Overview

American River College's chemistry program offers you a high quality education whether you are seeking to transfer to a 4-year college, obtain an Associate's Degree, or seeking to obtain career technical education. The highly trained faculty in the Chemistry Department is committed to rigorous academic standards, large selection of classes, student-friendly atmosphere, and interactive classes. They have backgrounds that cover all aspects of chemistry. The department provides hands-on experiential learning as well as access to a nationally award-winning peer assisted tutorial program (Beacon).

Division Dean
Dr. Rina Roy
(about-us/contact-us/faculty-and-staff-directory/rina-roy)

Department Chair
Michael Payne
(about-us/contact-us/faculty-and-staff-directory/michael-payne)
Kristin Casale

Division Science & Engineering Division Office
(academics/arc-science-and-engineering-division-office)

Associate Degree

A.S. in General Science

This program provides a broad study in the fields of biological and physical sciences in preparation for transfer to a four-year program and continuation of studies in upper division science courses.

Catalog Date: June 1, 2020

### Chemistry (CHEM) Courses

#### CHEM 83 Strategies for Problem Solving in General, Organic and Biological Chemistry

- **Units:** 0.75
- **Hours:** 40.5 hours LAB
- **Prerequisite:** None
- **Corequisite:** CHEM 309
- **Catalog Date:** June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 309 at American River College. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- evaluate new and accepted ideas about the natural universe using scientific methods.
- analyze a wide variety of natural phenomena using basic definitions and fundamental theories of biological or physical sciences.
- apply appropriate quantitative and qualitative methods to interpret and analyze pertinent data.
- outline the basic concepts and fundamental theories of a natural science.
- articulate orally and/or in writing the importance of continuous examination and modification of accepted ideas as a fundamental element in the progress of science.
- discuss ethical components of scientific decision making and apply personal and social values within the process of decision making in scientific endeavors.

---

#### CHEM 84 Strategies for Problem Solving in General Chemistry I

- **Units:** 0.75
- **Hours:** 40.5 hours LAB
- **Prerequisite:** None
- **Corequisite:** CHEM 400
- **Catalog Date:** June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 400 at American River College. Pass/No Pass only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
- demonstrate quantitative, qualitative, and descriptive problem solving skills as they relate to the study of chemistry.
- apply study habits that enable mastery of chemistry.
- build expertise and increased competence in problem-solving strategies through practice.

---

#### CHEM 86 Strategies for Problem Solving in Organic Chemistry I

- **Units:** 0.75
- **Hours:** 40.5 hours LAB
- **Prerequisite:** None
- **Corequisite:** CHEM 420
- **Catalog Date:** June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 420 at American River College. Pass/No Pass Only.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.

---

1 must be transfer-level and must include one laboratory course in a physical science and one laboratory course in a biological science.

The General Science Associate in Science (A.S.) degree may be obtained by completion of the required program, plus general education requirements, plus sufficient electives to meet a 60-unit total. See ARC graduation requirements.
• demonstrate quantitative, qualitative, and descriptive problem-solving skills as they relate to the study of chemistry.
• apply study habits that enable mastery of chemistry.
• build expertise and increased competence in problem-solving strategies through practice.

CHEM 87 Strategies for Problem Solving in Organic Chemistry II

Units: 0.75
Hours: 40.5 hours LAB
Prerequisite: None.
Corequisite: CHEM 421
Catalog Date: June 1, 2020

This course develops analytical reasoning strategies, critical thinking skills, and problem-solving abilities for both quantitative and qualitative problems in chemistry. It is designed to support students enrolled in CHEM 421 at American River College.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• apply analytical reasoning and critical thinking skills as they relate to the study of chemistry.
• demonstrate quantitative, qualitative, and descriptive problem-solving skills as they relate to the study of chemistry.
• apply study habits that enable mastery of chemistry.
• build expertise and increased competence in problem-solving strategies through practice.

