department computer and related software.
- Analyze various laws and legal issues affecting the fire service.
- Identify the latest techniques to manage and supervise employees.
- Operate various hose lays on the fire ground.
- Calculate various mathematical hydraulic formulas to ensure proper engine pressures.
- Apply different search and rescue techniques used to search structures.
- Operate aerial apparatus for different fire ground and rescue situations.
- Perform various truck company evolutions.
- Describe the different approaches and techniques used in extrication.
- Employ the various types of ventilation used in the fire service.
- Describe how to secure utilities at different types of structures.
- Explain the various type of techniques used to ensure firefighter safety and survival.
- Describe the benefits of a post incident analysis as they might relate to firefighter safety.
- Describe the basics of fire behavior.
- Discuss the different techniques used to control wildland fires.
- Discuss the different techniques used to control fire involving high rise buildings.
- Recognize different medical problems through the use of a patient assessment.
- Identify the various types of medical emergencies a firefighter may encounter.
- Apply different treatment techniques used to treat patients.
- Interpret the local protocols and procedures identified with in the EMS service area.
- Identify the legal responsibilities of a emergency medical provider.
- Demonstrate CPR.
• Discuss the use of the incident command system as it applies to multi-casualty incidents.
• Define bloodborne pathogens and identify ways to protect oneself from them.
• Identify the correct personnel protective equipment use at various incidents.
• Demonstrate self contained breathing apparatus procedures.
• Demonstrate the use of other specialized equipment utilized in the fire service: saws, lighting, hand tools, etc.
• Express knowledge of the periodic table.
• Identify level of protective clothing for hazardous materials at entry.
• Apply current laws and regulations pertaining to hazardous materials.
• Identify category types relating to weapons of mass destruction.
• Employ skill and knowledge in technical rescue procedures.
• Conduct search and rescue techniques.
• Apply a Rapid Intervention Crew, RIC requirements, and develop a RIC plan.
• Describe the steps associated with pump operations and water flow.
• Identify five (5) apparatus types used in the fire service.
• Apply tiller operations and truck positioning techniques.
• Apply defensive driving skills and Emergency Vehicle Operations Control capabilities.
• Explain general staff sections in the Incident Command System.
• Describe the responsibilities of the various positions during a major fire or emergency incident.
• Identify the various ways that resources can be acquired and coordinated.
• Describe command and control as it applies to an incident including the command and general staff positions.
• Explain status reports using the Conditions/Actions/Needs model of field reporting.
• Compare and contrast the differences between the various stages of fire.
• Compare the relative effectiveness of different types of fire department connections and systems.
• Identify specific risks and exposures in your first-in response area.
• Conduct a risk assessment of occupancies and developments.
• Identify the five (5) types of building construction.
• Identify the high-hazard risks and develop a target hazard plan.

FIRE 1760 Low-Angle Rope Rescue Operational (LARRO)

Units: 0.5
Hours: 7 hours LEC; 17 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides the techniques and methods for using rope, webbing, hardware friction devices, and litters in low-angle rescue situations. Topics include rope and related equipment, anchor systems, safety lines, stretcher lashing and rigging, mechanical advantage systems, and single-line and two-line rescue systems. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe rope rescue equipment, rescue knots and hitches, anchor systems, system attachments and fall restraint, belay/safety line systems, and load-releasing devices.
• describe methods and techniques used to inspect and maintain rescue rope, webbing, and hardware.
• demonstrate methods and techniques to tie knots and package victims and rescuers.
- demonstrate methods and techniques for using rescue equipment to build lower/raise systems.
- explain rescue scene organization and management.
- demonstrate and apply basic low-angle rope rescue techniques.

**FIRE 1761 Rescue Systems 1: Basic Rescue Skills**

This course provides rescue professionals with the level of knowledge to perform urban search and rescues. Topics include team organization, rescue, and environmental considerations, use of ropes, knots rigging and pulley systems, descending, rappelling, and belaying tools and techniques, subsurface rescue techniques, use of cribbing, wedges, cutting/prying and hydraulic tools, use of fire service ladders in specialized rescue situations, and day and night simulated rescue exercises. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply techniques to operate safely when working around the structural collapse of light frame buildings.
- identify the potential hazards associated with rescue operations.
- build on skills acquired in low angle rope rescue operational (LARRO) training.
- demonstrate techniques for lifting and moving heavy objects.
- demonstrate techniques to break or breach building components to access a victim(s).
- demonstrate techniques to shore and stabilize building components.

**FIRE 1762 Aircraft Rescue and Firefighting (FC 5)**

This course provides the knowledge to operate safely during an aircraft emergency. This course identifies types of aircraft, aviation fuels, proper extinguishing agents, and airport communication systems used in aircraft emergencies. This course was formerly listed as CDF, FJPA, SFD, SMFD, USDA, and FIRE 1062 prior to April 2011. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify typical airport operations
- describe airport communications systems
- identify types of aircraft, engines, and systems
- identify the different types of aviation fuels
- identify the different types of extinguishing agents and their appropriate uses
- demonstrate proper utilization of protective clothing and breathing apparatus
- describe how to work around aircraft emergency egress systems, aircraft armament and have an understanding of the types of hazardous cargo carried aboard aircraft
- identify the importance of maintaining, knowing how to operate, and understanding the capabilities of aircraft fire fighting and rescue apparatus and equipment
- demonstrate a sound workable knowledge of all facets of aircraft fire fighting and rescue procedures
FIRE 1763 Rescue Boat Operations

This course provides the skills needed to operate a rescue boat and perform rescue in river and flood situations. Safety, course philosophy, and terminology are covered. "In water" experiences for students include how to read dynamics flow for safety travel, perform self-rescue and victim-rescue operations, along with executing pre/post-inspections of the personal watercraft (PWC). This course was formerly listed as FIRE 1059 prior to April 2011. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- describe the codes and regulations that impact rescue boat operations
- identify the primary components of a rescue boat
- describe the differences between rescue operations in dynamic water as opposed to rescue operations in static water
- describe the inspection process on a rescue boat
- describe the maintenance process on a rescue boat
- identify the crew positions in a rescue boat
- identify the different types of rescue boats
- demonstrate how to launch a rescue boat
- demonstrate how to hover and ferry a rescue boat
- demonstrate how to shore a rescue boat
- demonstrate how to trailer a rescue boat

FIRE 1764 Personal Watercraft Operations

This course provides the knowledge and skills necessary to operate personal watercraft on water related incidents. Subjects learned are the reading of water movement and the tactics/strategies for operating personal watercraft. Not open to students who have completed CDF 1063, Rescue Water Craft. This course was formerly listed as CDF, SFD, and SMFD 1061 prior to April 2011. Pass/No Pass Only.

Upon completion of this course, the student will be able to:

- Describe the codes and regulations that impact personal watercraft operations.
- Describe some of the tactics and strategies for operating personal watercraft.
- Explain the philosophy of personal watercraft use.
- Name the components of the pre-operation inspection.
- Demonstrate the shoring procedure for personal watercraft.
- Demonstrate how to right an overturned personal watercraft.
- Discuss the differences between static and dynamic water as it relates to personal watercraft operations.
- Demonstrate how to hover and ferry a personal watercraft.
- Demonstrate how to perform a victim pick-up.
FIRE 1766 River and Flood Water Rescue

Units: 0.5  
Hours: 5 hours LEC; 11 hours LAB  
Prerequisite: None.  
Catalog Date: June 1, 2020  

This course is intended for the training of fire service personnel in water rescue techniques. Topics include swift water rescue, submerged vehicles, drowning, use of engine/truck company equipment for water rescue, use of rafts and boats, and underwater search and recovery. This course was formerly listed as FIRE 1079 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify river hydrology and where incidents occur
- list the safety equipment required in water rescue
- select the industry standard equipment for rescue
- list river search techniques for day and night operations
- identify medical concerns associated with rescue operations
- describe the techniques employed in shore-based rescue
- identify techniques for self-rescue

FIRE 1768 Vehicle Extrication

Units: 0.75  
Hours: 9 hours LEC; 15 hours LAB  
Prerequisite: FIRE 1500  
Catalog Date: June 1, 2020  

This course provides the knowledge and skills to prepare a fire fighter to extricate victim(s) from a common passenger vehicle in a safe and effective manner in accordance with established policies and procedures. Topics include sizing up a vehicle incident, scene safety zones, fire protection, stabilizing a common passenger vehicle, isolating and managing energy sources, access and egress points, disentangling victims, removing victims, and terminating a vehicle incident. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the fire agency's role at a vehicle accident.
- identify scene safety operation procedures.
- describe fire protection policies and procedures.
- identify initial vehicle immobilization techniques.
- describe system awareness and isolation methods.
- describe vehicle access and egress standard operating procedures.
- describe extrication equipment uses, limitations, and safety considerations.
- describe disentanglement points and techniques.
- identify patient handling techniques.
- employ protective measures for rescuers and bystanders during termination operations.

FIRE 1769 Trench Rescue Technician

Units: 0.75  
Hours: 10 hours LEC; 14 hours LAB  
Prerequisite: FIRE 1761
This course transitions students from classroom discussion to working safely and efficiently in a trench rescue environment. Topics include trench and excavation regulations, understanding soil, trench configurations, trench hazards, rescue team preparation, incident response, initial on-scene and pre-entry operations, shoring systems and components, installation of shoring systems, victim rescue and recovery, and incident termination. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate their knowledge by accurately citing specific regulations that impact trench rescue operations.
- describe soil classifications and types, soil testing procedures and other factors affecting trench stability.
- recognize types of trenches and excavations, along with the types of collapses, collapse patterns, and factors leading to trench failures.
- describe the different types of hazards associated in and around the trench incident as well as how to mitigate those hazards.
- recall and discuss rescue team preparation including rescue tool maintenance and use, scene accountability, personal protective equipment and scene safety.
- outline trench rescue considerations when responding to a given trench rescue incident.
- identify and integrate the operational priorities at a given trench rescue incident.
- describe and demonstrate the pre-entry operation essential to safely perform in-and-around a given trench rescue incident.
- demonstrate various types of protective systems in trench rescue operations.
- identify shoring system components and demonstrate how they are deployed and used in a given trench rescue operation.
- demonstrate the installation of shoring systems in a given trench rescue operation.
- identify factors that affect victim search, soil removal, and demonstrate victim rescue and recovery at a given trench rescue operation.
- demonstrate all of the elements necessary to terminate a given trench rescue operation.

**FIRE 1800 Firefighter Training (S-130)**

**Units:** 2  
**Hours:** 35.5 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course provides new firefighters with basic wildland firefighting skills. It also provides the knowledge needed to identify basic weather conditions, topography, fuels, and their effect on fire behavior. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- demonstrate how to construct a fireline to required standards  
- demonstrate how to strengthen, reinforce, and use holding actions on a fireline  
- describe how to extinguish the fire with or without use of water  
- demonstrate how to locate self and fire on a map  
- describe how to assess and report fire situation data (written or oral) by radio and/or messenger  
- describe the assigned tasks and the safe actions used to complete those tasks  
- describe factors in a wildland environment which could impact safety

**FIRE 1801 Fire Fighter Survival**

**Units:** 0.25  
**Hours:** 4 hours LEC; 12 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020
This course provides a greater understanding of how to avoid committing fatal errors on the fireground. Topics include fire fighter survival terminology, developing a survival attitude, increasing situational awareness, and problem-solving techniques. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify fire fighter survival terminology.
- demonstrate knowledge of the federal government involvement to reduce fire fighter injuries and fatalities and the guidelines and laws put in place from tragic fire loss events.
- apply fire fighter fatality case study recommendations to enhance fire fighter training to handle their own emergencies on the fireground.
- employ techniques for developing fire fighter survival attitude and identify personal equipment that fire fighters should carry in their possession for self-preparedness measures.
- employ situational awareness to prevent the fire fighter emergency and recognize critical structural fireground factors.
- employ “When to call a fire fighter emergency” and emergency communications when fire fighters become lost, trapped, or disoriented inside a burning structure.
- employ Self-Contained Breathing Apparatus (SCBA) knowledge and techniques for air awareness and SCBA air emergencies, and applying them during hands-on evolutions.

FIRE 1803 Rapid Intervention Crew Operations

Units: 0.5
Hours: 4 hours LEC; 20 hours LAB
Prerequisite: FIRE 1500 and 1801
Catalog Date: June 1, 2020

This course is designed for fire fighters to rescue a downed fire fighter in an Immediately Dangerous to Life and Health (IDLH) environment in the continuing effort to reduce the number of fire fighter injuries and deaths that occur regularly. Students train using evolutions and scenarios based off tragedies suffered by fellow fire fighters from departments across the country. Students receive information on how to locate and use these Line of Duty Death (LODD) studies as training and prevention tools throughout their careers. This course focuses on the three phases of a Rapid Intervention Crew (RIC) operation: 1) predeployment, 2) deployment, and 3) rescue. During the class, you will also gain a greater understanding of RIC operations terminology and the RIC mindset. Topics include identifying causes of firefighter injuries and fatalities at structure fires, describing and preventing common fire ground errors that have caused injuries or fatalities, demonstrating self-survival knowledge and techniques, and demonstrating and applying firefighter rescue and self-survival techniques. This course was formerly listed as FIRE 1050 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify rapid intervention crew terminology.
- employ fire fighter fatality case study recommendations to enhance rapid intervention crew training to handle fire fighter emergencies on the fireground.
- employ techniques and training in developing the “RIC mindset” and steps taken before a RIC deployment occurs (pre-deployment) to increase the chances of a successful outcome.
- employ techniques and training in conducting a RIC deployment, including search operations and thermal imaging.
- employ techniques and training in conducting rescue operations once a downed fire fighter is located, including assessment and extrication from the structure.

FIRE 1804 Confined Space Awareness

Units: 0.25
Hours: 6 hours LEC; 2 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides instruction in identifying a permit and non-permit required confined space, the hazards associated with confined spaces, state regulations and industry standards, incident management, communications, and equipment requirements. It does not qualify participants to make permit-required entries. Topics include regulations and standards, dangers of confined space incidents, permit-required confined spaces, hazards, resources needed, tactical worksheets, communications, nonentry rescue, and incident command. This course was formerly listed as CDF 1081 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- identify the regulations and industry standards relating to confined-space incidents.
- describe the history behind the dangers of confined spaces and describe the industry-recognized levels of training.
- define and recognize a confined space.
- define and recognize a permit-required confined space.
- recognize and identify all incident hazards.
- apply isolation procedures, considering hazard isolation and minimizing risks to rescuers and victims.
- recognize the need for confined space support resources.
- adapt resource application to the operational requirements and take into account rescue time constraints.
- recognize the need for technical rescue resources at the incident.
- apply search protocols, minimize risks to searchers, and account for all searchers.
- employ communications with victim(s) and document victim(s) conditions.
- perform nonentry rescue, operating the retrieval system to extract the victim, protecting the rescuer from fall hazards when working near unprotected edges, establishing and maintaining victim communication, managing the victim through the portal, and initiating patient care on extraction.
- describe the mandatory positions and components of a permit-required confined-space entry, per Cal-OSHA.
- describe how to properly terminate the incident, including performing rehab, debriefing personnel, inventorying and inspecting equipment, and completing documentation.

**FIRE 1805 Wildland Firefighting Skills**

Units: 1.75  
Hours: 26 hours LEC; 20 hours LAB  
Prerequisite: None.  
Catalog Date: June 1, 2020

This course provides the necessary information required in wildland firefighting to safely operate in emergency conditions. Topics include map/compass and GPS use, radio use, hand tool use, fire shelters, belt weather kits, and human factors. This course was formerly listed as USDA 1109 prior to April 2011. Credit/No Credit only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Demonstrate proficiency in map reading, compass reading, and GPS reading.
- Apply hand tools, radios, belt-weather kits, and fire shelters in firefighting.
- Relate to the human factors in emergency situations.

**FIRE 1806 Confined Space Rescue Technician**

Units: 1  
Hours: 11 hours LEC; 29 hours LAB  
Prerequisite: FIRE 1804  
Catalog Date: June 1, 2020

This course is an intensive hands-on training program that will prepare students for confined-space emergencies. Topics include identifying confined spaces and permit-required confined spaces, the hazards associated with permit-required confined spaces, target industries and hazards, state and federal regulations, components of a rescue operation, and the roles and responsibilities of the rescue team. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify regulations and standards for entry into confined spaces.
- identify confined spaces and permit-required confined spaces.
- identify the hazards associated with confined spaces.
• perform confined-space rescue on incidents involving terrorism or weapons of mass destruction.
• select and use atmospheric monitoring equipment and the equipment necessary to control hazards in confined spaces.
• identify, select, and use personal protective equipment.
• use various types of victim removal and packaging systems.
• construct rope rescue systems for confined-space rescue.
• plan, organize, operate, and command at confined-space rescue incidents.
• apply the principles of confined-space rescue through directed rescue scenarios.

FIRE 1807 Advanced Firefighter Training (S-131)

Units: 0.5
Hours: 8 hours LEC
Prerequisite: FIRE 1800
Catalog Date: June 1, 2020

This course provides advanced training in wildland firefighting skills with an emphasis on safety and tactics. This is suggested training for firefighters who wish to become qualified at first level supervisory positions. This course also meets the training requirements for Advanced Firefighter/Squad Boss and Incident Commander Type 5. This course was formerly listed as FIRE 1067 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• define the appropriate information during fire suppression activities
• incorporate and maintain open lines of communication with all appropriate fire suppression personnel
• make informed fire fighting decisions
• demonstrate the steps required to properly size up a fire situation and determine appropriate tactics
• document fireline activities

FIRE 1808 Fire Ground Skills: Update

Units: 0.25
Hours: 4 hours LEC; 4 hours LAB
Prerequisite: Completion of a State of California Fire Marshal approved Firefighter 1 academy
Catalog Date: June 1, 2020

This course updates critical knowledge, skills, and abilities employed in emergency conditions. Topics include self-contained breathing apparatus, ground ladders, ropes and knots, apparatus operation, wildland hoselays, and fire shelter deployment and safety. This course was formerly listed as CDF 1048 prior to April 2011. Credit/No Credit only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• Demonstrate correct fit, care, and use of self contained breathing apparatus.
• Describe correct care and use of ground ladders; demonstrate proper deployment and use of ladders.
• Utilize and care for fire service ropes, including tying fire service knots.
• Operate CDF fire engine pumps and water moving systems.
• Describe use and care of fire shelters
• Demonstrate deployment techniques.
• Deploy wildland hoselays.
FIRE 1809 Wildland Fire Chain Saws (S-212)

Units: 1
Hours: 11 hours LEC; 25 hours LAB
Prerequisite: None.
Enrollment Limitation: To enroll in this course (FIRE 1809) the student must be an employee of a federal fire fighting agency, or a member of a state or local fire agency.
Catalog Date: June 1, 2020

This course is designed for prospective chainsaw operators. Topics include introduction to the function, maintenance and use of internal combustion engine powered chain saws, tactical wildland fire applications, and training for firefighters with little or no previous experience in operating a chain saw, providing hands-on cutting experience in surroundings similar to fireline situations. This course was formerly listed as CDF, FJPA, SMFD, USDA, EGFD, and SFD 1080 prior to September 2011. Credit/No Credit only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define and apply chain saw safety standards as required by OSHA and agency handbooks, manuals, directives, and owner’s manuals.
- identify and demonstrate basic chain saw operation, troubleshooting, maintenance, and safety features.
- demonstrate the tactical application of chain saws in fireline construction and mop up operations.

FIRE 1860 Physical Fitness for Fire Service Personnel

Units: 1.5 - 3
Hours: 13 hours LEC; 42 - 130 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is a physical fitness course for employed firefighters. It includes fire service wellness initiatives, cardiovascular and muscular fitness, safety and proper usage of exercise equipment, joint flexibility, hydration, nutrition and weight control, cardiac risk factors, and sleep disorders. This course was formerly listed as FITNS 341 prior to April 2011. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize major fire service wellness initiatives
- investigate physical disablers and illnesses common to firefighters
- describe the methods of self-evaluating personal fitness levels
- examine the basic elements of nutrition
- diagnose personal risk factors for coronary artery disease and formulate appropriate interventions
- differentiate between safe and unsafe practices during resistance training
- resolve the physiological responses of dehydration and supplementation through fluid replacement
- access sleeping disorders associated with fire suppression and formulate appropriate interventions
- recommend specific exercises associated with fire fighting

FIRE 1872 Basic Air Operations (S-270)

Units: 0.75
Hours: 16 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers aircraft types and capabilities, aviation management and safety for flying in and working with agency aircraft, tactical and logistical uses of aircraft, and requirements for helicopter take-off and landing areas. Topics include the types of helicopters and air tankers and the criteria that make up each type. Also included are safe firefighting conduct operations when aircraft are being used. Note: The regulations, procedures and policies addressed in this course are primarily those governing federal agency and ICS operations. State, county, or other political subdivisions using this course will need to consult their agency having jurisdiction with respect to regulations, procedures and policies. This course was formerly listed as FIRE 1058 prior to April 2011. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- identify the Incident Command System (ICS) types helicopters and air tankers and the criteria that make up each type.
- identify and discuss safety procedures to be followed while flying in or working around agency aircraft.
- define tactical and logistical aircraft use.
- describe safety procedures to be observed during water, foam, or retardant dropping.
- identify helicopter operations.

FIRE 1873 Strike Team/Task Force Leader, All-Hazards (STEN/TFLD) (AH-330)

Upon completion of this course, the student will be able to:

- define the differences between a Strike Team and a Task Force, so that Strike Team/Task Force (ST/TF) Leaders will maximize the use of resources, reducing the span-of-control and simplifies communications.
- identify the qualification requirements for ST/TF personnel, so that ST/TF are formed and designated with the all hazard incident command structure.
- assemble a ST/TF leader kit and personal “kit”, and describe the tools needed to assemble, brief and coordinate your resources while traveling to, during and returning from an incident, so that the safety, coordination and needs of all personnel and equipment on the ST/TF are provided.
- identify personnel actions, significant events and equipment issues, so that understanding of agreements are maintained and the duties are managed with maximum coordination, notification and documentation.
- utilize the resources of a ST/TF, so that the assignment will complete all operational goals with the elements of management and supervision while keeping personnel on track.
- describe the proper steps to assemble and brief the ST/TF on the assignment, operational procedures, expectations, information on the equipment and personnel, so that guidelines for assignment, safe travel routes and checking in are performed on all hazard incident.
- utilize assigned resources, so that Strike Team/Task Force resources are managed within incident guidelines matching assignments while assigned to an incident.
- describe the demobilization process, so that maximum safety and orderly demobilization is completed with the resources of the ST/TF for efficient return to home assignment.
- describe a snapshot in the “day in the life of a ST/TF leader,” so that elements and procedures are administered and managed on the all hazard incident.
- describe risk and the risk control elements, so that risk is managed with calculated and pre-determined tools with proper risk refusal.
- determine escape routes and safety zones when engaging a fire, so that human factors that contribute to fireline decision errors are managed with fireline conditions and utilization of required safety zones for maximum personnel safety considerations.
- determine tactical maneuvers and tactical actions, so that an appropriate tactical engagement process is determine utilizing FIRESCOPE WUI placarding system.
- determine and establish incident objectives, establish briefing elements, and provide feedback action item feedback for passover assignments on case studies, so that a relief transition assignment can carry the objectives of an incident action plan during the next operational period responding to an appropriate question and answer period.
- identify and describe typical situations that may be encountered as a ST/TF leader, so that a predetermined systematic problem analysis is completed and can be documented or reported for standard outcomes.
- determine unintended consequences, and identify potential freelancing decisions, so that the appropriate actions are determined to be directly in support of the all hazard incident action plan avoiding freelancing decisions.
This course presents the rules and regulations required to operate as a strike team/task force leader on emergency incidents. Additionally, this course explains the many rules and regulations governing strike team leaders’ actions. This course was formerly listed as CDF, FJPA, SMFD, and USDA 1075 prior to April 2011. Credit/No Credit only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Identify the hazards and risks on various incidents and describe how to mitigate them.
- List and describe the rules and regulations as they pertain to a strike team leader’s management of an incident.
- Implement task force/strike team.
- List and describe the five components of an Incident Action Plan.
- Develop and implement an incident action plan.

**FIRE 1875 Fire Operations in the Wildland/Urban Interface (S-215)**

This course is designed for the firefighter operating as incident commander in areas where urban growth and expansion interfaces with the wildland. Topics include firefighter safety in the interface, managing human factors in the interface, pre-incident planning, size-up and initial strategy, structure triage, structure protection overview, tactics in the interface, tactical operations and resource use in the interface, action assessment, plans updates, and after action review. This course was formerly listed as FIRE 1073 prior to April 2011. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- describe how to operate safely and effectively in a wildland/urban interface incident by using situational awareness.
- describe how to perform structure triage.
- describe how to operate safely and effectively in a wildland/urban interface incident by using pre-planning tools.
- apply a basic understanding of fire behavior.
- apply strategy and tactics unique to the wildland/urban environment.

**FIRE 1880 Field Observer/Display Processor (S-244/S-245)**

This course provides the techniques, theory, and practical experience to be a field observer/display processor in the Incident Command System Planning Section. Topics include identifying and interpreting maps, making map calculations, using observation aids, mapping from aircraft, making field observations, and processing and displaying data. This course was formerly listed as CDF, FJPA, SMFD, and USDA 1118 prior to April 2011. Credit/No Credit only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
Define the various types of maps used in wildland fire situations.

- Record weather and fire behavior measurements on a topographic map.
- Demonstrate the use of equipment as a Field Observer/Display Processor.
- Define the role of the Field Observer/Display Processor in the Incident Command System.

FIRE 1881 Helicopter Training (S217)

**Units:** 1.5  
**Hours:** 26 hours LEC; 14 hours LAB  
**Prerequisite:** FT 55 (SMFD 1055) and FT 52 (SMFD 1052)  
**Catalog Date:** June 1, 2020

This course provides an understanding of basic helicopter operations and their use on wildland firefighting incidents. This course includes aircraft terminology, helicopter support systems and helicopter tactics used in their operation. This course was formerly listed as FIRE 1070 prior to April 2011. Credit/No Credit only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- Perform safety briefing to passengers.
- Listen safety precautions to be observed when working around helicopters.
- Describe the procedures to be taken during a landing area emergency.
- List and complete incident reporting documents.
- List the six procedures to be accomplished during an in-flight emergency.
- List the personal protective equipment requirements.
- Discuss the general aspects of helicopter design, flight controls, terminology and principals of flight.
- Describe "safe autorotation" theory.
- Demonstrate how to correctly complete the helicopter load calculation form.
- Identify various helicopter models and types.
- Define helispots, helibase, and safety circles.

FIRE 1882 Ignition Operations (S-234)

**Units:** 1  
**Hours:** 16 hours LEC; 8 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course presents the functions of an Ignition Specialist or Firing-Boss on emergency incidents. It includes backfire and burnout safety training and the proper application of fire suppression firing methods and practices. This course was formerly listed as FIRE 1094 prior to April 2011. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the roles and responsibilities of Firing-Boss and Ignition Specialist
- name resources needed to successfully conduct an ignition operation
- discuss an ignition plan utilizing fire behavior data

FIRE 1883 Chainsaw Bench

**Units:** 0.5

1.5 Units: 16 hours LEC; 8 hours LAB

**Catalog Date:** June 1, 2020
This course covers basic chainsaw field mechanics and troubleshooting. Topics include chainsaw components, attachments, adjustments, problems, and maintenance.
This course was CDF, FJPA, and USDA 1083 prior to September 2011. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- Identify 20 parts of the chainsaw and describe the function of each.
- Describe cutting attachment inspections, adjustments, and maintenance.
- List the three carburetor adjustments and the function of each.
- Describe how carburetor adjustments are made.
- Explain air and fuel filter maintenance.
- List three problems that cause ignition failure.
- List the daily, weekly, and monthly maintenance items.
- Describe the procedure to adjust starter cord spring tension.

FIRE 1884 Crew Boss (Single Resource) (Blended) (S-230)

Units: 0.25
Hours: 8 hours LEC
Prerequisite: FFS 1541 with a grade of "C" or better
Enrollment Limitation: To enroll in this course (FIRE 1884) the student must be an employee of a federal fire fighting agency, or a member of a state or local fire agency.
Catalog Date: June 1, 2020

This course covers the performance of duties associated with the single resource boss position from initial dispatch through demobilization to the home unit. Topics include operational leadership, preparation and mobilization, assignment preparation, risk management, entrapment avoidance, safety and tactics, offline duties, demobilization, and post incident responsibilities. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe Crew Boss responsibilities prior to and during mobilization, on the incident, and during demobilization.
- identify the hazards and risks on various incidents and describe how to mitigate them.
- describe tactics which are appropriate to various wildland fire situations and procedures to implement them through the chain of command.

FIRE 1885 Firing Operations (S-219)

Units: 1
Hours: 16 hours LEC; 8 hours LAB
Prerequisite: None
Enrollment Limitation: To enroll in this course (FIRE 1885) the student must be an employee of a federal fire fighting agency, or a member of a state or local fire agency.
Catalog Date: June 1, 2020

This course utilities a blended approach to learning, incorporating a mix of online and instructor-led training (ILT). Students complete the online training portion of the course prior to taking the ILT. Topics include the roles and responsibilities of a Firing Boss (FIRB), outlines duties of other personnel who may engage firing operations, and illustrates common firing devices and techniques. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- identify the roles and responsibilities of the FIRB for planning, execution, safety, coordination, and evaluation of an ignition operation on a wildland or prescribed fire.
describe the characteristics, applications, safety, and availability of the various firing devices a FIRB has at their disposal.

given a wildland or prescribed scenario, prepare a firing plan and briefing that contains desired fire behavior, firing techniques, required resources, coordination, safety and risk management factors, and communication, to meet specific objectives.

FIRE 1886 Engine Boss (Single Resource) (Blended) (S-231)

Units: 0.25
Hours: 3.5 hours LEC; 4.5 hours LAB
Prerequisite: FIRE 1884
Enrollment Limitation: To enroll in this course (FIRE 1886) the student must be an employee of a federal fire fighting agency, or a member of a state or local fire agency.
Catalog Date: June 1, 2020

This course is designed to produce student proficiency in the performance of the duties associated with Engine Boss, single resource (ENGB). Topics include engine and crew capabilities and limitations, information sources, fire size-up considerations, tactics, and wildland/urban interface. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- perform the tasks of an engine boss in making the tactical decisions required to safely manage an engine on an incident.