CHEM 130 Chemistry for Funeral Service

Units: 4
Hours: 72 hours LEC
Prerequisite: None.
Corequisite: BUS 340, FSE 310, and FSE 320
Enrollment Limitation: Acceptance into the Funeral Service Education program.
Catalog Date: June 1, 2020

This course is a survey of the basic principles of chemistry as they relate to funeral service. Topics include chemical principles involved in sanitation, disinfection, public health, and embalming practices. It also covers the development and use of personal, professional, and community sanitation practices, as well as use of and precautions related to potentially harmful chemicals that are currently used in the field of funeral service.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• describe selected facts of general chemistry as a basis for studying organic and biochemistry.
• explain the essential characteristics of autolysis, hydrolysis, fermentation, and putrefaction in the area of chemistry of decomposition.
• identify the characteristic features of solutions, suspensions, emulsions, and the processes of diffusion as they relate to the embalming process.
• describe the characteristic features of organic compounds.
• compare the characteristics of carbohydrates, lipids, and proteins in the area of basic biochemistry.
• describe representative chemicals in embalming fluids (arterial, cavity, and accessory) and give their respective functions.
• list the potentially harmful chemicals used in the preparation room and the precautions to be taken with each.

CHEM 305 Introduction to Chemistry

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: MATH 100 or 132 with a grade of "C" or better
Advisory: Eligible for ENGRD 310 or ENGRD 312 AND ENGRD 312 AND ENGWR 300; OR ESLR 340 AND ELSW 340.
Transferable: CSU; UC (Credit Limitation: No credit if taken after CHEM 400)
Transferable: AA/AS Area IV; CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
C-ID: C-ID CHEM 101; Part of C-ID PHYS 140
Catalog Date: June 1, 2020

This course covers general principles of chemistry, such as unit analysis, atomic structure, nomenclature, mole concept, stoichiometry, and gases. It also introduces organic chemistry and biochemistry. This course is primarily designed for allied health majors.

Student Learning Outcomes

Upon completion of this course, the student will be able to:
• analyze and set up measurements of physical quantities and convert units of physical quantities via the use of dimensional analysis
• name and write formulas of elements, ions, acids, and ionic and molecular compounds
• describe atomic theory and interpret the periodic table
• apply the mole concept toward stoichiometry-related problems and chemical reactions
• identify the variables used to describe properties of a gas
• formulate qualitatively and quantitatively the effect of change of one or more variables on one another
• describe chemical bonds, intermolecular forces in the liquid state, solubility of substances, and the concept of osmosis, and their applications
• demonstrate the properties of acids and bases and convert acid concentration to pH and vice-versa
• classify, distinguish, and contrast the classes and structural features of organic and biological compounds

CHEM 306 Introduction to Organic and Biological Chemistry
This course is a continuation of CHEM 305. It covers the organic functional groups and reactions involved in the chemistry of life (biochemistry) as applied to the health sciences.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- identify, name, and draw structures of organic compounds including hydrocarbons, alcohols, organic acids, esters, amines, and amides.
- defend predicted physical properties of hydrocarbons, alcohols, organic acids, esters, amines, and amides based on their chemical structure.
- classify reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides.
- predict products from reactions involving hydrocarbons, alcohols, organic acids, esters, amines, and amides.
- compare the physical and chemical properties of carbohydrates, lipids, proteins, enzymes, and nucleic acids.
- compare and contrast the structures and functions of carbohydrates, lipids, proteins, enzymes, and nucleic acids in the body.
- compare and contrast the processes of DNA replication and transcription, RNA translation, and common types of mutations.
- predict the chemical reactions used in carbohydrate and lipid metabolism.
- evaluate the energy yield from carbohydrate and lipid metabolism in the body.