Public Safety Training Center (PSTC)

PSTC 1200 Basic Law Enforcement Academy

Units: 24 - 32
Hours: 304 - 389 hours LEC; 410 - 584 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must 1) Be free of felony convictions 2) Possess a valid California Driver's License 3) Undergo a fingerprint and criminal history check 4) Be a minimum of 18 years of age 5) Be a United States high school graduate, pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university 6) Complete a medical suitability examination.
Catalog Date: June 1, 2020

The Basic Law Enforcement Academy meets or exceeds the minimum training requirements of the California Commission on Peace Officer Standards and Training (POST) for Level I Reserve Officer training and for Full-time Regular Peace Officer employment. Topics include: leadership, professionalism & ethics, policing in the community, introduction to criminal law, laws of arrest, search and seizure, presentation of evidence, juvenile law & procedure, investigative report writing, vehicle operations, use of force, vehicle operations, domestic violence, unusual occurrences, traffic collision investigations, crime scenes, evidence, defensive tactics, firearms/chemical agents, hazardous materials awareness, and cultural diversity/discrimination. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the components of leadership, the responsibility of law enforcement officers to lead, and the impact of law enforcement leadership on the profession.
- distinguish between problem oriented policing and community policing.
- discuss landmark events in the evolution of civil and human rights.
- identify and discuss the freedoms and rights afforded to individuals under the US Constitution, the Bill of Rights, and later amendments.
- describe a peace officer’s authority, responsibility, and potential for liability in the areas of search and seizure law, the protections provided by constitutional law, statutory law, and case law against unreasonable searches and seizures.
- describe the rules of evidence as they pertain to relevancy, types of evidence, and evidence authentication.
- discuss the consequences of using unreasonable force and the legal/ethical responsibilities to intervene if force used by another peace officer is inappropriate or unlawful.
- describe the consequences for the use of unreasonable force on the officer, community perception, and public trust.
- demonstrate safe and effective handcuffing procedures, mechanics of control holds and take down techniques, handgun retention techniques, and delivering strikes with an impact weapon.
- distinguish and apply reasonable force options in a given circumstance.
- demonstrate the safe and effective operation of specified firearms.
- demonstrate the ability to safely drive and control a law enforcement vehicle while operating under emergency and pursuit conditions.
- demonstrate appropriate actions officers should take to maintain their own safety and the safety of others while on patrol.
- identify terminology, capabilities, exposure symptoms, and decontamination procedures in order to safely and effectively handle/deploy chemical agents and gas masks.
- demonstrate proficiency in Victimology and Crisis Intervention.
- demonstrate proficiency in performing the tasks of an officer conducting preliminary investigations.
- demonstrate proficiency in contacting people with simulated disabilities.
- demonstrate proficiency in responding to and investigating simulated in-progress crimes and critical incidents.
- prepare an arrest report which minimally incorporates the elements of a crime, probable cause to stop, probable cause to search/seize evidence, recovery of evidence, probable cause to arrest, and admonishment of the suspect.
- demonstrate proficiency in providing basic life support techniques.
- demonstrate appropriate peace officer responses while testifying as a witness.

PSTC 1251 Skills and Knowledge Modules

Units: 0.25 - 3
Hours: 4.5 - 44 hours LEC
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course is designed to facilitate the acquisition of advanced skills and knowledge necessary for policing and peacekeeping in contemporary society. Course topics are based upon California Commission on Peace Officer Standards and Training (POST) updates to mandated minimum training for peace officers, legislative mandates, changes in local, state and federal laws, and evolving bodies of knowledge in the law enforcement field. Course hours are variable in order to meet specific local and regional needs which may exceed the POST minimum. Topics include: arrest methods update, chemical agents update, community relations, courtroom testimony, emotional survival, entry techniques update, ethics, field tactics, impact weapons update, interpersonal/tactical communication update, investigative report writing update, juvenile law update, legal update, less than lethal force update, search and seizure update, search warrant writing and service and tactical firearms update. Pass/No Pass.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the inter-relationship between statutory and case law, law enforcement practice and policies, and social and cultural change.
- develop new and/or advanced skills and knowledge beyond basic academy competencies.
- demonstrate skills and knowledge as POST mandated in the course curriculum.
- pass POST required written and exercise exams for perishable skills.

PSTC 1270 Juvenile Corrections Officer Core

Units: 7.5
Hours: 126 hours LEC; 34 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for the new juvenile corrections officer or the individual interested in a career in juvenile corrections. Topics include California criminal justice system, professionalism and ethics, defensive tactics, report writing, mental health issues, gangs and physical conditioning. This course is certified by California Standards and Training for Corrections (STC). This course is formerly known as PSTC 1519. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- assess gang signs to determine gang affiliation.
- draft court reports making recommendations to court personnel.
- analyze court documents to determine appropriate sentencing.
- apply arrest and control techniques to restrain and/or take into custody law violators.
- identify appropriate criminal codes applying to violations of the law.
- define mental health issues that afflict individuals in a custodial environment.

PSTC 1271 Adult Correctional Officer Core Course

This course is designed for entry level positions in the adult corrections field. Topics include criminal procedure, interviewing and counseling techniques, defensive tactics, public relations, oral and written communications, classifications and housing of inmates, court testimony and indicators of psychological problems. This course meets or exceeds Standards and Training for Corrections' minimum training requirements for entry level adult corrections officers. This course is formerly known as SCSD 1139 and PSTC 1879. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast the past and present criminal justice system.
- assess a set of facts and apply the appropriate statute, code or regulation.
- classify individuals as gang members based on specific identifying criteria.
- categorize items as non-contraband or contraband in a correctional setting.
- apply restraint holds.

</table>

This course is designed to enhance the basic criminal investigation skills of the California Department of Corrections Investigator. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and apply the accepted and standard methods of collecting evidence
- recognize the effects of drugs and alcohol
- prepare a valid search warrant
- assemble and analyze intelligence information from various sources
- differentiate gang affiliations

PSTC 1273 Probation Officer Core Course

This course is designed for entry-level positions in the probation officer field. Topics include criminal justice system, legal foundations, terminology, codes, statutes, case law, indicators of psychological problems, gangs, interviews, court reports, and report writing. This course meets or exceeds minimum standards set by Standards and Training for Corrections (STC). This course is formerly known as PSTC 1878. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate proper search techniques in a field setting.
- differentiate the need to interview or interrogate a subject based upon a recognized fact pattern.
- compare and contrast legal liabilities, roles, and responsibilities relating to the position of probation officer.
- recommend a course of action to court officials relating to probation.
- demonstrate the physical skills and abilities necessary to physically defend self and others.

PSTC 1275 Adult Corrections: Supplemental Core Course

Units: 3.5
Hours: 59.5 hours LEC; 10.5 hours LAB
Prerequisite: PSTC 1271
Catalog Date: June 1, 2020

This course expands upon the student’s existing knowledge of legal and procedural concepts introduced in PSTC 1271. Instruction is focused on correctional codes and statutes, inmate classification, contraband, and booking and inmate supervision. This course is formerly known as PSTC 1294. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply regulations related to Title 15 to a correctional facility.
- assess inmate needs and provide appropriate supervision and care.
- differentiate the different types and classes of fires.
- compare and contrast inmate gangs and their cultures.
- examine safety policies and strategies for supervising inmates.
- evaluate situations and select appropriate security measures to safeguard inmates and officers.

PSTC 1300 Bureau of Investigative and Security Services (BSIS) Skills Training Course for Security Guards

Units: 2
Hours: 40 hours LEC
Prerequisite: None.
Enrollment Limitation: Applicants must 1) be at least 18 years old and 2) undergo a criminal history background check through the California Department of Justice (DOJ) and the Federal Bureau of Investigation (FBI).
Catalog Date: June 1, 2020

This course provides the student with the skills training required for security guard licensing by the Department of Consumer Affairs, Bureau of Security and Investigative Services (BSIS). Topics include powers to arrest, weapons of mass destruction, public relations, observation and documentation, communication and its significance, liability/legal aspects, officer safety, handling of difficult people, trespass, and courtroom demeanor. Students will receive a certificate of completion at the end of the course and be eligible to apply for BSIS security guard registration.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the role and responsibilities of the security guard/proprietary private security officer.
- differentiate the legal authority between a security guard/proprietary private security officer and a peace officer.
- recall the definition of arrest.
- describe the circumstances under which a security guard/proprietary private security officer may perform a frisk for weapons.
- recall the definition of terrorism and the techniques of physical security.
- discuss the reasons security guards should develop and maintain positive relationships with community members and customers.
- write a basic observation report.
- identify internal and external resources that may be necessary to contact under normal and/or emergency conditions.
- compare and contrast aspects of civil, legal, and administrative liability.
- discuss aspects of personal safety.
- recall the definition of trespass.
- describe challenges associated with conflict management.
- demonstrate professional demeanor before, during, and after courtroom testimony.

</tbody>
</table>

This course improves the skills and knowledge of the BSIS Security Guard and is accepted as part of the 16 hours of elective training mandated by the Business and Professions Code section 7683.6 and 7683.6 (b). It may be taken within thirty (30) days from the day the security guard's registration card is issued or the day the security guard starts employment, or within the first six (6) months from the day the security guard's registration card is issued or the day the security guard starts employment. Topics include security officer safety and handling difficulty people. Pass/No Pass Only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
- identify basic threats to officer safety.
- discuss proper and safe measures to take when exposed to a blood borne pathogen.
- identify hazardous materials, precautionary measures to avoid injury, and proper safety and notification procedures.

**PSTC 1302 Skills Training for Security Guards - BSIS Elective B**

<table>

</tr>
</tbody>
</table>

This course improves the skills and knowledge of the BSIS Security Guard and is accepted as part of the 16 hours of elective training mandated by the Business and Professions Code section 7683.6 and 7683.6 (b). It may be taken within thirty (30) days from the day the security guard's registration card is issued or the day the security guard starts employment, or within the first six (6) months from the day the security guard's registration card is issued or the day the security guard starts employment. Topics include trespass and arrest; search and seizure update. Pass/No Pass Only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:
- discuss how trespass law applies to open land, private property, private buildings, public property, and other public places.
- recall the Merchant Law, its use and limitations.

**PSTC 1305 Introduction to Loss Prevention**
This course introduces the student to the foundational concepts of loss prevention in the retail industry. It covers the roles and responsibilities of loss prevention officers, the crimes that commonly occur in the retail environment, the legal authority for the loss prevention officer to effect an arrest, loss prevention techniques, case building, and courtroom testimony. Students may be required to travel to multiple locations for course instruction and demonstrations. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the impact of theft on retail businesses.
- discuss the roles and responsibilities of the loss prevention officer/agent.
- describe the types of crimes that commonly occur in the retail environment.
- recall the legal authority for loss prevention officers/agents to effect an arrest.
- identify theft evidence.
- write a retail theft incident report.
- compare and contrast floor walking techniques.
- prepare for courtroom testimony in a retail theft case.

PSTC 1400 Limited Peace Officer Criminal Investigations I

Units: 4
Hours: 66 hours LEC; 18 hours LAB
Prerequisite: PSTC 1501, 1555, and 1800
Catalog Date: June 1, 2020

This course is designed to provide advanced investigative skills and knowledge to the limited peace officer, as defined in PC 830.11 PC. Topics include evidence, interviewing techniques, search and seizure, search warrants, working with victims and witnesses, managing informants, information sources, case preparation, courtroom testimony, media relations, and surveillance techniques. This course was formerly PSTC 1803. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the role of a criminal investigator at a crime scene.
- recognize, identify, and properly handle evidence.
- recall search and seizure laws and the legal requirements and parameters of a search warrant.
- obtain investigative information using advanced interview and interrogation techniques.
- develop and organize an investigative surveillance plan.
- discuss the requirements, issues, and challenges of maintaining and managing informants over time.

PSTC 1401 Limited Peace Officer Criminal Investigations II

Units: 3
Hours: 48 hours LEC; 20 - 32 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to advance the skill set of the limited peace officer, as defined in PD 830.11 PC. Topics include personal safety, medical marijuana investigations, economic crimes, tobacco dating, crime scene management, evidence identification, collection, processing, and preservation, case management, investigative report writing, and courtroom testimony. Pass/No Pass only.
Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate and define situational awareness.
- discuss investigative and evidentiary aspects of medical marijuana, economic crimes, and tobacco dating.
- recall the common obstacles to effective crime scene management.
- discuss the technological advances in evidence identification, collection, processing, and preservation.
- assess case documents and files for investigative detail and compliance for regulatory review and audit.
- prepare an in-depth and detailed investigative report.
- anticipate courtroom challenges and objections to victim, witness, and suspect credibility and testimony and plan/implement investigative methods to minimize these issues.

PSTC 1402 Limited Police Officer Criminal Investigations III

Units: 3
Hours: 48 hours LEC; 20 - 32 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to provide advanced investigative skills and knowledge to the limited peace officer, as defined in PC 830.11 PC. Topics include community oriented policing and problem-solving, media relations, and surveillance techniques. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- define community oriented policing.
- apply a problem-solving model to a crime pattern or quality of life issue.
- evaluate social media content for investigative leads.
- recall the laws and limitations associated with seizure of electronic devices.
- discuss the legal issues associated with accessing social media accounts for investigative and evidentiary purposes.

PSTC 1403 Basic Skills for the District Attorney Non-Sworn Investigator

Units: 1.5
Hours: 32 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to provide the student with foundational skills and knowledge for employment as a non-sworn investigator in a California District Attorney’s office. Topics include the role of the district attorney and district attorney investigator, evidence, interview skills, report writing, technology resources, criminal justice information systems, subpoenas and due diligence, personal safety, and courtroom testimony. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe the roles of the district attorney and the district attorney investigator.
- describe the prosecutor’s obligations in discovery.
- list the components of evidence collection and preservation.
- demonstrate basic interview skills.
- demonstrate basic note-taking skills.
- cite key provisions of the Electronic Communications Privacy Act.
identifying common law enforcement sharing applications and their capabilities.

- define due diligence and associated legal requirements.

- explain the necessity of situational awareness and the use of tactical communication in the field.

- compare and contrast direct and cross examination.

- demonstrate appropriate demeanor when objections are raised during courtroom testimony.

PSTC 1500 Basic Sheriff Academy

**Units:** 25  
**Hours:** 198 hours LEC; 758 hours LAB  
**Prerequisite:** None.  
**Enrollment Limitation:** Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.  
**Catalog Date:** June 1, 2020

This course is a consolidated program of regular basic law enforcement training. Topics include criminal law, juvenile law, laws of evidence, administration of justice, community relations, investigation, traffic control and procedures, patrol procedures, defensive tactics, arrest control, weaponless defense, baton techniques, first aid/cardio pulmonary resuscitation (CPR), and vehicle operations. This course is certified by the California Commission on Peace Officer Standards and Training (POST). Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- define necessary procedures including patrol, arrest, self defense, and vehicle operations.

- explain and analyze basic investigations, traffic control, and community relations.

- apply defensive techniques including handcuffing, baton, chemical agents, and weaponless defense.

- analyze critical aspects of juvenile law, criminal law, laws of evidence, and other related codes.

- demonstrate the principles of handgun shooting, including safe and effective techniques to manipulate the semiautomatic pistol in both the left and right hand.

- write a clear, concise, and organized report which documents the facts and activities of a criminal investigation.

- evaluate the consequences of using unreasonable force and the legal and ethical responsibilities to intervene if the force being used by another peace officer is unlawful or inappropriate.

PSTC 1501 PC 832 Arrest, Search & Seizure

**Units:** 2  
**Hours:** 36 hours LEC; 4 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course satisfies the arrest, search, and seizure requirement for peace officers as defined in section 832 of the California Penal Code. Topics include professional orientation, justice system, knowing your community, laws of evidence and arrest, investigation, use of force and, arrest and control. This course is Commission on Peace Officer Standards and Training (POST) certified. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- discuss ethical conduct required of today's peace officers.

- compare and contrasts elements of a crime and select the appropriate crime code(s).

- name the components of the criminal justice system.

PSTC 1502 Basic Law Enforcement Academy- Module III
The course satisfies Level III training requirements of the Commission on Peace Officer Standards and Training (POST) Level III module. Topics include: leadership and ethics, community policing and problem solving, introduction to criminal law, investigative report writing, use of force, traffic enforcement, crimes scenes and forensics, arrest methods and defensive tactics, and firearms. POST certification #2970-00133. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- explain the components of leadership, the responsibility of law enforcement officers to lead, and the impact of law enforcement leadership on the profession and the community.
- identify and discuss the freedoms and rights afforded to individuals under the U.S. Constitution, the Bill of Rights, and later amendments.
- describe the rules of evidence as they pertain to relevancy, types of evidence, evidence authentication and chain of custody.
- perform the steps of a preliminary criminal investigation.
- write a clear, concise, and organized report which documents the facts and activities of a criminal investigation.
- discuss the consequences of using unreasonable force, and the officer's legal and ethical responsibilities to intervene if the force being used by another peace officer is inappropriate or unlawful.
- demonstrate techniques to effectively direct and control traffic using hand signals, flashlights, and warning devices.
- demonstrate safe and effective handcuffing procedures, mechanics of control holds and takedown techniques, handgun retention techniques, and use of an impact weapon.
- demonstrate basic life support techniques.
- demonstrate the principles of handgun shooting, to include techniques to safely and effectively manipulate the semiautomatic pistol in both the left and right hand.

PSTC 1503 Basic Law Enforcement Academy- Module II

This course satisfies training requirements of the Commission on Peace Officer Standards and Training (POST) Module II. Topics include property crimes, crimes against persons, crimes against the justice system, laws of arrest, search and seizure, presentation of evidence, patrol techniques, vehicle pullovers, crimes in progress, lifetime fitness, and career preparation. POST certification #2970-00140. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- distinguish between problem oriented policing (POP) and community policing (CP).
- identify the actions which should be taken during a preliminary investigation.
- describe a peace officer's authority, responsibility, and potential for liability in the areas of search and seizure law, as well as the protections provided by constitutional law, statutory law, and case law against unreasonable searches and seizures.
- demonstrate appropriate peace officer responses while testifying as a witness.
- describe the consequences for the use of unreasonable force on the officer, community perception, and public trust.
• demonstrate appropriate actions officers should take to maintain their own safety and the safety of others while on patrol.
• demonstrate handgun takeaway and retention techniques.
• demonstrate the safe and effective operation of specified firearms.
• identify the terminology, capabilities, exposure symptoms, and decontamination procedures in order to safely and effectively handle and deploy chemical agents and gas masks.
• discuss landmark events in the evolution of civil and human rights.

PSTC 1504 Basic Law Enforcement Academy- Module I

Units: 13.5 - 17
Hours: 149 - 190 hours LEC; 286 - 360 hours LAB
Prerequisite: PSTC 1503
Enrollment Limitation: Students must 1) be free of felony convictions 2) possess a valid California Driver's License 3) undergo a fingerprint and criminal history check 4) be a minimum of 18 years of age 5) be a United States high school graduate, pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university, and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course, the third in a three-part series of courses, satisfies training requirements of the Commission on Peace Officer Standards and Training (POST) for the Level I reserve or full-time regular peace officer. Topics include victimology, crimes against children, juvenile law and procedure, vehicle operations, crimes in progress, domestic violence, missing persons, traffic collision investigation, lifetime fitness, firearms and chemical agents, persons with disabilities, gang awareness, emergency management, interview and interrogations, courtroom testimony and emotional survival. Upon successful completion the students will possess a Certificate of Completion of the POST Basic Law Enforcement Academy. POST certification #2970-00150. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• discuss the officer's responsibility to provide ethical leadership in the law enforcement agency and in the community.
• demonstrate proficiency in the safe and proper application of control holds, handgun retention, and handgun take-away techniques.
• demonstrate proficiency in the safe and proper application of the carotid control hold and for aftercare.
• demonstrate proficiency in the delivery of safe and proper impact weapon strikes.
• demonstrate proficiency in the safe handling and use of specified firearms under a variety of conditions.
• demonstrate proficiency in victimology and crisis intervention.
• understand the officer's legal responsibilities, duties, and obligations when interacting with juveniles.
• demonstrate proficiency in first aid and CPR.
• demonstrate the ability to safely drive and control a law enforcement vehicle under emergency and pursuit conditions.
• demonstrate proficiency in conducting pedestrian stops.
• demonstrate proficiency in conducting vehicle pullovers under a variety of conditions.
• demonstrate proficiency in responding to and investigating suspicious persons and incidents.
• perform the tasks of an officer conducting preliminary investigations of crimes against property and persons.
• write an investigative crime report which is free of spelling and grammar errors.
• write a traffic collision report and draw a related traffic collision diagram.
• demonstrate proficiency in the administration of a DUI field sobriety test.
• demonstrate proficiency in contacting persons with disabilities.
• identify items commonly associated with illegal marijuana grows and clandestine labs.
• pass the POST-developed physical fitness work sample test battery (WSTB).
• pass the POST-approved arrest methods exercise tests.
• pass the POST-approved firearms tests.
• pass the POST-approved scenario tests.
PSTC 1505 California Highway Patrol Basic Law Enforcement Academy

This POST certified course is a consolidated program of training in criminal law, juvenile law, laws of evidence, administration of justice, community relations, investigation, traffic control and procedures, patrol procedures, defensive tactics, arrest control including handcuffing and weaponless defense, baton techniques, firearms, first aid and CPR, and vehicle operations. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- discuss the objectives and responsibilities of each of the three components of the criminal justice system.
- discuss the roles and responsibilities of the peace officer in modern society.
- discuss the professional and ethical standards by which peace officer are held in order to maintain the public trust.
- describe the psychological trauma experienced by crime victims.
- identify techniques used to defuse crisis situations which result from people being victims of crime.
- differentiate between the letter of the law and spirit of the law, and between criminal and civil law.
- recall the statutory definitions, crime elements to arrest for, and classifications of general criminal statutes and specified property crimes, person crimes, and narcotic and alcohol-related crimes.
- describe the physical and behavioral indicators of child neglect and abuse.
- describe the common emotional and physical reactions victims experience and the pressures associated with reporting a sex crime.
- discuss the roles and responsibilities of peace officers regarding the protection of the rights of juveniles under California law.
- describe how specified drugs can affect normal behavior.
- recognize the existence of an illegal manufacturing/cultivating site for controlled substances based on observations and discovery, and how officers need to take appropriate safety precautions to protect themselves and the public from potential associated problems.
- identify and discuss amendments to the U.S. Constitution and similar sections of the California Constitution that are related to peace officer authority, liability, and responsibility they have in making arrests.
- differentiate the statutory rules regarding appropriate actions during a consensual encounter, detention, and arrest.
- understand that in order to develop admissible evidence while ensuring the constitutional rights of all individuals, peace officers must correctly follow standardized practices for conducting crime scene interviews and interrogations.
- understand the peace officer’s authority, responsibility, and potential for liability in the areas of search and seizure law, as well as the protections provided by constitutional law, statutory law, and case law against unreasonable searches and seizures.
- identify the rules and requirements for peace officers to obtain and execute a search warrant and of the legal requirements for warrantless searches.
- discuss the rules of evidence as they pertain to relevancy, types of evidence, authentication, and chain of custody.
- discuss the laws governing the use of force including the Fourth Amendment standard for determining the objective use of reasonable force, the circumstances under which a peace officer has the authority to use force, and the level of authority agency policies have regarding the use of force by a peace officer.
- write an investigative report that is well organized, includes facts needed to establish that a crime has been committed and all actions taken by officers were appropriate, and is relatively free or errors in sentence structure, grammar and other writing mechanics.
- demonstrate proficiency in the safe and proper operation of a law enforcement patrol vehicle while utilizing defensive driving principles and techniques under a variety of low and high speed conditions.
- demonstrate proficiency in the use of force to include problem-solving, decision making, legal authority/individual rights, officer safety, effective verbal and non-verbal communication skills, ethical action based upon professional values and expectations, and stress tolerance and emotional regulation.
- demonstrate proficiency in the use of effective communication, command presence, and appropriate physical control during the detention of a verbally uncooperative individual.

25 Units: 152 hours LEC; 894 hours LAB

Prerequisite: None.

Enrollment Limitation: Students must 1) be free of felony convictions 2) possess a valid California Driver’s License 3) undergo a fingerprint and criminal history check 4) be a minimum of 18 years of age 5) be a United States high school graduate, pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university, and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This POST certified course is a consolidated program of training in criminal law, juvenile law, laws of evidence, administration of justice, community relations, investigation, traffic control and procedures, patrol procedures, defensive tactics, arrest control including handcuffing and weaponless defense, baton techniques, firearms, first aid and CPR, and vehicle operations. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the objectives and responsibilities of each of the three components of the criminal justice system.
- discuss the roles and responsibilities of the peace officer in modern society.
- discuss the professional and ethical standards by which peace officer are held in order to maintain the public trust.
- describe the psychological trauma experienced by crime victims.
- identify techniques used to defuse crisis situations which result from people being victims of crime.

- demonstrate proficiency in the use of force to include problem-solving, decision making, legal authority/individual rights, officer safety, effective verbal and non-verbal communication skills, ethical action based upon professional values and expectations, and stress tolerance and emotional regulation.
- demonstrate proficiency in the use of effective communication, command presence, and appropriate physical control during the detention of a verbally uncooperative individual.
demonstrate proficiency in responding to reports of suspicious persons.

- demonstrate proficiency in conducting safe and proper vehicle pullovers under a variety of conditions.
- demonstrate proficiency in employing effective tactics while responding to specified high-risk situations and critical incidents.
- understand the peace officer’s responsibility to keep the peace in order to prevent a civil matter from escalating into criminal activity that could threaten the safety of officers and the persons involved.
- demonstrate appropriate skills for defusing, mediating and resolving disputes in order to protect their safety and the safety of others, as well as prevent a dispute from escalating.
- understand the peace officer’s legal and professional obligations as well as the need for sensitivity and effective communication when responding to a missing persons investigation.
- perform the tasks associated with specified criminal investigations.
- demonstrate competency in effectively directing and controlling traffic using hand signals, flashlights, and warning devices.
- recall commonly used California Vehicle Code violations and the associated classifications.
- perform the tasks associated with a traffic collision investigation.
- understand definitions, laws, and procedures related to DUI arrests.
- explain the legal responsibilities of a peace officer in the care and custody of an arrested person from the time of arrest to the transfer of responsibility to a local detention facility.
- demonstrate physical proficiency in a law enforcement-related test battery.
- demonstrate competency in conducting safe and proper searching, handcuffing, and take-down techniques.
- demonstrate competency in applying the carotid restraint hold.
- demonstrate competency in handgun take-away and retention techniques.
- demonstrate competency in administering first aid/CPR.
- demonstrate competency in basic handgun and shotgun safety, mechanical functions, manipulations, and shooting accuracy under a variety of conditions.
- understand the laws regulating access and use of law enforcement information systems.
- recognize the behavioral and psychological indicators of mental illness in order to determine if an individual is a danger to others, a danger to self, or gravely disabled and to determine an appropriate response.
- discuss the indicators of gang involvement.
- recognize the risks presented by hazardous materials and the peace officer’s role in responding to hazardous materials incidents and the indicators and warning systems that identify specific dangers of hazardous materials.
- discuss the complexities and impact of cultural diversity within law enforcement agencies and California’s changing communities.
- discuss how to implement the Incident Command System (ICS) and its relationship to the Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).

PSTC 1506 Sacramento Police Department Basic Academy

Units: 22 - 26
Hours: 251 hours LEC; 466 - 682 hours LAB
Prerequisite: None.
Enrollment Limitation: Students must 1) be free of felony convictions 2) possess a valid California Driver's License 3) undergo a fingerprint and criminal history check 4) be a minimum of 18 years of age 5) be a United States high school graduate, pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university, and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course presents a comprehensive program of training in law, ethics, community policing, vehicle operations, use of force, patrol techniques, firearms, traffic control and enforcement, criminal investigations, physical fitness, chemical agents, and first aid and CPR. Upon successful completion of the course, students receive a POST Basic Academy Certificate of Completion. This course is formerly known as SPD 1100. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• discuss the objectives and responsibilities of each of the three components of the criminal justice system.
• discuss the professional and ethical standards by which peace officers are held in order to maintain the public trust.
• discuss the roles and responsibilities of the peace officer in modern society.
• describe the psychological trauma experienced by crime victims.
• identify techniques used to defuse crisis situations which result from people being victims of crime.
• differentiate between the letter of the law and spirit of the law, and between criminal and civil law.
• recall the statutory definitions, crime elements to arrest for, and classifications of general criminal statutes and specified property crimes, person crimes, and narcotic and alcohol-related crimes.
• discuss the physical and behavioral indicators of child neglect and abuse.
• describe the common emotional and physical reactions victims experience and the pressures associated with reporting a sex crime.
• discuss the roles and responsibilities of peace officers regarding the protection of the rights of juveniles under California law.
• recognize how drugs can affect normal behavior.
• recognize the existence of an illegal manufacturing/cultivating site for controlled substances based on observations and discovery, and how officers need to take appropriate safety precautions to protect themselves and the public from potential associated problems.
• identify and discuss amendments to the U.S. Constitution and similar sections of the California Constitution that are related to the authority, liability, and responsibility they have in making arrests.
• differentiate the statutory rules regarding appropriate actions during a consensual encounter, detention, and arrest.
• understand that in order to develop admissible evidence while ensuring the constitutional rights of all individuals, peace officers must correctly follow standardized practices for conducting crime scene interviews and interrogations.
• understand the peace officer’s authority, responsibility, and potential for liability in the areas of search and seizure law, as well as the protections provided by constitutional law, statutory law, and case law against unreasonable searches and seizures.
• understand the rules and requirements for peace officers to obtain and execute a search warrant and of the legal requirements for warrantless searches.
• discuss the rules of evidence as they pertain to relevancy, types of evidence, authentication, and chain of custody.
• discuss the laws governing the use of force including the Fourth Amendment standard for determining objective reasonable force, the circumstances under which a peace officer has the authority to use force, and the level of authority agency policies have regarding the use of force by a peace officer.
• write an investigative report that is well organized, includes facts needed to establish that a crime has been committed and all actions taken by officers were appropriate, and is relatively free of errors in sentence structure, grammar and other writing mechanics.
• demonstrate proficiency in the safe and proper operation of a law enforcement patrol vehicle while utilizing defensive driving principles and techniques under a variety of low and high speed conditions.
• demonstrate proficiency in the use of force.
• demonstrate proficiency in responding to reports of suspicious persons.
• demonstrate proficiency in conducting safe and proper vehicle pullovers under a variety of conditions.
• demonstrate proficiency in employing effective and safe tactics and/wile responding to specified high-risk situations and critical incidents.
• understand the peace officer’s responsibility to keep the peace in order to prevent a civil matter from escalating into criminal activity that could threaten the safety of officers and the persons involved.
• demonstrate appropriate skills for defusing, mediating, and resolving disputes in order to protect their safety and the safety of others, as well as prevent a dispute from escalating.

• recall commonly used California Vehicle Code violations and associated classifications.
• understand definitions, laws, and procedures related to DUI arrests.
• perform the tasks associated with a traffic collision investigation.
- explain the legal responsibilities of a peace officer in the care and custody of an arrested person from the time of arrest to the transfer of responsibility to a local detention facility.
- demonstrate physical proficiency in a law enforcement related test battery.
- demonstrate competency in conducting safe and proper searching, handcuffing, and take-down techniques.
- demonstrate competency in applying the carotid restraint hold.
- demonstrate competency in handgun take-away and retention techniques.
- demonstrate competency in administering first aid/CPR.
- demonstrate competency in basic handgun and shotgun safety, mechanical functions, manipulations, and shooting accuracy under a variety of conditions.
- understand the laws regulating access and use of law enforcement information systems.
- recognize the behavioral and psychological indicators of mental illness in order to determine if an individual is a danger to others, a danger to self, or gravely disabled and to determine an appropriate response.
- discuss the indicators of gang involvement.
- recognize the risks presented by hazardous materials and the peace officer's role in responding to hazardous materials incidents and the indicators and warning systems that identify specific dangers of hazardous materials.
- discuss the complexities and impact of cultural diversity within law enforcement agencies and California's changing communities.
- discuss how to implement the Incident Command System (ICS) and its relationship to the Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).