**CHEM 309 Integrated General, Organic, and Biological Chemistry**

This course is an intensive survey of general, organic, and biological chemistry specifically designed for students majoring in nursing and other health-related fields. Topics include general chemistry, organic chemistry, and biological chemistry as they apply to the chemistry of the human body. This course satisfies the requirements of those health-career programs which require one semester of chemistry. Students enrolled in this course are strongly encouraged to co-enroll in CHEM 83.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- analyze the fundamental features of chemistry including measurement of physical properties such as mass, volume, density, pressure, temperature, solutions, concentrations, and dilutions.
- apply the concept of unit analysis towards medical dosage calculations.
- differentiate between physical and chemical properties of matter.
- name and write chemical formulae of cations, anions and inorganic and organic compounds.
- evaluate various types of chemical reactions, both organic and inorganic.
- qualitatively compare spontaneous and nonspontaneous processes.
- analyze the phenomena of diffusion, osmosis, dialysis, and transport mechanisms of particles through cell membranes based on their physical properties.
- describe intermolecular forces and apply them in the understanding of basic principles of biochemistry and physical characteristics of organic compounds.
- differentiate between functional groups when they appear in an organic structure.
- relate the physical and chemical properties of compounds containing functional groups.
- differentiate typical acid and base formulae and compare the behavior associated with acids and bases.
- apply Le Chatlier’s equilibrium principles in the understanding of blood buffers.
- distinguish various functions of four major classes of biomolecules in living cells.
- distinguish key structural features and properties of these classes of biomolecules.
- compare the processes of DNA replication, transcription, and translation.
- compare major biochemical components in common catabolic pathways for carbohydrates and fatty acids and compare the output from those processes.

**CHEM 310 Chemical Calculations**

This course introduces calculations, terminology, chemical techniques, and laboratory techniques. It provides intensive problem solving skills necessary for CHEM 400.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- solve chemical calculation problems, for example, unit conversion and theoretical yield calculations, in a clear and logical fashion.
- describe and explain organizational trends of the periodic table, for example, atomic mass, periods and groups, metals, nonmetals, metalloids, and atom size.
- describe the structure of an atom and predict common ions formed.
- formulate the name of inorganic compounds (molecular and ionic) and acids.
- identify the type of chemical reaction given reactant(s) and product(s) and balance the chemical reaction using coefficients.
- predict the products of inorganic chemical reactions using solubility rules.
- use the ideal gas law and the gas laws to predict temperature, pressure, volume, mass, or molar quantity of a gas.
- perform calculations involving mass percents, molarity, solution stoichiometry, and pH.
- complete lab experiments in a safe and timely manner, after receiving written and/or verbal instructions.
- demonstrate the proper use of laboratory glassware and equipment by collecting and recording scientific measurements in data tables with the correct number of units and significant figures (i.e. graduated cylinder, balances, thermometer, buret, pipet, and metric ruler), and the recording of observations (physical and chemical changes and properties).

**CHEM 400 General Chemistry I**

**Units:** 5
**Hours:** 54 hours LEC; 108 hours LAB
**Prerequisite:** MATH 120, 125, 129, or 133 with a grade of "C" or better AND one of the following: 1) CHEM 310 with a grade of "C" or better; or 2) Previous chemistry course with a grade of "C" or better AND a passing score on the Chemistry Assessment Test from the Assessment Center at American River College.
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ELSLW 340.
**Transferable:** CSU; UC
**Catalog Date:** June 1, 2020