PSTC 1507 Preparing for a Law Enforcement Career

Units: 0.5 - 0.75
Hours: 4 - 8 hours LEC; 16 - 24 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces the student to requirements that must be met for application and acceptance into a California Peace Officer Standards and Training (POST) certified regular basic law enforcement academy. Topics include an overview of the academy training program and program standards, POST and legislatively mandated pre-academy testing, educational requirements, required clearances, reading and writing tests, physical skills tests, and availability of financial assistance through the community college. It also covers guidance in researching law enforcement agencies throughout the state and preparing for a law enforcement agency background and interview process. Field trips may be required. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- articulate the legal requirements for application and acceptance into a POST certified regular basic law enforcement academy.
- describe the recommended skill set for academy applicants.
- discuss the purpose and role of the law enforcement communication metric.
- identify behaviors consistent with law enforcement academy success.
- demonstrate written communication skills in a writing exercise.
- demonstrate oral communication skills in a mock interview.

PSTC 1512 POST Instructor Development - Intermediate Level 2

Units: 2
Hours: 40 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides the skills necessary for obtaining level 2 instructor certification through California California Commission on Peace Officer Standards and Training (POST). Topics include learning theories, instructional design, student assessment, outcome-based learning, problem-based learning, facilitation skills, active learning, presentation skills, and critical thinking. Pass/No Pass only.
Student Learning Outcomes
Upon completion of this course, the student will be able to:

- design a lesson and/or learning activity that addresses learning styles, learning modalities, and the different audiences within the training environment.
- integrate assessment strategies that determine what students know, don't know, and need to know based on presented evidence.
- analyze the quality of critical thinking and problem solving in a lesson plan.
- explain the concept of problem based learning.

PSTC 1514 Academy Graduate Training - SPD

Units: 1.5 - 2
Hours: 28 - 34 hours LEC
Prerequisite: PSTC 1200 with a grade of "C" or better
Catalog Date: June 1, 2020

This course, designed for the new academy graduate, provides specific additional training in areas not covered in the POST Basic Academy. Topics include use of the intoxilyzer, in-car camera, field training overview and the robbery alarm monitor system. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- demonstrate the proper and effective use of the intoxilyzer.
- explain the M26 Taser device and demonstrate the necessary after force care following use on an individual.
- describe the purpose and function of the Internal Affairs Unit.
- describe the purpose and function of the Peace Officers' Association.

PSTC 1515 Academy Instructor Certification Course

Units: 1
Hours: 8 hours LEC; 32 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for instructors assigned to teach at a POST-certified basic law enforcement academy. Upon completion of the course, students receive a POST AICC certificate of completion. Topics include adult learning methodologies, facilitation skills, and the POST regular basic academy instructional design. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- define and apply adult learning concepts and principles in an educational setting.
- identify the roles and responsibilities of a basic academy instructor.
- design and integrate course curriculum and lesson plans with POST training and testing specifications.
- demonstrate knowledge of a variety of instructional techniques and a commitment to delivering entry-level training.
- compare and contrast a variety of instructor and student learning resources and training aids.

PSTC 1517 Academy Graduate Training

Units: 2
Hours: 41 hours LEC; 32 hours LAB
Prerequisite: California POST-certified basic law enforcement academy within 2 years or equivalent as determined by the Dean of Academy Instruction.

Note: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School
This course provides the recent POST-certified law enforcement academy graduate with additional training in topics specific to daily field operations. It is intended to bridge the academy and field training programs with a focus on enhancing the safety and well-being of law enforcement officers and the communities they serve. Topics include introduction to the field training program, internal affairs and the role of the police officers’ union, legal updates, fair and impartial policing, less lethal force options and deployment, crowd movement and control, court appearances, and work-life balance and wellness. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the purpose and objectives of the field training program.
- define cultural competency and fair and impartial policing.
- explain effective techniques for cross-cultural communication.
- demonstrate proficiency in the use of various technology resources utilized in field operations.
- explain the appropriate circumstances for employing less lethal force options.
- recall potential infectious diseases and exposure treatment protocol.
- describe the internal affairs investigation process and the role of the police officers’ union.

PSTC 1520 POST Supervisor

| Units: | 2 |
| Hours: | 16 hours LEC; 64 hours LAB |
| Prerequisite: | POST-certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency. |
| Enrollment Limitation: | Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination. |
| Catalog Date: | June 1, 2020 |

This course examines the legal, moral, and ethical responsibilities and challenges associated with first line field operations supervision specific to the law enforcement environment. Lectures, facilitated discussions, and student presentations emphasize the examination of case studies, reviews and updates of case and statutory law, situational leadership, followership, critical incidents and critical incident management, stress management, managing conflict, counseling, and problem solving. It includes examining personality profiles for effective team development and supervision, developing and conducting subordinate counseling sessions, and preparing performance evaluations and improvement programs. This course is certified by the California Commission on Peace Officer Standards and Training, POST #2970-00400. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the law enforcement supervisor's vicarious responsibility and liability for subordinate personnel.
- identify subordinate behavior that requires intervention, counseling, or disciplinary measures.
- develop a performance improvement plan for subordinate personnel.
- identify common types of stress experienced by on-duty law enforcement officers, signs and behaviors associated with stress, and resources for stress prevention and management.
- identify leader actions to manage difficult personalities.
- resolve workplace conflicts in accordance with state and federal law and within organizational parameters.

PSTC 1521 Supervisory (STC Format)

| Units: | 2 |
| Hours: | 24 hours LEC; 56 hours LAB |
| Prerequisite: | PSTC 1270, 1271, or 1273 |
| Catalog Date: | June 1, 2020 |
This course focuses on aspects of supervision specific to the field of corrections. This examination of supervision in the context of parole and probation environments will include ethics, problem solving, discipline, legal update, grievance procedures, and leadership. This course is accredited by the State of California's Standards and Training for Corrections (STC) with STC Certification #0218-011703. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagnose and document the performance of subordinate officers.
- define and apply the legal requirements involved in supervision.
- resolve employee work environment conflicts within the standards of organizational parameters.
- evaluate, research and recommend resolutions to employees' legal grievance procedures.

PSTC 1522 Supervisor Training -Non-Sworn

Units: 2
Hours: 40 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course examines the roles and responsibilities of the non-sworn public safety first-line supervisor, focusing on ethical leadership, vicarious liability and sources of influence. Students will explore the use of effective communication in counseling, mentoring, recognizing training opportunities and performance evaluations. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the relationship between effective communication and ethical leadership.
- compare and contrast leadership techniques and select the appropriate technique for influencing the outcome of a given situation.
- evaluate subordinate employees for retention, additional responsibilities, commendation and promotion.
- recognize the need to counsel an employee and apply appropriate disciplinary measures.

PSTC 1525 Supervisory Update

Units: 0.5 - 1
Hours: 1 hours LEC; 23 - 39 hours LAB
Prerequisite: PSTC 1520
Catalog Date: June 1, 2020

This course is designed to provide the existing law enforcement supervisor with updated training on contemporary supervisory issues and techniques. Topics include leadership and ethics, tactical resources, legal issues, general orders, use of force and progressive discipline. This course is presented in educational partnership with the Sacramento Police Department and is accredited by the Commission on Peace Officer Standards and Training (POST) with POST Certification number #9270-1200 and #1039-1200. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize issues in the transition from first line officer to supervisor.
- explain the need to provide reasonable accommodations for personnel, in compliance with the Americans with Disabilities Act (ADA).
- examine existing departmental policies and procedures for appropriate application and revision.
- describe progressive discipline and the processes for its application.
- prioritize the multiple tasks assigned to peace officers during their duty assignments.
PSTC 1531 Frontline Leadership SPD

This course is designed to enhance the leadership skills of line-level law enforcement personnel. Topics include characteristics of leadership, personal accountability, holding employees accountable, and ethical dilemmas in leadership.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast different styles of leadership.
- discuss how values influence decision-making.
- differentiate between discipline and punishment.
- identify behaviors that contradict ethical leadership.
- create a personal leadership development plan.
- develop and lead effective team building exercises.

PSTC 1533 Internal Affairs Investigation

This course introduces the issues and techniques associated with conducting Internal Affairs investigations in a law enforcement environment. Topics include the role and purpose of internal affairs, risk and liability assessment, role of internal affairs investigator, policy considerations and public employee rights. This course also explores the impact of internal investigations on employees, the organization and the public. This course is certified by the California Peace Officer Standards and Training (POST).

Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss the roles and responsibilities of the internal affairs investigator.
- recall case law relative to internal affairs investigations.
- conduct a risk and liability assessment.
- identify public safety/law enforcement employee misconduct.
- conduct public safety/law enforcement internal affairs investigations.
- recognize challenges in conducting an internal affairs investigation.

PSTC 1534 Sergeant Training and Orientation Program (TOPS)

This course introduces the new police supervisor to the responsibilities and job requirements of the sergeant position. Emphasis is placed on leadership, handling of critical incidents, major crimes, internal affairs, and pursuit liability. Pass/No Pass only.
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define police department expectations of a new sergeant.
- explain the civil liability implications while supervising vehicle pursuits and other major incidents.
- apply sound leadership techniques.

PSTC 1542 Property and Evidence Room Management

Units: 1.25
Hours: 24 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course covers the legal requirements, procedures, and basic responsibilities and techniques involved in the proper operation of a property room. Topics include property room problems and solutions, packaging, security, storage management, documentation, purging, dispositions, audits, and inventories.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- diagnose an agency property and evidence room systems and make recommendations for increased efficacy.
- critique internal controls related to intake, storage and disposal.
- analyze agency controls and author policy and procedures manuals.

PSTC 1550 Code Enforcement Officer

Units: 2
Hours: 36 hours LEC; 4 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for newly appointed code enforcement/peace officer who is assigned to enforce the codes of a city, county, or state. Topics include ethics, zoning laws, sub-standard housing, inspection protocol, report writing, case preparation, and administrative hearings. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- assess the laws and procedures related to code enforcement abatement and zoning.
- critique the protocol of inspections and determine the difference between sub-standard and safe housing.
- formulate the elements for case preparation and documentation for prosecution in court.

PSTC 1551 Code Enforcement Officer - Intermediate

Units: 2
Hours: 36 hours LEC; 4 hours LAB
Prerequisite: PSTC 1550
Catalog Date: June 1, 2020

This course is designed for code enforcement/peace officers with experience enforcing city, county, and state administrative codes. Topics include legal update, courtroom testimony, administrative hearings, tactical communication, use of pepper spray, problem oriented policing (POP), customer service, officer safety, and animal awareness. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
- define recent changes to laws and procedures relative to code enforcement.
- evaluate possible communication techniques when contacting upset, angry or irrational subjects.
- investigate neighborhood code violations while using good customer service.
- recognize the potential hazards in dealing with domestic and/or wild animals.
- formulate an action plan to safely handle a dangerous animal.
- apply problem oriented policing strategies to neighborhood complaints.

**PSTC 1552 Code Enforcement Officer - Advanced**

Units: 2
Hours: 36 hours LEC; 4 hours LAB
Prerequisite: PSTC 1551
Catalog Date: June 1, 2020

This course covers advanced topics for code enforcement/peace officers. Topics include legal updates and personal safety, with a focus on vectors, molds, fire, electrical, and plumbing codes. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the existence and type of mold present in various environments.
- research the differences between fire, electrical, plumbing and mechanical codes.
- formulate a rudimentary safety plan for an inspection and activate necessary techniques.

**PSTC 1555 Regulatory Investigative Techniques**

Units: 2
Hours: 40 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for the law enforcement officer assigned to an investigative role within a state agency. The course focuses on techniques that enhance the investigator's ability to prepare a criminal or administrative cases for prosecution in a criminal or administrative hearing. Topics include roles and responsibilities, interview techniques, search warrants and report writing. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- discuss the roles and responsibilities of an investigator.
- compare and contrast an inspection warrant, subpoena duces tecum, and search warrant.
- analyze legal issues and apply the appropriate investigative technique.

**PSTC 1571 Field Training Officer**

Units: 2
Hours: 40 hours LEC
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This course is designed for newly assigned personnel responsible for training entry-level law enforcement officers. Topics include field training program goals and objectives; the expectations, functions, and roles of the field training officer; legal and liability issues for field training officers; driver awareness and safety; interaction with
persons with mental illness or intellectual disability; teaching and training skills development; competency evaluation and documentation; intervention techniques; remediation; and test and scenario development strategies. Field Training Officer is certified by the California Commission on Peace Officer Standards and Training (POST), certification #2970-31725. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the four goals of the law enforcement field training program.
- compare and contrast the basic law enforcement academy environment and the law enforcement training environment.
- analyze and evaluate leadership and ethical dilemmas common in the law enforcement and field training environment, and develop risk management strategies to reduce liability exposure for the trainee, trainer, and organization.
- design and deliver a course of competency-based remedial instruction.
- recognize behavioral cues and other indicators of people with mental illness or intellectual disability.
- employ strategies to effectively intervene and safely manage encounters involving people in crisis.
- identify common stressors that affect a law enforcement trainee's performance and the available resources to minimize the trainee's psychological, physical, and emotional stress.
- identify and discuss methods to evaluate and remediate a trainee's mental and physiological preparedness and ethical awareness for operating a vehicle under normal and emergency conditions.
- demonstrate appropriate and effective field training intervention strategies.
- analyze, evaluate, and impartially document a law enforcement trainee's performance against agency-established standards of core competencies.
- utilize the Situational Leadership concept and an ethical decision making model to prepare a recruit evaluation and remedial performance plan.

PSTC 1572 Field Training Officer - Update

Units: 1
Hours: 24 hours LEC
Prerequisite: PSTC 1571
Catalog Date: June 1, 2020

This course updates field training officers on new training methods, new policing methods, and legal liabilities. Topics include academy update, remediation methodologies, tactical communications, adult learning theories, ethics, liability, and supervision. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply the basic components of communication skills and techniques.
- evaluate and document employee performance.
- employ adult learning techniques to facilitate individual learning styles.

PSTC 1573 Field Training Program Supervisor, Administrator, Coordinator Course

Units: 1
Hours: 24 hours LEC
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This POST certified course is designed for personnel responsible for administering their law enforcement agency's Field Training Program. Topics include POST approved Field Training Program and manual, managing a training program, documentation and legal liability. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- diagnose an agency POST approved Field Training program.
- design an adult learning Field Training Program activity.
- prioritize the legal and liability issues within a training program.

**PSTC 1581 Volunteers in Partnership with the Sheriff - Module A**

Units: 1  
Hours: 26 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020  

This course is designed as an entry level course for individuals who desire to work for law enforcement in a volunteer capacity. Topics include peer support, basic law, scams and frauds, crime prevention and report writing. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate a fact pattern and apply a specific crime code to the pattern.
- locate and interpret a department's general orders.
- describe specific crime prevention techniques.

**PSTC 1582 VIPS Academy - Module B**

Units: 1  
Hours: 25 hours LEC  
Prerequisite: PSTC 1581  
Catalog Date: June 1, 2020  

This course is designed as the second of two courses to assist citizen volunteers to better understand the various aspects of the law enforcement community. Topics include traffic control, explosives, radio procedures, drugs and search and rescue techniques. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast gang dynamics to determine gang affiliation.
- categorize various drugs and drug paraphernalia to determine type, legality, or illegality.
- identify and report an explosive device.

**PSTC 1584 Life Skills - Power Program --Sac Sheriff**

Units: 1  
Hours: 26 hours LEC  
Prerequisite: None.  
Catalog Date: June 1, 2020  

This course is designed to assist those who have a criminal background in developing life skills. Course topics include Domestic Violence, Substance Abuse, Identifying Drug Problems, Anger Management, and Communication Techniques. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- discuss state laws and local rules regarding Domestic Violence.
- design a personal program regarding abstinence from substance abuse.
- evaluate effects of drug and alcohol use on children.
- create a personal plan for anger/stress management.
- develop interpersonal and communication skills by incorporating active listening techniques.
- implement a daily health and nutrition plan.

**PSTC 1585 Employment Training - Power Program - SSD**

**Units:** 1  
**Hours:** 26 hours LEC  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course is designed to prepare those who have a criminal background in seeking employment. Course topics include completing employment applications and resumes, navigating the job interview and job seeking skills. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- prepare an employment application.
- compose an employment resume.
- respond to interview questions.
- develop an employment cover and thank-you letter.

**PSTC 1586 Citizens Academy - SPD**

**Units:** 1  
**Hours:** 12 hours LEC; 24 hours LAB  
**Prerequisite:** None.  
**Catalog Date:** June 1, 2020

This course provides a comprehensive overview of the criminal justice system. Topics include the role of the District Attorney, role of law enforcement and internal affairs, special challenges for the prosecution, race as a factor in the criminal justice system, the federal criminal justice system, anatomy of a criminal case, the judicial system, community focus and gangs, and building bridges and partnerships. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the primary roles and responsibilities of Sacramento area law enforcement agencies and the District Attorney.
- recognize the importance of effective partnerships among communities and criminal justice agencies.
- analyze the benefits of achieving long term strategies and solutions to public safety and quality of life issues.

**PSTC 1602 Defensive Tactics Instructor**

**Units:** 1.25  
**Hours:** 80 hours LAB  
**Prerequisite:** POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.  
**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.  
**Catalog Date:** June 1, 2020

This course introduces students with the requisite skills and knowledge to provide weaponless defense instruction in POST certified law enforcement and/or STC certified correctional environments. Instruction is provided in the areas of defense and liability issues for police and corrections, health and safety precautions for instructing manipulative skills, safe and proper application of control holds, take-down maneuvers and ground fighting. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- discuss the instructor's role and associated liability for providing law enforcement/corrections agencies with instruction in weaponless defense.
- explain law enforcement/correction's use of weaponless defense tactics in the use force continuum.
- explain the proper and safe training conditions under which to provide instruction in weaponless defense.
- demonstrate instruction on the safe application of control holds, take-down techniques, and escape techniques.
- explain the safety hazards of utilizing the carotid restraint and the required after care associated with utilization of the technique.
- discuss the necessity for the proper documentation of the use of force.
- develop a POST and/or STC weaponless defense expanded course outline and lesson plan.
- evaluate a student's safe application of control holds, take-down techniques, and escape techniques.
- provide corrective instruction for a student's safe application of control holds, take-down techniques, and escape techniques.

PSTC 1603 Defensive Tactics Instructor- Advanced

This course provides students with advanced skills and knowledge for providing weaponless defense ground fighting instruction in POST certified law enforcement and/or STC certified corrections environments. Topics include legal updates, ground control, take-downs, wall defenses, escapes, and sustained resistance techniques. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- instruct, evaluate, and correct a student in the application of take-down techniques to a ground control.
- instruct, evaluate, and correct a student in the application of gun take-a ways.
- develop a POST and/or STC lesson plan for ground fighting.
- develop a departmental use of force policy.

PSTC 1604 Defensive Tactics Instructor Update

This course provides weaponless defense instructors with updates in techniques, tactics, and legal issues in contemporary policing. Topics include legal updates, control holds, take-downs, arrest tactics, searches, handcuffing, ground control, and expert witness testimony. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss liability issues associated with providing weaponless defense training for law enforcement agencies.
* discuss relevant changes in statutory and case law pertaining to the use of force.
* demonstrate and evaluate gun retention techniques.
* demonstrate and evaluate take down and ground fighting techniques.
* demonstrate and discuss handcuffing techniques.
* discuss the challenges unique to testifying as an expert witness in weaponless defense.

**PSTC 1621 Impact Weapons Instructor**

**Units:** 1.25  
**Hours:** 80 hours LAB  
**Prerequisite:** POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.  
**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.  
**Catalog Date:** June 1, 2020

This course introduces students to effective instructional design and methods for teaching a Peace Officers Standards and Training (POST) certified course in the use of impact weapons course in public safety environments. Topics include adult learning, aggression and suspect action, POST regulations for instructing, evaluating, and testing in the use of impact weapons and documentation per the POST Administrative Manual (PAM), relevant case law, legal issues, physical warm-ups, striking and blocking techniques with the baton and the yawara stick, personal body weapons, and confrontational exercises and evaluations. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

* describe how adults learn.
* identify the POST regulations that apply to the training, evaluation, testing, and documentation of impact weapons instruction in a law enforcement environment.
* identify liability issues in the use of impact weapons.
* demonstrate the safe, effective, and proper use of one or more law enforcement approved impact weapons.
* demonstrate the use of three different methods to instruct a student on the safe and proper use of a law enforcement approved impact weapon.
* evaluate and document a student's learning and performance in the use of one or more impact weapons that meets requirements of the PAM.
* develop and implement a POST expanded course outline and lesson plan.

**PSTC 1622 Impact Weapons Instructor - Update**

**Units:** 0.25  
**Hours:** 16 hours LAB  
**Prerequisite:** PSTC 1621  
**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.  
**Catalog Date:** June 1, 2020

This course provides impact weapons instructors with updated skills and knowledge in the use of force and the accompanying legal issues in the public safety environment. Topics include review of baton use, striking techniques, and legal and liability updates. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

* evaluate liability issues regarding impact weapons.
* discuss the different strike zones of the body.
* demonstrate the use of various impact weapons while instructing.
* discuss changes in case law pertaining to the use of impact weapons.
• discuss changes in PAM regulations pertaining to the instruction, evaluation, and testing in the use of impact weapons.

PSTC 1625 Arrest Control and Baton Instructor - SPD

| Units: | 3 |
| Hours: | 42 hours LEC; 38 hours LAB |
| Prerequisite: | PSTC 1200 |
| Catalog Date: | June 1, 2020 |

This course provides law enforcement officers with the skills necessary to be certified as arrest control and baton instructors. Topics include principles of arrest control, legal issues, search fundamentals, handcuffing techniques and application, ground-fighting techniques, and carotid control hold. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• safely apply control holds and take down techniques.
• explain the hazards and first aid techniques of carotid restraint.
• compare and contrast various laws and liability issues associated with the use of force.
• safely apply take downs and ground control.
• identify liability issues associated with the use of impact weapons.
• effectively manipulate impact weapons for safe and legal use in the law enforcement environment.
• identify how adults learn.
• create a training plan.

PSTC 1640 Firearms Familiarization (PC 832)

| Units: | 1 |
| Hours: | 19 hours LEC; 5 hours LAB |
| Prerequisite: | None |

Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This POST certified course complies with California Penal Code 832. It provides a basic introduction to legal aspects of shooting and safety. Topics include handgun familiarization, safety, shooting principles, and live fire exercises. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• describe a handgun's nomenclature.
• manipulate a firearm in a safe manner.
• compare and contrast different shooting principles.

PSTC 1645 Force and Weaponry - Basic

| Units: | 1.5 |
| Hours: | 24 hours LEC; 16 hours LAB |
| Prerequisite: | PSTC 1273 |
| Catalog Date: | June 1, 2020 |

This course is designed for field probation officers who are required to carry firearms in the performance of their duties. Topics include day and night shooting, use of force, firearms safety, principles of arrest control, and tactical reloading. Pass/No Pass only.
Upon completion of this course, the student will be able to:

- assess the need for the use of force and select the appropriate level of force to be used.
- demonstrate techniques for the safe handling, loading, and unloading of firearms.
- employ a lawful and reasonable use of force defense against an armed assailant.
- demonstrate proficiency in weapon retention.

PSTC 1646 Force and Weaponry - Advanced

Units: 1
Hours: 16 hours LEC; 8 hours LAB
Prerequisite: PSTC 1645
Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course provides an update for armed probation officers. Topics include legal issues, shoot/don't shoot, weapon retention, arrest and control, and weapon malfunctions. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply proper arrest and control procedures while arresting an individual.
- assess a situation to determine the level of force necessary to be used.
- employ proper safety techniques when using a firearm.

PSTC 1648 Firearms Tactical Rifle SSD

Units: 0.75
Hours: 10 hours LEC; 14 hours LAB
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course builds upon the student's existing skills and knowledge in the legal, safe, and proper use of firearms in the law enforcement environment. Instruction includes the safe and proper handling of the long rifle, consideration of environmental factors, tactical shooting, tactical movement, and shooting under dim light conditions. This course is formerly known as SCSD 1221. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate the ability to safely and properly disassemble, assemble, and clean a patrol rifle.
- demonstrate the ability to safely and properly use a long rifle under a variety of lighting conditions.

PSTC 1650 Firearms Instructor

Units: 3
Hours: 48 hours LEC; 32 hours LAB
Prerequisite: PSTC 1683; POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval
This course is specifically designed to prepare experienced law enforcement personnel to teach firearms courses at the basic and in-service level. Topics include the role of the law enforcement firearms instructor, liability issues, instructor development, lesson plan development, basic marksmanship, shooter problem analysis, standard and non-traditional shooting positions, weapons transition, and tactical movement and cover. This course meets the minimum instructor certification requirements to be a POST pistol, rifle, and shotgun instructor. Successful completion of all portions of the course, including all course work and firearms qualifications, are mandatory to receive certification. Partial certification will not be allowed.

Upon completion of this course, the student will be able to:

- identify the four cardinal rules of firearms safety.
- identify the state and federal laws pertaining to the use of firearms.
- conduct an agency firearms training needs assessment.
- identify the roles of the firearms instructor.
- demonstrate proficiency with industry standard firearms and shooting practices, static and moving line drills.
- prepare a lesson plan, safety plan, and training diagram for the law enforcement academy recruit firearms qualifications course and the state mandated in-service requalification course.
- assess shooting problems and target analysis.
- evaluate and properly document student shooting performance and deficiencies.

### PSTC 1651 Firearms Instructor Update

**Units:** 0.5  
**Hours:** 2 hours LEC; 22 hours LAB  
**Prerequisite:** PSTC 1650  
**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

**Catalog Date:** June 1, 2020

This course is designed to further develop and update existing firearm instructors on instructional techniques, diagnostic interpretation, and target systems. This course is accredited by the Commission on Peace Officer Standards and Training (POST) with POST Certification #2970-21740 and the Standards and Training for Correction (STC) Program #0218-027422. This course is formerly known as PSTC 1258. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- diagnose sample problem shooter and develop an appropriate training plan.
- design a target system for various courses of fire.
- construct a training presentation for an individual to safely manipulate various weapons during hands-on application and under a variety of conditions.
- assess a law enforcement agency firearms and use of force policies to ensure they are contemporary and in compliance with state and local regulations.

### PSTC 1653 Firearms Instructor - Long Rifle

**Units:** 1.5  
**Hours:** 30 hours LEC; 10 hours LAB  
**Prerequisite:** PSTC 1650; POST-certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency.

**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

**Catalog Date:** June 1, 2020

This course is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

**Catalog Date:** June 1, 2020

This course is specifically designed to prepare experienced law enforcement personnel to teach firearms courses at the basic and in-service level. Topics include the role of the law enforcement firearms instructor, liability issues, instructor development, lesson plan development, basic marksmanship, shooter problem analysis, standard and non-traditional shooting positions, weapons transition, and tactical movement and cover. This course meets the minimum instructor certification requirements to be a POST pistol, rifle, and shotgun instructor. Successful completion of all portions of the course, including all course work and firearms qualifications, are mandatory to receive certification. Partial certification will not be allowed. POST certification 2970-21640. Pass/No Pass.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify the four cardinal rules of firearms safety.
- identify the state and federal laws pertaining to the use of firearms.
- conduct an agency firearms training needs assessment.
- identify the roles of the firearms instructor.
- demonstrate proficiency with industry standard firearms and shooting practices, static and moving line drills.
- prepare a lesson plan, safety plan, and training diagram for the law enforcement academy recruit firearms qualifications course and the state mandated in-service requalification course.
- assess shooting problems and target analysis.
- evaluate and properly document student shooting performance and deficiencies.

### PSTC 1651 Firearms Instructor Update

**Units:** 0.5  
**Hours:** 2 hours LEC; 22 hours LAB  
**Prerequisite:** PSTC 1650  
**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

**Catalog Date:** June 1, 2020

This course is designed to further develop and update existing firearm instructors on instructional techniques, diagnostic interpretation, and target systems. This course is accredited by the Commission on Peace Officer Standards and Training (POST) with POST Certification #2970-21740 and the Standards and Training for Correction (STC) Program #0218-027422. This course is formerly known as PSTC 1258. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- diagnose sample problem shooter and develop an appropriate training plan.
- design a target system for various courses of fire.
- construct a training presentation for an individual to safely manipulate various weapons during hands-on application and under a variety of conditions.
- assess a law enforcement agency firearms and use of force policies to ensure they are contemporary and in compliance with state and local regulations.

### PSTC 1653 Firearms Instructor - Long Rifle

**Units:** 1.5  
**Hours:** 30 hours LEC; 10 hours LAB  
**Prerequisite:** PSTC 1650; POST-certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

**Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

**Catalog Date:** June 1, 2020

This course is not a guarantee state regulatory or licensing agencies will also grant equivalency.
This course is designed for existing law enforcement firearms instructors to develop into effective patrol rifle instructors in the AR15 platform patrol rifle. This will be accomplished through an understanding of the weapon, legal aspects, demonstrating proficiency with the weapon, as well as specific training in the teaching of a patrol rifle course. Topics include safety protocol, liability, nomenclature, weapon employment, and student presentations. Because this course is designed to provide practical hands-on training in police tactics and weapon usage, participants will engage in activities and exercises that include a risk of injury. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- discuss legal aspects and agency policy and procedures for use of the long rifle in day to day law enforcement activities.
- demonstrate the safe and proper use, cleaning and storage of the long rifle.
- prepare a safety plan, lesson plan and qualification course for the long rifle.
- demonstrate classroom, range, and firing line instruction for the use of the long rifle.
- evaluate and document a student's long-rifle shooting pattern/performance and any recommended corrective measures.

PSTC 1654 Firearms / Rifle Instructor - Update

Units: 0.5
Hours: 2 hours LEC; 22 hours LAB
Prerequisite: PSTC 1653
Enrollment Limitation: Students must be legally authorized to carry/possess the short-barreled rifle. Authorized persons are identified as "peace officer members of a police department, sheriff's office, marshal's office, the California Highway Patrol, the Department of Justice, or the Department of Corrections and Rehabilitation, when on duty and the use is authorized by the agency and is within the course and scope of their duties, and the officers have completed a training course in the use of these weapons certified by the Commission on Peace Officer Standards and Training."

Catalog Date: June 1, 2020

This course provides the POST-certified law enforcement rifle instructor with contemporary information on legal issues, liability issues, updated training techniques and skills assessment in the use of the short barreled patrol rifle. Topics include instructional techniques, close-quarter combat and active shooter techniques, weapon maintenance, and deployment shooting techniques. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- employ adult learning techniques while instructing law enforcement officers in the use of the patrol rifle.
- identify and analyze the legal aspects related to the use of a rifle and its deployment.
- evaluate an individual officer's proficiency with the patrol rifle and create a performance improvement program.