This course covers the basic principles of chemistry with an emphasis on chemical calculations, chemical reactions including balancing of complicated reduction-oxidation (REDOX) reactions, stoichiometry, gas laws, thermochemistry, atomic structure and bonding theories, ionic equations, solutions, intermolecular forces and phases of matter, and acid/base chemistry including titrations and pH. Laboratory work is devoted to investigations of the theoretical work discussed in lecture.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- successfully complete laboratory experiments (involving evaluation of experimental data and confirmation of physical constants) in a safe and timely manner, after receiving written and/or verbal instructions.
- demonstrate the proper collection and recording of scientific measurements in tables with the correct units and number of significant figures (i.e. measuring mass, volume, temperature, length, and pressure), and the recording and evaluation of observations (physical and chemical changes and properties).
- analyze and then solve chemical calculation problems that involve solids, solutions, or gases, in a clear and logical fashion; for example, stoichiometry, acid-base, and colligative property problems.
- analyze and then solve chemical calculation problems that involve heat energy transfers in calorimeters or chemical reactions; for example, determining the heat of fusion, heat of solution, heat of reaction, and heat capacity.
- construct balanced chemical equations from written descriptions of chemical reactions.
- synthesize data into computer-generated graphical outputs and make predictions by interpolation using linear and non-linear regression analyses.
- evaluate errors related to experimental procedures and assess their effects on experimental results.
- predict the products of inorganic chemical reactions using solubility rules and the activity series, by assessing electrolyte strength, and by employing the fundamental rules of acid-base chemistry.
- apply chemical naming rules to inorganic molecular and ionic compounds, acids, and simple straight-chain hydrocarbons.
- predict changes in solution properties based on colligative property calculations; for example, changes in boiling point, freezing point, vapor pressure, and osmotic pressure.
- explain how and why substances dissolve in other substances and perform calculations to evaluate solution concentration in various units (molar, molal, % mass, mole fraction).
- use the ideal gas law and the empirical or combined gas laws to predict temperature, pressure, volume, mass, or molar quantity of a gas.
- explain and predict observable properties of gases (pressure, temperature, volume) from an understanding of the behavior of the individual particles in a gas.
- produce Lewis structures of simple molecules and polyatomic ions and predict their shape and relative polarity.
- label the parts of a phase diagram, use it to predict the temperature and pressure at which phase changes will occur, and construct heating curves that include phase changes.
- analyze the structure of an atom and explain the origin of atomic emission spectra.

**CHEM 401 General Chemistry II**

**Units:** 5
**Hours:** 54 hours LEC; 108 hours LAB
**Prerequisite:** CHEM 400 with a grade of "C" or better
**Advisory:** Eligible for ENGRD 310 or ENGRD 312 AND ENGRWR 300; OR ESLR 340 AND ELSLW 340.
**Transferable:** CSU; UC
**General Education:** CSU Area B1; CSU Area B3; IGETC Area 5A; IGETC Area 5C
**Catalog Date:** June 1, 2020

This course is a continuation of the principles of chemistry with emphasis on equilibria, bonding, thermodynamics, kinetics, and electrochemistry. A brief introduction to organic chemistry is included. Laboratory work is devoted to qualitative analysis and experiments dealing with the theoretical work discussed in lecture.

**Student Learning Outcomes**

Upon completion of this course, the student will be able to:

- explain the basic concepts and theories of kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry.
- cite examples of the importance and relevancy of chemical concepts.
- solve quantitative problems in kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry through the mathematical application of basic principles.
- evaluate and solve qualitative problems using the basic principles of kinetics, equilibrium, thermodynamics, electrochemistry, coordination chemistry, and nuclear chemistry.
- conduct a variety of qualitative and quantitative inorganic laboratory experiments utilizing a variety of chemistry instrumentation such as spectrophotometry and pH meters.
- analyze experimental data to compare and contrast theoretical value versus experimental values.
- design appropriate laboratory procedures for open-ended inquiry experiments.
- prepare written laboratory reports describing and interpreting hands-on laboratory experiments.
- demonstrate safe laboratory practices and proper materials handling.

**CHEM 420 Organic Chemistry I**

**Units:** 5
**Hours:** 54 hours LEC; 108 hours LAB
**Prerequisite:** CHEM 401 with a grade of "C" or better
This course is designed to prepare students who are majoring in chemistry or chemical engineering, for transfer to a four-year institution, or to prepare students for entrance into professional schools in the fields of medicine, pharmacy, or dentistry. Emphasis is on the application of modern principles regarding structure, reactivity, methods of synthesis and physical properties of carbon compounds.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- name saturated and unsaturated hydrocarbons, alkyl halides, and alcohols
- analyze the relationship between the molecular structure of an organic molecule and its physical properties and chemical reactivity
- analyze reaction mechanisms to predict products of organic chemistry reactions
- propose reaction mechanisms for common organic chemistry reactions
- identify a compound given its molecular formula, infrared spectrum, and nuclear magnetic resonance (NMR) spectrum
- design multi-step organic syntheses
- analyze organic compounds through the operation of instruments such as the refractometer, Fourier transform infrared spectroscopy (FTIR), nuclear magnetic resonance spectroscopy (NMR), gas chromatography (GC), and polarimeter
- perform laboratory techniques such as separation, synthesis, purification, identification, and characterization of organic compounds utilizing both macro- and micro-scale procedures
- evaluate experimental data