PSTC 1660 Public Safety Dispatcher - Basic (SPD)

Units: 6
Hours: 105 hours LEC; 15 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to introduce new dispatchers to the basic requirements of first responder dispatching. This course fulfills the requirement by Commission on Standards and Training for Peace Officers (POST). Topics include telephone procedures, radio procedures, stress management, criminal justice system and law. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply communication skills in a crucial situation.
- evaluate the need for a low enforcement response based upon a specific fact pattern.
- analyze information provided by a citizen and interpret it to a responding officer.
- evaluate specific information and apply the appropriate laws to the situation.
PSTC 1661 Public Safety Dispatcher - Advanced (SPD)

This course is designed for public safety dispatchers who have successfully completed the Public Safety Dispatcher Basic Course. Topics include local geography, databases, officer safety, system inquiries, telephone systems and practical exercises. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- deduce the correct geographical location and select the appropriate unit to dispatch.
- generate a computer aided dispatch inquiry for law enforcement information.
- compare and contrast specific facts to determine the appropriate incident codes.
- discuss the employee assistance/peer support program.

PSTC 1662 Radio Dispatch Academy (SPD)

This course increases the student's knowledge of radio procedures and technology, emergency dispatch, and telecommunications. Topics include radio equipment, radio codes, basic voice dispatch, special assistance commands, broadcast procedures, officer safety, and search patterns. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- demonstrate a working knowledge of computer aided dispatch equipment.
- process traffic stops, subject stops, and on-view incidents using a computer aided dispatch system.
- demonstrate the dispatch of basic calls for police service.
- demonstrate the dispatch of emergency calls for service.

PSTC 1663 SPD Communications Training Program (CTP)

This course is designed to instruct dispatchers on the techniques for training newly assigned personnel to a communications center. Topics include leadership, training models, adult learning theories and practical exercises. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast the differences between the traditional dispatch models and the Communications Training Program (CTP).
- demonstrate teaching and evaluation methods used in the CTP program.
- analyze adult learning styles and describe how they impact the learning process.
- construct a learning matrix binder with relevant departmental operating procedures, regulations and other necessary materials.
PSTC 1671 Automated Field Reporting (AFR)

Units: 0.5
Hours: 4 hours LEC; 16 hours LAB
Prerequisite: PSTC 1660 (Public Safety Dispatcher - Basic (SPD)) or equivalent as determined by the Dean of academy instruction.
Catalog Date: June 1, 2020

This course builds upon students' existing skills, providing training and orientation to the law enforcement records management system. Topics include records management, tracking, data screens and terminology. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast the records management system and automated field reporting system.
- define the terminology used when using the records management system.

PSTC 1683 Continuing Professional Training for Peace Officers

Units: 0.25 - 1.5
Hours: 6 - 16 hours LEC
Prerequisite: California POST-certified basic law enforcement academy within two (2) years or equivalent as determined by the Dean of Academy Instruction (Chapter 11, California Code of Regulations, Section 1005). NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course is designed to meet the 2-year perishable skills training cycle requirements for California peace officers. Course content consists of instructional blocks which update and advance the student's existing knowledge and skill set associated with providing public safety in dynamic and multicultural environments. Instruction includes tactical communication, first aid/CPR update, tactical firearms, arrest and control, and may include additional topics determined by legislative mandates and/or regional needs. Formerly SCSD 1150. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify current mandated legislative training requirements for public safety personnel.
- demonstrate the safe and legal application of arrest methods and defensive tactics associated with the use of non-lethal force.
- demonstrate the current first aid/CPR/AED techniques that are legislatively mandated for public safety officers.
- demonstrate the proper storage, handling, cleaning, firing, and tactical movement techniques for the use of public safety agency approved on-duty firearms.
- demonstrate effective verbal and non-verbal communication skills that develop rapport, reduce conflict, and optimize safety for community members and public safety personnel.
- discuss the impact of new case and/or statutory law on contemporary and evolving issues in peacekeeping and law enforcement.

PSTC 1684 Continued Professional Training - Sacramento Police Department

Units: 0.25 - 2.5
Hours: 4 - 40 hours LEC; 4 - 40 hours LAB
Prerequisite: POST-certified basic law enforcement academy within two (2) years or equivalent as determined by the Dean of Academy Instruction (Chapter 11, California Code of Regulations, Section 1005). NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020
This course updates and advances the student's existing knowledge and skill set associated with peacekeeping and law enforcement in contemporary society. Instruction in evolving issues includes the safe handling of firearms, tactical shooting, tactical movement, arrest and control, ground fighting, chemical weapons, non-lethal weapons, government codes, penal codes, vehicle codes, health and safety codes, welfare and institution codes, and interpersonal and tactical communication. This course is formerly known as SPD 1193. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- discuss how recent changes to case and statutory impact law enforcement policies and procedures, field operations, and police-community relations.
- demonstrate effective verbal and non-verbal communication skills to optimize community and officer safety.
- demonstrate the legislatively mandated and industry standard first aid/CPR/AED techniques.
- demonstrate the proper storage, handling, cleaning and firing techniques for agency approved on-duty firearms.

This course is designed for the new Public Information Officer, Public Affairs Officer or individual whose responsibility it is to work with the media. Topics include legal issues, issue management, crisis and incident management, media management, interview training and writing for the media. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply laws affecting media relations and public safety.
- manage strategies and tactics for working with various types of media.
- evaluate opportunities and challenges in interacting with special interest groups.

**PSTC 1713 Special Weapons and Tactics - Commander**

| Units:   | 1.5  |
This course is designed for supervisors or command staff assigned responsibility for a SWAT unit. Topics include tactical entries, utilizing assault weapons, barricaded subjects, and conducting tactical rescues. This course was formerly known as SCSD 1232. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply leadership concepts in tactical situations.
- assess tactical situations and select appropriate responses such as team deployment, evacuation options, weapons selection, and/or use of chemical agents.
- recognize a critical incident and prepare a tactical response to the situation.

PSTC 1720 Defensive Driving

Units: 0.25
Hours: 8 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed to enhance the driving skills of public employees who are required to drive motor vehicles in the performance of their duties. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- manipulate a motor vehicle in a safe manner.
- apply appropriate techniques to control vehicle skids

PSTC 1722 Driver Training - Update

Units: 0.5
Hours: 6 hours LEC; 12 hours LAB
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: "Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination."

Catalog Date: June 1, 2020

This course is designed for law enforcement personnel to update them on new laws and refresh their driving skills. This is a Commission on Peace Officer Standards and Training (POST) mandate. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast legal immunities and liabilities affecting law enforcement personnel.
- employ appropriate emergency vehicle driving techniques under a variety of emergency and non-emergency situations.

PSTC 1729 Emergency Vehicle Operations Instructor (SSD/SPD)
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize and discuss defensive driving factors.
- demonstrate Pursuit Immobilization Techniques (PIT).
- construct a skid pan and pursuit training program.
- compare and contrast emergency response and pursuit statistics.

PSTC 1734 Basic K9 Training

Units: 7
Hours: 8 hours LEC; 372 hours LAB
Prerequisite: POST-certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course provides law enforcement officers with skills and knowledge in areas of canine (K9) training and deployment. Topics include care at the home of the canine partner, canine behavior, obedience, obstacle and agility course work, field searches, narcotics and explosives detection, vehicle retention, and safety. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the canine learning process.
- apply appropriate canine training techniques.
- discuss obstacles typically encountered by a canine and canine handler.
- control the canine in a variety of field situations.
- demonstrate canine obedience training techniques.
- demonstrate field tracking and building searches using a canine partner.

PSTC 1744 Less Lethal Force Update- SPD

Units: 0.75
Hours: 12 hours LEC; 6 hours LAB
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This update course on lethal force enhances the knowledge of personal safety and effectiveness of the officer assigned to patrol. Topics include pepper spray, use of baton, and carotid holds. This course is formerly known as SPD 1195. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- interpret use of force policies and applicable statutory and case laws.
- evaluate the appropriate level of force to use under a variety of circumstances and conditions.
- choose effective protocol for Taser deployment.

**PSTC 1745 Police Radar Operator (SPD)**

- **Units:** 0.5
- **Hours:** 32 hours LAB
- **Prerequisite:** POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency. Students who do not hold a POST basic certificate, or equivalent, may struggle in this course, because fundamental terms and concepts and laws basic to law enforcement will not be taught or explained.
- **Enrollment Limitation:** Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
- **Catalog Date:** June 1, 2020

This course advances the student's existing knowledge and skill set in the area of traffic violation enforcement and in the proper use of police radar devices. Topics include speed enforcement, history and theory, vehicle code law and court decisions, moving radar operation, radar effects, and visual speed and range estimation. The course may meet at various off-campus locations. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- operate a police radar device as a stationary unit.
- demonstrate knowledge of laws affecting the operation of radar devices.
- evaluate a moving vehicle's speed and estimate the approximate speed.
- evaluate and interpret information in a clear and concise manner and testify in a court of law regarding the information.

**PSTC 1749 Officer Survival and Tactics**

- **Units:** 1
- **Hours:** 8 hours LEC; 32 hours LAB
- **Prerequisite:** POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
- **Enrollment Limitation:** Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
- **Catalog Date:** June 1, 2020

This course is designed to advance the skill level of law enforcement personnel in the most current methods of field tactics and combative confrontations. Topics include officer survival techniques, handgun retention techniques, and defensive tactics. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- compare and contrast various defensive tactics and apply the appropriate technique for a give situation.
- apply safe searching techniques when searching a room.
- analyze a situation to determine if it is necessary to use deadly force.

**PSTC 1760 Basic Crime Prevention**

- **Units:** 2
- **Hours:** 40 hours LEC
This course is designed for new law enforcement personnel who provide basic crime prevention services for community members. Topics include physical hardware, alarm applications, use of environmental design, security surveys, community support, and program evaluation. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- define the purposes of neighborhood watch.
- plan a neighborhood watch program for a neighborhood.
- interpret the role of the police in the crime prevention process.
- construct a crime prevention survey program for a business.
- define the crime prevention process as it relates to the criminal justice system.

PSTC 1761 Crime Prevention Through Environmental Design

Units: 2
Hours: 40 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for crime prevention personnel and city and county planners dealing with environmental designs. Topics include reviewing new construction submittals and its impact on law enforcement, community policing, problem solving and theory and process. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- describe the basic applications of Community Policing.
- compare and contrast CPTED theories.
- evaluate a specific site and apply CPTED theories.

PSTC 1763 High Rise Policing and Crime Prevention through Environmental Design

Units: 2
Hours: 40 hours LEC
Prerequisite: PSTC 1200
Catalog Date: June 1, 2020

This course provides participants with an awareness of the specific and unique considerations for designing high rise structures relative to preparing for, preventing, and responding to high rise incidents. Topics include infrastructure protection, critical assessment and management, crime prevention, physical security, mass evacuations and terror mitigation. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- Compare and contrast the impact of weapons of mass destruction, explosive devices, and fires as they relate to high rise structures.
- Identify and explain at least two critical infrastructure components.
- Define the basic principles and strategies of Crime Prevention Through Environmental Design (CPTED) relative to high rise structures.

PSTC 1768 Community Oriented Policing

Units: 1
Hours: 24 hours LEC
This course is for new personnel assigned to work within Community Oriented Policing Programs (COPPS) and/or Problem Oriented Policing Program (POPPS). Topics include introduction to COPPS and POPPS, problem solving, facilitating community meetings, politics and Section 8 housing. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- compare and contrast COPPS and POPPS.
- facilitate a community meeting in a manner that reduces conflict as a result of politics and personal agendas.
- analyze information and/or data associated with a community problem and develop an appropriate response.
- evaluate the effectiveness of problem-solving efforts.

PSTC 1770 Basic Peer Support

Units: 0.5 - 1
Hours: 6 - 10 hours LEC; 18 - 30 hours LAB
Prerequisite: None.
Catalog Date: June 1, 2020

This course introduces the skills required to provide basic peer support in the law enforcement environment. Topics include communication and listening skills, peer support methods, critical incidents and critical incident stress management, operational stress injury, the grief cycle, suicide prevention and intervention, peer support responses, and peer support program building. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the mission and goals of a law enforcement peer support program.
- identify the three components of a critical incident.
- describe the physical, cognitive, behavioral, and emotional reactions and perceptual distortions commonly associated with critical incidents.
- discuss the impact and recognition of secondary trauma.
- demonstrate active listening skills.
- discuss the potential impact of critical incident stress on an individual's law enforcement career and family.
- delineate the principles of stress management.
- apply the ACE model for suicide prevention and intervention.

PSTC 1771 Faith in Crisis

Units: 1.5
Hours: 24 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course provides volunteer crisis responders with the basic knowledge needed to provide appropriate support for survivors of violent crimes and critical incidents. Topics include local program background, structure, and code of ethics; operational procedures for local public safety agencies; local resources and referral agencies; occupational health, safety, and first aid; and mandated reporting requirements. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- list the types of events that tend to cause emotional trauma.
- describe normal physical, mental, emotional, behavioral, and spiritual reactions to a trauma.
• identify symptoms that indicate a traumatized person needs prompt attention from a medical professional.
• identify risk factors that may indicate a survivor should be encouraged to seek out a mental health professional.
• explain how providing effective crisis intervention as soon as possible after a traumatic incident can have a long-term effect on survivors’ lives.
• identify self-care techniques for volunteer crisis responders.

PSTC 1773 Basic Critical Incident Stress Management

Units: 1
Hours: 18 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course examines a wide range of crisis intervention services, including pre-incident and post-incident crisis education, significant support services, crisis intervention for individuals, demobilizations after large-scale traumatic incidents, small group diffusing, and the group intervention known as Critical Incident Stress Debriefing (CISD). Pass/No Pass Only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify and explain crisis intervention services.
• demonstrate specific demobilizations and defusings.
• demonstrate specific interventions.
• prepare a simulated Critical Incident Stress Debriefing.

PSTC 1778 Interpersonal and Tactical Communications: Train the Trainer

Units: 1
Hours: 24 hours LEC
Prerequisite: PSTC 1200
Catalog Date: June 1, 2020

This course is designed for the individual who is assigned to or intends to teach Interpersonal and Tactical Communications. Topics include elements of communication, persuasion techniques, questioning techniques, adult learning concepts and lesson planning. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• demonstrate different communication techniques.
• apply methods of de-escalation using verbal and non-verbal communication.
• develop an an extended course outline and prepare a lesson plan for Tactical Communication.

PSTC 1780 Campus Law Enforcement

Units: 2
Hours: 36 hours LEC; 4 hours LAB
Prerequisite: Successful completion of a POST certified basic law enforcement academy within the last three years or current equivalent training as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee that state regulatory or licensing agencies will also grant equivalency. Students who do not hold a POST basic certificate, or equivalent, may struggle in this course, because fundamental terms and concepts and laws basic to law enforcement will not be taught or explained.

Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This course extends the student’s fundamental knowledge of and skill set in contemporary law enforcement and peacekeeping in diverse societies to include the
considerations and challenges unique to the campus environment. Topics include the roles and responsibilities of school police, mandatory reporting requirements, constitutional, case, and juvenile law specific to school campuses, situational and tactical awareness in the education setting, clique structure, gang culture, dynamics of student behavior, and application of crowd control, emergency management, and incident command principles on and around campus. This course is certified by the California Commission on Peace Officer Standards and Training (POST), #2970-22294. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the school police officer’s role and responsibilities in the education environment.
- discuss the school police officer’s authority on and off duty.
- recognize student behavior as it relates to providing a safe educational environment, with a focus on gang culture, gang dynamics, and/or clique structure.
- recount the laws relative to search, seizure, and arrest on school campuses.
- discuss the school discipline process and privacy issues as they relate to student records.
- identify mandated reporting requirements and liability issues on and off campus.
- utilize communication skills to defuse conflict and obtain voluntary compliance.
- utilize age-appropriate mediation to resolve conflicts.
- identify dangerous and potentially dangerous situations, trespassers, and the time frame for potential problems to arise on and around the campus.
- summarize the school district’s responsibilities for managing disasters and emergencies.
- apply crime scene management and crowd control principles on and around campus.