CHEM 421 Organic Chemistry II

Units: 5
Hours: 54 hours LEC; 108 hours LAB
Prerequisite: CHEM 420 with a grade of "C" or better
Transferable: CSU; UC
Catalog Date: June 1, 2020

This course covers general physical and chemical properties of aromatic compounds, ethers, carbonyl compounds, amines, carbonyl derivatives, and biological compounds of interest. It also includes mass spectrometry, ultraviolet-visible (UV-VIS) spectroscopy, and carbon-13 nuclear magnetic resonance (NMR). Special attention is given to development of reaction mechanisms, methods of organic synthesis, and instrumental analysis as they apply to organic chemistry.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- relate principles of chemical reactions and mechanisms to organic functional groups
- propose reaction mechanisms for common organic chemistry reactions
- plan the synthesis of organic compounds utilizing the specific reactions of functional groups
- describe biochemical processes using organic reactions
- determine the structure of organic compounds by evaluating mass spectra, NMR spectra, UV-VIS, and infrared (IR) spectra
- perform laboratory experiments using both macro- and micro-scale procedures
- evaluate experimental data

CHEM 423 Organic Chemistry - Short Survey

Units: 5
Hours: 72 hours LEC; 54 hours LAB
Prerequisite: CHEM 401 with a grade of "C" or better
Transferable: CSU; UC ((CHEM 420 & 423 combined: maximum credit - one course))
Catalog Date: June 1, 2020

This course is a survey of carbon containing compounds with emphasis on organic compounds of biological interest. Topics include the chemistry of organic functional groups, Infra Red spectroscopy, and mechanisms of reactions. This course is designed primarily for students majoring in the life sciences, nutrition/dietetics, and related fields. This course is not recommended for students majoring in chemistry, chemical engineering, medicine, dentistry, pharmacy, or chiropractics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

- validate structural and bonding theories towards the reactivity of the functional groups of organic chemistry.
- name alkanes, alkenes, alkynes, alcohols, ethers, acids, esters, aldehydes, ketones, amides, amines, and aromatic molecules using the International Union of Pure and Applied Chemistry (IUPAC) system.
- predict mechanisms and intermediates in the understanding of organic reactions.
- identify organic compounds through the interpretation of Infra Red spectral data and degree of unsaturation.
- differentiate between structural isomers, stereoisomers, and resonance forms.
- analyze the effect of reagents, solvents, catalysts, temperature, and pressure in reactions.
- develop the conversion of one organic functional group to another.
- propose route synthesis of simple organic molecules.
- evaluate concepts of organic chemistry towards understanding of biochemistry topics such as carbohydrates, proteins, and lipids.

CHEM 495 Independent Studies in Chemistry

Units: 1 - 3
Hours: 54 - 162 hours LAB
Prerequisite: None.
Transferable: CSU

Catalog Date:
Student Learning Outcomes
1 - 3Units:
54 - 162 hours LABHours:
None.Prerequisite:
CSUTransferable:
Independent Study is an opportunity for the student to extend classroom experience in this subject, while working independently of a formal classroom situation. Independent study is an extension of work offered in a specific class in the college catalog. To be eligible for independent study, students must have completed the basic regular catalog course at American River College. They must also discuss the study with a professor in this subject and secure approval. Only one independent study for each catalog course will be allowed.

**CHEM 499 Experimental Offering in Chemistry**

**Units:** 0.5 - 4  
**Prerequisite:** None  
**Transferable:** CSU  
**Catalog Date:** June 1, 2020

### Faculty

#### Slava Bekker  
**Chemistry Assistant Professor**