PSTC 1781 School Resource Officer

Units: 2
Hours: 40 hours LEC
Prerequisite: PSTC 1200
Catalog Date: June 1, 2020

This course is designed for the officer assigned or newly assigned as a school resource officer. Topics include school law, mentoring, basic teaching skills, instructional techniques and constructing a course outline. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify and apply appropriate codes to individual and/or groups of students.
- compare and contrast gang affiliation indicia.
- develop a 2-4 hour course outline.

PSTC 1783 Campus Law Enforcement Supervisor

Units: 1.5
Hours: 28 hours LEC; 12 hours LAB
Prerequisite: PSTC 1780
Catalog Date: June 1, 2020

This course is designed to provide skills and knowledge for the campus law enforcement supervisor employed by a school district. Topics include the role and responsibilities of the campus supervisor, administrative processes, campus safety plans, violence mitigation, crowd control, disaster and emergency management, disciplinary and truancy hearings, legal update, and liability issues for campus supervisors. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the role and responsibilities of the campus supervisor.
- explain legal issues and liabilities related to campus supervision.
• explain the importance of procedural justice.
• discuss the impact of technology on student behavior and campus life.
• develop a campus security plan.
• develop a campus emergency and disaster response plan.

PSTC 1787 School Security Officer

Units: 1
Hours: 24 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for security officers and guards (watch-person, campus monitor, campus officer) employed by a school district (K-12 or California Community College) for more than 20 hours per week. Topics include roles and responsibilities, liability issues, conflict resolution and student behavior. This course is approved by Department of Consumer Affairs/Bureau of Security and Investigative Services, and the California Commission on Peace Officers Standards and Training (POST). Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• identify important points of campus law enforcement.
• identify appropriate laws and regulations related to search and seizure on school grounds.
• demonstrate knowledge of handling disasters and emergencies within the on-campus environment.

PSTC 1800 Interview and Interrogation Techniques

Units: 2
Hours: 36 hours LEC; 4 hours LAB
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This course advances the law enforcement or corrections student's knowledge and skills set in legal and behavioral techniques associated with interview and interrogation. Topics include predictable behavior, free-format interviews, elimination interviews, polygraphs, and the Ten Step Plan for interviews and interrogations. This course is certified by the California Commission on Peace Officer Standards and Training (POST). #2970-31445 and Standards and Training for Corrections (STC), #0218-007921. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

• compare and contrast attorney privileges specified in 5th and 6th Amendments.
• determine when to apply the Miranda Warning three-pronged test.
• conduct free format, cognitive, and elimination interviews.

PSTC 1801 Background Investigations

Units: 1.5 - 2
Hours: 32 - 40 hours LEC
Prerequisite: PSTC 1200
Catalog Date: June 1, 2020
This course is designed for law enforcement or civilian personnel who are responsible for conducting background investigations for the hiring of public safety personnel. Topics include the background process, psychological evaluations, interviewing techniques and documentation. This course is approved by the California Commission on Peace Officer Standards and Training (POST) and California Standards and Training for Corrections (STC). Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- describe the instruments available to detect deception.
- apply the Commission on Peace Officers Standards and Training (POST) rules and regulations to the public safety background process.
- evaluate pre-employment applications for employment recommendation.

PSTC 1804 Informant Development and Maintenance

Units: 1
Hours: 24 hours LEC
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.
Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver’s License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.
Catalog Date: June 1, 2020

This course advances students’ existing investigative skills, interview and interrogation skills, informant development and management, case management and the development and execution of search warrants. Topics include common problems when using informants, limitations on the use of informants, informant motives, informant policies, investigative strategies, and informants and ethics.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- discuss the most common problems encountered when using informants.
- identify and discuss the contemporary state and federal statutes related to developing confidential informants.
- discuss law enforcement agency policies relevant to informant development, vicarious liability and officer safety.
- describe the parameters for maintaining the confidentiality of informants.
- demonstrate interview techniques for recruiting and developing informants.
- demonstrate confidential informant case development, utilization and management in undercover scenarios.
- discuss the ethical issues associated with the use of informants.

PSTC 1806 Crime Analysis

Units: 1.5
Hours: 32 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020

This course is designed for the newly hired, promoted, or assigned crime analyst and/or supervisor responsible for law enforcement crime analysis functions with an agency. Topics include building a crime analysis unit, staffing, data collection and information dissemination. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- discuss the elements of crime analysis.
- collect and analyze information to construct crime patterns.
- evaluate and determine the appropriate distribution of crime analysis data.
PSTC 1807 Advanced Identification of Organized Criminal Street Gangs and Criminal Gang Activities

This course provides students with information and resource identification critical to the reduction of gang violence. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- identify and document local organized criminal street gangs.
- identify the impact of criminal street gangs on communities.
- identify law enforcement and community partners impacted by organized criminal street gangs.

PSTC 1808 Advanced Organized Gang Investigations

This course enhances the skill level of law enforcement officers, probation and parole officers with information vital to reduce gang violence. Topics include identification and documentation of organized gang activity, proactive investigative techniques, developing an investigative plan, case initiation and operational planning, case organization and documentation, and multi-location and multi-jurisdictional search warrants.

Upon completion of this course, the student will be able to:

- identify and document local organized criminal street gangs.
- identify law enforcement, corrections and community partners impacted by organized criminal street gangs and gang violence.
- develop a strategy for providing gang education, gang prevention, and gang violence reduction.

PSTC 1812 Fingerprint Identification - Basic

This course is designed to provide basic instruction in fingerprint comparison and identification. Topics include ridge characteristics, basic pattern types, classifications and verifications. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- evaluate basic fingerprint pattern types.
- classify a fingerprint based upon established procedures.
- compare and contrast a fingerprint to identify an individual.

PSTC 1813 Crime Scene and Forensic Photography of Physical Evidence
This course provides law enforcement crime scene investigators the skills needed to conduct forensic photography of physical evidence as well as conduct general crime scene photography. Topics include legal admissibility, photographic coverage, major crime scene photography, film speed, lighting techniques, and photographic equipment. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- explain the importance of documenting every photograph taken at a crime scene.
- demonstrate how to properly photograph a crime scene.
- recommend film suitable for crime scene and evidence photography.
- select proper camera settings to properly expose color and black and white film.

PSTC 1814 Advanced Latent Print Comparison & Identification

This advanced course is designed for the crime scene investigator or fingerprint technician to learn how to compare and identify latent/fragmentary prints to inked fingerprint and palm print impressions. This course is formerly known as PSTC 1821. Pass/No Pass only.

Student Learning Outcomes
Upon completion of this course, the student will be able to:

- explain the basis for the science of identification of friction ridge impressions and its historical background.
- discuss the embryonic development and characteristics of friction ridge skin.
- identify the various friction ridge formations and ridge flows found on the fingers, thumbs, and palmer surface of the hand.
- analyze and use the ridge flows and creases on the palmer surface of the hand to help locate and orient fragmentary friction ridge impressions for comparison to known impressions.
- identify the three phalanges of the fingers and the two phalanges of the thumbs and the phalangeal creases are commonly discovered.
- describe the various shapes of latent palm prints that will provide orientation clues for a comparison to a corresponding area in a known impression.
- discuss verification protocols, note taking, and documentation matters.
- develop proficiency with the ACE-V Scientific Method to compare and identify partial/fragmentary latent friction ridge impressions.
- understand the usefulness of charts to illustrate and identification by friction ridges to a jury.
- discuss what juries expect to see and hear from a latent fingerprint expert.
- develop a list of “qualification questions” and answers to use when testifying as an expert fingerprint witness in the future.
- take the I.A.I. Latent Print Examiner Certification test.
- take legible Complete Friction Ridge Exemplars.

PSTC 1820 Crime Scene Investigation - Basic

This course is designed for newly assigned law enforcement agency crime scene investigators who are responsible for conducting crime scene investigations. Topics
Student Learning Outcomes

Upon completion of this course, the student will be able to:

- evaluate and preserve critical evidence.
- analyze and prepare documentation of a crime scene through photography and videography.
- apply court recognized procedures for handling and storage of evidence.
- compare and contrast bloodstain spatter.

PSTC 1852 Drug and Alcohol Recognition

Units: 1  
Hours: 24 hours LEC  
Prerequisite: PSTC 1200  
Catalog Date: June 1, 2020

This course provides law enforcement personnel with the knowledge and skills to evaluate the effects of drugs and alcohol on an individual and to provide expert testimony on the evaluation. Topics include legal codes, stimulants and depressants, investigative techniques and courtroom testimony. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recognize and categorize the effects of different drugs on the human body.
- recognize objective symptoms of alcohol on the human body.
- compare and contrast the effects of alcohol between individuals at various levels of intoxication.
- administer legally approved field tests to determine the level of intoxication.

PSTC 1853 Integrated Narcotics Training

Units: 0.5 - 1  
Hours: 4 - 8 hours LEC; 32 - 36 hours LAB  
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency.

Enrollment Limitation: Students must 1) Be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This course advances the student's existing advanced investigative skills with specialized narcotics related training. Topics include ethics and integrity, surveillance techniques, undercover operations, and asset seizure. This course is formerly known as SPD 1237. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- recall updated case law, forfeiture procedures, and legal requirements for search warrants related to narcotic enforcement.
- differentiate between reliable and problematic informants.
- design and formulate a basic search warrant and affidavit.
- demonstrate basic fixed and moving surveillance techniques.

PSTC 1854 Drug Recognition Evaluator Course
This course enhances the skills of law enforcement personnel to evaluate and provide expert testimony on the effects of drugs and alcohol. Topics include psycho-physical tests, eye examinations, alcohol workshop, signs and symptoms, drugs in society, vehicle operation, drug classification process and procedures, nystagmus, convergence, pupil size and reaction to light, physiology and drugs, depressants, stimulants, physician's desk reference, hallucinogens, associative anesthetics, narcotic analgesics, inhalants, cannabis, report writing, curriculum vitae, and case preparation and testimony. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- analyze objective symptoms of alcohol and drugs on the human body.
- administer legally approved field tests to determine the level of intoxication.
- recognize and categorize the effects of different drugs on the human body.
- collect evidence, complete a narrative report, and prepare a case for court.

### PSTC 1870 Disaster Preparedness

This course prepares students to respond to disasters and take the necessary steps to minimize loss of life and property. Topics include floods, hazardous materials, transportation disasters, wildfires, earthquakes, national security, and critical incidents. This course is formerly known as SCSD 1209. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- describe the characteristics of the seven common disasters.
- identify and evaluate the basic hazards and problems law enforcement officers face when responding to and managing a disaster/critical incident.
- analyze law enforcement disaster plans.

### PSTC 1874 Traffic Collision Investigation - Intermediate

This course is designed to expand the investigative knowledge and skills of the traffic collision investigator. Topics include definitions and terminologies associated with minor and major collisions, measuring and diagramming the collision scene and speed computation. Pass/No Pass only.

Upon completion of this course, the student will be able to:

- diagram a collision for evidential purposes and courtroom presentation.
apply mathematical formulas from vehicle tire marks to determine speed.

prepare documents for courtroom testimony.

PSTC 1900 Traffic Collision - Basic

Units: 2
Hours: 40 hours LEC
Prerequisite: PSTC 1200
Catalog Date: June 1, 2020

This course provides in-depth instruction into the multiple disciplines of traffic collision investigation. Topics include scene management techniques and introduction to the Manual on Uniform Traffic Control Devices, highway engineering definitions, Nine-Cell Matrix, incident scene photography, primary collision factors, identification and documentation of physical evidence, measuring and diagramming methodology, use of the Northwestern University traffic template functions and nomographs, and an in-depth discussion on proper traffic collision documentation and Highway Patrol Manual 110.5, Collision Investigation Manual (CIM). This course satisfies the prerequisites for the Intermediate Collision Investigation course, as well as the requirements of Vehicle Code Section 40600.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- identify the primary collision factor of a traffic collision and justify the opinion based upon the collected facts and statements.
- identify, collect, and document physical evidence associated with traffic collisions.
- properly document a complex traffic collision, utilizing the Collision Investigation Manual (HPM 100.5), based on a felony DUI scenario.

PSTC 1902 Traffic Accident Reconstruction

Units: 4
Hours: 72 hours LEC; 8 hours LAB
Prerequisite: POST certified basic law enforcement academy or equivalent as determined by the Dean of Academy Instruction. NOTE: Approval of equivalent training is not a guarantee state regulatory or licensing agencies will also grant equivalency. Students who do not hold a POST basic certificate, or equivalent, may struggle in this course, because fundamental terms and concepts and laws basic to law enforcement will not be taught or explained.

Enrollment Limitation: Students must 1) be free of felony convictions; 2) possess a valid California Driver's License; 3) undergo a fingerprint and criminal history check; 4) be a minimum of 18 years of age; 5) be a United States high school graduate; pass the GED, pass the California High School Proficiency Examination, or have attained a two-year or four-year degree from an accredited college or university; and 6) complete a medical suitability examination.

Catalog Date: June 1, 2020

This course advances the skill set of law enforcement personnel assigned to investigate traffic collisions. It covers the knowledge and skills needed to determine at-impact speeds of collision-involved vehicles and to draw conclusions of how and why the collision occurred. Topics include math and physics review, reconstruction principles, crush analysis, conservation of momentum analysis, heavy duty and articulated vehicles, motorcycle collision, vehicle vs. pedestrian, and bicycle collision analysis. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- apply basic math and physics principles involved in collision reconstruction.
- calculate slide to stop velocity and conduct critical speed scuff mark analysis.
- define the basic principles underlying the determination of speed change from collision damage.
- summarize the collision reconstruction process.
- formulate and support conclusions as to how and why a traffic accident occurred.

PSTC 1904 LIDAR Operator Course

Units: 0.5
Hours: 9 hours LEC
Prerequisite: None.
Catalog Date: June 1, 2020
This course covers the legal and technical use of light distance and ranging speed enforcement (LIDAR). It includes the history of LIDAR, applicable case law, and visual speed determination skills. May be taken two times for credit. Pass/No Pass only.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- explain the operational considerations when using LIDAR speed enforcement.
- cite the applicable case law regarding laser speed enforcement.

A.A., Golden West College  
A.S., American River College  
B.S., Cal Poly, Pomona

Automotive Technology  
A.S., Sierra College  
B.S., CSU Sacramento

Jones, Stanley (2019)  
Horticulture  
M.S., Texas A&M University

McCormack, John (2001)  
Automotive Technology/Apprenticeship  
A.A., Sierra College  
B.V.E., CSU Sacramento  
M.Ed., CSU Sacramento

Messier, Christopher (2015)  
Welding Technology  
Certification, Cosumnes River College

Meyer, Jordan (2015)  
Electronics Technology  
B.S., UC San Diego  
M.S., UC San Diego

Moore, Christopher (2012)  
Automotive Technology  
A.S., American River College

Reese, Mark Alan (2003)  
Welding Technology  
A.A., American River College  
B.V.E., CSU Sacramento  
IMET, CSU Sacramento

Design Technology  
B.S.M.E., UC Davis

Sichi, Cielo (2016)  
Horticulture  
B.S., California State Polytechnic University

Weckman, Craig (2008)  
Diesel/Clean Diesel Technology & Automotive Collision Technology  
B.V.E., CSU Sacramento  
A.A., American River College  
B.S., CSU Sacramento  
M.S., CSU East Bay
